Field	Details
	Description Name of the contact point type consent record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the account owner associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PartyRoleId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Party Role for the individual you want to associate consent with. This is a polymorphic relationship field. This field is available in API version 53.0 and later. Relationship Name PartyRole Relationship Type Lookup Refers To Customer, Seller
PrivacyConsentStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Required. Identifies whether the individual or person account associated with this record agrees to this form of contact. Possible values are: - NotSeen - OptIn

Field	Details
	• <code>OptInPending</code>—Available in API version 58.0 and later. • <code>OptOut</code> • <code>Seen</code>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ContactPointConsentChangeEvent](#)

Change events are available for the object.

[ContactPointConsentHistory](#)

History is available for tracked fields of the object.

[ContactPointConsentOwnerSharingRule](#)

Sharing rules are available for the object.

[ContactPointConsentShare](#)

Sharing is available for the object.

ContactPointEmail

Represents a contact's email, which is associated with an individual or person account. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>ActiveFromDate</code>	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the contact's email became active.
<code>ActiveToDate</code>	Type date

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the contact's email is no longer active.
BestTimeToContactEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The latest time to contact the individual.
BestTimeToContactStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The earliest time to contact the individual.
BestTimeToContactTimezone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The timezone applied to the best time to contact the individual.
EmailAddress	Type email Properties Create, Filter, Group, Sort, Update Description Required. The email address of the contact.
EmailDomain	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The domain of the contact's email, which is everything after the @ sign.
EmailLatestBounceDateTime	Type dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The date and time when an email failed to reach its recipient.
EmailLatestBounceReasonText	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The reason why the email didn't reach its recipient.
EmailMailBox	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A subset of the contact's email, which is everything before the @ sign.
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's email is their primary email (<code>true</code>) or not (<code>false</code>).
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Required. The name of the contact point email record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account's owner associated with this contact. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the contact's parent. Only an individual or account can be a contact's parent. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Individual
UsageType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Specify the usage type of this email. For instance, whether it's a work email or a temporary email. Possible values are: • Home • Temp • Work

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ContactPointConsentChangeEvent

Change events are available for the object.

ContactPointEmailHistory

History is available for tracked fields of the object.

ContactPointEmailOwnerSharingRule

Sharing rules are available for the object.

ContactPointEmailShare

Sharing is available for the object.

ContactPointPhone

Represents a contact's phone number, which is associated with an individual or person account. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActiveFromDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The date when the contact's phone number became active.
ActiveToDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the contact's phone number is no longer active.
AreaCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The area code of the phone number's location for the contact.
BestTimeToContactEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The latest time to contact the individual.
BestTimeToContactStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The earliest time to contact the individual.
BestTimeToContactTimezone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The timezone applied to the best time to contact the individual.
ExtensionNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The phone number extension for the contact.
FormattedInternationalPhoneNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The internationally recognized format for the contact's phone number.
FormattedNationalPhoneNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The nationally recognized format for the contact's phone number.
IsBusinessPhone	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's phone number is a business number (<code>true</code>) or not (<code>false</code>).
IsFaxCapable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's phone number is a fax number (<code>true</code>) or not (<code>false</code>).
IsPersonalPhone	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's phone number is a personal number (<code>true</code>) or not (<code>false</code>).
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether a contact's phone number is their primary number (<code>true</code>) or not (<code>false</code>).
IsSmsCapable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's phone number can receive text messages (<code>true</code>) or not (<code>false</code>).
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Required. The name of the contact point phone record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account's owner associated with this contact. This is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
ParentId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the contact's parent. Only an individual or account can be a contact's parent. This is a polymorphic relationship field.
	Relationship Name Parent
	Relationship Type Lookup
	Refers To Account, Individual
PhoneType	Type picklist
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description The type of phone number for the contact. Possible values are: • Home • Mobile
PreferenceRank	Type int
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Specify how this phone numbers ranks in terms of preference among the contact's other phone numbers.
TelephoneNumber	Type phone

Field	Details
	Properties Create, Filter, Group, Sort, Update Description Required. The phone number for the contact.
UsageType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specify the usage type of this number. For instance, whether it's a work phone or a home phone. Possible values are: • Home • Temp • Work

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ContactPointConsentChangeEvent

Change events are available for the object.

ContactPointPhoneHistory

History is available for tracked fields of the object.

ContactPointPhoneOwnerSharingRule

Sharing rules are available for the object.

ContactPointPhoneShare

Sharing is available for the object.

ContactPointTypeConsent

Represents consent for a contact point type, such as email or phone. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

With certain page layout and field-level security settings, some fields aren't visible or editable.

Field Name	Details
BusinessBrandId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Business Brand that the individual has given consent to for a contact point type. this is a relationship field. This field is available in API version 53.0 and later. Relationship Name BusinessBrand Relationship Type Lookup Refers To BusinessBrand
CaptureContactPointType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Indicates how you captured consent. Possible values are: • Email • MailingAddress • Phone • Social • Web
CaptureDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Required. Date when consent was captured.

Field Name	Details
CaptureSource	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Indicates how you captured consent. For example, a website or online form.
ContactPointType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Represents the contact method you want to apply consent to. Possible values are: • Email • MailingAddress • Phone • Social • Web
DataUsePurposeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the record for data use purpose that you want to associate this consent with. This is a relationship field. Relationship Name DataUsePurpose Relationship Type Lookup Refers To DataUsePurpose
DoubleConsentCaptureDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description Date when double opt-in was captured.
EffectiveFrom	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date when consents starts.
EffectiveTo	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date when consent ends.
EngagementChannelType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required if a <code>ContactPointType</code> isn't selected. Represents the contact method you want to apply consent to. Possible values are: • <code>Billboard</code> • <code>Email</code> • <code>MailingAddress</code> • <code>Phone</code> • <code>SMS</code> • <code>Social</code> • <code>Web</code> This is a relationship field. Relationship Name <code>EngagementChannelType</code> Relationship Type Lookup Refers To <code>EngagementChannelType</code>

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the contact point type consent record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PartyId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description Required. Represents the record based on the Individual object you want to associate consent with. This is a relationship field. Relationship Name Party Relationship Type Lookup Refers To Individual
PartyRoleId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Party Role for the individual you want to associate consent with. This is a polymorphic relationship field. This field is available in API version 53.0 and later. Relationship Name PartyRole Relationship Type Lookup Refers To Customer, Seller
PrivacyConsentStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Required. Identify whether the individual associated with this record agrees to this form of contact. Possible values are: • NotSeen • Seen • OptIn • OptInPending—Available in API version 58.0 and later. • OptOut • OptOutPending—Available in API version 58.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ContactPointConsentChangeEvent (API version 47.0)

Change events are available for the object.

ContactPointTypeConsentHistory

History is available for tracked fields of the object.

ContactPointTypeConsentOwnerSharingRule

Sharing rules are available for the object.

ContactPointTypeConsentShare

Sharing is available for the object.

ContactOwnerSharingRule

Represents the rules for sharing a contact with a User other than the owner.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ContactAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of access granted to the target Group, UserRole, or User for Contacts. The possible values are: - Read - Edit
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group. A Contact owned by a User in the source Group triggers the rule to give access.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The ID representing the User or Group being granted access.

Usage

Use this object to manage the sharing rules for contacts.

SEE ALSO:

[Contact](#)

[ContactShare](#)

[Metadata API Developer Guide: SharingRules](#)

ContactRequest

Represents a customer's request for support to get back to them about an issue. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>AvailableCallbackAttempts</code>	Type integer Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the number of retries that are possible for a voice callback. Applies to calls routed through Omni-Channel Unified Routing. Valid values are 0 through 5. The default is 0. Available in API version 66.0 and later.
<code>DelayBetweenCallbackAttempts</code>	Type integer Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Specifies the delay between voice callback attempts in minutes. Applies to calls routed through Omni-Channel Unified Routing. Valid values are 0 through 10,080, and the default is 0. Available in API version 66.0 and later.
IsCallback	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines how a voice call callback is handled after an agent accepts the callback work item. If set to <code>true</code>, when an agent accepts the work item, the Omni-Channel utility doesn't immediately dial the callback phone number. Instead, the agent can determine how to handle the call. For example, after the agent accepts the work item, they can view the callback details, transfer the call, or contact the end user at another phone number. If the agent makes a call by using click-to-dial, the call appears as a Callback call in the Omni-Channel utility. If set to <code>false</code>, when the agent accepts the work item in the Omni-Channel utility, the contact request is opened. The agent can review callback details. If they call with click-to-dial, the call appears as an Outbound call in the Omni-Channel utility. The default value is <code>false</code>. Available in API version 60.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The contact request number.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the Salesforce record that owns the request. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PreferredChannel	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The channel the customer selected as their preferred method of communication in the contact request flow. For example: • Phone
PreferredPhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The phone number the customer provided when requesting help in the contact request flow.
RequestDescription	Type textarea

Field Name	Details
	Properties Create, Nillable, Update Description The description of the customer's issue that they provided when requesting help in the contact request flow.
RequestReason	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The reason the customer provided when requesting help in the contact request flow. These values are customizable in Object Manager. The default values are: • Account • Billing • Case • General • Order • Other • Product
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The status of the contact request. For example: • Abandoned • Attempted • Contacted • New
WhatId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Salesforce record the contact request is related to, such as an account, case, opportunity, voice call, or work order. This is a polymorphic relationship field.

Field Name	Details
	Relationship Name What
	Relationship Type Lookup
	Refers To Account, Case, Contact Request, Opportunity, WorkOrder
WhoId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description ID of the Salesforce contact record the contact request is related to, such as a contact, lead, or user. This is a polymorphic relationship field.
	Relationship Name Who
	Relationship Type Lookup
	Refers To Contact, Lead, User

Usage

Contact request records are created when a customer fills out an online form. This form is created using a flow that uses the type `ContactRequestFlow`. There's a guided setup experience to create this flow on the Customer Contact Requests page in Setup. You then add the flow to an Experience Cloud site using either the Flows component or the Contact Request Button & Flow component.

Contact Request works in Experience Cloud sites, whether they require authentication or not. Make sure that your users have the Run Flows permission, including your Guest User profile. Without this permission, members won't see the button or the form to submit contact requests.

By default, all Standard User and System Administrator profiles have access to the object. Make sure that your users profiles, like service agents, have at least read access on the contact request object.

You can create queues for contact requests and route them with Omni-Channel.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ContactRequestOwnerSharingRule](#)

Sharing rules are available for the object.

ContactRequestShare

Sharing is available for the object.

SEE ALSO:

[Salesforce Help: Set Up and Manage Contact Requests](#)

ContactRequestShare

Represents a list of access levels to a ContactRequest with an explanation of the access level. This object is available in API version 45.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose RowCause field is set to Manual. Sharing entries for standard objects with different RowCause values are created as a result of your Salesforce org’s sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren’t stored at all.

 **Note:** While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it’s possible that we’ll stop storing certain share records to improve performance. As a best practice, don’t create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to contact requests. The possible values are: - Read - Edit - All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) This value must be set to an access level that is higher than the organization’s default access level for contact requests.
ParentId	Type reference Properties Create, Filter, Group, Sort

Field Name	Details
	Description ID of the parent object, if any. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To ContactRequest
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Possible values are: <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the ContactRequest with them. <code>Owner</code>—The User is the owner of the ContactRequest. <code>Rule</code>—The User or Group has access via a ContactRequest sharing rule. <code>GuestRule</code>—The User or Group has access via a ContactRequest guest user sharing rule.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the ContactRequest. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object lets you determine which users and groups can view and edit `ContactRequest` records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

SEE ALSO:

[Salesforce Help: Set Up and Manage Contact Requests](#)

ContactShare

Represents a list of access levels to a Contact along with an explanation of the access level. For example, if you have access to a record because you own it, the `ContactAccessLevel` is `All` and `RowCause` is `Owner`.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with access to the Contact object can access this object.

Fields

Field	Details
<code>ContactId</code>	Type reference Properties Filter, Group, Sort Description ID of the Contact associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Contact Relationship Type Lookup

Field	Details
	Refers To Contact
ContactAccessLevel	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Level of access that the User or Group has to cases associated with the account Contact. The possible values are: • Read • Edit • All This value is not valid for create or update. This field must be set to an access level that is higher than the organization's default access level for contacts.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted .
RowCause	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code> . If no value is specified, the field defaults to <code>Manual</code> . All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • <code>Rule</code>—The User or Group has access via a Contact sharing rule. • <code>GuestRule</code>—The User or Group has access via a Contact guest user sharing rule. • <code>ImplicitChild</code>—The User or Group has access to the Contact via sharing access on the associated Account. After faster account sharing recalculation is enabled for your org, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically. • <code>ImplicitPerson</code>—The User or Group has access to the business contact of a person account via access to the person account itself.

Field	Details
	• <code>GuestPersonImplicit</code>—The guest user has access to the business contact of a person account via a Contact sharing rule. • <code>PortalImplicit</code>—The Contact is associated with the portal user. • <code>LpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. • <code>ARImplicit</code>—The User, who belongs to a partner or customer account, has access to the Contact via an account relationship data sharing rule. • <code>Manual</code>—The User or Group has access because a User with “All” access manually shared the Contact with them. • <code>Owner</code>—The User is the owner of the Contact.
UserOrGroupId	Type reference Properties Filter, Group, Sort Description ID of the User or Group that has been given access to the Contact. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit Contact records owned by other users.

 **Note:** After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child contact records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child contact records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.

For more information, see the [Faster Account Sharing Recalculation](#) knowledge article.

SEE ALSO:
[AccountShare](#)

ContactSuggestionInsight

Represents a suggestion for a new contact record. Available in API versions 45.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To add or decline contact suggestions, users need a Sales Cloud Einstein license and edit access on accounts. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field Name	Details
AccountId	Type reference Properties Filter, Group, Sort Description The ID of the related account.
Address	Type address Properties Filter, Nillable Description The address of the suggested contact.
City	Type string Properties Filter, Group, Nillable, Sort Description The city of the suggested contact.
ContactTitle	Type string Properties Filter, Group, Nillable, Sort Description The title of the suggested contact.
Country	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The country of the suggested contact.
CreatedRecordId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the created contact record.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The division of the suggested contact.
Email	Type email Properties Filter, Group, Nillable, Sort Description The email address of the suggested contact.
FirstName	Type string Properties Filter, Group, Nillable, Sort Description The first name of the suggested contact.

Field Name	Details
GeocodeAccuracy	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Accuracy level of the geocode for the address. See Compound Field Considerations and Limitations for details on geolocation compound fields.  Note: This field is available in the API only.
LastName	Type string Properties Filter, Group, Sort Description The last name of the suggested contact.
LastOperationUserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who last performed a related operation.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.

Field Name	Details
Latitude	Type double Properties Filter, Nillable, Sort Description Used in conjunction with <code>Longitude</code> to specify the precise geolocation of an address.
Longitude	Type double Properties Filter, Nillable, Sort Description Used in conjunction with <code>Latitude</code> to specify the precise geolocation of an address.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number of the suggested contact.
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description The postal code of the suggested contact.
RationaleLabel	Type string Properties Filter, Group, Nillable, Sort Description The reason why this entry is a suggested contact.
State	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The state of the suggested contact.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the suggested contact. Possible values include: • New • Pending • Added • Declined
Street	Type textarea Properties Filter, Group, Nillable, Sort Description The street of the suggested contact.

Usage

This object is read-only and isn't supported in workflows, triggers, process builder, or Visualforce pages.

ContactTag

Associates a word or short phrase with a Contact.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference

Field Name	Details
	Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

ContactTag stores the relationship between its parent TagDefinition and the Contact being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

ContentAsset

Represents a Salesforce file that has been converted to an asset file in a custom app in Lightning Experience. Use asset files for org setup and configuration. Asset files can be packaged and referenced by other components. This object is available in API version 38.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object’s name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Only admin users can edit or delete ContentAssets.
- Users with file access can create and query ContentAssets.
- It isn’t necessary to create asset files for regular, collaborative use of Salesforce Files. “Assetize” files only when they’re used in setup and configuration situations.
- Neither the file (ContentDocument) nor the asset settings record (ContentAssets) can be deleted if the asset file is referenced by another component.
- ContentAsset doesn’t support search or most recently used (MRU) lists.
- ContentAsset doesn’t support Apex triggers.

Fields

Field	Details
ContentDocumentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the document. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
DeveloperName	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The unique name of the asset file in the API. ContentAsset.DeveloperName: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
IsVisibleByExternalUsers	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether unauthenticated users can see the asset file.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language for this document. This field defaults to the user's language unless the org is multi-language enabled. Specifies the language of the labels returned. The value must be a valid user locale (language and country), such as <code>de_DE</code> or <code>en_GB</code>. For more information on locales, see the <code>Language</code> field on the <code>CategoryNodeLocalization</code> object.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for the asset file. This internal label doesn't get translated.
NamespacePrefix	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.

ContentBody

Represents the body of a file in Salesforce CRM Content or Salesforce Files. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`

Special Access Rules

Cannot be queried, inserted, updated, or deleted directly.

Fields

Field	Details
Id	Type ID
	Properties , Filter, Group, idLookup, Sort
	Description ID of the file body.

Usage

ContentBody is intended for internal Salesforce use. If you need to access the file content body, please use [ContentVersion](#) on page 1528.

ContentDistribution

Represents information about sharing a document externally. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Content deliveries must be enabled to query content deliveries.
- Users (including users with the “View All Data” permission) can query only the files that they have access to. If the file is managed by a Content Library, the user must have “Deliver Content” enabled in the library permission definition and be a member of the library. If the file isn’t managed by a Content Library, the user must have the “Enable Creation of Content Deliveries for Salesforce Files” permission.
- Users can query the `DistributionPublicUrl` and `Password` fields only if they are the file owner, if the file is shared with them, or if the `RelatedRecordId` specifies a record that the users can access.
- If the shared document is deleted, the delete cascades to any associated `ContentDistribution`. The `ContentDistribution` is still queryable by using the `QueryAll` verb.
- If the shared document is archived, the only fields that users can edit are `ExpiryDate` and `PreferencesExpires`.
- Customer Portal users can’t access this object.
- Guest users of Experience Cloud sites can’t access or create this object.
- Chatter Free users can’t access this object.

Fields

Field Name	Details
<code>ContentDocumentId</code>	Type reference Properties Filter, Group, Nillable, Sort Description ID of the shared document.
<code>ContentDownloadUrl</code>	Type string Properties Sort, Nillable Description The link for downloading the file. This field is available in API version 40.0 and later.
<code>ContentVersionId</code>	Type reference Properties Create, Filter, Group, Sort

Field Name	Details
	Description ID of the shared document version. This is a relationship field. Relationship Name ContentVersion Relationship Type Lookup Refers To ContentVersion
DistributionPublicUrl	Type string Properties Nillable, Sort Description URL of the link to the shared document.
ExpiryDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date when the shared document becomes inaccessible.
FirstViewDate	Type dateTime Properties Filter, Nillable, Sort Description Date when the shared document is first viewed.
LastViewDate	Type dateTime Properties Filter, Nillable, Sort Description Date when the shared document was last viewed.
Name	Type string

Field Name	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the content delivery.
OwnerId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the user who owns the shared document. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
PdfDownloadUrl	Type string Properties Sort, Nillable Description The link for downloading the file as a PDF. This field is available in API version 40.0 and later.
Password	Type string Properties Group, Nillable, Sort Description A password that allows access to a shared document.
PreferencesAllowOriginalDownload	Type boolean Properties Create, Filter, Update Description When <code>true</code> , the shared document can be downloaded as the file type that it was uploaded as.

Field Name	Details
	When <code>false</code>, download availability depends on whether a preview of the file exists. If a preview exists, the file can't be downloaded. If a preview doesn't exist, the file can still be downloaded. If the shared document is a link, it can't be downloaded.
PreferencesAllowPDFDownload	Type boolean Properties Create, Filter, Update Description When <code>true</code>, the shared document can be downloaded as a PDF if the original file type is PDF or if a PDF preview has been generated.
PreferencesAllowViewInBrowser	Type boolean Properties Create, Filter, Update Description When <code>true</code>, a preview of the shared document can be viewed in a Web browser.
PreferencesExpires	Type boolean Properties Create, Filter, Update Description When <code>true</code>, access to the shared document expires on the date that's specified by <code>ExpiryDate</code>.
PreferencesLinkLatestVersion	Type boolean Properties Create, Filter, Update Description When <code>true</code>, users see the most recent version of a shared document. When <code>false</code>, users see the version of the document that's shared, even if it isn't the most recent version.
PreferencesNotifyOnVisit	Type boolean Properties Create, Filter, Update

Field Name	Details
	Description When <code>true</code> , the owner of the shared document is emailed the first time that someone views or downloads the shared document.
PreferencesNotifyRndtnComplete	Type boolean Properties Create, Filter, Update Description When <code>true</code> , the owner of the shared document is emailed when renditions of the shared document that can be previewed in a Web browser are generated.
PreferencesPasswordRequired	Type boolean Properties Create, Filter, Update Description When <code>true</code> , a password, specified by <code>Password</code> , is required to access the shared document.
RelatedRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the record, such as an Account, Campaign, or Case, that the shared document is related to. This is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To Account, Campaign, Case, Contact, EmailMessage, Lead, ListEmail, Opportunity
ViewCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times that the shared document has been viewed.

Usage

Use this object to create, update, delete, or query information about a document shared externally via a link or via Salesforce CRM Content delivery.

The ContentDistribution object supports triggers before and after these operations: insert, update, delete. It supports triggers after undelete.

Example: The VP of Marketing wants file authors to specify whether their files can be shared with external people using content delivery. He also wants some files to have a password. You can add a custom field `DeliveryPolicy` on the ContentVersion object. Make the custom field a picklist with the values, `Allowed`, `Blocked`, and `Password required`. Add the field to the ContentVersion layout so that the user can set the delivery policy per file. Then, add an insert trigger for the ContentDistribution object to enforce the rules based on the delivery policy set in the file.

Note: The `ContentVersionId` for ContentDistribution must be unique.

This trigger for the ContentDistribution object enforces the delivery policy rules for each file:

```
trigger deliveryPolicy on ContentDistribution (before insert) {
    for (ContentDistribution cd : trigger.new) {
        String versionId = DeliveryPolicyHelper.getContentVersionId(cd);
        ContentVersion version = [select DeliveryPolicy__c from ContentVersion where
Id = :versionId];
        String policy = version.DeliveryPolicy__c;
        if (policy.equals('Blocked')) {
            cd.addError('This file is not allowed to be delivered.');
```

The trigger calls this helper class:

```
public class DeliveryPolicyHelper {
    public static String getContentVersionId(ContentDistribution cd) {
        if (cd.ContentVersionId != null) {
            return cd.ContentVersionId;
        } else {
            String versionId = [select LatestPublishedVersionId from ContentDocument
where Id = :cd.ContentDocumentId].get(0).LatestPublishedVersionId;
            return versionId;
        }
    }

    public static boolean requirePassword(ContentDistribution cd) {
        return cd.PreferencesPasswordRequired;
    }
}
```

Important: Apex has a per organization limit of 10 concurrent requests that last longer than 5 seconds. A trigger that uploads files can easily hit this limit.

ContentDistributionEventLog

Content Distribution events contain information about content distributions and deliveries to users. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
Action	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe action that’s used when a delivery is viewed.
DeliveryIdentifier	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe 15-character ID of the content delivery.
DeliveryLocation	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe location of the delivery.
RelatedObjectIdentifier	Typestring PropertiesFilter, Group, Nillable, Sort

Field	Details
	Description The 15-character ID of the record that's associated with the delivery distribution.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 20130715233322.670.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
VersionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the content version.

ContentDistributionView

Represents information about views of a shared document. This read-only object is available in API version 32.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

- Content deliveries must be enabled to query content deliveries.
- Users (including users with the “View All Data” permission) can query only the files that they have access to. If the file is managed by a Content Library, the user must have “Deliver Content” enabled in the library permission definition and be a member of the library. If the file isn’t managed by a Content Library, the user must have the “Enable Creation of Content Deliveries for Salesforce Files” permission.
- ContentDistributionView can be deleted by an admin.
- If the shared document is deleted, the delete cascades to any associated ContentDistributionView. The ContentDistributionView is still queryable by using the `QueryAll` verb.
- Customer Portal users can’t access this object.
- Chatter Free users can’t access this object.

Fields

Field Name	Details
DistributionId	Type reference Properties Filter, Group, Sort Description ID of the content delivery that the document is part of. This is a relationship field. Relationship Name Distribution Relationship Type Lookup Refers To ContentDistribution
IsDownload	Type boolean Properties Defaulted on create, Filter, Group, Sort Description <code>true</code> if the shared document is downloaded; <code>false</code> if the shared document is viewed.
IsInternal	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description <code>true</code> if the shared document is viewed by a user in the same organization; <code>false</code> if viewed by an external user.
ParentViewId	Type reference Properties Filter, Group, Nillable, Sort Description ID of this instance of accessing the shared document.

Usage

Use this read-only object to query information about users who are accessing shared documents.

ContentDocument

Represents a document that was uploaded to a library in Salesforce Files or Salesforce CRM content. This object is available in versions 17.0 and later for Salesforce CRM. This object is available in API version 21.0 and later for Salesforce Files.

The maximum number of documents that can be published is 30,000,000. Archived files count toward this limit and toward storage usage limits.

- Contact Manager, Group, Professional, Enterprise, Unlimited, and Performance Edition customers can publish a maximum of 200,000 new versions per 24-hour period.
- Developer Edition and trial users can publish a maximum of 2,500 new versions per 24-hour period.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Special Access Rules

- By default, users (including users with the View All Data permission) can only query files they have access to, including:
 - Salesforce files in their personal library and in libraries they're a member of, regardless of library permissions (API version 17.0 and later).
 - Salesforce files they own, shared directly with them, posted on their profile, or posted on groups they can see (API version 21.0 and later).

Turn on the Query All Files permission to let your View All Data users bypass the restrictions on querying files.

- Query All Files returns all files, including files in non-member libraries and files in unlisted groups.
- Users can't edit, upload new versions, or delete files they don't have access to.
- View All Data permission is required to enable Query All Files.

- For API version 62.0 and later, enable the Query Non Vetoed Files permission in Data Cloud orgs to let your integration or API users view and SOQL query only public and non-vetoed files in the org.
- Customer and partner portal users must have the View Content in Portal permission to query content in libraries where they have access.
- A Salesforce CRM content document can be deleted if any of these statements is true.
 - The document is published into a personal library or is in the user's upload queue.
 - The document is published into a public library, the user trying to delete the document is the file owner, and is a member of that library.
 - The document is published into a public library and the user trying to delete the document isn't the owner but has the Manage Library or Delete Content library permission enabled.

For API version 25.0 and later, you can change ownership of Salesforce Files and Salesforce CRM content documents.

- A user can change ownership of a Salesforce CRM content document or Salesforce file if any of these statements is true.
 - The user is the current owner.
 - The user has the Modify All Data permission enabled.
 - For a file in a Content Library, the user either has the Manage Salesforce CRM content permission enabled, or has the Manage Library permission enabled for the library containing the document.
-  **Note:** When the owner of a ContentDocument is changed, [ContentDocumentLink](#) may be triggered. This action deletes the ContentDocumentLink to the old owner and inserts one to the new owner. When you change document ownership, keep these considerations in mind.
- The user who's becoming the document owner must be a visible, active user. The original owner can be inactive.
 - If the new document owner doesn't have access to the library that contains the document, library administrators must give the new owner membership to the library.

Fields

Field	Details
ArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the document. This field is available in API version 24.0 and later.
ArchivedDate	Type date Properties Filter, Group, Nillable, Sort Description The date when the document was archived.

Field	Details
	This field is available in API version 24.0 and later.
ContentAssetId	Type reference Properties Filter, Group, Nillable, Sort, Update Description If the ContentDocument is an asset file, this field points to the asset. For most entities, the value of this field is <code>null</code>. This field is available in API version 38.0 and later. This is a relationship field. Relationship Name ContentAsset Relationship Type Lookup Refers To ContentAsset
ContentModifiedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the document was modified. ContentModifiedDate updates when, for example, the document is renamed or a new document version is uploaded. When you're uploading the first version of a document, ContentModifiedDate can be set to the current time or anytime in the past. This field is available in API version 32.0 and later.
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the document in bytes for documents smaller than 2 GB. This field is available in API version 31.0 and later. In API version 65.0 and later, we recommend that you use the ContentSizeLong field even for files smaller than 2 GB.
ContentSizeLong	Type long

Field	Details
	Properties Filter, Group, Nillable, Sort Description The size of the document in bytes up to 10 GB. This field is available in API version 65.0 and later.
Description	Type textarea Properties Filter, Nillable, Sort, Update Description A description of the document. This field is available in API version 31.0 and later.
Division	Type picklist Properties Defaulted on Create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the document. This field is available in API version 31.0 and later.
FileType	Type string Properties Filter, Group, Nillable, Sort Description Type of document, determined by the file extension. This field is available in API version 31.0 and later.

Field	Details
IsArchived	Type boolean Properties Defaulted on Create, Filter, Group, Sort, Update Description Indicates whether the document was archived (<code>true</code>) or not (<code>false</code>).
IsInternalOnly	Type boolean Properties Defaulted on Create, Filter, Group, Sort, Update Description Indicates that a file is for internal use only. When <code>true</code>, prevents users with the Query Non Vetoed Files permission from viewing and performing SOQL query on public and non vetoed files in a Data Cloud org. Default value is <code>false</code>. This field is available in API version 62.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
LatestPublishedVersionId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the latest document version (<code>ContentVersion</code>). This is a relationship field. Relationship Name LatestPublishedVersion

Field	Details
	Relationship Type Lookup Refers To ContentVersion
MalwareScanDate (Beta)	Type dateTime Properties Filter, Group, Nillable, Sort Description The date the document was scanned for malware. This field is available as a beta feature in API version 66.0 and later.  Note: The MalwareScanDate field is a pilot or beta service that is subject to the Beta Services Terms at Agreements - Salesforce.com or a written Unified Pilot Agreement if executed by Customer, and applicable terms in the Product Terms Directory . Use of this pilot or beta service is at the Customer's sole discretion.
MalwareScanStatus (Beta)	Type picklist Properties Filter, Group, Sort Description Indicates whether the document was scanned for malware and whether it's safe or malicious. This field is available in API version 66.0 and later. • NotScanned—The file hasn't yet been scanned for malware. This is the default value. • Scheduled—The file scan is in progress. • Clean—The file was scanned and doesn't contain malware. • Malicious—The file was scanned and contains malware. • Skipped—The file can't be scanned because it's either larger than 100 MB or it's a Salesforce-generated file, such as a Content Note. • Failed—The file wasn't scanned because of an error.  Note: The MalwareScanStatus field is a pilot or beta service that is subject to the Beta Services Terms at Agreements - Salesforce.com or a written Unified Pilot Agreement if executed by Customer, and applicable terms in the Product Terms Directory . Use of this pilot or beta service is at the Customer's sole discretion.
OwnerId	Type reference Properties Filter, Group, Sort, Update

Field	Details
	Description ID of the owner of this document. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
ParentId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the library that owns the document. Created automatically when inserting a ContentVersion via the API for the first time. This field is available in API version 24.0 and later when Salesforce CRM content is enabled.
PublishStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Indicates if and how the document is published. Valid values are: • P—The document is published to a public library and is visible to other users. Label is Public. • R—The document is published to a personal library and is not visible to other users. Label is Personal Library. • U—The document is not published because publishing was interrupted. Label is Upload Interrupted.
SharingOption	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Controls whether sharing is frozen for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is Allowed, which means that new shares are allowed. When set to Restricted, new shares are prevented without affecting existing shares.

Field	Details
	This field is available in API versions 35.0 and later.
SharingPrivacy	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Controls sharing privacy for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Valid values are: • N—Default. Label is Visible to Anyone With Record Access • P—The file is private on records but can be shared selectively with others. Label is Private on Records. This field is available in API versions 41.0 and later.
Title	Type string Properties Filter, Group, idLookup, Sort, Update Description The title of a document.

Usage

- Use this object to retrieve, query, update, and delete the latest version of a document in a library or a Salesforce file. Use the `ContentVersion` object to create, query, retrieve, search, edit, and update a specific version of a Salesforce CRM content document or Salesforce file.
- A document record is a container for multiple version records. You create a version to add a document to the system. The new version contains the actual file data which allows the document to have multiple versions. The version stores the body of the uploaded document.
- To create a document, create version via the `ContentVersion` object without setting the `ContentDocumentId`. This process automatically creates a parent document record. When adding a new version of the document, you must specify an existing `ContentDocumentId` which initiates the revision process for the document. When the latest version is published, the title, owner, and publish status fields are updated in the document.
- You can't add new versions of archived documents.
- When you delete a document, all versions of that document are deleted, including ratings, comments, and tags.
- A `ContentDocument` insert trigger executes when a file (`ContentDocument`) is added to the file library.
- A `ContentDocument` delete trigger executes when a file is deleted, but the cascaded `ContentDocumentLink` delete does not trigger `ContentDocumentLink` triggers.
- The `query()` call doesn't return archived documents. The `queryAll()` call returns archived documents.

- To query a file that is accessible only through a record share, you must specify the content ID of the file. When SOQL querying the `ContentDocument` object, the `ContentDocumentId` must be compounded by an AND operator.

For example,

```
SELECT Id, Title FROM ContentDocument
WHERE (Id = '<ContentDocumentId>' and Title LIKE '%<title>%')
```

```
SELECT Id, Title, MyCustomField_c FROM ContentDocument
WHERE (Id IN ('<Id1>', '<Id2>')) AND (Title LIKE '%<title1>%' OR (Title LIKE '%<title2>%'))
```

- If you query versions in the API, versions with a `PublishStatus` of `Upload Interrupted` are not returned.
- Assign topics to `ContentDocument` using `TopicAssignment` in API version 37.0 or later.

Associated Objects

This object has the following associated objects. Unless noted, associated objects are available in the same API version as this object.

[ContentDocumentChangeEvent](#) on page 68 (API version 55.0)

Change events are available for the object.

[ContentDocumentFeed](#) (API version 20.0)

Feed tracking is available for the object.

[ContentDocumentHistory](#)

History is available for tracked fields of the object.

SEE ALSO:

[ContentDocumentHistory](#)

[ContentVersion](#)

ContentDocumentHistory

Represents the history of a document. This object is available in versions 17.0 and later.

Supported Calls

`describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

- Customer and Partner Portal users must have the “View Content in Portal” permission to query content in libraries where they have access.
- A user can query all versions of a document from their personal library and any version that is part of or shared with a library where they are a member, regardless of library permissions.

Fields

Field	Details
ContentDocumentId	Type reference Properties Filter, Group, Sort Description ID of the document. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
DataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
Field	Type picklist Properties Filter, Group, Sort, Restricted picklist Description The name of the field that was changed. Possible values include: • <code>contentDocPublished</code>—The document is published into a library.

Field	Details
	• <code>contentDocUnpublished</code>—The document is archived or removed from a library, either directly or when the owning library is changed. • <code>contentDocRepublished</code>—The document is removed from the archive. • <code>contentDocFeatured</code>—The document is featured. • <code>contentDocSubscribed</code>—The document is subscribed to. • <code>contentDocUnsubscribed</code>—The document is no longer subscribed to.
NewValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
OldValue	Type anyType Properties Nillable, Sort Description The latest value of the field before it was changed.

Usage

Use this read-only object to query the history of a document.

SEE ALSO:

[ContentDocument](#)

ContentDocumentLink

Represents the link between a Salesforce CRM Content document, Salesforce file, or ContentNote and where it's shared. A file can be shared with other users, groups, records, and Salesforce CRM Content libraries. This object is available in versions 21.0 and later for Salesforce CRM Content documents and Salesforce Files.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- In API versions 59.0 and later, turn on the Query All Files permission to query without a filter on `id`, `LinkedEntityId`, and `documentID` fields. The View All Data permission is required to turn on Query All Files.
- In API versions 33.0 and later, you can create and delete ContentDocumentLink objects with a `LinkedEntityId` of any record type that can be tracked in the feed, even if feed tracking is disabled for that record type.
- In API versions 25.0 and later, you can create ContentDocumentLink objects with a `LinkEntityId` of type User, CollaborationGroup, or Organization.
- In API versions 21.0 and later, users with explicit Viewer access (the file has been directly shared with the user) to a file can delete ContentDocumentLink objects between the file and other users who have Viewer access. In the same API versions, any user with Viewer access to a file can delete ContentDocumentLink objects between the file and organizations or groups of which they're a member.
- For orgs with Digital Experiences enabled, a document can be shared with only users and groups that are a part of the Experience Cloud site the file was created in.

Fields

Field	Details
ContentDocumentId	Type reference Properties Create, Filter, Group, Sort Description ID of the document. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
LinkedEntityId	Type reference Properties Create, Filter, Group, Sort Description ID of the linked object. Can include Chatter users, groups, records (any that support Chatter feed tracking including custom objects), and Salesforce CRM Content libraries. Using the API only, you can relate notes to custom settings. This is a polymorphic relationship field.

Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentWorkspace, Contract, ConversationEntry, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EmailMessage, EmailTemplate, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, ListEmail, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, Organization, OtherComponentTask, OutgoingEmail, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember

Field	Details
ShareType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. The permission granted to the user of the shared file in a library. This is determined by the permission the user already has in the library. This field is available in API version 25.0 and later. V Viewer permission. The user can explicitly view but not edit the shared file. C Collaborator permission. The user can explicitly view and edit the shared file. You can retrieve the ShareType for ContentDocumentLink, but you can't create a ContentDocumentLink with a ShareType of C from an Apex trigger. I Inferred permission. The user's permission is determined by the related record. For shares with a library, this is defined by the permissions the user has in that library. Inferred permission on shares with libraries and file owners is available in API versions 21.0 and later. Inferred permission on shares with standard objects is available in API versions 36.0 and later. Inferred permission can't be used on shares with the Organization object.
Visibility	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies whether this file is available to all users, internal users, or shared users. This field is available in API version 26.0 and later. Valid values are: • AllUsers—The file is available to all users who have permission to see the file. • InternalUsers—The file is available only to internal users who have permission to see the file. • SharedUsers—The file is available to all users who can see the feed to which the file is posted. SharedUsers is used only for files shared with users, and is available only when an org has private org-wide sharing on by default. The SharedUsers value is available in API version 32.0 and later. Note the following exceptions for Visibility. • AllUsers & InternalUsers values apply to files posted on standard and custom object records, but not to users, groups, or content libraries. • For posts to a record feed, Visibility is set to InternalUsers for all internal users by default.

Field	Details
	- External users can set <code>Visibility</code> only to <code>AllUsers</code>. - On user and group posts, only internal users can set <code>Visibility</code> to <code>InternalUsers</code>. - For posts to a user feed, if the organization-wide default for user sharing is set to private, <code>Visibility</code> is set to <code>SharedUsers</code>. - Only internal users can update <code>Visibility</code>. <code>Visibility</code> can be updated on links to files posted on standard and custom object records, but not to users, groups, or content libraries. <code>Visibility</code> is updatable in API version 43.0 and later. The visibility setting on <code>ContentDocumentLink</code> determines a file's visibility on a record post. When a file has multiple references posted in a feed, the file's visibility is determined by the most visible setting.

Usage

Use this object to query the locations where a file is shared or query which files are linked to a particular location. For example, the following query returns a particular document shared with a Chatter group:

```
SELECT ContentDocument.title FROM ContentDocumentLink WHERE ContentDocumentId =
'069D00000000so2' AND LinkedEntityId = '0D5000000089123'
```

- You can't run a query without filters against `ContentDocumentLink`.
- You can't filter on `ContentDocument` fields if you're filtering by `ContentDocumentId`. You can only filter on `ContentDocument` fields if you're filtering by `LinkedEntityId`.
- You can't filter on the related object fields. For example, you can't filter on the properties of the account to which a file is linked. You can filter on the properties of the file, such as the title field.

A SOQL query must filter on one of `Id`, `ContentDocumentId`, or `LinkedEntityId`.

The `ContentDocumentLink` object supports triggers before and after these operations: insert, update, delete. A `ContentDocumentLink` trigger executes whenever there is an addition or deletion of the `ContentDocumentLink`. When a file is deleted, a `ContentDocument` delete trigger executes, but the cascaded `ContentDocumentLink` delete does not trigger `ContentDocumentLink` triggers.

Example: This trigger for the `ContentDocumentLink` object prevents public XLSX files from being shared.

```
trigger NoShareXLSX on ContentDocumentLink (after insert) {
    for (ContentDocumentLink cdl : trigger.new) {
        if (!CDLHelper.isSharingAllowed(cdl)) {
            cdl.addError('Sorry, you cannot share this file.');
        }
    }
}
```

The trigger calls this helper class.

```
public class CDLHelper {

    /**
     * Gets FileExtension of the inserted content.
```

```

    */
    public static String getFileExtension(ContentDocumentLink cdl) {
        String fileExtension;
        String docId = cdl.ContentDocumentId;
        FileExtension = [select FileExtension from ContentVersion where ContentDocumentId
= :docId].get(0).FileExtension;
        return FileExtension;
    }

    /**
     * Checks the file's PublishStatus and FileExtension to decide whether user can
share the file with others.
     * PublishStatus 'P' means the document is in a public library.
     */
    public static boolean isSharingAllowed(ContentDocumentLink cdl) {
        String docId = cdl.ContentDocumentId;
        ContentVersion version = [select PublishStatus,FileExtension from ContentVersion
where ContentDocumentId = :docId].get(0);
        if (version.PublishStatus.equals('P') && (version.FileExtension != null &&
version.FileExtension.equals('xlsx'))) {
            return false;
        }
        return true;
    }

    /**
     * Gets the parent account name if the file is linked to an account.
     */
    public static String getAccountName(ContentDocumentLink cdl) {
        String name;
        String id = cdl.LinkedEntityId;
        if (id.substring(0,3) == '001') {
            name = [select Name from Account where Id = :id].get(0).Name;
        }
        return name;
    }
}

```

 **Important:** Apex has a per organization limit of 10 concurrent requests that last longer than 5 seconds. A trigger that uploads files, like bulk `ContentVersion` creation, can easily hit the SOQL queries limit.

Associated Objects

This object has the following associated objects. Unless noted, associated objects are available in the same API version as this object.

ContentDocumentLinkChangeEvent on page 68 (API version 55.0)

Change events are available for the object.

SEE ALSO:

[ContentDocument](#)

ContentDocumentListViewMapping

Represents an association between a ListView and a Quip ContentDocument. Applies to Quip file types only. Maintains the mapping between a list view and Quip document when the list view is exported to a newly created Quip document. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To use this object, the Files Connect and Quip permissions must be enabled in the org.

To insert and update this object through the API, the QuipMassAction gater permission must also be enabled.

Fields

Field	Details
ContentDocumentId	Type reference Properties Create, Filter, Group, Sort Description ID of the document.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this document.
ListViewId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort
	Description ID of the list view associated with the document.
Name	Type string
	Properties Create, Filter, Group, idLookup, Sort, Update
	Description Name of the document.

Usage

ContentDocumentListViewMapping is used primarily by the Quip list view integration feature. Only Quip file types (Quip sheets and docs) are supported. The ContentDocumentId field must point to a Quip file.

ContentDocumentSubscription

Represents a subscription for a user following or commenting on a file in a library. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
ContentDocumentId	Type reference
	Properties Filter, Group, Sort
	Description ID of the file. This is a relationship field.

Field	Details
	Relationship Name ContentDocument
	Relationship Type Lookup
	Refers To ContentDocument
IsCommentSub	Type boolean
	Properties Defaulted on create, Filter, Group, Sort
	Description Specifies whether the user made comments on the file.
IsDocumentSub	Type boolean
	Properties Defaulted on create, Filter, Group, Sort
	Description Specifies whether the user follows the file.
UserId	Type reference
	Properties Filter, Group, Sort
	Description ID of the user following or commenting on the file. This is a relationship field.
	Relationship Name User
	Relationship Type Lookup
	Refers To User

ContentDocLinkEventLog

Content Document Link events contain sharing information for content documents. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>DocumentIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the document that's being shared.
<code>RequestIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
<code>SharedWithObjectIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description Who the document was shared with.
<code>SharingOperation</code>	Type string Properties Filter, Group, Nillable, Sort Description The type of sharing operation on the document. Possible Values • INSERT • UPDATE

Field	Details
	DELETE
SharingPermission	Type string Properties Filter, Group, Nillable, Sort Description What permissions the document was shared with. Possible Values ∇: Viewer - C: Collaborator ⌵: Inferred—that is, the sharing permissions were inferred from a relationship between the viewer and document. For example, a document’s owner has a sharing permission to the document itself. Or, a document can be a part of a content collection, and the viewer has sharing permissions to the collection rather than explicit permissions to the document directly.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who’s using Salesforce services through the UI or the API. For example: 005300000009M943

ContentFolder

Represents a folder in a content library for adding files. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Salesforce CRM Content or Chatter must be enabled to access ContentFolder.
- All users with a content feature license can modify folders in their personal library.
- To modify a folder, the user must be a member of the library and have permission to modify folders.

Fields

Field Name	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the folder.
ParentContentFolderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the ParentFolder. This is a relationship field. Relationship Name ParentContentFolder Relationship Type Lookup Refers To ContentFolder

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ContentFolderChangeEvent (API version 62.0)

Change events are available for the object.

ContentFolderItem

Represents a file (ContentDocument) or folder (ContentFolder) that resides in a ContentFolder in a ContentWorkspace. This object is available in API version 35.0 and later.

Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`

Special Access Rules

Fields

Field Name	Details
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the file or folder in bytes, when the size is smaller than 2 GB. In API version 66.0 and later, we recommend that you use the <code>ContentSizeLong</code> field even for files smaller than 2 GB.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the file or folder in bytes up to 10 GB. This field is available in API version 66.0 and later.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description Specifies the file extension if the ContentFolderItem is a file.
FileType	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description Specifies the type of file if the ContentFolderItem is a file.
IsFolder	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the ContentFolderItem is a folder, and not a file.
ParentContentFolderId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the ContentFolder that the ContentFolderItem resides in. This is a relationship field. Relationship Name ParentContentFolder Relationship Type Lookup Refers To ContentFolder
Title	Type string Properties Filter, Group, Sort Description The name of the file or folder.

ContentFolderLink

Defines the association between a library and its root folder. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Salesforce CRM Content must be enabled to access ContentFolderLink.
- ContentFolderLink is read-only in the context of a library.

Fields

Field Name	Details
ContentFolderId	Type reference Properties Filter, Group, Sort Description ID of the folder. This is a relationship field. Relationship Name ContentFolder Relationship Type Lookup Refers To ContentFolder
EnableFolderStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the status of enabling folders for the library. Valid values are: • C — Completed folder enablement • S — Started folder enablement • F — Failed folder enablement This field is available in API version 39.0 and later.
ParentEntityId	Type reference Properties Filter, Group, Sort

Field Name	Details
	Description Name of the entity the folder hierarchy is linked to.

ContentFolderMember

Defines the association between a file and a folder. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`, `update()`

Special Access Rules

- Salesforce CRM Content or Chatter must be enabled to access ContentFolderMember.
- All users with a content feature license can modify folders in their personal library.
- To modify ContentFolderMember, the user must be a member of the library and have permission to modify folders.

Fields

Field Name	Details
ChildRecordId	Type reference Properties Filter, Group, Sort Description ID of the file. This is a relationship field. Relationship Name ChildRecord Relationship Type Lookup Refers To ContentDocument
ParentContentFolderId	Type reference Properties Filter, Group, Sort, Update

Field Name	Details
	Description ID of the folder the file is in. This is a relationship field.
	Relationship Name ParentContentFolder
	Relationship Type Lookup
	Refers To ContentFolder

ContentHubItem

Represents a file or folder in a Files Connect external data source, such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

Special Access Rules

Chatter and Files Connect must be enabled for the organization.

Supported Calls

`describeSObjects()`, `query()`, `search()`

Fields

Field Name	Details
ContentHubRepositoryId	Type reference Properties Filter, Group, Nillable Description The ID for the related external data source described by the ContentHubRepository object.
ContentSize	Type long Properties Group, Nillable

Field Name	Details
	Description The size of the file or folder. Available in API version 65.0 and later.
ContentModifiedDate	Type dateTime Properties Nillable Description Date the file or folder content last changed.
ContentSize	Type int Properties Group, Nillable Description The size of the file or folder that's less than 2 GB.
Description	Type string Properties Filter, Group, Nillable Description Explanation of item in external data source.
ExternalContentUrl	Type url Properties Group, Nillable Description The URL of the document content in the external data source.
ExternalDocumentUrl	Type url Properties Group, Nillable Description The URL of the detail page in the external data source.
ExternalId	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description ID for the file or folder in the external data source.
FileExtension	Type string Properties Group, Nillable Description File format extension, such as .doc or .pdf
FileType	Type string Properties Group, Nillable Description Complete file type, such as "Microsoft Word Document."
IsFolder	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether item is a folder or file.
MimeType	Type string Properties Filter, Group, Nillable Description MIME type of the content.
Name	Type string Properties Filter, Nillable, Sort Description Name of the file or folder in the external data source.
Owner	Type string Properties Filter, Group, Nillable

Field Name	Details
	Description Username of the content owner in the external data source.
ParentId	Type string Properties Filter, Group, Nillable Description The ID of the parent folder for the record. This field isn't returned in queries or searches of the ContentHubItem object. It supports only WHERE clauses, such as the following: <code>WHERE ContentHubRepositoryId = <ID of external source> and ParentId = <ID of parent folder or record>.</code> Or specify <code>WHERE ParentId = <name of root folder></code> to return the children of the root folder.  Tip: The ParentId field supports both Salesforce IDs (in the format "0CHxxx") and external IDs.
Title	Type string Properties Group, Nillable Description The title that appears in the content, which often differs from the Name of the containing file or folder.
UpdatedBy	Type string Properties Group, Nillable Description Username for the person who last updated the file.

Usage

The following SOQL query examples show how to retrieve files and folders from a Files Connect external data source. These examples use placeholders for ID values for the repository ID and folder IDs. Before running these queries, replace the placeholders with valid ID values for your external data source and folders.

Important: You must filter queries and searches on ContentHubItem with the ContentHubRepositoryId field; for example, `SELECT Id FROM ContentHubItem WHERE ContentHubRepositoryId = <ID of external data source>`.

Example 1: Get the ID and name of the root folder in an external file source.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = NULL
```

Example 2: List all folders and files under the specified root folder.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = '<root folder ID>'
```

Example 3: List all external file data sources by querying ContentHubRepository.

```
SELECT DeveloperName
FROM ContentHubRepository
```

Example 4: List all files and folders in a given folder and external file source.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = '<parent folder ID>'
```

Example 5: To return only folders in the result set, add `IsFolder = true` in the `WHERE` clause to a query that returns files and folders. For example, the following query lists all folders under the root folder.

```
SELECT Id, Name
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND ParentId = '<root folder ID>'
      AND IsFolder = true
```

Example 6: Retrieve a link that is used to open the specified document in an external source.

```
SELECT ExternalDocumentUrl
FROM ContentHubItem
WHERE ContentHubRepositoryId = '<repository ID>' AND Id = '<document ID>'
```

SOSL Example: Retrieve the ID and name of all documents that contain the search string. The result set is limited to the first 10 documents.

```
FIND {<search string>}
RETURNING ContentHubItem(Id, Name
                        WHERE ContentHubRepositoryId = '<repository ID>')
LIMIT 10
```

ContentHubRepository

Represents a Files Connect external data source such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

Special Access Rules

Chatter and Files Connect must be enabled for the organization.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Master label for the external data source. This display value is the internal label and does not get translated.
Type	Type string Properties Filter, Group, Nillable, Sort Description The data source type. Possible values are: • <code>contenthubGoogleDrive</code> • <code>contenthubOffice365</code> • <code>contenthubOneDrive</code> • <code>contenthubSharepoint</code>

Field Name	Details
	• <code>contenthubBox</code> • <code>contenthubQuip</code>

ContentNote

Represents a note created with the enhanced note-taking tool, released in Winter '16. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

- Notes must be enabled.

Fields

Field	Details
<code>Content</code>	Type base64 Properties Create, Nillable, Update Description The content or body of the note, which can include properly formatted HTML or plain text. When a document is uploaded or downloaded via the API, it must be base64 encoded (for upload) or decoded (for download). Any special characters within plain text in the <code>Content</code> field must be escaped. You can escape special characters by calling <code>content.escapeHtml4()</code>. If the input contains unsafe HTML characters or new lines, we automatically strip them out before saving the content.
<code>ContentModifiedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date the document was modified. <code>ContentModifiedDate</code> updates when, for example, the document is renamed or a new document version is uploaded. This field is available in API version 48.0 and later.

Field	Details
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the note in bytes for notes smaller than 2 GB. In API version 66.0 and later, use the <code>ContentSizeLong</code> field.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the note in bytes, up to 10 GB. This field is available in API version 66.0 and later.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the note.
FileType	Type string Properties Filter, Group, Nillable, Sort Description Type of file for the note. All notes have a file type of <code>SNOTE</code>.
IsReadOnly	Type boolean Properties Defaulted on create, Group, Sort Description Indicates whether the note is read only.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date the note was last viewed. This field is available in API version 35.0 and later.
LatestContentId	Type reference Properties Filter, Group, Nillable, Sort Description Lookup to the note's ContentBody. This field is available in API version 52.0 and later. This is a relationship field. Relationship Name LatestContent Relationship Type Lookup Refers To ContentBody
LatestPublishedVersionId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the ContentVersion for the latest published version of the note.
OwnerId	Type reference Properties Create (for users assigned the Set Audit Fields Upon Creation permission), Defaulted on create, Filter, Group, Sort, Update (for users assigned the Set Audit Fields Upon Creation permission) Description ID of the owner of the note.
SharingPrivacy	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Controls sharing privacy for a file. Only Salesforce admins and file owners with Collaborator access to the file can modify this field. Default is <code>Visible to Anyone With Record Access</code> . When set to <code>Private on Records</code> , the file is private on records but can be shared selectively with others.

Field	Details
	This field is available in API versions 41.0 and later.
TextPreview	Type string Properties Filter, Group, Nillable, Sort Description A preview of the note's content. This field is available in API version 35.0 and later.
Title	Type string Properties Create, Filter, Group, idLookup, Namefield, Sort, Update Description Title of the note.

Usage

- Use ContentNote to create, query, retrieve, search, edit, and update notes.
- ContentNote is built on ContentVersion, and so it has many of the same usages.
- Not all fields can be set for notes. Only the `Content` and `Title` fields can be updated.
- The maximum file size that you can upload via the SOAP API is 50 MB. When a document is uploaded or downloaded via the API, it's converted to base64. This conversion increases the document size by approximately 37%. Account for the base64 conversion increase so that the file you plan to upload is less than 50 MB after conversion.
- You can convert old Note records to Lightning Experience, so users can view and edit notes from the Notes & Attachments related list in Lightning Experience. Users can edit their converted notes, which are accessible from the Notes related list and Notes tab. Copy old Note records to newly created ContentNote records. Users assigned the Set Audit Fields Upon Creation permission can set the owner, created date, and last modified date on ContentNote records.
- SOQL and SOSL queries on the ContentNote return only the most recent version of the note.
- To relate a note to a record, use [ContentDocumentLink](#). Review the `LinkedEntityID` field in [ContentDocumentLink](#) for a list of objects that notes can relate to.

For example, the following Apex code creates a note and escapes any special characters so they're converted to their HTML equivalents.

 **Note:** Apex code doesn't need to be encoded to base64 before it's uploaded and downloaded.

```
ContentNote cn = new ContentNote();
cn.Title = 'test1';
String body = 'Hello World. Before insert/update, escape special characters such as ", ',
    &, and other standard escape characters.';
cn.Content = Blob.valueOf(body.escapeHTML4());
insert(cn);
```

In this example, the following code creates a note using text that is already formatted as HTML, so it doesn't need to be escaped.

```
ContentNote cn = new ContentNote();
cn.Title = 'test2';
String body = '<b>Hello World. Because this text is already formatted as HTML, it does not
need to be escaped.
Special characters such as &quot;;, etc. must already use their HTML equivalents.</b>';
cn.Content = body;
insert(cn);
```

ContentNotification

Represents a notification for a file. This object is available in API version 42.0 and later.

Supported Calls

delete(), describeSObjects(), query(), retrieve()

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
EntityIdentifierId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the object with the notification.
EntityType	Type string Properties Filter, Group, Nillable, Sort Description Type of object with the notification. One of the following. - ContentDocument - ContentTagName - ContentVersion - ContentWorkspace - ContentWorkspacePermission

Field	Details
	User
Nature	Type string Properties Filter, Group, Nillable, Sort Description Type of notification.
Subject	Type textarea Properties Filter, Nillable, Sort Description Subject of the notification.
Text	Type textarea Properties Filter, Nillable, Sort Description Text of the notification.
UsersId	Type reference Properties Filter, Group, Sort Description ID of the user who received the notification. This is a relationship field. Relationship Name Users Relationship Type Lookup Refers To User

ContentTagSubscription

Represents a subscription for a user following a tag on a file. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
UserId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user following the tag on the file. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

ContentTaxonomy

Represents a content taxonomy, which is used to classify and organize Salesforce CMS content. To create a hierarchy of terms in a content taxonomy, use this object in addition to the `ContentTaxonomyTerm`, `ContentTaxonomyRelatedTerm`, and `ContentTaxonomyTermRelatedTerm` objects. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the content taxonomy. This description appears in the API and in the Content Taxonomy tab in the Digital Experiences App. The maximum length is 255 characters.
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The combined language and locale ISO code.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the content taxonomy.

SEE ALSO:

- [ContentTaxonomyRelatedTerm](#)
- [ContentTaxonomyTerm](#)
- [ContentTaxonomyTermRelatedTerm](#)
- [ContentTaxonomyTermRelationshipType](#)

ContentTaxonomyRelatedTerm

Represents the relationship between a term and the content taxonomy to which the term belongs. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

Fields

Field	Details
ContentTaxonomyId	Type reference Properties Create, Filter, Group, Sort Description The ID of the content taxonomy to which the term belongs. This field is a relationship field. Relationship Name ContentTaxonomy Relationship Type Lookup Refers To ContentTaxonomy object
ContentTaxonomyTermId	Type reference Properties Create, Filter, Group, Sort Description The ID of the term that belongs to the content taxonomy. This field is a relationship field. Relationship Name ContentTaxonomyTerm Relationship Type Lookup Refers To ContentTaxonomyTerm object

Usage

To include a term in a taxonomy, you must use this object in addition to the ContentTaxonomyTerm and ContentTaxonomy objects.

SEE ALSO:

- [ContentTaxonomy](#)
- [ContentTaxonomyTerm](#)

ContentTaxonomyTerm

Represents a term in a content taxonomy. Terms describe what content is or how it's used, and they're organized in parent-child relationships in the taxonomy hierarchy. This object is available in API version 63.0 and later.

Supported Calls

```
create(), delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(),
search(), undelete(), update(), upsert()
```

Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the content taxonomy term. This description appears in the API and in the Content Taxonomy tab in the Digital Experiences App. The maximum length is 255 characters.
DeveloperName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The unique name of the content taxonomy term in the API. This field is unique within your organization. The name: • must be 80 characters or fewer • must begin with a letter

Field	Details
	• can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The external ID of the content taxonomy term.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the content taxonomy term. The name must be between 2 and 255 characters long.

Usage

To include a term in a taxonomy, you must also use the objects `ContentTaxonomyRelatedTerm` and `ContentTaxonomy`. If you create only a `ContentTaxonomyTerm`, then the term isn't considered part of the taxonomy, and isn't visible. To relate this term to another term in your taxonomy, use the object `ContentTaxonomyTermRelatedTerm`.

SEE ALSO:

[ContentTaxonomy](#)

[ContentTaxonomyRelatedTerm](#)

[ContentTaxonomyTermRelatedTerm](#)

ContentTaxonomyTermRelatedTerm

Represents the relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled. To edit this object, users need View Content Taxonomy and Manage Content Taxonomy enabled.

Fields

Field	Details
ContentTaxonomyId	Type reference Properties Create, Filter, Group, Sort Description The ID of the content taxonomy to which the term belongs. This field is a relationship field. Relationship Name ContentTaxonomy Relationship Type Lookup Refers To ContentTaxonomy object
ContentTaxonomyTermId	Type reference Properties Create, Filter, Group, Sort Description The ID of the primary term that has a relationship with another term. This field is a relationship field. Relationship Name ContentTaxonomyTerm Relationship Type Lookup Refers To ContentTaxonomyTerm object
ContentTaxonomyTermRelaTypeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the type of relationship between the two taxonomy terms.

Field	Details
	This field is a relationship field. Relationship Name ContentTaxonomyTrmRelaType Relationship Type Lookup Refers To ContentTaxonomyTermRelationshipType object
RelatedContentTaxonomyTermId	Type reference Properties Create, Filter, Group, Sort Description The ID of the term that is related to the primary term. This field is a relationship field. Relationship Name RelatedContentTaxonomyTerm Relationship Type Lookup Refers To ContentTaxonomyTerm object

Usage

To relate a term to another term in a content taxonomy, use this object in addition to the ContentTaxonomyTerm object. This object can't be updated. You can only create and delete it.

SEE ALSO:
[ContentTaxonomyTerm](#)

ContentTaxonomyTermRelationshipType

Represents the type of relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To view this object, users need the permission View Content Taxonomy enabled.

Fields

Field	Details
ContentTaxonomyTrmRelaCatg	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Category of the relationship type. Possible values are: HasBroader
Description	Type textarea Properties Filter, Group, Nillable, Sort Description Description of the relationship type.
Name	Type string Properties Filter, Group, idLookup, Sort Description Name of the relationship type.

Usage

ContentTaxonomyRelationshipType can't be created, updated, or deleted. In API version 63.0, the default category for the relationship type is HasBroader.

ContentTransferEventLog

ContentTransferEventLog stores information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
DocumentIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the document that's being shared.
FilePreviewType	Type string Properties Filter, Group, Nillable, Sort Description The content type of the file preview.
FileSize	Type double Properties Filter, Nillable, Sort Description The size of rendition being added (bytes).
FileType	Type string Properties Filter, Group, Nillable, Sort Description The content type of the file version.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The operation that's being performed.

Field	Details
	Possible Values • meta_deploy • meta_list • meta_retrieve • meta_synchronous_create • meta_synchronous_read • meta_synchronous_upsert
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 18-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943YAS
VersionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the content version.

ContentUserSubscription

Represents a subscription for a user following another user. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
SubscribedToUserId	Type reference Properties Filter, Group, Sort Description ID of the user who is followed by another user. This is a relationship field. Relationship Name SubscribedToUser Relationship Type Lookup Refers To User
SubscriberUserId	Type reference Properties Filter, Group, Sort Description ID of the user who follows another user. This is a relationship field. Relationship Name SubscriberUser Relationship Type Lookup

Field	Details
	Refers To User

ContentVersion

Represents a specific version of a document in Salesforce CRM content or Salesforce Files. This object is available in versions 17.0 and later for Salesforce CRM content documents. This object is available in versions 20.0 and later for Salesforce Files.

The maximum number of versions that can be published in a 24-hour period is 200,000.

 **Note:** Depending on how files are shared, queries on `ContentDocument` and `ContentVersion` without specifying an ID don't return all files a user has access to. For example, if a user only has access to a file because they have access to a record that the file is shared with, the file won't be returned in a query such as "SELECT Id FROM ContentDocument."

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- All users with a content feature license can create versions in their personal library. Customer and Partner Portal users must also supply the `NetworkId` of the Experience Cloud site in the request.
- By default, users (including users with the "View All Data" permission) can only query files they have access to, including:
 - Salesforce Files in their personal library and in libraries they're a member of, regardless of library permissions (API version 17.0 and later).
 - Salesforce Files they own, shared directly with them, posted on their profile, or posted on groups they can see (API version 21.0 and later).

Enable the Query All Files permission to let your View All Data users bypass the restrictions on querying files.

 - Query All Files returns all files, including files in non-member libraries and files in unlisted groups.
 - Users can't edit, upload new versions, or delete files they don't have access to.
 - View All Data permission is required to enable Query All Files.
- All users can update versions in their personal library.
- The owner of a version or document can update the document if they're a member of the library, regardless of library permissions.
- To update a Salesforce CRM Content document, the user must be a member of the library with one of these library privileges enabled:
 - Add Content
 - Add Content On Behalf of Others
 - Manage Library
- Customer and Partner Portal users must have the View Content in Portal permission to query content in libraries where they have access.
- Customer and Partner Portal users can only publish, version, or edit documents if they have a Salesforce CRM Content feature license.
- `FileType` is defined by either `ContentUrl` for links or `PathOnClient` for documents, but not both.

- In API version 34.0 and later, any file can be shared with libraries, whether the file originated in Chatter or in Salesforce CRM Content.
- In API version 39.0 and later, custom Apex download handlers can be created that can control access to documents. See the [Apex Developer Guide](#) for more information.

Fields

Field	Details
Checksum	Type string Properties Filter, Group, Nillable, Sort Description MD5 checksum for the file.
ContentBodyId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Allows inserting a file version independently of the file blob being uploaded. This field is available for query and insert only. It can only point to a ContentBody record. This field is available in API version 40.0 and later. This is a relationship field. Relationship Name ContentBody Relationship Type Lookup Refers To ContentBody
ContentDocumentId	Type reference Properties Create, Filter, Group, Sort Description ID of the document. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup

Field	Details
	Refers To ContentDocument
ContentLocation	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description Origin of the document. Valid values are: • S—Document is located within Salesforce. Label is Salesforce. • E—Document is located outside of Salesforce. Label is External. • L—Document is located on a social network and accessed via Social Customer Service. Label is Social Customer Service. • SfDrive—For internal use only. • SCS—For internal use only.
ContentModifiedById	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user who modified the document. This is a relationship field. Relationship Name ContentModifiedBy Relationship Type Lookup Refers To User
ContentModifiedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description Date the document was modified. ContentModifiedDate updates when, for example, the document is renamed or a new document version is uploaded. When uploading the first version of a document, ContentModifiedDate can be set to the current time or any time in the past.

Field	Details
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the document in bytes for documents smaller than 2 GB. The value is zero for links. In API version 66.0 and later, we recommend that you use the <code>ContentSizeLong</code> field even for documents smaller than 2 GB.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the document in bytes up to 10 GB. The value is zero for links. This field is available in API version 66.0 and later.
ContentUrl	Type url Properties Create, Filter, Nillable, Sort, Update Description URL for links. This is only set for links. One of the fields that determines the <code>FileType</code>. The character limit in API versions 33.0 and later is 1,300. The character limit in API versions 32.0 and earlier was 255.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the content version.
Division	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North

Field	Details
	America," "Healthcare," or "Consulting." Available only if the org has the Division permission enabled.
ExternalDataSourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the external document referenced in the ExternalDataSource object. This is a relationship field. Relationship Name ExternalDataSource Relationship Type Lookup Refers To ExternalDataSource
ExternalDocumentInfo1	Type string Properties Create, Filter, Nillable, Sort, Update Description Stores the URL of the file in the external content repository. The integration from the external source determines the content for this string. After the reference or copy is created, the URL of the external file is updated when you: • Republish a file reference in Lightning Experience • Open the document • Create a file reference in the Connect REST API with <code>reuseReference</code> set to true. When the file is updated, the shared link is updated to the most current version.
ExternalDocumentInfo2	Type string Properties Create, Filter, Nillable, Sort, Update Description Contains the external file ID. Salesforce determines the content for this string, which is private. The content can change without notice, depending on the external system. After the file reference is created, this field isn't updated, even if the file path changes.
FeaturedContentBoost	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description Read only. Designates a document as featured.
FeaturedContentDate	Type date Properties Filter, Group, Nillable, Sort Description Date the document was featured.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the document. This field is available in API version 31.0 and later.
FileType	Type string Properties Filter, Group, Sort Description Type of content determined by <code>ContentUrl</code> for links or <code>PathOnClient</code> for documents.
FirstPublishLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the location where the version was first published. If the version is first published into a user's personal library or My Files, the field will contain the ID of the user who owns the personal library or My Files. In Lightning Experience, if the first version is published into a public library, the field will contain the ID of that library. Accepts all record IDs supported by <code>ContentDocumentLink</code> (anything a file can be attached to, like records and groups). Setting <code>FirstPublishLocationId</code> allows you to create a file and share it with an initial record/group in a single transaction, and have the option to create more links to share

Field

Details

the file with other records or groups later. When a file is created, it's automatically linked to the record, and PublishStatus will change to Public from Pending/Personal.

This field is only set the first time a version is published via the API.

FirstPublishLocationId can't be set to another ID when a new content version is inserted.

Note: Salesforce updates the FirstPublishLocationId updates automatically when a new OwnerId is added to the ContentVersion. For example, when you publish a new version with a different OwnerId than the current OwnerId, the FirstPublishLocationId of all previous versions updates to the previous OwnerId. The new published version sets the FirstPublishLocationId to the new OwnerId.

This is a polymorphic relationship field.

Field	Details
	PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
IsAssetEnabled	Type boolean Properties Create, Group, Defaulted on create Description Can be specified on insert of ContentVersion to automatically convert a ContentDocument file into a ContentAsset. This field can be SOQL queried, but it can't be edited. This field is available in API version 38.0 and later.
IsLatest	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this is the latest version of the document (<code>true</code>) or not (<code>false</code>).
IsMajorVersion	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description <code>true</code> if the document is a major version; <code>false</code> if the document is a minor version. Major versions can't be replaced.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language for this document. This field defaults to the org's default language unless the multi language setting is enabled.

Field	Details
	Specifies the language of the labels returned. The value must be a valid user locale (language and country), such as <code>de_DE</code> or <code>en_GB</code>. For more information on locales, see the Language field on the <code>CategoryNodeLocalization</code> object.
MalwareScanDate (Beta)	Type dateTime Properties Filter, Group, Nillable, Sort Description The date the document was scanned for malware. This field is available as a beta feature in API version 66.0 and later.  Note: The <code>MalwareScanDate</code> field is a pilot or beta service that is subject to the Beta Services Terms at Agreements - Salesforce.com or a written Unified Pilot Agreement if executed by Customer, and applicable terms in the Product Terms Directory. Use of this pilot or beta service is at the Customer's sole discretion.
MalwareScanStatus (Beta)	Type picklist Properties Filter, Group, Sort Description Indicates whether the document was scanned for malware and whether it's safe or malicious. This field is available in API version 66.0 and later. Valid values are: • <code>NotScanned</code>—The file hasn't yet been scanned for malware. This is the default value. • <code>Scheduled</code>—The file scan is in progress. • <code>Clean</code>—The file was scanned and doesn't contain malware. • <code>Malicious</code>—The file was scanned and it contains malware. • <code>Skipped</code>—The file can't be scanned because it's either larger than 100 MB or it's a Salesforce-generated file, such as a Content Note. • <code>Failed</code>—The file wasn't scanned because of an error.  Note: The <code>MalwareScanStatus</code> field is a pilot or beta service that is subject to the Beta Services Terms at Agreements - Salesforce.com or a written Unified Pilot Agreement if executed by Customer, and applicable terms in the Product Terms Directory. Use of this pilot or beta service is at the Customer's sole discretion.
NegativeRatingCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description Read only. The number of times different users have given the document a thumbs down. Rating counts for the latest version are not version-specific. If Version 1 receives 10 thumbs-down votes, and Version 2 receives 2 thumbs-down votes, the <code>NegativeRatingCount</code> on Version 2 is 12. However, rating counts are not retroactive for prior versions. The <code>NegativeRatingCount</code> on Version 1 is 10.
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Experience Cloud site that this file originated from. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. You can add a <code>NetworkId</code> only when creating a file. You can't change or add a <code>NetworkId</code> for an existing file.
Origin	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description The source of the content version. Valid values are: • C—Content document from the user's personal library. Label is Content. The <code>FirstPublishLocationId</code> must be the user's ID. If <code>FirstPublishLocationId</code> is left blank, it defaults to the user's ID. • H—Salesforce file from the user's My Files. Label is Chatter. The <code>FirstPublishLocationId</code> must be the user's ID. If <code>FirstPublishLocationId</code> is left blank, it defaults to the user's ID. Origin can only be set to H if Chatter is enabled for your organization. This field defaults to C. Label is Content Origin.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this document. This is a relationship field. Relationship Name Owner

Field	Details
	Relationship Type Lookup Refers To User
PathOnClient	Type string Properties Create, Filter, Nillable, Sort Description The complete path of the document. One of the fields that determines the <code>FileType</code>.  Note: Specify a complete path including the file extension in order for the document to be visible in the Preview tab.
PositiveRatingCount	Type int Properties Filter, Group, Nillable, Sort Description Read only. The number of times different users have given the document a thumbs up. Rating counts for the latest version are not version-specific. If Version 1 receives 10 thumbs-up votes, and Version 2 receives 2 thumbs-up votes, the <code>PositiveRatingCount</code> on Version 2 is 12. However, rating counts are not retroactive for prior versions. The <code>PositiveRatingCount</code> on Version 1 is 10.
PublishStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Indicates if and how the document is published. Valid values are: • <code>P</code>—The document is published to a public library and is visible to other users. Label is Public. • <code>R</code>—The document is published to a personal library and is not visible to other users. Label is Personal Library. • <code>U</code>—The document is not published because publishing was interrupted. Label is Upload Interrupted.
RatingCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description Read only. Total number of positive and negative ratings.
ReasonForChange	Type string Properties Create, Filter, Nillable, Sort, Update Description The reason why the document was changed. This field can only be set when inserting a new version (revising) a document.
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type of the version. Custom fields are restricted in <code>RecordTypeId</code>. When an administrator creates a custom field via the API it must be added to at least one page layout: • If the custom field is added to the page layout associated with the General record type, the <code>RecordTypeId</code> that corresponds to that record type does not have to be set on the version record. • If the custom field is added to the page layout associated with a custom record type, the <code>RecordTypeId</code> that corresponds to that record type must be set on the version record.
SharingOption	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Controls whether sharing is frozen for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is <code>Allowed</code>, which means that new shares are allowed. When set to <code>Restricted</code>, new shares are prevented without affecting existing shares. This field is available in API versions 35.0 and later.
SharingPrivacy	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Controls sharing privacy for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is <code>Visible to Anyone With Record Access</code>. When set to <code>Private on Records</code>, the file is private on records but can be shared selectively with others. This field is available in API versions 41.0 and later.
TagCsv	Type textarea Properties Create, Nillable, Sort, Update Description Text used to apply tags to a content version via the API.
TextPreview	Type string Properties Nillable, Filter, Group, Sort Description A preview of a document. Available in API version 35.0 and later.
Title	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The title of a document.
VersionData	Type base64 Properties Create, Nillable, Update Description The content or body of the note, which can include properly formatted HTML or plain text. When a document is uploaded or downloaded via the API, it should be base64 encoded (for upload) or decoded (for download). Any special characters within plain text in the <code>Content</code> field must be escaped. You can escape special characters by calling <code>content.escapeHtml4()</code>. This field can't be set for links.

Field	Details
	The maximum file size you can upload via the SOAP API is 50 MB. When a document is uploaded or downloaded via the API, it is converted to base64 and stored in <code>VersionData</code>. This conversion increases the document size by approximately 37%. Account for the base64 conversion increase so that the file you plan to upload is less than 50 MB after conversion. If a custom Apex download handler is active, this field is accessed from the API, and the download is not allowed, Salesforce will return a <code>CONTENT_CUSTOMIZED_DOWNLOAD_EXCEPTION</code> error.
VersionDataUrl	Type string Properties Filter, Group, Nillable, Sort Description The URL used to fetch a file from the binary data endpoint. This field is only populated on direct queries to ContentVersion, and not when queried through a related entity's foreign key to ContentVersion. If available, access preview images of a file by appending a <code>thumb</code> query parameter to this URL. For example: <pre>myContentVersion.VersionDataUrl + '?thumb=THUMB240BY180'</pre> Available <code>thumb</code> parameter values are: • <code>THUMB720BY480</code> — corresponds to the <code>big-thumbnail</code> preview format • <code>THUMB240BY180</code> — corresponds to the <code>thumbnail</code> preview format • <code>THUMB120BY90</code> — corresponds to the <code>tiny-thumbnail</code> preview format See File Preview in the <i>Connect REST API Developer Guide</i> for additional details about file previews. This field can't be set for links. This field is available in API versions 55.0 and later.
VersionNumber	Type string Properties Filter, Group, Nillable, Sort Description The version number. The number increments with each version of the document, for example, 1, 2, 3.

Usage

- Use this object to create, query, retrieve, search, edit, and update a specific version of a Salesforce CRM Content document or Salesforce file. Use the ContentDocument object to retrieve, query, update, and delete the latest version of a document, but not a content pack, in a library or a Salesforce file.
- Use this object to create, query, retrieve, search, edit, and update a specific version of a Salesforce file. Use the ContentDocument object to retrieve, query, update, and delete the latest version of a Salesforce file.
- To query a file that is shared only with a record, you must specify the content ID of the file.
- Not all fields can be set for Salesforce Files.
- You can only update a version if it is the latest version and if it is published.
- You can't archive versions.
- Using API version 32.0 and later, you can update record types on versions.
- You can't delete a version via the API.
- The maximum file size you can upload via the SOAP API is 50 MB. When a document is uploaded or downloaded via the API, it is converted to base64 and stored in `VersionData`. This conversion increases the document size by approximately 37%. Account for the base64 conversion increase so that the file you plan to upload is less than 50 MB after conversion.
- To download a document via the API, you must export the `VersionData` of the document. This does not increase the download count.
- When you upload a document from your local drive using the Data Loader, you must specify the actual path in both `VersionData` and `PathOnClient`. `VersionData` identifies the location and extracts the format and `PathOnClient` identifies the type of document being uploaded.
- SOQL queries on the ContentVersion object return all versions of the document. SOSL searches on the ContentVersion object return only the most recent version of the document.
- To query a file that is accessible only through a record share, you must specify the content ID of the file. When SOQL querying the ContentVersion object, either the `ContentVersionId` or the `ContentDocumentId` must be compounded by an AND operator.

For example,

```
SELECT FileExtension, Title FROM ContentVersion
WHERE (ContentDocumentId = '<ContentDocumentId>' or Id='<ContentVersionId>') and
IsLatest=true
```

```
SELECT Id, VersionData, FileExtension, Title FROM ContentVersion
WHERE ContentDocumentId='<ContentDocumentId>' AND FirstPublishLocationId =
'<FirstPublishLocationId>'
```

- If you query versions in the API, versions with a `PublishStatus` of `Upload Interrupted` are not returned.
- Documents published into a personal library assume the default record type that is set for the user profile of the person publishing the document (General, if no default is set for the user profile).

Note: An administrator can rename the default (*Content Version Layout*) page layout.

- Contact Manager, Group, Professional, Enterprise, Unlimited, and Performance Edition customers can publish a maximum of 200,000 new versions per 24-hour period. Developer Edition and trial users can publish a maximum of 2,500 new versions per 24-hour period.
- Custom validation rules can prevent an update of documents published into a personal library via the API.

Applying Tags to ContentVersion Records

Tags can be applied to ContentVersion records using either Enterprise or Partner API.

To apply tags to a ContentVersion record, set a value in the `TagCsv` field. For example, setting this field to `one,two,three` creates and associates three tags to that version.

- The maximum length of the `TagCsv` field is 2,000 characters.
- The maximum length of an individual tag is 100 characters.
- When tags are applied to a version, the content is indexed automatically and the tags are searchable.
- You can't apply tags to a `TagCsv` that is published into a personal library. You can apply tags to a `TagCsv` that's in a shared library or folder.
- You can't apply tags using the ContentDocument object.
- You can't change or delete tag names. You can remove tags from a document, but that doesn't delete the tag.
- Tags are case insensitive. You can't have two tags with the same name even if they use different uppercase and lowercase letters. The case of the original tag is always used.

To delete tags from a ContentVersion record, perform a standard API update, and remove any values from the `TagCsv` field that you want to delete. For example, if the original `TagCsv` is `one,two,three`, perform an API update specifying `one,three` in the `TagCsv` field to delete `two`. To delete all tags from a ContentVersion you perform a standard API update by setting the field to `null`.

If you create a ContentVersion record and want to revise it via the API, you insert another ContentVersion record but associate it to the same ContentDocument record as the original. This has an impact on tagging:

- If you insert the revision and do not set any value in the `TagCsv` field, any tags applied to the previous version are automatically applied to the new version.
- If you insert the revision and specify a new `TagCsv` field, no tags transfer over and the tags you specify are applied instead.

When you perform a SOQL query for a ContentVersion record and select the `TagCsv` field, all the tags associated with that record are returned. The tags in the string are always ordered alphabetically even if they were inserted in a different order. You can't use the `TagCsv` field as part of a filter in a SOQL query. You can't query all tags in your organization.

Library tagging rules:

- API tagging respects the tagging restrictions that exist on any library that the document is published into. For example, if the library is in restricted tagging mode and only allows tags `one,three`, you can't save a version with a `TagCsv` of `one,two,three`.
- If the library is in guided tagging mode, you can apply tags to the ContentVersion. You can't query the value of guided tags on a library, but you can query the tagging model of a library.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ContentVersionChangeEvent](#) on page 68 (API version 55.0)

Change events are available for the object.

[ContentVersionHistory](#)

History is available for tracked fields of the object.

SEE ALSO:

[ContentDocument](#)

[ContentVersionHistory](#)

ContentVersionComment

Represents a comment on a version of a file. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
ContentDocumentId	Type reference Properties Filter, Group, Sort Description ID of the file. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
ContentVersionId	Type reference Properties Filter, Group, Sort Description ID of the version of the file. This is a relationship field. Relationship Name ContentVersion Relationship Type Lookup

Field	Details
	Refers To ContentVersion
UserComment	Type textarea Properties Filter, Nillable, Sort Description ID of the user who commented on the file.

ContentVersionHistory

Represents the history of a specific version of a document. This object is available in version 17.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

- Customer and Partner Portal users must have the “View Content in Portal” permission to query content in libraries where they have access.
- A user can query all versions of a document from their personal library and any version that is part of or shared with a library where they are a member, regardless of library permissions.

 **Note:** To record an event in `contentVersionViewed`, make sure:

- All files are published to a Content Library.
- The details page is viewed in Salesforce Classic.

Fields

Field	Details
ContentVersionId	Type reference Properties Filter, Group, Sort Description ID of the version.

Field	Details
	This is a relationship field. Relationship Name ContentVersion Relationship Type Lookup Refers To ContentVersion
DataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
Field	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the field that was changed. Possible values include: • <code>contentVersionCreated</code>—A new version is created. • <code>contentVersionUpdated</code>—The title, description, or any custom field on the version is changed. • <code>contentVersionDownloaded</code>—A version is downloaded. • <code>contentVersionViewed</code>—The version details are viewed. • <code>contentVersionRated</code>—The version is rated. • <code>contentVersionCommented</code>—The version receives a comment. • <code>contentVersionDataReplaced</code>—The new version replaces the previous version, which can happen only when the new version is uploaded immediately after the previous version.

Field	Details
newValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
oldValue	Type anyType Properties Nillable, Sort Description The latest value of the field before it was changed.

Usage

Use this read-only object to query the history of a document version.

SEE ALSO:

[ContentVersion](#)

ContentVersionRating

Represents a rating on a version of a file. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
ContentVersionId	Type reference

Field	Details
	Properties Filter, Group, Sort Description ID of the version of the file. This is a relationship field. Relationship Name ContentVersion Relationship Type Lookup Refers To ContentVersion
Rating	Type int Properties Filter, Group, Nillable, Sort Description Rating of the file.
UserComment	Type textarea Properties Filter, Nillable, Sort Description Comment made by the user who rated the file.
UserId	Type reference Properties Filter, Group, Sort Description ID of the user who rated the file. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

ContentWorkspace

Represents a content library. This object is available in versions 17.0 and later.

 **Note:** This object doesn't apply to personal libraries.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

 **Note:** `create()`, `update()` and `delete()` on `ContentWorkspace` are supported in API version 40.0 and later only.

Special Access Rules

- The Access Libraries user permission allows orgs to make libraries available to users without requiring that they have the legacy Salesforce CRM Content license. This permission is available for profiles and permission sets on most standard user licenses, and isn't available for High Volume Customer Portal, Customer Community, or Chatter Free licenses. Available in API versions 40.0 and later.
- Users with the Create Libraries user perm or the Manage Salesforce CRM Content administrator permission can create libraries (ContentWorkspaces) from the Libraries tab in Salesforce Classic and from the API.
- Customer and Partner Portal users can only edit the library document object if they have a Salesforce CRM Content feature license.
- Customer and Partner Portal users can query this object if they have the "View Content in Portal" permission. A user can query all public libraries where they're members, regardless of library permissions.
- Automated process users can't publish documents to libraries (ContentWorkspaces).

Fields

Field	Details
<code>DefaultRecordTypeId</code>	Type reference Properties Filter, Group, Nillable, Sort Description ID of the default content type for the library. Content types are the containers for custom fields in Salesforce CRM Content.
<code>Description</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Text description of the content library.

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name of the library in the API. Allows a link to the library to be packaged when an asset file is added to a package. Although libraries aren't a packageable entity, references to libraries with a developer name will be included in the package when asset files are packaged. These links can then be restored in the target org. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Label is Unique Name. This field is available in API version 39.0 and later.
IsRestrictContentTypes	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. Indicates whether content types have been restricted (<code>true</code>) or not (<code>false</code>).
IsRestrictLinkedContentTypes	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. Indicates whether linked content types have been restricted (<code>true</code>) or not (<code>false</code>).
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the library.
NamespacePrefix	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The unique name of the library in the API. Allows a link to the library to be packaged when an asset file is added to a package. Limit: 15 characters. This field is available in API version 39.0 and later.
RootContentFolderId	Type reference Properties Filter, Group, Nillable, Sort Description ID of root folder of the library. This field is available in API version 39.0 and later.
ShouldAddCreatorMembership	Type boolean Properties Create, Defaulted on create, Group Description Automatically create a library membership for the user creating the library. Note this field isn't meant for query and always returns false in query. This field is available in API version 40.0 and later.
TagModel	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of tagging assigned to a library. Valid values are: • U — Unrestricted. No restrictions on tagging. Users can enter any tag when publishing or editing content. • G — Guided. Users can enter any tag when publishing or editing content, but they're also offered a list of suggested tags. • R — Restricted. Users must choose from a list of suggested tags.
WorkspaceImageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of a library image. Image files can be assigned to libraries for branding and easy identification. Library image is visible to all users, even if they aren't library members. This field is available in API version 43.0 and later. Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of a library image. Image files can be assigned to libraries for branding and easy identification. Library image is visible to all users, even if they are not library members. This field is available in API version 43.0 and later. This is a relationship field. Relationship Name WorkspaceImage Relationship Type Lookup Refers To ContentAsset
WorkspaceType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Differentiates between different types of libraries. Valid values are: • R — Regular library • B — Org asset library This field is available in API version 39.0 and later.

Usage

Use this object to query libraries to find out where documents can be published.

If the content type isn't specified when publishing a new version into a library, it is determined by the `DefaultRecordTypeId` of the primary library.

As of 40.0, you can create, update, or delete a library via the API.

SEE ALSO:

[ContentWorkspaceDoc](#)

ContentWorkspaceDoc

Represents a link between a document and a public library in Salesforce CRM Content. This object is available in versions 17.0 and later.

Note: This object does not apply to documents and versions in a personal library.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Customer and Partner Portal users must have the “View Content in Portal” permission in order to query and obtain content in libraries where they have access.
- Customer and Partner Portal users can only edit documents if they have a Salesforce CRM Content feature license.
- To create a ContentWorkspaceDoc, you must be a member of the library with one of these library privileges enabled:
 - “Add Content”
 - “Add Content On Behalf of Others”
 - “Manage Library”
- To query all library documents in a library, a user must be a member of that library, regardless of library permissions.

Fields

Field	Details
ContentDocumentId	Type reference Properties Create, Filter, Group, Sort Description Read only. ID of the library document. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
ContentWorkspaceId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description Read only. ID of the library. This is a relationship field. Relationship Name ContentWorkspace Relationship Type Lookup Refers To ContentWorkspace
IsOwner	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. Indicates whether the library owns the document and determines permissions for that document (<code>true</code>) or not (<code>false</code>). Documents can belong to more than one library, but only one library owns the document and determines its permissions.

Usage

- Use this object to link a document to one or more libraries.
- To share a document with additional libraries, create additional ContentWorkspaceDoc records which join the document to the additional libraries.
- Inserting a ContentWorkspaceDoc triggers the publish process for public libraries.
- A document can be published into many public libraries, but it will always be owned by one library which controls the security of the document.
- A document can only be published into the document owner's personal library. You can't publish into another user's personal library. Personal libraries are not visible via the API.
- To publish a document into a personal library, you must specify your user ID as the first publish location ID. If you leave the first publish location ID blank, it defaults to the current user's ID.
- A document can be published from a personal library into a public library, but once it has been published into the public library, it can't be published into the personal library again.
- You can't publish a document from a personal library into a public library that has restricted content types.
- You can't update or delete a library document via the API.

SEE ALSO:

[ContentWorkspace](#)

ContentWorkspaceMember

Represents a member of a content library. This object is available in API version 40.0 and later.

Manage library membership from the API.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

A user can create/update/delete memberships if they have the Manage Salesforce CRM Content admin perm or the Manage Library permission for the library concerned.

Fields

Field	Details
ContentWorkspaceId	Type reference Properties Create, Filter, Group, Sort Description ID of the library. This is a relationship field. Relationship Name ContentWorkspace Relationship Type Lookup Refers To ContentWorkspace
ContentWorkspacePermissionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The id of the library permission or role. This is a relationship field. Relationship Name ContentWorkspacePermission

Field	Details
	Relationship Type Lookup Refers To ContentWorkspacePermission
MemberId	Type reference Properties Create, Filter, Group, Namepointing, Sort Description ID of the library member (the member is either a user or a group). This is a polymorphic relationship field. Relationship Name Member Relationship Type Lookup Refers To Group, User
MemberType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of library member. Valid values are: • G - Group • U - User

Usage

Use this object to create, update, or delete members from a library.

ContentWorkspacePermission

Represents a library permission. This object is available in API version 40.0 and later.

A library permission is a group of privileges assigned to each content library member. It determines which tasks a member can perform in a particular library. The same user can have a different library permission in each of his or her libraries.

Note: Library permissions do not apply to personal libraries. All library users can save files in their personal libraries.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The ability to create permissions requires either the Manage Salesforce CRM Content admin perm or the Manage Content Permissions user perm.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description
Name	Type string Properties Create, Filter, Group, idLookup, Namefield, Sort, Update Description Name of the library.
PermissionsAddComment	Type boolean Properties Create, Filter, Update Description Permission for user to post comments to any content in the library and view all comments in the library. Users can edit or delete their own comments.
PermissionsAddContent	Type boolean Properties Create, Filter, Update Description Permission for user to publish new content to the library, upload new content versions, or restore archived (deleted) content. Content authors can also change any tags associated with their content and archive or delete their own content.

Field	Details
PermissionsAddContentOBO	Type boolean Properties Create, Filter, Update Description Permission for user to choose an author when publishing content in the library.
PermissionsArchiveContent	Type boolean Properties Create, Filter, Update Description Permission for user to archive and restore any content in the library.
PermissionsChatterSharing	Type boolean Properties Create, Filter, Update Description Permission for user to make content from this library accessible outside of the library, sharing with a record or in Chatter. From a record or from Chatter, select a file from the library and attach it to a record or a post.
PermissionsDeleteContent	Type boolean Properties Create, Filter, Update Description Permission for user to delete any content in the library. Authors can undelete their own content from the Recycle Bin.
PermissionsDeliverContent	Type boolean Properties Create, Filter, Update Description Permission for user to share content outside the org via a content delivery or public link.
PermissionsFeatureContent	Type boolean Properties Create, Filter, Update

Field	Details
	Description Permission for user to identify any content in the library as “featured.”
PermissionsManageWorkspace	Type boolean Properties Create, Filter, Update Description Permission for user to perform any action in the library. This privilege is required to edit a library’s name and description, add or remove library members, or delete a library. Manage Library is a super permission which provides all other permission options listed except Deliver Content. Creating a library requires the Manage Salesforce CRM Content app permission or Create Libraries system permission.
PermissionsModifyComments	Type boolean Properties Create, Filter, Update Description Permission for user to edit or delete comments made to any content in the library.
PermissionsOrganizeFileAndFolder	Type boolean Properties Create, Filter, Update Description Permission for user to create, rename, and delete folders in libraries.
PermissionsTagContent	Type boolean Properties Create, Filter, Update Description Permission for user to add tags when publishing content or editing content details in the library.
PermissionsViewComments	Type boolean Properties Create, Filter, Update Description Permission for user to view comments.

Field	Details
Type	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Provides the type of access a user has to a library. Valid values are: • Library Administrator • Author • Viewer • Custom

ContentWorkspaceSubscription

Represents a subscription for a user following a library. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Modify All Data permission have access to this object.

Fields

Field	Details
ContentWorkspaceId	Type reference Properties Filter, Group, Sort Description ID of the library. This is a relationship field. Relationship Name ContentWorkspace Relationship Type Lookup

Field	Details
	Refers To ContentWorkspace
UserId	Type reference Properties Filter, Group, Sort Description ID of the user following the library. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

ContextParamMap

Represents optional context data for a Conversation or a ConversationParticipant. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ContextEntityId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Conversation or ConversationParticipant record. This field is a polymorphic relationship field. Relationship Type Lookup Refers To Conversation, ConversationParticipant

Field	Details
MapKey	Type string Properties Filter, Group, Nillable, Sort Description The key for the context data.
MapValue	Type string Properties Filter, Nillable, Sort Description The value for the context data.

Contract

Represents a contract (a business agreement) associated with an Account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the Account associated with this contract. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account

Field	Details
ActivatedById	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the User who activated this contract. This field is a relationship field. Relationship Name ActivatedBy Relationship Type Lookup Refers To User
ActivatedDate	Type dateTime Properties Filter, Nillable, Sort, Update Description Date and time when this contract was activated.
ActivityMetricId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric. This field is a relationship field. Relationship Name ActivityMetric Refers To ActivityMetric
ActivityMetricRollupId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup. This field is a relationship field. Relationship Name ActivityMetricRollup Refers To ActivityMetricRollup
AggregationStrategy	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The aggregation strategy when creating a pricing contract. Valid value is <code>Cumulative</code>. This field is available with Revenue Cloud in API version 64.0 and later.
BillingAddress	Type address Properties Filter, Nillable Description The compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.
BillingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address. The maximum size is 40 characters.
BillingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address of this account. The maximum size is 80 characters.

Field	Details
BillingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the contract's billing address.
BillingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The accuracy of the geocode for the billing address. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
BillingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
<code>BillingPostalCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address of this account. The maximum size is 20 characters.
<code>BillingState</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address. The maximum size is 80 characters.
<code>BillingStateCode</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO state code for the contract's billing address.
<code>BillingStreet</code>	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street address for the billing address.
<code>CompanySignedDate</code>	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date your organization signed the contract.
<code>CompanySignedId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the user who signed the contract. This field is a relationship field. Relationship Name CompanySigned Relationship Type Lookup Refers To User
ContractNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Number of the contract.
ContractTerm	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of months that the contract is valid.
CustomerSignedDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the customer signed the contract.
CustomerSignedId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Contact who signed this contract. This field is a relationship field.

Field	Details
	Relationship Name CustomerSigned
	Relationship Type Lookup
	Refers To Contact
CustomerSignedTitle	Type string
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Title of the customer who signed the contract.
Description	Type textarea
	Properties Create, Nillable, Update
	Description Description of the contract.
EndDate	Type date
	Properties Filter, Group, Nillable, Sort,
	Description Read-only. Calculated end date of the contract. This value is calculated by adding the <code>ContractTerm</code> to the <code>StartDate</code> . If the Auto-calculate Contract End Date setting is disabled, the contract end date is editable.
HasContractCotermination	Type boolean
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates whether the contract can be coterminated (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> . This field is available with Revenue Cloud in API version 65.0 and later.
IsPricingContract	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the contract has related contract item prices (<code>true</code>) or if there are no contract item prices for the contract (<code>false</code>). This field is available with Revenue Cloud in API version 63.0 and later.
IsDeleted	Type boolean Properties Defaulted on create or filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). The label is Deleted.
LastActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Value is the most recent: • The due date of the most recent event is logged against the record. • The due date of the most recently closed task associated with the record.
LastApprovedDate	Type dateTime Properties Filter, Nillable, Sort Description Last date the contract was approved.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type datetime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>) but didn't view it.
OwnerExpirationNotice	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Number of days ahead of the contract end date (15, 30, 45, 60, 90, and 120). Used to notify the owner in advance that the contract is ending.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who owns the contract. This field is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
Pricebook2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the pricebook, if any, associated with this contract.
PricingSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Source of the pricing for the contract. Valid values are: • <code>LastTransaction</code> • <code>PriceBookListPrice</code>—Price Book or List Price Available in API version 60.0 and later.
<code>RecordTypeId</code>	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object.
<code>RenewalTerm2</code>	Type double Properties Create, Filter, Nillable, Sort, Update Description The default subscription term for renewals. For example, if the Renewal Term Unit is months and you want a 6-month term, set the Renewal Term to 6. Available in API version 60.0 and later.
<code>RenewalTermUnit</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The unit of time for a subscription term. Valid values are: • <code>Annual</code>—UI label is Years • <code>Months</code> • <code>Quarterly</code>—Available in API version 61.0 and later. • <code>Semi-Annual</code>—Available in API version 61.0 and later. Available in API version 60.0 and later.
<code>ShippingAddress</code>	Type address Properties Filter, Nillable

Field	Details
	Description The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
ShippingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. City maximum size is 40 characters.
ShippingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. Country maximum size is 80 characters.
ShippingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the contract's shipping address.
ShippingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The accuracy of the geocode for the shipping address. Valid values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State

Field	Details
	• Street • Unknown • Zip Available in API version 60.0 and later.
ShippingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
ShippingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
ShippingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. The postal code maximum size is 20 characters.
ShippingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. The maximum size for the state is 80 characters.
ShippingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO state code for the contract's shipping address.

Field	Details
ShippingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street address of the shipping address. The maximum size is 255 characters.
SourceQuoteId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the source quote associated with this contract. This field is available with Revenue Cloud in API version 64.0 and later. This field is a relationship field. Relationship Name Contract Relationship Type Lookup Refers To Quote
SpecialTerms	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Special terms that apply to the contract.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Start date for this contract. The label is Contract Start Date.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The picklist of values that indicate order status. Each value is within one of two status categories defined in <code>StatusCode</code>. For example, the status picklist may contain: Ready to Ship, Shipped, Received as values within the Activated <code>StatusCode</code>. Valid values are: - Activated - Draft - In Approval Process Available in API version 60.0 and later.
<code>StatusCode</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status category for the contract. A contract can be Draft, InApproval, or Activated. Label is Status Category. Valid values are: - Activated - Draft - InApproval Available in API version 60.0 and later.
<code>UnitPriceUplift</code>	Type percent Properties Create, Filter, Nillable, Sort, Update Description Indicates the percentage increase of a line item's unit price. This field is available with Revenue Cloud in API version 64.0 and later.

Usage

The Contract object represents a business agreement.

The `Status` field specifies the current state of a contract. Status strings (defined in the `ContractStatus` object) represent its current state (Draft, InApproval, or Activated).

Client applications must initially create a Contract in a non-Activated state. Client applications can subsequently activate a Contract by updating it and setting the value in its `Status` field to `Activated`; however, the `Status` field is the only field you can update when activating the Contract.

After a Contract has been activated, your client application can't change its status; however, before activation, your client application can change the status value from `Draft` to `InApproval` via the API. Also, your client application can delete contracts whose status is `Draft` or `InApproval` but not when a contract status is `Activated`.

Client applications can use the API to create, update, delete, and query any Attachment associated with a contract.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountChangeEvent (API version 46.0)

Change events are available for the object.

ContractFeed (API version 18.0)

Feed tracking is available for the object.

ContractHistory

History is available for tracked fields of the object.

SEE ALSO:

- [ContractContactRole](#)
- [ContractStatus](#)

ContractContactRole

Represents the role that a Contact plays on a Contract.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ContactId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the Contact associated with this Contract. This is a relationship field. Relationship Name Contact

Field	Details
	Relationship Type Lookup Refers To Contact
ContractId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Contract. This is a relationship field. Relationship Name Contract Relationship Type Lookup Refers To Contract
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted .
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether this Contact plays the primary role on this Contract (<code>true</code>) or not (<code>false</code>). Each contract has one primary contact role. Default is <code>false</code> . Labels is Primary .
Role	Type picklist Properties Create, Filter, Nillable, Group, Sort, Update

Field	Details
	Description Name of the role played by the Contact on this Contract, such as Decision Maker, Approver, Buyer, and so on. Must be unique—there can't be multiple records in which the <code>ContractId</code> , <code>ContactId</code> , and <code>Role</code> values are identical. Different contacts can play the same role on the same contract. A contact can play different roles on the same contract.

SEE ALSO:

[ContractStatus](#)

ContractLineItem

Represents a product covered by a service contract (customer support agreement). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AssetId</code>	Type reference Properties Create, Filter, Nillable, Update Description Required. ID of the Asset associated with the contract line item. Must be a valid asset ID.
<code>Description</code>	Type textarea Properties Create, Nillable, Update Description Description of the contract line item.
<code>Discount</code>	Type percent Properties Create, Filter, Nillable, Update

Field	Details
	Description The discount for the product as a percentage. When updating, if you specify <code>Discount</code> without specifying <code>TotalPrice</code>, the <code>TotalPrice</code> will be adjusted to accommodate the new <code>Discount</code> value, and the <code>UnitPrice</code> will be held constant. If you specify both <code>Discount</code> and <code>Quantity</code>, you must also specify either <code>TotalPrice</code> or <code>UnitPrice</code> so the system can determine which one to automatically adjust.
EndDate	Type date Properties Create, Filter, Nillable, Update Description The last day the contract line item is in effect.
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
LineItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Update Description Automatically-generated number that identifies the contract line item.
ListPrice	Type currency

Field	Details
	Properties Filter, Nillable Description Corresponds to the <code>UnitPrice</code> on the <code>PricebookEntry</code> that is associated with this line item, which can be in the standard pricebook or a custom pricebook. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the pricebook entry list price.
<code>LocationId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location associated with the contract line item. If you have access to the location entity, it doesn't necessarily mean you can access the location id field. To access the location, you must have <code>userHasLocation</code> user access.
<code>ParentContractLineItemId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The line item's parent line item, if it has one.
<code>PricebookEntryId</code>	Type reference Properties Create, Filter, Update Description Required. ID of the associated <code>PricebookEntry</code>. Only exists if <code>Product2</code> is enabled.
<code>Product2Id</code>	Type reference Properties Filter, Group, Nillable, Sort Description The product related to the contract line item.
<code>Quantity</code>	Type double

Field	Details
	Properties Create, Filter, Update Description Number of units of the contract line item (product) included in the associated service contract.
RootContractLineItemId	Type reference Properties Filter, Group, Nillable, Sort Description (Read only) The top-level line item in a contract line item hierarchy. Depending on where a line item lies in the hierarchy, its root could be the same as its parent.
ServiceContractId	Type reference Properties Create, Filter Description Required. ID of the ServiceContract associated with the contract line item. Must be a valid service contract ID.
StartDate	Type date Properties Create, Filter, Nillable, Update Description The first day the contract line item is in effect.
Status	Type picklist Properties Filter, Nillable Description Status of the contract line item.
Subtotal	Type currency Properties Filter, Nillable Description Contract line item's sales price multiplied by the <code>Quantity</code> .

Field	Details
TotalPrice	Type currency Properties Filter, Nillable Description This field is available only for backward compatibility. It represents the total price of the ContractLineItem. If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>UnitPrice</code> is required. This field is nillable, but you can't set both <code>TotalPrice</code> and <code>UnitPrice</code> to null in the same update request. To insert the <code>TotalPrice</code> for a contract line item via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity.
UnitPrice	Type currency Properties Create, Filter, Update Description The unit price for the contract line item. In the user interface, this field's value is calculated by dividing the total price of the contract line item by the quantity listed for that line item. Label is Sales Price. This field or <code>TotalPrice</code> is required. You can't specify both. If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>TotalPrice</code> is required.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ContractLineItemChangeEvent](#) (API version 44.0)

Change events are available for the object.

[ContractLineItemFeed](#)

Feed tracking is available for the object.

[ContractLineItemHistory](#)

History is available for tracked fields of the object.

ContractLineOutcome

Represents information on a contract line outcome's captured data and other related parameters that are used when capturing data. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Entitlements must be enabled.

Fields

Field	Details
CalculationMethod	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The method used for calculating the contract line outcome's captured data to determine the outcome value. Select Average or As Captured to calculate the contract line outcome. Average calculates the outcome value based on the average of all data captured to date. As Captured calculates the outcome value based on the asset's current data at the time of the compliance check. Possible values are: • AsCaptured • Average
CaptureFrequency	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The frequency at which data capturing and contract compliance check for the contract line outcome occurs. Possible values are: • Daily • Monthly • Weekly
ComplianceStatus	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates if the criteria were met. Compliant–The outcome is compliant with the contract. Not Compliant–The outcome isn’t compliant with the contract. Not Available–The outcome’s compliance information isn’t available yet. Invalid–The outcome isn’t valid because the option selected for the Criteria Field of the recordset filter criteria was deleted. To restart the calculation, create a new contract line outcome. Possible values are: - Compliant - Invalid - NotAvailable - NotCompliant The default value is NotAvailable.
ContractLineItemId	Type reference Properties Create, Filter, Group, Sort, Update Description The contract line item associated with the contract line outcome. This field is a relationship field. Relationship Name ContractLineItem Relationship Type Lookup Refers To ContractLineItem
Description	Type textarea Properties Create, Nillable, Update Description A description of the contract line outcome.
EndDate	Type dateTime Properties Create, Filter, Sort, Update

Field	Details
	Description The contract line outcome's data capture end date.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the contract line outcome was last modified. Its UI label is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the contract line outcome was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the contract line outcome.
NextDataCaptureDate	Type dateTime Properties Filter, Nillable, Sort Description The date of the next data capture and compliance check based on the capture frequency. The date is auto-populated and updated after each capture
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The contract line outcome's owner. By default, the owner is the user who created the contract line outcome record. Its UI label is Contract Line Outcome Owner. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
RecordsetFilterCriteriaId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the recordset filter criteria in which the contract line outcome's conditions are defined. This field is a relationship field.
	Relationship Name RecordsetFilterCriteria
	Relationship Type Lookup
	Refers To RecordsetFilterCriteria
ServiceContractId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The service contract associated with the contract line item and the contract line outcome. This field is a relationship field.
	Relationship Name ServiceContract
	Relationship Type Lookup
	Refers To ServiceContract
StartDate	Type dateTime
	Properties Create, Filter, Sort, Update

Field	Details
	Description The contract line outcome's data capture start date.

Usage

Use this object to define the data capture frequency and other related parameters that are used when capturing data in order to evaluate a service contract's compliance.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ContractLineOutcomeShare](#) on page 67

Sharing is available for the object.

SEE ALSO:

[ContractLineOutcomeData](#)

ContractLineOutcomeData

Represents the contract line outcome's captured data. It stores the data that was captured between the contract line outcome's start date and end date. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Entitlements must be enabled.

Fields

Field	Details
CalculatedValue	Type double Properties Filter, Nillable, Sort Description The value calculated based on the contract line outcome's calculation method and the captured data.
CaptureDate	Type dateTime Properties Create, Filter, Sort, Update Description The date and time when the data was captured.
ContractLineOutcomeId	Type reference Properties Create, Filter, Group, Sort Description The contract line outcome associated with the contract line outcome data record. This field is a relationship field. Relationship Name ContractLineOutcome Relationship Type Lookup Refers To ContractLineOutcome
KeyPerformanceIndicator	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The key performance indicators (fields or asset attributes) that define the contract line outcome's compliance status.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date and time when the contract line outcome data record was last modified. Its UI label is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the contract line outcome data record was last viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the contract line outcome data record.
Value	Type double Properties Create, Filter, Nillable, Sort, Update Description The actual value of the key performance indicator.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ContractLineOutcomeDataChangeEvent](#) on page 68

Change events are available for the object.

[ContractLineOutcomeDataOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[ContractLineOutcomeDataShare](#) on page 67

Sharing is available for the object.

ContractStatus

Represents the status of a Contract, such as Draft, InApproval, Activated, Terminated, or Expired.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this is the default contract status value (<code>true</code>) or not (<code>false</code>) in the picklist.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Label for this contract status value. This display value is the internal label that does not get translated.
SortOrder	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description Number used to sort this value in the contract status picklist. These numbers are not guaranteed to be sequential, as some previous contract status values might have been deleted.
StatusCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Code indicating the status of a contract. One of the following values: - Draft - InApproval - Activated Two other values (Terminated and Expired) are defined but are not available for use via the API.

Usage

This object represents a value in the contract status picklist. The contract status picklist provides additional information about the status of a Contract, such as its current state (Draft, InApproval, or Activated). You can query these records to retrieve the set of values in the contract status picklist, and then use that information while processing Contract objects to determine more information about a given contract. For example, the application could test whether a given contract is activated based on its Status value and the value of the StatusCode property in the associated ContractStatus object.

SEE ALSO:

[ContractContactRole](#)

ContractTag

Associates a word or short phrase with a Contract.

Supported Calls

create(), delete(), describeSOObjects(), query(), retrieve()

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

ContractTag stores the relationship between its parent TagDefinition and the Contract being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

ConvAnalysisSummary

Represents the information stored for each run or refresh of Sales Signals. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Users need the Sales Signals permission set and the Sales Signals feature must be enabled.

Fields

Field	Details
AnalysisDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the actual data analysis was done, accounting for the delay between the refresh start time and the data analysis.
DataModelVersion	Type string Properties Create, Filter, Group, Nillable, Sort Description The data model version generated by Hawking.
Error	Type textarea Properties Create, Nillable, Update Description The error message sent by Hawking when a refresh fails.
FlowIdentifier	Type string

Field	Details
	Properties Create, Filter, Group, Sort Description Required. The UUID used to track the Hawking flow ID.
RefreshDate	Type dateTime Properties Create, Filter, Sort Description Required. The date when the admin started the refresh of their ECI data for processing.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. The status of the refresh or run. Possible values are: • FAILED • PARTIALLY_FAILED • PROCESSING • SUCCESS
TotalCalls	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of calls that were analyzed for Sales Signals.
TotalMentions	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of mentions or keywords that were analyzed.

ConvAnalysisTopic

Represents a topic generated from the Sales Signals refresh or run. For example, a product experiencing issues due to high pricing could be a topic identified through the analysis of multiple calls. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Users need the Sales Signals permission set and the Sales Signals feature must be enabled.

Fields

Field	Details
CallPercentage	Type double Properties Create, Filter, Sort Description Required. The percentage of calls that apply to a topic, out of the total number of calls that were analyzed.
Category	Type string Properties Create, Filter, Group, Sort Description Required. A classification or grouping used to filter topics. This field is used in conjunction with <code>Keyword</code> .
ConvAnalysisSummaryId	Type reference Properties Create, Filter, Group, Sort Description Required. The conversation analysis summary associated with the topic. This field is a relationship field. Relationship Name ConvAnalysisSummary

Field	Details
	Relationship Type Master-detail Refers To ConvAnalysisSummary (the parent object)
GenerationsIdentifier	Type string Properties Create, Filter, Group, Sort Description Required. The ID used to track the LLM-generated response for feedback purposes.
Keyword	Type string Properties Create, Filter, Group, Sort Description Required. A specific word used in conjunction with <code>Category</code> to filter topics. For example, <code>Product : Salesforce</code> , where the keyword is Salesforce.
MentionCount	Type int Properties Create, Filter, Group, Sort Description Required. The number of call insights associated with the topic.
Order	Type int Properties Create, Filter, Group, Sort Description Required. A numerical value used to sort topics in a sequence.
Summary	Type textarea Properties Create, Update Description Required. A detailed explanation of the topic.

Field	Details
Title	Type string Properties Create, Filter, Group, Sort, Update Description Required. The title of the topic that describes it.
TopicSentiment	Type string Properties Create, Filter, Group, Nillable, Sort Description The sentiment of the topic, whether it's negative, neutral, or positive.
TotalCalls	Type int Properties Create, Filter, Group, Nillable, Sort Description The total number of calls analyzed for the topic.
TotalCallsForCategoryKeyword	Type int Properties Create, Filter, Group, Nillable, Sort Description The total number of calls analyzed for <code>category: keyword</code>. Multiple topics can be under a single <code>category: keyword</code>.
TotalMentionsForCategoryKeyword	Type int Properties Create, Filter, Group, Nillable, Sort Description The total number of mentions analyzed for <code>category: keyword</code>.
TurnIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description UUID that is generated and used to track a group of LLM-generated content.

ConvAnalysisTopicEntry

Represents a single entry under the ConvAnalysisTopic object. An entry represents a segment of a video or voice call that is associated with a conversation analysis topic. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Users need the Sales Signals permission set and the Sales Signals feature must be enabled.

Fields

Field	Details
BulletGenerationsIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort Description The generation ID used to track the LLM-generated response for feedback purposes.
CallId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The unique identifier of the voice or video call that corresponds to the entry. This field is a polymorphic relationship field. Relationship Name Call Refers To VideoCall, VoiceCall

Field	Details
ConvAnalysisTopicId	Type reference Properties Create, Filter, Group, Sort Description Required. The conversation analysis topic associated with the entry. This field is a relationship field. Relationship Name ConvAnalysisTopic Relationship Type Master-detail Refers To ConvAnalysisTopic (the parent object)
SnippetStartTime	Type double Properties Create, Filter, Nillable, Sort, Update Description The timestamp when the call is associated with the current topic entry.
Summary	Type textarea Properties Create, Nillable, Update Description The LLM-generated call summary that corresponds to the parent topic.

Conversation

Represents a conversation between an end user and an agent. Available in API version 49.0 and later.

Note: This object is available for Einstein Conversation Insights customers whose data is stored natively on the Salesforce Platform. If you turned on Einstein Conversation Insights for the first time starting in Spring '26, this object is available to query and access using Salesforce tools. For existing ECI customers, data migration and access to related Salesforce Platform objects is scheduled to begin in Summer '26.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ConversationChannelId	Type reference Properties Filter, Group, idLookup, Sort Description The record ID of the channel used to initialize the conversation. This can either be a messaging channel for the Messaging product or a call center for the Service Cloud Voice product. Available in API version 50.0 and later.
ConversationIdentifier	Type string Properties Filter, Group, idLookup, Sort Description A unique identifier generated for the conversation.
EndTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time that a conversation ends.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The autogenerated name of the conversation.
StartTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time that a conversation starts.

ConversationApiLog

Logs of an API operation on a specific conversation object done using the Conversation Service API. This object is available in API version 63.0 and later.

This object stores the logs of operations done on the [Conversation Service API](#). The Conversation Service API enables you to interact with conversational data on the Conversation Platform, offering tools to manage, access, and maintain your data effectively.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Action	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The specific action performed using the Conversation Service API. Possible values are: • Delete
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Autogenerated name of the logs.
Operation	Type string Properties Create, Filter, Group, Sort Description Name of the operation that triggered the Conversation Service API log.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Owner ID that triggered the Conversation API log. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
RequestedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The User ID that triggered the Conversation API log. This field is a relationship field. Relationship Name RequestedBy Refers To User
RequestedDate	Type dateTime Properties Create, Filter, Sort Description The date of the operation that triggered the Conversation API log.
RequestedEntityIdentifier	Type string Properties Create, Filter, Group, Sort Description The entity ID being created, updated, or deleted.
RequestedEntityType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of entity being created, updated, or deleted. Possible values are:

Field	Details
	• <code>MessagingEndUser</code>—Messaging End User
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the Conversation API operation. Possible values are: • <code>Completed</code> • <code>Enqueued</code> • <code>Failed</code> • <code>InProgress</code>—In Progress • <code>Requested</code>

ConversationContextEntry

Represents the context of a message or an event in the chat history between an agent and a messaging user. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
<code>ConversationContextEntryName</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The autogenerated number of the entry.

Field	Details
CustomDetailContextKey	Type textarea Properties Create, Nillable Description The key or name of the pre-chat field specified by the admin in the pre-chat implementation, for example, <code>customer_email</code>.
CustomDetailContextValue	Type textarea Properties Create, Nillable Description The value entered in the pre-chat field by a user before starting the chat.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The Conversation ID this entry is associated with.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ConversationContextChangeEvent (API version 62.0)

Change events are available for the object.

ConversationChannelDefinition

Represents a configurable definition of a conversation channel that's implemented for Interaction Service for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS messaging channels. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, interaction service must be configured. Access to standard objects requires Salesforce admin privileges or the Customize Application permission.

Fields

Field	Details
<code>CapabilitiesSupportsCustomChannelParameters</code>	Type boolean Properties Create, Filter, Update Description Indicates whether admins can configure custom parameters and parameter mappings for messaging channels. Custom parameters and parameter mappings are used to pass additional information at runtime to Omni-Channel flows. The default value is <code>false</code>. Available in API version 61.0.
<code>CapabilitiesSupportsDoubleOptInConsent</code>	Type boolean Properties Filter Description Indicates whether the channel supports (<code>true</code>) the Double Opt-In consent level. The default value is <code>false</code>. If set to true, then <code>capabilitiesSupportsExplicitConsent</code> must also be set to true. This field is optional and isn't supported for Bring Your Own Channel for Messaging. It's only supported for Bring Your Own Channel for CCaaS.
<code>CapabilitiesSupportsExplicitConsent</code>	Type boolean Properties Filter Description Indicates whether the channel supports (<code>true</code>) the Explicit Opt-In consent level. This field is optional.
<code>CapabilitiesSupportsImplicitConsent</code>	Type boolean Properties Filter Description Indicates whether the channel supports (<code>true</code>) the Implicit Opt-In consent level. This value is required and must always be set to true. The default value is false.

Field	Details
CapabilitiesSupportsIsoCountryCode	Type boolean Properties Filter Description Indicates whether the channel supports (<i>true</i>) ISO country codes. The default value is false.
CapabilitiesSupportsKeywords	Type boolean Properties Filter Description Indicates whether the channel supports (<i>true</i>) keywords. The default value is false.
ConnectedAppOAuthLink	Type string Properties Filter, Group, Sort Description DO NOT SET OR CHANGE THIS VALUE. This value is automatically generated. This field represents the OAuth link for the external client app (ECA) or connected app if the ConnectedAppType is <i>Partner</i>. This is a string identifier to the ECA or connected app containing the partner Org ID and the consumer ID minus the key prefixes.
ConnectedAppType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The owner of the external client app (ECA) or connected app used to manage authentication between Salesforce Interaction Service and the Messaging or CCaaS partner's system. Possible values are: • <i>Partner</i> • <i>Customer</i> The default value is <i>Partner</i>. If set to <i>Partner</i>, the partner creates the ECA or connected app and includes it in their managed package. If set to <i>Customer</i>, the admin creates the ECA or connected app. Available in API version 62.0.
ConsentOwner	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The system the customer uses to manage consent levels. Possible values are: • Partner • Salesforce The default value is <i>Salesforce</i>. For example, if set to <i>Salesforce</i>, consent levels are managed by the Salesforce system. If set to <i>Partner</i>, consent levels are managed by the partner's telephony system. For Bring Your Own Channel for Messaging, this value must be set to <i>Salesforce</i>.
ConversationVendorInfoId	Type reference Properties Filter, Group, Nillable, Sort Description The <i>ConversationChannelDefinition.ConversationVendorInfoId</i> value used to link this record to the ConversationVendorInfo record. For example, 0m8000000000000123. This field is a relationship field. Relationship Name ConversationVendorInfo Relationship Type Lookup Refers To ConversationVendorInfo
customEventChnlAddrIdField	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The mapping field that points to the custom field used to point to the <i>ChannelAddressIdentifier</i> field. This field is deprecated in API version 60.0 and will be removed in API version 61.0. Use a combination of <i>customEventTypeField</i> and <i>customEventPayloadField</i> instead.
CustomEventPayloadField	Type picklist

Field	Details
	Properties Filter, Group, Restricted picklist, Sort Description The mapping field that points to the custom field used to point to the <code>Payload</code> field in the format <code><orgNamespace>__<CustomFieldName>__c</code>. This is the API name of the custom Payload field in the custom platform event. For example, <code>devorg__Payload__c</code>.
<code>customEventRecipientField</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The mapping field that points to the custom field used to point to the Recipient field. This field is deprecated in API version 60.0 and will be removed in API version 61.0. Use a combination of <code>customEventTypeField</code> and <code>customEventPayloadField</code> instead.
<code>CustomEventTypeField</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The mapping field that points to the custom field used to point to the Platform event type (EventType) field, in the format <code><orgNamespace>__<CustomFieldName>__c</code>. This is the API name of the custom EventType field in the custom platform event. For example, <code>devorg__EventType__c</code>.
<code>CustomIconId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description For Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS, this field represents the name of the status resource image used to identify the channel integration, such as a channel logo. For the best results, set the image size to 50px x 50px and save the image in SVG file format. This field is optional. Available in API version 61.0 and later. This field is a relationship field. Relationship Name CustomIcon Relationship Type Lookup

Field	Details
	Refers To StaticResource
CustomPlatformEvent	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The API name of the custom platform event created for the Interaction Service API in the format <code><orgNamespace>__<CustomPlatformEventName>__e</code> . For example, <code>devorg__TestEvent__e</code> .
CustomerConnectedAppOAuthLink	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description DO NOT SET OR CHANGE THIS VALUE. This value is automatically generated. This field represents the OAuth link for the external client app or connected app created by an admin if the ConnectedAppType is <code>Customer</code> . Available in API version 62.0.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the custom metadata type object in the API in the format <code><Prefix>_<ConversationChannelDefinition></code> , where <i>Prefix</i> matches the prefix you gave to the name of the Interaction Service external client app or connected app. For example, <code>Partner1_ChannelDefinition1</code> , where <code>Partner1</code> is the prefix and <code>ChannelDefinition1</code> is the given name.
ExtCapabilitiesInboundAckOptInExposed	Type boolean Properties Create, Filter, Update Description Indicates whether the partner supports read receipts and delivery receipts for inbound messages (<code>true</code>) or whether the partner doesn't support these inbound acknowledgments and the functionality is hidden from the Salesforce admin in the Messaging settings (<code>false</code>). The default value is <code>false</code> . This field is available in API version 65.0 and later. Use this field instead of <code>IsInboundReceiptsEnabled</code> .

Field	Details
EventCapabilitiesProgressIndicatorExposed	Type boolean Properties Create, Filter, Update Description Indicates whether the partner supports progress indicators for AI agents (<code>true</code>) or whether the partner doesn't support them and the functionality is hidden from the Salesforce admin in the Messaging settings (<code>false</code>). The default value is <code>false</code>. This field is available in API version 65.0 and later.
EventCapabilitiesRoutingWorkResultSupported	Type boolean Properties Create, Filter, Update Description Indicates whether the Routing Work Result event is sent as a Custom Platform event (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is available in API version 65.0 and later. Use this field instead of <code>IsRoutingWorkResultEnabled</code>.
EventCapabilitiesTypingIndicatorOptionHidden	Type boolean Properties Create, Filter, Update Description Indicates whether the partner doesn't support typing indicators for outbound messages and the functionality is hidden from the Salesforce admin in the Messaging settings (<code>true</code>) or whether outbound typing indicators are supported by the partner (<code>false</code>). The default value is <code>false</code>, meaning the outbound typing indicator feature is supported by default. To disable the outbound typing indicator feature, set this value to <code>true</code>. This field is available in API version 65.0 and later. Use this field instead of <code>IsTypingIndicatorDisabled</code>.
IsConferenceSupported	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the partner supports conferencing for Bring Your Own Channel (<code>true</code>), or not (<code>false</code>). With conferencing, more than two participants are allowed in a Messaging session. The default is <code>false</code>. This field is available in API version 64.0 and later.

Field	Details
IsInboundReceiptsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the partner supports read receipts and delivery receipts for inbound messages (<code>true</code>) or whether the partner doesn't support these inbound acknowledgements and the functionality is hidden from the Salesforce admin in the Messaging settings (<code>false</code>). The default value is <code>false</code>. Available in API versions 63.0 to 65.0. In API version 66.0 and later, this field is removed. Use <code>EventCapabilitiesIsInboundAcknwOptionExposed</code> instead.
IsRoutingWorkResultEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the Routing Work Result event is sent as a Custom Platform event or not. The default value is <code>false</code>. Available in API versions 64.0 and 65.0. In API version 66.0 and later, this field is removed. Use <code>EventCapabilitiesIsRoutingWorkResultSupported</code> instead.
IsTypingIndicatorDisabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the partner doesn't support typing indicators for outbound messages and the functionality is hidden from the Salesforce admin in the Messaging settings (<code>true</code>) or whether outbound typing indicators are supported by the partner (<code>false</code>). The default value is <code>false</code>, meaning the outbound typing indicator feature is supported by default. To disable the outbound typing indicator feature, set this value to <code>true</code>. Available in API versions 63.0 to 65.0. In API version 66.0 and later, this field is removed. Use <code>EventCapabilitiesIsTypingIndicatorOptionHidden</code> instead.
MasterLabel	Type string Properties Filter, Group, Sort

Field	Details
	Description The UI label name for the custom metadata type object in the API. This name appears in several places in the UI, so include the partner channel name for easy identification. For example, Channel Definition 1.
MaxParticipantsForCnfrOverride	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the limit for how many participants can be in a messaging conference. If set, this field overrides the platform limit for the number of participants in a conference. If not set or if set to a value higher than the messaging platform limit, the limit defaults to the messaging platform limit of how many participants can be in a messaging conference at one time. This field is available in API version 64.0 and later.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <i>NamespacePrefix</i> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <i>NamespacePrefix</i> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <i>NamespacePrefix</i> is null if the publisher is Salesforce.
RoutingOwner	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The system the customer uses to manage routing for Bring Your Own Channel for Messaging or Bring Your Own Channel for CCaaS.

Field	Details
	Possible values are: • <code>Partner</code> • <code>Salesforce</code> The default value is <code>Salesforce</code>. For example, if set to <code>Salesforce</code>, routing is managed by the Salesforce system. If set to <code>Partner</code>, routing is managed by the partner's system. For Bring Your Own Channel for Messaging, this value must be set to <code>Salesforce</code>.

ConversationEntry

Represents a message or event in a voice call or messaging session. The schema on this page only applies to conversation entries for legacy chat. Refer to the ConversationEntry (Off-Core) schema in the [Messaging Object Model](#) guide to see the ConversationEntry schema for Enhanced Channels. This object is available in API version 43.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To use the ConversationEntry object, enable the Access Conversation Entries user permission, which is available in API version 50.0 and later. Earlier versions do not require permissions.

Fields

Field	Details
<code>ActorId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the author. The possible values can be <code>null</code> or any ID in the following domain set: • <code>BotDefinition</code> • <code>LiveChatVisitor</code> • <code>MessagingEndUser</code> • <code>User</code> This is a polymorphic relationship field.

Field	Details
	Relationship Name Actor
	Relationship Type Lookup
	Refers To MessagingEndUser, User
ActorName	Type string
	Properties Create, Filter, Nillable, Sort
	Description The name of the author sending the message or event.
ActorType	Type picklist
	Properties Create, Filter, Group, Restricted picklist, Sort
	Description The author of this entry in the chat history. The valid values include: • Agent • Bot • EndUser • Supervisor • System
ClientDuration	Type int
	Properties Create, Filter, Group, Nillable, Sort
	Description The length in milliseconds for the entry. This field is used with voice messages and other applicable use cases. This value may be 0 if not set by the client. This field is available in API version 51.0 and later.
ClientTimestamp	Type dateTime
	Properties Create, Filter, Nillable, Sort

Field	Details
	Description The timestamp sent by the client when it generated the entry. This field is available in API version 51.0 and later.
ConversationId	Type reference Properties Create, Filter, Group, Sort Description The MessagingSession ID this entry belongs to. This is a polymorphic relationship field. Relationship Name Conversation Relationship Type Lookup Refers To MessagingSession, VoiceCall
EntryEndTime	Type datetime Properties Create, Filter, Nillable, Sort Description The timestamp that this entry ended in the chat history. This field is available in API version 48.0 and later.
EntryTime	Type datetime Properties Create, Filter, Sort Description The timestamp of this entry in the chat history.
EntryTimeMillisecs	Type int Properties Create, Filter, Group, Nillable, Sort Description The milliseconds value for the time when an entry was received by the server. Note that the related <code>EntryTime</code> field does not provide millisecond accuracy. This field is available in API version 51.0 and later.

Field	Details
EntryType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of entry in the chat history. Can be a message (<code>text</code>) or an event. The possible values include: • <code>Text</code> • <code>AdminOptedIn</code> • <code>AdminOptedOut</code> • <code>BotEscalated</code> • <code>ChatbotClosedIdleSession</code> • <code>ChatbotEndedChatByAction</code>—Conversation ended by automated action • <code>ChatbotEndedTransferNotConfigured</code>—Conversation ended because transfer fail is not configured • <code>ChatbotEstablished</code> • <code>ChatbotNotEstablished</code> • <code>EndUserOptedIn</code> • <code>EndUserOptedOut</code>
HasAttachments	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether a message has attachments associated with it (<code>true</code>) or not (<code>false</code>).
Message	Type textarea Properties Create, Nillable Description The message or event sent by the author. In ConversationEntry records for enhanced Messaging channels or Messaging for In-App and Web, the Message field is blank due to data storage differences from standard channels.
MessageDeliverTime	Type datetime Properties Create, Filter, Nillable, Sort

Field	Details
	Description Unused field reserved for future use.
MessageIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort Description The unique ID for the message. Maximum size is 36 characters.
MessageReadTime	Type datetime Properties Create, Filter, Nillable, Sort Description Unused field reserved for future use.
MessageSendTime	Type datetime Properties Create, Filter, Nillable, Sort Description Unused field reserved for future use.
MessageStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The status of the message sent by the author. The valid values include: • Delivered • Error • Pending • Read • Sent
MessageStatusCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The code associated with a message status. <code>MessageStatusCode</code> is only populated when a message is undeliverable
Seq	Type int Properties Create, Filter, Group, Sort Description The sequence position of this entry in the chat history.
ServerReceivedTimestamp	Type dateTime Properties Create, Filter, Nillable, Sort Description The timestamp recorded when the server received the entry. This is a unique value and is used for ordering. This value can also be referred to as the “transcripted timestamp.” This field is available in API version 51.0 and later.

Usage

 **Important:** The schema on this page only applies to conversation entries for legacy chat. The legacy chat product is in maintenance-only mode, and we won't continue to build new features. Refer to the [ConversationEntry \(Off-Core\)](#) schema in the [Messaging Object Model](#) guide to see the ConversationEntry schema for Enhanced Channels.

In standard SMS, WhatsApp, and Facebook Messenger channels, a ConversationEntry record is created for each message sent by a messaging end user or an agent, bot, or automation. Each ConversationEntry record is associated with a MessagingSession record, which represents the interaction between the messaging end user and the business. Access and work with ConversationEntry records like any standard object. You can report on messaging activity and track the conversation workflow end to end. You can also download or delete transcripts, redact sensitive text, and customize your workflows with solutions built on the ConversationEntry object.

In enhanced Messaging channels, Messaging for In-App and Web, and Service Cloud Voice (“enhanced channels”), inbound and outbound messages are processed in one of two ways depending on your location.

- A ConversationEntry record is created but the `Message` field is blank, or
- No ConversationEntry record is created.

To get the fullest picture of conversations in enhanced channels, use Data Cloud, the Connect REST API, or the Conversation Transcript Export tool to access transcripts. See [Accessing Messaging and Voice Conversation Data](#).

 **Note:** ConversationEntry records aren’t created until the messaging session ends and the agent closes the session tab. One exception is for the first message in any standard messaging session, whose ConversationEntry record is created immediately.

ConversationParticipant

Represents an active participant in a conversation. A new ConversationParticipant record is created each time a participant joins a conversation. This object is available in API version 49.0 and later.

Note: This object is available for Einstein Conversation Insights customers whose data is stored natively on the Salesforce Platform. If you turned on Einstein Conversation Insights for the first time starting in Spring '26, this object is available to query and access using Salesforce tools. For existing ECI customers, data migration and access to related Salesforce Platform objects is scheduled to begin in Summer '26.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
AppType	Type string Properties Filter, Group, Nillable, Sort Description The type of app used by the participant, such as messaging, chatbot, live_message, agent. The nillable property is available in API version 51.0 and later.
ConversationId	Type reference Properties Filter, Group, Nillable, Sort Description The record ID of the conversation that this participant is part of.
JoinedTime	Type dateTime Properties Filter, Sort Description The date and time that a participant joined a conversation.
LastActiveTime	Type dateTime Properties Filter, Sort

Field	Details
	Description The date and time that a participant was last active during a conversation.
LeftTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time that a participant left a conversation.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The autogenerated name of the conversation participants.
ParticipantContext	Type string Properties Filter, Group, Nillable, Sort Description An identifier, such as a Facebook page, to add context about this participant.
ParticipantEntityId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the record connected to this participant record, such as a Contact, Messaging End User, or User record.
ParticipantKey	Type string Properties Filter, idLookup, Group, Nillable, Sort Description A value that uniquely identifies this participant.
ParticipantRole	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The role of this participant in the conversation, such as Agent, End User, or Supervisor.

ConvIntelligenceSignalRule

Represents a conversation intelligence signal rule. The rule triggers actions based on real-time intelligence signals from your telephony system or keywords mentioned by support reps or customers. The rule contains a set of conditions (subrules) and the filter logic used to evaluate those conditions to determine whether to trigger actions. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This type requires an add-on license for Service Cloud Voice for Amazon Connect, Service Cloud Voice for Partner Telephony with Amazon Connect, Service Cloud Voice for Partner Telephony, or Digital Engagement.

Fields

Field	Details
ActionType	Type picklist
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description Required. Action to take based on the conversation intelligence signal detected during a conversation. Possible values are: Possible values are: - AlertSupervisor—Sends an alert to the supervisor. - AlertSupervisorAndAgent—Sends an alert to the rep and supervisor. - LaunchFlow—Triggers an auto-launched flow. If set, also set <code>ActionValue</code>. - LaunchNBA—Recommends the next best action to the rep.
ActionValue	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Action to perform based on the <code>ActionType</code> specified. If <code>ActionType</code> is set to <code>LaunchFlow</code>, this value is the <code>DeveloperName</code> of the flow to be launched. For example, <code>EmailAlert</code>. For all other <code>ActionType</code> values, don't set this parameter.
<code>ConversationChannelId</code>	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID (<code>ChannelAddressIdentifier</code>) of the Messaging channel or name (<code>InternalName</code>) of the Voice channel. This field is a polymorphic relationship field. Relationship Name ConversationChannel Refers To CallCenter, MessagingChannel
<code>Criteria</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Filter logic applied to the rule conditions (subrules). For example, <code>((1 AND 2) OR 3)</code>. The numbers in the formula are derived from the <code>ConvIntelligenceSignalSubrule.Order</code> value plus 1. For example, filter logic <code>(1 AND 2)</code> is calculated by adding the first condition (<code>Order=0</code>) with the second condition (<code>Order=1</code>).
<code>DeveloperName</code>	Type string Properties Required. Create, Filter, Group, Sort, Update Description API name of the conversation intelligence signal rule.
<code>IsActive</code>	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. Indicates whether the conversation intelligence signal rule is active (<code>true</code>) or inactive (<code>false</code>). The default value is <code>false</code>.
Label	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the conversation intelligence signal rule.
ParticipantRole	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If <code>Service</code> is set to <code>KeywordMatch</code>, this value determines whether the rule applies to utterances made by reps, customers, or both roles. Possible values are: Possible values are: • <code>Agent</code> • <code>AgentOrCustomer</code> • <code>Customer</code> If <code>Service</code> is not set to <code>KeywordMatch</code>, don't set this parameter.
Service	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Salesforce- or partner-provided intelligence source. For Salesforce-provided intelligence sources, set this parameter to <code>KeywordMatch</code>. For partner-provided intelligence sources, possible values are: • <code>AmazonConnectContactLens</code> If none of the options apply to you, contact your Salesforce representative for the service name.

ConvIntelligenceSignalSubRule

Represents a condition (subrule) within a conversation intelligence signal rule. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This type requires an add-on license for Service Cloud Voice for Amazon Connect, Service Cloud Voice for Partner Telephony with Amazon Connect, Service Cloud Voice for Partner Telephony, or Digital Engagement.

Fields

Field	Details
ConvIntelligenceSignalRuleId	Type reference Properties Create, Filter, Group, Sort Description Unique ID of the conversation intelligence signal rule. This field is a relationship field. Relationship Name ConvIntelligenceSignalRule Relationship Type Master-detail Refers To ConvIntelligenceSignalRule (the master object)
OperandValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Value of the signal type used to determine if the rule condition is met. For example, <code>escalate_level_1</code>.
Operator	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Filter logic operator used to determine if the rule condition is met. Possible values are: • <code>Equals</code> • <code>GreaterThan</code> • <code>LessThan</code> • <code>NotEquals</code>
Order	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Order the condition appears in relation to the other conditions in the list, with zero (0) being the first condition listed. If <code>Type</code> is set to <code>Keyword</code>, the maximum value is 24. For all other <code>Type</code> values, the maximum value is 4. This value is used when applying filter logic to the rule.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Type of conversation intelligence signal used by the rule to determine whether to trigger an action. This value depends on the <code>ConvIntelligenceSignalRule.ConversationChannelId</code> and <code>ConvIntelligenceSignalRule.Service</code> values. If <code>Service</code> is set to <code>KeywordMatch</code>, possible values are: • <code>Keyword</code>—A word or group of words spoken or typed. If <code>Service</code> is set to <code>AmazonConnectContactLens</code>, possible values are: • <code>Category</code>—Category name defined in your telephony system. If <code>Service</code> is set to another value, contact your Salesforce representative for the conversation intelligence signal types available for your intelligence source.

ConvMessageSendRequest

Represents a request to send a template-based messaging component to a series of messaging users in an enhanced messaging channel or Messaging for In-App. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Messaging and its associated objects are available only in Enterprise, Unlimited, and Developer Editions for Service Cloud or Sales Cloud with the Digital Engagement add-on license.

Fields

Field	Details
AllowExistingSessionStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates whether the message can be sent only at certain times. Possible values are: - Any—Send the message regardless of whether the messaging user is engaged in an active messaging session with the business. - Closed—Send the message unless the messaging user is engaged in a messaging session with a status other than Error or Ended, in which case it's never sent. - NonActive—Send the message unless the messaging user is engaged in a messaging session with a status of Active, in which case it's never sent.
CommSubscriptionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related communication subscription, if applicable. This field is a relationship field that refers to CommSubscription.
CompletedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the request completes and all messages associated with the request are sent or failed to be sent.
FailedMessageCount	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort

Field	Details
	Description The number of messages that failed to be delivered to a messaging user. For example, if a flow sends the message to 50 messaging users and 4 don't receive the message, this value is 4.
FailedMessageErrorReasons	Type textarea Properties Nullable Description The error reason for each of the failed messages. For example, if 4 messages fail to send, this field shows the error reason for each failed message.
FailedMessageIdentifiers	Type textarea Properties Nullable Description The IDs of the messages that failed to send. For example, if 4 messages fail to send, this field shows 4 message IDs.
FailedMessagePlatformKeys	Type textarea Properties Filter, Group, Nullable, Sort Description A list of platform keys for messaging end users with messages that failed to send. Available in API version 65.0 and later.
InProgressMessageCount	Type int Properties Defaulted on Create, Filter, Group, Sort Description The number of messages in the process of being sent.
InProgressMessageIdentifiers	Type textarea Properties Filter, Group, Nullable, Sort Description A list of IDs of the messages being sent.

Field	Details
InProgressMessagingEndUserIds	Type textarea Properties Filter, Group, Nillable, Sort Description A list of IDs of messaging end users with messages that are being sent. Available in API version 65.0 and later.
InProgressMessagingSessionIds	Type textarea Properties Filter, Group, Nillable, Sort Description A list of IDs of messaging sessions with messages that are being sent. Available in API version 65.0 and later.
InProgressMeuPlatformKeys	Type textarea Properties Filter, Group, Nillable, Sort Description A list of platform keys for messaging end users with messages that are being sent. Available in API version 65.0 and later.
MessageDefinition	Type string Properties Filter, Group, Sort Description The name of the messaging component being sent. Only active messaging components can be sent.
MessageDefinitionParameters	Type textarea Properties Nillable Description A list of parameters used to dynamically construct the message that is being sent. Available in API version 65.0 and later.
Name	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description An auto-generated ID for the request that uses the format MSJ-{00000000}.
PendingMessageCount	Type int
	Properties Filter, Group, Sort
	Description The number of messages that haven't yet been sent.
PendingMessageEndUserIds	Type textarea
	Properties Nillable
	Description A list of IDs of the messaging end users with pending messages. Available in API version 65.0 and later.
PendingMeuPlatformKeys	Type textarea
	Properties Nillable
	Description A list of platform keys of the messaging end users with pending messages. Available in API version 65.0 and later.
PendingMessageIdentifiers	Type textarea
	Properties Nillable
	Description A list of IDs of the pending messages.
RequestConsentType	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description Indicates whether the flow applies the consent settings of the messaging end user or the communication subscription.

Field	Details
	Possible values are: • CommunicationSubscription • MessagingEndUser
RequestStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the request. Possible values are: • Completed • Pending • In Progress—The system is actively trying to send the message. If a message can't be sent, the RequestStatus returns to Pending and sending is tried again later.
RequestType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of request. Possible values are: • SendNotificationMessages
SessionLongevityPreference	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether to end the session after the message is sent. Possible values are: • KeepSessionOpen—After the flow sends the message, keep the messaging session in a New state. If the end user doesn't respond within 48 hours, the session ends. Use this option if you expect customers to respond to automated messages and want service reps to see their response in context. • EndSession—After the flow sends the message, end the messaging session. If the customer responds, a new messaging session is created and routed to your support team. • KeepSessionOpenOrAppend—If there's an existing session with the messaging end user in the New state, use that session to send the message. Otherwise, follow the

Field	Details
	behavior documented for the <code>KeepSessionOpen</code> option. Available in API version 65.0 and later.
<code>ShouldEnforceChannelConsent</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the existing Messaging channel consent preferences are applied when determining who receives the message. Setting this value to <code>true</code> is the most common approach. The default value, <code>false</code>, allows you to add custom consent logic—for example, to customize a flow to send the message to both implicitly opted-in users and explicitly opted-in users.
<code>SuccessMessageCount</code>	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of messages that were successfully sent to messaging users. Delivery can occur much later than sending, depending on factors such as the connectivity status of the recipient. Delivery is reflected in the messaging session transcript.
<code>SuccessMessageIdentifiers</code>	Type textarea Properties Nillable Description A list of IDs of the messages that were sent.
<code>SuccessMeuPlatformKeys</code>	Type textarea Properties Filter, Group, Nillable, Sort Description A list of platform keys for messaging end users with messages that were sent. Available in API version 65.0 and later.
<code>TotalMessageCount</code>	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of messages that the related flow attempted to send. This field is a calculated field.

Usage

A `ConvMessageSendRequest` can be generated by a flow, Apex code, or REST API call that invokes the `sendConversationMessages` invocable action. Use the `ConvMessageSendRequest` object to query messages sent by the `sendConversationMessages` invocable action.

ConversationVendorInfo

This setup object connects the partner vendor system to the Service Cloud feature. For example, for Service Cloud Voice, this object contains information about the partner telephony or Contact Center as a Service (CCaaS) partner system. For Bring Your Own Channel for Messaging this object contains information about the partner messaging system, and for Bring Your Own Channel for CCaaS, this object contains information about the CCaaS partner system. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object requires an add-on license for Service Cloud Voice for Partner Telephony or Digital Engagement.

Fields

The fields in the `ConversationVendorInfo` object apply to all Service Cloud features unless otherwise stated in the field description. For example, if a field applies to just one Service Cloud Voice telephony model setup or is applied differently by different partner systems, this is stated in the field description.

Field	Details
<code>AwsAccountKey</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The 12-digit AWS subaccount ID that's automatically provisioned for you when Service Cloud Voice was turned on. Available in API version 55.0 and later. Applies to the following implementation: • Service Cloud Voice with Amazon Connect

Field	Details
AwsRootEmail	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The email address used by Salesforce to create the root user for the provisioned AWS subaccount when Service Cloud Voice was turned on. Available in API version 55.0 and later. Applies to the following implementation: • Service Cloud Voice with Amazon Connect
AwsTenantVersion	Type double Properties Create, Filter, Nillable, Sort, Update Description The version number of the SVCTenantStack AWS CloudFormation stack that's deployed. The stack is deployed in AWS region "us-east-1". Available in API version 55.0 and later. Applies to the following implementation: • Service Cloud Voice with Amazon Connect
agentSSOSupported	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, agents can single sign-on (SSO) into their contact center using Salesforce as the identity provider (IdP). Behind the scenes, Salesforce is used as the SAML IdP in the Single Sign-On connected app for the contact center. If set to <code>false</code>, an IdP other than Salesforce is used or an IdP isn't used at all. The default value is <code>false</code>. If this value is set to <code>false</code> and you want to use Salesforce as the IdP for your contact center, set this value and the <code>namedCredentialSupported</code> value to <code>true</code> and configure the <code>service_cloud_voice.PartnerSSO</code> interface in your Apex integration class. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
BridgeComponent	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The Lightning component used to communicate between the telephony or messaging system and other Lightning components. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
CapabilitiesSupportsIntelligence	Type boolean Properties Create, Filter, Update Description If set to <code>true</code>, Salesforce ingests real-time signals sent from a partner telephony system. If set to <code>false</code>, Salesforce doesn't ingest real-time intelligence signals from a partner telephony system. The default value is <code>false</code>. Available in API version 59.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony
CapabilitiesSupportsKeyProvisioning	Type boolean Properties Create, Filter, Update Description If set to <code>true</code>, Salesforce has permission to automatically provision public keys to contact centers. The default value is <code>false</code>. Available in API version 54.0 and later. Applies to the following implementation: • Service Cloud Voice with Partner Telephony
CapabilitiesSupportsMultiVendorConfig	Type boolean Properties Create, Filter, Update Description Indicates whether multiple Connector URLs are supported (<code>true</code>) or not supported (<code>false</code>) for contact centers. The default value is <code>false</code>. Available in API version 65.0 and later.

Field	Details
	Applies to this telephony model: Service Cloud Voice with Partner Telephony
CapabilitiesSupportsPartnerPhoneNumbers	Type boolean Properties Create, Filter, Update Description If set to <code>true</code>, Salesforce has permission to access relevant agents' phone numbers while configuring contact center channels. The default value is <code>false</code>. Available in API version 54.0 and later. Applies to the following implementation: Service Cloud Voice with Partner Telephony
CapabilitiesSupportsQueueManagement	Type boolean Properties Create, Filter, Update Description If set to <code>true</code>, support queue management. The default value is <code>false</code>. Available in API version 56.0 and later. Applies to the following implementations: - Service Cloud Voice with Partner Telephony - Service Cloud Voice with Partner Telephony from Amazon Connect - Bring Your Own Channel for CCaaS
CapabilitiesSupportsUnifiedRouting (Beta)	Type boolean Properties Create, Filter, Update Description Indicates whether unified routing is supported (<code>true</code>) or not supported (<code>false</code>) for inbound voice calls in voice channels. The default value is <code>false</code>. Once this value is set to <code>true</code>, it can't be changed to <code>false</code>. Available in API version 63.0 and later. Applies to the following implementation: Service Cloud Voice with Partner Telephony
ClientAuthMode	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The client authentication mode. Possible values are: • Custom • Mixed • SSO Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect
ConnectorUrl	Type url Properties Create, Filter, Group, Sort, Update Description The URL that hosts your Service Cloud Voice or Bring Your Own Channel for CCaaS connector. This value could be a Visualforce page or a public URL. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
customConfig	Type CustomEntityDefinition Properties Create, Filter, Group, Update Description The foreign key to the CustomEntityDefinition, which contains partner-specific custom settings. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
CustomIconId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the static resource used to identify the contact center integration, such as a Contact Center as a Service (CCaaS) provider logo. The static resource must be in SVG format. This field is optional. Available in API version 62.0 and later. This field is a relationship field. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Bring Your Own Channel for CCaaS This field is a relationship field. Relationship Name CustomIcon Refers To StaticResource
CustomLoginUrl	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description The URL that hosts your telephony system or CCaaS system login page. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API.  Note: Only users with View DeveloperName or View Setup and Configuration permissions can view, group, sort, and filter this field.
IsTaxCompliant	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the Amazon tax settings for the AWS subaccount provisioned for Service Cloud Voice have been confirmed (<code>true</code>). The default value is <code>false</code>. Available in API version 55.0 and later. Applies to the following implementation: • Service Cloud Voice with Amazon Connect
<code>einsteinConversationInsightsSupported</code>	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, Einstein Conversation Insights is turned on. The default value is <code>false</code>. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect
<code>integrationClass</code>	Type ApexClass Properties Create, Filter, Group, Update Description The foreign key to the partner Apex class implementing supported interfaces. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
<code>IntegrationClassName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Deprecated in API version 53.0. Don't set this field. Instead, use <code>integrationClass</code>. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect

Field	Details
keyProvisioningSupported	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, key provisioning and renewal are automated. The default value is <code>false</code>. Available in API version 54.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the master label (<code>MasterLabel</code>) in the user interface. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The partner vendor's display name as it appears in the UI. This name appears in several places in the UI, so include the partner vendor name for easy identification. For Service Cloud Voice, this label also represents the telephony provider name in the contact center record. For Service Cloud Voice with Amazon Connect, this field is always set to <code>Service Cloud Voice</code>.
namedCredential	Type Named Credential Properties Create, Filter, Group, Update Description A sample-named credential that can be used for Apex callouts to the partner system. Available in API version 53.0 and later. Applies to the following implementations:

Field	Details
	• Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
namedCredentialSupported	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code> and if supported by the partner telephony, then prescriptive setup through a named credential is enabled allowing server-to-server communication with a named credential. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that's associated with this object. Applies to the following implementations: • Service Cloud Voice with Amazon Connect • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
partnerContactCenterListSupported	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, enables the customer to select one contact center from a list of multiple contact centers to connect with Salesforce. The default value is <code>false</code>. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect

Field	Details
	Bring Your Own Channel for CCaaS
partnerPhoneNumbersSupported	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, displays a list of phone numbers used to create contact center channels. The default value is <code>false</code>. Available in API version 54.0 and later. Applies to the following implementations: - Service Cloud Voice with Partner Telephony - Service Cloud Voice with Partner Telephony from Amazon Connect
partnerTransferDestinationsSupported	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, allows Salesforce to fetch contact center queues so that Salesforce and contact center queues can be mapped. The default value is <code>false</code>. Available in API version 53.0 and later. Applies to the following implementations: - Service Cloud Voice with Partner Telephony - Service Cloud Voice with Partner Telephony from Amazon Connect - Bring Your Own Channel for CCaaS
ServerAuthMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Deprecated in API 53.0. Server authentication mode. Set this value to <code>None</code>. Applies to the following implementations: - Service Cloud Voice with Partner Telephony - Service Cloud Voice with Partner Telephony from Amazon Connect
TelephonySettingsComponent	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The name of the Lightning Web Component (LWC) that is used to display additional agent settings in the Omni-Channel widget. This value is in the format <code>mynamespace:componentName</code>, where <code>mynamespace</code> is the namespace associated with the Service Cloud Voice package that was created, and <code>componentName</code> is the FQDN of the Lightning component. Available in API version 54.0 and later. Applies to the following implementation: • Service Cloud Voice with Partner Telephony
<code>universalCallRecordingAccessSupported</code>	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, Universal Call Recording Access is turned on. The default value is <code>false</code>. If this value is set to <code>false</code> and you want to turn on Universal Call Recording, set this value to <code>true</code> and configure the <code>service_cloud_voice.RecordingMediaProvider</code> interface in your Apex integration class. Available in API version 54.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect
<code>userSyncingSupported</code>	Type boolean Properties Create, Filter, Group, Update Description If set to <code>true</code>, supports automated user syncing whenever a user is added to or removed from a contact center. The default value is <code>false</code>. Available in API version 53.0 and later. Applies to the following implementations: • Service Cloud Voice with Partner Telephony • Service Cloud Voice with Partner Telephony from Amazon Connect • Bring Your Own Channel for CCaaS
<code>vendorType</code>	Type picklist Properties Create, Filter, Group, Update

Field	Details
	Description The Service Cloud feature the partner vendor supports. Possible values are: • <code>Amazon_Connect</code> — For Service Cloud Voice with Amazon Connect. • <code>BringYourOwnChannelPartner</code> — For Bring Your Own Channel for Messaging. Available in API version 60.0 and later. • <code>BringYourOwnContactCenter</code> — For Bring Your Own Channel for Contact Center as a Service (CCaaS). Available in API version 60.0 and later. • <code>ServiceCloudVoicePartner</code> — For Service Cloud Voice with Partner Telephony or Service Cloud Voice with Partner Telephony from Amazon Connect. If you're inserting or updating the record, this field must be set. Available in API version 53.0 and later.

CorsWhitelistEntry

Represents an entry in the cross-origin resource sharing (CORS) allowlist. Origins included in the allowlist can request REST resources from that Salesforce org.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>DeveloperName</code>	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.

Field Name	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description This picklist contains the following fully-supported languages: - Chinese (Simplified): <code>zh_CN</code> - Chinese (Traditional): <code>zh_TW</code> - Danish: <code>da</code> - Dutch: <code>nl_NL</code> - English: <code>en_US</code> - Finnish: <code>fi</code> - French: <code>fr</code> - German: <code>de</code> - Italian: <code>it</code> - Japanese: <code>ja</code> - Korean: <code>ko</code> - Norwegian: <code>no</code> - Portuguese (Brazil): <code>pt_BR</code> - Russian: <code>ru</code> - Spanish: <code>es</code> - Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. - Swedish: <code>sv</code> - Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Primary label for the CORS allowlist entry.

Field Name	Details
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description For managed packages, this field is the namespace prefix assigned to the package. For unmanaged packages, this field is blank.
UrlPattern	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The origin URL pattern must include the HTTPS protocol (unless you're using your localhost) and a domain name, and can include a port. The wildcard character (*) is supported and must be in front of a second-level domain name. For example, <code>https://*.example.com</code> adds all subdomains of <code>example.com</code> to the allowlist. The origin URL pattern can be an IP address. But an IP address and a domain that resolve to the same address aren't the same origin, and you must add them to the CORS allowlist as separate entries. Google Chrome™ and Mozilla® Firefox® browser extensions are also allowed as resources in API version 53 and later. Chrome extensions must use the prefix <code>chrome-extension://</code> and 32 characters without digits or capital letters, for example <code>chrome-extension://abdkkegmcbiomijcbdaodaf1gehffed</code>. Firefox extensions must use the prefix <code>moz-extension://</code> and an 8-4-4-12 format of small alphanumeric characters, for example <code>moz-extension://1234ab56-78c9-1df2-3efg-4567891hi1j2</code>.

Usage

Cross-Origin Resource Sharing (CORS) allows web browsers to request resources from other origins. For example, using CORS, the JavaScript for a web application at `https://www.example.com` can request a resource from `https://www.salesforce.com`. To allow access to supported Salesforce APIs, Apex REST resources, and Lightning Out from JavaScript code in a web browser, add the requesting origin to your Salesforce CORS allowlist.

If a browser that supports CORS makes a request to an origin in the Salesforce CORS allowlist, Salesforce returns the origin in the `Access-Control-Allow-Origin` HTTP header, along with any additional CORS HTTP headers. If the origin isn't included in the allowlist, Salesforce returns HTTP status code 403.

Important: CORS doesn't support requests for unauthenticated resources, including OAuth endpoints. You must pass an OAuth token with requests that require it.

[CORS](#) is a W3C recommendation to enable browsers to request resources from origins other than their own.

Coupon

A coupon associated with a promotion. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Coupon object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CouponCode	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Coupon code for the coupon. A buyer can use the coupon code to qualify for a promotion.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the coupon.
EndDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The end date and time when the coupon is no longer active.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the coupon.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of this coupon. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
PromotionId	Type reference Properties Create, Filter, Group, Sort Description ID of the promotion associated with the coupon. This is a relationship field. Relationship Name Promotion Relationship Type Lookup Refers To Promotion
RedemptionLimitAllBuyers	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of times this coupon can be used in total. This field is available in API version 61.0 and later.
RedemptionLimitPerBuyer	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of times this coupon can be used per customer. This field is available in API version 61.0 and later.
StartDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The start date and time when the coupon is active.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Status of the coupon. Possible values are: • <code>Active</code> • <code>Inactive</code> The default value is <code>Inactive</code>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CouponChangeEvent](#) on page 68 (API version 62.0)

Change events are available for the object.

CouponCodeRedemption

Tracks each coupon code redemption. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available through the B2B Commerce license. To access this object, the Promotions Coupon Redemption Limit user permission must be assigned.

Fields

Field	Details
<code>Buyer</code>	Type <code>string</code> Properties <code>Create</code> , <code>Filter</code> , <code>Group</code> , <code>Sort</code> Description Information about the buyer. Can be any buyer-specific information.

Field	Details
CouponId	Type reference Properties Create, Filter, Group, Sort Description ID of the redeemed coupon. This field is a relationship field. Relationship Name Coupon Relationship Type Lookup Refers To Coupon
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Salesforce generated coupon code, such as CCR-000000002. Can't be edited.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who created the coupon code redemption. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Transaction	Type string Properties Create, Filter, Group, idLookup, Sort Description ID of the transaction where the coupon code was redeemed. Must be a valid cart ID.

CreditMemo

Represents a document that is used to reduce the amount that a buyer owes a seller under the terms of an earlier invoice. This object is available in API version 48.0 and later.

A credit memo always decreases the balance of an invoice. Users can apply positive credit memos to positive invoices, for example, a \$10 credit memo reduces the balance of a \$100 invoice line to \$90.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Order Management, Subscription Management, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
AppType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Read-only field that indicates which Salesforce application generated the credit memo. Possible values are: • Commerce Cloud • Revenue Cloud This field is available in API versions 54.0 to 55.0
Balance	Type currency Properties Filter, Nillable, Sort Description Amount of the credit memo that's available for allocation.
BillToContactId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort, Update Description Inherited from the account's Bill to Account field. This field is a relationship field. Relationship Name BillToContact Relationship Type Lookup Refers To Contact
BillingAccountId	Type reference Properties Filter, Group, Sort, Update Description The customer account associated with this credit memo. This field is a relationship field. Relationship Name BillingAccount Relationship Type Lookup Refers To Account
CreationMode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the credit memo originated in Salesforce or an external system. Possible values are: • External • Salesforce This field is available in API version 55.0 and later.
CreditDate	Type date

Field	Details
	Properties Filter, Group, Nillable, Sort Description The date when the credit memo was posted.
CreditMemoNumber	Type string Properties Filter, Group, Nillable, Sort, Update Description A credit memo numbering alternative to DocumentNumber, containing a number in a format of your choice. Credit memo numbering is optional.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the credit memo. The default value is USD. This field is available in API version 55.0 and later.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Description of the credit memo.
DocumentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated number for organizing financial documents, for example DOC-0000123.
EffectiveDate	Type date Properties Filter, Group, Nillable, Sort

Field	Details
	Description Represents the effective date of the credit memo. If this field is empty, the credit date is used. For reporting purposes only; this field drives no other logic. This field is available in API version 55.0 and later.
ExternalReference	Type string Properties Filter, Group, Nillable, Sort, Update Description Contains an external system's ID for the credit memo. This field is available in API version 55.0 and later.
ExternalReferenceDataSource	Type string Properties Filter, Group, Nillable, Sort, Update Description Contains the name of the external system that also contains the credit memo. This field is available in API version 55.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was only referenced (<code>LastReferencedDate</code>) and not viewed.
NetCreditsApplied	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Represents the total difference between the credit applied to and credit unapplied from the invoice. This field is a calculated field. This field is available in API version 55.0 and later.
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The user who owns a credit memo record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ReferenceEntityId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the record that this credit memo was generated from. For example, the order, order summary, or invoice. This field is a polymorphic relationship field. Relationship Name ReferenceEntity Relationship Type Lookup Refers To Invoice, Order This field is available in API version 53.0 and later.
SourceAction	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates which Salesforce API created the credit memo.

Field	Details
	Possible values are: • Invoice—Indicates that Credit Invoice API created the credit memo and applied it to the invoice. • NegativeInvoiceLineConversion—Indicates that Subscription Management created the credit memo when a negative invoice line was converted. • Standalone—Indicates that the Credit Memo API created the credit memo. • VoidPostedInvoice—Indicates that the Void a Posted Invoice API created the credit memo to offset the amount that was voided on the invoice. This field is available in API version 55.0 and later.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description Status of the credit memo. Possible values are: • Canceled—Indicates that the credit memo isn't being used and doesn't have a financial impact. • Error—Indicates that the credit memo has an error and doesn't have a financial impact. • Pending—Indicates that the credit memo is being processed but hasn't yet been posted as a financial transaction. • Posted—The credit memo has been recorded as a financial transaction. Most fields can't be edited.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description Sum of TotalAmount values for the credit memo's adjustment lines. This field is a calculated field.
TotalAdjustmentAmountWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of the credit memo's adjustment line amounts, including tax. This field is available in API version 49.0 and later.

Field	Details
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the credit memo's adjustment line tax. Adjustment line balances are excluded. This field is available in API version 49.0 and later.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description Sum of the credit memo's TotalLineAmount and TotalAdjustmentAmount. This field is a calculated field.
TotalAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total credit memo amount, with tax included. This field is a calculated field.
TotalChargeAmount	Type currency Properties Filter, Nillable, Sort Description Sum of TotalAmount values for the credit memo's charge lines. This field is a calculated field.
TotalChargeAmountWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of the credit memo's charge line amounts, including tax. This field is available in API version 49.0 and later.

Field	Details
TotalChargeTaxAmount	Type currency Properties Filter, Nillable, Sort Description This field is available in API version 49.0 and later.
TotalCreditAmountApplied	Type currency Properties Filter, Nillable, Sort Description Credit memo amount that's been applied to invoices. This field is available in API version 53.0 and later.
TotalCreditAmountUnapplied	Type currency Properties Filter, Nillable, Sort Description Credit memo amount that's been unapplied from invoices. This field is available in API version 55.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Sum of <code>TotalAmount</code> values for the credit memo's tax lines. This field is a calculated field.

Sharing is available for the object.

CreditMemoAddressGroup

Stores the buyer's address information, which is used to determine the amount of tax to credit to a buyer when a credit memo is issued. This object is available in API version 55.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Address	Type address Properties Filter, Nillable Description Buyer's address.
City	Type string Properties Filter, Group, Nillable, Sort Description Buyer's city.
Country	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Buyer's country.
CreditMemoAddressGroupNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number, such as 0000123, that represents the address group.
CreditMemoId	Type reference Properties Filter, Group, Sort Description ID of the credit memo associated with the address group. This field is a relationship field. Relationship Name CreditMemo Relationship Type Lookup Refers To CreditMemo
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the credit memo. The default value is USD.
GeocodeAccuracy	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The accuracy rating for the geocode of the address group. An accuracy rating contains information about the location of a latitude and longitude. Possible values are: • Address

Field	Details
	• Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this address group.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this address group.
Latitude	Type double Properties Filter, Nillable, Sort Description Latitude of the buyer's address.
Longitude	Type double Properties Filter, Nillable, Sort Description Longitude of the buyer's address.
PostalCode	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The buyer's postal code or ZIP code.
State	Type string Properties Filter, Group, Nillable, Sort Description The buyer's state.
Street	Type textarea Properties Filter, Group, Nillable, Sort Description The buyer's street number and name.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CreditMemoAddressGroupHistory](#) on page 63

History is available for tracked fields of the object.

CreditMemoInvApplication

Represents an amount applied from a credit memo to an invoice. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Amount	Type currency Properties Filter, Sort Description The amount of the credit memo that was applied to or unapplied from the invoice.
AppliedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the credit memo was applied. If the credit memo invoice application's type is <code>Unapplied</code>, this value is inherited from the Applied date of the credit memo referenced in the AssociatedLineId.
AssociatedLineId	Type reference Properties Filter, Group, Nillable, Sort Description For a credit memo invoice application that represents an unapplied credit memo, this field shows the original credit memo invoice application. This field is a relationship field. Relationship Name AssociatedLine Relationship Type Lookup Refers To CreditMemoInvApplication
CreditMemoBalance	Type currency Properties Filter, Nillable, Sort Description The balance of a credit memo after a credit memo is applied or unapplied. This field is a snapshot of the credit memo's balance after the action. It isn't updated after further changes to the credit memo balance.

Field	Details
CreditMemoId	Type reference Properties Filter, Group, Sort Description The credit memo that was applied or unapplied. This field is a relationship field. Relationship Name CreditMemo Relationship Type Lookup Refers To CreditMemo
CreditMemoInvoiceNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Number of the invoice to which a credit memo is applied.
Date	Type dateTime Properties Filter, Nillable, Sort Description Date when the credit memo amount was applied to the invoice.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Description of the credit applied to an invoice.
EffectiveDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The effective date of the application or unapplication of credit. Users can provide this value when applying or unapplying the credit memo. This field is optional and provided only for reporting purposes. It doesn't affect the credit memo invoice application's other fields.
HasBeenUnapplied	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Shows whether this credit memo application has been unapplied from the target invoice. Possible values are: • NA • No • Yes
ImpactAmount	Type currency Properties Filter, Nillable, Sort Description The net adjustment to the invoice's balance after a credit memo is applied or unapplied. If a credit memo was applied, this value is the negative version of the credit memo invoice application's <code>Amount</code>. If a credit memo was unapplied, this value is the positive version of the credit memo invoice application's <code>Amount</code>. This field is a calculated field.
InvoiceBalance	Type currency Properties Filter, Nillable, Sort Description The balance of the credit memo after a credit memo is applied or unapplied. This field is a snapshot of the credit memo's balance after the action. It isn't updated after further changes to the credit memo balance.
InvoiceId	Type reference Properties Filter, Group, Sort Description ID of the invoice to which credit is applied.

Field	Details
	This field is a relationship field. Relationship Name Invoice Relationship Type Lookup Refers To Invoice
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates whether the credit memo line application was generated because of an apply action (application) or an unapply action (unapplication). Possible values are: • Applied • Unapplied
UnappliedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when this application was unapplied from the target invoice.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CreditMemolnvApplicationFeed](#) on page 55

Feed tracking is available for the object.

[CreditMemolnvApplicationHistory](#) on page 63

History is available for tracked fields of the object.

CreditMemoLine

Represents product, service, adjustment, or tax line items that were included in a credit memo. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Order Management, Subscription Management, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
AdjustmentAmount	Type currency Properties Filter, Nillable, Sort, Update Description Amount of this credit memo line item if its type is Adjustment.
AdjustmentAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Sum of the adjustment amount and the adjustment tax amount. This field is available in API version 49.0 and later. This field is available when Subscription Management is enabled.
AdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the tax related to the adjustment amount. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.
BillingAddressId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the billing address related to this credit memo line. This field is a relationship field. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. Relationship Name BillingAddress Relationship Type Lookup Refers To CreditMemoAddressGroup
ChargeAmount	Type currency Properties Filter, Nillable, Sort, Update Description Amount of this credit memo line item if its type is Charge.
ChargeAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Sum of the adjustment amount and the adjustment tax amount. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.
ChargeTaxAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the tax related to the charge amount. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.
CreditMemoId	Type reference Properties Filter, Group, Sort

Field	Details
	Description ID of the parent credit memo. This field is a relationship field. Relationship Name CreditMemo Relationship Type Lookup Refers To CreditMemo
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the credit memo line. The default value is USD.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Description of the credit memo line.
EndDate	Type date Properties Filter, Group, Nillable, Sort, Update Description For credit memos made from a time-based service, the end date of the line item being credited.
LineAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the credit memo line. This field is a calculated field. This field is available in API version 49.0 and later.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description Name of the credit memo line.
Product2Id	Type reference Properties Filter, Group, Nillable, Sort, Update Description The product or service being credited in the credit memo line. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ReferenceEntityItemId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The order product or invoice line corresponding to this credit memo line. This field is a polymorphic relationship field. This field is available in API version 53.0 and later. Relationship Name ReferenceEntityItem Relationship Type Lookup Refers To OrderItemSummary, OrderProduct, InvoiceLine
ReferenceEntityType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The type of transaction that generated the credit memo line. Possible values are: • DeliveryCharge • OrderProduct
ReferenceEntityItemTypeCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of object that generated the credit memo line. Possible values are: • Charge • Product
RelatedLineId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The credit memo line related to this line item. This field is a relationship field. Relationship Name RelatedLine Relationship Type Lookup Refers To CreditMemoLine
ShippingAddressId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the shipping address. This field is a relationship field. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. Relationship Name ShippingAddress

Field	Details
	Relationship Type Lookup Refers To CreditMemoAddressGroup
StartDate	Type date Properties Filter, Group, Nillable, Sort, Update Description For credit memo lines generated from a time-based service, the first date of the billing for the service.
Status	Type string Properties Filter, Group, Nillable, Sort Description State of the credit memo line. Inherited from the credit memo.
TaxAmount	Type currency Properties Filter, Nillable, Sort, Update Description Total tax for the credit memo.
TaxCode	Type string Properties Filter, Group, Nillable, Sort, Update Description The code used to calculate the tax rate for the invoice line.
TaxDocumentNumber	Type string Properties Filter, Group, Nillable, Sort Description The document number that tracks taxes calculated for this credit memo line.

Field	Details
	This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.
TaxEffectiveDate	Type date Properties Filter, Group, Nillable, Sort, Update Description The date used to calculate the credit memo line's TaxAmount.
TaxName	Type string Properties Filter, Group, Nillable, Sort, Update Description User-defined name for applied tax.
TaxRate	Type percent Properties Filter, Nillable, Sort, Update Description Percentage value used for calculating tax.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The total amount of the credit memo line before any applicable tax.
TotalAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of tax for this credit memo line, with tax included. Sum of TotalAmount and TaxAmount.
TaxStatus	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Tracks whether the taxes were calculated for this credit memo line. Possible values are: - Complete - Error - None The default value is None. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.
TaxTransactionNumber	Type string Properties Filter, Group, Nillable, Sort Description Tracks the transaction number of the tax calculated for this credit memo line. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled.
TaxTreatmentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the tax treatment for the credit memo line. This field is a relationship field. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. Relationship Name TaxTreatment Relationship Type Lookup Refers To TaxTreatment
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of transaction for the invoice line.

Field	Details
	Possible values are: • Adjustment • Charge • Tax

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CreditMemoLineFeed](#) on page 55

Feed tracking is available for the object.

[CreditMemoLineHistory](#) on page 63

History is available for tracked fields of the object.

Crisis

Represents a major crisis event that affects an Employee in an InternalOrganizationUnit. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Work.com uses this object to track and describe crisis situations.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

Fields

Field	Details
CrisisType	Type picklist Properties Create, Filter, Group, Sort, Update Description Required. The type or category of crisis.

Field	Details
	Possible values are: • Economic Crisis • Natural Disaster • Pandemic • War
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The crisis description.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the crisis ended.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The crisis record name.

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
StartDate	Type date Properties Create, Filter, Group, Sort, Update Description Required. The date the crisis started.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

CrisisHistory (API version 49.0)

History is available for tracked fields of the object.

CrisisOwnerSharingRule

Sharing rules are available for the object.

CrisisShare (API version 49.0)

Sharing is available for the object.

[Workplace Command Center for Work.com Developer Guide: Extend Work.com with Custom Solutions](#)

CronJobDetail

Contains details about the associated scheduled job, such as the job's name and type. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
JobType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the associated scheduled job. The following are the available job types. Use the job type value when querying for a specific job type. • 1—Data Export • 3—Dashboard Refresh • 4—Reporting Snapshot • 6—Scheduled Flow • 7—Scheduled Apex • 8—Report Run • 9—Batch Job • A—Reporting Notification
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the associated scheduled job.

Usage

Use this object to query additional information about a scheduled job, such as the job's name and type.

CronTrigger

Contains schedule information for a scheduled job. CronTrigger is similar to a cron job on UNIX systems. This object is available in API version 17.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CronExpression	Type string Properties Filter, Group, Nillable, Sort Description The cron expression used to initiate the schedule. Syntax: <i>Seconds Minutes Hours Day_of_month Month Day_of_week Optional_year</i> See <code>schedule(jobName, cronExpression, schedulableClass)</code> in the <i>Apex Reference Guide</i>.
CronJobDetailId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the CronJobDetail record containing more details about this scheduled job. This is a relationship field. Relationship Name CronJobDetail Relationship Type Lookup Refers To CronJobDetail
EndTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the job either finished or will finish.
NextFireTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The next date and time the job is scheduled to run. <code>null</code> if the job is not scheduled to run again.
OwnerId	Type reference Properties Filter, Group, Nillable, Sort Description Owner of the job.
PreviousFireTime	Type dateTime Properties Filter, Nillable, Sort Description The most recent date and time the job ran. <code>null</code> if the job has not run before current local time.
StartTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the most recent iteration of the scheduled job started.
State	Type string Properties Filter, Group, Nillable, Sort Description The current state of the job. The job state is managed by the system. Possible values are: • <code>WAITING</code>—The job is waiting for execution. • <code>ACQUIRED</code>—The job has been picked up by the system and is about to execute. • <code>EXECUTING</code>—The job is executing. • <code>COMPLETE</code>—The trigger has fired and is not scheduled to fire again. • <code>ERROR</code>—The trigger definition has an error. • <code>DELETED</code>—The job has been deleted. • <code>PAUSED</code>—A job can have this state during patch and major releases. After the release has finished, the job state is automatically set to <code>WAITING</code> or another state.

Field	Details
	BLOCKED—Execution of a second instance of the job is attempted while one instance is running. This state lasts until the first job instance is completed. PAUSED_BLOCKED—A job has this state due to a release occurring. When the release has finished and no other instance of the job is running, the job's status is set to another state.
TimesTriggered	Type int Properties Filter, Group, Nillable, Sort Description The number of times this job has been triggered.
TimeZoneSidKey	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Returns the timezone ID. For example, <code>America/Los_Angeles</code>.

Usage

Use this object to query scheduled jobs in your organization.

CryptoProdCatgWalletGroup

Specifies if CryptoWalletGroup is in the allowlist or airdrop for the ProductCategory. A custom object between ProductCategory and CryptoWalletGroup adding the CryptoWalletGroup to allowlist or airdrop. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object has read, create, update, delete, modify all, and view all access.

Fields

Field	Details
CryptoWalletGroupId	Type reference Properties Create, Filter, Group, Sort Description The CryptoWalletGroup ID. This field is a relationship field. Relationship Name CryptoWalletGroup Relationship Type Lookup Refers To CryptoWalletGroup
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the record.
ProductCategoryId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the category. This field is a relationship field. Relationship Name ProductCategory Relationship Type Lookup Refers To ProductCategory
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies if CryptoProdCatgWalletGroup is active and functional, or inactive and disabled. Possible values are: • Active • Inactive
Type	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines whether the list of wallets is for minting allowlist or for executing an airdrop. Possible values are: • Airdrop • Allowlist

CspTrustedSite

Represents a trusted URL. For each CspTrustedSite, you can specify Content Security Policy (CSP) directives and permissions policy directives. Each CSP directive allows Lightning components, third-party APIs, and WebSocket connections to access a resource type from the trusted URL. If the Permissions-Policy HTTP header is enabled, each permissions policy directive grants the trusted URL access to a browser feature. In API version 58.0 and earlier, CspTrustedSite included only CSP directives and was referred to as CSP Trusted Sites in Salesforce Setup. Available in API version 39.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>CanAccessCamera</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this <code>CspTrustedSite</code> can access the user's camera. The default value is <code>false</code>. This field takes effect only when the <code>enablePermissionsPolicy</code> field equals <code>true</code> and the <code>grantCameraAccess</code> field equals <code>TrustedUrls</code> in the <code>SecuritySettings</code> metadata API type. This field is available in API version 59.0 and later.
<code>CanAccessMicrophone</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this <code>CspTrustedSite</code> can access the user's microphone. The default value is <code>false</code>. This field takes effect only when the <code>enablePermissionsPolicy</code> field equals <code>true</code> and the <code>grantMicrophoneAccess</code> field is <code>TrustedUrls</code> in the <code>SecuritySettings</code> metadata API type. This field is available in API version 59.0 and later.
<code>Context</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Declares the scope of the CSP directives for this trusted URL. Possible values are: • <code>All</code>—Apply the CSP directives to all supported context types. • <code>Communities</code>—Apply the CSP directives to Experience Builder sites only. • <code>FieldServiceMobileExtension</code>—Apply the CSP directives to the Field Service Mobile Extensions only.

Field	Details
	• <code>LEX</code>—Apply the CSP directives to Lightning Experience only. • <code>LightningOut</code>—Reserved for future use. Available in API version 64.0 and later • <code>VisualForce</code>—Apply the CSP directives to custom Visualforce pages only. This value is available in API version 55.0 and later. For custom Visualforce pages, content is restricted to trusted URLs only if the page's <code>cspHeader</code> attribute is set to <code>true</code>. This field is available in API version 44.0 and later.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the trusted URL. Limit: 255 characters.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer name of the trusted URL. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
EndpointUrl	Type string Properties Create, Filter, Group, Sort, Update Description The URL for this CspTrustedSite. This field must include a domain name and can include a port. For example, <code>https://example.com</code> or <code>https://example.com:8080</code>. To reduce repetition, you can use the wildcard character <code>*</code> (asterisk). For example, <code>*.example.com</code>. For a third-party API, the URL must begin with <code>https://</code>. For example, <code>https://example.com</code>. For a WebSocket connection, the URL must begin with <code>wss://</code>. For example, <code>wss://example.com</code>. Otherwise, the URL cannot be malformed. Examples of malformed URLs that fail a syntax check are <code>malformed^url.example.com</code>, and <code>https://{subdomain}.example.com</code>. To add a URL based on parameters, build the URL before you update the <code>EndpointUrl</code> field.

Field	Details
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this CspTrustedSite is active.
IsApplicableToConnectSrc	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Lightning components, third-party APIs, and WebSocket connections can load URLs using script interfaces from this trusted URL.
IsApplicableToFontSrc	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Lightning components, third-party APIs, and WebSocket connections can load fonts from this trusted URL.
IsApplicableToFrameSrc	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Lightning components, third-party APIs, and WebSocket connections can load resources contained in <iframe> elements from this trusted URL.
IsApplicableToImgSrc	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Lightning components, third-party APIs, and WebSocket connections can load images from this trusted URL.
IsApplicableToMediaSrc	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Lightning components, third-party APIs, and WebSocket connections can load audio and video from this trusted URL.
IsApplicableToStyleSrc	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Lightning components can load style sheets from this trusted URL.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language for the trusted URL.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Master label for this trusted URL.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Namespace prefix for this trusted URL.

Usage

For each CSPTTrustedSite, at least one field starting with `grantAccess` or `isApplicableTo` must be set to `true`.

In API versions 50.0 to 58.0, if all `isApplicable` fields are `false`, the `isApplicableToImgSrc` field is set to `true`. In API version 49.0 and earlier, if all `isApplicable` fields are `false`, those fields all default to `true`.

To ensure smooth integration across Salesforce products, Salesforce includes URLs in each of the CSP directives that correspond to the `isApplicable` fields, even though those URLs aren't defined as `CspTrustedSite` components. Salesforce regularly updates those URLs based on the latest requirements.

CspViolationEventLog

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). This object is available in API version 63.0 and later.

This event is free for all customers with a 24-hour data retention period. The CSP violation event is available in the API but not in the Event Monitoring Analytics app.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>BlockedUri</code>	Type string Properties Filter, Group, Nillable, Sort Description The full string of the blocked resource. If the call to the blocked resource used a URL, <code>BLOCKED_URI</code> is the full URL. Or, for violations with a <code>DIRECTIVE</code> of <code>script-src</code> directives, <code>inline</code> or <code>eval</code>. Examples • <code>https://www.example.com/images/picture.png</code> • <code>file://host1:0002/media/video.mp4</code> • <code>inline</code>
<code>BlockedUriDomain</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description If <code>BLOCKED_URI</code> is a URL, the domain for that URL. To allow resources to be loaded from the <code>BLOCKED_URI</code>, <code>BLOCKED_URI_DOMAIN</code> is the <code>endpointUrl</code> value to add or update in the CspTrustedSite Metadata API.
ColumnNumber	Type double Properties Filter, Nillable, Sort Description The column number in the document or worker script at which the violation occurred. This value is relevant only when <code>DIRECTIVE</code> is <code>script-src</code>. For those violations, use this value with <code>LINE_NUMBER</code> to identify the location of the violation. Example 27
Context	Type string Properties Filter, Group, Nillable, Sort Description The content security policy (CSP) context for the request. The CSP context controls which pages can load content from a CspTrustedSite. CSP violation events capture details about blocked resource requests from only Lightning Experience pages, this value is always <code>Lightning</code>.
Directive	Type string Properties Filter, Group, Nillable, Sort Description The CSP directive that blocked the resource request. Possible Values • <code>font-src</code> • <code>frame-src</code> • <code>img-src</code> • <code>media-src</code> • <code>style-src</code> • <code>script-src</code>

Field	Details
	For information on these directives and a full list of all CSP directives, see MDN Web Docs: Content-Security-Policy.
Disposition	Type string Properties Filter, Group, Nillable, Sort Description The CSP violation handling instruction for the user agent at the time of the violation. Possible Values • <code>enforce</code>—Enforce the policy violation. For violations with this <code>DISPOSITION</code>, the resource request was blocked. • <code>report</code>—Report the policy violation. For violations with this <code>DISPOSITION</code>, the resource request wasn't blocked, but the violation was reported.
LineNumber	Type double Properties Filter, Nillable, Sort Description The line number in the document or worker script at which the violation occurred. This value is relevant only when <code>DIRECTIVE</code> is <code>script-src</code>. For those violations, use this value with <code>COLUMN_NUMBER</code> to identify the location of the violation. Example 12
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.
ResourceSample	Type string Properties Filter, Group, Nillable, Sort Description A sample of the resource that caused the violation, usually the first 40 characters, or the empty string.

Field	Details
Source	Type string Properties Filter, Group, Nillable, Sort Description The page where this CSP violation originated. For example, if your CSP policy prevented an image from loading on a Visualforce page, <code>SOURCE</code> contains the URL of that page.
SourceFile	Type string Properties Filter, Group, Nillable, Sort Description The URL of the script in which the violation occurred. If the violation didn't occur in a script, <code>SOURCE_FILE</code> is null.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
UniqueIdentifier	Type string Properties Filter, Group, Nillable, Sort Description A string identifier for the CSP violation.

Usage

Only one CSP violation event log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file.

If the event log file doesn't exist, either the log generation process hasn't run yet or there's no violation data to report for that 24-hour window. The event log file is generated only when at least one violation occurred for the day.

To collect CSP violation logs for multiple days, schedule a daily query of the CSP Violation event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

CurrencyType

Represents the currencies used by an organization for which the multicurrency feature is enabled.

Supported Calls

`create()`, `describeSObjects()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

- This object is not available in single-currency organizations.
- You need the “Customize Application” permission to edit this object.
- Your client application can't delete this object.

Fields

Field	Details
ConversionRate	Type double Properties Filter Description Required. Conversion rate of this currency type against the corporate currency.
DecimalPlaces	Type int Properties Filter Description Required. For this currency, specifies the number of digits to the right of the decimal point, such as zero (0) for JPY or 2 for USD.
IsActive	Type boolean Properties Defaulted on create, Filter Description Indicates whether this currency type is active (<code>true</code>) or not (<code>false</code>). Inactive currency types do not appear in picklists in the user interface. Label is Active . This field defaults to <code>false</code> if no value is provided when updating or inserting a record.
IsCorporate	Type boolean

Field	Details
	Properties Defaulted on create, Filter Description Indicates whether this currency type is the corporate currency (<code>true</code>) or not (<code>false</code>). Label is Corporate Currency. All other currency conversion rates are applied against this corporate currency. If a currency is already defined as the corporate currency in the user interface, it can't be unset. When a non-corporate currency is set to a corporate currency, the system reconfigures all conversion rates based on the new corporate currency.
IsoCode	Type picklist Properties Filter, Restricted picklist Description Required. ISO code of the currency. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as <code>USD</code>, <code>GBP</code>, or <code>JPY</code>. Must be unique within your organization. Label is Currency ISO Code.

Usage

This object is for multicurrency organizations only. Use this object to define the currencies your organization uses.

When updating an existing record, make sure to provide values for all fields to avoid undesired changes to the `CurrencyType`. For example, if a value for `IsActive` is not provided, the default (`false`) is used, which could result in a currently active `CurrencyType` becoming inactive.

[Overview of Salesforce Objects and Fields](#)

CustExpIntlTransfSetup

Stores information for different data sources that are processed for customer insights. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataSourceChannelName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the associated communication channel, such as Web, Email, Chat, or Voice.
DataSourceChannelType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specifies the channel type as standard or custom. Possible values are: • Custom • Standard The default value is <code>Standard</code>.
IsDataProcessingPaused	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether data processing for the channel is temporarily paused (<code>true</code>). Use this field to control channel operations without deactivating the channel. The default value is <code>false</code>.
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the channel is active for processing data (<code>true</code>). The default value is <code>false</code>.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Date and time when the current user last viewed or modified this record, a record related to this record, or a list view. If this value is null, the current user has never viewed or modified a record related to this object.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the current user last viewed or modified this record. If this value is null, the current user has never viewed or modified this record.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the Customer Experience Intelligence Transformer Setup record.
ProcessingStartDate	Type dateTime Properties Create, Filter, Sort, Update Description The date to start processing data in the specified communication channel.

CustomBrand

Represents a custom branding and color scheme. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
ParentId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the parent entity that this branding applies to. The parent entity can be an Experience Cloud site, organization, topic, or reputation level. The branding applies to the entity that the <code>ParentId</code> references. For example, if the <code>ParentId</code> references a network ID, the branding applies to that Experience Cloud site only, and if the <code>ParentId</code> references an organization ID, the branding applies to the organization that it is accessed through, and so on. Label is <code>Branded Entity ID</code>.

Usage

Use this object along with [CustomBrandAsset](#) to apply a custom branding scheme to your Experience Cloud site. The branding scheme for the site shows in both the user interface and in the Salesforce mobile app. You must have Create and Manage Experiences to customize site branding.

You can also use this object to apply a custom branding scheme to your org when it is accessed through the Salesforce mobile app.

SEE ALSO:

[Network](#)

CustomBrandAsset

Represents a branding element in a custom branding scheme. For example, a color, logo image, header image, or footer text. A CustomBrandAsset can apply to an Experience Cloud site or to an org using the Salesforce mobile app. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
AssetCategory	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Values include: MotifZerenaryColor—The background color for the header. Label is <code>Zerenary motif color</code>. If this CustomBrandAsset is for a network, this is the header color for the network. If it is for an org, this is the header color when users access the Salesforce mobile app. MotifPrimaryColor—The color used for the active tab. Label is <code>Primary motif color</code>. Not used for the Salesforce mobile app branding. MotifSecondaryColor—The color used for the top borders of lists and tables. Label is <code>Secondary motif color</code>. Not used for the Salesforce mobile app branding. MotifTertiaryColor—The background color for section headers on edit and detail pages. Label is <code>Tertiary motif color</code>. Not used for the Salesforce mobile app branding. MotifQuaternaryColor—If this CustomBrandAsset is for a network, this is the background color for network pages. If it is for an org, this is the background color on a splash page. Label is <code>Quaternary motif color</code>. MotifZerenaryComplementColor—Font color used with <code>zerenaryColor</code>. Label is <code>Zerenary motif colors complement color</code>. MotifPrimaryComplementColor—Font color used with <code>primaryColor</code>. Label is <code>Primary motif colors complement color</code>. Not used for the Salesforce mobile app branding. MotifTertiaryComplementColor—Font color used with <code>tertiaryColor</code>. Label is <code>Tertiary motif colors complement color</code>. Not used for the Salesforce mobile app branding.

Field Name	Details
	• MotifQuaternaryComplementColor—Font color used with <code>quaternaryColor</code>. Label is <code>Quaternary motif colors complement color</code>. Not used for the Salesforce mobile app branding. • PageHeader—An image that appears on the header of the pages. Can be an .html, .gif, .jpg, or .png file. Label is <code>Page Header</code>. Not used for the Salesforce mobile app branding. • PageFooter—An image that appears on the footer of the pages. Must be an .html file. Label is <code>Page Footer</code>. Not used for the Salesforce mobile app branding. • LoginFooterText—The text that appears in the footer of the login page. Label is <code>Footer text displayed on the login page</code>. Not used for the Salesforce mobile app branding. • LoginLogoImageId—The logo that appears on the login page for external users. In the Salesforce mobile app, this logo also appears on the Experience Cloud site splash page. Label is <code>Logo image displayed on the login page</code>. • LargeLogoImageId—Only used for the Salesforce mobile app. The logo that appears on the splash page when you start the Salesforce mobile app. Label is <code>Large logo image</code>. • SmallLogoImageId—Only used for the Salesforce mobile app. The logo that appears on the publisher in the Salesforce mobile app. Label is <code>Small logo image</code>. • StaticLogoImageUrl—The logo that appears on the login page for external users. Label is <code>Static logo image url</code>. • LoginQuaternaryColor—The background color that appears on the Experience Cloud site login page for external users. Label is <code>Login background color</code>. • LoginRightFrameUrl—The URL to the contents that appears on right side of the Experience Cloud site login page for external users. Label is <code>Login right frame url</code>. • LogoAssetId—Navigation tile menu item images. Label is <code>Logo asset image</code>. • LoginPrimaryColor—The background color of the login button. Label is <code>Login primary color</code>. • LoginBackgroundImageUrl—The path to the image URL that appears as the background on the Experience Cloud site's login page. Label is <code>Background image url</code>. • LargeLogoAssetId—Navigational topic images. Label is <code>Large logo asset image</code>.

Field Name	Details
	MediumLogoAssetId—Featured topic images. Label is Medium logo asset image.
AssetSourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the document uploaded to the Documents folder if the value of AssetCategory is: - PageHeader - PageFooter - LoginLogoImageId - LargeLogoImageId - SmallLogoImageId ID of the content asset if the value of the AssetCategory is: - LogoAssetId - LargeLogoAssetId - MediumLogoAssetId
CustomBrandId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the associated CustomBrand . This is a relationship field. Relationship Name CustomBrand Relationship Type Lookup Refers To CustomBrand
ForeignKeyAssetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description This field was removed in API version 41.0, and is available in earlier versions for backward compatibility only. Use <code>AssetSourceId</code> instead. ID of the document used if the value of <code>AssetCategory</code> is <code>PageHeader</code> , <code>PageFooter</code> , or <code>LoginLogoImageId</code> .
<code>TextAsset</code>	Type string Properties Create, Filter, Nillable, Sort, Update Description Text used if the <code>AssetCategory</code> is <code>LoginFooterText</code> .

Usage

Use this object to add basic branding elements—color scheme, header or footer images, login page logo, or footer text—to the branding scheme ([CustomBrand](#)) for your Experience Cloud site. You must have Create and Manage Experiences to customize site branding.

If you're using digital experiences in the Salesforce mobile app, the loading page shows the logo.

SEE ALSO:

[Network](#)

CustomFieldDisplayValue

Stores variation details for the product attribute item view. This object is available in API version 63.0 and later.

Supported Calls

```
create(), delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(),  
undelete(), update(), upsert()
```

Special Access Rules

CustomFieldDisplayValue is available only if the B2B or D2C Commerce license is enabled.

Fields

Field	Details
Color	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The color variation in hexadecimal value format, for example #FF0000.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency ISO code allowed by the organization. Possible value is: • USD—U.S. Dollar The default value is USD.
CustomFieldDisplayId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the custom field display that this variation is associated with. This field is a relationship field. Relationship Name CustomFieldDisplay Refers To CustomFieldDisplay
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the custom field display value.
PickListApiValue	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The API name of the color variation picklist value, for example, <code>red_c</code> .

Usage

This object only gets populated when display type in the CustomFieldDisplay object is ColorSwatch.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as CustomFieldDisplayValue.

CustomFieldDisplayValueChangeEvent on page 68

Change events are available for the object.

CustomFieldDisplayValueFeed on page 55

Feed tracking is available for the object.

CustomFieldDisplayValueHistory on page 63

History is available for tracked fields of the object.

CustomHelpMenuItem

Represents the items within a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Packaging Considerations

Although you can package custom Help Menu section information, the section won't appear in the Help Menu Setup page or the Help Menu user interface of orgs where the package is installed. Instead, customers must view the data in the CustomHelpMenuItem and CustomHelpMenuSection objects and then manually add resources on the Help Menu Setup page.

Fields

Field	Details
LinkUrl	Type url
	Properties Create, Filter, Sort, Update

Field	Details
	Description Required. The URL for the resource. Specify up to 1,000 characters.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. The name of the resource. Specify up to 100 characters.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the custom help section the item belongs to. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To CustomHelpMenuSection
SortOrder	Type int Properties Create, Filter, Group, Sort, Update Description Required. The order of the item within the custom section. Valid values are 1 through 15.

CustomHelpMenuSection

Represents a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Packaging Considerations

Although you can package custom Help Menu section information, the section won't appear in the Help Menu Setup page or the Help Menu user interface of orgs where the package is installed. Instead, customers must view the data in the CustomHelpMenuItem and CustomHelpMenuSection objects and then manually add resources on the Help Menu Setup page.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the custom help section in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to section title in the user interface. Limit: 80 characters.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Language of the label. Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish (Mexico)) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch)

Field	Details
	- no (Norwegian) - pt_BR (Portuguese (Brazil)) - ru (Russian) - sv (Swedish) - th (Thai) - zh_CN (Chinese (Simplified)) - zh_TW (Chinese (Traditional))
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. The name of the resource. Specify up to 100 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

CustomHTTPHeader

Represents a custom HTTP header that provides context information from Salesforce such as region, org details, or the role of the person viewing the external object. This object is available in API version 43.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
Description	Type textarea Properties Filter, Nillable, Sort Description A text description of the header field's purpose.
HeaderFieldName	Type string Properties Filter, Group, Sort Description Name of the header field. The name must contain at least one alphanumeric character or underscore. It can also include: ! # \$ % & ' * + - . ^ _ ` ~
HeaderFieldValue	Type string Properties Filter, Sort Description A formula that resolves to the value for the header. The values in the formula must evaluate to a string. If the formula resolves to null and an empty string, the header isn't sent.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the custom HTTP header is available to use.
ParentId	Type reference

Field Name	Details
	Properties Filter, Group, Sort
	Description ID of the entity that the custom HTTP header is related to. This is a polymorphic relationship field.
	Relationship Name Parent
	Relationship Type Lookup
	Refers To ExternalDataSource, NamedCredential

Usage

For each OData external data source, define up to 10 HTTP headers to request data.

 **Note:** HTTP headers aren't supported on named credentials.

CustomMsgChannel

Represents a custom conversation channel and stores event-driven Messaging settings. Custom conversation channels are implemented for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS Messaging channels. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Access to standard objects requires Salesforce admin privileges or the Customize Application permission.

Fields

Field	Details
ChannelDefinitionId	Type reference
	Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Specifies the ConversationChannelDefinition for the custom channel. This field is a relationship field. Relationship Name ChannelDefinition Refers To ConversationChannelDefinition
EventCapabilitiesInboundAcknowledgmentEnabled	Type boolean Properties Create, Filter, Update Description Indicates whether the Salesforce admin has enabled read receipts and delivery receipts for inbound messages in the Messaging settings (<code>true</code>) or whether the admin hasn't enabled these inbound acknowledgments (<code>false</code>). The default value is <code>false</code>, meaning inbound acknowledgments are disabled by default even if supported by the partner. This field is available in API version 65.0 and later. Use this field instead of <code>HasInboundReceipts</code>.
EventCapabilitiesProgressIndicatorEnabled	Type boolean Properties Create, Filter, Update Description Indicates whether the Salesforce admin has enabled AI agent progress indicators in the Messaging settings (<code>true</code>) or whether the admin hasn't enabled progress indicators (<code>false</code>). The default value is <code>false</code>, meaning progress indicators for AI agents are disabled by default even if supported by the partner. This field is available in API version 65.0 and later.
EventCapabilitiesTypingIndicatorDisabled	Type boolean Properties Create, Filter, Update Description Indicates whether the Salesforce admin has enabled typing indicators for outbound messages in the Messaging settings (<code>false</code>) or whether the admin hasn't enabled outbound typing indicators (<code>true</code>). The default value is <code>false</code>, meaning the outbound typing indicators are enabled by default. This field is available in API version 65.0 and later. Use this field instead of <code>HasTypingIndicator</code>.

Field	Details
HasInboundReceipts	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the Salesforce admin has enabled read receipts and delivery receipts for inbound messages in the Messaging settings (<code>true</code>) or whether the admin hasn't enabled these inbound acknowledgments (<code>false</code>). The default value is <code>false</code>, meaning inbound acknowledgments are disabled by default even if supported by the partner. Available in API versions 63.0 to 65.0. In API version 66.0 and later, this field is removed. Use <code>EventCapabilitiesIsInboundAcknowledgementEnabled</code> instead.
HasTypingIndicator	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the Salesforce admin has enabled typing indicators for outbound messages in the Messaging settings (<code>true</code>) or whether the admin hasn't enabled outbound typing indicators (<code>false</code>). The default value is <code>true</code>, meaning the outbound typing indicator feature is enabled by default if supported by the partner. To disable the outbound typing indicator feature, set this value to <code>false</code>. Available in API versions 63.0 to 65.0. In API version 66.0 and later, this field is removed. Use <code>EventCapabilitiesIsTypingIndicatorDisabled</code> instead.
MessagingChannelId	Type reference Properties Create, Filter, Group, Sort, Update Description Specifies the Messaging Channel ID for the custom channel. This field is unique within your organization. This field is a relationship field. Relationship Name MessagingChannel Refers To MessagingChannel

CustomNotificationType

Stores information about custom notification types. This object is available in API version 47.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CustomNotifTypeName	Type string Properties Create, Filter, Group, idLookup, Sort, Unique, Update Description Specifies a notification type name. The notification type name is unique within your organization. The notification type name isn't namespaced, so it can't be duplicated across installed packages. Maximum number of characters: 80.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies a general description of the notification type, which is displayed with the notification type name. Maximum number of characters: 255.
Desktop	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the desktop delivery channel is enabled (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Specifies the API name of the notification type.

Field	Details
IsSlack	Type boolean Properties Reserved for future use. Description Reserved for future use.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the language of the custom notification type. The value for this field is the language value of the org.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Specifies the notification type label.
Mobile	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the mobile delivery channel is enabled (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Specifies the namespace of the notification type, if installed with a managed package.

CustomPermission

Represents a permission created to control access to a custom process or app, such as sending email. This object is available in API version 31.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

Fields

Field Name	Details
Description	Type textarea Properties Filter, Group, Nillable, Sort Description A description of the custom permission. Limit: 255 characters.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the custom permission in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to Name in the user interface. Limit: 80 characters.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsLicensed	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description When enabled (<code>true</code>) indicates that the appropriate Salesforce license is required before accessing the permission. This field is available in API version 50.0 and later.
IsProtected	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the custom permission is protected (<code>true</code>) or not (<code>false</code>). Protected components that have been installed in other organizations can't be linked to or referenced by components created in the subscriber organization. A developer can delete a protected component contained in a managed package in a future release of the package without worrying about failing installations. However, after a component is marked as unprotected and is released globally, the developer can't delete it. The default value is <code>false</code>. This field is available in API version 50.0 and later.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the custom permission. Valid values are: - Chinese (Simplified): <code>zh_CN</code> - Chinese (Traditional): <code>zh_TW</code> - Danish: <code>da</code> - Dutch: <code>nl_NL</code> - English: <code>en_US</code> - Finnish: <code>fi</code> - French: <code>fr</code> - German: <code>de</code> - Italian: <code>it</code> - Japanese: <code>ja</code> - Korean: <code>ko</code> - Norwegian: <code>no</code> - Portuguese (Brazil): <code>pt_BR</code> - Russian: <code>ru</code> - Spanish: <code>es</code>

Field Name	Details
	- Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. - Swedish: <code>sv</code> - Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
MasterLabel	Type string Properties Filter, Group, Sort Description The custom permission label, which corresponds to Label in the user interface. Limit: 80 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Use the CustomPermission object to determine users' access to custom permissions.

For example, to query all permission sets where the Button1 permission is enabled:

```
SELECT Id, DeveloperName,
(select Id, Parent.Name, Parent.Profile.Name from SetupEntityAccessItems)
FROM CustomPermission
WHERE DeveloperName = 'Button1'
```

To query all permission sets and profiles with custom permissions:

```
SELECT Assignee.Name, PermissionSet.Id,
PermissionSet.Profile.Name,
PermissionSet.isOwnedByProfile,
PermissionSet.Label
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
    FROM SetupEntityAccess
    WHERE SetupEntityType =
'CustomPermission')
```

To query for all SetupEntityAccess rows with custom permissions:

```
SELECT Id,ParentId,Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE SetupEntityType='CustomPermission'
AND ParentId
IN (SELECT Id
    FROM PermissionSet
    WHERE isOwnedByProfile = false)
```

SEE ALSO:

- [CustomPermissionDependency](#)
- [PermissionSet](#)
- [Profile](#)
- [SetupEntityAccess](#)

CustomPermissionDependency

Represents the dependency between two custom permissions when one custom permission requires that you enable another custom permission. This object is available in API version 32.0 and later.

Supported Calls

describeLayout(), describeSObjects(), query(), retrieve()

Special Access Rules

As of Spring '20 and later, only users with View Setup and Configuration permission can access this object.

Fields

Field Name	Details
CustomPermissionId	Type reference

Field Name	Details
	Properties Filter, Group, Sort Description The ID of the custom permission that requires the permission that's specified in <code>RequiredCustomPermissionId</code>. This is a relationship field. Relationship Name CustomPermission Relationship Type Lookup Refers To CustomPermission
RequiredCustomPermissionId	Type reference Properties Filter, Group, Sort Description The ID of the custom permission that must be enabled when <code>CustomPermissionId</code> is enabled. This is a relationship field. Relationship Name RequiredCustomPermission Relationship Type Lookup Refers To CustomPermission

Usage

The following Apex class contains a method that returns the IDs of all custom permissions that are required for the given custom permission ID. To use this class, save it in your organization.

```
public class CustomPermissionUtil {
    public String[] getAllRequiredCustomPermissions(String customPermId) {
        return getAllRequiredHelper(new String[] {customPermId});
    }

    private String[] getAllRequiredHelper(String[] customPermIds) {
        CustomPermissionDependency[] requiredPerms = [SELECT RequiredCustomPermissionId
                                                    FROM CustomPermissionDependency
                                                    WHERE CustomPermissionId
                                                    IN :customPermIds];
    }
}
```

```
String[] requiredPermIds = new String[]{};
for (CustomPermissionDependency cpd : requiredPerms) {
    requiredPermIds.add(cpd.RequiredCustomPermissionId);
}
if (requiredPermIds.size() > 0) {
    customPermIds.addall(getAllRequiredHelper(requiredPermIds));
    return customPermIds;
} else {
    return customPermIds;
}
}
```

For more information about using Apex classes, see the [Apex Developer Guide](#).

[CustomPermission](#)

Customer

Represents the customer role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CustomerStatusType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the customer account. Possible values are: - Active - Inactive
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this customer.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns the record. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PartyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Represents the individual object related to this customer record. This is a relationship field.

Field	Details
	Relationship Name Party
	Relationship Type Lookup
	Refers To Individual
TotalLifeTimeValue	Type int
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The total revenue amount gained from this customer.

DandBCompany

Represents a Dun & Bradstreet® company record, which is associated with an account added from Data.com. This object is available in API version 25.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Warning: You can update fields in the DandBCompany object; however, field changes may be overwritten by Data.com Clean jobs or by using the Data.com Clean button.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Only organizations with Data.com Premium Prospector or Data.com Premium Clean can access this object.

Fields

Field Name	Details
Address	Type address Properties Filter, Nillable Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city where a company is physically located. Maximum size is 40 characters.

SalesVolume	Type double Properties Create, Filter, Nillable, Sort, Update Description The total annual sales revenue in the headquarters' local currency. Dun & Bradstreet tracks revenue data for publicly traded companies, Global Ultimates, Domestic Ultimates, and some headquarters.
SalesVolumeReliability	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The reliability of the <code>SalesVolume</code> figure. Available values include: • 0—Actual number

Field Name	Details
	• 1—Low • 2—Estimated (for all records) • 3—Modeled (for non-US records)
SecondNaics	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters.
SecondNaicsDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters.
SecondSic	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
SecondSic8	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
SecondSic8Desc	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
SecondSicDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
SixthNaics	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters.
SixthNaicsDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters.
SixthSic	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
SixthSic8	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
SixthSic8Desc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
SixthSicDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
SmallBusiness	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether the company is designated a small business as defined by the Small Business Administration of the US government. Available values include: • Y—Small business site • N—Not small business site
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The state where a company is physically located. Maximum size is 20 characters.
StockExchange	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The corresponding exchange for a company's stock symbol. For example: NASDAQ or NYSE. Maximum size is 16 characters.
StockSymbol	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The abbreviation used to identify publicly traded shares of a particular stock. Maximum size is 6 characters.
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street address where a company is physically located. Maximum size is 255 characters.
Subsidiary	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether a company is more than 50 percent owned by another organization. Available values include: 0—Not subsidiary of another organization 3—Subsidiary of another organization
ThirdNaics	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional NAICS code used to further classify an organization by industry. Maximum size is 6 characters.
ThirdNaicsDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A brief description of an organization's line of business, based on the corresponding NAICS code. Maximum size is 120 characters.
ThirdSic	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
ThirdSic8	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
ThirdSic8Desc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
ThirdSicDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
TradeStyle1	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A name, different from its legal name, that an organization may use for conducting business. Similar to “Doing business as” or “DBA”. Maximum size is 255 characters.
TradeStyle2	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional tradestyle used by the organization. Maximum size is 255 characters.
TradeStyle3	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional tradestyle used by the organization. Maximum size is 255 characters.
TradeStyle4	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional tradestyle used by the organization. Maximum size is 255 characters.
TradeStyle5	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An additional tradestyle used by the organization. Maximum size is 255 characters.
URL	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description An organization’s primary website address. Maximum size is 104 characters.
UsTaxId	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The identification number for the company used by the Internal Revenue Service (IRS) in the administration of tax laws. Also referred to as Federal Taxpayer Identification Number. Maximum size is 9 characters.

YearStarted	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The year the company was established or the year when current ownership or management assumed control of the company. Maximum size is 4 characters.

Usage

Use this object to manage D&B Company records in your organization.

Dashboard

Represents a dashboard, which shows data from custom reports as visual components. Access is read-only. This object is available in API version 20.0 and later.

Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
BackgroundDirection	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Returns the direction of the background fade. Available values are: • Top to Bottom • Left to Right • Diagonal (default value) Label is Background Fade Direction.
BackgroundEnd	Type int Properties Filter, Group, Sort Description Returns the ending fade color in hexadecimal. Label is Ending Color.
BackgroundStart	Type int Properties Filter, Group, Sort Description Returns the starting fade color in hexadecimal. Label is Starting Color.
ChartTheme	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Returns the background theme used for charts. Possible values are: • dark—Dark Background • light—Light Background
ColorPalette	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description Returns the color palette used for the dashboard. Possible values are: • <code>Default</code>—Default Palette • <code>accessible</code>—Mineral(Accessible) Palette • <code>bluegrass</code>—Bluegrass Palette • <code>colorSafe</code>—Color Safe Palette • <code>dusk</code>—Dusk Palette • <code>earth</code>—Lake Palette • <code>fire</code>—Fire Palette • <code>gray</code>—Gray Palette • <code>heat</code>—Heat Palette • <code>justice</code>—Wildflowers Palette • <code>nightfall</code>—Nightfall Palette • <code>pond</code>—Pond Palette • <code>sunrise</code>—Sunrise Palette • <code>tropic</code>—Ocean Palette • <code>unity</code>—Aurora Palette • <code>water</code>—Water Palette • <code>watermelon</code>—Watermelon Palette
DashboardResultRefreshedDate	Type string Properties Nillable Description Returns the date on which the dashboard results were last refreshed.
DashboardResultRunningUser	Type string Properties Nillable Description The user whose security settings were used to generate the dashboard results.
Description	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Returns the description of the dashboard. Limit: 255 characters.
DeveloperName	Type string Properties Filter, Group, Sort Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is <code>Dashboard Unique Name</code>.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
FolderId	Type reference Properties Filter, Group, Sort Description Required. Returns the ID of the Folder that contains the dashboard. See <code>Folder</code>. This is a relationship field. Relationship Name Folder Relationship Type Lookup Refers To Folder, User
FolderName	Type string Properties Filter, Nillable, Sort

Field	Details
	Description Name of the folder that contains the dashboard. Available in API version 35.0 and later.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort, Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
LeftSize	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Returns the size of the left column of the dashboard. Available values are: • Narrow • Medium • Wide

Field	Details
MiddleSize	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Returns the size of the middle column of the dashboard. Available values are: • Narrow • Medium • Wide
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
RightSize	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Returns the size of the right column in the dashboard. Available values are: • Narrow • Medium • Wide

Field	Details
RunningUserId	Type reference Properties Filter, Group, Sort Description Returns the ID of the running user specified for the dashboard. If the dashboard was created in Lightning Experience and is configured to run as the viewing user, it returns the user ID of the dashboard creator. If the dashboard was created in Salesforce Classic and is configured to run as the logged-in user, returns the user ID of the last specified running user. This is a relationship field. Relationship Name RunningUser Relationship Type Lookup Refers To User
TextColor	Type int Properties Filter, Group, Sort Description Returns the body text color in hexadecimal. Label is <code>Text Color</code>.
Title	Type string Properties Filter, Group, idLookup, Sort Description Returns the title of the dashboard. Limit: 80 characters.
TitleColor	Type int Properties Filter, Group, Sort Description Returns the title text color in hexadecimal. Label is <code>Title Color</code>.
TitleSize	Type int

Field	Details
	Properties Filter, Group, Sort Description Returns the title font size in points. Label is <code>Title Size</code> .
Type	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Returns the dashboard type. Available values are: • <code>SpecifiedUser</code>—The dashboard displays data according to the access level of one specific running user. • <code>LoggedInUser</code>—The dashboard displays data according to the access level of the logged-in user. • <code>MyTeamUser</code>—The dashboard displays data according to the access level of the logged-in user, and managers can view dashboards from the point of view of users beneath them in the role hierarchy.

Supported Query Scopes

Use these scopes to help specify the data that your SOQL query returns.

allPrivate

Records saved in all users' private folders.

Requires the user permission "Manage All Private Reports and Dashboards" and [Enhanced Analytics Folder Sharing](#). If your organization was created after the Summer '13 release, you already have Enhanced Analytics Folder Sharing. Available in API version 36.0 and later.

created

Records created by the user running the query.

everything

All records except records saved in other users' private folders.

mine

Records saved in the private folder of the user running the query.

Usage

Provides read-only access to the current values in the dashboard fields.

Example: Dashboards in an Inactive User’s Private Folder

This SOQL query returns dashboards saved in a specific user’s private folder.

```
SELECT Id FROM Dashboard USING SCOPE allPrivate WHERE CreatedById = '005A0000000Bc2deFG'
```

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

DashboardFeed

Feed tracking is available for the object.

SEE ALSO:

- [DashboardTag](#)
- [Report](#)

DashboardComponent

Represents a dashboard component, which can be a chart, metric, table, or gauge on a dashboard. Access is read-only. This object is available in API version 21.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CustomReportId	Type reference Properties Filter, Group, Nillable, Sort Description Requires the user permission "Manage All Private Reports and Dashboards." The ID of the report that provides data for the dashboard component. See Report.
DashboardId	Type reference Properties Filter, Group, Sort Description The ID of the dashboard that contains the dashboard component. See Dashboard. This is a relationship field.

Field	Details
	Relationship Name Dashboard
	Relationship Type Lookup
	Refers To Dashboard
Name	Type string
	Properties Filter, Group, Nillable, Sort
	Description The name of the dashboard component.

Usage

Provides read only access to the current values in dashboard component fields.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[DashboardComponentFeed](#)

Feed tracking is available for the object.

DashboardTag

Associates a word or short phrase with a Dashboard. This object is available in API version 20.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference
	Properties Create, Filter

Field Name	Details
	Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

DashboardTag stores the relationship between its parent TagDefinition and the Dashboard being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

[Dashboard](#)

DataAssessmentFieldMetric

Represents summary statistics for matched, blank, and differing fields in account records of an org compared to records in Data.com. This object is available in API version 37.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Child Relationships

DataAssessmentFieldMetric is a child object of [DataAssessmentMetric](#) object.

Fields

Field Name	Details
DataAssessmentMetricId	Type reference Properties Filter, Group, Sort Description A unique number that identifies the parent DataAssessmentMetric record. This is a relationship field. Relationship Name DataAssessmentMetric Relationship Type Lookup Refers To DataAssessmentMetric
FieldName	Type string Properties Filter, Group, Nillable, Sort Description The name of the assessed field.

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An optional field used to name your record.
NumMatchedBlanks	Type int Properties Filter, Group, Nillable, Sort Description The number of matched records that contain blank fields.
NumMatchedDifferent	Type int Properties Filter, Group, Nillable, Sort Description The number of matched records that have a different value for this field.
NumMatchedInSync	Type int Properties Filter, Group, Nillable, Sort Description The number of matched records that have the same value for this field.
NumUnmatchedBlanks	Type int Properties Filter, Group, Nillable, Sort Description The number of unmatched records that contain blank fields.

DataAssessmentMetric

Represents a summary of statistics for fields matched and unmatched in your account records with Data.com account records. This object is available in API version 37.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An optional field used to name your record.
NumDuplicates	Type int Properties Filter, Group, Nillable, Sort Description The number of duplicate records.
NumMatched	Type int Properties Filter, Group, Nillable, Sort Description The number of matched records.
NumMatchedDifferent	Type int Properties Filter, Group, Nillable, Sort Description The number of records in your org matched with a Data.com record that have different fields.

Field Name	Details
NumProcessed	Type int Properties Filter, Group, Nillable, Sort Description The number of records processed in the data assessment.
NumTotal	Type int Properties Filter, Group, Nillable, Sort Description The number of records available for data assessment processing.
NumUnmatched	Type int Properties Filter, Group, Nillable, Sort Description The number of records not matched.

DataAssessmentValueMetric

Summarizes the number of fields matched for your account records with Data.com account records. This object is available in API version 37.0 and later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Child Relationships

DataAssessmentValueMetric is a child of [DataAssessementFieldMetric](#).

Fields

Field Name	Details
DataAssessmentFieldMetricId	Type reference Properties Filter, Group, Sort Description A unique number that identifies the parent DataAssesementFieldMetric record. This is a relationship field. Relationship Name DataAssessmentFieldMetric Relationship Type Lookup Refers To DataAssessmentFieldMetric
FieldValue	Type string Properties Filter, Group, Nillable, Sort Description The value in the matched field.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An optional field used to name your record.
ValueCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times this value appears in this field.

DatabaseSaveEventLog

Database Save events track when records are created,updated, or deleted This object is available in API version 64.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>BotIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
<code>BotSessionIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The bot session ID.
<code>DmlType</code>	Type string Properties Filter, Group, Nillable, Sort Description The type of DML operation.
<code>FirstObjectIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description Only the first object ID is logged upon an update. During record updates, the ID of that specific row is logged. When multiple rows are updated, only a single ID is logged.

Field	Details
KeyPrefix	Type string Properties Filter, Group, Nillable, Sort Description The key prefix of the entity type that was saved
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. The session starts with a login event and ends with either a logout event or the user session expiring. For example, 1UqjLPQTWRdvRG4.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestIdentifier.
RowCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of records in the result set.
SampleFactor	Type double Properties Filter, Nillable, Sort

Field	Details
	Description Rate at which entities are logged. If the sample factor is 1 that means every entity saved was logged. If it is 100 that means that 1/100 logs.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API.

DatacloudCompany

Represents the fields for Data.com company records. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`

Fields

Field Name	Details
ActiveContacts	Type int Properties Nillable Description The number of active contacts that are associated with a company.
AnnualRevenue	Type currency Properties Filter, Nillable Description The amount of money that the company makes in 1 year. Annual revenue is measured in US dollars.
City	Type string Properties Filter, Nillable, Sort Description The name of the city where the company is located.
CompanyId	Type string Properties Filter, Nillable Description A unique numerical identifier for the company and theData.com identifier for a company.
Country	Type string Properties Filter, Nillable, Sort Description A string that represents the standard abbreviation for the country where the company is located.

Field Name	Details
CountryCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist Description A standardized name for countries of the world.
Description	Type string Properties Nillable Description A brief synopsis of the company that provides a general overview of the company and what it does.
DunsNumber	Type string Properties Filter, Nillable Description A randomly generated nine-digit number that's assigned by Dun & Bradstreet (D&B) to identify unique business establishments.
EmployeeQuantityGrowthRate	Type double Properties Nillable Description The yearly growth rate of the number of employees in a company expressed as a decimal percentage. The data includes the total employee growth rate for the past two years.
ExternalId	Type string Properties Filter, Nillable, Sort Description A unique numerical identifier for the company. The ExternalId is a system-generated number.

Field Name	Details
Fax	Type phone Properties Nillable Description The telephone number that's used to send and receive faxes.
FortuneRank	Type int Properties Defaulted on create, Group, Nillable Description The numeric value of the company's Fortune 1000 ranking. A null or blank value means that the company isn't ranked as a Fortune 1000 company.
FullAddress	Type string Properties Group, Nillable Description The complete address of a company, including Street, City, State, and Zip.
IncludedInSnP500	Type string Properties Group, Nillable Description A true or false value. If <code>true</code>, the company is listed in the S&P 500 Index. If <code>false</code>, the company isn't listed in the S&P 500 Index.
Industry	Type string Properties Nillable Description A description of the type of industry such as Telecommunications, Agriculture, or Electronics.
IsInCrm	Type boolean

Field Name	Details
	Properties Defaulted on create, Group Description Whether the record is in Salesforce (true) or not (false).
IsInactive	Type boolean Properties Defaulted on create, Filter Description A true or false response. True, the company record is not active. False, the company record is active.
IsOwned	Type boolean Properties Defaulted on create Description A true or false value. True, your organization owns the record. False, your organization doesn't own the record.
NaicsCode	Type string Properties Filter, Nillable Description A value that represents the North American Industry Classification System (NAICS) code. NAICS was created to provide details about a business's service orientation. The code descriptions are focused on what a business does.
NaicsDesc	Type string Properties Nillable Description A description of the NAICS classification.
Name	Type string

Field Name	Details
	Properties Filter, Nillable, Sort Description The company's name.
NumberOfEmployees	Type int Properties Filter, Nillable Description The number of employees working for the company.
Ownership	Type string Properties Filter, Nillable Description The type of ownership of the company: • Public • Private • Government • Other
Phone	Type phone Properties Nillable Description A numeric string containing the primary telephone number for the company.
PremisesMeasure	Type int Properties Group, Nillable Description A numeric value for the measurement of the premises.
PremisesMeasureReliability	Type string

Field Name	Details
	Properties Group, Nillable Description A descriptive accuracy of the measurement such as actual, estimated, or modeled.
PremisesMeasureUnit	Type string Properties Group, Nillable Description A descriptive measurement unit such as acres, square meters, or square feet.
PriorYearEmployees	Type int Properties Group, Nillable Description The total number of employees for the prior year.
PriorYearRevenue	Type double Properties Nillable Description The annual revenue for the prior year.
SalesTurnoverGrowthRate	Type double Properties Nillable Description The increase in annual revenue from the previous value for an equivalent period expressed as a decimal percentage.
Sic	Type string Properties Filter, Nillable

Field Name	Details
	Description A numeric value that represents the Standard Industrial Codes (SIC). SIC is a numbering convention that indicates what type of service a business provides. It is a four-digit value.
SicCodeDesc	Type string Properties Group, Nillable Description The SIC numeric code and description for a company.
SicDesc	Type string Properties Nillable Description A description of the SIC classification.
Site	Type picklist Properties Filter, Group, Nillable, Restricted picklist Description An organizational status of the company. • Branch: a secondary location to a headquarter location • Headquarter: a parent company with branches or subsidiaries • Single Location: a single business with no subsidiaries or branches
State	Type string Properties Filter, Nillable, Sort Description The two-letter standard abbreviation for a state.
StateCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist

Field Name	Details
	Description A standard two-letter abbreviation for states and territories of the United States. The state where the company is located. The abbreviation can also be a province or other equivalent to a state, depending on the country where the company is located.
Street	Type string Properties Nillable Description A postal address for the company.
TickerSymbol	Type string Properties Nillable Description The symbol that uniquely identifies companies that are traded on public stock exchanges.
TradeStyle	Type string Properties Nillable Description A legal name under which a company conducts business.
UpdatedDate	Type dateTime Properties Nillable, Sort Description The last date and time when the information for this company was updated.
Website	Type url Properties Nillable

Field Name	Details
	Description The standard URL for the company's home page.
YearStarted	Type string Properties Nillable Description The year when the company was founded.
Zip	Type string Properties Filter, Nillable Description A numeric postal code that's designated for the address.

Usage

Use the DatacloudCompany object to search the Data.com database for companies with the specific criteria that you enter. Use this object to find company records that you are interested in purchasing for your organization. Data.com APIs use the term "company," which is similar to Salesforce term "accounts."

Important: DatacloudCompany can't be used in Apex test methods, because an external web service call is required to access it. These calls are not allowed in Apex test methods.

DatacloudContact

The fields and properties for Data.com contact records. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
City	Type string Properties Filter, Nillable, Sort Description The city where the company is located.
CompanyId	Type string Properties Filter, Nillable Description The unique numerical identifier for the company and the Data.com company identification number or Data.com Key.
CompanyName	Type string Properties Filter, Group, Sort Description The name of the company.
ContactId	Type string Properties Filter, Nillable Description The unique numeric identifier for this contact.
Country	Type string Properties Filter, Nillable, Sort Description The standard abbreviation or name for the country where the company is located.  Note: You can enter a comma-separated list of countries; however, for a country that uses a comma in its name, leave out the comma. For example, enter "Taiwan, ROC" as <code>Taiwan ROC</code>.

Field Name	Details
Department	Type picklist Properties Filter, Group, Restricted picklist Description The department in the company that the contact is affiliated with. The values of this field are fixed enumerated values. • Engineering • Finance • Human Resources • IT • Marketing • Operations • Other • Sales • Support
Email	Type email Properties Filter, Nillable Description A business email address for the contact.
ExternalId	Type string Properties Filter, Nillable, Sort Description A unique system-generated numerical identifier for the contact.
FirstName	Type string Properties Filter, Nillable Description The first name of the contact.

Field Name	Details
IsInCrm	Type boolean Properties Defaulted on create, Group Description Whether the record is in Salesforce (true) or not (false).
IsInactive	Type boolean Properties Defaulted on create, Filter Description Whether the record is active (false) or not (true).
IsOwned	Type boolean Properties Defaulted on create Description • <code>True</code>: You own this record. • <code>False</code>: You do not own this record.
LastName	Type string Properties Filter, Nillable, Sort Description The last name of the contact.
Level	Type picklist Properties Filter, Group, Nillable, Restricted picklist Description A human resource label that designates a person's level in the company. The values of this field are fixed enumerated values. • <code>C-Level</code> • <code>VP</code> • <code>Director</code> • <code>Manager</code>

Field Name	Details
	• Staff • Other
Phone	Type phone Properties Nillable Description The direct-dial telephone number for the contact.
SocialHandles	Type string Description The social handles for this contact. Social handles are a normalized URL and user name for social media accounts such as, LinkedIn, Facebook, and Twitter. This field is response-only. The DatacloudSocialHandles object is a child of the DatacloudContact object.
State	Type string Properties Filter, Nillable, Sort Description The state where the company is located, which can also be a province or other equivalent to a state, depending on the country where the company is located.
Street	Type string Properties Nillable Description The street address for the company where the contact works.
Title	Type string Properties Filter, Group, Nillable, Sort Description Title of the contact such as CEO or Vice President.

Field Name	Details
UpdatedDate	Type dateTime Properties Nillable, Sort Description The last date and time when the information for a contact was updated.
Zip	Type string Properties Filter, Nillable Description The postal or zip code for the address.

Usage

This object searches the Data.com database for contacts with the specific criteria that you enter. Use this object to find contact records that you are interested in purchasing for your organization.

 **Important:** DatacloudContact can't be used in Apex test methods, because an external web service call is required to access it. These calls are not allowed in Apex test methods.

DatacloudDandBCompany

Represents a set of read-only fields that are used to return D&B company data from Data.com API calls. This object is available in API version 30.0 or later.

 **Note:** When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
City	Type string Properties Nillable Description The name of the city where the company is physically located.
CompanyCurrencyIsoCode	Type picklist Properties Nillable, Restricted picklist Description The code used to represent a company's local currency. This data is provided by the International Organization for Standardization (ISO) and is based on their three-letter currency codes. For example, USD is the ISO code for United States Dollar.
CompanyId	Type string Properties Filter, Nillable, Sort Description A unique numeric identifier for a company.
Country	Type string Properties Nillable Description The country where a company is physically located.
CountryAccessCode	Type string Properties Nillable Description The required code for international calls.

Field Name	Details
CurrencyCode	Type picklist Properties Nillable, Restricted picklist Description The currency in which the company's sales volume is expressed.
Description	Type string Properties Nillable Description A brief description of the company, which may include information about its history, its products and services, and its influence on a particular industry.
DomesticUltimateBusinessName	Type string Properties Nillable Description The primary name of the Domestic Ultimate, which is the highest ranking subsidiary, specified by country, within an organization's corporate structure.
DomesticUltimateDunsNumber	Type string Properties Nillable Description The D-U-N-S number for the Domestic Ultimate, which is the highest-ranking subsidiary, specified by country, within an organization's corporate structure.
DunsNumber	Type string Properties Filter, Nillable Description The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking.

Field Name	Details
EmployeeQuantityGrowthRate	Type double Properties Nillable Description The yearly growth rate of the number of employees in a company expressed as a decimal percentage. The data includes the total employee growth rate for the past two years.
EmployeesHere	Type double Properties Nillable Description The number of employees at a specified location, such as a branch location.
EmployeesHereReliability	Type picklist Properties Nillable, Restricted picklist Description The reliability of the EmployeesHere figure. Available values are <i>Actual number, Low, Estimated (for all records), Modeled (for non-US records)</i>. A blank value indicates this data is unavailable.
EmployeesTotal	Type double Properties Nillable Description The total number of employees in the company, including all subsidiary and branch locations. This data is available only on records that have a value of <i>Headquarters/Parent</i> in the LocationStatus field.
EmployeesTotalReliability	Type picklist Properties Nillable, Restricted picklist

Field Name	Details
	Description The reliability of the EmployeesTotal figure. Available values are <i>Actual number, Low, Estimated (for all records), Modeled (for non-US records)</i> . A blank value indicates this data is unavailable.
ExternalId	Type string Properties Filter, Nillable, Sort Description A system generated numeric identification.
FamilyMembers	Type int Properties Nillable Description The total number of family members, worldwide, within an organization, including the Global Ultimate, its subsidiaries (if any), and its branches (if any).
Fax	Type phone Properties Nillable Description The company's facsimile number.
FifthNaics	Type string Properties Nillable Description A NAICS code that's used to further classify an organization by industry.
FifthNaicsDesc	Type string Properties Nillable

Field Name	Details
	Description A brief description of an organization's line of business, based on the corresponding NAICS code.
FifthSic	Type string Properties Nillable Description A Standard Industrial Classification (SIC) code that's used to further classify an organization by industry.
FifthSic8	Type string Properties Group, Nillable Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
FifthSic8Desc	Type string Properties Group, Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
FifthSicDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code.
FipsMsaCode	Type string Properties Nillable

Field Name	Details
	Description The Federal Information Processing Standards (FIPS) and the Metropolitan Statistical Area (MSA) codes identify the organization's location. The MSA codes are defined by the US Office of Management and Budget.
FipsMsaDesc	Type string Properties Nillable Description A brief description of an organization's FIPS MSA code.
FortuneRank	Type int Properties Defaulted on create, Group, Nillable Description The numeric value of the company's Fortune 1000 ranking. A null or blank value means that the company isn't ranked as a Fortune 1000 company.
FourthNaics	Type string Properties Nillable Description A NAICS code used to further classify an organization by industry.
FourthNaicsDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding NAICS code.
FourthSic	Type string Properties Group, Nillable

Field Name	Details
	Description A SIC code used to further classify an organization by industry.
FourthSic8	Type string Properties Group, Nillable Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
FourthSic8Desc	Type string Properties Group, Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
FourthSicDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code.
GeoCodeAccuracy	Type picklist Properties Nillable, Restricted picklist Description The level of accuracy of a location's geographical coordinates compared with its physical address. Available values include <i>Rooftop level</i> , <i>Street level</i> , <i>Block level</i> , <i>Census tract level</i> , <i>Mailing address level</i> , <i>ZIP code level</i> , <i>Geocode could not be assigned</i> , <i>Places the address in the correct city</i> , <i>Not matched</i> , <i>State or Province Centroid</i> , <i>Street intersection</i> , <i>PO BOX location</i> , <i>Non-US rooftop accuracy</i> , <i>County Centroid</i> , <i>Sub Locality-Street Level</i> , and <i>Locality Centroid</i>

Field Name	Details
GlobalUltimateBusinessName	Type string Properties Nillable Description The primary name of the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries.
GlobalUltimateDunsNumber	Type string Properties Filter, Nillable Description The D-U-N-S number of the Global Ultimate, which is the highest-ranking entity within an organization's corporate structure and can oversee branches and subsidiaries.
GlobalUltimateTotalEmployees	Type double Properties Nillable Description The total number of employees at the Global Ultimate, which is the highest entity within an organization's corporate structure and may oversee branches and subsidiaries.
ImportExportAgent	Type picklist Properties Nillable, Restricted picklist Description Identifies whether a business imports goods or services, exports goods or services, and/or is an agent for goods.
IncludedInSnP500	Type string Properties Group, Nillable Description A true or false value. If <code>true</code>, the company is listed in the S&P 500 Index. If <code>false</code>, the company isn't listed in the S&P 500 Index.

Field Name	Details
Industry	Type string Properties Group, Nillable Description A description of the type of industry such as Telecommunications, Agriculture, or Electronics.
IsOwned	Type boolean Properties Defaulted on create Description A true or false value. True, your organization owns the record. False, your organization doesn't own the record.
IsParent	Type boolean Properties Defaulted on create, Description A true or false value. True, the company is a parent company. False, the company isn't a parent company. A parent company owns other companies.
Latitude	Type string Properties Nillable Description Used with longitude to specify a precise location, which is used to assess the Geocode Accuracy.
LegalStatus	Type picklist Properties Nillable, Restricted picklist Description Identifies the legal structure of an organization. Available values include <i>Cooperative</i>, <i>Nonprofit organization</i>, <i>Local government body</i>, <i>Partnership of unknown type</i>, and <i>Foreign company</i>.

Field Name

Details

LocationStatus

Type

picklist

Properties

Filter, Nillable, Restricted picklist

Description

Identifies the organizational status of a company. A numeric value represents each value.

Organizational status	Numeric value
<i>Single location</i> : The business has no branches or subsidiaries.	0
<i>Headquarters/Parent</i> : A parent company that owns more than 50 percent of another company. When the company also has branches, it's the headquarters.	1
<i>Branch</i> : A secondary location of a business.	2

Note: Only the numeric value is accepted in an API request.

Properties

Nillable

Description

Used with latitude to specify a precise location, which is used to assess the Geocode Accuracy.

MailingCity

Type

string

Properties

Nillable

Description

The city where a company has its mail delivered.

MailingCountry

Type

string

Field Name	Details
	Properties Nillable Description The country where a company has its mail delivered.
MailingState	Type string Properties Nillable Description The state where a company has its mail delivered.
MailingStreet	Type string Properties Nillable Description The street address where a company has its mail delivered.
MailingZip	Type string Properties Nillable Description The postal zip code for the company.
MarketingPreScreen	Type picklist Properties Nillable, Restricted picklist Description The probability that a company pays with a significant delay compared to the agreed terms. The risk level is based on the standard Commercial Credit Score, and ranges from low risk to high risk. Available values are <i>High risk of delinquency</i> , <i>Low risk of delinquency</i> , and <i>Moderate risk of delinquency</i> .  Important: Use this information for marketing pre-screening purposes only.

Field Name	Details
MarketingSegmentationCluster	Type picklist Properties Nillable, Restricted picklist Description Twenty-two distinct, mutually exclusive profiles, created as a result of cluster analysis of Dun & Bradstreet data for US organizations. Available values include <i>High-Tension Branches of Insurance/Utility Industries, Rapid-Growth Large Businesses, Labor-Intensive Giants, Spartans, Main Street USA.</i>
MinorityOwned	Type picklist Properties Nillable, Restricted picklist Description Indicates whether an organization is owned or controlled by a member of a minority group.
Name	Type string Properties Filter, Nillable Description The primary or registered name of a company.
NationalId	Type string Properties Nillable Description The identification number used in some countries for business registration and tax collection.
NationalIdType	Type picklist Properties Nillable, Restricted picklist Description A code value that identifies the type of national identification number that's used.

Field Name	Details
OutOfBusiness	Type picklist Properties Nillable, Restricted picklist Description Indicates whether the company at the specified address has discontinued operations.
OwnOrRent	Type picklist Properties Nillable, Restricted picklist Description Indicates whether a company owns or rents the building it occupies.
ParentOrHqBusinessName	Type string Properties Nillable Description The primary name of the parent or headquarters company.
ParentOrHqDunsNumber	Type string Properties Filter, Nillable Description The D-U-N-S number for the parent or headquarters.
Phone	Type phone Properties Nillable Description A company's primary telephone number.
PremisesMeasure	Type int Properties Group, Nillable

Field Name	Details
	Description A numeric value for the measurement of the premises.
PremisesMeasureReliability	Type string Properties Group, Nillable Description A descriptive accuracy of the measurement such as actual, estimated, or modeled.
PremisesMeasureUnit	Type string Properties Group, Nillable Description A descriptive measurement unit such as acres, square meters, or square feet.
PrimaryNaics	Type string Properties Nillable Description The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the US business economy.
PrimaryNaicsDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on its NAICS code.
PrimarySic	Type string Properties Nillable Description The four-digit SIC code that's used to categorize business establishments by industry.

Field Name	Details
PrimarySic8	Type string Properties Group, Nillable Description The eight-digit Standard Industrial Classification (SIC) code is used to categorize business establishments by industry. The full list of values can be found at the Optimizer Resources page maintained by Dun & Bradstreet. Maximum size is 8 characters.
PrimarySic8Desc	Type string Properties Group, Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
PrimarySicDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on its SIC code.
PriorYearEmployees	Type int Properties Group, Nillable Description The total number of employees for the prior year.
PriorYearRevenue	Type double Properties Nillable Description The annual revenue for the prior year.
PublicIndicator	Type picklist

Field Name	Details
	Properties Nillable, Restricted picklist Description Indicates whether ownership of the company is public or private.
Revenue	Type double Properties Nillable Description The annual revenue of a company in US dollars.
SalesTurnoverGrowthRate	Type double Properties Nillable Description The increase in annual revenue from the previous value for an equivalent period expressed as a decimal percentage.
SalesVolume	Type double Properties Nillable Description The total annual sales revenue in the headquarters' local currency. Dun & Bradstreet tracks revenue data for publicly traded companies, Global Ultimates, Domestic Ultimates, and some headquarters.
SalesVolumeReliability	Type picklist Properties Nillable, Restricted picklist Description The reliability of the SalesVolume figure.
SecondNaics	Type string Properties Nillable

Field Name	Details
	Description A NAICS code used to further classify an organization by industry.
SecondNaicsDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding NAICS code.
SecondSic	Type string Properties Nillable Description A SIC code used to further classify an organization by industry.
SecondSic8	Type string Properties Group, Nillable Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
SecondSic8Desc	Type string Properties Group, Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
SecondSicDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code.

Field Name	Details
SixthNaics	Type string Properties Nillable Description A NAICS code used to further classify an organization by industry.
SixthNaicsDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code.
SixthSic	Type string Properties Nillable Description A SIC code used to further classify an organization by industry.
SixthSic8	Type string Properties Group, Nillable Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
SixthSic8Desc	Type string Properties Group, Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
SixthSicDesc	Type string

Field Name	Details
	Properties Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code.
SmallBusiness	Type picklist Properties Nillable, Restricted picklist Description Indicates whether the company is designated a small business as defined by the Small Business Administration of the US government.
State	Type string Properties Nillable Description The state where a company is physically located.
StockExchange	Type string Properties Nillable Description The corresponding exchange for a company's stock symbol, for example, NASDAQ or NYSE.
StockSymbol	Type string Properties Nillable Description The abbreviation that's used to identify publicly traded shares of a particular stock.
Street	Type string

Field Name	Details
	Properties Nillable Description The street address where a company is physically located.
Subsidiary	Type picklist Properties Nillable, Restricted picklist Description Indicates whether a company is more than 50 percent owned by another organization.
ThirdNaics	Type string Properties Nillable Description A NAICS code used to further classify an organization by industry.
ThirdNaicsDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding NAICS code.
ThirdSic	Type string Properties Nillable Description A SIC code used to further classify an organization by industry.
ThirdSic8	Type string Properties Group, Nillable

Field Name	Details
	Description An additional SIC code used to further classify an organization by industry. Maximum size is 8 characters.
ThirdSic8Desc	Type string Properties Group, Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code. Maximum size is 80 characters.
ThirdSicDesc	Type string Properties Nillable Description A brief description of an organization's line of business, based on the corresponding SIC code.
TradeStyle1	Type string Properties Nillable Description A name, different from its legal name, that an organization may use for conducting business. Similar to "Doing business as" or "DBA".
TradeStyle2	Type string Properties Nillable Description A tradestyle used by the organization.
TradeStyle3	Type string Properties Nillable Description A tradestyle used by the organization.

Field Name	Details
TradeStyle4	Type string Properties Nillable Description A tradestyle used by the organization.
TradeStyle5	Type string Properties Nillable Description A tradestyle used by the organization.
UsTaxId	Type string Properties Nillable Description The identification number for the company used by the Internal Revenue Service (IRS) in the administration of tax laws. Also referred to as Federal Taxpayer Identification Number.
Website	Type url Properties Filter, Group, Nillable Description An organization's primary website address.
WomenOwned	Type picklist Properties Nillable, Restricted picklist Description Indicates whether a company is more than 50 percent owned or controlled by a woman.
YearStarted	Type string

Field Name	Details
	Properties Nillable Description The year when the company was established or the year when current ownership or management assumed control of the company.
zip	Type string Properties Nillable Description A five or nine-digit code that's used to help sort mail.

Usage

Use this object to return D&B Company information. These fields are read-only.

Important: DatacloudDandBCompany can't be used in Apex test methods, because an external web service call is required to access it. These calls are not allowed in Apex test methods.

DatacloudOwnedEntity

Represents fields in the DatacloudOwnedEntity object. The DatacloudOwnedEntity object tracks user-purchased records. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
DataDotComKey	Type string

Field Name	Details
	Properties Create, Filter, Sort Description The Data.com contact or company record identification number used by the DatacloudPurchaseUsage object to keep track of purchased records. This is equivalent to the Data.com record ID for a contact or company.
DatacloudEntityType	Type picklist Properties Create, Filter, Restricted picklist, Sort Description The type of Data.com record you want to purchase. • 0—contact • 1—company
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description An optional field used to name your record.
PurchaseType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description A read only field set by the API to identify the purchase type. • Added • Export • API
PurchaseUsageId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The unique identification number for the DatacloudPurchaseUsage object created by making a REST POST request.

Field Name	Details
	0—contact 1—company
UserId	Type reference Properties Filter, Group, Sort Description A unique identifier for the user making the purchase.

Usage

The Datacloud object that tracks records that are purchased and owned by a specific user.

DatacloudPurchaseUsage

Represents an object used to identify and track Data.com record purchases. This object is available in API version 30.0 or later.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields are removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
DatacloudEntityType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of Data.com record you want to purchase. 0—indicates contact entity type.

Field Name	Details
	1—indicates company entity type.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An optional field. You can add a description for your purchase.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description An optional field used to name your record.
PurchaseType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description A read only field set by the API to identify the purchase type. - Added - Export - API
Usage	Type double Properties Filter, Sort Description A read only field set by the API. It is used to track the points used to purchase records.
UserId	Type reference Properties Filter, Group, Sort Description A read only field set by the API that identifies the user purchasing the records.

Field Name	Details
UserType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A read only field set by the API with 2 user types. - Monthly Usage - List Pool User

Usage

The DatacloudPurchaseUsage object allows you to track Data.com record purchases for CRM users.

DataDetectJobObjectSession

For internal use only. This object is available in API version 63.0 and later.

SEE ALSO:

[Salesforce Help: Data Detect](#)

DataDetectJobSession

Represents a run of a DataDetect scan policy that's triggered manually. This object is available in API version 63.0 and later.

To opt in for beta, contact your Salesforce account executive. After enabling the org permission, users can access the Data Detect app from the app launcher.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Fields

Field	Details
DataDetectPolicyId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the scan policy associated with this job session. This field is a relationship field. Relationship Name DataDetectPolicy Refers To DataDetectPolicy
DataDetectPolicySnapshotId	Type reference Properties Filter, Group, Sort Description ID of the snapshot of the scan policy associated with this job session. This field is a relationship field. Relationship Name DataDetectPolicySnapshot Relationship Type Master-Detail Refers To DataDetectPolicySnapshot
SessionEndTime	Type dateTime Properties Filter, Nillable, Sort Description Time and date when the data scan completes.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-generated name of the job session.
NamedEntityCount	Type int Properties Create, Filter, Nillable, Update

Field	Details
	Description Aggregate count of PII found during the data scan.
PolicyJobStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the data scan. Valid values are: • Stopped • Completed • Failed • PartialSuccess • Running • Scheduled • TimedOut The default value is Scheduled.
RunByUser	Type string Properties Filter, Group, Nillable, Sort Description User who started the job session or data scan.
SessionStartTime	Type dateTime Properties Filter, Nillable, Sort Description Time and date when the data scan begins.

Associated Objects

This object has this associated object. If the API version isn't specified, it's available in the same API version as this object. Otherwise, it's available in the specified API version and later.

DataDetectJobSessionFeed

Feed tracking is available for the object.

SEE ALSO:

[Salesforce Help: Data Detect](#)

DataDetectJobSessSummary

For internal use only. This object is available in API version 66.0 and later.

DataDetectPolicy

Represents a set of parameters that specifies the types of sensitive data for search with in a data scan. DataDetect scan policies can also apply filters to a data scan, along with specific objects and fields for scanning. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the scan policy.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Time and date when the data scan completes.
IsScheduled	Type Boolean Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Determines if the policy is scheduled or not.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the scan policy.
OwnerId	Type reference Properties Create, Filter, Group, idLookup, Sort, Update Description The UserID of the person who owns the record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
ScanType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Designates whether the data scan type is <code>AIInference</code> or <code>PatternMatching</code> . The default value is <code>PatternMatching</code> .
StartTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Time and date when the data scan begins. Data scans can start anytime within a 30-day window from the current date.

SEE ALSO:

[Salesforce Help: Data Detect](#)

DataDetectPolicyObject

Represents an object of the DataDetect scan policy to be scanned. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataDetectPolicyId	Type reference Properties Create, Filter, Group, Sort Description ID of the scan policy associated with this scan policy object. This field is a relationship field. Relationship Name DataDetectPolicy Relationship Type Master-Detail Refers To DataDetectPolicy
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the scan policy object.
ObjectReference	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Name of the scan policy object to be scanned.

SEE ALSO:
[Salesforce Help: Data Detect](#)

DataDetectScanResult

Represents the results of a DataDetect data policy scan. This object is available in API version 63.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CreatedDate	Type dateTime Properties Filter, Nillable, Sort Description Time and date when an instance of PII is added to the scan result.
DataDetectJobSessionId	Type reference Properties Filter, Group, Sort Description ID of the job session associated with the scan policy. This field is a relationship field. Relationship Name DataDetectJobSession Relationship Type Lookup Refers To DataDetectJobSession

Field	Details
FieldName	Type string Properties Filter, Group, Sort Description UMD name from standard fields, or custom field ID from custom fields.
NamedEntityCount	Type int Properties Filter, Group, Sort Description Number of times PII is found.
NamedEntityType	Type string Properties Filter, Group, Sort Description Type of PII found in the record of the scan policy object.
ObjectName	Type string Properties Filter, Group, Sort Description KeyPrefix of the scan policy object that contains PII.
RecordIdentifier	Type string Properties Filter, Group, Sort Description Unique identifier for the record.
SensitiveValues	Type text Properties Filter, Nillable, Sort

Field	Details
	Description Stores the excerpts in the form of encrypted text.

SEE ALSO:
[Salesforce Help: Data Detect](#)

DataDetectPolicyObjField

Represents an object field of the DataDetect scan policy object to be scanned. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataDetectPolicyObjectId	Type reference Properties Create, Filter, Group, Sort Description ID of the scan policy object associated with the scan policy object's field. This field is a relationship field. Relationship Name DataDetectPolicyObject Relationship Type Master-Detail Refers To DataDetectPolicyObject
FieldName	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Name of the scan policy object field.

SEE ALSO:
[Salesforce Help: Data Detect](#)

DataDetectPolicySnapshot

For internal use only. This object is available in API version 64.0 and later.

SEE ALSO:
[Salesforce Help: Data Detect](#)

DataDetPlcyDataSrchExps

Represents data search expressions for scanning DataDetect scan policies based on Java regex. This object is available in API version 64.0 and later.

 **Note:** When working with regex, Salesforce recommends Java 17 or later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataDetectPolicyId	Type reference Properties Create, Filter, Group, Sort Description ID of the scan policy associated with the data search expression. This field is a relationship field. Relationship Name DataDetectPolicy Relationship Type Master-Detail

Field	Details
	Refers To DataDetectPolicy
Expression	Type string Properties Create, Filter, Group, Sort, Update Description Regular expression that represents sensitive data to be scanned.
IsCaseSensitive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Designates whether the expression is case-sensitive (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
IsKeywordSearch	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Designates whether the expression can be used as a search keyword (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the expression.

SEE ALSO:

[Salesforce Help: Data Detect](#)

DataDetPlcyMdatScanCrit

Represents inclusion and exclusion criteria that filter what DataDetect scan policy object fields are to be scanned based on metadata tags. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Criteria	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines category of inclusion or exclusion criteria applied to fields during scan policy creation. Valid values are: • ComplianceCategory—Compliance acts, definitions, or regulations related to the field's data. • DataSensitivity—Level of data sensitivity related to the field's data. • FieldUsage—Data planned for deprecation, or intended to be hidden, related to the active and visible field's data.
DataDetectPolicyId	Type reference Properties Create, Filter, Group, Sort Description ID of the policy associated with the data search expression. This field is a relationship field. Relationship Name DataDetectPolicy Relationship Type Master-Detail Refers To DataDetectPolicy
Name	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the criteria.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines what criteria, <code>inclusion</code> or <code>exclusion</code> , is applied to a field in the policy scan object.
Value	Type string Properties Create, Filter, Group, Sort, Update Description Value of the criteria applied to filters.

SEE ALSO:

[Salesforce Help: Data Detect](#)

DataDetPlcySstvDataCatg

Represents the sensitive data categories that the DataDetect scan policy is required to scan. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataCategory	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Sensitive data category associated with the scan policy.
DataDetectPolicyId	Type reference Properties Create, Filter, Group, Sort Description ID of the scan policy associated with the sensitive data category. This field is a relationship field. Relationship Name DataDetectPolicy Relationship Type Master-Detail Refers To DataDetectPolicy
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the sensitive data category.

SEE ALSO:

[Salesforce Help: Data Detect](#)

DataEncryptionKey

The DataEncryptionKey object is part of the Bring Your Own Key (BYOK) feature, which allows users to upload a data encryption key (DEK) using a public key generated by the Salesforce Shield Key Management Service (KMS). Customers create their own DEKs and upload them to Salesforce. Users access this entity via the API to list DEK keys for auditing purposes. They can also programmatically use this object to create the certificate and to upload key material. This object is available in API version 63.0 and later.

DEKs are used to encrypt and decrypt data. They reside in either the Salesforce database or in an external KMS. They're created by root keys, and when persisted, wrapped by root keys as well.

Supported Calls

`create()`, `describeObjects()`, `query()`, `queryAll()`

Special Access Rules

This object is available as part of the Shield and Salesforce Platform Encryption add-on subscriptions.

Fields

Field	Details
CreatedBy	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The email address of the user who created the DEK. For example, <code>user@example.com</code>.
DataEncryptionKeyCertName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the certificate whose public key is used to encrypt the <code>DEK</code> during a remote key callout. When you want to create a BYOK-compatible certificate, use this property in a call to <code>create()</code> to name the certificate. You need to know the name to retrieve the certificate later. Specify only the file name. Salesforce will add the <code>.crt</code> extension when it creates the file.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The user-defined description of the root key.
DoesUseKeyDerivation	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the DEK is intended to be used as part of a derived key (<code>true</code>) or not (<code>false</code>). See Components Involved in Deriving Keys for information on derived keys. The default value is <code>false</code>.
LastModifiedBy	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The email address of the user who most recently modified the key. For example, <code>user@example.com</code> .
RootKeyIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique key identifier assigned by Salesforce to the root key used to create the DEK.
RootKeyKmsIdentifier	Type string Properties Create, Filter, Nillable, Sort, Update Description The unique key identifier from the external KMS, such as an AWS Amazon Resource Name (ARN). For example, <code>arn:aws:kms:us-west-2:123456789000:key/123ab456-7cd8-9012-3e4f-5gh678i901j2</code>
SecretValue	Type textarea Properties Create, Nillable, Update Description The encrypted 256-bit secret value encoded in base64.
SessionToken	Type textarea Properties Create, Nillable, Update Description Contains the token for the session that was active when the DEK was last wrapped. If the session is inactive, a new certificate is required in order to transmit the DEK.
Source	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The source of the encryption key material. Values are: • <code>AWS</code>—A tenant secret or DEK fetched from the Amazon Key Management Service DEKs with a <code>Source</code> value of <code>AWS</code> are listed as <code>Fetch</code>d on the Key Management page in Setup. • <code>Salesforce</code>—A Salesforce-generated DEK.
Status	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The status of the key. Possible values are: • <code>Activation Pending</code>—Salesforce is waiting for confirmation of a valid key policy in the external key store. • <code>Active</code>—Can be used to encrypt new DEKs and decrypt existing DEKs. • <code>Archived</code>—Can't encrypt new DEKs. Can be used to decrypt previously created DEKs. • <code>Canceled</code>—Root key activation canceled by a user. • <code>Inactive</code>—The root key, and the DEKs that it encrypts, are inaccessible. Inaccessible DEKs can't be used to decrypt data, which renders that data also inaccessible.
Type	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The type of DEK. This value appears in the <code>Type</code> picklist: • <code>Search Index</code>—search index files. For Hyperforce orgs on API version 63.0 and later, create secrets of type <code>SearchIndex</code> using the <code>DataEncryptionKey</code> object. For Hyperforce orgs on API versions 62.0 and earlier, and for all non-Hyperforce orgs, create secrets of type <code>SearchIndex</code> using the TenantSecret object. You also specify a type of <code>SearchIndex</code> when you are creating a BYOK-compatible certificate using the <code>DataEncryptionKey</code> object.
Version	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The version number of this secret. The version number is unique within your org.

Usage

Four functions are available: `describe()`, `create()`, `query()` and `queryAll()`.

- Use `create()` to create BYOK-compatible certificates and DEKs.
- Use `query()` or `queryAll()` to list one or all of your DEKs.
- Use `describe()` to get information about the `DataEncryptionKey` object.

You use `create()` and `queryAll()` together to upload a Search Index Encryption DEK. Check the Examples section for how to do each of these steps.

- Create a BYOK-compatible certificate with `create()`. This will create a temporary DEK to contain the certificate reference. Specify a Type of `Search Index` and a name for the certificate file.
- Use `queryAll()` to list your DEKs. The temporary DEK will include the name of your certificate file in the `DataEncryptionKeyCertName` attribute. It will also include a session token in the `sessionToken` attribute. Save this value for later.
- Download the certificate using the metadata object API. Specify `Certificate` for the object name node, and the `DataEncryptionKeyCertName` for the members node. The certificate file will be in the zip file returned by the metadata object API.
- Run the [BYOK Search Index Encryption script](#) to generate the **payload.bin** file which contains the plaintext of your new DEK. Use the certificate file you created when you run the script. Alternatively, generate a key using a method of your choice. It must meet the specifications outlined in [Bring Your Own Key Overview](#).
- Generate a b64 string from the contents of the **payload.bin** file.
- Run the `DataEncryptionKey.create()` method again, this time with the the b64 string and the session token. Specify:

```
"SecretValue": "<b64 string>"
"SessionToken": "<session token string>"
"Type": "SearchIndex"
```

With success, the temporary DEK is replaced by the uploaded secret. The certificate is deleted, and the session token eventually expires. A call to `queryAll()` will show the new DEK. The DEK will also appear on the Search Index Encryption Key Management page.

Examples

Use your preferred developer environment to run the examples. Use the Salesforce developer [Introduction to REST API](#) for basic information on making REST calls into Salesforce. Also, [Introducing the Salesforce Shield Platform Encryption REST API](#) gives you starter information on using REST to work with Shield Platform Encryption.

Create a BYOK-compatible certificate with `create ()`

To create a BYOK-compatible certificate, use a POST method to create an sObject of type `DataEncryptionKey`. Specify a Type of `search index` (case insensitive), and an appropriate string value for `DataEncryptionKeyCertName`. You need to name the certificate to retrieve it later. Specify just the name. Salesforce will add the `.cert` extension to the file.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/subjects/'\
      DataEncryptionKey/create' \
      --header 'Content-Type: application/json' \
      --header 'Authorization: Bearer TOKEN' \
      --data '{
        "Type": "search index",
        "DataEncryptionKeyCertName": "my-byok-compatible-cert"
      }'
```

List all DEKs with `queryAll ()`

To retrieve DEKs, use `query` or `queryAll` on the `DataEncryptionKey` sObject. You must specify a limit for the query. All DEKs are retrieved, including archived DEKs. You use `queryAll` to get the session token.

```
curl --location
      'https://DOMAIN.my.salesforce.com/services/data/v63.0/queryAll/?q=SELECT+FIELDS(ALL)+FROM+DataEncryptionKey+LIMIT+10' \
      --header 'Authorization: Bearer TOKEN'
```

Download your Certificate

Retrieve the certificate using [Metadata API](#). object to download your new certificate.

```
<?xml version="1.0" encoding="UTF-8"?>
<Package xmlns="http://soap.sforce.com/2006/04/metadata">
  <types>
    <members>DataEncryptionKeyCertName</members>
    <name>Certificate</name>
  </types>
  <version>65.0</version>
</Package>
```

Your certificate will be contained in the `cert` folder.

Create a DEK with `create ()`

To create the final DEK, use a POST method to create an sObject of type `DataEncryptionKey`. Specify a Type of `search index` (case insensitive).

```
curl --location
      'https://DOMAIN.my.salesforce.com/services/data/v63.0/subjects/DataEncryptionKey/create' \
      --header 'Content-Type: application/json' \
      --header 'Authorization: Bearer TOKEN' \
      --data '{
        "SecretValue": "b64-secret"
        "SessionToken": "session-token value"
        "Type": "search index"
      }'
```

Describe a DataEncryptionKey with `describe()`

To get information about the DataEncryptionKey sObject, use `describe`.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/objects/'\
      DataEncryptionKey/describe'
      --header 'Content-Type: application/json' \
      --header 'Authorization: Bearer TOKEN'
```

On success, the response is the full JSON description of the DataEncryptionKey sObject.

Return Values for `Create()`

The response for creating a certificate or DEK are the same. On success, the response is be similar to

```
{
  "totalSize": (COUNT),
  "done": true,
  "records": [
    {
      "attributes": {
        "type": "DataEncryptionKey",
        "url": "/services/data/v63.0/objects/DataEncryptionKey/(ID) "
      },
      ATTRIBUTE LIST
    },
  ]
}
```

On error, the response is similar to

```
[
  {
    "message": "ERROR MESSAGE",
    "errorCode": "ERROR CODE"
  }
]
```

DataIntegrationRecordPurchasePermission

Indicates Lightning Data purchase credits that a Salesforce admin has granted to users.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
ExternalObject	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the name of the data service record matched to the Salesforce record.
UserId	Type reference Properties Create, Filter, Group, Sort, Update Description Indicates the ID of a user to whom purchase credits are assigned. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User
UserRecordPurchaseLimit	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the number of purchase credits assigned to a user.

DataKitDeployEvent

Represents a data kit deployment event that notifies subscribers of the status of the data kit component deployment. This object is available in API version 61.0 or later.

Supported Calls

`create()`, `describeSObjects()`

Special Access Rules

Users that have access to Data Cloud.

Fields

Field	Details
DataKitDeployStatus	Type picklist Properties Create, Nillable, Restricted picklist Description The deployment status of the components deployed from a data kit. This field is available in API version 63.0 and later. Possible values are: • Active • Deleting • Error • Inactive • Processing
DataKitName	Type string Properties Create, Nillable Description Name of the data kit from which a component is deployed.
DataspaceName	Type string Properties Create, Nillable Description Name of the data space into which a component is deployed.
DeployStartTime	Type dateTime Properties Create, Nillable Description The date and time the deployment starts.

Field	Details
ErrorDetails	Type textarea Properties Create, Nillable Description Explanation of the error.
EventCreationDate	Type dateTime Properties Create, Nillable Description The date and time the data kit deploy creation event was created.
EventPublishDate	Type dateTime Properties Create, Nillable Description The date and time of the data kit deploy publish event.
EventType	Type picklist Properties Create, Nillable, Restricted picklist Description The event type action of the data kit components. Available in API version 66.0 and later. Possible values are: • Deploy • Undeploy
EventUuid	Type string Properties Nillable Description The unique ID of the event.
IsDataKitDeployStatusSuccess	Type string

Field	Details
	Properties Create, Nillable Description Status of the data kit component deployment. Possible values are: • Active • Failure
JobIdentifier	Type string Properties Create, Nillable Description Data kit component deployment job identifier.
ReplayId	Type string Properties Nillable Description The ID of the data kit deploy event replay.
TemplateName	Type string Properties Create, Nillable Description The template name from which the data kit deploy event is created.

DataKitDeploymentLog

Represents the log details of a data kit component deployment. This object is available in API version 61.0 or later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Users that have access to Data Cloud.

Fields

Field	Details
BundleName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the data stream bundle if a data stream is deployed from a data kit.
ComponentName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the component that's deployed from a data kit.
ComponentTemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the data kit template from which the component is deployed. This field is a polymorphic relationship field. Relationship Name ComponentTemplate Refers To DataSourceBundle
ComponentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the component for which the deployment is tracked in the log details. Possible values are: • MktCalculatedInsight • MktDataLakeObject • MktDataModelObject • MktDataStream • MktDataTransform

Field	Details
	Possible values available in API version 63.0 and later are: • <code>ActivationTarget</code> • <code>DataAction</code> • <code>DataActionTarget</code> • <code>DataGraph</code> • <code>DataSemanticSearch</code> • <code>EngagementSignal</code> • <code>ExtDataShare</code> • <code>IdentityResolution</code> • <code>MarketSegment</code> • <code>MarketSegmentActivation</code> • <code>MktDataConnection</code> • <code>MktMLModel</code> • <code>PersonalizationObjective</code> • <code>PersonalizationRecommender</code> Possible values available in API version 64.0 and later are: • <code>IrRelatedListEnrichment</code> • <code>MktCalculatedInsight</code> • <code>MktDataLakeObject</code> • <code>MktDataStream</code> • <code>MktDataTransform</code> • <code>PersonalizationPoint</code> • <code>PersonalizationSchema</code> Possible values available in API version 66.0 and later are: • <code>CopyFieldEnrichment</code> • <code>SemanticModel</code>
<code>DataKitName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the data kit being deployed.
<code>DataPackageKitDefinition</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description ID of the data kit being deployed. Available in API version 63.0 and later. Possible values are: • <code>1dk.Collections</code> • <code>1dk.SalesNextGenForecastingDatakit</code> • <code>1dk.Test_Fbdk</code> • <code>1dk.sf_mktg_ae__Marketing_Account_Engagement_CRM_Data</code>
DataSpaceName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the data space the components are deployed to.
DeployJob	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The deployment job ID.
DeploymentAction	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Deployment action of the data kit components. Possible values are: • <code>Deploy</code> • <code>Undeploy</code>
DeploymentError	Type textarea Properties Create, Nillable, Update Description Contains the error details if the data kit deployment fails.

Field	Details
DeploymentStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Deployment status of the data kit components. Possible values are: - Failed - Started - Successful
FileBasedComponentTemplate	Type string Properties Create, Filter, Sort, Update Description ID of the file-based component template that corresponds to the deployment log entry. Available in API version 63.0 and later.
FlowInterviewIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Identifier of the flow interview if the deployment was triggered using a flow.
JobIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Identifier of the data kit component deployment job. Available in API version 66.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed the deployment log file.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this deployment log.
Name	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The name of the deployment log.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user that owns the deployment. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
PublisherOrgComponentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the component in the publisher org. This field is a polymorphic relationship field. Relationship Name PublisherOrgComponent Refers To MktCalculatedInsight, MktDataTransform
SubscriberOrgComponentId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the component in the subscriber org in which the components of a data kit are deployed. This field is a polymorphic relationship field.
	Relationship Name SubscriberOrgComponent
	Refers To ActivationTarget, DataGraph, DataStream, ExtDataShare, IdentityResolution, MarketSegment, MarketSegmentActivation, MktCalculatedInsight, MktDataTransform
TemplateVersion	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description The version of the template from which the deployment was done.

Usage

Use the DataKitDeploymentLog object to track the deployment of a data kit component.

DatasetExport

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExport acts as the header and includes the JSON schema.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CompressedMetadataLength	Type int
	Properties Filter, Group, Nillable, Sort

Field	Details
	Description This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExport object, Metadata is the BLOB field.
Metadata	Type base64 Properties Nullable Description Contains the JSON schema that describes the data in the CSV. This schema includes column metadata such as type, format, and defaultValue.
MetadataLength	Type int Properties Filter, Group, Nullable, Sort Description This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExport object, Metadata is the BLOB field.
Owner	Type string Properties Filter, Group, Nullable, Sort Description User ID of the owner, as specified in the <code>userId</code> parameter in the export node of the dataflow that created the record. Only the specified owner can read the content of the record.
PublisherInfo	Type string Properties Filter, idLookup, Sort Description Identifies the export record to facilitate searching when a user has multiple export records. By default, this column is set to the ID of the dataflow that generated the export record, concatenated with the name of the specific export node. PublisherInfo is unique within your organization.  Note: A dataflow can have multiple export nodes.
PublisherType	Type picklist

Field	Details
	Properties Filter, Group, Restricted picklist, Sort Description Target of the export, as specified in the <code>target</code> parameter in the export node of the dataflow that created the record. The value must be <i>EinsteinDiscovery</i>.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Status of the export. The possible values are: • New • InProgress • Completed • Canceled • Failed  Note: The content of the Metadata field can be downloaded when the status is Completed.

Usage

This object is used with the DatasetExportPart object for exporting data from a dataset in CRM Analytics for use in Einstein Discovery. An export is initiated using the export node in an Analytics dataflow.

SEE ALSO:

[DatasetExportPart](#)

DatasetExportPart

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExportPart contains parts of the .csv file.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CompressedDataFileLength	Type int Properties Filter, Group, Sort Description This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExportPart object, DataFile is the BLOB field.
DataFile	Type base64 Description Contains a part of the dataset data from the generated .csv file. Maximum size is 32 MB.
DataFileLength	Type int Properties Filter, Group, Sort Description This field is required when a record in an object contains a BLOB (binary large object) field. In the DataExportPart object, DataFile is the BLOB field.
DatasetExportId	Type reference Properties Filter, Group, Sort Description ID of the parent record that the part record is associated with.
Owner	Type string Properties Filter, Group, Sort Description User ID of the owner, as specified in the <code>userId</code> parameter in the export node of the dataflow that created the record. Only the specified owner can read the content of the record.
PartNumber	Type int Properties Filter, Group, Sort

Field	Details
	Description Used with the DatasetExportId to uniquely identify the data part. Parts are assembled sequentially based on their numbers.

Usage

This object is used with the DatasetExport object for exporting data from a dataset in CRM Analytics for use in Einstein Discovery. An export is initiated using the export node in an Analytics dataflow.

SEE ALSO:

[DatasetExport](#)

DataMaskCustomValueLibrary

Represents a set of user-inputted values in a custom library in Data Mask. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with the Sandbox Data Mask managed package.

Fields

Field	Details
ContentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of value used in a field of the custom library. Possible values are: • <code>email</code> • <code>number</code> • <code>phone_number</code> • <code>string</code>

Field	Details
	url
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the value in the custom library.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Represents whether the library is active or inactive for use. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the custom library.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the owner of the custom library. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Represents how the values were added to the library. Possible values are: • default • user_defined
Values	Type textarea Properties Create, Nillable, Update Description The content of the value field for masking data.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[DataMaskCustomValueLibraryOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[DataMaskCustomValueLibraryShare](#) on page 67

Sharing is available for the object.

DataStatistics

For internal use only.

DataUseLegalBasis

Represents the legal basis for contacting a customer, such as billing or contract. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the data use legal basis.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string

Field Name	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description Specifies a name for the legal basis. For example, “billing” or “contract”.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Source	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the source of the legal basis. For example, the URL of a contract.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[DataUseLegalBasisChangeEvent](#) (API version 62.0)

Change events are available for the object.

[DataUseLegalBasisHistory](#)

History is available for tracked fields of the object.

[DataUseLegalBasisOwnerSharingRule](#)

Sharing rules are available for the object.

[DataUseLegalBasisShare](#)

Sharing is available for the object.

DataUsePurpose

Represents the reason for contacting a prospect or customer, such as for billing, marketing, or surveys. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
CanDataSubjectOptOut	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. Indicates whether the customer can decline contact for the described purpose.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the purpose for contacting a customer.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
LegalBasisId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Identifies the legal basis record associated with the data use purpose. This is a relationship field. Relationship Name LegalBasis Relationship Type Lookup Refers To DataUseLegalBasis
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Identifies the reason for contacting a customer. For example, billing or marketing.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup

Field Name	Details
	Refers To Group, User
PurposeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of an object containing data specific to the data use purpose. This is a polymorphic relationship field. Relationship Name Purpose Relationship Type Lookup Refers To Asset, CareProgram, CareRegisteredDevice, or Product2

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

DataUsePurposeChangeEvent (API version 62.0)

Change events are available for the object.

DataUsePurposeHistory

History is available for tracked fields of the object.

DataUsePurposeOwnerSharingRule

Sharing rules are available for the object.

DataUsePurposeShare

Sharing is available for the object.

DataWeaveResource

Represents the DataWeaveScriptResource class that is generated for all DataWeave scripts. This object is available in API version 58.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
ApiVersion	Type double Properties Filter, Sort Description The API version of this component.
BodyLength	Type int Properties Filter, Group, Sort Description Size of the DataWeave script (in bytes).
ContentType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Possible value: • <code>dw1</code>: The metadata file for the DataWeave scripts that are deployed to an org.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API.
IsGlobal	Type boolean Properties Defaulted on create, Filter, Group, Sort Description When set to true, the <code>generatedDataWeaveScriptResource</code> class is global. The default value is <code>false</code>.
IsProtected	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Not used
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the MasterLabel.
MasterLabel	Type string Properties Filter, Group, Sort Description Required. The name of the resource.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Although the `DataWeaveResource` object supports the create and update field properties, a runtime exception occurs if you try to create, update, or delete using the API. Instead, use the Salesforce Extensions for Visual Studio Code.

DatedConversionRate

Represents the dated exchange rates used by an organization for which the multicurrency and the effective dated currency features are enabled.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`,

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ConversionRate	Type double Properties Filter, Update Description Required. Conversion rate of this currency type against the corporate currency.
IsoCode	Type picklist Properties Filter, Restricted picklist Description Required. ISO code of the currency. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as <code>USD</code> , <code>GBP</code> , or <code>JPY</code> . Must be unique within your organization. Label is Currency ISO Code .
NextStartDate	Type date Properties Filter, Nillable Description Read only. The date on which the next effective dated exchange rate will start. Effectively the day after the end date for this exchange rate.
StartDate	Type date

Field	Details
	Properties Filter
	Description The date on which the effective dated exchange rate starts. The timestamp is determined by the base calendar of the API.

Usage

This object is for multicurrency organizations with advanced currency management enabled. Use this object to define the exchange rates your organization uses for a date range. This object is not available in single-currency organizations, nor is it available if the organization does not have advanced currency management enabled.

DealIndirectPartner

Represents an indirect partner's involvement in a deal. This object is available in API version 63.0 and later.

A DealIndirectPartner record can be created manually or through automation when a partner is associated with an opportunity, lead, or account, capturing role and contact information.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account associated with the indirect partner on the deal. This field is a relationship field. Relationship Name Account Refers To Account
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp when the record was last referenced by the user or system.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and the timestamp when the record was last viewed in the Salesforce UI. Helps monitor user access and engagement.
LeadId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Reference to a lead associated with this indirect partner record. This field is a relationship field. Relationship Name Lead Refers To Lead
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated unique identifier for the record, used for lookup and reference purposes.
OpportunityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Opportunity associated with the indirect partner. This field is a relationship field. Relationship Name Opportunity

Field	Details
	Refers To Opportunity
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description User or group that owns this record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
PartnerName	Type string Properties Create, Filter, Group, Sort, Update Description Name of the indirect partner participating in the deal. This field captures the business or entity name.
PartnerRoleType	Type picklist Properties Create, Filter, Group, Sort, Update Description The role played by the indirect partner in the deal. Common values might include Reseller, Distributor, and so on.
PrimaryContactFirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description First name of the primary contact at the partner organization.
PrimaryContactLastName	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Last name of the primary contact at the partner organization.
PrimaryContactName	Type string Properties Filter, Group, Nillable, Sort Description Full name of the primary contact. This field may be auto-generated by combining first and last names or used for reporting purposes.
PrimaryContactSalutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Salutation for the primary contact. Possible values are: • Dr . • Mr . • Mrs . • Ms . • Mx . • Prof .

DeclinedEventRelation

Represents event participants (invitees or attendees) with the status `Declined` for a given event. This object is available in API versions 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
EventId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the event. This is a relationship field. Relationship Name Event Relationship Type Lookup Refers To Event
RelationId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the invitee. This is a polymorphic relationship field. Relationship Name Relation Relationship Type Lookup Refers To Calendar, Contact, Lead, User
RespondedDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates the most recent date and time when the invitee declined an invitation to the event.
Response	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort
	Description Indicates the content of the response field. Label is Comment.
Type	Type string
	Properties Filter, Group, Nillable, Sort
	Description Indicates whether the invitee is a user, lead or contact, or resource.

Usage

Query invitees who have declined an invitation to an event

```
SELECT eventId, type, response FROM DeclinedEventRelation WHERE eventId='00UTD000000ZH5LA'
```

SEE ALSO:

[AcceptedEventRelation](#)

[UndecidedEventRelation](#)

DelegatedAccount

Represents the external managed account. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

You must have a Partner or Customer Community Plus license. You can't edit the visibility of DelegatedAccount metadata on user profiles.

Fields

Field	Details
AccessBuyFor	Type boolean

Field	Details
	Properties Create, Filter, Update Description The access that an admin authorizes for an external user to buy for other accounts. This field is available in API version 50.0 and later. A B2B Commerce license is required to use AccessBuyFor.
AccessManageUsers	Type boolean Properties Create, Filter, Update Description The access that an admin authorizes for an external user to manage external users on other accounts. This includes managing permission sets, membership, passwords, and activation. This field is available in API version 50.0 and later. Delegated External User Administrator permission is required to use AccessManageUsers.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
ManagedById	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the managing user. This is a relationship field. Relationship Name ManagedBy

Field	Details
	Relationship Type Lookup Refers To User
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the external managed account.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the record owner. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the managing users account. This field is available in API version 50.0 and later. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account

Field	Details
TargetId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the account being managed. This is a relationship field. Relationship Name Target Relationship Type Lookup Refers To Account

DeleteEvent

Represents a record that has been soft deleted. Search on this object was available in API version 48.0, then removed in API version 50.0.

DeleteEvent is a read-only object. You can't create, update, or delete it directly. To create a DeleteEvent record, soft delete a record of another type, like an Account. To remove a DeleteEvent record, use the [emptyRecycleBin\(\)](#) API or hard delete the corresponding Record.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeletedById	Type reference Properties Filter, Group, Sort Description The ID of the user who deleted the record. This is a relationship field. Relationship Name DeletedBy Relationship Type Lookup

Field	Details
	Refers To User
DeletedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the record was deleted.
Record	Type string Properties Filter, Group, Nillable, Sort Description The ID of the record that was deleted.
RecordName	Type string Properties Filter, Group, Nillable, Sort Description The name of the record that was deleted.
SubjectName	Type string Properties Filter, Group, Nillable, Sort Description The type of record that was deleted, for example, Account.

DeliveryEstimationSetup

Shows the configuration options for the commerce delivery service offered through a web store or sales channel. Includes settings such as delivery location group, channel, fulfillment types, and default fulfillment time. This object is available in API version 61.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The DeliveryEstimationSetup object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
ChannelId	Type reference Properties Create, Filter, Group, Sort, Update Description ID for the web store or sales channel associated with the delivery estimation configuration.
DefaultBusinessHoursId	Type reference Properties Create, Filter, Group, Sort, Update Description ID for the default business hours. This is a relationship field. Relationship Name DefaultBusinessHours Refers To BusinessHours
DefaultPickupTime	Type time Properties Create, Filter, Sort, Update Description Default pickup time.
DefaultProcessingTime	Type int Properties Create, Filter, Group, Sort, Update Description Default processing time.
DefaultProcessingTimeUnit	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Default processing time unit. Possible values are: • Hours • Days • Weeks
ExternalReference	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Unique code, reference, or identifier for the delivery estimation configuration record used by external systems. Can be the name of the web store or sales channel associated with the configuration to ensure a unique ID within the organization. For example, <code>DefaultWebstore123</code>.
isEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the given delivery estimation configuration is active. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the record was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastSyncedById	Type reference Properties Filter, Group, Nillable, Sort Description User ID of who performed the last sync for this delivery estimation configuration. This field is available in API version 62.0 and later.

Field	Details
	This is a relationship field. Relationship Name LastSyncedBy Refers To User
LastSyncedDate	Type dateTime Properties Filter, Nillable, Sort Description Date the delivery estimation configuration was last synced. This field is available in API version 62.0 and later.
LastSyncedMessage	Type textarea Properties Nillable Description Message that occurred during the last sync. This field is available in API version 62.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Last time the delivery estimation configuration was viewed.
LocationGroupId	Type reference Properties Create, Filter, Group, Sort, Update Description Represents a group of Omnichannel Inventory locations. This is a relationship field. Relationship Name LocationGroup Refers To LocationGroup

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the delivery estimation setup configuration.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who currently owns this DeliveryEstimationSetup object. Default value is the user logged in to the API to perform the create. This is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
RoutingType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines an order's route and calculates delivery estimations. This field is available in API version 65.0 and later. Possible values are: • DRE • None • Standard The default value is None.
ServiceRegion	Type string Properties Filter, Group, Nillable, Sort Description An org's commerce delivery service provisioning region (North America, Europe, or Asia) that's set when Delivery Estimation is enabled in the Order Management app. It can't be

Field	Details
	changed. If the field is empty, provisioning hasn't occurred yet. Available in API version 63.0 and later.
SyncStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Sync status of the delivery estimation setup configuration. Possible values are: • Deleting • Deprovisioned • Error • None • Synced • Syncing The default value is <code>NONE</code>. This field is available in API version 62.0 and later.

DigitalSignature

Represents a signature captured on a service report in field service.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
DigitalSignatureNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field Name	Details
	Description An auto-generated number identifying the signature.
DocumentBody	Type base64 Properties Create Description The captured signature image.
DocumentContentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The data type of the captured signature. Possible values are: • audio/acc • audio/amr • audio/ogg • video/3gpp2 • video/3gpp • image/avif • text/calendar • audio/x-caf • image/webp
DocumentLength	Type int Properties Filter, Group, Nillable, Sort Description The length of the captured signature.
DocumentName	Type string Properties Create, Filter, Group, Sort Description The name of the captured signature image.

Field Name	Details
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the service appointment, work order, or work order line item that the service report is generated for. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To AuthorizationFormConsent, Order, ServiceAppointment, WorkOrder, WorkOrderLineItem
Place	Type string Properties Create, Filter, Group, Nillable, Sort Description The place where the report was signed.
SignatureType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description The role of the person signing the service report. Your org comes with one signature type, <code>Default</code>. A service report template can only contain one signature per type. If you plan to collect multiple signatures on service reports, create additional values for the Signature Type field. Create at least one value for every role that might need to sign a service report. For example, <code>Technician</code>, <code>Customer</code>, <code>Supervisor</code>, or <code>Supplier</code>. If some service reports will be signed by multiple people in one role—for example, all technicians present at an appointment—create numbered types: <code>Technician 1</code>, <code>Technician 2</code>, and so forth.  Note: You can create up to 1,000 signature types. You can't delete signature types, but you can deactivate them so they can't be used in service report templates. When you deactivate a type, it still appears on service report templates that used it, but you can't use it on new service report templates.

Field Name	Details
SignedBy	Type string Properties Create, Filter, Group, Nillable, Sort Description The name of the person signing.
SignedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date and time of the signing.

Usage

Add signature blocks to service report templates to determine which signatures need to be gathered on reports that use the template. Service report templates can contain up to 20 signatures, and each signature must use a different Signature Type. For example, create a standard service report template that contains a customer signature and a technician signature.

To learn more about digital signatures, see [Guidelines for Using Signatures on Service Reports](#).

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

DigitalSignatureChangeEvent (Available in API version 57.0)

Change events are available for the object.

DigitalWallet

Represents a customer's digital wallet service. Salesforce Payments can use a digital wallet as a payment source when processing payments through a payment gateway. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account of the customer owns the digital wallet. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
AuditEmail	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the digital wallet owner where audit information about payments gets sent. This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own.
BillingName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Billing name linked to customer's digital wallet. Available in API version 64.0 and later.
Comments	Type textarea Properties Create, Nillable, Update Description Users can provide additional details about the digital wallet. Supports a maximum of 1000 characters.

Field	Details
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Company of the digital wallet owner.
Customer	Type string Properties Create, Filter, Group, Nillable, Sort Description Customer name of the digital wallet owner.
DigitalWalletNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated reference number for the digital wallet.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email of the digital wallet owner.
ExtendedPaymentMethodType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Other digital payment methods used for the transaction. This field value is required when the value of the <code>PaymentMethodType</code> field is <code>extd_altrn_payment_method_type</code> or <code>extd_wallet</code>. This field is available in API version 66.0 and later.
GatewayToken	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Unencrypted unique token ID generated by the payment gateway to represent the digital wallet during transactions. This field is available for backward compatibility. To secure the token, use the <code>GatewayTokenEncrypted</code> field. If you try to record a <code>GatewayToken</code> for a digital wallet that already has a <code>GatewayToken</code> or <code>GatewayTokenEncrypted</code> value, Salesforce throws an error.
<code>GatewayTokenDetails</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Unique ID generated by the payment gateway for the card for future transactions.
<code>GatewayTokenEncrypted</code>	Type encryptedstring Properties Create, Nillable, Update Description Encrypted unique token ID generated by the payment gateway to represent the digital wallet during transactions. Encrypted using Salesforce Classic Encryption for custom fields. Available in API v52.0 and later.
<code>IpAddress</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The IP address of the digital wallet owner. This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own.
<code>IsAutoPayEnabled</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False. This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Digital Wallet page layout in the UI. It isn't automatically added.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible the user only referenced this record (LastReferencedDate) but not viewed it.
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The MAC address of the digital wallet owner. This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own.
NickName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description User-defined nickname for the digital wallet.
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Gateway used with transactions for the digital wallet. This field is a relationship field. Relationship Name PaymentGateway

Field	Details
	Relationship Type Lookup Refers To PaymentGateway
PaymentMethodAddress	Type address Properties Filter, Nillable Description Full address associated with the digital wallet payment method. For more information about address fields, see Address Compound Fields
PaymentMethodCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Part of the address for the payment method.
PaymentMethodCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Part of the address for the payment method.
PaymentMethodDetails	Type string Properties Create, Filter, Group, Nillable, Sort Description Optional information about the payment method type. This field is available in API version 57.0 and later.
PaymentMethodGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
PaymentMethodLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Latitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Part of the address for the payment method.

Field	Details
PaymentMethodState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Part of the address for the payment method.
PaymentMethodStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Part of the address for the payment method.
PaymentMethodSubType	Type string Properties Create, Filter, Group, Nillable, Sort Description More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be digital wallet. This field is available in API version 57.0 and later.
PaymentMethodType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Payment method used for the transaction. Possible values include credit cards such as Visa and American Express, digital wallets like Apple Pay and PayPal, direct debits such as ACH, BECS, Bacs, non-card payments methods such as EPS, SEPA, and iDEAL, extended alternate payments methods, and extended wallets. This field is available in API version 57.0 and later.
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the digital wallet owner. This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own.

Field	Details
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether the digital wallet is used for transactions made inside or outside the payment platform. Possible values are: • External—Transactions happened outside of the Salesforce payments platform. • Salesforce—Salesforce made and recorded an external call to the payment platform. This field is available in API v49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from v48.0. Users must add it to the DigitalWallet page layout on their own.  Important: ProcessingMode is required to create a DigitalWallet entity.
SavedPaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the saved payment method record. Relationship Name SavedPaymentMethod Relationship Type Lookup Refers To SavedPaymentMethod
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines the state of the digital wallet as a payment source. Possible values are: • Active—Customers can make payments with the digital wallet. • Canceled—The digital wallet can no longer be used for payments. This status can't be changed. • InActive—The digital wallet can't be used for payments until a user changes its status to Active.

DirectMessage

Represents a direct message conversation between multiple users in Chatter. This object is available in API version 38.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

You must have the Manage Chatter Messages and Direct Messages permission enabled to access the DirectMessage object.

Fields

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description A default value that isn't visible to users.
Subject	Type string Properties Filter, Group, Nillable, Sort, Update Description Subject of the overall direct message conversation.

Usage

DirectMessage is an object used by Salesforce to control DirectMessage conversations. It represents a record of a direct message conversation, but doesn't include conversation data, such as posts or comments. It is most frequently used to moderate direct message data in order to meet data compliance regulations.

Division

A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.

Supported Calls

`create()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Divisions must be enabled for your organization to access this object. To discover whether divisions have been enabled for an organization, inspect the User or Group object for the `DefaultDivision` field—if it is present, then divisions have been enabled, and this field (the field is named `Division` in objects other than User and Group) will be available in all relevant objects.
- Customer Portal users can't access this object.

Fields

Field	Details
<code>IsActive</code>	Type boolean Properties Create, Defaulted on create, Filter, Update Description Indicates whether the division is active (<code>true</code>) or not (<code>false</code>). Label is Active.
<code>IsGlobalDivision</code>	Type boolean Properties Defaulted on createFilter Description Indicates whether the division is your organization's global default division (<code>true</code>) or not (<code>false</code>). Label is Global Division.
<code>Name</code>	Type string Properties Create, Filter, Update Description A descriptive name for the division. Limit: 80 characters.
<code>SortOrder</code>	Type int Properties Create, Filter, Nillable, Update Description The order in which this division name appears in the Division picklist field when creating or editing users in the Salesforce user interface.

Usage

The values available for that field are the global division ID for the organization, created when divisions are first enabled, and any other division IDs that have been created. The division ID associated with a user is populated in the objects owned or created by the user.

You can use the division ID to make searches, reports, and list views run more quickly and return more relevant results if an organization has very large data sets. For more information, see the Salesforce online help, in the Fields description for the object.

You can use WITH in SOSL to pre-filter results based on division. This is faster than specifying the division in a WHERE clause.

 **Note:** The User object has a `Division` field that is unrelated to this object. The `Division` field is a standard text field similar to Company or Department that has no special properties. Do not confuse it with the `DefaultDivision` field, which does relate to this object.

[Overview of Salesforce Objects and Fields](#)

DivisionLocalization

When the Translation Workbench is enabled for your organization, the DivisionLocalization object provides the translation of the label for a division.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

Fields

Field	Details
Language	Typestring PropertiesCreate, Filter, Nillable, Restricted picklist DescriptionThe language for this translated label.
NamespacePrefix	Typestring

Field	Details
	Properties Filter, Nillable Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Nillable Description The ID of the Division associated with the label that is being translated.
Value	Type string Properties Create, Filter, Nillable, Update Description The actual translated label for the division. Label is Translation.

Usage

Use this object to translate the labels of your divisions into the different languages supported by Salesforce.

DocAtchDownloadEventLog

Document Attachment Downloads events contain details of document and attachment downloads. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>FileType</code>	Type string Properties Filter, Group, Nillable, Sort Description The type of the file or attachment.
<code>ObjectIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the object that's associated with the document or attachment.
<code>RequestIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID..
<code>Timestamp</code>	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
<code>UserIdentifier</code>	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943

Document

Represents a file that a user has uploaded. Unlike Attachment records, documents are not attached to a parent object.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the "Edit" permission on documents and the appropriate access to the Folder that contains a document in order to create or update a document in that Folder.

Fields

Field	Details
AuthorId	Type reference
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description ID of the User who is responsible for the Document. This is a relationship field.
	Relationship Name Author
	Relationship Type Lookup
	Refers To User
Body	Type base64

Field	Details
	Properties Create, Nillable, Update Description Required. Encoded file data. If specified, then do not specify a URL.
BodyLength	Type int Properties Filter, Group, Sort Description Size of the file (in bytes).
ContentType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Type of content. Label is Mime Type. Limit: 120 characters. If the Don't allow HTML uploads as attachments or document records security setting is enabled for your organization, you cannot upload files with the following file extensions: .htm, .html, .htt, .htx, .mhtm, .mhtml, .shtm, .shtml, .acgi, .svg.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the Document. Limit: 255 characters.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Document Unique Name.

Field	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
FolderId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the Folder that contains the document. This is a relationship field. Relationship Name Folder Relationship Type Lookup Refers To Folder, User
IsBodySearchable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the contents of the object can be searched using a SOSL <code>FIND</code> call. The <code>ALL FIELDS</code> search group includes the content as a searchable field.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsInternalUseOnly	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the object is only available for internal use (<code>true</code>) or not (<code>false</code>). Label is Internal Use Only.

Field	Details
IsPublic	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the object is available for external use (<code>true</code>) or not (<code>false</code>). Label is Externally Available.
Keywords	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Keywords. Limit: 255 characters.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the document. Label is Document Name.
NamespacePrefix	Type string Properties Filter, Group, Sort, Nillable

Field	Details
	Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Type	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description File type of the Document. In general, the values match the file extension for the type of Document (such as pdf or jpg). Label is File Extension.
Url	Type string Properties Create, Filter, Nillable, Group, Sort, Update Description URL reference to the file (instead of storing it in the database). If specified, do not specify the <code>Body</code> or <code>BodyLength</code>.

Usage

When creating or updating a document, you can specify a value in either the `Body` or `Url` fields, but not both.

Encoded Data

The API sends and receives the binary file data encoded as a base64 data type. Prior to creating a record, clients must encode the binary file data as base64. Upon receiving an API response, clients must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

Maximum Document Size

You can only create or update documents to a maximum size of 5 MB.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

DocumentAttachmentMap

Maps the relationship between an EmailTemplate and its attachment, which is stored as a Document.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>DocumentId</code>	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the document that this object tracks.
<code>DocumentSequence</code>	Type int Properties Create, Filter, Group, Sort, Update Description Represents the order that the attachments will be included in the email defined by the EmailTemplate specified by the <code>DocumentId</code>. Label is Attachment Sequence. The first attachment is given a value of 0, and each subsequent attachment is given a value incremented by 1.
<code>ParentId</code>	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description ID of the EmailTemplate parent. The attachment identified by <code>DocumentId</code> is attached to the EmailTemplate specified in this field.

Usage

Use this object to map the relationship of an EmailTemplate to its attachments, and to specify the order of the attachments.

SEE ALSO:

[EmailTemplate](#)

DocumentRecipient

Connects a Service Report to a Digital Signature. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>DigitalSignatureId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Digital Signature to be used on the Service Report. This field is a relationship field. Relationship Name DigitalSignature Relationship Type Lookup Refers To DigitalSignature
<code>DigitalSignatureUrl</code>	Type textarea

Field	Details
	Properties Create, Nillable, Update Description Link to request signature from Experience Cloud site.
DocumentId	Type reference Properties Create, Filter, Group, Sort, Update Description The document sent to the recipient. This field is a polymorphic relationship field. Relationship Name Document Relationship Type Lookup Refers To ServiceReport
DocumentRecipient	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Number automatically assigned to a new record.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. ID of the creator of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
QuoteDocumentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The quote document sent to the recipient. This field is a relationship field. Relationship Name QuoteDocument Refers To QuoteDocument
RecipientId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The recipient to sign the document. This field is a polymorphic relationship field. Relationship Name Recipient

Field	Details
	Relationship Type Lookup Refers To Contact, User
SignatureIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A unique identifier that associates DocumentRecipient with a signature Lightning web component (LWC) on the report page layout, telling you where on the report the signature goes.
SignatureStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the signature. The default value is Completed. Possible values are: - Completed - Skipped
SignatureStatusReason	Type textarea Properties Create, Filter, Nillable, Sort, Update Description An explanation for the signature status. For example, a reason why the signature was skipped.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the document recipient record. Possible values are: - Completed - Declined - Delivered - None

Field	Details
	• Sent The default value is None.
StatusReason	Type textarea Properties Create, Nillable, Update Description The final status reason.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[DocumentRecipientFeed](#) on page 55

Feed tracking is available for the object.

[DocumentRecipientOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[DocumentRecipientShare](#) on page 67

Sharing is available for the object.

DocumentTag

Associates a word or short phrase with a Document.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.

Field Name	Details
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

DocumentTag stores the relationship between its parent TagDefinition and the Document being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

Domain

Read-only object that represents a custom Web address assigned to a site in your organization. This object is available in API version 26.0 and later.

To access this object, Salesforce Sites, Digital Experiences, or Site.com must be enabled for your organization. **DomainSite** contains records for domains that serve your Experience Cloud sites only when enhanced domains are deployed. The system-managed site

hostnames for those Experience Cloud sites end in `.my.site.com`. This object doesn't contain records for legacy domains that serve Experience Cloud sites with hostnames that end in `.force.com`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have either the View Setup and Configuration or Manage Custom Domains permission.
- Site.com Publisher users have read-only API access to the Domain and [DomainSite](#) objects.

Fields

Field	Description
CnameTarget	Type string Properties Filter, Nillable, Sort Description The canonical name (CNAME) of the external host or server. If you use a custom domain with a non-Salesforce provider, such as your own external server or CDN provider, to serve your domain, this field points to the CNAME of the external provider. This field is available in API version 43.0 and later.
Domain	Type string Properties Filter, idLookup, Sort Description The branded custom Web address within the global namespace identified by this domain's type. In the Domain Name System (DNS) global namespace, this field is the custom Web address that you registered with a third-party domain name registrar. The custom Web address can be used to access the site of this domain.
DomainType	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Description
	Description The global namespace that this custom Web address belongs to. This value is set to DNS for custom Web addresses in the global DNS. DomainType can have the following value: • DNS—Domain Name System (DNS)
HttpsOption	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Current HTTPS option. Values include: • CdnPartner—Salesforce serves the custom domain, such as <code>https://www.example.com</code>, with the Salesforce Content Delivery Network (CDN) partner. • Community—The system-managed Experience Cloud sites domain that ends in <code>.force.com</code>. This option applies only to orgs without enhanced domains. • CommunityAlt—The system-managed Experience Cloud sites domain that ends in <code>.my.site.com</code>. This option applies only to orgs with enhanced domains. • ExternalHttps—An external service or CDN serves the custom domain, such as <code>https://www.example.com</code>. • LegacyDomain—A previous system-managed domain for this org. This option is rarely used. • NoHttps—Salesforce serves the custom domain, such as <code>http://www.example.com</code>, via HTTP. Used to configure your custom domain before selecting a permanent HTTPS option. • OrgDomain—The system-managed My Domain login URL for this org. • Sites—The system-managed Salesforce Sites domain that ends in <code>.force.com</code>. This option applies only to orgs without enhanced domains. • SitesAlt—The system-managed Salesforce Sites domain that ends in <code>.my.salesforce-sites.com</code>. This option applies only to orgs with enhanced domains. • SitesRuntime—Salesforce serves the custom domain, such as <code>https://www.example.com</code>, using your HTTPS certificate on Salesforce servers. This field is available in API version 47.0 and higher. To get the current system-managed domains for your org, use the Domain Apex class.

Field	Description
OptionsHstsPreload	Type boolean Properties Filter Description Indicates whether the <code>preload</code> directive is added to the HSTS header so that the domain is eligible for HSTS preloading registration (<code>true</code>) or not (<code>false</code>). This field is available in API version 52.0 and later. After this field is set to <code>true</code>, to ensure that HTTPS connections are always used in browsers that support HSTS, you must also register the domain at https://hstspreload.org. We only modify the HSTS headers of domains that are eligible for registration. Domain names can consist of a public suffix plus one additional label. For more information, see Add a Domain in Salesforce Help.

Usage

Use this read-only object to query the domains that are associated with each site in your organization.

DomainSite

Read-only junction object that joins the Site and Domain objects. This object is available in API version 26.0 and later.

To access this object, Salesforce Sites, Digital Experiences, or Site.com must be enabled. `DomainSite` contains records for domains that serve your Experience Cloud sites only when enhanced domains are deployed. The system-managed site hostnames for those Experience Cloud sites end in `.my.site.com`. This object doesn't contain records for legacy domains that serve Experience Cloud sites with hostnames that end in `.force.com`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have either the View Setup and Configuration or Manage Custom Domains permission.
- Site.com Publisher users have read-only API access to the [Domain](#) and `DomainSite` objects.

Fields

Field	Description
DomainId	Type reference Properties Filter, Group, Sort Description The ID of the associated Domain. This is a relationship field. Relationship Name Domain Relationship Type Lookup Refers To Domain
PathPrefix	Type string Properties Filter, Group, Sort Description Shows where a site's root exists on a domain. Can only be set for custom Web addresses. Always begins with a /.
SiteId	Type reference Properties Filter, Group, Sort Description The ID of the associated Site. This is a relationship field. Relationship Name Site Relationship Type Lookup Refers To Site

Usage

Use this read-only object to query or retrieve information about your sites.

DsarPolicy

Represents a Data Subject Access Request (DSAR) policy created in the Privacy Center managed package. DSAR policies anonymize or transfer personal data from your org at your customer’s request. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is for Privacy Center customers with the `ReadAllData` or `PrivacyDataAccess` permissions.

Fields

Field	Details
Description	Type textarea Properties Filter, Group, Nillable, Sort Description Description of the policy. The description is limited to 255 characters.
DeveloperName	Type string Properties Filter, Group, Sort Description Developer name of the policy.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether this policy can be used (<code>true</code>) or not (<code>false</code>) for data subject (customer) requests. The default value is <code>false</code>.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the MasterLabel. Possible values are: • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish • <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label of the policy.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as the object.

DsarPolicyLog

Sharing is available for the object.

DsarPolicyLog

Represents the history of Data Subject Access Request (DSAR) policy execution requests. This log records the status and results of executed DSAR policies for a customer. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is for Privacy Center customers with the `ReadAllData` or `PrivacyDataAccess` permissions.

Fields

Field	Details
CompletionDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the data subject access request was completed. Available in API version 51.0 and later.
DataSubjectId	Type reference Properties Filter, Group, Nillable, Sort Description The 15–18 character ID of the data subject making the request. Available in API version 51.0 and later.
DeletedDateTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date and time when the file generated for the data subject's request is deleted. Available in API version 51.0 and later.
DeveloperName	Type string Properties Filter, Group, Sort Description Developer name of the policy.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
DownloadedDateTime	Type dateTime Properties Filter, Nillable, Sort Description The most recent date and time when the data subject downloaded the file generated at their request. Available in API version 51.0 and later.
DsarError	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Represents an error in generating the file for the data subject access request. Available in API version 51.0 and later.
DsarPolicyId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the DSAR policy.
FileURL	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The result of the DSAR policy execution. The URL links to a downloadable file that contains the customer data.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the MasterLabel. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label of the policy.
RequestDateTime	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort
	Description The date and time when a data subject requested access to their data in the org. Available in API version 51.0 and later.
RequestStatus	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description The status of the policy execution. Possible values are: • Complete • Deleted • Downloaded • Expired • Failed • In Progress
RequestUserId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the org employee or admin making the request on behalf of the data subject. Available in API version 51.0 and later.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as the object.

[DsarPolicy](#)

Sharing is available for the object.

DuplicateJob

Represents an instance of a job that identifies duplicates among existing records in the system.

This object is available in API versions 42.0 and later.

A duplicate job is the parent of the DuplicateRecordSet instances that it generates. The duplicate record items in a set generated by a duplicate job are of one object type.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
<code>DuplicateJobDefinitionId</code>	Type reference Properties Filter, Group, Sort, Update Description The ID of the corresponding duplicate job definition.
<code>DuplicateJobStatus</code>	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The current status of a duplicate job. Valid values are <code>Not Started</code> , <code>In Progress</code> , <code>Completed</code> , <code>Canceled</code> , <code>Failed</code> , <code>Results Deleted</code> .
<code>EndTime</code>	Type dateTime Properties Filter, Nillable, Sort Description The date and time when a duplicate job was completed.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date when a duplicate job was last referenced.
<code>LastViewedDate</code>	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The date when a duplicate job was last viewed.
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description The name of a duplicate job.
NumDuplicateRecordItems	Type int Properties Filter, Group, Sort Description The total number of duplicate records identified as a result of invoking a duplicate job.
NumDuplicateRecordSets	Type int Properties Filter, Group, Sort Description The number of duplicate record sets identified as a result of invoking a duplicate job.
NumRecordsScanned	Type int Properties Filter, Group, Sort Description The number of records scanned as a result of invoking a duplicate job.
ResultListViewId	Type reference Properties Filter, Group, Nillable, Sort, Update Description List view metadata for displaying the duplicate record sets identified as result of invoking a duplicate job.

Field Name	Details
StartDateTime	Type dateTime Properties Filter, Sort Description The date and time when a duplicate job was invoked.

DuplicateJobDefinition

Setup object defining a job that identifies duplicate record items globally.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The name of the user who created a duplicate job.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language in the user's personal settings.

Field Name	Details
MasterLabel	Type string Properties Filter, Group, Sort Description The label of the duplicate job.
SubjectSubtype	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The object subtype. Valid values are <code>Person</code> <code>Account</code> or <code>None</code> .
SubjectType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The object type: account, contact, or lead.

DuplicateJobMatchingRule

Represents a MatchingRule to be used with a DuplicateJob sharing the corresponding DuplicateJobMatchingRuleDefinition.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
DuplicateJobId	Type reference

Field Name	Details
	Properties Filter, Group, Sort Description The ID of the corresponding DuplicateJob.
DuplicateJobMatchRuleDefId	Type reference Properties Filter, Group, Sort Description The ID of the matching rule defined for the corresponding DuplicateJobMatchingRuleDefinition.
MatchingRuleBooleanFilter	Type textarea Properties Filter, Sort Description Boolean logic of the MatchingRule for this DuplicateJobMatchingRule.
MatchingRuleDescription	Type textarea Properties Filter, Group, Nillable, Sort Description Description of the matching rule for this DuplicateJobMatchingRule.
MatchingRuleName	Type string Properties Filter, Group, Sort Description The name of the matching rule defined for this particular DuplicateJob invocation.

DuplicateJobMatchingRuleDefinition

Setup object specifying a MatchingRule to use with DuplicateJob instances that share a DuplicateJobDefinition.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

This object is available in API versions 42.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `search()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
<code>DuplicateJobDefinitionId</code>	Type reference Properties Filter, Group, Sort Description ID of DuplicateJobDefinition (master) for this DuplicateJobMatchingRuleDefinition (detail).
<code>MatchingRuleId</code>	Type reference Properties Filter, Group, Nillable, Sort Description ID of the MatchingRule to be used with this DuplicateJobMatchingRuleDefinition.

DuplicateRecordItem

Represents a record that's been identified as a duplicate. DuplicateRecordItems are included in a DuplicateRecordSet, which are processed in duplicate jobs. Use this object to create custom report types for duplicates.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Duplicate Management. A Salesforce admin can grant access to any user with a Sales Cloud or CRM user license.

Fields

Field Name	Details
DuplicateRecordSetId	Type reference Properties Create, Filter, Group, Sort Description The duplicate record set that the duplicate record item is assigned to. This is a relationship field. Relationship Name DuplicateRecordSet Relationship Type Lookup Refers To DuplicateRecordSet
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The autogenerated name that's given to the Duplicate Record Item. Label is Duplicate Record Item Name.
RecordId	Type reference Properties Create, Filter, Group, Sort, Update Description The name of the record as it appears on the record's detail page. This is a polymorphic relationship field. Relationship Name Record Relationship Type Lookup Refers To Account, Contact, Individual, Lead

DuplicateRecordSet

Represents a group of records that have been identified as duplicates. Each duplicate record set contains one or more duplicate record items. Use this object to create custom report types and view the results of duplicate jobs.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, activate duplicate rules. A Salesforce admin must give users read and write access.

Fields

Field Name	Details
DuplicateRuleId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The duplicate rule used to identify this list of duplicate records. Label Duplicate Rule ID This is a relationship field. Relationship Name DuplicateRule Relationship Type Lookup Refers To DuplicateRule
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field Name	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The autogenerated name that's given to the duplicate record set. Label is <code>Duplicate Record Set Name</code>.
RecordCount	Type int Properties Filter, Group, Nillable, Sort Description The number of record items in the set.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The <code>ParentId</code> represents the parent of a duplicate rule or duplicate job. A <code>ParentId</code> is polymorphic. The label is Parent. This field is available in API versions 42.0 and later.

DuplicateRule

Represents a duplicate rule for detecting duplicate records.

Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`, `search()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The developer name for the duplicate rule.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a duplicate rule is active (<code>true</code>) or not (<code>false</code>). This field is read only.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language for the duplicate rule.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. This field is available in API version 41.0 or later.
MasterLabel	Type string Properties Filter, Group, Sort

Field Name	Details
	Description The label for the duplicate rule.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
SubjectSubtype	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The subtype of object the duplicate rule is defined for. This field is available in API version 39.0 or later. Possible values are: • None • PersonAccount The default value is None.
sObjectType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of object the duplicate rule is defined for. Possible values are:

Field Name	Details
	- Account - Contact - Individual - Lead

Usage

You can use the API to view a duplicate rule's details. To create, edit, or delete duplicate rules, use the UI.

Use DuplicateRule to get the sObject type.

DuplicateRule is unavailable in some orgs.

DynamicDataCapture

DynamicDataCapture is a junction object that adds a Form tab to Work Order Overview, and to the related list of a work order, work order line item, or service appointment in the Field Service mobile app. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionDefinition	Type string Properties Create, Filter, Group, Sort, Update Description The associated Data Capture Flow to execute.
ActionType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of platform action that the form is associated with. Possible values are: Possible values are: Flow

Field	Details
	The default value is Flow.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the form.
ExecutionOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The order in which the Data Capture flow is executed. Positive integer values or null are supported.
IsRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Boolean value that specifies if this form needs to be completed before moving on to the next form.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The order in which the Data Capture flow is executed. Positive integer values or null are supported.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the form.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID that refers to user who owns the Dynamic Data Capture object. This field is a polymorphic relationship field. Relationship Name Owner Refers To ServiceAppointment, WorkOrder, WorkOrderLineItem (the parent object), Timesheet
ParentRecordId	Type reference Properties Create, Filter, Group, Sort Description The ID that refers to a work order, work order line item, or service appointment that serves as the parent record for junction object. This field is a polymorphic relationship field. Relationship Name ParentRecord Relationship Type Parent-child Refers To ServiceAppointment, WorkOrder, WorkOrderLineItem (the parent object)
ParentRecordType	Type string Properties Filter, Group, Nillable, Sort Description The type of parent object associated with the junction object. Possible values are: • Work Order • Work Order Line Item • Service Appointment
PausedFlowInterviewId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the flow interview that has been paused by a user. This field is a relationship field. Relationship Name PausedFlowInterview Refers To FlowInterview
ProcessType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The flow process type for the form. Possible values are: • DataCaptureFlow—Data Capture Flow The default value is DataCaptureFlow.
ServiceDocumentTemplate	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
ServiceReportLanguage	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description
StatusCategory	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The category that each status value belongs to. Possible values are: • Completed • InProgress—In Progress • New

Field	Details
	• NotApplicable—Not Applicable • Paused The default value is New.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

DynamicDataCaptureChangeEvent on page 68(API Version 64.0)

Change events are available for the object.

DynamicDataCaptureOwnerSharingRule on page 65(API Version 64.0)

Sharing rules are available for the object.

DynamicDataCaptureShare on page 67(API Version 64.0)

Sharing is available for the object.

ElectronicMediaGroup

Represents the type of media that you can associate with a product or category.This object is available in API version 49.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The default value is USD.
Description	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Description of the store.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Filter, Group, idLookup, Sort Description Name of the media group.
OwnerId	Type reference

Field	Details
	Properties Filter, Group, Sort Description The ID of the owner of the ElectronicMediaGroup object. For external routing, allows the object to be used in the Streaming API to listen to events whenever a ElectronicMediaGroup record is created, modified, or deleted.
UsageType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Possible values are: • Attachment • Banner • Listing • Standard • Tile

ElectronicMediaUse

Represents the usage of media. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The default value is <code>USD</code> . Possible values are: • <code>USD</code>—U.S. Dollar
<code>ElectronicMediaGroupId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the electronic media group.
<code>ElectronicMediaId</code>	Type reference Properties Filter, Group, Sort Description The ID of the electronic media.
<code>ImplementorType</code>	Type string Properties Filter, Group, Nillable, Sort Description The type of implementor. Available implementors of <code>ElectronicMediaUse</code> include: • <code>ProductMedia</code> • <code>ProductCategoryMedia</code>
<code>SortOrder</code>	Type int Properties Filter, Group, Nillable, Sort Description The order that electronic media is displayed in.

EmailContent

Represents a marketing email asset for use with Account Engagement. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

EmailContent is only available for orgs that use Account Engagement. The Manage Email Content user permission is required. Users also need the CRM User, Sales, or Service User permission set. EmailContent isn't available for custom portal or guest users.

Fields

Field	Details
ClickThroughRate	Type percent Properties Filter, Nillable, Sort Description The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted.
ClickToOpenRatio	Type percent Properties Filter, Nillable, Sort Description The number of unique clicks divided by unique HTML opens.
DeliveryRate	Type percent Properties Filter, Nillable, Sort Description The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder.
Description	Type textarea Properties Create, Nillable, Update Description Description of the email content, for example, Promotion Mass Mailing.

Field	Details
HtmlBody	Type textarea Properties Nillable Description The body of the email in HTML format. The field is read-only.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when the current user last viewed the record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, the record could have been referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the email asset.
OpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces).
OptOutRate	Type percent Properties Filter, Nillable, Sort

Field	Details
	Description The percentage of users that have opted out compared to the total number of emails sent.
SpamComplaintRate	Type percent Properties Filter, Nillable, Sort Description The percentage of spam complaints compared to the total number emails sent.
Subject	Type textarea Properties Create, Filter, Nillable, Update Description Content of the subject line.
TemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The Email Template field is mostly read-only. You can populate the Email Template field only during record create to prevent overwriting data on the email content record.
TextBody	Type textarea Properties Create, Nillable, Update Description The body of the email in plain text format. The character limit is 384, 000.
TotalDelivered	Type int Properties Filter, Group, Nillable, Sort Description The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder.
TotalHardBounced	Type int

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of emails that permanently returned to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown.
TotalOpens	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) do not display images by default. Account Engagement counts an open each time the images load.
TotalSent	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses.
TotalSoftBounced	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. After 5 soft bounces, Account Engagement opts the prospect out of emails.
TotalSpamComplaints	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The total number of prospects that reported the email as spam.

Field	Details
TotalTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The number of times prospects clicked a link in the email.
UniqueClickThroughRate	Type percent Properties Filter, Nillable, Sort Description Read-only field. The percentage of visitors who clicked a link contained in an email
UniqueOpens	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient only one time, even if the prospect loaded images more than once.
UniqueOptOuts	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. They are removed from future email sends.
UniqueTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only field. The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link.

EmailDomainFilter

Represents a filter that determines whether an email relay is restricted to a specific list of domains. This object is available in API version 43.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the “Email Administration,” “Customize Application,” and “View Setup” user permissions to use this object.

You must create an email relay in Setup or through the [EmailRelay](#) object before you can use the `EmailDomainFilter` object.

Fields

Field Name	Details
EmailRelayId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the EmailRelay record. This is a relationship field. Relationship Name EmailRelay Relationship Type Lookup Refers To EmailRelay
FromDomain	Type textarea Properties Create, Nillable, Update Description Restricts the email relay to send emails based on the sender domains (<code>FromDomain</code>) listed in this field. This field is optional, accepts a list of comma-separated values, and supports the wildcard character.
IsActive	Type boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the email domain filter is active (<code>true</code>) or not (<code>false</code>). Use this field to enable or disable the email domain filter.
PriorityNumber	Type int Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description Indicates the order in which the email domain filter is processed. Filters are evaluated in ascending order. The priority number must be unique. If this field is left blank, it is assigned the next available number and is processed last. Processing stops after the first matching filter is applied.
ToDomain	Type textarea Properties Create, Nillable, Update Description Restricts the email relay to send emails based on the recipient domains (<code>ToDomain</code>) listed in this field. This field is optional, accepts a list of comma-separated values, and supports the wildcard character.

Usage

Tip: If you also plan to activate Bounce Management and Email Compliance Management, confirm with your email admin that your company allows relaying email sent from Salesforce. For more information on bounce management, see [Configure Deliverability Settings for Emails Sent from Salesforce](#).

EmailDomainKey

Represents a domain key for an organization's domain, used to authenticate outbound email that Salesforce sends on the organization's behalf. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

We've upgraded and replaced the original DKIM (DomainKeys Identified Mail) key feature, so that you can create a DKIM key with increased email security. For more information, see [Setting Up More Secure DKIM Keys](#).

Fields

Field Name	Details
AlternatePublicKey	Type textarea Properties Nillable Description Read-only. Alternate public keys are used by Salesforce to auto-rotate domain keys. This field is available in API version 44.0 and later after activating the Critical Update.
AlternateSelector	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The text used to distinguish the DKIM key from any other DKIM keys your organization uses for the specified domain. This field is available in API version 44.0 and later after activating the Critical Update.
AlternateTxtRecordName	Type string Properties Filter, Group, Nillable, Sort Description The alternate TXT record name is used to create the CNAME record. Refer to the Usage section for more information. This field is available in API version 44.0 and later after activating the Critical Update.
Domain	Type string Properties Create, Filter, Group, Sort, Update Description The organization's domain name that the DKIM key is generated for.

Field Name	Details
DomainMatch	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The specificity of match required on the sending domain name before signing with this DKIM key. Valid values are: • <code>DomainOnly</code>—Sign if sending domain matches at the domain level only (example.com but not mail.example.com) • <code>SubdomainsOnly</code>—Sign if sending domain matches at the subdomain level only (mail.example.com but not example.com) • <code>DomainAndSubdomains</code>—Sign if sending domain matches at the domain and subdomain levels (example.com and mail.example.com)
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this DKIM key is active (<code>true</code>) or not (<code>false</code>).
KeySize	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description Indicates the RSA key size, in bits. The possible values are: • 1024 • 2048 This field is available in API version 45.0 and later.
PrivateKey	Type textarea Properties Create, Nillable, Update Description Once you activate the Critical Update, this field is no longer visible. The private portion of the DKIM key pair used to encrypt mail headers from your domain. Salesforce generates an encrypted <code>PrivateKey</code> if you don't specify

Field Name	Details
	a value when creating the DKIM key. If you do specify a value, it must be an existing valid <code>PrivateKey</code> from another EmailDomainKey object. This field doesn't contain the actual private key, but a value that represents the key in our system. Therefore: - The actual private key can't be leaked. - You can't use the value to do your own email signing.
PublicKey	Type textarea Properties Create, Nillable, Update Description Part of the domain key pair that mail recipients retrieve to decrypt the DKIM header and verify your domain. Add the <code>PublicKey</code> value to your domain's DNS records before you start signing with this domain key.
Selector	Type string Properties Create, Filter, Group, Sort, Update Description Text used to distinguish the DKIM key from any other DKIM keys your organization uses for the specified domain.
TxtRecordName	Type string Properties Filter, Group, Nillable, Sort Description Read-only. The TXT record name is used to create the CNAME record. Refer to the Usage section for more information. This field is available in API version 44.0 and later after activating the Critical Update.
TxtRecordsPublishState	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The possible values are: - Published - Publishing in progress

Field Name	Details
	Publishing failed This field is available in API version 44.0 and later after activating the Critical Update.

Usage

Create DKIM Keys with Increased Security

- If your Salesforce org was created before Winter '19, enable the Critical Update. From Setup, enter *Critical Updates* in the Quick Find box, and then select **Critical Updates**. For Enable Redesigned DomainKeys Identified Mail (DKIM) Key Feature with Increased Email Security, click **Activate**.
- Insert `Domain`, `DomainMatch`, `Selector`, and `AlternateSelector`. Salesforce publishes your TXT record to DNS.
- Retrieve the `TxtRecordName` and `AlternateTxtRecordName` and use them to create and publish the CNAME and Alternate CNAME record to your domain's DNS.
 - Create CNAME record using: `<selector>._domainkey.<domain> IN CNAME txtRecordName.`
 - Create Alternate CNAME record using: `<alternateSelector>._domainkey.<domain> IN CNAME alternateTxtRecordName.`
- Set the `IsActive` field to true.

Create DKIM Keys (pre-Winter '19 Version)

Note: The critical update activates for everyone on October 15, 2019. After that date, this approach to creating DKIM keys will no longer be available.

When you create a DKIM key, Salesforce generates a public and private key pair. Publish the public key in the DNS.

For each domain key you create, we recommend this sequence:

- Insert the `Domain`, `DomainMatch`, and `Selector`.
- Update your domain's DNS records.
 - Locate the DNS record at `selector._domainkey.domain`. For example, `mail._domainkey.mail.example.com`.
 - Add the `PublicKey` value, like this: `V=DKIM1; p=public_key`.

DKIM Signing Outbound Email

- In addition, you can optionally put the record in testing mode, which instructs recipients to not make decisions based on the email signature. Add parameter `t=y` to the DNS entry: `V=DKIM1; t=y; p=public_key`.
- Update the key via the API or UI to be active.

EmailInsight

Represents an insight generated from an email interaction. EmailInsights acts as a central place to store various types of insights related to email messages. The insights stored include status, type, and time of generation. Only certain types of insights can be created based on a pre-configured list of insight types. This object is available in API version 63.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

EmailStream permission must be enabled.

EmailStreamPref and SyncEmailToCoreActivity Org prefs must be enabled.

To be able to see SyncEmailToCoreActivity preference, EACLegacyEmailSyncAWS Org permission, AnalyticsActivity, UnifiedActivities, and ActivityMetrics must be disabled. In addition, license to Standard Einstein Activity Capture and turning on Einstein Activity Capture and EmailInsights provisions the required permissions and preferences.

Fields

Field	Details
EmailMessageId	Type reference Properties Filter, Group, Sort Description Required. The ID of the email message the insight is generated for. This field is a relationship field. Relationship Name EmailMessage Refers To EmailMessage
GeneratedDate	Type dateTime Properties Filter, Sort Description Required. The date and time when the insight was generated in the legacy system.
InsightTypeDescription	Type textarea

Field	Details
	Properties None Description Required. Description of the insight type.
InsightTypeIdentifier	Type string Properties Filter, Group, Sort Description Required. The ID of the insight type based on which the insight is generated.
InsightTypeLabel	Type string Properties Filter, Group, Sort Description Required. The display name of the insight type.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email insight record is locked or not. The default value is false.
LegacyInsightIdentifier	Type string Properties Filter, Group, idLookup, Sort Description Required. The unique ID of the insight that was generated and stored in the legacy system.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email insight record can be edited or not. The default value is false.

Field	Details
RowVersion	Type string Properties Defaulted on create, Filter, Group, Sort Description A system-generated, read-only field that tracks the version of a record. Each time a record is created or updated, the RowVersion value increments, providing a mechanism to detect changes and manage concurrency.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Required. The status of the insight record. Possible values are: • Active • Completed • Deprecated • Dismissed The default value is Active.

EmailInsightAction

Represents the actions that have been taken, or could be taken, in relation to email insights. It logs different types of actions and associated metadata, helping to track and manage the activities and decisions made based on email insights. This object is available in API version 63.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

EmailStream permission must be enabled.

EmailStreamPref and SyncEmailToCoreActivity Org prefs must be enabled.

To be able to see SyncEmailToCoreActivity preference, EACLegacyEmailSyncAWS Org permission, AnalyticsActivity, UnifiedActivities, and ActivityMetrics must be disabled. In addition, license to Standard Einstein Activity Capture and turning on Einstein Activity Capture and EmailInsights provisions the required permissions and preferences.

Fields

Field	Details
ActionMetadata	Type textarea Properties Nillable Description The metadata for the action.
EmailInsightId	Type reference Properties Filter, Group, Sort Description Required. The ID of the email insight where the action is applied. This field is a relationship field. Relationship Name EmailInsight Refers To EmailInsight
InsightAction	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Required. The action that's taken on the email insight. Possible values are: - CreateCalendarEvent - CreateTaskWithDate - EciCreateEmail - EciScheduleMeetings - EciSendEmail - EmailReply - EmailReplyLater - EmailReplyWithTemplate - InsertFreeTime - PostOnChatter - ViewCalendar - ViewContactProfile

Field	Details
	The default value is <code>EmailReply</code> .
<code>IsLocked</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email insight action record is locked or not. The default value is false.
<code>MayEdit</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email insight action record can be edited or not. The default value is false.
<code>RowVersion</code>	Type string Properties Defaulted on create, Filter, Group, Sort Description A system-generated, read-only field that tracks the version of a record. Each time a record is created or updated, the <code>RowVersion</code> value increments, providing a mechanism to detect changes and manage concurrency.

EmailMessage

Represents an email in Salesforce.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

EmailMessage is only available for orgs that use Email-to-Case or Enhanced Email, which is automatically enabled for most customers.

To use reply and forward functionality, `FromAddress` must specify an email address that exists in `EmailMessageRelation`, with a `RelationType` of `FromAddress`.

The `Status` field is mostly read-only. You can change the status only from *New* to *Read*.

The `HtmlBody` and `RelatedToId` fields are supported in Classic list views but not in Lightning list views. In related lists and search results in Lightning Experience, these fields either don't appear, show blank values, or result in an error.

`update()` is supported when an email record is in *Draft* status, and `IsPrivateDraft` is `false`. It's also supported if the email status is *Draft*, `IsPrivateDraft` is `true`, and `CreatedBy` is associated with the current user. When the email record isn't in *Draft* status, the `IsExternallyVisible` field and custom fields only can be updated.

Set the Update Email Messages user permission for users, such as an Automated Case User, who run automated processes that modify email message-related records. With the Update Email Message permission set, users' processes can modify `EmailMessageRelation` and `ContentDocumentLink` records that are related to an email message that isn't in *Draft* status. Don't set this user permission for other users.

Access to an email message depends on the associated object. The user who created the email is specified in `CreatedById` and always has access, unless that user is a guest user. Guest users have read access if the message is marked as `IsExternallyVisible`.

The object that's used to determine access differs for Email-to-Case and Enhanced Email.

- Email-to-Case—When Email-to-Case is enabled and the email is Case-based (the `ParentId` field is *Case*), access depends on the user's access to the related Case record. If the email message is a draft, only the user in the `CreatedById` field or users with the Modify All Data permission can access it.
- Enhanced Email—Access is activity-based. The `ActivityId` field specifies an associated Task record. You can control access to activity-based objects with the [Access Activities permission](#). Users with the Modify All Data permission can also access the message.

When you use the API to insert `EmailMessage` records in bulk, the same access rules apply: access is based on cases in `ParentId` fields or by tasks in `ActivityId` fields. When inserting a single record, set the `CreatedById` field to the user performing the operation or leave it blank.

Fields

Field	Details
<code>ActivityId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the activity that is associated with the email. Usually represents an open task that is created for the case owner when a new unread email message is received. <code>ActivityId</code> can only be specified for emails on cases. It's auto-created for other entities. If an <code>EmailMessage</code> has a related task, and fields on the email record are updated, we may delete the related task and create a new related task.
<code>AttachmentIds</code>	Type string Properties Create, Nillable, Update

Field	Details
	Description A comma-separated list of email attachments. This is used by the Send Email quick action when you use Salesforce Classic email templates. Maximum length is 32,768 characters.
AutomationType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description A picklist value that determines if an outgoing email was manually created or AI-generated. Possible values are: • <code>AiAssisted</code>—Email is AI-generated, but sent by human. • <code>AiAutomated</code>—Email is generated and sent by AI. • <code>Null</code>—Email is created and sent by human.
BccAddress	Type string Properties Create, Filter, Nillable, Sort, Update Description A string array of email addresses for recipients who were sent a visually impaired carbon copy of the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the <code>BccIds</code> field instead of adding their email address to the <code>BccAddress</code> field. When adding their ID, the email message is automatically associated with the contact, lead, or user. For an Experience Cloud site user who isn't the sender of the email, this field returns null. You can't send emails unless there's at least one recipient.
BccIds	Type JunctionIdList Properties Create, Update Description A string array of IDs for contacts, leads, and users who were sent a visually impaired carbon copy of the email message. Each ID is linked to an <code>EmailMessageRelation</code> record, which represents the relationship between an email message and a Contact, Lead, or User record. For an Experience Cloud site user who isn't the sender of the email, this list is empty.

Field	Details
	Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
<code>CcAddress</code>	Type string Properties Create, Filter, Nillable, Sort, Update Description A string array of email addresses for recipients who were sent a carbon copy of the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the <code>CcIds</code> field instead of adding their email address to the <code>CcAddress</code> field. Then the email message is automatically associated with the contact, lead, or user. You can't send emails unless there's at least one recipient.
<code>CcIds</code>	Type <code>JunctionIdList</code> Properties Create, Update Description A string array of IDs for contacts, leads, and users who were sent a carbon copy of the email message. Each ID is linked to an <code>EmailMessageRelation</code> record, which represents the relationship between an email message and a Contact, Lead, or User record. Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
<code>ClientThreadIdentifier</code>	Type string Properties Create, Filter, Nillable, Sort, Update Description A value used by third-party email clients to identify which thread an email belongs to. See Email-to-Case Threading for more information. Available in API versions 56.0 and later.
<code>ContentDocumentIds</code>	Type <code>JunctionIdList</code> Properties Create, Update

Field	Details
	Description A string array of IDs for content documents such as files and attachments that are associated with an email. Each ID is linked to a <code>ContentDocumentLink</code> record, which represents the relationship between an email message and a content document record. Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
EmailRoutingAddressId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Stores the ID of the email routing address used to create the email. This value is set when the email is processed by Email-to-Case service. When this field is set, <code>EmailMessage.Incoming</code> cannot be <code>false</code>. Relationship Name EmailRoutingAddress Relationship Type Lookup Refers To EmailRoutingAddress
EmailTemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The email template, if any, that was chosen for the email. This field is populated in Lightning Experience only. This is a relationship field.

Field	Details
	Relationship Name EmailTemplate Relationship Type Lookup Refers To EmailTemplate
FirstOpenedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date the email was first opened. To see this field, enable email tracking in your org.
FromAddress	Type email Properties Create, Filter, Nillable, Sort, Update Description The address that originated the email. When using this field, specify an email address that exists in EmailMessageRelation, with a <code>RelationType</code> of <code>FromAddress</code>. EmailMessages in Draft status with <code>IsPrivateDraft</code> set to <code>true</code> must use the user's address, a verified org-wide email address, or a verified Email-to-Case routing address in the <code>FromAddress</code> field.
FromId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The contact, lead, or user who sent the email. Maximum length is 18 characters.
FromName	Type string Properties Create, Filter, Nillable, Sort, Update Description The sender's name. When using this field, specify an email address that exists in EmailMessageRelation, with a <code>RelationType</code> of <code>FromAddress</code>.

Field	Details
HasAttachment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email was sent with an attachment (<code>true</code>) or not (<code>false</code>).
Headers	Type textarea Properties Create, Nillable, Update Description The Internet message headers of the incoming email. Used for debugging and tracing purposes. Doesn't apply to outgoing emails.
HtmlBody	Type textarea Properties Create, Nillable, Update Description The body of the email in HTML format. You can't send emails unless at least one of these fields has content. • Subject field • HTML Body or Text Body field As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields.
Incoming	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the email was received (<code>true</code>) or sent (<code>false</code>).
IsBounced	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the email bounced.

Field	Details
	This field is set to <code>True</code> for bounced emails in orgs using Lightning Threading. It's not set to <code>True</code> for orgs using Ref ID threading. To see this field, enable bounce management in your org.
<code>IsClientManaged</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description If <code>EmailMessage</code> is created with <code>IsClientManaged</code> set to <code>true</code>, users can modify <code>EmailMessage.ContentDocumentIds</code> to link file attachments even when the <code>Status</code> of the <code>EmailMessage</code> isn't set to <code>Draft</code>. When this field is set to <code>true</code> and Enhanced Email is enabled, a Task record is created for the <code>EmailMessage</code> regardless of Email-to-Case settings.
<code>IsDeleted</code>	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
<code>IsExternallyVisible</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the Experience Cloud site case feed is enabled, <code>IsExternallyVisible</code> controls the external visibility of emails in sites. When <code>IsExternallyVisible</code> is set to <code>true</code>—its default value—external users see the email message in the case feed. • Emails remain visible in the Emails related list whether or not this field is set to <code>true</code>. For security reasons, we recommend that you remove this related list from your case page layout for external community users. • Only emails with a value in the <code>ParentId</code> field can be made externally visible in sites. • This field can't be updated if the email's <code>Status</code> is set to <code>Draft</code>. • The <code>Enable Case Feeds in Experience Cloud Sites</code> organization preference in Setup makes case-related emails, comments, and updates visible to site members. When this preference is off, <code>IsExternallyVisible</code> is <code>True</code> by default for the <code>EmailMessage</code>. When this preference is on, <code>IsExternallyVisible</code>

Field	Details
	defaults to <code>True</code> only if the case contact email is the sender or the recipient of the <code>EmailMessage</code> . Otherwise, <code>IsExternallyVisible</code> defaults to <code>False</code> .
<code>IsOpened</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email has been opened. To see this field, enable email tracking in your org.
<code>IsPrivateDraft</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description If <code>IsPrivateDraft</code> is set to <code>true</code>, then only the <code>CreatedById</code> user can view, update, and send this email draft. If <code>IsPrivateDraft</code> is set to <code>false</code>, then any user with permissions to work on the case can see these drafts. After the email is sent, then this field is updated to be <code>false</code>. Public drafts are loaded and visible in Salesforce Classic while Private Drafts are only used in Lightning Experience.
<code>IsTracked</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the email is being tracked. To see this field, enable email tracking in your org.
<code>LastOpenedDate</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date the email was last opened. To see this field, enable email tracking in your org.
<code>MessageDate</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The date the email was created. For inbound emails, Email-to-Case sets this field using the Date header. The Date header is set by the email client and is subject to the sender's time preferences.
MessageIdentifier	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The ID of the email message.
Name	Type string Properties Filter, Group, idLookup, Sort Description A name for the email message that's derived from the first 255 characters of the Subject field. If the Subject field is empty, a localized string of [No Subject] is used. This field is read-only and can't be created or updated. Available in API versions 56.0 and later.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the case that's associated with the email. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Case
RelatedToId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field**Details****Description**

The `RelatedToId` represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. RelatedTolds are polymorphic. Polymorphic means a `RelatedTold` is equivalent to the ID of a related object.

You must have access to at least one entity listed under `Refers To` to access `RelatedTold`.

You can update `RelatedToId` when `IsClientManaged` is set to `true`.

`RelatedToId` and `ParentId` should have the same value when `ParentId` is set. You might see unexpected results otherwise.

This is a polymorphic relationship field.

`ReplyToEmailMessageId`

Type

reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort Description ID of the inbound or outbound email message the current email message is a reply to. It's not possible to reply to a message whose <code>Status</code> is <code>Draft</code>. This is a relationship field. This is only set for Case related Email replies at setup. Relationship Name ReplyToEmailMessage Relationship Type Lookup Refers To EmailMessage
Source	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description When Sync Email as Salesforce Activity is enabled, this value reflects from where the email was captured automatically. Available in API version 64.0 and later. Possible values are: • <code>Einstein Activity Capture</code>—Captured as an entire email message by Einstein Activity Capture. • <code>Einstein Activity Capture Limited</code>—Captured as a header-only email by Einstein Activity Capture. The sender, recipients, date, and time of the message were captured, not the subject or body. • <code>Email Integration App Manual</code>—Captured to track the email message records created or edited from the mailapp. • <code>Migrated Captured Email</code>—An email that was captured in Einstein Activity Capture and migrated to an updated version of Einstein Activity Capture in which Sync Email as Activity is turned on. Available in API version 65.0 and later. • <code>Migrated Captured Email Header Only</code>—An email that was captured in Einstein Activity Capture and migrated as header-only data to an updated version of Einstein Activity Capture in which Sync Email as Activity is turned on. Available in API version 65.0 and later.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The status of the email. The <code>Status</code> field is mostly read-only. You can change the status only from <i>New</i> to <i>Read</i>. Possible values are: • 0 (New) • 1 (Read) • 2 (Replied) • 3 (Sent) • 4 (Forwarded) • 5 (Draft) For emails not sent as part of a case, only the status 3 (Sent) is valid.
Subject	Type string Properties Create, Filter, Nillable, Sort, Update Description The subject line of the email. You can't send emails unless at least one of these fields has content. • Subject field • HTML Body or Text Body field As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields.
TextBody	Type textarea Properties Create, Nillable, Update Description The body of the email, in plain text format. If <code>TextBody</code> isn't set, then it's extracted from <code>HtmlBody</code>. You can't send emails unless at least one of these fields has content. • Subject field • HTML Body or Text Body field As the sender, you can provide the content, or it can be automatically inserted using predefined values. An email template can also include the content for these fields
ThreadIdIdentifier	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The ID of the email thread the email message belongs to. This field is used by features that sync emails directly from an inbox into Salesforce. This field is not used by On-Demand Email-to-Case.
ToAddress	Type string Properties Create, Filter, Nillable, Sort, Update Description A string array of email addresses for recipients who were sent the email message. Include only email addresses that aren't associated with Contact, Lead, or User records in Salesforce. If the recipient is a contact, lead, or user, add their ID to the <code>ToIds</code> field instead of adding their email address to the <code>ToAddress</code> field. Then the email message is automatically associated with the contact, lead, or user. You can't send emails unless there's at least one recipient.
ToIds	Type JunctionIdList Properties Create, Update Description A string array of IDs for contacts, leads, and users who were sent a carbon copy of the email message. Each ID is linked to an <code>EmailMessageRelation</code> record, which represents the relationship between an email message and a Contact, Lead, or User record. Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
ValidatedFromAddress	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description A picklist value with either the sender's address, org-wide email addresses, or Email-to-Case routing address. The email address must be verified. If the sender's email address is used, the sender must be the current user. <code>ValidatedFromAddress</code> isn't suitable for use in Group By or Sort By statements. Use <code>FromAddress</code> instead.

Usage

EmailMessage is limited to 50 custom fields.

If your org uses Email-to-Case, a case is created when an email is sent to one of your company's addresses. The email, which is related to the case by the `ParentID` field, is stored as an EmailMessage record. When users view the email, they see the EmailMessage record.

If your org uses Enhanced Email, each email is stored as an EmailMessage record and a Task record. When users view an email, they see the EmailMessage record.

Note: In an org with Email-to-Case enabled, an inbound (`Incoming = true`) email with case as the parent record won't create a task automatically. This functionality respects the Create Task from Email setting for each Email-to-Case routing address.

If you would like to change the recipients or contents of an outbound email, don't use automation tools, like Flows or Apex triggers, to update EmailMessage records. Unless they are for a draft, updates to EmailMessage records will not be reflected in the actual sent email. To update an email's data before it's sent, use Quick Action predefined values or a [QuickActionDefaultsHandler](#).

When a Flow creates an EmailMessage with set values in the audit fields (like `CreatedBy` and `CreatedDate`), any FeedItem automatically created for that EmailMessage will not share the same audit field values.

Sample Code—Apex

This sample logs email activity in Salesforce.

```
// if EnhancedEmail Perm is not enabled, continue logging the email as a task

// if EnhancedEmail Perm is enabled, create an EmailMessage object
EmailMessage emailMessage = new EmailMessage();
emailMessage.status = '3'; // email was sent
emailMessage.relatedToId = '006B0000003weZGIAY'; // related to record e.g. an opportunity
emailMessage.fromAddress = 'sender@example.com'; // from address
emailMessage.fromName = 'Dan Perkins'; // from name
emailMessage.subject = 'This is the Subject!'; // email subject
emailMessage.htmlBody = '<html><body><b>Hello</b></body></html>'; // email body
// Contact, Lead or User Ids of recipients
String[] toIds = new String[]{'003B0000000AxcEjIAJ'};
emailMessage.toIds = toIds;
// additional recipients who don't have a corresponding contact, lead or user id in the
// Salesforce org (optional)
emailMessage.toAddress = 'emailnotinsalesforce@toexample.com, anotherone@toexample.com';
insert emailMessage; // insert

// Add Email Message Relation for id of the sender
EmailMessageRelation emr = new EmailMessageRelation();
emr.emailMessageId = emailMessage.id;
emr.relationId = '005B0000003qHvOIAU'; // user id of the sender
emr.relationType = 'FromAddress';
insert emr;
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EmailMessageChangeEvent (API version 48.0)
Change events are available for the object.

SEE ALSO:
[Case](#)
[Overview of Salesforce Objects and Fields](#)

EmailMessageMigration

For internal use only.

EmailMessageRelation

Represents the relationship between an email and contacts, leads, and users. This object is available in API version 37.0 and later.

Special Access Rules

EmailMessageRelation is only available for organizations that use Email-to-Case or Enhanced Email, which is automatically enabled for most customers.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
EmailMessageId	Type reference Properties Create, Filter, Group, Sort Description The ID of the <code>EmailMessage</code> record. This is a relationship field. Relationship Name EmailMessage Relationship Type Lookup Refers To EmailMessage

Field Name	Details
RelationAddress	Type string Properties Create, Filter, Group, Nillable, Sort Description The email address of the sender or recipient.  Note: If a record relates an email to an existing contact, lead, or user record in Salesforce, the value of <code>RelationAddress</code> is the current value of the email address. If the value is not set, it is auto-populated from <code>RelationId</code>.
RelationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The <code>RecordId</code> of the sender or recipient.  Note: If a record relates an email to an email address that's not associated with an existing contact, lead, or user record in Salesforce, the value of <code>RelationId</code> is null. This is a polymorphic relationship field. Relationship Name Relation Relationship Type Lookup Refers To Contact, Lead, User
RelationObjectType	Type string Properties Filter, Group, Nillable, Sort Description The API name of the object type of the <code>RecordId</code> in the <code>RelationId</code> field. It can be a contact, lead, or user.
RelationType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description The type of relationship the contact, lead, or user has with the email message. Possible values include: • ToAddress • CcAddress • BccAddress • FromAddress • OtherAddress For an Experience Cloud site user who is not the sender of the email, no <code>BccAddress</code> relations are returned.

Usage

EmailMessageRelation allows an email to be related to contacts, leads, and users.

EmailRelay

Represents the configuration for sending an email relay. An email relay routes email sent from Salesforce through your company's email servers. This object is available in API version 43.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the Email Administration, Customize Application, and View Setup user permissions to use this object.

Fields

Field Name	Details
AuthType	Type picklist Properties Create, Filter, Group, Restricted Picklist, Sort, Update Description Specifies which SASL mechanism Salesforce uses for SMTP authentication. This field is available when Enable SMTP Auth is selected. Select an option:

Field Name	Details
	- PLAIN- Salesforce uses PLAIN SASL mechanism for SMTP authentication. Default. - LOGIN- Salesforce uses LOGIN SASL mechanism for SMTP authentication This field is available in API version 52.0 and later.
Host	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Indicates the host name or IP address of your company's SMTP server.
IsRequireAuth	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether (true) or not (false) authentication is required. When setting this field to true, the <code>TlsSetting</code> must be set to RequiredVerify. This field is available in API version 44.0 and later.
Password	Type encryptedstring Properties Create, Nillable, Update Description Specifies the password for relay host SMTP authentication. When <code>IsRequireAuth</code> is set to true, this field is required. This field is available in API version 44.0 and later.
Port	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the port number of your company's SMTP server. 25 587 10025 11025

Field Name	Details
TlsSetting	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Specifies whether Salesforce uses TLS for SMTP sessions. • Off: TLS is turned off. SMTP session continues through an insecure connection. • Preferred: If the remote server supports TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS. • Required: Salesforce continues the session only if the remote server supports TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email. • PreferredVerify: If the remote server supports TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session begins, Salesforce verifies that the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS. • RequiredVerify: Salesforce continues the session only if the remote server supports TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.
Username	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the username for relay host SMTP authentication. When IsRequiredAuth is set to true, this field is required. This field is available in API version 44.0 and later.

Usage

An email relay must be associated with an active email domain filter to take effect. If you set up multiple email relays in one org, they are processed in the priority order of their email domain filters.

 **Tip:** If you also plan to activate Bounce Management and Email Compliance Management, confirm with your email admin that your company allows relaying email sent from Salesforce. For more information on bounce management, see [Configure Deliverability Settings for Emails Sent from Salesforce](#).

[EmailServicesFunction](#)

[EmailDomainFilter](#)

EmailRoutingAddress

An email address used for Email-to-Case. Email routing addresses store a unique email services address provided by Salesforce and configuration options for emails received by this address.

Supported Calls

`create()`, `describeSObjects()`, `delete()`, `update()`, `query()`, `retrieve()`, `upsert()`

Special Access Rules

To access this object, Email-to-Case must be enabled. Only admin users can access this object.

Fields

Field	Details
PersonalName	Type string Properties Create, Filter, Sort, Update Description The display name of the EmailRoutingAddress. Maximum size is 300 characters.
Address	Type email Properties Create, Filter, Sort, Update Description The email address to which your customers direct their questions. Emails are forwarded from this address.
EmailServicesAddress	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description A unique, Salesforce-generated email address. This field value is read-only and can't be modified. Emails are forwarded to this address.

SEE ALSO:

[EmailServicesAddress](#)

EmailServicesAddress

An email service address.

Each email service has one or more email addresses to which users can send messages for processing. An email service only processes messages it receives at one of its addresses.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
AuthorizedSenders	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Configures the email service address to only accept messages from the email addresses or domains listed in this field. If the email service address receives a message from an unlisted email address or domain, the email service performs the action specified in the <code>AuthorizationFailureAction</code> field of its associated email service. Leave this field blank if you want the email service address to receive email from any email address.
DeveloperName	Type string

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This 25-character field must be unique among other EmailServicesAddress records under the same EmailServiceFunction parent. In managed packages, this field prevents naming conflicts on package installations. This field is automatically generated, but you can supply your own value if you create the record using the API. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance might be slow while Salesforce generates one for each record.
EmailDomainName	Type string Properties Filter, Group, Nillable, Sort Description A read only field you can query that contains the system-generated domain part of this email service address. The system generates a unique domain-part for each email service address to ensure that no two email service addresses are identical.
FunctionId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the email service for which the email service address receives messages. This is a relationship field. Relationship Name Function Relationship Type Lookup Refers To EmailServicesFunction
IsActive	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this object is active (true) or not (false).
LocalPart	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The local-part of the email service address. The local-part of the address is the string that comes before the @ symbol. For the local-part of a Salesforce email address, all alphanumeric characters are valid, plus the following special characters: ! # \$ % & amp; ' * / = ? ^ _ + - ` { } ~ , The dot character (.) is also valid as long as it's not the first or last character. Email addresses aren't case-sensitive.
RunAsUserId	Type reference Properties Create, Filter, Group, Sort, Update Description The username of the user whose permissions the email service assumes when processing messages sent to this address.

Usage

This object supports the email services feature, which allows you to create automated processes that use Apex classes to process the contents, headers, and attachments of inbound email. For example, you can create an email service that automatically creates contact records based on contact information in messages.

SEE ALSO:

[EmailServicesFunction](#)

EmailServicesFunction

An email service.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
<code>AddressInactiveAction</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates what the email service does with messages received at an email address that is inactive. One of the following values: • <code>UseSystemDefault</code>—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is 0.) • <code>Bounce</code>—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 1.) • <code>Discard</code>—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is 2.) • <code>Requeue</code>—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 3.)
<code>ApexClassId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The ID of the Apex class that the email service uses to process inbound messages. This field is required for API version 12.0 and later.
<code>AttachmentOption</code>	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the types of attachments the email service accepts. One of the following values: • None—The email service accepts the message but discards any attachment. (In API version 41.0 and earlier, the value specified for this choice is 0.) • NoContent—The attachment metadata (filename, MIME type, and so on) is provided to the Apex class, but the body is set to <code>null</code>. There was no previous numeric value for this choice. • TextOnly—The email service only accepts the following types of attachments: – Attachments with a Multipurpose Internet Mail Extension (MIME) type of text. – Attachments with a MIME type of application/octet-stream and a file name that ends with either a .vcf or .vcs extension. These are saved as text/x-vcard and text/calendar MIME types, respectively. (In API version 41.0 and earlier, the value specified for this choice is 1.) • BinaryOnly—The email service only accepts binary attachments, such as image, audio, application, and video files. (In API version 41.0 and earlier, the value specified for this choice is 2.) • All—The email service accepts any type of attachment. (In API version 41.0 and earlier, the value specified for this choice is 3.)
AuthenticationFailureAction	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates what the email service does with messages that fail or do not support any of the authentication protocols if the <code>IsAuthenticationRequired</code> field is true. One of the following values: • UseSystemDefault—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is 0.) • Bounce—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 1.) • Discard—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is 2.) • Requeue—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 3.)

Field	Details
AuthorizationFailureAction	Type picklist Properties Defaulted on create, Group, Sort, Create, Filter, Nillable, Restricted picklist, Update Description Indicates what the email service does with messages received from senders who are not listed in the <code>AuthorizedSenders</code> field on either the email service or email service address. One of the following values: • <code>UseSystemDefault</code>—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is 0.) • <code>Bounce</code>—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 1.) • <code>Discard</code>—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is 2.) • <code>Requeue</code>—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 3.)
AuthorizedSenders	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Configures the email service to only accept messages from the email addresses or domains listed in this field. If the email service receives a message from an unlisted email address or domain, the email service performs the action specified in the <code>AuthorizationFailureAction</code> field. Leave this field blank if you want the email service to receive email from any email address.
ErrorRoutingAddress	Type email Properties Create, Filter, Nillable, Sort, Update Description The destination email address for error notification email messages when <code>IsErrorRoutingEnabled</code> is <code>true</code>.
FunctionInactiveAction	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates what the email service does with messages it receives when the email service itself is inactive. One of the following values: • <code>UseSystemDefault</code>—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is <code>0</code>.) • <code>Bounce</code>—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is <code>1</code>.) • <code>Discard</code>—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is <code>2</code>.) • <code>Requeue</code>—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is <code>3</code>.)
FunctionName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the email service.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this object is active (<code>true</code>) or not (<code>false</code>).
IsAuthenticationRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Configures the email service to verify the legitimacy of the sending server before processing a message. The email service uses the SPF, SenderId, and DomainKeys protocols to verify the sender's legitimacy: If the sending server passes at least one of these protocols and does not fail any, the email service accepts the email. If the server fails a protocol or does not support

Field	Details
	any of the protocols, the email service performs the action specified in the <code>AuthenticationFailureAction</code> field.
<code>IsErrorRoutingEnabled</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description When incoming email messages can't be processed, indicates whether error notification email messages are routed to a chosen address or to the senders.
<code>IsTextAttachmentsAsBinary</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, text attachments are supplied to the Apex code as a <code>Messaging.BinaryAttachment</code> instead of as a <code>Messaging.TextAttachment</code>. This means that the body is supplied as an Apex Blob instead of as an Apex String.
<code>IsTextTruncated</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description This field is deprecated. It is not available as of API version 23.0 and is deprecated and hidden in versions 17.0 through 22.0. In all API versions, the email service now accepts inbound email messages up to the 10 MB size limit, without truncating the text. Previously, it indicated whether the email service truncated and accepted email messages with HTML body text, plain body text, and text attachments over approximately 100,000 characters (<code>true</code>) or rejected these email messages and notified the sender (<code>false</code>).
<code>IsTlsRequired</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Not currently in use.
<code>OverLimitAction</code>	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates what the email service does with messages if the total number of messages processed by all email services combined has reached the daily limit for your organization. One of the following values: • <code>UseSystemDefault</code>—The system default is used. (In API version 41.0 and earlier, the value specified for this choice is 0.) • <code>Bounce</code>—The email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 1.) • <code>Discard</code>—The email service deletes the message without notifying the sender. (In API version 41.0 and earlier, the value specified for this choice is 2.) • <code>Requeue</code>—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected. (In API version 41.0 and earlier, the value specified for this choice is 3.) The system calculates the limit by multiplying the number of user licenses by 1,000.

Usage

This object supports the email services feature, which allows you to create automated processes that use Apex classes to process the contents, headers, and attachments of inbound email. For example, you can create an email service that automatically creates contact records based on contact information in messages.

SEE ALSO:

[EmailServicesAddress](#)

EmailStatus

Represents the status of email sent.

Supported Calls

`describeSObjects()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
EmailTemplateName	Type string Properties Filter, Group, Nillable, Sort Description The name of the EmailTemplate.
FirstOpenDate	Type dateTime Properties Filter, Nillable, Sort Description Date when the email was first opened by recipient. Label is Date Opened.
LastOpenDate	Type dateTime Properties Filter, Nillable, Sort Description Date when the email was last opened by recipient.
TaskId	Type reference Properties Filter, Group, Sort Description The activity (task or event) associated with the email. Label is Activity ID. This is a relationship field. Relationship Name Task Relationship Type Lookup Refers To Task
TimesOpened	Type int Properties Filter, Group, Sort

Field	Details
	Description Number of times the recipient opened the email.
WhoId	Type reference Properties Filter, Group, Nillable, Sort Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is Name ID. This is a polymorphic relationship field. Relationship Name Who Relationship Type Lookup Refers To Contact, Lead

SEE ALSO:

[EmailTemplate](#)

EmailTemplate

Represents a template for an email, mass email, list email, or Sales Engagement email. Supported in first-generation managed packages only.

Note: You can't send a mass email using a Visualforce email template.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ApiVersion	Type double Properties Create, Filter, Nillable, Sort, Update Description The API version for this class. Every class has an API version specified at creation.
Body	Type textarea Properties Create, Nillable, Update Description Content of the email. Limit: 384 KB.
BrandTemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. ID of the BrandTemplate associated with this email template. The brand template supplies letterhead information for the email template.
DeliveryRate	Type percent Properties Filter, Nillable, Sort Description Read-only. The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
Description	Type string Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Description of the template, for example, Promotion Mass Mailing.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Template Unique Name .  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.
Encoding	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Character set encoding for the template.
EnhancedLetterheadId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the enhanced letterhead associated with the email template.  Note: To use an enhanced letterhead, associate it with a Lightning email template that uses the HML merge language. This is a relationship field. Relationship Name EnhancedLetterhead Relationship Type Lookup Refers To EnhancedLetterhead

Field	Details
EntityType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Description When <code>UiType</code> is 2 (Lightning Experience) or 3 (Lightning ExperienceSample), <code>EntityType</code> indicates which entities this template can be used with (for example, account or lead). Valid values are standard object ID prefixes: 001 for account, 003 for contact, 006 for opportunity, and 00Q for lead, 500 for case, and 701 for campaign. This field has been removed in API version 39.0. Use <code>RelatedEntityType</code> instead.
FolderId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the folder that contains the template. This is a relationship field. Relationship Name Folder Relationship Type Lookup Refers To Folder, Organization, User
FolderName	Type string Properties Filter, Nillable, Sort Description The name of the folder that contains the template.
HasSalesforceFiles	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the email template has attachments from Salesforce Files. The default value is false.
HtmlValue	Type textarea

Field	Details
	Properties Create, Nillable, Update Description This field contains the content of the email message, including HTML coding to render the email message. Limit: 384 KB.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that this template is active if <code>true</code>, or inactive if <code>false</code>.
IsBuilderContent	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the email template was made in Email Template Builder. The default value is false.
LastUsedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when this email template was last used. Used with Salesforce Classic templates. Not typically used with Lightning Experience templates.
Markup	Type textarea Properties Create, Nillable, Update Description The Visualforce markup, HTML, JavaScript, or any other Web-enabled code that defines the content of the template.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Name of the template. Label is Email Template Name.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the template. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
RelatedEntityType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description When <code>UiType</code> is 2 (Lightning Experience) or 3 (Lightning ExperienceSample), <code>RelatedEntityType</code> indicates which entities this template can be used with. Valid values are the entity API name: "Account" for account, "Contact" for contact, "Opportunity" for opportunity, "Lead" for lead, and so on. The value can be any entity the user has read access to (including custom entities) but not virtual entities, setup entities, or platform entities. No restrictions exist at the schema level.
Subject	Type string Properties Create, Nillable, Sort, Update Description Content of the subject line. The limit is 1,000 characters for Lightning email templates and 230 characters for Classic email templates.
TemplateStyle	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Style of the template. Possible values are: • <code>formalLetter</code>—Formal Letter • <code>freeForm</code>—Free Form Letter • <code>newsletter</code>—Newsletter • <code>none</code>—No Email Layout • <code>products</code>—Products • <code>promotionLeft</code>—Promotion (Left) • <code>promotionRight</code>—Promotion (Right)
TemplateType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Type of template. Possible values are: • <code>custom</code>—Custom

Field	Details
	• <code>html</code>—HTML • <code>text</code>—Text • <code>visualforce</code>—Visualforce
TimesUsed	Type int Properties Filter, Group, Nillable, Sort Description Number of times this email template has been used. Used with Salesforce Classic templates. Not typically used with Lightning Experience templates.
TotalDelivered	Type int Properties Filter, Group, Nillable, Sort Description Read-only. The total number of emails sent minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
TotalHardBounced	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only. The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
TotalOpens	Type int

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only. The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Pardot counts an open each time the images load. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
TotalSent	Type int Properties Filter, Group, Nillable, Sort Description Read-only. The total number of emails sent, including bounced, opted-out, and invalid To: addresses. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
TotalSoftBounced	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only. The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be delivered at another time. After 5 soft bounces, Pardot opts the prospect out of emails. This field is available in API version 46.0 and later. To access this field, your org must use Sales Engagement and users need the Sales Engagement User or Sales Engagement Cadence Creator permission set. This field value includes emails sent via the ListEmail object or Sales Engagement cadences.
UIType	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the user interface where this template is usable. Possible values are: • Aloha • SFX • SFX_Sample—SFXSample

Usage

To retrieve this object, issue a describe call on an object, which returns a query result for each activity since the object was created. You can't query these records.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EmailTemplateChangeEvent (API version 48.0)

Change events are available for the object.

EmailTemplateMonthlyMetric

Represents the monthly engagement metrics for an email template. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
AllEmailsBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total of hard and soft bounced emails for this email template in the month. This is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of successfully delivered emails for this email template in the month. This is a calculated field.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of hard bounced emails for this email template in the month.
AllEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails containing a link clicked by the recipient for this email template in the month.
AllEmailsNotDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails not delivered for this email template in the month. This field is available in API version 54.0 and later.

Field	Details
AllEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails opened by the recipient for this email template in the month.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that triggered an out-of-office reply for this email template in the month.
AllEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails replied to for this email template in the month.
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent for this email template in the month. This is a calculated field.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails soft bounced for this email template in the month.
AllEmailsTrackedSentCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of emails sent with engagement tracking enabled for this email template in the month.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent without engagement tracking for this email template in the month.
DeliveredRecipientCount	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who were successfully delivered an email for this email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
DeliveredRecipientRate	Type percent Properties Filter, Nillable, Sort Description The percentage of unique recipients that received an email you sent. This field is available in API version 54.0 and later. This is a calculated field.
EmailTemplateId	Type reference Properties Filter, Group, Sort Description The ID of the related email template. This is a relationship field. Relationship Name EmailTemplate Relationship Type Lookup

Field	Details
	Refers To EmailTemplate
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with hard bounce tracking. This field is available in API version 54.0 and later.
HrdBncTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with hard bounce tracking. This field is available in API version 54.0 and later.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the monthly metric record is locked or not. The default value is 'false'.
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with link click tracking for the email template in the month. This field is available in API version 54.0 and later.
LinkClkTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with link tracking for the email template in the month. This field is available in API version 54.0 and later.

Field	Details
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the monthly metric record can be edited or not. The default value is 'false'.
Month	Type date Properties Filter, Group, Sort Description The month in which the engagement occurred.
MonthInt	Type int Properties Filter, Group, idLookup, Sort Description The month in which the engagement occurred, in yyyyymm format.
OooTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with out-of-office tracking for the email template in the month. Out-of-office tracking requires Inbox. This field is available in API version 54.0 and later.
OpenTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with open tracking for the email template in the month. This field is available in API version 54.0 and later.
OpenTrackableSends	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of emails sent with open tracking for the email template in the month. This field is available in API version 54.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with out-of-office tracking for the email template in the month. This field is available in API version 54.0 and later.
RecipientReplies	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who replied to an email for this email template in the month. This field is available in API version 54.0 and later.
RecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of unique email recipients for this email template in the month. This field is available in API version 54.0 and later.
RecipientsHardBounced	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients that hard-bounced an email for this email template in the month. Hard bounces can mean that the recipient's email address doesn't exist or is misspelled. This field is available in API version 54.0 and later.
RecipientsOutOfOffice	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of recipients that responded with an out-of-office reply for the email template in the month. This field is available in API version 54.0 and later.
RecipientsSoftBounced	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients that soft-bounced an email for the email template in the month. A soft bounce often indicates a temporary issue with the recipient's email server, such as a full inbox. This field is available in API version 54.0 and later.
ReplyTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with reply tracking for this email template in the month. This field is available in API version 54.0 and later.
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with reply tracking for the email template in the month. This field is available in API version 54.0 and later.
SftBncTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with soft bounce tracking for the email template in the month. This field is available in API version 54.0 and later.
SoftBounceTrackableSends	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of emails sent with soft bounce tracking for the email template in the month. This field is available in API version 54.0 and later.
SomeEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of sent emails that were successfully delivered to at least one of its recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
SomeEmailsDeliveredRate	Type percent Properties Filter, Nillable, Sort Description The percentage of sent and tracked emails that were successfully delivered to at least one of their recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendHrdBncRt	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to unique recipients with hard bounce tracking that hard bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendOooRate	Type percent Properties Filter, Nillable, Sort

Field	Details
	Description The percentage of emails sent with out-of-office tracking that received out-of-office replies from unique recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendReplyRt	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with reply tracking that received replies from unique recipients for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableRecipientSendSftBncRt	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to unique recipients with soft bounce tracking that soft-bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendHardBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with hard bounce tracking that hard bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendLinkClickRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with link tracking that had link clicks for the email template in the month. This field is available in API version 54.0 and later.

Field	Details
	This is a calculated field.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with open tracking that were opened by the recipient for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendOutOfOfficeRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with out-of-office tracking that received out-of-office replies for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with reply tracking that received replies for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with soft bounce tracking that soft bounced for the email template in the month. This field is available in API version 54.0 and later. This is a calculated field.
UniqueEmailsLinkClickedCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The number of link clicks by unique recipients for the email template in the month.
UniqueEmailsOpenedCount	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of times an email you sent was opened by a unique recipient for the email template in the month. When you send a list email, this field increments each time a recipient opens the received email.
UniqueEmailsRepliedCount	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of replies from unique recipients for the email template in the month.

EmbeddedServiceDetail

Represents a metadata catalog object that exposes fields from the underlying Embedded Service setup objects defined in each EmbeddedServiceConfig deployment for guest users. Guest users don't have direct access to the Embedded Service setup objects. Available in API version 39.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

GET

Fields

Field	Details
AvatarImg	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description URL of the image used as the agent avatar image.
ContrastInvertedColor	Type string Properties Filter, Group, Nillable, Sort Description Accent branding color used in the embedded component, displayed as a hexadecimal value. Changes made to this field in the API aren't reflected in the embedded component.
ContrastPrimaryColor	Type string Properties Filter, Group, Nillable, Sort Description Value of the ContrastPrimaryColor field in the EmbeddedServiceBranding setup object.
CustomMinimizedComponent	Type string Properties Filter, Group, Nillable, Sort Description The custom Aura component that's used for the minimized state for this Embedded Chat deployment.
CustomPrechatComponent	Type string Properties Filter, Group, Nillable, Sort Description The custom Aura component that's used for the pre-chat page for this Embedded Chat deployment.
DurableId	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Developer name for the EmbeddedServiceConfig.
FieldServiceConfirmCardImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the image used for the confirmation card in embedded Appointment Management (beta).
FieldServiceHomeImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the image used for the home screen in embedded Appointment Management (beta).
FieldServiceLogoImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the logo used for the home screen in embedded Appointment Management (beta).
Font	Type string Properties Filter, Group, Nillable, Sort Description Font used in the chat text of the Embedded Chat window.
FontSize	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Font size for the embedded component. Possible values are: • Small • Medium

Field	Details
	• Large
HeaderBackgroundImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the image used for the header background in Embedded Chat. This field is removed in API version 49.0 and later. The header background image is no longer supported.
Height	Type int Properties Filter, Group, Nillable, Sort Description Height of the embedded component.
IsFieldServiceEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether Field Service is enabled for this Embedded Service deployment (<code>true</code>) or not (<code>false</code>). Embedded Appointment Management is currently beta.
IsLiveAgentEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether Chat is enabled for this Embedded Service deployment (<code>true</code>) or not (<code>false</code>).
IsOfflineCaseEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether offline support is enabled for this Embedded Chat deployment (<code>true</code>) or not (<code>false</code>).

Field	Details
IsPrechatEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Value of the <code>PrechatEnabled</code> field in the <code>EmbeddedServiceLiveAgent</code> setup object.
IsQueuePositionEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether queue position (displaying the customer's place in line while they wait for an agent) is enabled for this Embedded Chat deployment (<code>true</code>) or not (<code>false</code>).
NavBarColor	Type string Properties Filter, Group, Nillable, Sort Description Value of the <code>NavBarColor</code> field in the <code>EmbeddedServiceBranding</code> setup object.
NavBarTextColor	Type string Properties Filter, Group, Nillable, Sort Description This field is used to set the text color for the header.
OfflineCaseBackgroundImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the image used for the background for the offline support case form in Embedded Chat.
PrechatBackgroundImg	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description URL of the image used for the background for the pre-chat form in Embedded Chat.
PrimaryColor	Type string Properties Filter, Group, Nillable, Sort Description Value of the PrimaryColor field in the EmbeddedServiceBranding setup object.
SecondaryColor	Type string Properties Filter, Group, Nillable Sort Description Value of the SecondaryColor field in the EmbeddedServiceBranding setup object.
SecondaryNavBarColor	Type string Properties Filter, Group, Nillable Sort Description This field is used to set the color of a secondary header.
ShouldHideAuthDialog	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether the prompt that the customer log in again during a flow should be hidden (true) or not (false). When it's hidden, the customer is taken directly to your login page.
ShouldShowExistingAppointment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether to display a button on the home screen for customers to access their existing appointments (true) or not (false) for embedded Appointment Management (beta).

Field	Details
ShouldShowNewAppointment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether to display a button on the home screen for customers to create a new appointment (<code>true</code>) or not (<code>false</code>) for embedded Appointment Management (beta).
Site	Type string Properties Filter, Group, Nillable Sort Description Value of the <code>site</code> field in the <code>EmbeddedServiceConfig</code> setup object.
SmallCompanyLogoImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the logo image used with Embedded Chat.
WaitingStateBackgroundImg	Type string Properties Filter, Group, Nillable, Sort Description URL of the image used for the background image in Embedded Chat while the customer waits to be connected with a support agent.
Width	Type int Properties Filter, Group, Nillable, Sort Description Width of the embedded component.

Note: Any changes you make to the image fields override what you've entered in Setup. We recommend setting your image URLs in Setup.

EmbeddedServiceLabel

Represents a customized label in Embedded Chat or embedded Appointment Management. This object is available in API version 44.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

GET

Fields

Field	Details
CustomLabelName	Type string Properties Filter, Group, Nillable, Sort Description The developer name for the custom label.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description The unique name containing <code>EmbeddedServiceConfig.labelKey</code> .
EmbeddedServiceConfigDeveloperName	Type string Properties Filter, Group, Nillable, Sort Description Developer name for the EmbeddedServiceConfig.
LabelKey	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The type of label for this embedded component. The value corresponds to the label within a label group (substate of chat state or page type).

Employee

Represents an employee within a company or organization. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must have a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission or have the Employee Management and Employee User add-on licenses.

Fields

Field	Details
AboutMe	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Information about the employee, such as areas of interest or skills. Values can be provided on Employee's profile page. This field is available even if Chatter is disabled.
AlternateEmail	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's alternate email address.
Availability	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's availability status. Possible values are: • In The Office • Out Of Office • Out Sick • PTO • Volunteering Time Off • Working Remotely
AvailabilityEndDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The end date of the Employee's availability, inclusive of the date.
AvailabilityStartDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The start date of the Employee's availability, inclusive of the date.
BannerPhotoUrl	Type url Properties Filter, Nillable, Sort Description Read only. The URL for the employee's banner photo. Available in API v51.0 and later.
CurrentWellnessStatus	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's current wellness status. Possible values are:

Field	Details
	• Available To Work • Remote Work Only • Unavailable • Unknown
DateOfBirth	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's date of birth.
Email	Type email Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The employee's email address. This field is unique within your organization.
EmployeeNumber	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The employee's employment ID for the organization they were hired into. This field is unique within your organization.
EmployeeStatus	Type picklist Properties Create, Filter, Group, Sort, Update Description Required. The employee's current work status. Possible values are: • Active • Inactive • Leave • Terminated
EmploymentType	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's full-time or part-time status. Possible values are: • Full-Time • Part-Time
FirstName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The employee's first name.
FullPhotoUrl	Type url Properties Filter, Nillable, Sort Description Read only. The URL for the employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.
Gender	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's gender. Possible values are: • Female • Male • Non-Binary / Non-Conforming • Other • Prefer Not to State • Transgender Female • Transgender Male

Field	Details
HomeAddress	Type address Properties Filter, Nillable Description The employee's home address.
HomeCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city for the employee's home address.
HomeCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The county for the employee's home address.
HomeGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The level of accuracy of an employee's home address geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown

Field	Details
	• Zip
HomeLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with HomeLongitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
HomeLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with HomeLatitude to specify the precise geolocation of the employee's home address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
HomePhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's home phone number.
HomePostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code for the employee's home address.
HomeState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The state for the employee's home address.
HomeStreet	Type textarea

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The street for the employee's home address.
IndividualId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A reference to the Individual record that this employee is assigned to.
InternalOrganizationUnitId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A reference to the InternalOrganizationUnit this employee is assigned to.
JobProfile	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's job profile at the company.
LastName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The employee's last name.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
LocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A reference to the Location that this employee is assigned to.
ManagerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A reference to the Employee record of the employee's manager.
MediumPhotoUrl	Type url Properties Filter, Nillable, Sort Description Read only. The URL for the medium-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.
MiddleName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's middle name.
Name	Type string Properties Filter, Group, idLookup, Nillable, Sort

Field	Details
	Description A compound field of <code>Employee.FirstName</code> , <code>Employee.MiddleName</code> , and <code>Employee.LastName</code> .
<code>NameSuffix</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's suffix.
<code>OutOfOfficeMessage</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The message portion of the employee availability. This message can provide reasons or details about the change in availability. The maximum length of this string is 40 characters.
<code>OwnerId</code>	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
<code>PreferredFirstName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name the employee prefers to be called.
<code>PreferredPronoun</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's preferred pronoun. Possible values are:

Field	Details
	• He/Him/His • Other/Ask Me • She/Her/Hers • They/Them/Theirs
RelatedPersonId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Links an employee to a person account with a unique value. Reserved for future use. Don't edit it.
SmallPhotoUrl	Type url Properties Filter, Nillable, Sort Description Read only. The URL for the small-sized employee's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo. Available in API v51.0 and later.
StatusAsOf	Type dateTime Properties Create, Filter, Sort, Update Description Required. Start date of the employee's current status.
StatusEndDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Planned end date for the employee's status.
TimeZone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The time zone which the employee's work hours fall within.
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup field to associate an Employee record with a user in the org. The field is optional and unique.
WorkPhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's formatted work phone number including country code and extension.
WorkerType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. The type of worker for the employee. Possible values are: • Alumnus • Contractor • Employee • Intern • Temporary
WorkingHoursEnd	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The end time of the employee's working hours.
WorkingHoursStart	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description The start time of the employee's working hours.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

EmployeeHistory (API version 49.0)

History is available for tracked fields of the object.

EmployeeOwnerSharingRule

Sharing rules are available for the object.

EmployeesShare (API version 49.0)

Sharing is available for the object.

SEE ALSO:

[Workplace Command Center for Work.com Developer Guide: Extend Work.com with Custom Solutions](#)

Employee2

Represents an employee within a company or an organization. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Talent Recruitment Management is enabled in your org. It's also available to customers who purchase the Unified Employee license. To access the object, you need one of these permission sets.

User Type	Permission Set
Internal Users	HR Service Workspace Personnel
Salesforce Platform Users	Employee Hub Community User OR Unified Employee Permission Set

User Type	Permission Set
	OR
	Work.com License
Unified Employee Users	Unified Employee Permission Set

Fields

Field	Details
AlternateEmail	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's alternate email address.
ContactId	Type reference Properties Create, Filter, Group, Sort Description The contact associated with the employee. Relationship Name Contact Relationship Type Master-detail Refers To Contact (the master object)
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO currency code for the post-authorization request. Valid value is: • USD—U.S. Dollar The default value is USD.

Field	Details
EmployeeNumber	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The employee's unique ID for their organization.
EmployeeStatus	Type picklist Properties Create, Filter, Group, Sort, Update Description The employee's current work status. Valid values are: • Active • Inactive • Leave • Terminated
EmployeeType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The employee's full-time or part-time status. Valid values are: • Alumnus • Contractor • Permanent • Intern • Temporary
EmploymentType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's full-time or part-time status. Valid values are: • Full-Time

Field	Details
	Part-Time
InternalOrganizationUnitId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The internal organization unit associated with the employee. Relationship Name InternalOrganizationUnit Refers To InternalOrganizationUnit
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that the user only accessed the record or a related list view (LastReferencedDate), but not viewed the record itself.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the employee record.
StatusEndDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The planned end date for the employee's status.

Field	Details
StatusStartDate	Type dateTime Properties Create, Filter, Sort, Update Description The start date of the employee's current status.
User	Type reference Properties Create, Filter, Nillable, Sort, Update Description The user associated with the employee. After this field is set to a non-null value, you can't update it. Relationship Name User Description User

EmployeeCrisisAssessment

Represents a crisis assessment of an Employee. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts. For Work.com, when an employee responds to a wellness survey, an EmployeeCrisisAssessment record is created based on an employee's answers.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must be assigned a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission.

Fields

Field	Details
Assessment	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The employee's COVID-19 status at the time of the assessment. Possible values are: • COVID-19 Immune or Recovered • COVID-19 No Symptoms • COVID-19 Symptoms or Exposed • COVID-19 Test Negative • COVID-19 Test Positive • Declined
AssessmentDate	Type dateTime Properties Create, Filter, Sort, Update Description The date of the assessment. Required
AssessmentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The assessment record number.
CrisisId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The Crisis that this assessment is associated with.
EmployeeId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Required. The Employee that this assessment is associated with.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
SourceAssessment	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The record in the source system that drove this assessment.
SourceSystem	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The source system that drove this assessment.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EmployeeCrisisAssessmentHistory (API version 49.0)

History is available for tracked fields of the object.

EmployeeCrisisAssessmentOwnerSharingRule

Sharing rules are available for the object.

EmployeeCrisisAssessmentShare (API version 49.0)

Sharing is available for the object.

SEE ALSO:

[Workplace Command Center for Work.com Developer Guide: Extend Work.com with Custom Solutions](#)

EmpUserProvisioningProcess

Represents an employee-user provisioning process. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

Fields

Field	Details
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that the user provisioning process ended.
ErrorRecordCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of records that encountered an error during the user provisioning process.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the user provisioning process was last referenced, with a precision of one second.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the user provisioning process was last viewed, with a precision of one second.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the user provisioning process.
ProcessStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the user provisioning process. Possible values are: • Aborted • Cancelled • Failed • Finished • Initializing • Processing • Queued
StartTime	Type dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The date and time that the user provisioning process started.
SuccessRecordCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of records that were successfully provisioned during the user provisioning process.
TotalRecordCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of records in the user provisioning process.

Usage

Use the EmpUserProvisioningProcess to view the status of an employee-user provisioning process.

EmpUserProvisionProcessErr

Represents an employee-user provisioning process error. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object requires a Workplace Command Center add-on license, or an Employee Experience add-on license.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Person Account linked to the employee record associated with the error. This is a relationship field. Relationship Name Account Refers To Account
EmployeeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the employee record associated with the error. This is a relationship field. Relationship Name Employee Relationship Type Lookup Refers To Employee
ErrorCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The error code if the provisioning isn't successful.
ErrorMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If an error occurred, this field contains the error message.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the error was last referenced, with a precision of one second.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the error was last viewed, with a precision of one second.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the error.
ProvisioningProcessId	Type reference Properties Create, Filter, Group, Sort Description The ID of the associated user provisioning process. This is a relationship field. Relationship Name ProvisioningProcess Relationship Type Lookup Refers To EmpUserProvisioningProcess

Usage

Use the EmpUserProvisionProcessErr to view the errors for an employee-user provisioning process.

EnablementMeasureDefinition

Represents an Enablement measure, which specifies the job-related activity that a user performs to complete a milestone or outcome in an Enablement program. A measure identifies a source object and optional related objects, with optional field filters and filter logic, for tracking the activity. This object also represents Enablement measure information in Metadata API. This object is available in API version 56.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

Fields

Field	Details
AggregateFieldApiName	Type string Properties Create, Filter, Group, Nillable, Sort Description The unique name in the API for the field that the <code>AggregateFunction</code> uses for calculating. For example, if you're measuring how much revenue a sales rep has won, the value of <code>aggregateFunction</code> is <code>Sum</code> and the value of <code>aggregateFieldApiName</code> is <code>Amount</code>, which is the API name of the Amount field on the Opportunity object.
AggregateFunction	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The method for calculating progress towards the milestone or outcome from records that qualify for the measure's criteria. Possible values are: • Average • Count

Field	Details
	Sum For example, if you're measuring the number of deals won, the function is <code>Count</code>. If the function is <code>Average</code> or <code>Sum</code>, then <code>AggregateFieldApiName</code> specifies the API name of the field to use for calculating progress.
Description	Type string Properties Create, Filter, Sort, Update Description An internal description for the measure to help Enablement admins understand the activity that's tracked.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: - must be 40 characters or fewer - must begin with a letter - can contain only underscores and alphanumeric characters - can't include spaces - can't end with an underscore - can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
DisplayFieldApiName	Type string Properties Create, Filter, Group, Sort Description The unique name in the API for the field that primarily identifies records that qualify for the activity you're measuring. For example, if you're measuring the number of deals won, you're tracking the Opportunity object, and maybe you want to identify opportunities by their name. In this case, this field can be <code>Name</code>, the API name of the Opportunity Name field on the Opportunity object.
IsValid	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Specifies whether the measure is valid. A measure becomes invalid and stops tracking progress under these circumstances: • An object or field is removed. • An object label or API name is renamed. • A field's API name is renamed. Default is <code>false</code>. A measure only becomes invalid after a breaking change is saved the corresponding outcome or milestone progress is calculated. See Considerations for Creating and Editing Measures.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Reserved for future use. Don't edit this field.
MasterLabel	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Label for this EnablementMeasureDefinition value. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field	Details
	In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. Available in API version 62.0 and later.
<code>PublishedDateTime</code>	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the measure was activated for use in Enablement programs.
<code>SourceMeasureObjectId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the <code>EnblMeasureObjectDefinition</code> that specifies the criteria for the source object that tracks the activity you're measuring. This field is a relationship field. Relationship Name SourceMeasureObject Relationship Type Lookup Refers To EnblMeasureObjectDefinition
<code>SourceObjectApiName</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The unique name in the API for the source object that tracks the activity you're measuring. This value is a derived value. For example, if you're measuring the number of deals won, this value is <code>Opportunity</code>, the API name for the Opportunity object.
<code>Status</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The availability of the measure for use in Enablement programs. Possible values are:

Field	Details
	• Archived—Available in API versions 56.0 to 60.0. • Draft—The measure is saved, but not activated for use in programs. • Published—The measure is activated for use in programs. In Lightning Experience, this value is Active.

Usage

An EnablementMeasureDefinition can have multiple EnblMeasureObjectDefinition references, depending on the number of related objects in the measure. Consider an example measure that tracks activity on the Opportunity source object and the Account related object.

- The EnablementMeasureDefinition identifies the Opportunity source object.
- An EnblMeasureObjectDefinition specifies the criteria on the Opportunity source object.
- An EnblMeasureObjectDefinition specifies the criteria on the Account related object.

EnablementProgram

Represents an Enablement program, which includes exercises and measurable milestones to help users such as sales reps achieve specific outcomes related to your company's revenue goals. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
Description	Type textarea

Field	Details
	Properties Create, Update Description A summary of the program's goals and content that's visible to users.
DoesAllowSelfEnrollment	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether users can self-enroll in programs that are shared with them (<code>true</code>) or take only assigned programs (<code>false</code>). The default value is <code>false</code>.
EnablementProgramDefinitionId	Type reference Properties Filter, Group, Nillable, Sort Description The representation for the program in Metadata API. This field is a relationship field. Available in API version 61.0 and later. Relationship Name EnablementProgramDefinition Relationship Type Lookup Refers To EnablementProgramDefinition
IsOutcomeBased	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the program includes a final, measurable outcome (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record. If this value is null, maybe the user accessed this record (LastReferencedDate) but not viewed it yet.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the program that's visible to users. For example, AE Onboarding, Event Prep, or New Product Launch.
NetworkId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the supported Experience Cloud site where a partner program is available. For site requirements, see Considerations for Partner Enablement Programs . Available in API version 60.0 and later. Relationship Name Network Relationship Type Lookup Refers To Network
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the program. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner Relationship Type Lookup Refers To Group, User
PublishedDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date that the program is published.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The status of the program. Only a published program is available for an Enablement admin to assign to users or share with users so they can self-enroll. Possible values are: • Archived • Draft • Published
TotalAssigned	Type int Properties Nillable Description The number of assignments in this program. For example, if the program is assigned to 3 users, then <code>TotalAssigned=3</code> .
TotalBehind	Type int Properties Nillable Description The number of assignments that are behind in this program. For example, if the program is assigned to 3 users, and 2 users are behind on their assignments, then <code>TotalBehind=2</code> .

Field	Details
TotalCompleted	Type int Properties Nillable Description The number of completed assignments in this program. For example, if the program is assigned to 3 users, and 1 user has completed the program, then <code>TotalCompleted=1</code>.
TotalDays	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Total days of the program. This value is derived from the latest day of all items in the program, including exercises, milestones, and the outcome. This field is a calculated field. For example, a program has Task A on day 1 and Task B on day 2. Since Task B has the latest days of all tasks, then <code>TotalDays=2</code>.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of the program. Possible values are: • <code>Enablement</code>—A sales program in Lightning Experience. • <code>PtnrEnablement</code>—A partner program in a supported Experience Cloud site. Available in API version 60.0 and later. • <code>EmployeeServiceEnablement</code>—An employee enablement program in Employee Portal. Available in API version 63.0 and later.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[EnablementProgramOwnerSharingRule](#) (API version 60.0)

Sharing rules are available for the object.

[EnablementProgramShare](#) (API version 60.0)

Sharing is available for the object.

EnablementProgramDefinition

Represents Enablement program information in Metadata API. This object is available in API version 61.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
EnablementProgramId	Type reference Properties Filter, Group, Nillable, Sort Description The Enablement program to reference in Metadata API. This field is a relationship field. Relationship Name EnablementProgram Relationship Type Lookup

Field	Details
	Refers To EnablementProgram
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Reserved for future use. Don't edit this field.
MasterLabel	Type string Properties Filter, Group, Sort Description Label for this EnablementProgramDefinition value. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. Available in API version 62.0 and later.

EnblMeasureObjectDefinition

Represents the criteria for an object that tracks the job-related activity for an Enablement measure in an Enablement program. A separate EnblMeasureObjectDefinition is used for a measure's source object and each optional related object. This object is available in API version 56.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
EnablementMeasureDefinitionId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The measure that the EnblMeasureObjectDefinition applies to. This field is a relationship field. Relationship Name EnablementMeasureDefinition Relationship Type Lookup Refers To EnablementMeasureDefinition
FilterLogic	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An expression that determines how to evaluate the optional field filters for the object.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Reserved for future use. Don't edit this field.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for the EnblMeasureObjectDefinition value. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values.

Field	Details
	- In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. Available in API version 62.0 and later.
ObjectApiName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The unique name in the API for the measure's source object or optional related object that the <code>EnblMeasureObjectDefinition</code> describes. For example, if you're measuring the number of deals won for a specific product, this field on one <code>EnblMeasureObjectDefinition</code> references the API name of the Opportunity source object and this field on another <code>EnblMeasureObjectDefinition</code> references the API name of the Opportunity Product related object.
SequenceNumber	Type int Properties Create, Filter, Group, Sort, Update Description A number that specifies the order of the <code>EnblMeasureObjectDefinition</code>, relative to other <code>EnblMeasureObjectDefinition</code> records under the same <code>EnablementMeasureDefinition</code>, starting at 1.

Usage

An `EnablementMeasureDefinition` can have multiple `EnblMeasureObjectDefinition` references, depending on the number of related objects in the measure. Consider an example measure that tracks activity on the Opportunity source object and the Account related object.

- The `EnablementMeasureDefinition` identifies the Opportunity source object.
- An `EnblMeasureObjectDefinition` specifies the criteria on the Opportunity source object.
- An `EnblMeasureObjectDefinition` specifies the criteria on the Account related object.

EnblPgmTaskMeasureProgress

Represents a user's progress through the object and field requirements that an Enablement measure defines for an outcome or milestone in an Enablement program. This object is available in API version 61.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
ContributingRecordCount	Type int Properties Filter, Group, Nillable, Sort Description The number of records that qualify for a user's progress towards completing an outcome or milestone. To qualify, the activity must meet the criteria that the corresponding Enablement measure defines for specific objects, fields, and field values.
EnblProgramTaskMeasureId	Type reference Properties Filter, Group, Sort Description ID of the record that represents the connection between a specific Enablement measure and a specific milestone or outcome in an Enablement program. This field is a relationship field.

Field	Details
	Relationship Name EnblProgramTaskMeasure Relationship Type Lookup Refers To EnblProgramTaskMeasure
EnblProgramTaskProgressId	Type reference Properties Filter, Group, Sort Description ID of the record that represents the progress through the milestone or outcome. This field is a relationship field. Relationship Name EnblProgramTaskProgress Relationship Type Master-detail Refers To EnblProgramTaskProgress (the master object)
MeasureComputationResult	Type double Properties Filter, Sort Description The calculated progress through the measure's requirements for a milestone or outcome. For example, if the measure is the dollar amount of all closed opportunities, then the field value is measured in dollars. For a composite milestone or a composite outcome, this value represents the progress through only one measure associated with the milestone or outcome.

EnblProgramSection

Represents an optional section in an Enablement program. A section can include other program items, such as milestones and exercises. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Available in API version 61.0 and later.
EnablementProgramId	Type reference Properties Filter, Group, Sort Description The Enablement program that contains the section. This field is a relationship field. Relationship Name EnablementProgram Relationship Type Lookup

Field	Details
	Refers To EnablementProgram
Name	Type string Properties Filter, Group, idLookup, Sort Description The title of the section that's visible to users when they take the program.
SequenceNumber	Type int Properties Filter, Group, Sort Description A number that specifies the order of the section, relative to other sections, starting at 0.

EnblProgramTaskDefinition

Represents an outcome, a milestone, or an exercise in an Enablement program. A program task is also known as a program item. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
CompositeMilestoneType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of logic to use for evaluating the activity from two Enablement measures in a composite milestone. Possible values are: • Addition • Division • Percentage Available in API version 61.0 and later.
CustomEnblPgmTaskSubCategoryId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the EnblProgramTaskSubCategory record associated with a custom exercise type. This field is required when the TaskSubCategory field's value is CustomExercise. This field is a relationship field. Available in API version 62.0 and later. Relationship Name CustomEnblPgmTaskSubCategory Relationship Type Lookup Refers To EnblProgramTaskSubCategory
Day	Type int Properties Filter, Group, Sort Description The day of the program when the item is due, relative to the program's start date. For example, if a user is expected to complete an exercise where they watch a product demo by day 2, this field's value is 2. For an outcome, this field specifies the number of days the full program takes. For example, if your program lasts 60 days, the value of this field is 60 for the outcome.

Field	Details
	This field's value contributes to the program's due date that users see when they take the program.
Description	Type textarea Properties Create Description A summary of the outcome, milestone, or exercise that's visible to users when they take the program.
EnablementProgramId	Type reference Properties Filter, Group, Sort Description The ID of the Enablement program that contains the outcome, milestone, or exercise. This field is a relationship field. Relationship Name EnablementProgram Relationship Type Lookup Refers To EnablementProgram
EnblProgramSectionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of an optional program section that contains the milestone or exercise. This field is a relationship field. Relationship Name EnblProgramSection Relationship Type Lookup Refers To EnblProgramSection
IsMilestoneAnOutcome	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the program item is the program's final outcome (<code>true</code>) or an incremental milestone (<code>false</code>). The default value is <code>false</code>.
LearningItemId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the learning item record for the outcome, milestone, or exercise. This field is a relationship field. Relationship Name LearningItem Relationship Type Lookup Refers To LearningItem
MilestoneTarget	Type double Properties Filter, Nillable, Sort Description The target value for a user to achieve to get credit for completing the outcome or milestone. The unit depends on the specific measure used with the outcome or milestone. For example, if the measure is the dollar amount of all closed opportunities, then the field value is measured in dollars.
MinimumSampleSize	Type int Properties Filter, Group, Nillable, Sort Description The number of records to evaluate when calculating progress for an outcome or milestone that uses an average-based measure. Use this field with <code>MilestoneTarget</code>. For example, if you want users to achieve an average deal size of \$50,000 after closing 4 deals, then this field's value is 4 and <code>MilestoneTarget</code> is 50000.
Name	Type string

Field	Details
	Properties Filter, Group, idLookup, Sort Description The title of the outcome, milestone, or exercise that's visible to users when they take the program.
SequenceNumber	Type int Properties Filter, Group, Sort Description A number that specifies the order of the milestone or exercise, relative to other milestones or exercises that have the same due date in the program or in the same section, starting at 0. This number determines the order of items that users see for that day in the program.
StandardCustomExerciseType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Reserved for future use.
TaskCategory	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of program item. Possible values are: • Exercise • Milestone Milestone is used for both the program's final outcome and incremental milestones.
TaskSubCategory	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of exercise. This value determines the content associated with the exercise. For example, if the field value is <code>video</code>, the exercise must reference video content from the Enablement workspace in the Digital Experiences app. The <code>LearningItemId</code> field specifies the reference to that video content. Possible values are:

Field	Details
	• ActionItem • AudioRecording • CustomExercise—Available in API version 62.0 and later. • Document • FeedbackRequest • Other • OtherExercise • ScheduledEvent • StandardCustomExercise—Reserved for future use. • TextLesson • Trailhead • Video

EnblProgramTaskMeasure

Represents the connection between an Enablement measure and a specific milestone or outcome in an Enablement program. This object is available in API version 61.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To access this object, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.

Fields

Field	Details
EnablementMeasureDefinitionId	Type reference Properties Filter, Group, Sort Description The ID of the Enablement measure to use with a milestone or outcome.

Field	Details
	This field is a relationship field. Relationship Name EnablementMeasureDefinition Relationship Type Lookup Refers To EnablementMeasureDefinition
EnblProgramTaskDefinitionId	Type reference Properties Filter, Group, Sort Description The ID of the outcome or milestone that uses the Enablement measure. This field is a relationship field. Relationship Name EnblProgramTaskDefinition Relationship Type Master-detail Refers To EnblProgramTaskDefinition (the master object)
SequenceNumber	Type int Properties Filter, Group, Nillable, Sort Description A number that specifies the order of the Enablement measure when multiple measures are used with one outcome or milestone, starting at 0. For example, in a composite milestone that uses the Percentage function, the measure that provides the numerator value is sequence 0 and the measure that provides the denominator value is sequence 1.

EnblProgramTaskProgress

Represents a user's progress towards completing an outcome, a milestone, or an exercise in an Enablement program. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
CompletedDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date that the user completed the outcome, milestone, or exercise.
CompletedOnDay	Type int Properties Filter, Group, Nillable, Sort Description Number of days that the user took to complete the outcome, milestone, or exercise.
CompletedPercent	Type percent Properties Filter, Nillable, Sort Description Percentage of the outcome, milestone, or exercise that's complete.
ContributingRecordCount	Type int Properties Filter, Group, Nillable, Sort Description The number of records that qualify for a user's progress towards completing an outcome or milestone. To qualify, the activity must meet the criteria that the corresponding Enablement measure defines for specific objects, fields, and field values.

Field	Details
	Available in API version 61.0 and later.
DueDate	Type date Properties Filter, Group, Sort Description The date the outcome, milestone, or exercise is due.
EnblProgramTaskDefinitionId	Type reference Properties Filter, Group, Sort Description ID of the outcome, milestone, or exercise definition. This field is a relationship field. Relationship Name EnblProgramTaskDefinition Relationship Type Lookup Refers To EnblProgramTaskDefinition
IsCompleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the outcome, milestone, or exercise is complete (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsNoLongerTracking	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the user hasn't completed the outcome or milestone and 30 days have elapsed since the program's due date, the value is <code>true</code>. Otherwise, the value is <code>false</code>. The default value is <code>false</code>. For details, see Completion Statuses in Enablement Analytics.
LearningItemProgressId	Type reference

Field	Details
	Properties Filter, Group, Sort Description ID of the record that tracks the user's progress through the program that includes this outcome, milestone, or exercise. This field is a relationship field. Relationship Name LearningItemProgress Relationship Type Lookup Refers To LearningItemProgress
MilestoneComputationResult	Type double Properties Filter, Nillable, Sort Description Derived from the associated EnblProgramTaskDefinition record. For example, if a milestone has a single measure A with a result of 5, this field's value is 5.
ProgressStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the outcome, milestone, or exercise progress. Possible values are: • Behind • Completed Late • Completed On Time • No Longer Tracking • Not Completed • Overdue For details, see Completion Statuses in Enablement Analytics.

EnblProgramTaskSubCategory

Represents a custom exercise type that an Enablement admin adds to an Enablement program in Program Builder. A custom exercise type also requires a corresponding EnblProgramTaskDefinition record for Program Builder and corresponding LearningItem and LearningItemType records for when users take the exercise in the Guidance Center. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.

 **Important:** Custom exercises aren't compatible with Partner Enablement programs.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
Icon	Type textarea Properties Create, Update Description The icon to use for the custom exercise type in Program Builder. Use the format <i>iconType: iconName</i>, where the values correspond to icon categories and names from the Salesforce Lightning Design System. • <i>iconType</i> is the type of icon, such as <code>standard</code> or <code>doctype</code>.

Field	Details
	• <i>iconName</i> is the icon name, such as <code>flow</code> or <code>slide</code>. For example, to use the Standard type Flow icon, this value is <code>standard:flow</code>. For details, see Implement Custom Exercise Types for Enablement Programs in the <i>Sales Programs and Partner Tracks with Enablement Developer Guide</i>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Reserved for future use. Don't edit this field.
LearningItemId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the learning item type record that represents this custom exercise type in the Guidance Center when users take a program. This field is a relationship field. Relationship Name LearningItemType Refers To LearningItemType
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for this EnblProgramTaskSubCategory value. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.

Field	Details
	The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

EngagementChannelType

Represents a channel through which a customer can be reached for communication. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>ContactPointType</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The contact point type of the channel. Possible values are: • <code>Email</code> • <code>MailingAddress</code> • <code>Phone</code> • <code>Social</code> • <code>Web</code>
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the communication subscription consent record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account owner associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[EngagementChannelTypeChangeEvent](#) (API version 61.0)

Change events are available for the object.

[EngagementChannelTypeFeed](#)

Feed tracking is available for the object.

[EngagementChannelTypeHistory](#)

History is available for tracked fields of the object.

EngagementChannelTypeOwnerSharingRule

Sharing rules are available for the object.

EngagementChannelTypeShare

Sharing is available for the object.

EngagementSignal

Represents data about an individual's engagement action, such as a web click, an email response, or a PDF download. This object is available in API version 62.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
<code>DataSetId</code>	Type reference Properties Filter, Group, Sort Description Required. Unique identifier that refers to the data space where the engagement signal originates. This field is a relationship field. Relationship Name DataSet Refers To DataSet
<code>Description</code>	Type string Properties Filter, Group, Nillable, Sort Description An optional text description of the engagement signal.
<code>DeveloperName</code>	Type string Properties Filter, Group, Sort

Field	Details
	Description Required. API name for the engagement signal that's system-or user-generated.
IsRemote	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if the engagement signal object is owned by a different org in Data 360. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the engagement signal was referenced by the current user.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the current user viewed the engagement signal record.
Name	Type string Properties Filter, Group, idLookup, Sort Description Required. Text label that identifies the engagement signal.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Picklist value that indicates the current status of the engagement signal. Possible values are: • Active

Field	Details
	• <code>CreateError—Error</code> • <code>DeleteError—Error</code> • <code>Deleting</code> • <code>EditError—Error</code> • <code>Preparing</code> • <code>Processing</code> The default value is <code>Processing</code>.

Usage

Use this object to define foundational data for your business objectives and recommendations in Salesforce Personalization. Use mapped data model object (DMO) fields to identify and track an individual's engagement actions. For example, use data about a web click, an email response, or a PDF download to help achieve your personalization goals.

EngagementSignalCmpndMetric

Represents a rate metric that measures the ratio between two engagement signal metrics, such as product orders and product views to calculate a conversion rate, or email clicks and email opens to determine a click-through rate. Use this object to create complex measurements for A/B testing and web experimentation. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>CompoundMetricFormula</code>	Type string Properties Filter, Group, idLookup, Nillable, Sort Description A read-only formula field that concatenates the three core components of a Compound Metric—the primary metric, the operator, and the secondary metric—into a single string. This field is unique within your Salesforce org. This field is a calculated field.
<code>DenomEngmtSignalMetricId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Sort, Update Description Points to the <code>EngagementSignalMetric</code> record that serves as the denominator of the compound metric. This field is a relationship field. Relationship Name DenomEngmtSignalMetric Refers To EngagementSignalMetric
IsRemote	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if the engagement signal compound metric object is owned by a different org in Data 360. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the engagement signal compound metric was referenced by the current user.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the current user viewed the engagement signal compound metric record.
Name	Type string Properties Filter, Group, idLookup, Sort

Field	Details
	Description Required. Text label that identifies the engagement signal compound metric.
NumerEngmtSignalMetricId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Points to the <code>EngagementSignalMetric</code> record that serves as the numerator of the compound metric. This field is a relationship field. Relationship Name NumerEngmtSignalMetric Refers To EngagementSignalMetric
Operator	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents the mathematical operation that combines the numerator and denominator metrics in the compound metric formula. Possible values are: Ratio The default value is <code>Ratio</code>.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Represents the ID of the user or group that owns the engagement signal compound metric. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User

Usage

Use this object to create rate metrics for A/B testing and web experimentation. To measure the effectiveness of personalization experiences, divide the numerator metric by the denominator metric. These metrics help you make data-driven decisions to compare content performance. This object is used for measurement and isn't used for machine learning model training.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[EngagementSignalCmpndMetricShare](#) on page 67
Sharing is available for the object.

EngagementSignalMetric

Represents a measurable quantity that's derived from an engagement signal, such as the sum of revenue or a count of clicks. Use this object to track user engagement for A/B tests, machine learning model training, and attribution configurations. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AggregateFunction	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Defines the type of calculation used on the metric field. Possible values are: • Avg • Count • Distinct • Select • Sum The default value is Count.

Field	Details
EngagementSignalId	Type reference Properties Create, Filter, Group, Sort Description Required. Represents the ID of the engagement signal that's associated with the metric. This field is a relationship field. Relationship Name EngagementSignal Relationship Type Master-detail Refers To EngagementSignal (the master object)
IsRemote	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if the engagement signal metric object is owned by a different org in Data 360. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the engagement signal metric was referenced by the current user.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the current user viewed the engagement signal metric record.
Name	Type string

Field	Details
	Properties Filter, Group, idLookup, Sort
	Description Required. Text label that identifies the engagement signal metric.

Usage

These derived metrics serve as the core unit of measurement across the personalization platform. Use them to train machine learning models, measure performance in A/B tests, track outcomes in attribution models, and define custom objectives or compound metrics.

EnhancedLetterhead

Represents an enhanced letterhead that can be associated with a Lightning email template that doesn't use the Salesforce Merge Language (SML). This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the contents of the header and footer.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when this enhanced letterhead was last used.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Date and time when this enhanced letterhead was last viewed.
LetterheadFooter	Type textarea Properties Create, Nillable, Update Description The contents of the enhanced letterhead's footer.
LetterheadHeader	Type textarea Properties Create, Nillable, Update Description The contents of the enhanced letterhead's header.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the enhanced letterhead, such as Standard Company Letterhead.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[EnhancedLetterheadFeed](#)

Feed tracking is available for the object.

Entitlement

Represents the customer support an account or contact is eligible to receive. This object is available in API version 18.0 and later. Entitlements may be based on an asset, product, or service contract.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Sort Description ID of the Account associated with the entitlement.
AssetId	Type reference Properties Filter, Group, Nillable, Sort Description Required. ID of the Asset associated with the entitlement. Must be a valid asset ID.
AssetWarrantyID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The identifier of the asset warranty record. Must be a valid asset warranty ID. AssetWarranty is available only with Field Service.
BusinessHoursId	Type reference Properties Filter, Group, Nillable, Sort Description Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID.
CasesPerEntitlement	Type int Properties Filter, Group, Nillable, Sort Description The total number of cases the entitlement supports. This field is only available if <code>IsPerIncident</code> is <code>true</code>.
ContractLineItemId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description Required. ID of the ContractLineItem associated with the entitlement. Must be a valid ID.
EndDate	Type date Properties Create, Filter, Nillable, Update Description The last day the entitlement is in effect.
IsPerIncident	Type boolean Properties Defaulted on create, Filter, Update Description Indicates whether the entitlement is limited to supporting a specific number of cases (<code>true</code>) or not (<code>false</code>).
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
LocationID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of the Location associated with the entitlement. Must be a valid location ID.
Name	Type string Properties Create, Filter, Update Description Required. Name of the entitlement.
SvcApptBookingWindowsId	Type reference Properties Create, Filter, Group, Sort, Nillable, Update Description The operating hours that the entitlement's work orders should respect. The label in the user interface is <code>Operating Hours</code> . Available only if Field Service is enabled.
RemainingCases	Type int Properties Create, Filter, Nillable, Update Description The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement. This field is only available if <code>IsPerIncident</code> is selected.
RemainingWorkOrders	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of agreed work orders remaining to be created.
ServiceContractId	Type reference Properties Create, Filter, Nillable, Update Description Required. ID of the ServiceContract associated with the entitlement. Must be a valid ID.

Field	Details
SlaProcessId	Type reference Properties Create, Filter, Nillable, Update Description ID of the SlaProcess associated with the entitlement. This field is available in version 19.0 and later.
StartDate	Type date Properties Create, Filter, Nillable, Update Description The first date the entitlement is in effect.
Status	Type picklist Properties Filter, Nillable Description Status of the entitlement, such as <code>Expired</code>.
SvcApptBookingWindows	Type reference Properties Create, Filter, Group, Sort, Nillable, Update Description The operating hours of the entitlement. This field is visible only if Field Service is enabled.
Type	Type picklist Properties Create, Defaulted on create, Filter, Nillable, Update Description The type of entitlement, such as Web or phone support.
WorkOrdersPerEntitlement	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Total number of work orders available for this entitlement.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EntitlementChangeEvent (API version 44.0)

Change events are available for the object.

EntitlementFeed (API version 23.0)

Feed tracking is available for the object.

EntitlementHistory

History is available for tracked fields of the object.

SEE ALSO:

[EntitlementContact](#)

[SlaProcess](#)

EntitlementContact

Represents a Contact eligible to receive customer support via an Entitlement. This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
<code>ContactId</code>	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Contact associated with the entitlement. Must be a valid ID.
<code>EntitlementId</code>	Type reference

Field	Details
	Properties Create, Filter Description Required. ID of the Entitlement associated with the entitlement contact. Must be a valid ID.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted .
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Nillable Description Required. Name of the entitlement contact.

Usage

Use to query and manage entitlement contacts.

SEE ALSO:

[Entitlement](#)

EntitlementTemplate

Represents predefined terms of customer support for a product (Product2). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
BusinessHoursId	Type reference Properties Create, Filter, Nillable, Update Description ID of the BusinessHours associated with the entitlement template. Must be a valid business hours ID.
CasesPerEntitlement	Type int Properties Create, Filter, Nillable, Update Description The total number of cases the entitlement template supports. This field is only available if <code>IsPerIncident</code> is <code>true</code>.
IsPerIncident	Type boolean Properties Create, Defaulted on create, Filter, Update Description Indicates whether the entitlement template is limited to supporting a specific number of cases (<code>true</code>) or not (<code>false</code>).
Name	Type string Properties Create, Filter, idLookup, Update Description Required. Name of the entitlement template.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.

Field	Details
	The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. Available in version 34.0 and later.
<code>SlaProcessId</code>	Type reference Properties Create, Filter, Nillable, Update Description ID of the <code>SlaProcess</code> associated with the entitlement template. This field is available in API version 19.0 and later.
<code>Term</code>	Type int Properties Create, Defaulted on create, Filter, Nillable, Update Description Number of days that the entitlement template is valid.
<code>Type</code>	Type picklist Properties Create, Filter, Nillable, Update Description The type of entitlement template, such as Web or phone support.

Usage

Use this object to manage entitlement templates.

EntityHistory

Represents historical information about an object's changed field values. This object is only available to users with the "View All Data" permission. This object is unavailable beginning with API version 8.0. Use the object-specific [History](#) objects instead.

Supported Calls

`describeSObjects()`, `getUpdated()`, `getDeleted()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
FieldName	Type picklist Properties Filter, Restricted picklist Description ID of the standard or custom field.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
NewValue	Type anyType Properties Nillable Description New value of the modified field.
OldValue	Type anyType Properties Nillable Description Previous value of the modified field.
ParentId	Type reference Properties Filter

Field	Details
	Description ID of the object that contains the field.
ParentObjectType	Type picklist Properties Filter, Restricted picklist Description The kind of object that contains the field.

Usage

In API version 7.0 and later, this object works with Case, Contract, and Solution objects:

- This object is always read-only in the online application.
- When a field is modified, this object records both the old and new field values. There are exceptions to this behavior for certain fields such as long text areas and multi-select picklists. These fields appear in this object to indicate that the field was changed, but the old and new values are not recorded.
- Two rows are added to this object when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, “Jane Doe” is recorded as the name of a contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.
- Up to a total of twenty fields (standard or custom) can be tracked for a given object.
- In the online application, you can specify which fields are tracked or not tracked at any time.
- As soon as tracking is turned on for a field, all changes to its value are recorded in the database.
- Turning off tracking for a field stops further changes from being recorded, but the history data is not deleted.
- Be advised that deleting a custom field also permanently deletes the history data for that custom field.

EntityMilestone

Represents a required step in a customer support process on a work order. The Salesforce user interface uses the term “object milestone.” This object is available in API version 37.0 and later.

 **Note:** Milestones on cases use the [CaseMilestone](#) object type.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

- As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.
- Entitlement management must be enabled.
- Work orders or Field Service must be enabled.

Fields

Field Name	Details
ActualElapsedTimeInDays	Type double Properties Filter, Nillable, Sort Description The number of days that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)  Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.
ActualElapsedTimeInHrs	Type double Properties Filter, Nillable, Sort Description The number of hours that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)  Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.
ActualElapsedTimeInMins	Type int Properties Filter, Group, Nillable, Sort Description The number of minutes that it took to complete a milestone. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time)  Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.

Field Name	Details
BusinessHoursId	Type reference Properties Filter, Group, Nillable, Sort Description The business hours on the milestone. If business hours aren't specified, the entitlement process business hours are used. If business hours are also not specified on the entitlement process, the business hours on the record are used.
CompletionDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The date and time the milestone was completed.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
ElapsedTimeInDays	Type double Properties Filter, Nillable, Sort Description The number of days it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
ElapsedTimeInHrs	Type double Properties Filter, Nillable, Sort Description The number of hours it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the

Field Name	Details
	business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
ElapsedTimeInMins	Type int Properties Filter, Group, Nillable, Sort Description The number of minutes it took to complete a milestone, including time during which the milestone was stopped. Automatically calculated to include the business hours on the record. Elapsed time is calculated only after the Completion Date field is populated. (Elapsed Time) – (Stopped Time) = (Actual Elapsed Time).
IsCompleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Green checkmark icon that indicates a milestone completion.
IsViolated	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Red exclamation point icon that indicates a milestone violation.
MilestoneTypeId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the milestone (for instance, First Response).
Name	Type string Properties Filter, Group, Sort, Update Description The name of the milestone.

Field Name	Details
ParentEntityId	Type reference Properties Filter, Group, Sort Description The ID of the record—for example, a work order—that contains the milestone.
SlaProcessId	Type reference Properties Filter, Group, Nillable, Sort Description The entitlement process associated with the milestone.
StartDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The date and time that milestone tracking started.
StoppedTimeInDays	Type double Properties Filter, Nillable, Sort Description The number of days that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.  Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.
StoppedTimeInHrs	Type double Properties Filter, Nillable, Sort Description The number of hours that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.

Field Name	Details
	 Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.
StoppedTimeInMins	Type int Properties Filter, Group, Nillable, Sort Description The number of minutes that an agent has been blocked from completing a milestone. For example, an agent may be waiting for a customer to reply with more information.  Note: To display this field, select Enable stopped time and actual elapsed time on the Entitlement Settings page and add the field to the object milestone page layout.
TargetDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time to complete the milestone.
TargetResponseInDays	Type double Properties Filter, Nillable, Sort Description The number of days to complete the milestone. Automatically calculated to include the business hours on the record.
TargetResponseInHrs	Type double Properties Filter, Nillable, Sort Description The number of hours to complete the milestone. Automatically calculated to include the business hours on the record.
TargetResponseInMins	Type int

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The number of minutes to complete the milestone. Automatically calculated to include the business hours on the record.
TimeRemainingInDays	Type string Properties Filter, Nillable, Sort Description The days that remain before a milestone violation. Automatically calculated to include the business hours on the record.
TimeRemainingInHrs	Type string Properties Filter, Group, Nillable, Sort Description The hours that remain before a milestone violation. Automatically calculated to include the business hours on the record.
TimeRemainingInMins	Type string Properties Group, Nillable, Sort Description The minutes that remain before a milestone violation. Automatically calculated to include the business hours on the record.
TimeSinceTargetInDays	Type string Properties Filter, Nillable, Sort Description The days that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.
TimeSinceTargetInHrs	Type string Properties Filter, Nillable, Sort

Field Name	Details
	Description The hours that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.
TimeSinceTargetInMins	Type string Properties Group, Nillable, Sort Description The minutes that have elapsed since a milestone violation. Automatically calculated to include the business hours on the record.

Usage

When you create an entitlement process, you select its type based on the type of record that you want the process to run on: Case or Work Order. Processes created before Summer '16 use the Case type. When a Work Order entitlement process runs on a work order, the resulting milestones on the work order are object milestones. Conversely, when a Case entitlement process runs on a case, the resulting milestones are case milestones, a separate standard object.

Tip: If an entitlement has an entitlement process associated with it, don't use the entitlement for multiple types of support records. An entitlement process works only on records that match the process's type. For example, when a Case entitlement process is applied to an entitlement, the process runs only on cases associated with that entitlement. If a work order is also associated with the entitlement, the process doesn't run on the work order. To ensure that the milestones you set up work as expected, associate a customer's work orders and cases with different entitlements.

Customize page layouts, validation rules, and more for object milestones from the Object Milestones node in Setup under Entitlement Management.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

EntityMilestoneFeed

Feed tracking is available for the object.

EntityMilestoneHistory

History is available for tracked fields of the object.

EntitySubscription

Represents a subscription for a user following a record or another user. This object is available in API version 34.0 and later.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce.

Feeds are available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Experience Cloud site where the user is following the record or user. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.
ParentId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the record or user which the user is following. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract,

Field	Details
	CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
SubscriberId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the user who is following the record or user. This is a relationship field. Relationship Name Subscriber Relationship Type Lookup Refers To User

Usage

Consider this when following records and users:

- Users can only follow records that they can see.
- Users can see which records other users are following, unless they don't have access to the records.
- Administrators and users with the "Modify All Data" permission can configure a user to follow records that the user has read access to.
- Administrators and users with the "Modify All Data" permission can configure users to stop following records.

- Following topics is available in API version 29.0 and later. For this reason, a topic ID is now a supported value for the `ParentId` field.
- If you deactivate a user, any `EntitySubscription` where the user is associated with the `ParentId` or `SubscriberId` field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user `EntitySubscription` is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

When using `query()` with `EntitySubscription`,

- Note the following SOQL restriction. No SOQL limit if logged-in user has "View All Data" permission. If not, specify a `LIMIT` clause of 1,000 records or fewer.
- A query using a `WHERE` clause can only filter by fields on the `EntitySubscription` object.
- If user sharing is enabled and the querying user is not an administrator, a SOQL query must be constrained either by the `ParentId` or `SubscriberId`. Otherwise, the query behavior at run time is undefined, meaning the result set can be incomplete or inconsistent from invocation to invocation. For an unconstrained query, the sharing check limits imposed on a non-administrative user are likely to be exceeded before the query completes, because access checks are run against both parent and subject, for each row of the result set. We recommend using the Connect REST API to query `EntitySubscription` data instead of running a SOQL query.
- Users without the "View All Data" permission
 - Need read access on the object associated with the `ParentId` field to see which users are following records for the object.
 - Can use an `ORDER BY` clause in a query only to order by fields on the `EntitySubscription` object. For example, if the subscription relates to an `Account` record, the query can `ORDER BY ParentId`, but it can't `ORDER BY Account.Name`.
 - Don't always get all matching subscriptions when running a query. For these users, a query evaluates visibility criteria on a maximum of 500 records to reduce the prospect of long-running queries. If a user runs a query to see the CEO's subscriptions, it might scan a large number of records. The query only returns matches within the first 500 records scanned. It is possible that there are more subscriptions that are visible to the user, but they are not returned. To mitigate this, we recommend using a `WHERE` clause, if possible, to reduce the scope of the query.

Sample—SOQL

The following SOQL query returns subscriptions for all the accounts that a subscriber is following that have more than 10 employees:

```
SELECT Id
FROM EntitySubscription
WHERE SubscriberId = '005U0000000Rg2CIAS'
AND ParentId IN (
  SELECT Id FROM Account
  WHERE NumberOfEmployees > 10
)
LIMIT 200
```

SEE ALSO:

[Custom Object __Feed __Feed](#)

EnvironmentHubMember

Represents a member organization in the Environment Hub. This object is available in API version 29.0 and later.

Note: You can create only 20 member orgs per day. If you need to create additional orgs, log a support case in the [Salesforce Partner Community](#). For product, specify **Platform**. For topic, specify **AppExchange & Managed Packages**.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Fields

Field Name	Details
Description	Type textarea Properties Nillable, Update Description A brief description of this org.
DisplayName	Type string Properties Filter, Group, Nillable, Sort, Update Description The name that the user has specified for this member org.
EnvironmentHubId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The Org ID of this member's Environment Hub org.
Instance	Type String Properties Filter, Group, Nillable, Sort Description Name of the instance where the Environment Hub member org resides.
IsFedIdSsoMatchAllowed	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Indicates if single sign-on (SSO) has been enabled based on matching the Federation ID. The default is <code>false</code>.
IsSandbox	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates if the member org is a sandbox (<code>true</code>) or not (<code>false</code>). This field is available in API version 36.0 and later.
MemberEntity	Type string Properties Filter, Group, idLookup, Sort Description The unique Org ID of the member org for this record.
MemberType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of member org for this record. Possible values include <code>Branch Org</code>, <code>Patch Org</code>, <code>Release Org</code>, <code>Sandbox Org</code>, <code>Trialforce Management Org</code>, and <code>Trialforce Source Org</code>.  Note: Only one member type at a time is stored. Member type is determined according to this hierarchy: (1) Sandbox, (2) Release, (3) Trialforce Source Org (TSO), (4) Patch, (5) Branch, and (6) Trialforce Management Org (TMO). For example, if an org is both a sandbox and a TMO, the value of <code>MemberType</code> is <code>Sandbox Org</code>.
Name	Type string Properties Defaulted on create, Filter, idLookup, Sort Description The name of the member org for this record.
OrgEdition	Type picklist

Field Name	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description The org's edition, for example, Enterprise Edition or Unlimited Edition.
OrgStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The licensing or creation status of this org. Possible values include <code>Active</code>, <code>Demo</code>, <code>Deleted</code>, <code>Free</code>, <code>Inactive</code>, and <code>Trial</code>.
Origin	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The method by which this org was added to the Environment Hub. Possible values are <code>autoDiscovered</code>, <code>userAdded</code>, and <code>provisioned</code>.
SSOMappedUsers	Type int Properties Filter, Group, Nillable, Sort Description The total number of mapped users in this member org. This field is available in API version 36.0 and later.
ServiceProviderId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the service provider for this member org. This field is available in API version 36.0 and later.
ShouldAddRelatedOrgs	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description Status of the connection of related orgs to the hub. Possible values are <code>done</code> , <code>notRequested</code> , <code>pending</code> , and <code>requested</code> .
<code>ShouldEnableSSO</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description If SSO should be enabled when this member org is added. The default is <code>false</code> .
<code>SsoStatus</code>	Type picklist Properties Defaulted on create, Filter, Group, Sort, Update Description If SSO has been enabled for this org. Possible values are: • <code>Enabled</code>—Single sign-on is enabled. • <code>Disabled</code>—Single sign-on is disabled. • <code>Pending</code>—Single sign-on is in the process of being enabled. • <code>Failed</code>—Single sign-on enablement failed. Contact Salesforce support for assistance.
<code>SsoUsernameFormula</code>	Type string Properties Filter, Group, Nillable, Sort, Update Description The custom formula for matching users in the hub and member orgs.

Usage

Use this object to access and modify settings of member orgs in the Environment Hub.

Event

Represents an event in the calendar. In the user interface, event and task records are collectively referred to as activities.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

 Note:

- An `EventRelation` object can't be related to a child event, and child events don't include the invitee related list.
- `query()`, `delete()`, and `update()` aren't allowed with events related to more than one contact in API versions 25.0 and earlier.
- `create()` and `update()` aren't available for read-only fields on Lightning Experience event series.
- `upsert()` and `undelete()` aren't supported for syncing changes made to events through the API using the feature Lightning Sync.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AcceptedEventInviteeIds	Type JunctionIdList Properties Create, Update Description A string array of contact or lead IDs who accepted this event. This <code>JunctionIdList</code> is linked to the <code>AcceptedEventRelation</code> child relationship.  Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description Represents the ID of the related account. The <code>AccountId</code> is determined as follows. If the value of <code>whatId</code> is any of the following objects, then Salesforce uses that object's <code>AccountId</code>. • Account • Opportunity • Contract • Custom object that's a child of Account If the value of the <code>whatId</code> field is any other object, and the value of the <code>whoId</code> field is a contact object, then Salesforce uses that contact's <code>AccountId</code>. If your org uses Shared Activities, Salesforce uses the <code>AccountId</code> of the primary contact.

Field	Details
	Otherwise, Salesforce sets the value of the <code>AccountId</code> field to <code>null</code>. For information on IDs, see ID Field Type. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActivityDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>true</code>. Doesn't contain the event's latest due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. When <code>IsAllDayEvent</code> flag is set to <code>true</code>, use <code>ActivityDateTime</code> or <code>StartDateTime</code>. This field is a date field with a timestamp that's always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences. Label is Due Date Only. This field is required in API versions 12.0 and earlier if the <code>IsAllDayEvent</code> flag is set to <code>true</code>. The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.
ActivityDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time. This field is required in API versions 12.0 and earlier if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.
ClientGuid	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The client globally unique identifier identifies the external API client used to create the event. Label is Client GUID.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
DeclinedEventInviteeIds	Type JunctionIdList Properties Create, Update Description A string array of contact, lead, or user IDs who declined this event. This <code>JunctionIdList</code> is linked to the <code>DeclinedEventRelation</code> child relationship.  Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
Description	Type textarea Properties Create, Nillable, Update Description Contains a text description of the event. Limit: 32,000 characters.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
DurationInMinutes	Type int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Contains the event length, in minutes. Even though this field represents a temporal value, it's an integer type—not a Date/Time type. Required in API versions 12.0 and earlier if <code>IsAllDayEvent</code> is false. In API versions 13.0 and later, this field is optional, depending on the following: • If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. • If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the <code>DurationInMinutes</code> field. API versions 12.0 and earlier can't access event objects whose <code>DurationInMinutes</code> is greater than 1440. For more information, see Multiday Events. Depending on your API version, errors with the <code>DurationInMinutes</code> and <code>EndTime</code> fields may appear in different places. • Versions 38.0 and before—Errors always appear in the <code>DurationInMinutes</code> field. • Versions 39.0 and later—If there's no value for the <code>DurationInMinutes</code> field, errors appear in the <code>EndTime</code> field. Otherwise, they appear in the <code>DurationInMinutes</code> field.
EndDate	Type date Properties Filter, Group, Nillable, Sort Description Read-only. Available in API versions 46.0 and later. This field supplies the date value that appears in the <code>EndTime</code> field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Available in API versions 13.0 and later. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. This field is optional, depending on the following:

Field	Details
	- If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. - If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. Depending on your API version, errors with the <code>DurationInMinutes</code> and <code>EndTime</code> fields may appear in different places. - Versions 38.0 and before—Errors always appear in the <code>DurationInMinutes</code> field. - Versions 39.0 and later—If there's no value for the <code>DurationInMinutes</code> field, errors appear in the <code>EndTime</code> field. Otherwise, they appear in the <code>DurationInMinutes</code> field.
<code>EventSubtype</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Provides standard subtypes to facilitate creating and searching for events. This field isn't updateable.
<code>EventWhoIds</code>	Type <code>JunctionIdList</code> Properties Create, Update Description A string array of contact or lead IDs used to create many-to-many relationships with a shared event. <code>EventWhoIds</code> is available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary <code>whoId</code> if you don't specify a primary <code>whoId</code>. If you set the <code>EventWhoIds</code> field to null, all entries in the list are deleted and the value of <code>whoId</code> is added as the first entry.  Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
<code>GroupEventType</code>	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Read-only. Available in API versions 19.0 and later. The possible values are: 0 (Non-group event)—An event with no invitees.

Field	Details
	1 (Group event)—An event with invitees. 2 (Proposed event)—An event created when a user requests a meeting with a contact, lead, or person account using the Salesforce user interface. When the user confirms the meeting, the proposed event becomes a group event. You can't create, edit, or delete proposed events in the API. This value is no longer used in API version 41.0 and later. 3 (IsRecurrence2 Series Pattern)—An event representing a template for a series recurrence pattern in Lightning Experience. You can't view, create, edit, or delete these events in the API.
IsAllDayEvent	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the <code>ActivityDate</code> field (<code>true</code>) or the <code>ActivityDateTime</code> field (<code>false</code>) is used to define the date or time of the event. Label is All-Day Event. See also DurationInMinutes and EndDateTime.
IsArchived	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the event has been archived.
IsChild	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the event is a child of another event (<code>true</code>) or not (<code>false</code>). For a child event, you can update <code>IsReminderSet</code> and <code>ReminderDateTime</code> only. You can query and delete a child event. If the objects related to the child event are different from those objects related to the parent event (this difference is possible if you use API version 25.0 or earlier) and one of the objects related to the child event is deleted, the objects related to the parent event are updated to ensure data integrity.
IsClientManaged	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the event is managed by an external client. If the value of this field is false, the event isn't owned or managed by an external client, and Salesforce can be used to update it. If the value is true, Salesforce can be used to change only noncritical fields on the event. Label is Is Client Managed.
IsGroupEvent	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the event is a group event—that is, whether it has invitees (<code>true</code>) or not (<code>false</code>).
IsPrivate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether users other than the creator of the event can (<code>false</code>) or can't (<code>true</code>) see the event details when viewing the event user's calendar. However, users with the View All Data or Modify All Data permission can see private events in reports and searches, or when viewing other users' calendars. Private events can't be associated with opportunities, accounts, cases, campaigns, contracts, leads, or contacts. Label is Private.
IsRecurrence	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether a Salesforce Classic event is scheduled to repeat itself (<code>true</code>) or only occurs one time (<code>false</code>). This field is read-only when updating records, but not when creating them. If this field value is <code>true</code>, then <code>RecurrenceEndDateOnly</code>, <code>RecurrenceStartDateTime</code>, <code>RecurrenceType</code>, and any recurrence fields associated with the given recurrence type must be populated. Label is Create recurring series of events.
IsRecurrence2	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Read-only. This field is available in API version 44.0 and later. Indicates whether a Lightning Experience event is scheduled to repeat (<code>true</code>) or only occurs one time (<code>false</code>). If this field value is true, then <code>Recurrence2PatternText</code> and <code>Recurrence2PatternVersion</code> must be populated. Label is Repeat.
<code>IsRecurrence2Exception</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. This field is available in API version 44.0 and later. Indicates whether an individual event in a Lightning Experience event series is different from the rest of the series, making it an exception. Changes made to the series aren't made to an event that is an exception.
<code>IsRecurrence2Exclusion</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. This field is available in API version 44.0 and later. Indicates when updates to a Lightning Experience event series recurrence pattern have been made, but affect future event occurrences only. For past event occurrences, <code>IsRecurrence2Exclusion</code> is set to <code>true</code>, excluding past occurrences from the series recurrence pattern.
<code>IsReminderSet</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the activity is a reminder (<code>true</code>) or not (<code>false</code>). To set <code>IsReminderSet</code> to <code>true</code>, the <code>ReminderDateTime</code> field must contain a valid date and time to trigger the reminder.
<code>IsVisibleInSelfService</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether an event associated with an object can be viewed in the Customer Portal (<code>true</code>) or not (<code>false</code>). If your org has enabled digital experiences, events marked <code>IsVisibleInSelfService</code> are visible to any external user in the Experience Cloud

Field	Details
	site, as long as the user has access to the record the event was created on. This field is available when - Customer Portal or partner portal is enabled OR - Digital experiences is enabled and you have Customer Portal or partner portal licenses
Location	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Contains the location of the event.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Contains the ID of the user or public calendar who owns the event. Label is Assigned to ID. This is a polymorphic relationship field.  Important: By default, the event is assigned to the user who created it. If the event is created by the Automated Process user, add a different value for OwnerId. The Automated Process user isn't a valid value for the OwnerId field. Relationship Name Owner Relationship Type Lookup Refers To Calendar, User
Recurrence2PatternStartDate	Type dateTime Properties Filter, Nillable, Sort Description Read-only. This field is available in API version 44.0 and later. Indicates the date and time when the Lightning Experience event series begins. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.

Field	Details
Recurrence2PatternText	Type textarea Properties Create, Nillable Description The RRULE that describes the recurrence pattern for Lightning Experience event series. Supports a subset of the RFC 5545 standard for internet calendaring and scheduling. See the Event Series section in this topic for usage examples. This field has a maximum length of 512 characters. This field is available in API version 44.0 and later, and has the <code>Create</code> property in API version 52.0 and later.
Recurrence2PatternTimeZone	Type string Properties Filter, Group, Nillable, Sort Description This field is available in API version 44.0 and later. Indicates the time zone in which the Lightning Experience event series was created or updated. This field uses standard Java TimeZone IDs. For example, America/Los_Angeles.
Recurrence2PatternVersion	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Description For internal use only. This field is available in API version 44.0 and later.
RecurrenceActivityId	Type reference Properties Filter, Group, Nillable, Sort Description Read-only. Not required on create. Contains the ID of the main record of the Salesforce Classic recurring event. Subsequent occurrences have the same value in this field.
RecurrenceDayOfMonth	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the day of the month on which the event repeats.

Field	Details
RecurrenceDayOfWeekMask	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the day or days of the week on which the Salesforce Classic recurring event repeats. This field contains a bitmask. The values are as follows: • Sunday = 1 • Monday = 2 • Tuesday = 4 • Wednesday = 8 • Thursday = 16 • Friday = 32 • Saturday = 64 Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.
RecurrenceEndDateOnly	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the last date on which the event repeats. For multiday Salesforce Classic recurring events, this date is the day on which the last occurrence starts. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the timestamp to account for time zone differences.
RecurrenceInstance	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the frequency of the Salesforce Classic event's recurrence. For example, 2nd or 3rd.
RecurrenceInterval	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the interval between Salesforce Classic recurring events.

Field	Details
RecurrenceMonthOfYear	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the month in which the Salesforce Classic recurring event repeats.
RecurrenceStartDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date and time when the Salesforce Classic recurring event begins. The value must precede the <code>RecurrenceEndDateOnly</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate.
RecurrenceTimeZoneSidKey	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the time zone associated with a Salesforce Classic recurring event. For example, "UTC-8:00" for Pacific Standard Time.
RecurrenceType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates how often the Salesforce Classic event repeats. For example, daily, weekly, or every nth month (where "nth" is defined in <code>RecurrenceInstance</code>).
ReminderDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Represents the time when the reminder is scheduled to fire, if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.

Field	Details
ShowAs	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates how this event appears when another user views the calendar: Busy, Out of Office, or Free. Label is Show Time As.
StartTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the start date and time of the event. Available in versions 13.0 and later. If the Event <code>IsAllDayEvent</code> flag is set to true (indicating that it's an all-day Event), then the event start date information is contained in the <code>StartTime</code> field. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. If the Event <code>IsAllDayEvent</code> flag is set to false (indicating that it isn't an all-day event), then the event start date information is contained in the <code>StartTime</code> field. The time portion is always transferred in the Coordinated Universal Time (UTC) time zone. You need to translate the time portion to or from a local time zone for the user or the application, as appropriate. If this field has a value, then <code>ActivityDate</code> and <code>ActivityDateTime</code> must either be <code>null</code> or match the value of this field.
Subject	Type combobox Properties Create, Filter, Nillable, Sort, Update Description The subject line of the event, such as Call, Email, or Meeting. Limit: 255 characters.
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the event type, such as Call, Email, or Meeting.

Field	Details
UndecidedEventInviteeIds	Type JunctionIdList Properties Create, Update Description A string array of contact, lead, or user IDs who are undecided about this event. This <code>JunctionIdList</code> is linked to the <code>UndecidedEventRelation</code> child relationship.  Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
WhatCount	Type int Properties Filter, Group, Nillable, Sort Description Available if your organization has enabled Shared Activities. Represents the count of related <code>EventRelations</code> pertaining to the <code>WhatId</code>. The count of the <code>WhatId</code> must be 1 or less.
WhatId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>. This is a polymorphic relationship field. Relationship Name What Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember,

Field	Details
	CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
WhoCount	Type int Properties Filter, Group, Nillable, Sort Description Available to organizations that have Shared Activities enabled. Represents the count of related EventRelations pertaining to the whoId.
WhoId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is Name ID. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the Whold field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is Name ID. If the JunctionIdList field is used, all whoIds are included in the relationship list. Beginning in API version 37.0, if the contact or lead ID in the whoId field isn't in the EventWhoIds list, no error occurs and the ID is added to the EventWhoIds as the primary whoId. If whoId is set to null, an arbitrary ID from the existing EventWhoIds list is promoted to the primary position. This is a polymorphic relationship field.
	Relationship Name Who

Field	Details
	Relationship Type Lookup
	Refers To Contact, Lead

Usage

Use Event to manage calendar appointments.

Querying and Filtering Events

Queries on events are denied before they time out if they involve amounts of data that are deemed too large. In such cases, the exception code `OPERATION_TOO_LARGE` is returned. If you receive `OPERATION_TOO_LARGE`, refactor your query to return or scan a smaller amount of data.

When querying for events with a specific due date, you must filter on both the `ActivityDateTime` and `ActivityDate` fields. For example to find all events with a due date of February 14, 2003, you need two filters:

- One filter with the `ActivityDate` field equal to the Coordinated Universal Time (UTC) time zone on February 14, 2003.
- One filter with the `ActivityDate` field greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

Alternatively, in API version 13.0 and later, you can find events with a specific due date by filtering on `StartTime`. For example, to find all events with a due date of February 14, 2003, filter with the `StartTime` greater than or equal to midnight on February 14, 2003 in the user's local time zone AND less than or equal to midnight on February 15, 2003 in the user's local time zone.

The `EventId` field of an `EventRelation` object always points to the master record. An invitee on a group event can query the `EventRelation` object to view the master record.

Multiday Events

- Multiday events are available in API version 13.0 and later. Also, in earlier versions SOQL queries don't return multiday events.
- Multiday events are enabled through the user interface from Setup by entering *Activity Settings* in the *Quick Find* box, then selecting **Activity Settings**.
- If the multiday event feature is enabled, then API versions 13.0 and later support values greater than 1440 for the `DurationInMinutes` field. API versions 12.0 and earlier can't access event objects whose `DurationInMinutes` is greater than 1440.
- Multiday events can't exceed 14 days.

Event Series and Recurring Events

In Lightning Experience, events with multiple occurrences are called event series, and are indicated when the `IsRecurrence2` field is set to `true`. In Salesforce Classic, events with multiple occurrences are called recurring events, and are indicated when the `IsRecurrence` field is set to `true`. Both fields can't be set to `true` for the same event.

- Lightning Experience event series are available in API version 44.0 and later as read-only fields. Recurrence patterns, specified by the `Recurrence2PatternText` field, are creatable in API version 52.0 and later. Salesforce Classic recurring events are available in API version 7.0 and later. In earlier versions, SOQL queries don't return any Lightning Experience event series.
- After an event is created, you can't change the values of `IsRecurrence2` or `IsRecurrence` from `true` to `false` or vice versa.
- You can't set fields associated with `IsRecurrence2` for events where `IsRecurrence` is set to `true`, or vice versa.

- For Lightning Experience event series where `IsRecurrence2` is `true`, if you'd like to delete a single or all remaining events, use the REST API call. For Salesforce Classic recurring events where `IsRecurrence` is `true`, all past and future events in the series are removed when you delete the recurring event series through the API. However, when you delete the recurring event series through the user interface, only future occurrences are removed.
- For Lightning Experience event series in API version 58.0 and later, when you change a future event, events in the entire series also change. When you change a past event, `IsRecurrence2Exception` is set to `true` and only that past event changes.
- When creating a Salesforce Classic recurring event series, the duration of the event must be 24 hours or less. When the Salesforce Classic recurring event series is created, you can extend the length of individual occurrences beyond 24 hours if Multiday events are enabled; see **Multiday Events**.
- For Salesforce Classic recurring events, `RecurrenceStartDateTime`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the Recurrence Field Usage for Salesforce Classic Recurring Events table) must be populated.
- When updating a Salesforce Classic recurring event series, it's not possible to update the `EventRelation` for the event series object and the `EventRelation` for the series object occurrences at the same time.
- Lightning Experience event series have no series ID, so it's not possible to locate other occurrences in the series. In Salesforce Classic recurring events, you can use `RecurrenceActivityId` to locate other occurrences.
- For both Lightning Experience event series and Salesforce Classic recurring events, when a series repeats every day, month, or year, you can only schedule occurrences one time per day, month, or year. The week option lets you schedule occurrences multiple days per week.

[Limits for Lightning Experience event series](#) and [limits for Salesforce Classic recurring events](#) also apply.

Lightning Experience Event Series and Recurring Events

Use the `Recurrence2PatternText` field to specify the recurrence pattern for Lightning Experience event series. These recurrence patterns, called reference rules or RRULES, support a subset of the RFC 5545 standards. This table includes common RRULE examples.

Recurrence Pattern	RRULE Example
Every day for five days	<code>RRULE:FREQ=DAILY;INTERVAL=1;COUNT=5</code>
Every Monday, Tuesday, Wednesday, Thursday, and Friday with no end date	<code>RRULE:FREQ=WEEKLY;INTERVAL=1;BYDAY=MO,TU,WE,TH,FR</code>
Every two weeks on Monday and Friday for 10 occurrences	<code>RRULE:FREQ=WEEKLY;INTERVAL=2;BYDAY=MO,FR;COUNT=10</code>
Monthly on the first day of the month until January 1, 2020	<code>RRULE:FREQ=MONTHLY;INTERVAL=1;BYMONTHDAY=1;UNTIL=20200101T000000Z</code>
Yearly on July 4th for three years (in this example, specify the date using <code>StartDateTime</code>)	<code>RRULE:FREQ=YEARLY;INTERVAL=1;BYMONTH=7;BYMONTHDAY=4;COUNT=3</code>
Daily until January 1, 2022 with no end date	<code>RRULE:FREQ=DAILY;UNTIL=20220101T000000Z</code>
Every third Friday of the month with no end date	<code>RRULE:FREQ=MONTHLY;BYSETPOS=3;BYDAY=FR</code>

The RRULE defined by `Recurrence2PatternText` supports a subset of the RFC 5545 standard for internet calendaring and scheduling. Supported RRULE parts include `FREQ`, `BYMONTH`, `BYMONTHDAY`, `BYDAY`, `WKST`, `BYSETPOS`, `INTERVAL`, `UNTIL`, and `COUNT`.

When the event record is saved, the RRULE might be modified to follow the required format:

- The RRULE parts are placed in the following order: `FREQ`, `BYMONTH`, `BYMONTHDAY`, `BYDAY`, `WKST`, `BYSETPOS`, `INTERVAL`, `UNTIL`, and `COUNT`.
- Any missing default values are inserted. For example, if the RRULE doesn't include `INTERVAL`, then `INTERVAL=1` is added.

- The RRULE is prefaced with `RRULE :` if that preface is missing.

RRULE Part	Supported RFC 5545 Implementation
FREQ	Required. Indicates the type of recurrence rule. Allowed values are: • DAILY—supported parts include FREQ, INTERVAL, UNTIL, and COUNT. • WEEKLY—supported parts include INTERVAL, UNTIL, COUNT, BYDAY, and WKST. BYDAY is required, but can't be preceded by a number. For example, to indicate weekly on Tuesday and Thursday until September 1, 2023, use <code>RRULE:FREQ=WEEKLY;UNTIL=20230901T000000Z;BYDAY=TU,TH</code> • MONTHLY—supported patterns include: – BYMONTHDAY For example, to indicate monthly on the third day of the month use: <code>RRULE:FREQ=MONTHLY;BYMONTHDAY=3</code> – BYDAY and BYSETPOS For example, to indicate the last weekday of the month, use <code>RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1</code> – BYDAY, where the BYDAY values are specified with a numeric value For example, to indicate monthly on the first Friday for 10 occurrences, use <code>RRULE:FREQ=MONTHLY;COUNT=10;BYDAY=1FR</code> • YEARLY—supported patterns include: – BYMONTH, BYDAY, and BYSETPOS For example, to indicate every year on the second Friday of January, use <code>RRULE:FREQ=YEARLY;BYMONTH=1;BYDAY=FR;BYSETPOS=2</code> – BYMONTH and BYMONTHDAY For example, to indicate every year on October 31, use <code>RRULE:FREQ=YEARLY;BYMONTH=10;BYMONTHDAY=31</code> For example, to create a maintenance pattern such as twice in May, and September on 7th and 15th; and one time in June/July/August on the 1st, use two RRULEs: <code>RRULE:FREQ=MONTHLY;BYMONTH=5,9;BYMONTHDAY=7,15</code> <code>RRULE:FREQ=MONTHLY;BYMONTH=6,7,8;BYMONTHDAY=1</code>
BYMONTH	The month. Valid values are 1 to 12.
BYMONTHDAY	The day of the month. Valid values are 1 to 31. If BYMONTHDAY is 31 and the month has fewer than 31 days, the event is created on the last day of the month.
BYDAY	A comma-separated list of days of the week. Valid values are SU, MO, TU, WE, TH, FR, SA. For RRULES with yearly or monthly frequency, BYDAY must be one of: • a single day • weekend days • weekdays

RRULE Part	Supported RFC 5545 Implementation
	every day of the week Each BYDAY value can be preceded by an integer that indicates the nth occurrence of a specific day within the monthly or yearly RRULE. Allowed values are -1, 1, 2, 3, and 4. You can't use different numbers in the BYDAY values. For example, this RRULE isn't supported: <pre>RRULE:FREQ=MONTHLY;INTERVAL=2;COUNT=10;BYDAY=1SU,-1SU</pre> If BYDAY values are prefaced with a number, the RRULE can't include BYSETPOS.
WKST	Specifies the day on which the workweek starts. Valid values are MO, TU, WE, TH, FR, SA, and SU. Default value is based on the user's locale.
BYSETPOS	A comma-separated list of values that correspond to the nth occurrence within the set of recurrence instances specified by the rule. Valid values are -1, 1, 2, 3, or 4. Default value is 1. For example, to indicate the last weekday of the month, use: <pre>RRULE:FREQ=MONTHLY;BYDAY=MO,TU,WE,TH,FR;BYSETPOS=-1</pre>
INTERVAL	The repetition interval. Valid values are: - an integer between 1 and 999 if FREQ=DAILY - an integer between 1 and 99 if FREQ=WEEKLY or FREQ=MONTHLY 1 if FREQ=YEARLY Default value is 1.
UNTIL	Specifies the datetime in UTC format when the recurrence rule stops. The supported format is yyyyMMddTHH:mm:ssZ, for example: 20210419T083000Z. An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely.
COUNT	The number of occurrences. Allowed values are 1 to 999. An RRULE can't contain both UNTIL and COUNT. A recurring event without either UNTIL or COUNT repeats indefinitely.
BYWEEKNO	Specifies a comma-separated list of values that specify weeks of the year. Valid values are: 1 to 53 -53 to -1 For example, to indicate specific weeks in a year, use: <code>RRULE: BYWEEKNO=20, -20</code>. This rule part can't be used when the FREQ rule part is set to anything other than YEARLY. For example, 3 represents the third week of the year. Note: Assuming a Monday week start, week 53 can only occur when Thursday is January 1 or if it's a leap year and Wednesday is January 1.
BYYEARDAY	Specifies a comma-separated list of values that specify days of the year. Valid values are: 1 to 366 -366 to -1

RRULE Part	Supported RFC 5545 Implementation
	For example, to indicate specific days in a year, use: <code>RRULE:BYEARDAY=1,100,200</code> ; or, <code>RRULE:BYEARDAY=1,-2</code> .

Salesforce Classic Event Series and Recurring Events

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

RecurrenceType Value	Properties	Example Pattern
RecursDaily	RecurrenceInterval	Every second day
RecursEveryWeekday	RecurrenceDayOfWeekMask	Every weekday - can't be Saturday or Sunday
RecursMonthly	RecurrenceDayOfMonth RecurrenceInterval	Every second month, on the third day of the month
RecursMonthlyNth	RecurrenceInterval RecurrenceInstance RecurrenceDayOfWeekMask	Every second month, on the last Friday of the month
RecursWeekly	RecurrenceInterval RecurrenceDayOfWeekMask	Every three weeks on Wednesday and Friday
RecursYearly	RecurrenceDayOfMonth RecurrenceMonthOfYear	Every March on the 26th day of the month
RecursYearlyNth	RecurrenceDayOfWeekMask RecurrenceInstance RecurrenceMonthOfYear	The first Saturday in every October

Attendees, Invitees, and Resources

The field `GroupEventType` indicates that event participants are included on an event. You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is Accepted. Events can't be saved when resources you've added aren't available.

JunctionIdList

To create an event using `JunctionIdList`, IDs are pulled from the related contacts and both the event and the `EventRelation` records are created in one API call. If the `EventRelation` fails, the event is rolled back because it's all done in a single API call.

```
public void createEventNew(Contact[] contacts) {
    String[] contactIds = new String[contacts.size()];
    for (int i = 0; i < contacts.size(); i++) {
        contactIds[i] = contacts[i].getID();
    }
    Event event = new Event();
    event.setSubject("New Event");
    event.setEventWhoIds(contactIds);
    SaveResult[] results = null;
    try {
        results = connection.create(new Event[] {
            task
```

```
});  
} catch (ConnectionException ce) {  
    ce.printStackTrace();  
}  
}
```

Syncing Events with Lightning Sync

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

Shared Field-Level Security for Event and Task Objects

Metadata deployments for the Event object must include the field-level security for the Task object. Shared field-level security prevents each object from changing the field-level security of the associated object.

Metadata deployments that include field-level security for only one of either the Event or Task objects can cause field-level security changes to the other object that aren't reflected in the metadata.

- If field-level security is enabled for one object, then field-level security is enabled for both objects.
- If field-level security is disabled for one object, then it's disabled for both objects.

Note: A missing entry in the metadata is treated as field-level security being disabled.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

EventChangeEvent (API version 44.0)

Change events are available for the object.

EventFeed (API version 20.0)

Feed tracking is available for the object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

EventLogFile

Represents event log files for event monitoring. The event monitoring product gathers information about your Salesforce org's operational events, which you can use to analyze usage trends and user behavior. This object is available in API version 32.0 and later. The `Interval` and `Sequence` fields are available only in API version 37.0 and later.

You can interact with event monitoring data by querying fields on the EventLogFile object (like `EventType` and `LogDate`). `CreatedDate` tracks when the log file was generated. To view the underlying event data, query the `LogFile` field. The `EventType` determines the schema of this field. Log files don't count towards your org's data or file storage allocations. For more information, see [EventLogFile Supported Event Types](#).

Composite requests that include multiple API requests in a single call aren't supported. In the event of a composite request, EventLogFile captures only the parent request.

-  **Note:** Log data schema for each `EventType` can change. With each new release, use the `LogFileFieldNames` and `LogFileFieldTypes` fields to validate the schema changes. In the unlikely case in which no log files are generated for 24 hours, contact Salesforce Customer Support.
-  **Tip:** Debug and troubleshoot performance issues by correlating logs using the customizable Request Identifier field, available in all Event Monitoring logs. To correlate logs pertaining to an API request call, set the `X-SFDC-REQUEST-ID` header with a 32 character OTEL compatible TraceId or a 22 -character alphanumeric Id. Using SOQL, search for the Event Monitoring logs with this RequestId to correlate the logs and see the unit of work performed as a part of the API transaction.

For details about event monitoring, see the [Trailhead Event Monitoring module](#).

Special Access Rules

Accessing this object requires View Event Log Files and API Enabled user permissions. Users with View All Data permission can view event log files.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

-  **Note:** You can only delete event log file data if you enable the **Delete event monitoring data** setting in Setup.

Fields

Field	Details
<code>ApiVersion</code>	Type double Properties Filter, Sort Description The specific API version for this log file. This field is available in API version 30.0 and later.
<code>EventType</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The event type—API, Login, Report, URI, and so forth. Use to determine which files were generated for your org. For the corresponding <code>LogFile</code> schema, see EventLogFile Supported Event Types.
<code>Interval</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The generation schedule for the event log file. Possible values are: • Daily • Hourly This field is available in API version 37.0 and later. This field is available in API version 37.0 and later to customers with hourly Event Log Files.
LogDate	Type dateTime Properties Filter, Sort Description The date and time of the log file's creation. For daily event log files, tracks usage activity for a 24-hour period, from 12:00 a.m. to 11:59 p.m. UTC time. For hourly event log files, indicates the hour in which the log file was generated. For example, for events that occur between 11:00 AM and 12:00 PM on 3/7/2016, this field's value is 2016-03-07T11:00:00.000Z.  Note: For hourly event log files, we recommend using <code>CreatedDate</code> to query the date and time that an EventLogFile object was created.
LogFile	Type base64 Description Encoded file data in <code>.csv</code> format. The <code>EventType</code> field defines the schema for this data.
LogFileContentType	Type string Properties Filter, Group, Sort Description The content type of the log file; always <code>.csv</code>.
LogFileFieldNames	Type string Properties Nullable Description The ordered list of fields in the log file data.  Note: <code>LogFileFieldNames</code> and <code>LogFileFieldTypes</code> are specific to each <code>EventType</code>. For example, <code>LogFileFieldNames</code> has a different value for an API <code>EventType</code> and a Login <code>EventType</code>.

Field	Details
LogFileFieldTypes	Type string Properties Nillable Description The ordered list of field types in the log file data (String, Id, and so forth).  Note: LogFileFieldNames and LogFileFieldTypes are specific to each EventType. For example, LogFileFieldTypes has a different value for an API EventType and a Login EventType.
LogFileLength	Type double Properties Filter, Sort Description The log file length in bytes. You can use this field to plan storage needs for your log files.
Sequence	Type int Properties Filter, Group, Sort Description The number for the portion of the event log file data captured in an hour. For 24-hour event log file generation, the value of this field is 0. For hourly event log files, the initial value is 1. This value increases by 1 when events are added in the same hour after the latest event log file is created. The value resets to 1 in the subsequent hour. For example, you have activity between 2:00 and 3:00 PM. Two-log files are generated that contain the event log data for that hour, with Sequence values of 1 and 2. For event log data that occurs at 3:01 PM, the Sequence value resets to 1. This field is available in API version 37.0 and later.

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

EventLogFile Supported Event Types

The `EventType` field in the EventLogFile object supports these events. Some common fields, such as `CPU_TIME` and `RUN_TIME`, can have null or zero values depending on how the events are generated for a given feature. Sometimes, three quotation marks appear around event data containing special characters in the CSV file. The third quotation mark is necessary for tools and applications to parse the field data at the correct field value boundary.

We generate some text messages in quotes, as in "example message". To preserve the original value, we add two more quotes and the final value looks like ""example message"" in the CSV file.

Note: The Apex Unexpected Exception, API Total Usage, CORS Violation Record, CSP Violation, Hostname Redirects, Insecure External Assets, Login, and Logout events are available in supported Salesforce editions at no additional cost. To purchase the remaining event types, contact Salesforce.

[Apex Callout Event Type](#)

Apex Callout events contain details about callouts (external requests) during Apex code execution.

[Apex Execution Event Type](#)

Apex Execution events contain details about Apex classes that are used.

[Apex Inline Event Type](#)

This event type is reserved for future use. This object is available in API version 66.0 and later.

[Apex REST API Event Type](#)

Apex REST API events capture information about every Apex REST API request.

[Apex SOAP Event Type](#)

Apex SOAP events contain details about custom SOAP web service calls.

[Apex Trigger Event Type](#)

Apex Trigger events contain details about triggers that fire in an organization.

[Apex Unexpected Exception Event Type](#)

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later. Unexpected exception information is not captured in the EventLogFile object with `@IsTest` and anonymous Apex.

[API Total Usage](#)

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests.

[Asynchronous Report Run Event Type](#)

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

[Aura Request Event Type](#)

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

[Blocked Redirect Event Type](#)

Blocked redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. The Blocked Redirect event type is available in the EventLogFile object in API version 63.0 and later.

[Bulk API Event Type](#)

Bulk API events contain details about Bulk API requests.

[Bulk API Request Event Type](#)

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes.

[Bulk API 2.0 Event Type](#)

BulkApi2 events contain details about Bulk API 2.0 requests.

[Change Set Operation Event Type](#)

Change Set Operation events contain information from change set migrations.

Composite API Event Type

Composite API events contain details about composite API requests. One composite API event is generated for each composite API and composite graph API call. This event type is available in API version 64.0 and later.

Composite API Subrequest Event Type

Composite API subrequest events contain details about composite API subrequests. One composite API subrequest event is generated for each subrequest or collated set of subrequests. For example, if a composite API request contains five subrequests and four of the subrequests are collated, then two composite API subrequest events are generated. This example also applies to composite graph API. This event type is available in API version 64.0 and later.

Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, all new Apex invocation requests are denied. This event type is available in the EventLogFile object in API version 45.0 and later.

Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

Content Transfer Event Type

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

CSP Violation Event Type

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). The CSP Violation event type is available in the EventLogFile object in API version 63.0 and later.

Dashboard Event Type

Dashboard events contain details about report requests from dashboards. These requests are triggered by dashboard refreshes, subscriptions, and filter changes.

Database Save Event Type

Database Save events track when records are created, updated, or deleted. This object is available in API version 63.0 and later.

Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

External Data Source Callout Event Type

External Data Source Callout events represent external data callouts via the Salesforce Connect adapters for Amazon DynamoDB and Amazon Athena. This event type is available in the EventLogFile object in API version 56.0 and later.

External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

Group Membership Event Type

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue.

Hostname Redirects Event Type

Hostname Redirect events contain details about blocked and successful redirections for your previous My Domain hostnames. The Hostname Redirects event type is available in the EventLogFile object in API version 56.0 and later.

Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

Insufficient Access Event Type

Insufficient Access events contain details about errors relating to insufficient account, case, contact, and opportunity record access, so that you can troubleshoot and resolve access issues for your users.

Invocable Action Event Type

Invocable Action events capture the calls to Salesforce Invocable Actions. This is particularly useful to monitor actions invoked during Agentforce flows. This event type is available in API versions 64.0 and later.

Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

[Lightning Logger Event Type](#)

Lightning Logger events contain information from observed Lightning component logs. This event type is available in the EventLogFile object in API version 58.0 and later.

[Lightning Page View Event Type](#)

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app, such as the page's load time. This event type is available in the EventLogFile object in API version 39.0 and later.

[Lightning Performance Event Type](#)

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

[Login Event Type](#)

Login events contain details about your org's user login history.

[Login As Event Type](#)

Login As events contain details about what a Salesforce admin did while logged in as another user.

[Logout Event Type](#)

Contains details of user sessions ending or being revoked.

[Metadata API Operation Event Type](#)

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

[Multiblock Report Event Type](#)

Multiblock Report events contain details about Joined Report reports.

[Named Credential Event Type](#)

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

[One Commerce Usage Event Type](#)

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

[Package Install Event Type](#)

Package Install events contain details about package installation in the organization.

[Permission Update Event Type](#)

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups.

[Platform Encryption Event Type](#)

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

[Pricing Event Type](#)

Pricing events contain information about pricing procedures that were executed, including details such as pricing procedures used, the pricing APIs, and pricing details and status.

[Queued Execution Event Type](#)

Queued Execution events contain details about queued executions—for example, batch Apex.

[Report Event Type](#)

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

[Report Export Event Type](#)

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

[REST API Event Type](#)

REST API events contain details about REST-specific requests.

[Sandbox Event Type](#)

Sandbox events contain details about sandbox copies.

[Search Event Type](#)

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

[Search Click Event Type](#)

Search Click events contain details about the user's interaction with the search results in the search results page. Interactions with search results in the instant result dialog are not recorded by this event. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

[Sites Event Type](#)

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

[SOAP API Event Type](#)

SOAP API events contain details about your org's SOAP API request activity.

[Time-Based Workflow Event Type](#)

Time-Based Workflow events contain details about queue activity monitoring.

[Transaction Security Event Type](#)

Transaction Security events contain details about policy execution. This event type is supported in API version 55.0 and later.

[UI Telemetry Navigation Timing Event Type](#)

UI Telemetry Navigation Timing events capture network performance metrics related to page navigation. The event extends from the [UI Telemetry Resource Timing Event](#) on page 2412 and includes requests initiated with either the [Fetch API](#) or the [XMLHttpRequest API](#). This object is available in API version 61.0 and later.

[UI Telemetry Resource Timing Event](#)

UI Telemetry Resource Timing events capture network performance metrics related to loading an application's resources. The event includes requests initiated with either the [Fetch API](#) or the [XMLHttpRequest API](#). This object is available in API version 61.0 and later.

[Unique Query Event Type](#)

Unique Query events capture specific search queries (SOQL), filter IDs, and report IDs that are processed, along with the underlying database queries (SQL). This event type is available in API versions 64.0 and later.

[URI Event Type](#)

URI events contain details about user interaction with the web browser UI.

[Visualforce Request Event Type](#)

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

[Wave Change Event Type](#)

Wave Change events represent route or page changes made in the CRM Analytics user interface. A Wave Change event type is captured every time the user opens a new CRM Analytics asset or tab, switches between tabs, or changes dashboard pages. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

[Wave Download Event Type](#)

Wave Download events represent downloads made from lens explorations and dashboard widgets in the CRM Analytics user interface. A Wave Download event type is captured when a user downloads images (.png), Microsoft® Excel® data (.xls), or comma-separated values (.csv) files.

[Wave Interaction Event Type](#)

Wave Interaction events represent route or page changes made in the CRM Analytics user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

[Wave Performance Event Type](#)

Wave Performance events help you track trends in your Analytics performance.

SEE ALSO:

[EventLogFile](#)

Apex Callout Event Type

Apex Callout events contain details about callouts (external requests) during Apex code execution.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BOT_IDENTIFIER	Type string Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type string Description The bot session ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `ApexCallout`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCSym5eyvtEK2I`.

METHOD

Type

String

Description

The HTTP method of the callout.

Example

For example: `GET`, `POST`, `PUT`, and so on.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D0000000000123`.

PLANNER_IDENTIFIER

Type

string

Description

The ID of the agent planner.

REQUEST_ID

Type

String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code> .
<code>REQUEST_SIZE</code>	Type Number Description The size of the callout request body, in bytes.
<code>RESPONSE_SIZE</code>	Type Number Description The size of the callout response, in bytes.
<code>RUN_TIME</code>	Type Number Description Not used for this event type. Use the <code>TIME</code> field instead.
<code>SESSION_KEY</code>	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: <code>d7DEq/ANa7nZZVD</code> .
<code>STATUS_CODE</code>	Type Number Description The HTTP status code for the response.
<code>SUCCESS</code>	Type Boolean Description Indicates if the HTTP callout was sent and a response was returned (1) or not (0).
<code>TIME</code>	Type Number

	Description The amount of time that the request took in milliseconds (ms).
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TYPE	Type String Description The type of Apex callout. For example: REST or AJAX.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
URL	Type String Description The callout endpoint URL. Example www.salesforce.com

USER_ID

Type
Id**Description**

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 005300000009M943

USER_ID_DERIVED

Type
Id**Description**

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Apex Execution Event Type

Apex Execution events contain details about Apex classes that are used.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

BOT_IDENTIFIER

Type
string**Description**

The ID of the bot.

BOT_SESSION_IDENTIFIER

Type
string**Description**

The bot session ID.

CALLOUT_TIME

Type
Number**Description**

Time spent waiting on webservice callouts, in milliseconds.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_TOTAL_TIME

Type

Number

Description

Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.

ENTRY_POINT

Type

String

Description

The entry point for this Apex execution.

Example

- `GeneralCloner.cloneAndInsertRecords`
- VF- /apex/CloneUser

EVENT_TYPE

Type

String

Description

The type of event. The value is always `ApexExecution`.

EXEC_TIME

Type

Number

Description

The end-to-end Apex execution time (in milliseconds).

IS_LONG_RUNNING_REQUEST

Type

Boolean

	Description Indicates whether the request is counted against your org's concurrent long-running Apex request limit (<code>true</code>) or not (<code>false</code>).  Note: Asynchronous Apex jobs (batch, queueable, scheduled, and future), background processes, and bulk API requests aren't counted against the concurrent long-running limit.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.
NUMBER_SOQL_QUERIES	Type Number Description The number of SOQL queries that were executed during the event. This value is the aggregate across all namespaces, and can exceed the per-namespace limits. For test executions, the aggregate total value across all test methods executed in the request is used. If you're using this value to track limit consumption, consider filtering out test execution quiddities (indicated by the <code>QUIDDITY</code> field).
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D000000000123</code>.
PLANNER_IDENTIFIER	Type string Description The ID of the agent planner.
QUIDDITY	Type String Description The type of outer execution associated with this event.

Example

- A–ACS Batch Apex
- B–Bulk API and Bulk API 2.0
- BA–Start method of a Batch Apex job
- C–Scheduled Apex
- CI–Commerce Integration
- DI– Discoverable Login page
- E–Inbound Email Service
- F–Future
- FC–Function Callback
- H–Apex REST
- I–Invocable Action
- K–Quick Action
- L–Lightning
- M–Remote Action
- P–Not used in API version 63.0 and later.
- PEP–Platform Event Publish Callback
- PI–Post install script for a managed package
- Q–Queueable
- QTXF–Transaction Finalizer for Queueable
- R–Synchronous uncategorized (which is where all transactions not specified elsewhere end up)
- S–QueryLocator Batch Apex (Batch Apex jobs run faster when the start method returns a QueryLocator object that doesn't include related records via a subquery. See Batch Apex Best Practices in [Using Batch Apex](#).)
- TA–Tests Async
- TD–Tests Deployment
- TS–Tests Synchronous
- UD–Undefined is the default when an event hasn't been assigned a more descriptive quiddity.
- V–Visualforce
- W–SOAP Webservices
- X–Execute Anonymous

 **Note:** Implementations of the Process.Plugin interface use the quiddity value **R**.

REQUEST_ID

Type
String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code> .
<code>RUN_TIME</code>	Type Number Description The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.  Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.
<code>SESSION_KEY</code>	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: <code>d7DEq/ANa7nNZZVD</code> .
<code>TIMESTAMP</code>	Type String Description The access time of Salesforce services in GMT. For example: <code>20130715233322.670</code> .
<code>TIMESTAMP_DERIVED</code>	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (<code>YYYY-MM-DDTHH:MM:SS.sssZ</code>). For example: <code>2015-07-27T11:32:59.555Z</code> . Timezone is GMT.
<code>URI</code>	Type String Description The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Apex Inline Event Type

This event type is reserved for future use. This object is available in API version 66.0 and later.

Note: Because this event type is reserved for future use, it captures no data.

Apex REST API Event Type

Apex REST API events capture information about every Apex REST API request.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#). For information about Apex REST, see [Introduction to Apex REST](#).

Fields

Field

Details

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CONNECTED_APP_ID

Type

String

Description

The 15-character ID of the connected app associated with the API call. For example, 0H4RM00000000Kx0AI.

CLIENT_NAME

Type

String

Description

The name of the client that's using Salesforce services.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

	Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and <code>DB_CPU_TIME</code> . Compare this field to <code>CPU_TIME</code> to determine whether performance issues are occurring in the database layer or in your own code.
ENTITY_NAME	Type Set Description API objects that are accessed. For example: <code>Account</code> , <code>Opportunity</code> , <code>Contact</code> , and so on.
EVENT_TYPE	Type String Description The type of event. The value is always <code>ApexRestApi</code> .
EXCEPTION_MESSAGE	Type String Description The returned exception message, used to debug issues. Provide this message when seeking support.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code> .
MEDIA_TYPE	Type String Description The media type of the response.
METHOD	Type String Description The HTTP method of the request. For example: <code>GET</code> , <code>POST</code> , <code>PUT</code> , and so on.

NUMBER_FIELDS

Type

Number

Description

The number of fields or columns, where applicable.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D0000000000123.

QUERY

Type

String

Description

The data that was queried.

REQUEST_SIZE

Type

Number

Description

The size of the callout request body, in bytes.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

For example:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

This field can have a blank value.

REQUEST_ID

Type

String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RESPONSE_SIZE	Type Number Description The size of the callout response, in bytes.
ROWS_PROCESSED	Type Number Description The number of rows that were processed in the request. For example: 150.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
STATUS_CODE	Type Number Description The HTTP status code for the response.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime

	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_AGENT	Type Number Description The numeric code for the type of client used to make the request (for example, the browser, application, or API).
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_TYPE	Type String Description The category of user license. Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile](#)

Apex SOAP Event Type

Apex SOAP events contain details about custom SOAP web service calls.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
-------	---------

CLASS_NAME

Type

String

Description

The Apex class name. If the class is part of a managed package, this string includes the package namespace.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96 . 43 . 144 . 26.

CLIENT_NAME

Type

String

Description

The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_TOTAL_TIME

Type

Number

Description

Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to `CPU_TIME` to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `ApexSoap`.

LIMIT_USAGE_PERCENT

Type

Number

	Description The percentage of Apex SOAP calls that were made against the organization's limit.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
METHOD_NAME	Type String Description The name of the calling Apex method.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
QUERY	Type String Description The SOQL query, if one was performed.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_STATUS	Type String Description The status of the request for a page view or user interface action. For example:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

This field can have a blank value.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.

Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- **CsnOnly**—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- **CspLitePortal**—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- **CustomerSuccess**—Customer Success license. Users whose access is limited because they're organization

customers and access the application through a customer portal.

- **Guest**—Users whose access is limited so that your customers can view and interact with your site without logging in.
- **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Apex Trigger Event Type

Apex Trigger events contain details about triggers that fire in an organization.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BOT_IDENTIFIER	Type String Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type String Description The bot session ID.

CLIENT_IP

Type

String

Description

The IP address of the client that is using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds is used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_TOTAL_TIME

Type

Number

Description

Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

ENTITY_NAME

Type

String

Description

The name of the object affected by the trigger.

EVENT_TYPE

Type

String

Description

The type of event. The value is always ApexTrigger.

EXEC_TIME

Type

Number

Description

The end-to-end Apex execution time (in milliseconds).

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

	For example: GeJCSym5eyvtEK2I.
ORGANIZATION_ID	Type ID Description The 15-character ID of the organization. For example: 00D0000000000123.
PLANNER_IDENTIFIER	Type String Description The ID of the agent planner.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_STATUS	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RUN_TIME	Type Number

	Description This field is always null. To view the end-to-end Apex execution time (in milliseconds), refer to the <code>EXEC_TIME</code> field.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. The timezone is GMT.
TRIGGER_ID	Type String Description The 15-character ID of the trigger that was fired.
TRIGGER_NAME	Type String Description For triggers coming from managed packages, <code>TRIGGER_NAME</code> includes a namespace prefix separated with a <code>.</code> character. If no namespace prefix is present, the trigger is from an unmanaged trigger. Examples: <code>examplePackage.managedExampleTrigger</code> - Managed trigger from the <code>examplePackage</code> namespace <code>unmanagedExampleTrigger</code> - Unmanaged trigger

TRIGGER_TYPE

Type

String

Description

The type of this trigger.

Possible Values

- AfterInsert
- AfterUpdate
- BeforeInsert
- BeforeUpdate

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

ID

Description

The 15-character ID of the user who is using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the user who is using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
 - `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
 - `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
 - `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
 - `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
 - `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
 - `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
 - `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
-

SEE ALSO:[EventLogFile Supported Event Types](#)[EventLogFile](#)

Apex Unexpected Exception Event Type

The Apex Unexpected Exception event type captures information about unexpected exceptions in Apex code execution. This event type is available in the EventLogFile object in API version 45.0 and later. Unexpected exception information is not captured in the EventLogFile object with `@IsTest` and anonymous Apex.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	Type String Description The type of event. The value is always <code>ApexUnexpectedException</code>.
EXCEPTION_CATEGORY	Type String Description The category of the unexpected Apex exception. Provides a breakdown of unhandled exceptions based on the type. For example, the <code>LimitException</code> exception type is split into subcategories that indicate if you exceeded a limit, such as the total heap size or CPU time. Possible values: - Subcategories of <code>LimitException</code> that indicate the Apex limit you've exceeded. Examples: <code>LimitException: CpuTime</code>: Maximum CPU time on the Salesforce servers. <code>LimitException: HeapSize</code>: Total heap size. <code>LimitException: Queries</code>: Total number of SOQL queries issued. <code>LimitException: QueryRows</code>: Total number of records retrieved by SOQL queries. <code>LimitException: DmlStatements</code>: Total number of DML statements issued. <code>LimitException: Callouts</code>: Total number of callouts (HTTP requests or web services calls) in a transaction. - See Execution Governors and Limits for other limits. <code>CustomException</code>: Unhandled custom exception. - An Apex exception that isn't limit-related; see Exception Class and Built-In Exceptions This field is available in API version 57.0 and later. Example <code>LimitException: CpuTime</code>
EXCEPTION_MESSAGE	Type Text Description The exception's message. Example Divide by 0

Field	Details
EXCEPTION_TYPE	Type String Description The class type of the unexpected exception. Example <code>System.MathException</code>
ORGANIZATION_ID	Type Id Description The 15-character ID of the org. For example: 00D000000000123.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
STACK_TRACE	Type Text Description The stack trace for the exception.  Note: If the exception is thrown from a managed package, STACK_TRACE is omitted. Example <pre>Class.OpportunityUtility.insert: line 22, column 1 AnonymousBlock: line 1, column 1</pre>
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 2024-08-08T06:08:02.755+0000.
TIMESTAMP_DERIVED	Type DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

API Total Usage

API Total usage events contain details about Platform SOAP API, Platform REST API, and Bulk API requests.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
API_CLIENT_CATEGORY	Type String Description The category of the client making the API request. Possible values are: • <code>AGENTFORCE__AGENT</code>—API request is from an Agentforce agent. • <code>EXTERNAL_APPLICATION</code>—API request is from an external app defined in the org. • <code>LIGHTNING_UI</code>—API request is from the Lightning UI.

- **SALESFORCE**—API request is from an internal Salesforce app or service.
- **UNKNOWN**—API request is from an unrecognized category.

API_FAMILY

Type

String

Description

The API family. Possible values are REST, SOAP, Bulk, or ApexREST. ApexREST indicates Apex REST, Agentforce Apex REST, or Agentforce AuraEnabled calls.

API_RESOURCE

Type

String

Description

The API method or resource. For example, `describeSObjects` for SOAP, or `/v21.0/objects/Account/001xx000003DGQW` for REST.

API_VERSION

Type

Number

Description

The API version. For example, 21.0.

BOT_IDENTIFIER

Type

string

Description

The ID of the bot.

BOT_SESSION_IDENTIFIER

Type

string

Description

The bot session ID.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CLIENT_NAME

Type

String

	Description The name of the client making the API request. Includes values passed via the Sforce-Call-Options header.
CONNECTED_APP_ID	Type String Description The ID of the connected app making the API request. If the connected app ID includes the prefix <i>0H4</i> , append it to the connected app ID in the My Domain URL to access app details (https://MyDomainName.my.salesforce.com/0H4xxxxxxxxxxx) If, however, the connected app ID uses the prefix <i>888</i> , contact Salesforce Customer Support for app details.
CONNECTED_APP_NAME	Type String Description The name of the connected app making the API request.
COUNTS_AGAINST_API_LIMIT	Type Boolean Description Whether the request counted against the API limit (<code>true</code>) or not (<code>false</code>).
ENTITY_NAME	Type Set Description The name of the object accessed by the API request. For example: <code>Account</code> , <code>Opportunity</code> , <code>Contact</code> , and so on.
EVENT_TYPE	Type String Description The type of event. The value is always <code>ApiTotalUsage</code> .
HTTP_METHOD	Type String Description The HTTP method. For example, <code>GET</code> .

ORGANIZATION_ID

Type
Id**Description**

The 15-character ID of the organization.
For example: 00D000000000123.

PLANNER_IDENTIFIER

Type
string**Description**

The ID of the agent planner.

REQUEST_ID

Type
String**Description**

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
For example: 3nWgxWbDKWWDIk0FKfF5DV.

STATUS_CODE

Type
Number**Description**

The HTTP response status code for the request.

TIMESTAMP

Type
String**Description**

The access time of Salesforce services in GMT.
For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type
DateTime**Description**

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).
For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type
Id**Description**

The 15-character ID of the user who's using Salesforce services through the API.

For example: 00530000009M943

USER_NAME

Type

String

Description

The username of the user who's using Salesforce services through the API.

Asynchronous Report Run Event Type

Asynchronous Report Run events are created for reporting requests that are scheduled. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field

Details

AVERAGE_ROW_SIZE

Type

Number

Description

The average row size of all rows in the Asynchronous Report Run event, in bytes. A large average size, coupled with a high ROW_COUNT, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

Example

700

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DASHBOARD_ID

Type

String

Description

The 15-character ID of the dashboard that was run.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DISPLAY_TYPE

Type

String

Description

The report display type, indicating the run mode of the report.

Possible values are:

- D—Dashboard
- S—Show Details
- H—Hide Details

ENTITY_NAME

Type

String

Description

The name of the object affected by the trigger.

EVENT_TYPE

Type

String

	Description The type of event. The value is always <code>AsynchronousReportRun</code> .
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code> .
NUMBER_BUCKETS	Type Number Description The number of buckets that were used in the report.
NUMBER_COLUMNS	Type Number Description The number of columns in the report.
NUMBER_EXCEPTION_FILTERS	Type Number Description The number of exception filters that are used in the report.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D000000000123</code> .
ORIGIN	Type String Description The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard. Possible Values • <code>ReportOpenedFromMobileDashboard</code>: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report.

- `DashboardComponentUpdated`: Report executed when a user refreshed a dashboard component.
- `DashboardComponentPreviewed`: Report executed from a Lightning dashboard component preview.
- `ReportRunUsingSynchronousApi`: Report executed from a synchronous API.
- `ReportRunUsingAsynchronousApi`: Report executed from an asynchronous API.
- `ReportRunUsingApexSynchronousApi`: Report executed from the synchronous Apex API.
- `ReportRunUsingApexAsynchronousApi`: Report executed from the asynchronous Apex API.
- `ReportExported`: Report executed from a printable view or report export that was not asynchronous nor an API export.
- `ReportRunFromClassic`: Report executed from the Run Report option of Salesforce Classic.
- `ReportRunFromMobile`: Report executed from the Run Report option of the mobile Salesforce app.
- `ReportRunFromLightning`: Report executed from the Run option in Lightning Experience from a non-mobile browser.
- `ReportRunFromRestApi`: Report executed from the REST API.
- `ReportPreviewed`: Report executed when a user got preview results while using the report builder.
- `ReportScheduled`: Report was scheduled.
- `ProbeQuery`: Report executed from a probe query.
- `ReportRunFromReportingSnapshot`: Report executed through Snapshot Analytics.
- `ReportExportedAsynchronously`: Report was exported asynchronously.
- `ReportExportedUsingExcelConnector`: Report was exported using the Excel connector.
- `ChartRenderedOnVisualforcePage`: Report executed from a rendered chart on a VisualForce Page.
- `ChartRenderedInEmbeddedAnalyticsApp`: Report executed from a rendered chart in an embedded Analytics app.
- `ReportRunAndNotificationSent`: Report executed through the notifications API.
- `ChartRenderedOnHomePage`: Report executed from a rendered chart on the home page.

- **ReportResultsAddedToWaveTrending:** Report executed when a user trended a report in CRM Analytics.
- **ReportAddedToCampaign:** Report was added from an Add to Campaign action.
- **ReportResultsAddedToEinsteinDiscovery:** Report executed synchronously from Einstein Discovery.
- **Unknown:** Report execution origin is unknown.
- **Test:** Report execution resulted from a test.

RENDERING_TYPE**Type**

String

Description

Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

Possible Values

- **W:** Web (HTML)
- **E:** Email
- **P:** Printable
- **X:** Excel
- **C:** Comma-separated values (CSV)
- **J:** JavaScript Object Notation (JSON)
- **D:** Dummy data

REPORT_ID**Type**

Id

Description

The 15-character ID of the report that was run.

REPORT_ID_DERIVED**Type**

Id

Description

The 18-character case insensitive ID of the report that was run.

REQUEST_ID**Type**

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same **REQUEST_ID**.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

For example:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

This field can have a blank value.

ROW_COUNT

Type

Number

Description

The number of rows that were processed in the Asynchronous Report Run event. High row counts, coupled with a high AVERAGE_ROW_SIZE, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

Example

150

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

SORT

Type

String

Description

The sort column and order that was used in the report.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- **CsnOnly**—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
 - **CspLitePortal**—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
 - **CustomerSuccess**—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
 - **Guest**—Users whose access is limited so that your customers can view and interact with your site without logging in.
 - **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
 - **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
 - **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
 - **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
-

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Aura Request Event Type

Aura Request events contain details of requests to Apex methods from Aura and Lightning web components. For example, you can benchmark request time or identify the URI of an unsuccessful request.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ACTION_MESSAGE	Type String Description The action (Apex method) names and times for all the actions in the request in the format: <pre>action1Name=action1Time;action2Name=action2Time...</pre>
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	Type Number Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
EASY_SUITE_VALUE	Type String

Description

The org's Small Business Suite Edition, if applicable. This field populates only for Small Business Suite editions and Salesforce Foundations. Otherwise, it will be empty. Available in API version 66.0 and later.

For example:

- `Freemium`—Salesforce Free Suite
- `Starter`—Salesforce Starter Suite
- `Pro`—Salesforce Pro Suite
- `C360SuiteEE`—Salesforce Foundations

EVENT_TYPE

Type

String

Description

The type of event. The value is always `AuraRequest`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCSym5eyvtEK2I`.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

Example

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

REQUEST_METHOD

Type

String

Description

The HTTP method of the request, such as `GET` or `POST`.

`REQUEST_STATUS`**Type**

String

Description

The status of the request for a page view or user interface action.

For example:

- **S**—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- **F**—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- **U**—Undefined
- **A**—Authorization Error
- **R**—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- **N**—Not Found. 404 error.

This field can have a blank value.

`RUN_TIME`**Type**

Number

Description

The amount of time that the request took in milliseconds.

`SESSION_KEY`**Type**

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

`TIMESTAMP`**Type**

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

`TIMESTAMP_DERIVED`**Type**

DateTime

	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the resource that's receiving the request. For example: /aura.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_AGENT	Type String Description The numeric code for the type of client used to make the request (for example, the browser, application, or API).
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_TYPE	Type String Description The category of user license. Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
 - `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
 - `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
 - `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
 - `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
 - `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
 - `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
 - `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
-

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Blocked Redirect Event Type

Blocked redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. The Blocked Redirect event type is available in the EventLogFile object in API version 63.0 and later.

This event is free for all customers with a 24-hour data retention period. The blocked redirects event is available in the API but not in the Event Monitoring Analytics app.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Blocked redirect events capture these redirections when the target URL isn't a [RedirectWhitelistUrl](#) or when the target URL fails a syntax check.

- An anchor link within a page or component that includes a redirection. For example, `<a href="/?startURL=targetUrl">linkText</a>` includes a redirection via the startURL parameter.
- A parameter within a page that redirects the user. For example, this form action redirects the user through the saveURL parameter: `<form action="/xyz?saveURL=targetURL">`.

Within pages and components, a direct anchor link to an external URL is always allowed, even if the target URL isn't a [RedirectWhitelistUrl](#). For those direct anchor links, if the target URL fails a syntax check, the user receives an error but the redirection isn't captured as a blocked redirect event. An example of a direct anchor link is `<a href="targetUrl">linkText</a>`.

For hyperlinks within URL and Long Text Area fields, blocked redirections to untrusted URLs are captured as blocked redirect events only when the user who clicked the hyperlink accessed Salesforce via Salesforce Classic. If those users see a warning message and can proceed to the untrusted URL, that event isn't captured as a blocked redirect event.

 **Note:** To help preserve performance, Salesforce uses throttling, a technique that limits the number of generated blocked redirect events when the volume is exceptionally high. Therefore, if your org generates a high volume of blocked redirections over a short period of time, some of those redirections can fail to generate a blocked redirect event.

Fields

Field	Details
BLOCKED_URI	Type String Description The full string of the target for the redirection. Example <code>https://www.example.com/shop.htm</code>
BLOCKED_URI_DOMAIN	Type String Description If BLOCKED_URI is a URL, the domain for that URL. To allow future redirections to the BLOCKED_URI, BLOCKED_URI_DOMAIN is the value to add to RedirectWhitelistUrl. Example <code>www.example.com</code>
EVENT_TYPE	Type String Description The type of event. The value is always <code>BlockedRedirect</code>.
MALFORMED_URL	Type Boolean Description Indicates whether this redirection was blocked because the target URL failed a syntax check (1) or not (0). Here are examples of malformed URLs.

Field	Details
	- https://www.example.com/\$t61'3 - https://malformed^url.example.com
ORIGIN	Type String Description The origin that caused the request to the <code>BLOCKED_URI</code>. For example, if a form on an Experience Cloud Visualforce site page redirects a user to an untrusted URL via the <code>saveURL</code> parameter, <code>ORIGIN</code> contains the base URL of that site.
REFERRER	Type String Description The absolute or partial address from which the request to the <code>BLOCKED_URI</code> came. The <code>Referrer-Policy</code> HTTP Header of the request determines how much of the URL is shared.
REMOTE_ADDRESS	Type String Description Remote IP address of the client making the request.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. Example 0000000062_0000x8Lz-
TIMESTAMP	Type DateTime Description The access time of Salesforce services in GMT. Example 20220715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). The time zone is always GMT.

Field	Details
	Example 2022-07-27T11:32:59.555Z.

Usage

Only one blocked redirect log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file.

If the log file doesn't exist, either the log generation process hasn't run yet or there's no redirection data to report for that 24-hour window. The log file is generated only when at least one redirection occurred for the day.

To collect blocked redirect logs for multiple days, schedule a daily query of the Blocked Redirect event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Bulk API Event Type

Bulk API events contain details about Bulk API requests.

Note: This event type does not include Bulk API 2.0 requests. For information about the BulkApi2 event type, see [Bulk API 2.0 Event Type](#) on page 2161.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BATCH_ID	Type String Description The 15-character ID of the Bulk API batch.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

ENTITY_TYPE

Type

String

Description

The type of entity that the Bulk API used.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `BulkApi`.

JOB_ID

Type

String

Description

The 15-character ID of the Bulk API job.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

MESSAGE

Type

EscapedString

Description

Any success or error message that's associated with the request.

NUMBER_FAILURES

Type

Number

Description

The number of failures that were returned with the request.

OPERATION_TYPE

Type

String

	Description The type of Bulk API operation that was performed.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
ROWS_PROCESSED	Type Number Description The number of rows that were processed in the request. For example: 150.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
SUCCESS	Type Boolean Description Whether the batch was successful.
TIMESTAMP	Type String

	Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

[EventLogFile Supported Event Types](#)
[EventLogFile](#)

Bulk API Request Event Type

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes.

Note: This event type doesn't include Bulk API 2.0 requests. For information about the BulkApi2 event types, see [Bulk API 2.0 Event Type](#) on page 2161.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
API_VERSION	Type Number Description The API version.
BATCH_ID	Type String Description The 15-character ID of the Bulk API batch.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CLIENT_NAME	Type EscapedString Description The name of the client making the request.
CONCURRENCY_MODE	Type String Description The concurrency mode selected by the user.
CONNECTED_APP_ID	Type String Description The ID of the connected app making a request.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

ERROR_MESSAGE

Type

EscapedString

Description

The type of entity that the Bulk API used.

EVENT_TYPE

Type

String

Description

The type of event. The value is always BulkApiRequest.

JOB_ID

Type

String

Description

The 15-character ID of the Bulk API job.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

OPERATION_TYPE

Type

String

Description

The type of Bulk API operation.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type

String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_PATH	Type String Description The path of the request.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
STATUS_CODE	Type Number Description The HTTP Status code indicating whether the batch was successful.
SUCCESS	Type Boolean Description Whether the batch was successful.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime

	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. The timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The ID of the user making the request.
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000011SNIA0.

Bulk API 2.0 Event Type

BulkApi2 events contain details about Bulk API 2.0 requests.

Note: This event type does not include Bulk API requests. For information about the BulkApi event type, see [Bulk API Event Type](#) on page 2154.

You can monitor the following Bulk API 2.0 parameters:

- The type of data processed via Bulk API 2.0 operations, and how much of that data was processed.
- Bulk API 2.0 limits.
- For jobs, track how long it takes to complete, database, and CPU usage.
- Understand users and the operations they performed.
- Detailed errors and failures.

BulkApi2 events represent the steps in the Bulk API 2.0 workflow and changes in job state.

For a Bulk API 2.0 **Ingest** job, an event is emitted when a job is marked:

- created
 - Note: For multi-part requests, there is no “created” event emitted, only an uploadComplete event.
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted
- deleted

For a Bulk API 2.0 **Query** job, an event is emitted when a job is marked:

- created
- uploadComplete
- inProgress
- with a processing update
- complete
- aborted
- deleted

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as “Salesforce.com IP”. For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
ENTITY_TYPE	Type String Description The type of entity that Bulk API 2.0 used.

For example, `Account` or `Contact`.

`EVENT_TYPE`

Type

String

Description

The type of event. The value is always `BulkApi2`.

`JOB_ID`

Type

String

Description

The 15-character ID of the Bulk API 2.0 job.

`JOB_STATUS`

Type

String

Description

The job's current status.

`LOGIN_KEY`

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

`OPERATION_TYPE`

Type

String

Description

The type of Bulk API 2.0 operation that was performed.

`ORGANIZATION_ID`

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

`RECORDS_FAILED`

Type

Number

Description

The total number of records that failed.

For example: `150`.

`RECORDS_PROCESSED`

Type

Number

Description

Number of records processed for this event.

For example: 980.

Note: The number of records processed is reported differently for ingest and query jobs.

For *ingest* jobs:

- Events with a status of `InProgress` report (if applicable) the number of records processed.

For *query* jobs:

- Events with a status of `JobComplete` or `InProgress` report (if applicable) the number of records processed.

RESULT_SIZE_MB

Type

Number

Description

Number of megabytes returned in query. Empty for ingest jobs.

For example: 670.

Note: RESULT_SIZE_MB currently does not emit events, but is shown here as a placeholder for future enhancement.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

	Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case-safe ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

Change Set Operation Event Type

Change Set Operation events contain information from change set migrations.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CHANGE_SET_NAME	Type String Description The name of the change set.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always <code>ChangeSetOperation</code>.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.
OPERATION	Type String Description The operation that's being performed. Possible Values • DELETE

- DEPLOY
- UPLOAD
- VALIDATE

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TARGET_ORG_ID

Type

Id

Description

The 15-character ID of the organization that's receiving the change set.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Composite API Event Type

Composite API events contain details about composite API requests. One composite API event is generated for each composite API and composite graph API call. This event type is available in API version 64.0 and later.

Fields

Field	Details
ALL_OR_NONE	Type boolean Description Indicates whether the entire request is rolled back when the update of any object fails (true), or if the call should continue with the independent update of other objects in the request (false). The default is false. If true, it overrides the ALL_OR_NONE setting in subrequests.
CLIENT_IP	Type String Description The IP address of the client that's using the API.
CPU_TIME	Type Number Description The CPU time in milliseconds to complete the request.
EVENT_TYPE	Type String Description The type of the event. The value is always CompositeApi.
FAILURE_REASON	Type String Description An error code giving the reason for a failed request.
IS_REQUEST_COLLATION_ON	Type boolean Description The setting for subrequest collation.
LOGIN_KEY	Type String Description Identifies all related events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I
NUM_GRAPH_DEPTH	Type Number

Field	Details
	Description The depth of the graph. When multiple graphs are present, this number is the depth of the deepest graph.
NUM_RETRIES	Type Number Description Number of attempted retries while processing the graph.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization that made the request. For example: 00D000000000123
REQUEST_ID	Type String Description A unique ID identifying the composite API request.
RUN_TIME	Type Number Description The amount of time in milliseconds to complete the request.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. For example: 20130715233322.670
TIMESTAMP	Type String Description The date and time that the event was generated.
TIMESTAMP_DERIVED	Type DateTime Description The date and time, in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ), that the event was generated. The timezone is GMT. For example: 2015-07-27T11:32:59.555Z

Field	Details
URI	Type String Description The resource URI.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user that's using the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user that's using the API. For example: 00590000000I1SNIA0

SEE ALSO:[REST API Developer Guide: Composite](#)[REST API Developer Guide: Composite Graph](#)[REST API Developer Guide: Using Composite Resources](#)

Composite API Subrequest Event Type

Composite API subrequest events contain details about composite API subrequests. One composite API subrequest event is generated for each subrequest or collated set of subrequests. For example, if a composite API request contains five subrequests and four of the subrequests are collated, then two composite API subrequest events are generated. This example also applies to composite graph API. This event type is available in API version 64.0 and later.

Fields

Field	Details
CANCELLED_REASON	Type String Description If the subrequest was canceled, shows the reason.

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using the API.
CPU_TIME	Type Number Description The CPU time in milliseconds to complete the request.
DB_TOTAL_TIME	Type Number Description Time (in nanoseconds) spent waiting for database processing in aggregate for all operations in the subrequest or set of collated subrequests. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	Type String Description The type of the event. The value is always CompositeApiSubrequest.
INITIAL_REFERENCE_IDS	Type String Description The original reference IDs of subrequests that were collated into the current subrequest.
IS_CANCELLED	Type boolean Description True if the subrequest call was canceled.
LOGIN_KEY	Type String Description Identifies all related events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I
METHOD	Type String

Field	Details
	Description The HTTP method of the request.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization that made the request. For example: 00D0000000000123
REQUEST_ID	Type String Description A unique ID identifying the composite API request.
REQUEST_STATUS	Type String Description The status of the subrequest or collated set of subrequests. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RUN_TIME	Type Number Description The amount of time in milliseconds to complete the request.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. For example: 20130715233322.670
STATUS_CODE	Type Number

Field	Details
	Description The HTTP status code for the response.
SUCCESS	Type boolean Description True if the subrequest call succeeded.
TIMESTAMP	Type String Description The date and time that the event was generated.
TIMESTAMP_DERIVED	Type DateTime Description The date and time, in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ), that the event was generated. The timezone is GMT. For example: 2015-07-27T11:32:59.555Z
URI	Type String Description The resource URI.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user that's using the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user that's using the API. For example: 00590000000I1SNIA0

Field	Details
USER_TYPE	Type String Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and they access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and they access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and they access the application through a customer portal. Users with this license type can view and edit data that they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and they typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and they access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses and admins for this org.

Concurrent Long-Running Apex Limit Event Type

Concurrent Long-Running Apex Limit events contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, all new Apex invocation requests are denied. This event type is available in the EventLogFile object in API version 45.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	Type String Description The type of event. The value is always <code>ConcurrentLongRunningApexLimit</code>.
NUMBER_REQUESTS	Type Number Description Count of requests with an established Apex context executing for longer than 5 seconds in your org.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D0000000000123.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_URI	Type String Description URI of the long-running Apex request that Salesforce terminated. Example /apex/ApexClassName
REQUESTS_LIMIT	Type Number Description Maximum count of requests with an established Apex context that can execute for longer than 5 seconds. When <code>NUMBER_REQUESTS</code> reaches this limit, then additional long-running Apex requests are terminated. (Asynchronous requests don't count towards the limit.) See <i>Apex Developer Guide</i>: Lightning Platform Apex Limits. Example 10

Field	Details
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943

Usage

For example, you can monitor Concurrent Long-Running Apex Limit log counts to get a benchmark or plot a count by hour. To identify where the limit was exceeded, see the REQUEST_URI field. Then, cross-reference this data with [Apex Execution event](#) data where the average RUN_TIME exceeds 5 seconds. To identify synchronous requests only, cross-reference event data with the QUIDDITY field in Apex Execution event data. For example, QUIDDITY NOT IN (A,BA,F,Q,S) and CALLOUT_TIME (>5000).

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

[Salesforce Developers Blog: Designing Force.com Applications That Avoid Hitting Concurrent Request Limits](#)

Console Event Type

Console events contain information about the performance and use of Salesforce Consoles. The Console events are logged whenever a Console tab is opened with a sidebar component. Outside of that, when Console tabs are opened, a regular view record detail event is served just like in Salesforce Classic.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
-------	---------

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

COMPONENT_ID

Type

Id

Description

The 15-character ID of the component.

COMPONENT_ID_DERIVED

Type

Id

Description

The 18-character, case-insensitive ID of the component.

CONSOLE_ID

Type

Id

Description

The 15-character ID of the console.

CONSOLE_ID_DERIVED

Type

Id

Description

The 18-character, case-insensitive ID of the console.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `Console`.

LICENSE_CONTEXT

Type

String

Description

The license context in which a user is using a console.

Example

service, salesandservice, sales

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

RECORD_ID

Type

Id

Description

The 15-character ID of the record that's associated with the console.

RECORD_ID_DERIVED

Type

Id

Description

The 18-character, case-insensitive ID of the record that's associated with the console.

REQUEST_ID

Type

String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: 3nWgxWbDKWWDIk0FKfF5DV.
<code>REQUEST_STATUS</code>	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
<code>RUN_TIME</code>	Type Number Description The amount of time that the request took in milliseconds.
<code>SESSION_KEY</code>	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
<code>TIMESTAMP</code>	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- **CanOnly**—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.

- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

SEE ALSO:[EventLogFile Supported Event Types](#)[EventLogFile](#)

Content Distribution Event Type

Content Distribution events contain information about content distributions and deliveries to users.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
<code>ACTION</code>	Type String

	Description The action that's used when a delivery is viewed.
	Possible Values • VIEW • INSERT • UPDATE
DELIVERY_ID	Type Id Description The 15-character ID of the content delivery.
DELIVERY_LOCATION	Type String Description The location of the delivery.
EVENT_TYPE	Type String Description The type of event. The value is always ContentDistribution.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
RELATED_ENTITY_ID	Type Id Description The 15-character ID of the record that's associated with the delivery distribution.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

VERSION_ID

Type

Id

Description

The 15-character ID of the content version.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Content Document Link Event Type

Content Document Link events contain sharing information for content documents.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
DOCUMENT_ID	Type Id Description The 15-character ID of the document that's being shared.
EVENT_TYPE	Type String Description The type of event. The value is always <code>ContentDocumentLink</code>.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
SHARED_WITH_ENTITY_ID	Type Id Description Who the document was shared with.
SHARING_OPERATION	Type String Description The type of sharing operation on the document. Possible Values • INSERT • UPDATE • DELETE

SHARING_PERMISSION

Type

String

Description

What permissions the document was shared with.

Possible Values

- v: Viewer
- c: Collaborator
- I: Inferred—that is, the sharing permissions were inferred from a relationship between the viewer and document. For example, a document's owner has a sharing permission to the document itself. Or, a document can be a part of a content collection, and the viewer has sharing permissions to the collection rather than explicit permissions to the document directly.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Content Transfer Event Type

Content Transfer events contain information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
DOCUMENT_ID	Type Id Description The 15-character ID of the document that's being shared.
DOCUMENT_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the document that's being shared.
EVENT_TYPE	Type String Description The type of event. The value is always ContentTransfer.
FILE_PREVIEW_TYPE	Type String Description The content type of the file preview.
FILE_TYPE	Type String Description The content type of the file version.

ORGANIZATION_ID

Type
Id**Description**

The 15-character ID of the organization.

For example: 00D000000000123.

REQUEST_ID

Type
String**Description**

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

SIZE_BYTES

Type
Number**Description**

The size of the file transfer, in bytes.

TIMESTAMP

Type
String**Description**

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type
DateTime**Description**

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TRANSACTION_TYPE

Type
String**Description**

The operation that was performed, including operations on files and attachments to records. For example, you can track operations in the Attachments related list on a case.

Possible Values

- VersionDownloadAction and VersionDownloadApi represent downloads via the user interface and API respectively.

- `VersionRenditionDownload` represents a file preview action.
- `saveVersion` represents a file that's being uploaded.

`USER_ID`**Type**

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

`USER_ID_DERIVED`**Type**

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

`VERSION_ID`**Type**

Id

Description

The 15-character ID of the content version.

`VERSION_ID_DERIVED`**Type**

Id

Description

The 18-character case insensitive ID of the content version.

[EventLogFile](#)

Continuation Callout Summary Event Type

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This event type is available in the EventLogFile object in API version 43.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Fields

Field	Details
CONTINUATION_ID	Type String Description A unique ID identifying a sequence of events within a request. Example SFDC-Continuation-14e3cg85-961d-389e-7bz1-3d171543162a
DURATION	Type Number Description Total duration of continuation, in milliseconds.
EVENT_TYPE	Type String Description The type of event. The value is always <code>ContinuationCalloutSummary</code>.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
ORIGIN_REQUEST_ID	Type Id Description The ID of the request that initiated a callout. Example TID:5iLoVKlztX_rDDJcp7
REQUEST_FORM_SIZE	Type String Description Continuation request form size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
REQUEST_ID	Type String

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.
<code>RESPONSE_SIZE</code>	Type String Description The size of the callout response, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
<code>STATUS_CODE</code>	Type String Description The HTTP status or internal code returned by the remote endpoint. A status code of 200 indicates that the request was successful. Other status code values indicate the type of problem that was encountered. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. Examples • 2000—The timeout was reached, and the server didn't get a chance to respond. • 2001—There was a connection failure. • 2002—Exceptions occurred. • 2003—The response hasn't arrived (which also means that the Apex asynchronous callout framework hasn't resumed). • 2004—The response size is too large (greater than 1 MB).
<code>SUCCESS</code>	Type Boolean Description Indicates whether the continuation was successful (1) or not (0).
<code>TIMESTAMP</code>	Type String Description The access time of Salesforce services in GMT. For example: <code>20130715233322.670</code>.
<code>TIMESTAMP_DERIVED</code>	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

Field	Details
	For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URL	Type String Description The callout endpoint URL. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values. Example http://prod.location.amazonaws.com:1000/orders/order/_search
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 005300000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 005900000000I1SNIA0.
VF_CONTROLLER_SIZE	Type String Description Continuation Visualforce controller size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

CORS Violation Record Event Type

CORS Violation Record events capture information about Cross-Origin Resource Sharing (CORS) violations. Cross-origin requests to Lightning apps are blocked unless the request comes from a URL listed in your CORS allowlist.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
EVENT_TYPE	Type String Description The type of event. The value is always <code>CorsViolation</code>.
HOST	Type String Description The URL of the requested Salesforce resource. If JavaScript code at <code>https://www.example.com</code> requests a resource from <code>https://www.salesforce.com</code>, the origin is <code>https://www.example.com</code> and the host is <code>https://www.salesforce.com</code>.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D0000000000123</code>.
ORIGIN	Type String Description The URL of the site making the cross-origin request to Salesforce. If JavaScript code at <code>https://www.example.com</code> requests a resource from <code>https://www.salesforce.com</code>, the origin is <code>https://www.example.com</code> and the host is <code>https://www.salesforce.com</code>.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

CSP Violation Event Type

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). The CSP Violation event type is available in the EventLogFile object in API version 63.0 and later.

This event is free for all customers with a 24-hour data retention period. The CSP violation event is available in the API but not in the Event Monitoring Analytics app.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Note: To help preserve performance, Salesforce uses throttling, a technique that limits the number of generated CSP violation events when the volume is exceptionally high. Therefore, if your org generates a high volume of CSP violations over a short period of time, some of those violations can fail to generate a CSP violation event.

Fields

Field**Details**

BLOCKED_URI

Type

String

Description

The full string of the blocked resource. If the call to the blocked resource used a URL, `BLOCKED_URI` is the full URL. Or, for violations with a `DIRECTIVE` of `script-src` directives, `inline` or `eval`.

Examples

- `https://www.example.com/images/picture.png`
- `file://host1:0002/media/video.mp4`
- `inline`

BLOCKED_URI_DOMAIN

Type

String

Field	Details
	Description If <code>BLOCKED_URI</code> is a URL, the domain for that URL. To allow resources to be loaded from the <code>BLOCKED_URI</code>, <code>BLOCKED_URI_DOMAIN</code> is the <code>endpointUrl</code> value to add or update in the CspTrustedSite Metadata API. Example <code>www.example.com</code>
<code>COLUMN_NUMBER</code>	Type Number Description The column number in the document or worker script at which the violation occurred. This value is relevant only when <code>DIRECTIVE</code> is <code>script-src</code>. For those violations, use this value with <code>LINE_NUMBER</code> to identify the location of the violation. Example <code>27</code>
<code>CONTEXT</code>	Type String Description The content security policy (CSP) context for the request. The CSP context controls which pages can load content from a CspTrustedSite. CSP violation events capture details about blocked resource requests from only Lightning Experience pages, this value is always <code>Lightning</code>.
<code>DIRECTIVE</code>	Type String Description The CSP directive that blocked the resource request. Possible Values • <code>font-src</code> • <code>frame-src</code> • <code>img-src</code> • <code>media-src</code> • <code>style-src</code> • <code>script-src</code> For information on these directives and a full list of all CSP directives, see MDN Web Docs: Content-Security-Policy.
<code>DISPOSITION</code>	Type String

Field	Details
	Description The CSP violation handling instruction for the user agent at the time of the violation. Possible Values • <code>enforce</code>—Enforce the policy violation. For violations with this <code>DISPOSITION</code>, the resource request was blocked. • <code>report</code>—Report the policy violation. For violations with this <code>DISPOSITION</code>, the resource request wasn't blocked, but the violation was reported.
EVENT_TYPE	Type String Description The type of event. The value is always <code>CspViolation</code>.
LINE_NUMBER	Type Number Description The line number in the document or worker script at which the violation occurred. This value is relevant only when <code>DIRECTIVE</code> is <code>script-src</code>. For those violations, use this value with <code>COLUMN_NUMBER</code> to identify the location of the violation. Example 12
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. Example 0000000062_0000x8Lz-
RESOURCE_SAMPLE	Type String Description A sample of the resource that caused the violation, usually the first 40 characters, or the empty string. Example <pre>var lastRow = 4;greyLink('fRemoveRowLink var SFDCSessionVars={"server\":"https:\/\/\ LoginHint.getSavedIdentities(false);</pre>

Field	Details
	<pre>LoginHint.saveHintEdit();</pre> <pre>function handleLogin() {document.login.un...</pre>
SOURCE	Type String Description The page where this CSP violation originated. For example, if your CSP policy prevented an image from loading on a Visualforce page, SOURCE contains the URL of that page. Example <code>https://MyDomainName.my.salesforce.com/apex/HelloWorld</code>
SOURCE_FILE	Type String Description The URL of the script in which the violation occurred. If the violation didn't occur in a script, SOURCE_FILE is null. Example <code>https://www.example.com/script_xyz.js</code>
TIMESTAMP	Type DateTime Description The access time of Salesforce services in GMT. Example <code>20220715233322.670</code>
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). The time zone is always GMT. Example <code>2022-07-27T11:32:59.555Z.</code>

Usage

Only one CSP violation event log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file.

If the event log file doesn't exist, either the log generation process hasn't run yet or there's no violation data to report for that 24-hour window. The event log file is generated only when at least one violation occurred for the day.

To collect CSP violation logs for multiple days, schedule a daily query of the CSP Violation event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Dashboard Event Type

Dashboard events contain details about report requests from dashboards. These requests are triggered by dashboard refreshes, subscriptions, and filter changes.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DASHBOARD_COMPONENT_ID	Type Id Description The 15-character ID of the dashboard component.
DASHBOARD_ID	Type String Description The 15-character ID of the dashboard that was run.
DASHBOARD_ID_DERIVED	Type String

	Description The 18-character case insensitive ID of the dashboard that was run.
DASHBOARD_TYPE	Type String Description The type of dashboard. Possible Values • R: Run as running user • C: Run as context user • S: Run as specific user
EVENT_TYPE	Type String Description The type of event. The value is always Dashboard.
IS_SCHEDULED	Type Boolean Description 1 if the dashboard component ran successfully, 0 if it didn't.
IS_SUCCESS	Type Boolean Description 1 if the dashboard component ran successfully, 0 if it didn't.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.

REPORT_ID

Type

Id

Description

The 15-character ID of the report that was run.

REPORT_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the report that was run.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user the dashboard is running as.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user the dashboard is running as.

For example: 00590000000I1SNIA0.

VIEWING_USER_ID

Type

Id

Description

The ID of the user who's viewing the dashboard.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Database Save Event Type

Database Save events track when records are created, updated, or deleted. This object is available in API version 63.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
DML_TYPE	Type String Description The type of DML statement.
EVENT_TYPE	Type Id Description The type of event.
FIRST_ENTITY_ID	Type String Description The first ID that is logged when an update occurs. If a single record is updated, the ID of that row is logged. If multiple records are updated, only one ID is logged.
KEY_PREFIX	Type String Description The key prefix of the entity type that was saved.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session.
NUM_ROWS	Type String Description The number of entities that were saved.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization.
REQUEST_ID	Type String Description Globally unique id for a given request.

Field	Details
SAMPLE_FACTOR	Type Number Description The ratio of saved entities that were logged. A value of 1 means every entity saved was logged. A value of 100 means that 1 out of 100 entities saved was logged.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. Example d7DEq/ANa7nNZZVD
TIMESTAMP	Type String Description The Timestamp at which the log event was generated.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z
USER_ID	Type Id Description The ID of the user who's using Salesforce services through the UI or the API. Example 005XXXXXXXXXXXXX

Document Attachment Downloads Event Type

Document Attachment Downloads events contain details of document and attachment downloads.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ENTITY_ID	Type Id Description The 15-character ID of the entity that's associated with the document or attachment.
EVENT_TYPE	Type String Description The type of event. The value is always DocumentAttachmentDownloads.
FILE_TYPE	Type String Description The type of the file or attachment.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D0000000000123.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime

	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

[EventLogFile](#)

External Cross-Org Callout Event Type

External Cross-Org Callout events represent external data callouts via the cross-org adapter for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

Note: For the cross-org adapter for Salesforce Connect, event monitoring currently doesn't track search callouts.

Fields

Field	Details
ACTION	Type String Description Action performed by the callout. Possible Values query

Field	Details
	• upsert • delete
ENTITY	Type String Description Name of the external object being accessed. Example Order
EVENT_TYPE	Type String Description Type of event. Value is always <code>ExternalCrossOrgCallout</code>.
EXECUTE_MS	Type Number Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later. Example 1
FETCH_MS	Type Number Description How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later. Example 452
FILTER	Type Text Description Field expressions to filter which rows to return. Corresponds to <code>WHERE</code> in SOQL queries. Example <code>WHERE CustomerId='123456'</code>
HAVING	Type Text Description Reserved for future use.

Field	Details
LIMIT	Type Number Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries. Example 200
MESSAGE	Type String Description Error or warning message associated with the failed query callout. Value is always empty for upsert and delete callouts. Example System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated
OFFSET	Type Number Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in SOQL queries. If a SOQL query doesn't define an <code>OFFSET</code>, the value is -1. Example 0 (default)
ORDERBY	Type String Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SOQL queries. Examples • <code>ORDER BY ShipName</code> • <code>ORDER BY ShipName DESC</code>
ORGANIZATION_ID	Type Id Description 15-character ID of the organization. Example 00D0000000000123

Field	Details
REQUEST_ID	Type String Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. Example 4A13-HSKv3CKs-0FKfceaV
ROWS	Type Number Description Total number of records in the result set. Value is always 0 for upsert and delete callouts. Example 200
ROWS_FETCHED	Type Number Description Reserved for future use.
SELECT	Type String Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries. Example SELECT Id,Name,CustomerID,OrderDate
STATUS	Type Boolean Description Whether the query was successful. Value is always empty for upsert and delete callouts. Possible Values • 1—Success • 0—Failed
SUBQUERIES	Type Number Description The number of subqueries that the query is split into.

Field	Details
THROUGHPUT	Type Number Description Reserved for future use.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TOTAL_MS	Type Number Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results. Example 453
USER_ID	Type Id Description 15-character ID of the user accessing the external system. Example 00530000009M943
USING_MRU	Type Boolean

Field	Details
	Description Reserved for future use.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

External Custom Apex Callout Event Type

External Custom Apex Callout events represent external data callouts via custom adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

Fields

Field	Details
ACTION	Type String Description Action performed by the callout. Possible Values • query • upsert • delete
ENTITY	Type String Description Name of the external object being accessed. Example Order
EVENT_TYPE	Type String Description Type of event. Value is always ExternalCustomApexCallout.
EXECUTE_MS	Type Number

Field	Details
	Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later. Example 102
FETCH_MS	Type Number Description How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later. Example 607
FILTER	Type Text Description Field expressions to filter which rows to return. Corresponds to <code>WHERE</code> in SOQL queries. Example Filter:[columnName=CustomerID, columnValue=537, subfilters=null, tableName=Order, type=EQUALS]
LIMIT	Type Number Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries. Example 200
MESSAGE	Type String Description Error or warning message associated with the failed call. Example System.UnexpectedException: Query is either selecting too many fields or the filter conditions are too complicated
OFFSET	Type Number Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in SOQL queries.

Field	Details
	Example 0 (default)
ORDERBY	Type String Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SQL queries. Examples (Order:[columnName=OrderDate, direction=ASCENDING, tableName=Order])
ORGANIZATION_ID	Type Id Description 15-character ID of the organization. Example 00D000000000123
REQUEST_ID	Type String Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. Example 4A13-HSKv3CKs-0FKfceaV
ROWS	Type Number Description Total number of records in the result set. The value is always -1 if the custom adapter's <code>DataSource.Provider</code> class doesn't declare the <code>QUERY_TOTAL_SIZE</code> capability. Example 200
ROWS_FETCHED	Type Number Description Number of rows fetched by the callout. Available in API version 42.0 and later. Example 200

Field	Details
SELECT	Type String Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries. Example (ColumnSelection:[aggregation=NONE, columnName=Name, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=CustomerID, tableName=Order], ColumnSelection:[aggregation=NONE, columnName=OrderDate, tableName=Order])
STATUS	Type Boolean Description Whether the query was successful. Possible Values • 1—Success • 0—Failed • Empty—Failed with no logged status or message
THROUGHPUT	Type Number Description Number of records retrieved in one second. Example 302.57
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
SUBQUERIES	Type Number Description Reserved for future use.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

Field	Details
	For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TOTAL_MS	Type Number Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results. Example 709
USER_ID	Type Id Description 15-character ID of the user accessing the external system. Example 00530000009M943

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

External Data Source Callout Event Type

External Data Source Callout events represent external data callouts via the Salesforce Connect adapters for Amazon DynamoDB and Amazon Athena. This event type is available in the EventLogFile object in API version 56.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

Fields

Field	Details
ACTION	Type String Description Action performed by the callout. Possible Values For Amazon DynamoDB data source: • query • insert • delete • update

Field	Details
	• upsert For Amazon Athena data source: • query
DATA_SOURCE_NAME	Type String Description Name of the external data source being accessed.
EVENT_TYPE	Type String Description Type of event. Value is always <code>ExternalDataSourceCallout</code>.
EXTERNAL_OBJECT	Type String Description Name of the external object being accessed.
FETCH_MS	Type Number Description How long it took (in milliseconds) to retrieve the query results from the external data source. Example 127
FILTER	Type Text Description Field expressions to filter which rows to return. Corresponds to <code>WHERE</code> in queries.
LIMIT	Type Number Description Maximum number of rows to return for a query. Corresponds to Limit parameter in ExecuteStatement operation for an Amazon DynamoDB data source.
MESSAGE	Type String Description Error or warning message associated with the failed call.

Field	Details
NEXT_LINK	Type String Description Next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response when the response includes only part of the result set. For requests to AWS data sources, this field stores the <code>nextToken</code> parameter that contains a unique hash string.
OFFSET	Type Number Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in queries to Amazon Athena. This field is not supported by queries to Amazon DynamoDB.
OPERATION	Type String Description The operation that's being performed.
ORDERBY	Type String Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in queries. Example • Country ASC • CustomerName DESC
ORGANIZATION_ID	Type Id Description 15-character ID of the organization. Example 00D000000000123
PARENT_CALLOUT	Type String Description If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set. Example 4EoZtuBzzRIXSk-ysRdf1F-1

Field	Details
PROVIDER_TYPE	Type String Description Whether the callout was made by Salesforce Connect adapter for Amazon DynamoDB or Amazon Athena. Possible Values - amazonDynamodb - amazonAthena
REQUEST_ID	Type String Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID. Example 4A13-HSKv3CKs-0FKfceaV
RESPONSE_SIZE	Type Number Description The size of the callout response, in bytes.
ROWS_FETCHED	Type Number Description Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set. Example 200
SEARCH	Type String Description Search query string.
SELECT	Type String Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in queries. To query, Salesforce Connect adapter uses PartiQL with Amazon DynamoDB and SQL with Amazon Athena.

Field	Details
	Example CustomerID,OrderDate,OrderID,ShipCity,ShipCountry
STATUS	Type Boolean Description Whether the query was successful. Possible Values 1—Success 0—Failed
STATUS_CODE	Type Number Description The HTTP response status code for the request.
TABLE_NAME	Type String Description Name of the table being queried in the AWS data source.
THROUGHPUT	Type Number Description Number of records retrieved in one second. Example 3025.67
TIMESTAMP	Type DateTime Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

Field	Details
TOTAL_MS	Type Number Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.
USER_ID	Type Id Description 15-character ID of the user accessing the external data source. Example 00530000009M943

External OData Callout Event Type

External OData Callout events represent external data callouts via the OData 2.0 and OData 4.0 adapters for Salesforce Connect. This event type is available in the EventLogFile object in API version 40.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

Fields

Field	Details
ACTION	Type String Description Action performed by the callout. Possible Values - query - upsert - delete
BYTES	Type Number Description Size of the result set in bytes.
ENTITY	Type String Description Name of the external object being accessed.

Field	Details
	Example Order
EVENT_TYPE	Type String Description Type of event. Value is always ExternalODataCallout.
EXECUTE_MS	Type Number Description How long it took (in milliseconds) for Salesforce to prepare and execute the query. Available in API version 42.0 and later. Example 21
EXPAND	Type String Description Reserved for future use.
FETCH_MS	Type Number Description How long it took (in milliseconds) to retrieve the query results from the external system. Available in API version 42.0 and later. Example 127
FILTER	Type Text Description Field expressions to filter which rows to return. Corresponds to <code>WHERE</code> in SOQL queries and <code>\$filter</code> in OData queries. Example CustomerID eq 12345
LIBRARY	Type String Description Reserved for future use.

Field	Details
LIMIT	Type Number Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries and <code>\$top</code> in OData queries. Example 200
MESSAGE	Type String Description Error or warning message associated with the failed call. Example The OData query result was too large, so the external data didn't load.
NEXT_LINK	Type String Description OData next link that the callout used to request a subsequent page of rows. A next link is provided in a previous response from the OData producer when the response includes only part of the result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. Example <code>http://services.example.org/Warehouse.svc/Orders?\$count=true&\$select=CustomerID,OrderID,RequiredDate,ShippedDate&\$top=301&\$skiptoken=10447</code>
OFFSET	Type Number Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in SOQL queries and <code>\$skip</code> in OData queries. Example 10
ORDERBY	Type String Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SOQL queries and <code>\$orderby</code> in OData queries.

Field	Details
	Examples • ShipName • ShipName desc
ORGANIZATION_ID	Type Id Description 15-character ID of the organization. Example 00D000000000123
PARENT_CALLOUT	Type String Description If the callout requested a subsequent page of rows, this field identifies the initial callout whose request resulted in the multi-page result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. Example 4EoZtuBzzRIXSk-ysRdf1F-1
PROVIDER_TYPE	Type String Description Whether the OData 2.0 or OData 4.0 adapter made the callout. Possible Values • OData—OData 2.0 adapter • OData4—OData 4.0 adapter
RATE_LIMIT_USAGE_PERCENT	Type Number Description Consumed percentage of the org's limit of OData callouts per hour. Example 2.5—2.5% of the hourly callout limit has been consumed
REQUEST_ID	Type String Description Unique ID of a transaction. A transaction can contain one or more events. All events in a transaction have the same REQUEST_ID.

Field	Details
	Example 4A13-HSKv3CKs-0FKfceaV
REQUESTS	Type Number Description Reserved for future use.
ROWS	Type Number Description Total number of records in the result set. Available in API version 42.0 and later. Example 830
ROWS_FETCHED	Type Number Description Number of records fetched by the callout. The records fetched by a callout can be a subset of a large result set. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. Example 200
SEARCH	Type String Description Search query string. Corresponds to condition expressions in SOSL. Example contains(CustomerID,'10248') eq true or contains(ShipName,'10248') eq true
SELECT	Type String Description Comma-separated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries and <code>\$select</code> in OData queries. Example CustomerID,OrderDate,OrderID,ShipCity,ShipCountry
STATUS	Type Boolean

Field	Details
	Description Whether the query was successful. Possible Values • 1—Success • 0—Failed
THROUGHPUT	Type Number Description Number of records retrieved in one second. Available in API version 42.0 and later. However, this field isn't supported for the OData 2.0 adapter on orgs created before Spring '18. Example 3025.67
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TOTAL_MS	Type Number Description How long it took (in milliseconds) to prepare and execute the query and to retrieve the query results.
USER_ID	Type Id Description 15-character ID of the user accessing the external system.

Field	Details
	Example 00530000009M943

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Flow Execution Event Type

Flow Execution events contain information about flows that were executed including details such as total execution time, number of interviews, and number of errors.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BOT_IDENTIFIER	Type string Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type string Description The bot session ID.
EVENT_TYPE	Type String Description The type of event. The value is always <code>FlowExecution</code> .
TIMESTAMP	Type String Description The time that the flow was executed in GMT. For example: 20210606032436.520.
REQUEST_ID	Type String

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: <code>TID:000000000000c00fff</code>.
<code>ORGANIZATION_ID</code>	Type Id Description The 15-character ID of the organization. For example: <code>00D000000000123</code>.
<code>USER_ID</code>	Type Id Description The 15-character ID of the user who executed the flow through the UI or the API. For example: <code>00530000009M943</code>
<code>PLANNER_IDENTIFIER</code>	Type string Description The ID of the agent planner.
<code>PROCESS_TYPE</code>	Type String Description The type of the flow. Valid values are: • <code>ActionableEventManagermentFlow</code>—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later. • <code>ActionCadenceAutoLaunchedFlow</code>—A flow that's executed when a user completes a cadence step. This value is available in API version 56.0 and later. • <code>ActionCadenceStepFlow</code>—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • <code>ActivityObjectMatchingFlow</code>—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later. • <code>Appointments</code>—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • <code>ApprovalWorkflow</code>—An orchestration that's used for an approval process. This value is available in API version 63.0 and later. • <code>AutoLaunchedFlow</code>—A flow that doesn't require user interaction.

Field	Details
	• CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request to be contacted by customer support. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • DataCaptureFlow— In the UI, Data Capture flows configure the Form tab in the Field Service mobile app. When the Data Capture flow is launched, its Flow metadata is publicly available in JavaScript format. This value is available in API version 62.0 and later. • DcvrFrameworkDataCaptureFlow—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later. • EvaluationFlow—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the <code>isOrchestrationConditionMet</code> output variable and discards values from any other output variables. This value is available in API version 54.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • FSClending—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • IdentityUserRegistrationFlow—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later. • IndicatorResultFlow—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • IndividualObjectLinkingFlow—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later. • InvocableProcess—A process that another process or the Invocable Actions resource in REST API invokes. This value is available in API version 38.0 and later. • Journey—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later.

Field	Details
	• LoginFlow—A flow for login. This value is available in API version 51.0 and later. • LoyaltyManagementFlow—A flow for the Loyalty Management app that's invocable by loyalty program processes. This value is available in API version 54.0 and later. • Orchestrator—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later. • PromptFlow—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later. • RecommendationStrategy—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies. • RoutingFlow—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • Survey—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • SurveyEnrich—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • Workflow—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use. • ActionPlan • AppProcess • ApprovalWorkflow • CartAsyncFlow • DigitalForm • JourneyBuilderIntegration • LoginFlow • ManagedContentFlow • OrchestrationFlow • SalesEntryExperienceFlow • TransactionSecurityFlow • UserProvisioningFlow
FLOW_VERSION_ID	Type Id Description The ID of the flow version that was executed.

Field	Details
FLOW_LOAD_TIME	Type Number Description The time in milliseconds to load the flow's metadata.
TOTAL_EXECUTION_TIME	Type Number Description The total time in milliseconds to start and finish all flow interviews.
NUMBER_OF_INTERVIEWS	Type Number Description The number of flow interviews that started after the flow version was executed.
NUMBER_OF_ERRORS	Type Number Description The number of errors for all flow interviews after the flow version was executed.
TIMESTAMP_DERIVED	Type DateTime Description The time that the flow was executed in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

Group Membership Event Type

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services.

Field	Details
	Example 96.43.144.26
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity that took place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always <code>GroupMembership</code> .
GROUP_ID	Type Id Description ID of the group whose membership changed. Example 00GXXXXXXXXXXXXX
GROUP_TYPE	Type String Description The type of group. Valid values are: • R—Public group • Q—Queue Example R
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2I
MEMBER_ID	Type Id

Field	Details
	Description The ID of the member added to or removed from the group. Public groups can contain individual users, other groups, or users in a specified role or territory. Queues can contain individual users, roles, public groups, territories, connections, or partner users. Example 005XXXXXXXXXXXXX or 00GXXXXXXXXXXXXX
OPERATION	Type String Description The operation that occurred, such as a member being added to or removed from a group. Valid values are: - AddedGroupMember - DeletedGroupMember Example DeletedGroupMember
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. Example 00DXXXXXXXXXXXXX
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds. Example 115
SESSION_KEY	Type String

Field	Details
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. Example d7DEq/ANa7nNZZVD
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z
URI	Type String Description The URI of the page that's receiving the request. Example /home/home.jsp
URI_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the URI of the page that's receiving the request. Example 005XXXXXXXXXXAY
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. Example 005XXXXXXXXXXXX

Field	Details
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005XXXXXXXXXXXXXIA0

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Hostname Redirects Event Type

Hostname Redirect events contain details about blocked and successful redirections for your previous My Domain hostnames. The Hostname Redirects event type is available in the EventLogFile object in API version 56.0 and later.

Note: The HostnameRedirects event type is disabled by default. To enable this event type, use the `logRedirections` field on the MyDomainSettings Metadata API type or enable the **Log Redirections** setting in the Routing section of the My Domain Setup page.

This event is free for all customers with a 24-hour data retention period. The hostname redirections event is available in the API but not in the Event Monitoring Analytics app. You can also download the latest hostname redirections event log file through a button on the My Domain page.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Fields

Field	Details
EVENT__TYPE	Type String Description The type of event. The value is always <code>HostnameRedirects</code>.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20220715233322.670

Field	Details
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 0000000062_0000x8Lz-
ORGANIZATION_ID	Type ID Description The 15-character ID of the org. Example 00D000000000345
USER_ID	Type ID Description This field is unused in the HostnameRedirects event type. The value is always null.
RUN_TIME	Type Number Description This field is unused in the HostnameRedirects event type. The value is always 0.
CPU_TIME	Type Number Description This field is unused in the HostnameRedirects event type. The value is always null.
URI	Type String Description This field is unused in the HostnameRedirects event type. The value is always null.
SESSION_KEY	Type String Description This field is unused in the HostnameRedirects event type. The value is always null.
LOGIN_KEY	Type String

Field	Details
	Description This field is unused in the HostnameRedirects event type. The value is always null.
MESSAGE	Type String Description This field is unused in the HostnameRedirects event type. The value is always null.
DOMAIN	Type Url Properties Filter, Sort Description This field is unused in the HostnameRedirects event type. The value is always null.
SOURCE_HOSTNAME	Type String Description The hostname of the URL from which the redirection originated. Example If <code>https://<i>oldMyDomainName</i>.my.salesforce.com</code> is redirected to <code>https://<i>newMyDomainName</i>.my.salesforce.com</code>, the value of this field is <i>oldMyDomainName</i>.my.salesforce.com
TARGET_HOSTNAME	Type String Description The hostname of the URL to which the user or API was redirected. Example If <code>https://<i>oldMyDomainName</i>.my.salesforce.com</code> is redirected to <code>https://<i>newMyDomainName</i>.my.salesforce.com</code>, the value of this field is <i>newMyDomainName</i>.my.salesforce.com
PATH	Type String Description The path of the originating URL request, up to the first question mark (?). The path is also used in the redirection target URL. However, this field doesn't include the query string, if present. Example If the user is redirected from <code>https://MyOldCompany.my.site.com/shop?q=sneakers</code> to

Field	Details
	<code>https://MyNewCompany.my.site.com/shop?q=sneakers</code>, the value of this field is <code>/shop</code>.
REDIRECT_REASON	Type String Description The reason for the hostname redirect event. Possible Values - Redirected due to a hostname mismatch.—The referring hostname was redirected to the current My Domain equivalent. - Redirection suppressed to prevent Lightning Out integration failure.—The <code>*.force.com</code> site URL can't be redirected for use with Lightning Out. To prevent issues, the original URL was processed as-is. To avoid issues after <code>*.force.com</code> site hostname redirections are stopped, update hard-coded references to the hostname in your Lightning Out integrations. For a Lightning Out code example that uses a site hostname, see Share Lightning Out Apps with Unauthenticated Users in the Salesforce Lightning Component Library. - Redirection was blocked because redirections for this hostname are disabled.—Only your last set of My Domain login hostnames is redirected. Those redirections are blocked when the My Domain Routing option Redirect previous My Domain URLs to your current My Domain is deselected or because you removed your previous My Domain. That option applies to legacy (non-enhanced) hostnames in production orgs until Spring '25. In non-production orgs, that option has no impact on redirections for legacy hostnames in Winter '25 and later. Non-production orgs include sandboxes, Developer Edition orgs, demo orgs, patch orgs, scratch orgs, and Trailhead Playgrounds. For information If the <code>SOURCE_HOSTNAME</code> is a legacy <code>*.force.com</code> site hostname, the redirection was blocked because the Redirect <i>previousSiteHostnames</i> URLs to your current My Domain site URLs Routing option was deselected on the My Domain Setup page. That option is available in production orgs until Spring '25. In non-production orgs, that option was removed in Winter '25. Non-production orgs include sandboxes, Developer Edition orgs, demo orgs, patch orgs, scratch orgs, and Trailhead Playgrounds. - Redirection was blocked because redirections for the legacy <code>SOURCE_HOSTNAME</code> are no longer supported.—If your org was created before June 2022, Salesforce served the org on a different set of hostnames until enhanced domains were deployed. The <code>SOURCE_HOSTNAME</code> is one of those hostnames. For non-production orgs, redirections for those hostnames stopped in Winter '25.
IS_BLOCKED_REDIRECTION	Type Boolean Description Indicates whether the redirection was blocked.

Field	Details
	Possible Values 1—The redirection was blocked and returned an HTTP 404 response. 0—The redirection proceeded and returned an HTTP 301 or 307 response.
REFERRER	Type String Description The absolute or partial address from which the request to the <code>SOURCE_HOSTNAME</code> came. The <code>Referrer-Policy</code> HTTP Header of the request determines how much of the URL is shared. For example, if a user clicked a link to the <code>SOURCE_HOSTNAME</code> from a web page, and that web page is on a different domain: - if the <code>Referrer-Policy</code> HTTP Header is <code>no-referrer-when-downgrade</code>, <code>REFERRER</code> includes the origin, path, and query-string parameters up to the first hash (<code>#</code>), if present. - if the <code>Referrer-Policy</code> HTTP Header is <code>strict-origin-when-cross-origin</code>, <code>REFERRER</code> includes the origin only. - if the <code>Referrer-Policy</code> HTTP Header is <code>same-origin</code>, <code>REFERRER</code> is null. Examples <code>https://www.example.com</code> <code>https://www.example.com/page/page/index.htm</code> <code>https://www.example.com/page/index.htm?q="Salesforce"</code>
ORIGIN	Type String Description The origin (protocol, hostname, and port) that caused the request to the <code>SOURCE_HOSTNAME</code>. For example, if a website on a different domain makes an XMLHttpRequest (XHR) to <code>SOURCE_HOSTNAME</code>, <code>ORIGIN</code> contains the base URL of that website. The port isn't included in the origin information with all requests. <code>ORIGIN</code> can be null in a number of situations, including but not limited to cross-origin requests and origins with a restrictive <code>Referrer-Policy</code> header. For example, if the request to the <code>SOURCE_HOSTNAME</code> is sent from a site external to Salesforce with a <code>RequestMode</code> of <code>no-cors</code>, <code>ORIGIN</code> is null. Examples <code>https://www.example.com</code> <code>https://www.example.com:443</code>
TIMESTAMP_DERIVED	Type DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). The time zone is always GMT.
	Example 2022-07-27T11:32:59.555Z.
USER_ID_DERIVED	Type String
	Description This field is unused in the HostnameRedirects event type. The value is always null.
CLIENT_IP	Type String
	Description The IP address of the client that made this request.
	Possible Values/Example 111.43.144.26
URI_ID_DERIVED	Type String
	Description This field is unused in the HostnameRedirects event type. The value is always null.

Usage

Use the information in the Hostname Redirects event log to determine the hostnames to update in your org after you deploy a change to your My Domain name. You can also use the log to develop communications to your customers and users about the changed hostnames. For example, you can encourage users to use the new hostnames and update their bookmarks. For more information on the steps to take after a My Domain change, see [Update Your Org and Test My Domain Changes](#) in Salesforce Help.

To access the log, use the HostnameRedirects event type from the EventLogFile object. Alternatively, you can download the current hostname redirections event log by clicking **Download Redirections Log** on the My Domain Setup page.

Each event, or each row in the redirection log, represents a redirection for a specific requested URL. Subsequent requests to the same URL within the hour following that request, however, aren't logged. If your last My Domain change included enhanced domains deployment, the log includes redirections for the old hostnames listed on [My Domain URL Format Changes with Enhanced Domains Deployment](#) in Salesforce Help.

Note: To keep the size of the log file manageable, the log includes one entry for each redirected hostname and path combination within an hour. As a result, the log includes all redirected hostname and path combinations, but only includes the first redirection within each hour.

For example, if `https://MyCompany.my.site.com/shop` is redirected at 02:01 PM and `https://MyCompany.my.site.com/shop?q=sneakers` is redirected for another user at 02:02 PM, only the redirection that occurred at 02:01 PM is captured for `MyCompany.my.site.com/shop` for that hour. But if

`https://MyCompany.my.site.com/help` is redirected at 2:05 PM, that redirection is captured on a new line because the `MyCompany.my.site.com/help` hostname and path combination differs from `MyCompany.my.site.com/shop`.

Similarly, if the redirection of `https://MyCompany.my.site.com/contactUs` is blocked at 07:02 AM and `https://MyCompany.my.site.com/contactUs` is redirected at 07:11 AM, only the blocked redirection for `MyCompany.my.site.com/contactUs` is captured in the log for that hour.

Only one hostname redirection log file is available at a time. When the daily incremental event log file is generated during the daily background process, the new file replaces the existing file. When you download the redirections log from the My Domain Setup page, you get the latest daily log file in CSV format.

If the log file doesn't exist, either the log generation process hasn't run yet or there's no redirection data to report for that 24-hour window. The log file is generated only when at least one redirection occurred for the day.

To collect hostname redirection logs for multiple days, schedule a daily query of the Hostname Redirects event type via REST API. For example, you can configure a cron job in Unix or a scheduled task in Windows to run the query.

Salesforce CLI Example

To use Salesforce CLI to query the Hostname redirects log, use the `sf data query` command to query the HostnameRedirects EventType.

First, download and install [Salesforce CLI](#).

Example

This Unix example authorizes Salesforce CLI to access your org and sets `orgAlias` to your org login URL. This method prompts you to log in to your org via a browser to grant Salesforce CLI access. To query event log files, log in as a user with the View Event Log Files and API Enabled permissions.

```
sf org web login --alias orgAlias --instance-url https://MyDomainName.my.salesforce.com
```

Example response

After you authenticate with a user via a browser, this response confirms that Salesforce CLI is authorized for use in your org.

```
Successfully authorized admin@mycompany.com with org ID 00D000000000000aIW
```

Then export the HostnameRedirects log to a CSV file.

Example

This example exports the HostnameRedirects EventType to a CSV file in your org, where `orgAlias` is your org's alias within Salesforce CLI.

```
ORGALIAS=orgAlias; QUERYRESULT=$(sf data query --target-org "$ORGALIAS" --query "SELECT
  LogDate, LogFile FROM EventLogFile WHERE EventType='HostnameRedirects' ORDER BY
  CreatedDate DESC LIMIT 1" --json); QUERYSTATUS=$(echo "$QUERYRESULT"|grep \"status\"|cut
  -d : -f 2|cut -d , -f 1); if [[ \"$QUERYSTATUS\" -eq 0 ]]; then LOGDATE=$(echo
  \"$QUERYRESULT"|grep LogDate|cut -d \" -f 4|cut -d T -f 1); if [[ \"$LOGDATE\" == \"\" ]];
  then echo \"No daily event log file exists for hostname redirects.\"; else
  DOWNLOADPATH=$(echo \"$QUERYRESULT"|grep \"url\"|cut -d \" -f 4); ORGDISPLAY=$(sf org
  display --target-org \"$ORGALIAS\" --json 2> /dev/null); SESSION=$(echo \"$ORGDISPLAY"|grep
  accessToken|cut -d \" -f 4); ORGURL=$(echo \"$ORGDISPLAY"|grep instanceUrl|cut -d \" -f
  4); curl -H \"Authorization: Bearer ${SESSION}\" --silent ${ORGURL}${DOWNLOADPATH}/LogFile
  > HostnameRedirectEvent-${LOGDATE}.csv; fi; else echo \"$QUERYRESULT\"; fi
```

For more information on Salesforce CLI, see the Salesforce CLI Setup Guide, Salesforce CLI Command Reference, and the Salesforce DX Developer Guide.

REST API Example

To use REST API to query the Hostname Redirects event log, use the [Query](#) resource to retrieve field values from a record. Specify the fields you want to retrieve in the fields parameter and use the GET method of the resource.

Example

This example retrieves the HostnameRedirects event log based on `Field` and `EventType` via a GET request. Replace `token` with your access token. In a production org, replace `MyDomainName` with your My Domain name. In a sandbox, replace `MyDomainName.my.salesforce.com` with your org's My Domain login hostname.

```
curl https://MyDomainName.my.salesforce.com/services/data/v66.0/query?q=SELECT+
LogDate%2C+LogFile+FROM+EventLogFile+WHERE+EventType%3D%27HostnameRedirects%27
+ORDER+BY+CreatedDate+DESC+LIMIT+1 -H "Authorization: Bearer token"
```

Example raw response

```
{ "totalSize":1, "done":true, "records":[{"attributes":
{ "type":"EventLogFile", "url":"/services/data/v56.0/objects/EventLogFile/
0AT00000003KxUSWA0"}, "LogDate":"2022-08-03T00:00:00.000+0000", "LogFile":"
/services/data/v56.0/objects/EventLogFile/0AT00000003KxUSWA0/LogFile"}]}
```

The log file can be downloaded by using curl with the same Authorization header while setting the URL path to the `LogFile` value from the output.

For more information on accessing event log files via REST API, see [Using Event Monitoring](#) in the REST API Developer Guide.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Insecure External Assets Event Type

Insecure External Assets events contain information about external assets. External assets include images or videos accessed by users over an insecure HTTP protocol. The event lists all your Salesforce pages that contain assets hosted insecurely on third-party sites that users loaded with a Chrome, Firefox, Microsoft Edge, or Safari browser. The `INSECURE_URI` field contains the URI being used to load the asset insecurely. The Insecure External Assets event type is available in the EventLogFile object in API version 42.0 and later.

Assets over HTTP can be manipulated through man-in-the-middle and other types of attacks. These attacks can trick users into sending their Salesforce credentials to malicious sites. Always use HTTPS in your custom code and templates for any asset you're loading from external sites.

Important: Because HTTPS connections are required to load external assets, Insecure External Assets events no longer apply. In Spring '25 and later, this event type captures no data.

To view blocked redirections and content security policy (CSP) violations for your org, use the [BrowserPolicyViolation](#) object.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer's Guide](#).

Fields

Field	Details
ASSET_TYPE	Type String Description Type of insecure asset. Possible Values • Base URI • Connect • Font • Frame Ancestor: External page that embeds the Salesforce page in an iframe • Frame • Image

Field	Details
	• Media • Object • Other • Plugin Types • Script • Style
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DISPOSITION	Type String Description If the insecure external asset is related to your content security policy (CSP), the HTTP header that identified the insecure asset. Available in API version 61.0 and later. Possible Values • <code>enforce</code>—The <code>Content-Security-Policy</code> header identified the insecure external asset. • <code>report</code>—The <code>Content-Security-Policy-Report-Only</code> header identified the insecure external asset.
DOCUMENT_URI	Type String Description URL of the page that contains the insecure asset, excluding the query parameter. Example <code>https://company.my.salesforce.com/00XXXXXXXXX</code>
EVENT_TYPE	Type String

Field	Details
	Description The type of event. The value is always <code>InsecureExternalAssets</code> .
INSECURE_URI	Type String Description Insecure external asset URL being used to load an asset insecurely. For example, loading Javascript libraries using <code>http://ajax.googleapis.com/</code> in your custom code logs an Insecure External Asset Event with the <code>INSECURE_URI</code> field set to this URL. Find this reference in your code and update it to use <code>https://ajax.googleapis.com/</code> instead. Example <code>http://pbs.twimg.com/profile_images/5699091412070816/Z4Stwts_normal.jpeg</code>
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code> .
NETWORK_ID	Type String Description The ID of the Experience Cloud site related to the request, if applicable. Available in API version 61.0 and later.
ORGANIZATION_ID	Type String Description The 15-character ID of the org. Example <code>00D0000000000123</code>
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code> .

Field	Details
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TYPE	Type String Description Type of Salesforce page. Possible Values - Appserver—Page without My Domain subdomain (for example, https://na44.salesforce.com) - Communities—Customer Experience Cloud site - Email—Email preview - Login—Login page (for example, https://login.salesforce.com) - Mydomain—Page on My Domain subdomain (for example, https://mycompany.my.salesforce.com) - Sites—Customer site - Static—Static content (for example, https://sfdcstatic.com) - Unknown—other type of page

Field	Details
UNIQUE_ID	Type String Description The 32-character ID of the event log file in which the insecure external asset event data is found. Example 44e128a5-ac7a-4c9a-be4c-224b6bf81b20
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

Usage

UNIQUE_ID is used by Salesforce Customer Support to troubleshoot any issues that occur.

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Insufficient Access Event Type

Insufficient Access events contain details about errors relating to insufficient account, case, contact, and opportunity record access, so that you can troubleshoot and resolve access issues for your users.

Note: The Insufficient Access event type is disabled by default. You can enable this event type for a period of 24 hours by contacting Salesforce Customer Support.

These insufficient access error scenarios are logged:

- The user can't share a case, contact, or opportunity because the user doesn't have permission to share the parent account or the recipient of the share doesn't currently have read access to the parent account.
- The user can't change ownership of a case, contact, or opportunity because the user doesn't have permission to share the parent account or the new owner doesn't currently have read access to the parent account.
- The user can't change the parent account of a case, contact, or opportunity because the user doesn't have permission to share the new parent account or the owner of the case, contact, or opportunity doesn't have read access to the new parent account.

Insufficient access errors resulting from bulk operations involving two or more records aren't logged.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

For more information on interpreting Insufficient Access events, see this [knowledge article](#).

Fields

Field	Details
ACCESS_ERROR	Type String Description The type of insufficient access error that the user received. Valid values are: • DATA_NOT_AVAILABLE—The record is no longer accessible. For example, a record was deleted and moved to the Recycle Bin. • INVALID_TYPE—The record type doesn't exist. • NO_ACCESS—The user doesn't have the required access level to complete the attempted action on the record. Example NO_ACCESS
ACTUAL_LOGGED_IN_USER_ID	Type Id Description The 15-character ID of the user who initiated the action that caused the insufficient access error. For example, a user attempts to transfer ownership of a record to a teammate, but the operation fails because the teammate doesn't have the required access. In this scenario, the ACTUAL_LOGGED_IN_USER_ID is the user who attempted to transfer access, and the USER_ID is their teammate. Example 005XXXXXXXXXXXXX

Field	Details
ENTITY_TYPE	Type String Description The object for which the user received the insufficient access error. Access errors for the account, case, contact, and opportunity objects are supported. Example Account
ERROR_DESCRIPTION	Type String Description Description of the insufficient access error that the user received. Example User 005XXXXXXXXXXXXX doesn't have full access for the record 001XXXXXXXXXXXXX.
ERROR_TIMESTAMP	Type String Description The time in GMT that the insufficient access error occurred. Example 20130715233322.670
EVENT_TYPE	Type String Description The type of event. The value is always <code>InsufficientAccess</code>.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. Example 00DXXXXXXXXXXXXX
RECORD_ID	Type String Description The ID of the record that the user doesn't have access to. Example 001XXXXXXXXXXXXX

Field	Details
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
REQUESTED_ACCESS_LEVEL	Type String Description The access level required by the user's attempted action on the record. Valid values are: • DELETE • FULL • READ • TRANSFER • WRITE Example FULL
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z
USER_ID	Type Id Description The 15-character ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record, the user couldn't complete an operation, or the user was

Field	Details
	the intended recipient of a record transfer that failed because the user didn't have the required access. Example 005XXXXXXXXXXXXX
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record or the user was the intended recipient of a record transfer that wasn't completed. Example 005XXXXXXXXXXXXXIA0

Invocable Action Event Type

Invocable Action events capture the calls to Salesforce Invocable Actions. This is particularly useful to monitor actions invoked during Agentforce flows. This event type is available in API versions 64.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ACTION_NAME	Type String Description Name of the action.
ACTION_TYPE	Type String Description InvocableActionType being referenced.
ACTION_VERSION	Type String

	Description The invocable action version.
AGENT_ACTION	Type String Description The API name of the agent action that invoked the action. This field is available in API version 66.0 or later.
API_CALLER	Type String Description Identifier of the API caller. This is only populated when the action is invoked from a REST API call
BOT_IDENTIFIER	Type string Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type string Description The bot session ID.
DURATION	Type String Description Time (in nanos) taken to process this set of requests.
EVENT_TYPE	Type String Description The type of event. The value is always <code>InvocableAction</code> .
FLOW_PROCESS_TYPE	Type String Description The process type of the calling flow.
FLOW_VERSION_ID	Type String Description The ID of the version of the calling flow.

INVOCATION_SOURCE

Type

String

Description

Indicates the source type that invoked the action. Valid values are:

- Agent Action
- Apex
- Bot
- Flow
- Internal
- Prompt Template
- REST

This field is available in API version 66.0 or later.

INVOKING_APEX_CLASS_NAME

Type

String

Description

The fully qualified name of the Apex class that invoked the action. This field is available in API version 66.0 or later.

ORGANIZATION_ID

Type

Id

Description

The number of invoked requests.

PLANNER_IDENTIFIER

Type

string

Description

The ID of the agent planner.

PROMPT_TEMPLATE

Type

string

Description

The API name of the prompt template that invoked the action. This field is available in API version 66.0 or later.

REQUEST_COUNT

Type

Number

Description

The number of invoked requests.

REQUEST_ID

Type

String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	Type String Description ID of the user employing salesforce.com services, whether through the user interface or API

Knowledge Article View Event Type

Knowledge Article View events contain user activity with your knowledge base.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ARTICLE_ID	Type Id Description The 15-character ID of the article. For example: 00Dxx0000001gEb.
ARTICLE_STATUS	Type Character Description Possible values are: • D—Draft

- O—Online
- A—Archived

ARTICLE_VERSION

Type

Number

Description

Article version number.

For example: 2.

ARTICLE_VERSION_ID

Type

Id

Description

The 15-character ID of the article version.

For example: ka0R00000005rt6.

CONTEXT

Type

String

Description

Context of the request.

Description

Possible values are:

- Apex
- API
- empty string

ENTITY

Type

String

Description

Entity requested.

For example: Knowledge__kav.

EVENT_TYPE

Type

String

Description

The type of event. The value is always KnowledgeArticleView.

LANGUAGE

Type

String

Description

iso-code of the language.

For example: en_US/

Example	
LARGE_LANGUAGE_MODEL	Type String Description The name of the large language model (LLM) that generated the knowledge article version.
LAST_VERSION	Type Boolean Description True if it is the last version. Possible values are: • True • False
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
SESSION_ID	Type String Description Session ID of the request. For example: gV7pCSW2vGaaJNF13GSpuPIjNbKVbSxRvx34LJsIvuc=. Example
TIMESTAMP	Type String Description The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. The timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

Character

Description

User type of the request.

Possible values are:

- A—App
 - C—Customer Portal
 - P—Partner Portal
 - G—guest
 -
-

Lightning Error Event Type

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
APP_NAME	Type String Description The name of the application that the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, Safari
BROWSER_VERSION	Type String Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> . Example United States/California
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". Example 96.43.144.26
COMPONENT_NAME	Type String

Field	Details
	Description The internal name of the standard component that generated the error. The Salesforce developer assigned the name when the standard component was created. Example SaveEdit, Lead.CCPM_sendSMS, ChangeOwnerOne
CONNECTION_TYPE	Type String Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DEVICE_ID	Type String Description The unique identifier used to identify a device when tracking events. <code>DEVICE_ID</code> is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	Type String Description The name of the device model. Example iPad, iPhone
DEVICE_PLATFORM	Type String

Field	Details
	Description The type of application experience in <code>name:experience:form</code> format. Possible Values • <code>name: APP_BUILDER, CUSTOM, S1, SFX</code> • <code>experience: BROWSER, HYBRID</code> • <code>form: DESKTOP, PHONE, TABLET</code>
DEVICE_SESSION_ID	Type Id Description The unique identifier of the user's session based on page load time. If the user reloads a page, it starts a new session. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
EVENT_TYPE	Type String Description The type of event. The value is always <code>LightningError</code>.
LOGIN_KEY	Type String Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2I
MESSAGE	Type String Description The error message generated.
ORGANIZATION_ID	Type String Description The 15-character ID of the org. Example 00D000000000123

Field	Details
OS_NAME	Type String Description The operating system name, derived from USER_AGENT. Example Android, iOS, OSX, Windows
OS_VERSION	Type String Description The operating system version, derived from USER_AGENT.
PAGE_APP_NAME	Type String Description The internal name of the application that the user accessed from the App Launcher. Example LightningSales
PAGE_CONTEXT	Type String Description Context of the page where the event occurred. Example clients:cardsContainer
PAGE_ENTITY_ID	Type Id Description The unique entity identifier of the event. Example 0013000000I3zJAAAZ
PAGE_ENTITY_TYPE	Type String Description The entity type of the event. Example Task, Account

Field	Details
PAGE_START_TIME	Type Number Description The time when the page was initially loaded, measured in milliseconds. Example 1471564788642
PAGE_URL	Type String Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. Example /sObject/0064100000JXITSAA5/view
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
SDK_APP_TYPE	Type String Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	Type String Description The mobile SDK application version number. Example 5.0

Field	Details
SDK_VERSION	Type String Description The mobile SDK version number. Example 2.1.0
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When a user logs out and logs in again, a new session is started. Example cdd09305cb6babf34059e27f70e47f1b11dec868
STACK_TRACE	Type String Description The stack trace contains the location in the code where the error occurred along with the calling frames that led to the error.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z. The timezone is GMT.
UI_EVENT_ID	Type String Description ID of the Lightning event type.

Field	Details
	Possible Values • ltng:error • ltng:interaction • ltng:pageView • ltng:performance
UI_EVENT_SEQUENCE_NUM	Type Number Description An auto-incremented sequence number of the current event since the session started.
UI_EVENT_SOURCE	Type String Description The source of the error event. Examples Here are some examples of error flags returned in this field. • AuraError • Error • InvalidStateError • RangeError • ReferenceError • SecurityError • SyntaxError • TypeError • unknown
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurred, measured in milliseconds. Example 1479769912796
UI_EVENT_TYPE	Type String Description The type of error event. Example error, info, warn

Field	Details
USER_AGENT	Type String Description The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string.
USER_ID	Type String Description The 15-character ID of the user accessing Salesforce services through the UI or API. Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard

Field	Details
	• x: Salesforce Administrator

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Lightning Interaction Event Type

Lightning Interaction events track user actions in Lightning Experience and the Salesforce mobile app, such as the user clicking, tapping, or scrolling on a page. This event type is available in the EventLogFile object in API version 39.0 and later.

Warning: The Lightning Interaction Event type is a best effort logging of user interactions but is not intended to meet privacy and security audit requirements. Not all interactions or CRUD operations are tracked and data loss may occur.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
APP_NAME	Type String Description The name of the application that the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, Safari
BROWSER_VERSION	Type String Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> .

Field	Details
	Example United States/California
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". Example 96.43.144.26
COMPONENT_NAME	Type String Description The internal name of the standard component that the user interacted with. The Salesforce developer assigned the name when the standard component was created. Example SaveEdit, Lead.CCPM_sendSMS, ChangeOwnerOne
CONNECTION_TYPE	Type String Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE

Field	Details
	WIFI
DEVICE_ID	Type String Description The unique identifier used to identify a device when tracking events. <code>DEVICE_ID</code> is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	Type String Description The name of the device model. Example iPad, iPhone
DEVICE_PLATFORM	Type String Description The type of application experience in <code>name:experience:form</code> format. Possible Values <code>name: APP_BUILDER, CUSTOM, S1, SFX</code> <code>experience: BROWSER, HYBRID</code> <code>form: DESKTOP, PHONE, TABLET</code>
DEVICE_SESSION_ID	Type Id Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DURATION	Type Number Description The duration in milliseconds since the page start time.
EVENT_TYPE	Type String Description The type of event. The value is always <code>LightningInteraction</code>.

Field	Details
GRANDPARENT_UI_ELEMENT	Type String Description Grandparent scope of the page element where the event occurred.
LOGIN_KEY	Type String Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2I
ORGANIZATION_ID	Type String Description The 15-character ID of the org. Example 00D000000000123
OS_NAME	Type String Description The operating system name, derived from USER_AGENT. Example Android, iOS, OSX, Windows
OS_VERSION	Type String Description The operating system version, derived from USER_AGENT.
PAGE_APP_NAME	Type String Description The internal name of the application that the user accessed from the App Launcher. Example LightningSales
PAGE_CONTEXT	Type String

Field	Details
	Description Context of the page where the event occurred. Example <code>clients:cardsContainer</code>  Note: A value of UNKNOWN means that the page hasn't finished loading, so the context can't be identified.
PAGE_ENTITY_ID	Type Id Description The unique entity identifier of the event. Example <code>0013000000I3zJAAZ</code>
PAGE_ENTITY_TYPE	Type String Description The entity type of the event. Example <code>task, contacts</code>  Note: A value of UNKNOWN means that the page hasn't finished loading or the page isn't displaying a record, so the entity type can't be identified.
PAGE_START_TIME	Type Number Description The time when the page was initially loaded, measured in milliseconds. Example <code>1471564788642</code>
PAGE_URL	Type String Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. Example <code>/sObject/0064100000JXITSAA5/view</code>  Note: A value of UNKNOWN means that the page hasn't finished loading, so the URL can't be identified.

Field	Details
PARENT_UI_ELEMENT	Type String Description Parent scope of the page element where the event occurred.
RECORD_ID	Type String array Description The IDs of one or more records that the user interacted with. For more information on the user interaction, see UI_EVENT_TYPE and UI_EVENT_SOURCE fields. Example ["5004100000JaGGLAA3", "5004100000Dn79CAAR", "50041000007KeugAAC"]
RECORD_TYPE	Type String Description The type of record object that the user interacted with. Example Account, Opportunity
RELATED_LIST	Type String Description The type of related list that the user clicked. Example Opportunity
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
SDK_APP_TYPE	Type String Description The mobile SDK application type.

Field	Details
	Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	Type String Description The mobile SDK application version number. Example 5.0
SDK_VERSION	Type String Description The mobile SDK version number. Example 2.1.0
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. Example cdd09305cb6babf34059e27f70e47f1b11dec868
TARGET_UI_ELEMENT	Type String Description The target page element where the event occurred. Example tabitem-link
TIMESTAMP	Type String Description The access time of Salesforce services in GMT.

Field	Details
	For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z. The timezone is GMT.
UI_EVENT_ID	Type String Description Id of the Lightning event type. Possible Values • ltng:error • ltng:interaction • ltng:pageView • ltng:performance
UI_EVENT_SEQUENCE_NUM	Type Number Description An auto-incremented sequence number of the current event since the session started.
UI_EVENT_SOURCE	Type String Description The user action on the record or records in RECORD_ID. This field's value indicates whether the user's action was on a single record or multiple records. For example, <code>read</code> indicates that one record was read (such as on a record detail page); <code>reads</code> indicates that multiple records were read (such as in a list view). Examples • click • create • delete • hover • read • update

Field	Details
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurred, measured in milliseconds. Example 1479769912796
UI_EVENT_TYPE	Type String Description The type of interaction with the records in RECORD_ID. Example crud, system, user, userInteraction
USER_AGENT	Type String Description The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string.
USER_ID	Type String Description The 15-character ID of the user accessing Salesforce services through the UI or API. Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process

Field	Details
	• b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • x: Salesforce Administrator

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Lightning Logger Event Type

Lightning Logger events contain information from observed Lightning component logs. This event type is available in the EventLogFile object in API version 58.0 and later.

To enable Lightning Logger events, from Setup, in the Quick Find box, enter *event*, and then select **Event Monitoring Settings**. Turn on Lightning Logger Events.

Note: The browser sends Lightning Logger event logs to the server in batches. Batches are sent when the user interacts with the page and when the page closes or refreshes. If the user experiences connectivity issues or if their login session expires due to browser inactivity, any pending Lightning Logger event logs on the browser are erased. There isn't a way to retrieve these lost logs.

The limit for Lightning Logger events is 30,000 events per minute per organization. Burst capacity may support up to 45,000-50,000 events per minute, but this is not guaranteed. The `MESSAGE` field shows details about what's logged when the limit is hit.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
APP_NAME	Type String

	Description The name of the application the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, IE, Safari, Gecko
BROWSER_VERSION	Type String Description The user's browser version in <code>major.minor</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> . Example United States/California
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP". Example 96.43.144.26
CONNECTION_TYPE	Type String Description The type of connection.

Possible Values

- CDMA1x
- CDMA
- EDGE
- EVDO0
- EVDOA
- EVDOB
- GPRS
- HRPD
- HSDPA
- HSUPA
- LTE
- WIFI

DEVICE_MODEL

Type

String

Description

The name of the device model.

Example

iPad, iPhone

DEVICE_PLATFORM

Type

String

Description

The type of application experience in
name:experience:form format.

Possible Values

Name

- APP_BUILDER
- CUSTOM
- S1
- SFX

Experience

- BROWSER
- HYBRID

Form

- DESKTOP
- PHONE
- TABLET

DEVICE_SESSION_ID

Type

Id

Description

The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started.

Example

321a1ddfaf924803a075f1e69fc87bc06f53ccd0

EVENT_TYPE

Type

String

Description

The type of event. The value is always `LightningLogger`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

Example

GeJCsym5eyvtEK2l

MESSAGE

Type

String

Description

The message passed to the `lightning/logger log()` method. The message can be a JSON object or a string. String length is limited to 4 KB (4096 characters).

If you hit the logger limit, subsequent events are muted for a minute. During this time, the message field is replaced with this text: `Rate limiting hit for this organization.` Lightning Logger events resume when the limit resets in the next minute.

ORGANIZATION_ID

Type

String

Description

The 15-character ID of the org.

Example

00D000000000123

OS_NAME

Type

String

	Description The operating system name, derived from the User Agent.
	Example Android, iOS, OSX, Windows
OS_VERSION	Type String
	Description The operating system version, derived from the User Agent.
PAGE_CONTEXT	Type String
	Description The name of the component hosting the main page content.
	Example clients:cardsContainer
PAGE_ENTITY_ID	Type Id
	Description The entity ID (if any) of the record being displayed.
	Example 0013000000I3zJAAAZ
PAGE_ENTITY_TYPE	Type String
	Description The entity type of the page being displayed.
	Example Task, contacts
PAGE_URL	Type String
	Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL.
	Example /s/Object/0064100000JXITSAA5/view
REQUEST_ID	Type String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
	Example 3nWgxWbDKWWDik0FKfF5DV
SDK_APP_TYPE	Type String Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	Type String Description The mobile SDK application version number. Example 5.0
SDK_VERSION	Type String Description The mobile SDK version number. Example 2.1.0
SEQUENCE	Type Number Description An auto-incremented sequence number of the current event since the session started.
SESSION_KEY	Type String

	Description The user's unique session ID. Use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. Example cdd09305cb6babf34059e27f70e47f1b11dec868
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z. The timezone is GMT.
UI_EVENT_RELATIVE_TIMESTAMP	Type Number Description Difference in milliseconds between when the message was logged and when the browser tab was opened. Example 29322.23
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurred, measured in milliseconds. Example 1479769912796
USER_ID	Type String Description The 15-character ID of the user accessing Salesforce services through the UI or API.

	Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 0059000000001SNIA0
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self-Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • x: Salesforce Administrator

Lightning Page View Event Type

Lightning Page View events represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app, such as the page's load time. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
APP_NAME	Type String Description The name of the application that the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, Safari
BROWSER_VERSION	Type String Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> . Example United States/California
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as <code>Salesforce.com IP</code> . Example 96.43.144.26
CONNECTION_TYPE	Type String

Field	Details
	Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DEVICE_ID	Type String Description The unique identifier used to identify a device when tracking events. DEVICE_ID is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	Type String Description The name of the device model. Example iPad, iPhone
DEVICE_PLATFORM	Type String Description The type of application experience in name:experience:form format. Possible Values • name: APP_BUILDER, CUSTOM, S1, SFX • experience: BROWSER, HYBRID • form: DESKTOP, PHONE, TABLET
DEVICE_SESSION_ID	Type Id

Field	Details
	Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DURATION	Type Number Description If the page completes loading, then DURATION indicates the duration of time in milliseconds between PAGE_START_TIME and when the loading completes. In this case, DURATION corresponds to EFFECTIVE_PAGE_TIME. If the page doesn't complete loading, then DURATION indicates the duration of time in milliseconds between PAGE_START_TIME and when the user navigates to another page.
EFFECTIVE_PAGE_TIME	Type Double Description Indicates how many milliseconds it takes for the page to load before a user can interact with the page. Multiple factors can affect effective page time (EPT), such as network speed, hardware performance, or page complexity.
EFFECTIVE_PAGE_TIME_DEVIATION	Type Boolean Description When a deviation is detected, EFFECTIVE_PAGE_TIME_DEVIATION records true. The default value is false.
EFFECTIVE_PAGE_TIME_DEVIATION_ERROR_TYPE	Type String Description Indicates the origin of an error. This field is populated when EFFECTIVE_PAGE_TIME_DEVIATION_REASON contains the PAGE_HAS_ERROR value. Possible Values - CUSTOM—An error originating from the customer's system or network. - SYSTEM—An error originating in Salesforce.
EFFECTIVE_PAGE_TIME_DEVIATION_REASON	Type String Description The reason for deviation in page loading time.

Field	Details
	Possible Values • <code>PageHasError</code>—An undefined page loading error occurred. • <code>PageNotLoaded</code>—If a customer navigates away from a page while loading processes are in progress, the page doesn't finish loading. • <code>PreviousPageNotLoaded</code>—When navigating to a new page, and the previous page hasn't completed loading, the next page is considered to have a deviation. Incomplete loading processes on a previous page can affect how the next page loads. • <code>InteractionsBeforePageLoaded</code>—A user interacts with a page element before the page is fully loaded. • <code>PageInBackgroundBeforeLoaded</code>—A background loading process runs on a page. Background processes run when a user navigates away from a page to another browser tab. The browser de-prioritizes the page in the background until the user activates the page's tab. Because a user can leave a page in the background for a long time, the page is expected to have a high Effective Page Time (EPT).
EVENT_TYPE	Type String Description The type of event. The value is always <code>LightningPageView</code>.
GRANDPARENT_UI_ELEMENT	Type String Description The grandparent scope of the page element where the event occurred.
LOGIN_KEY	Type String Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example <code>GeJCsym5eyvtEK2I</code>
ORGANIZATION_ID	Type String Description The 15-character ID of the org. Example <code>00D0000000000123</code>
OS_NAME	Type String

Field	Details
	Description The operating system name, derived from USER_AGENT. Example Android, iOS, OSX, Windows
OS_VERSION	Type String Description The operating system version, derived from USER_AGENT.
PAGE_APP_NAME	Type String Description The internal name of the application that the user accessed from the App Launcher. Example LightningSales
PAGE_CONTEXT	Type String Description The name of the component hosting the main content of the page. Example clients:cardsContainer
PAGE_ENTITY_ID	Type Id Description The ID of the record that the user accessed which triggered the event on the page. Example 00130000000I3zJAAAZ
PAGE_ENTITY_TYPE	Type String Description The entity type of the event. Example Task, contacts
PAGE_FLEXI_PAGE_NAME_OR_ID	Type String

Field	Details
	Description The page name or identifier. Example runtime_sales_seller_home__SellerHome_L
PAGE_FLEXI_PAGE_TYPE	Type String Description The page type. Example HomePage
PAGE_START_TIME	Type Number Description The time when the page starts loading, measured in milliseconds. Example 1471564788642
PAGE_URL	Type String Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. Example /sObject/0064100000JXITSAA5/view
PARENT_UI_ELEMENT	Type String Description The parent scope of the page element where the event occurred.
PREVPAGE_APP_NAME	Type String Description The internal name of the previous application that the user accessed from the App Launcher. Example LightningSales
PREVPAGE_CONTEXT	Type String

Field	Details
	Description The context of the previous page where the event occurred. Example <code>clients:cardsContainer</code>
PREVPAGE_ENTITY_ID	Type Id Description The unique previous page entity identifier of the event.
PREVPAGE_ENTITY_TYPE	Type String Description The previous page entity type of the event. Example <code>Task, contacts</code>
PREVPAGE_URL	Type String Description The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened. Example <code>/sObject/006410000</code>
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example <code>3nWgxWbDKWWDIk0FKfF5DV</code>
SDK_APP_TYPE	Type String Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE

Field	Details
	• NATIVE • REACTNATIVE
SDK_APP_VERSION	Type String Description The mobile SDK application version number. Example 5 . 0
SDK_VERSION	Type String Description The mobile SDK version number. Example 2 . 1 . 0
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. Example cdd09305cb6babf34059e27f70e47f1b11dec868
TARGET_UI_ELEMENT	Type String Description The target page element where the event occurred. Example tabitem-link
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322 . 670.
TIMESTAMP_DERIVED	Type DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. The timezone is GMT.
UI_EVENT_ID	Type String Description Id of the Lightning event type. Possible Values • ltng:error • ltng:interaction • ltng:pageView • ltng:performance
UI_EVENT_SEQUENCE_NUM	Type Number Description An auto-incremented sequence number of the current event since the session started.
UI_EVENT_SOURCE	Type String Description This field is being deprecated and is mostly null, except in mobile app views where it indicates the page type of views where the context is "native."
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurred, measured in milliseconds. Example 1479769912796
USER_AGENT	Type String Description The type of client used to make the request (for example, the browser, application, or API) as a string.
USER_ID	Type String

Field	Details
	Description The 15-character ID of the user accessing Salesforce services through the UI or API. Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • E: Self-Service • G: Guest • I: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator

[EventLogFile](#)

Lightning Performance Event Type

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This event type is available in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
APP_NAME	Type String Description The name of the application that the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, Safari
BROWSER_VERSION	Type String Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> . Example United States/California
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CONNECTION_TYPE	Type String Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DEVICE_ID	Type String Description The unique identifier used to identify a device when tracking events. DEVICE_ID is a generated value that's created when the mobile app is initially run after installation.
DEVICE_MODEL	Type String Description The name of the device model. Example iPad, iPhone
DEVICE_PLATFORM	Type String Description The type of application experience in name:experience:form format.

Field	Details
	Possible Values • name: APP_BUILDER, CUSTOM, S1, SFX • experience: BROWSER, HYBRID • form: DESKTOP, PHONE, TABLET
DEVICE_SESSION_ID	Type Id Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DURATION	Type Number Description The duration in milliseconds since the page start time.
EVENT_TYPE	Type String Description The type of event. The value is always <code>LightningPerformance</code> .
LOGIN_KEY	Type String Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2I
ORGANIZATION_ID	Type String Description The 15-character ID of the org. Example 00D000000000123
OS_NAME	Type String

Field	Details
	Description The operating system name, derived from USER_AGENT. Example Android, iOS, OSX, Windows
OS_VERSION	Type String Description The operating system version, derived from USER_AGENT.
PAGE_START_TIME	Type Number Description The time when the page was initially loaded, measured in milliseconds. Example 1471564788642
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
SDK_APP_TYPE	Type String Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	Type String Description The mobile SDK application version number.

Field	Details
	Example 5.0
SDK_VERSION	Type String Description The mobile SDK version number. Example 2.1.0
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. Example cdd09305cb6babf34059e27f70e47f1b11dec868
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z. The timezone is GMT.
UI_EVENT_ID	Type String Description Id of the Lightning event type. Possible Values - ltng:error - ltng:interaction

Field	Details
	• <code>ltng:pageView</code> • <code>ltng:performance</code>  Note: Any other value, such as <code>ltng:bootstrap</code>, is for internal usage only.
UI_EVENT_SOURCE	Type String Description The user action on the record or records. This field's value indicates whether the user's action was on a single record or multiple records. For example, <code>read</code> indicates that one record was read (such as on a record detail page); <code>reads</code> indicates that multiple records were read (such as in a list view). Example • <code>click</code> • <code>create</code> • <code>delete</code> • <code>hover</code> • <code>read</code> • <code>update</code>
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurred, measured in milliseconds. Example 1479769912796
UI_EVENT_TYPE	Type String Description The type of performance event. Example <code>bootstrap, defs, performance</code>
USER_AGENT	Type String Description The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string.
USER_ID	Type String

Field	Details
	Description The 15-character ID of the user accessing Salesforce services through the UI or API. Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • E: Self Service • G: Guest • I: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Login Event Type

Login events contain details about your org’s user login history.

 **Note:** The Login event type is used by EventLogFile (ELF). It isn’t a real-time event. For the LoginEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see [LoginEvent](#) in the *Platform Events Developer Guide*.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer Guide](#).

Fields

Field	Details
API_TYPE	Type String Description The type of API request. Possible values are: • D—Apex Class • E—SOAP Enterprise • M—SOAP Metadata • P—SOAP Partner • S—SOAP Apex • T—SOAP Tooling • f—Feed • l—Live Agent • p—SOAP ClientSync
API_VERSION	Type String Description The version of the API that’s being used. For example: 36.0.
AUTHENTICATION_CONTEXT_CLASS_REFERENCE	Type String Description If provided by a third-party identity provider, the authentication method indicated in the Authentication Context Class Reference (ACR) claim. • SAML providers—Stores the value of the <code>AuthnContextClassRef</code> statement in the SAML response. • OpenID Connect providers—Stores the value of the ACR claim in the ID token

This field is available in API version 66.0 and later.

AUTHENTICATION_METHOD_REFERENCE**Type**

String

Description

If provided by a third-party identity provider, the authentication method indicated in the Authentication Method Reference (AMR) claim.

- SAML providers—Stores the value of any attribute named `AMR` or `authmethodsreferences` in the SAML response.
- OpenID Connect providers—Stores the value of the AMR claim in the ID token.

This field is available in API version 51.0 and later.

AUTHENTICATION_SERVICE_ID**Type**

Id

Description

The 15-character ID for the authentication service used to log in. This field stores IDs for these authentication services.

- SAML single sign-on providers
- Token exchange handlers

Available in API version 60.0 and later.

BROWSER_TYPE**Type**

String

Description

The identifier string returned by the browser used at login.

Example values are:

- `Go-http-client/1.1`
- `Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0`
- `Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36`

CIPHER_SUITE**Type**

String

Description

The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For

more information, see [OpenSSL Cryptography and SSL/TLS Toolkit](#).

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96 . 43 . 144 . 26.

COUNTRY_CODE

Type

String

Description

The country code associated with the IP address of the user logging in.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always Login.

FORWARDED_FOR_IP

Type

String

Description

The value in the X-Forwarded-For header of HTTP requests sent by the client. For logins that use one or more HTTP proxies, the X-Forwarded-For header is sometimes used to store the origin IP and all proxy IPs.

The `FORWARDED_FOR_IP` field stores whatever value the client sends, which might not be an IP address. The maximum length is 256 characters. Longer values are truncated. The `FORWARDED_FOR_IP` field isn't populated for logins completed via OAuth flows or single sign-on (SSO).

Available in API version 61.0 and later.

`HTTP_REFERER`**Type**

String

Description

The referring URI of the page that's receiving the request.

`LOGIN_KEY`**Type**

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

`LOGIN_STATUS`**Type**

String

Description

The status of the login attempt. For successful logins, the value is `LOGIN_NO_ERROR`. All other values indicate errors or authentication issues. For details, see [Login Event Type — LOGIN_STATUS Values](#) on page 2306.

`LOGIN_SUB_TYPE`**Type**

picklist

Properties

Nullable, Restricted picklist

Description

The type of login flow used. See the `LoginSubType` field of [LoginHistory](#) in the Object Reference guide for the list of possible values.

Label is **Login Subtype**.

`LOGIN_TYPE`**Type**

String

Description

The type of login used to access the session.

Possible values are:

- 7—AppExchange

- A—Application
- s—Certificate-based login
- k—Chatter Communities External User
- n—Chatter Communities External User Third Party SSO
- x—Cross Tenant Login (for internal use only)
- r—Employee Login to Community
- z—Lightning Login
- 1—Networks Portal API Only
- 6—Remote Access Client
- i—Remote Access 2.0
- I—Other Apex API
- R—Partner Product
- w—Passwordless Login
- 3—Customer Service Portal
- q—Partner Portal Third-Party SSO
- 9—Partner Portal
- 5—SAML Idp Initiated SSO
- m—SAML Chatter Communities External User SSO
- b—SAML Customer Service Portal SSO
- c—SAML Partner Portal SSO
- h—SAML Site SSO
- 8—SAML Sfdc Initiated SSO
- E—SelfService
- j—Third Party SSO

LOGIN_URL

Type
String

Description
The URL of the login page.

ORGANIZATION_ID

Type
Id

Description
The 15-character ID of the organization.
For example: 00D000000000123.

REQUEST_ID

Type
String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: 3nWgxWbDKWWDIk0FKfF5DV.
<code>REQUEST_STATUS</code>	Type String Description The status of the request for a page view or user interface action. For example: • <code>S</code>—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • <code>F</code>—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • <code>U</code>—Undefined • <code>A</code>—Authorization Error • <code>R</code>—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • <code>N</code>—Not Found. 404 error. This field can have a blank value.
<code>RUN_TIME</code>	Type Number Description The amount of time that the request took in milliseconds.
<code>SESSION_KEY</code>	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created. Example d7DEq/ANa7nNZZVD
<code>SOURCE_IP</code>	Type IP

	Description The IP address of the incoming client request that first reaches Salesforce during a login. For example, 126.7.4.2. For clients that redirect through one or more HTTP proxies, this field stores the IP address of the first proxy to reach Salesforce. To better identify the origin IP for these cases, check the FORWARDED_FOR_IP field instead.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Time zone is GMT.
TLS_PROTOCOL	Type String Description The TLS protocol used for the login. Example There are 3 possible values. • 1.0 • 1.1 • 1.2
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.

USE_API_TOKEN

Type

String

Description

Login with API Token - T token, or P password.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_NAME

Type

String

Description

The username that's used for login.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.

- **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Login Event Type — LOGIN_STATUS Values

When users attempt to log in to your org, the success or failure of their login attempts is tracked in event log file data. Specifically, the LOGIN_STATUS field in the Login event type contains the result of these login attempts. The data in LOGIN_STATUS can help you determine whether your users' login attempts were successful. This field is available in the Login event type in the EventLogFile object in API version 39.0 and later.

Login Event Type — LOGIN_STATUS Values

When users attempt to log in to your org, the success or failure of their login attempts is tracked in event log file data. Specifically, the LOGIN_STATUS field in the Login event type contains the result of these login attempts. The data in LOGIN_STATUS can help you determine whether your users' login attempts were successful. This field is available in the Login event type in the EventLogFile object in API version 39.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

API Error Code	Details (If Available)
LOGIN_CHALLENGE_ISSUED	Failed: Computer activation required
LOGIN_CHALLENGE_PENDING	Failed: Computer activation pending
LOGIN_DATA_DOWNLOAD_ONLY	
LOGIN_END_SESSION_TXN_SECURITY_POLICY	

API Error Code	Details (If Available)
LOGIN_ERROR_API_TOO_OLD	Failed: API Version Removed. The API version specified for login is below the minimum supported value, and has been removed. Update to a newer, supported API version.
LOGIN_ERROR_APPEXCHANGE_DOWN	Unable to process your login request
LOGIN_ERROR_ASYNC_USER_CREATE	
LOGIN_ERROR_AVANTGO_DISABLED	
LOGIN_ERROR_AVANTGO_TRIAL_EXP	
LOGIN_ERROR_CLIENT_NO_ACCESS	
LOGIN_ERROR_CLIENT_REQ_UPDATE	Failed: Client update required
LOGIN_ERROR_CSS_FROZEN	
LOGIN_ERROR_CSS_PW_LOCKOUT	
LOGIN_ERROR_DUPLICATE_USERNAME	
LOGIN_ERROR_EXPORT_RESTRICTED	Restricted country
LOGIN_ERROR_GLOBAL_BLOCK_DOMAIN	Restricted domain
LOGIN_ERROR_HT_DOWN	
LOGIN_ERROR_HTTP_METHOD_INVALID	Failed: Invalid HTTP method
LOGIN_ERROR_INSECURE_LOGIN	Failed: Login over insecure channel
LOGIN_ERROR_INVALID_GATEWAY	Invalid gateway
LOGIN_ERROR_INVALID_ID_FIELD	
LOGIN_ERROR_INVALID_PASSWORD	Invalid password
LOGIN_ERROR_LOGINS_EXCEEDED	Maximum logins exceeded
LOGIN_ERROR_MUST_USE_API_TOKEN	Failed: API security token required
LOGIN_ERROR_MUTUAL_AUTHENTICATION	Mutual authentication failed
LOGIN_ERROR_NETWORK_INACTIVE	Invalid - Experience Cloud site offline
LOGIN_ERROR_NO_HT_ACCESS	
LOGIN_ERROR_NO_NETWORK_ACCESS	No Experience Cloud site access
LOGIN_ERROR_NO_NETWORK_INFO	
LOGIN_ERROR_NO_PORTAL_ACCESS	Invalid profile association
LOGIN_ERROR_NO_SET_COOKIES	
LOGIN_ERROR_OFFLINE_DISABLED	Offline disabled
LOGIN_ERROR_OFFLINE_TRIAL_EXP	Offline trial expired

API Error Code	Details (If Available)
LOGIN_ERROR_ORG_CLOSED	Organization closed
LOGIN_ERROR_ORG_DOMAIN_ONLY	Restricted domain
LOGIN_ERROR_ORG_IN_MAINTENANCE	Organization is in maintenance
LOGIN_ERROR_ORG_INACTIVE	Organization is inactive
LOGIN_ERROR_ORG_IS_DOT_ORG	Organization is a DOT
LOGIN_ERROR_ORG_LOCKOUT	Organization locked
LOGIN_ERROR_ORG_SIGNING_UP	
LOGIN_ERROR_ORG_SUSPENDED	Organization suspended
LOGIN_ERROR_OUTLOOK_DISABLED	Outlook integration disabled
LOGIN_ERROR_PAGE_REQUIRES_LOGIN	
LOGIN_ERROR_PASSWORD_EMPTY	
LOGIN_ERROR_PASSWORD_LOCKOUT	Password lockout
LOGIN_ERROR_PORTAL_INACTIVE	Invalid - Portal disabled
LOGIN_ERROR_RATE_EXCEEDED	Login rate exceeded
LOGIN_ERROR_RESTRICTED_DOMAIN	Restricted IP
LOGIN_ERROR_RESTRICTED_TIME	Restricted time
LOGIN_ERROR_SESSION_TIMEOUT	
LOGIN_ERROR_SSO_PWD_INVALID	Invalid password
LOGIN_ERROR_SSO_SVC_DOWN	Your company's authentication service is down
LOGIN_ERROR_SSO_URL_INVALID	The Single Sign-On Gateway URL is invalid
LOGIN_ERROR_STORE	
LOGIN_ERROR_STORE_DOWN	
LOGIN_ERROR_SWITCH_SFDC_INSTANCE	
LOGIN_ERROR_SWITCH_SFDC_LOGIN	
LOGIN_ERROR_SYNOFFLINE_DISBLD	Failed: Mobile disabled
LOGIN_ERROR_SYSTEM_DOWN	
LOGIN_ERROR_UNKNOWN_ERROR	Login invalid
LOGIN_ERROR_USER_API_ONLY	Failed: API-only user
LOGIN_ERROR_USER_FROZEN	User is frozen
LOGIN_ERROR_USER_INACTIVE	User is inactive

API Error Code	Details (If Available)
LOGIN_ERROR_USER_NON_MOBILE	Failed: Mobile license required
LOGIN_ERROR_USER_STORE_ACCESS	
LOGIN_ERROR_USERNAME_EMPTY	
LOGIN_ERROR_WIRELESS_DISABLED	Wireless disabled
LOGIN_ERROR_WIRELESS_TRIAL_EXP	Wireless trial expired
LOGIN_LIGHTNING_LOGIN	Lightning Login required
LOGIN_NO_ERROR	
LOGIN_OAUTH_API_DISABLED	Failed: OAuth API access disabled
LOGIN_OAUTH_CONSUMER_DELETED	Failed: Consumer Deleted
LOGIN_OAUTH_DS_NOT_EXPECTED	Failed: Activation secret not expected
LOGIN_OAUTH_EXCEED_GET_AT_LMT	Failed: Get Access Token Limit Exceeded
LOGIN_OAUTH_INVALID_CODE_CHALLENGE	Failed: Invalid Code Challenge
LOGIN_OAUTH_INVALID_CODE_VERIFIER	Failed: Invalid Code Verifier
LOGIN_OAUTH_INVALID_DEVICE	Failed: Device Id missing or not registered
LOGIN_OAUTH_INVALID_DS	Failed: Activation secret invalid
LOGIN_OAUTH_INVALID_DSIG	Failed: Signature Invalid
LOGIN_OAUTH_INVALID_IP	Failed: IP Address Not Allowed
LOGIN_OAUTH_INVALID_NONCE	Failed: Invalid Nonce
LOGIN_OAUTH_INVALID_SIG_METHOD	Failed: Invalid Signature Method
LOGIN_OAUTH_INVALID_TIMESTAMP	Failed: Invalid Timestamp
LOGIN_OAUTH_INVALID_TOKEN	Failed: Invalid Token
LOGIN_OAUTH_INVALID_VERIFIER	Failed: Invalid Verifier
LOGIN_OAUTH_INVALID_VERSION	Failed: Version Not Supported
LOGIN_OAUTH_MISSING_DS	Activation secret missing
LOGIN_OAUTH_NO_CALLBACK_URL	Failed: Invalid Callback URL
LOGIN_OAUTH_NO_CONSUMER	Missing Consumer Key Parameter
LOGIN_OAUTH_NO_TOKEN	Missing OAuth Token Parameter
LOGIN_OAUTH_NONCE_REPLAY	Failed: Nonce Replay Detected
LOGIN_OAUTH_PACKAGE_MISSING	Package for this consumer is not installed in your organization
LOGIN_OAUTH_PACKAGE_OLD	Installed package for this consumer is out of date

API Error Code	Details (If Available)
LOGIN_OAUTH_UNEXPECTED_PARAM	Failed: Unexpected parameter
LOGIN_ORG_TRIAL_EXP	Trial Expired
LOGIN_READONLY_CANNOT_VALIDATE	
LOGIN_SAML_INVALID_AUDIENCE	Failed: Audience Invalid
LOGIN_SAML_INVALID_CONFIG	Failed: Configuration Error/Perm Disabled
LOGIN_SAML_INVALID_FORMAT	Failed: Assertion Invalid
LOGIN_SAML_INVALID_IN_RES_TO	Failed: InResponseTo Invalid
LOGIN_SAML_INVALID_ISSUER	Failed: Issuer Mismatched
LOGIN_SAML_INVALID_ORG_ID	Failed: Invalid Organization Id
LOGIN_SAML_INVALID_PORTAL_ID	Failed: Invalid Portal Id
LOGIN_SAML_INVALID_RECIPIENT	Failed: Recipient Mismatched
LOGIN_SAML_INVALID_SESSION_LEVEL	
LOGIN_SAML_INVALID_SIGNATURE	Failed: Signature Invalid
LOGIN_SAML_INVALID_SITE_URL	Failed: Invalid Site URL
LOGIN_SAML_INVALID_STATUS	Failed: Status Invalid
LOGIN_SAML_INVALID_SUB_CONFIRM	Failed: Subject Confirmation Error
LOGIN_SAML_INVALID_TIMESTAMP	Failed: Assertion Expired
LOGIN_SAML_INVALID_USERNAME	Failed: Username Or SSO Id Invalid
LOGIN_SAML_INVALID_VERSION	
LOGIN_SAML_MISMATCH_CERT	Failed: Signature Invalid/Configured Certificate Mismatch
LOGIN_SAML_MISSING_ORG_ID	Failed: Missing Organization Id for Portal login
LOGIN_SAML_MISSING_PORTAL_ID	Failed: Missing Portal Id
LOGIN_SAML_PROVISION_ERROR	Failed: SAML Provision Error
LOGIN_SAML_REPLAY_ATTEMPTED	Failed: Replay Detected
LOGIN_SAML_SITE_INACTIVE	Failed: Specified Site is Inactive
LOGIN_TWOFACOR_REQ	Multi-factor (formerly called two-factor) is required

Usage

Use LOGIN_STATUS to determine whether your users' login attempts were successful. For example, you can determine whether a departed employee attempted to log in successfully or unsuccessfully.

A	B	C	D	E	F	G	H	I	J	K
EVENT_TYPE	CLIENT_IP	URI	SESSION_KEY	LOGIN_KEY	REQUEST_STATUS	USER_NAME	TIMESTAMP_DERIVED	USER_ID_DERIVED	URI_ID_DERIVED	LOGIN_STATUS
Login	1.2.3.4	/my/uri/path/005B0000000GSwO	sidHash_basic	loginHash_basic	requestStatus_common	userName_L	2015-01-01T00:00:00.000	001xx0000000useAAA	005B0000000GSwOIAW	LOGIN_NO_ERROR

[EventLogFile](#)

Login As Event Type

Login As events contain details about what a Salesforce admin did while logged in as another user.

Note: Login As Event Type is used by EventLogFile (ELF). It isn't a real-time event. For the LoginAsEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see [LoginAsEvent](#) in the *Platform Events Developer Guide*.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Note: Bolster your security posture by receiving alerts and blocking potentially malicious LoginAsEvent activities with a Transaction Security policy.

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DELEGATED_USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.

DELEGATED_USER_ID_DERIVED

Type

Id

Description

The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.

DELEGATED_USER_NAME

Type

String

Description

The username of the user who's using Salesforce services through the UI or API. In this case, the user who's doing the impersonation.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `LoginAs`.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

RUN_TIME

Type

Number

	Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943

USER_ID_DERIVED

Type
Id

Description
The 18-character case insensitive ID of the user who’s using Salesforce services through the UI or the API.
For example: 005900000000I1SNIA0.

SEE ALSO:
[EventLogFile Supported Event Types](#)
[EventLogFile](#)

Logout Event Type

Contains details of user sessions ending or being revoked.

 **Note:** Logout Event Type is used by EventLogFile (ELF). It isn’t a real-time event. For the LogoutEvent real-time event, which is part of Real-Time Event Monitoring (RTEM), see [LogoutEvent](#) in the *Platform Events Developer Guide*.

These scenarios count as logout events.

- Logging out via the UI
- Session expiration
- Revoking access for a connected app
- Calling the Salesforce revocation endpoint
- Salesforce disabling a connected app
-  **Note:** For batch operations where multiple sessions are revoked at once, Salesforce records only one logout event. You can tell that it’s a batch operation because there’s no user ID.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer’s Guide](#).

Fields

Field	Details
API_TYPE	Type String Description The type of API request. Possible values are: • D—Apex Class • E—SOAP Enterprise • M—SOAP Metadata • P—SOAP Partner • S—SOAP Apex

- T—SOAP Tooling
- f—Feed
- l—Live Agent
- p—SOAP ClientSync

API_VERSION

Type

String

Description

The version of the API that's being used.

For example: 36.0.

APP_TYPE

Type

Number

Description

The application type that was in use upon logging out.

Example Values

- 1000: Application
- 1007: SFDC Application
- 1014: Chat
- 2501: CTI
- 2514: OAuth
- 3475: SFDC Partner Portal

BROWSER_TYPE

Type

String

Description

The identifier string returned by the browser used at login.

Example values are:

- Go-http-client/1.1
- Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0
- Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36

CLIENT_IP

Type

String

	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CLIENT_VERSION	Type Number Description The version of the client that was in use upon logging out.
EVENT_TYPE	Type String Description The type of event. The value is always Logout.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D0000000000123.
PLATFORM_TYPE	Type Number Description The code for the client platform. If a timeout caused the logout, this field is null. Example Values • 1000: Windows • 1008: Windows 2003 • 1013: Windows 8.1 • 1015: Windows 10 • 2003: Macintosh/Apple OSX • 4000: Linux

- 5005: Android
- 5006: iPhone
- 5007: iPad
- 5200: Android 10.0

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RESOLUTION_TYPE

Type

Number

Description

The screen resolution of the client. If a timeout caused the logout, this field is null.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

SESSION_LEVEL

Type

String

Description

The security level of the session that was used when logging out.

Possible Values

- 1: Standard Session
- 10: High-Assurance Session

SESSION_TYPE

Type

String

Description

The session type that was used when logging out.

Possible Values

- A: API

- I: APIOnlyUser
- N: ChatterNetworks
- Z: ChatterNetworksAPIOnly
- C: Content
- P: OAuthApprovalUI
- O: OAuth2
- T: SiteStudio
- R: SitePreview
- S: SubstituteUser
- B: TempContentExchange
- G: TempOAuthAccessTokenFrontdoor
- Y: TempVisualforceExchange
- F: TempUIFrontdoor
- U: UI
- E: UserSite
- V: Visualforce
- W: WDC_API

Timestamp**Type**

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

When a customer logs out by using the **Logout** button, the **Timestamp** field records the actual logout time. However, when a customer is logged out automatically, Salesforce detects the event by using a process that runs every 15 minutes. **Timestamp** values can reflect a logout time up to 15 minutes later than the actual automatic logout time.

Timestamp_Derived**Type**

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

User_ID**Type**Id

	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_INITIATED_LOGOUT	Type Boolean Description The value is 1 if the user intentionally logged out of the organization by clicking the Logout button. If the user's session timed out due to inactivity or another implicit logout action, the value is 0.
USER_TYPE	Type String Description The category of user license of the user that logged out. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • E: Self-Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard

- x: Salesforce Administrator

Metadata API Operation Event Type

Metadata API Operation events contain details of Metadata API retrieval and deployment requests.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
API_VERSION	Type String Description The version of the API that's being used. For example: 36.0.
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String

	Description The type of event. The value is always <code>MetadataApiOperation</code> .
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code> .
OPERATION	Type String Description The operation that's being performed. Possible Values • <code>meta_deploy</code> • <code>meta_list</code> • <code>meta_retrieve</code> • <code>meta_synchronous_create</code> • <code>meta_synchronous_read</code> • <code>meta_synchronous_upsert</code>
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D000000000123</code> .
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code> .
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

[EventLogFile](#)

Multiblock Report Event Type

Multiblock Report events contain details about Joined Report reports.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	Type Number Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `MultiblockReport`.

HAS_CHART

Type

Boolean

Description

True if the report has a chart.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

MASTER_REPORT_ID

Type

String

Description

The 15-character ID of the master report.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

For example:

- **S**—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- **F**—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- **U**—Undefined
- **A**—Authorization Error
- **R**—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- **N**—Not Found. 404 error.

This field can have a blank value.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

	Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_TYPE	Type String Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in.

- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they’re organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they’re partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they’re organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Named Credential Event Type

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don’t recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This event type is available in the EventLogFile object in API version 53.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer’s Guide](#).

Fields

Field	Details
<code>BOT_IDENTIFIER</code>	Type String Description The ID of the bot.
<code>BOT_SESSION_IDENTIFIER</code>	Type String Description The bot session ID.

Field	Details
CALLER_PACKAGE_NAMESPACE	Type String Description If an Apex callout using a Named Credential endpoint is initiated from a package, then this field contains the package's namespace. If the callout isn't initiated from a package, then this field is empty. Example Acme
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always <code>NamedCredential</code>.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
NAMED_CREDENTIAL_NAME	Type String Description The name of the named credential that's the endpoint of the Apex callout. Example My_Named_Credential

Field	Details
ORGANIZATION_ID	Type ID Description The 15-character ID of the org. Example 00D0000000000123
PLANNER_IDENTIFIER	Type String Description The ID of the agent planner.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime

Field	Details
	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case-safe ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-safe ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

[EventLogFile](#)

One Commerce Usage Event Type

One Commerce Usage events capture information about your Commerce instance. This event type is available in the EventLogFile object in API version 51.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BROWSER_DEVICE_TYPE	Type Number Description A code used to identify the browser and device type. The code is in the format "BBVVXYZ," with the following signification: • BB — Two digits that indicate the browser type. — IE: "10" — CHROME: "13" — FIREFOX: "11" — SAFARI: "14" — OPERA: "15" — ANDROID_WEBKIT: "16" — NETSCAPE: "17" — OTHER_WEBKIT: "18" — OTHER_GECKO: "19" — OTHER_KHTML: "20" — OTHER_MOBILE: "21" — SALESFORCE_DESKTOP: "22" — BLACKBERRY: "23" — GOOD_ACCESS: "24" — EDGE: "25" — SALESFORCE_MOBILE: "26" • VV—Three digits that indicate version, leading zeroes. • XYZ—Browser-type specific flags or options. Each digit in XYZ represents a different flag depending on the BrowserType: — X=1: If the parser recognizes a "touch" browser. Here, touch means the older touch native client, not that the device supports touch. — Y=1: If the parser recognizes a browser in compatibility mode. Only for IE. — Z=1: If the browser is recognized as <code>MOBILE</code>. — Z=2: If the browser is recognized as <code>PHONE</code>. — Z=3: If the browser is recognized as <code>TABLET</code>. — Z=4: If the browser is a recognized as <code>MEDIA PLAYER</code>.

Field	Details
	— Z=6: Only for Opera Mini.
B2B_EDITION	Type String Description Edition of B2B Commerce. Edition can include Lightning (LB2B), CCRZ, or future flavors.
B2B_VERSION	Type String Description This field is optional. For the managed package, then B2B_VERSION includes Major, Minor, Patch revision numbers. For Lightning B2B_VERSION includes the optional service version.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.
CONTEXT_ID	Type String Description The contextId (Key Business Domain Value) in which the operation is done. For example, for Cart, the contextId is cartId.
CONTEXT_MAP	Type String Description This field is optional. It holds a JSON string with additional operational context.
CORRELATION_ID	Type String Description This field holds correlations, such as client to server and other asynchronous calls to B2B subsystems.

Field	Details
COUNT	Type String Description The number of records impacted by this operation.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	Type Number Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
EFFECTIVE_ACCOUNT_ID	Type String Description The B2B Effective Account ID in context of the operation.
ERROR_CODE	Type String Description The API error code that appears when an operation fails. If there is no error the value is <code>null</code> .
ERROR_MESSAGE	Type String Description Error message that appears when an operation fails. If there is no error the value is <code>null</code> .
EVENT_TYPE	Type String Description The type of event. The value is always <code>OneCommerceUsage</code> .

Field	Details
IS_RETRY	Type String Description The field is <code>True</code> if the operation resulted in a retry, otherwise it's <code>False</code>. Understanding the frequency of operation retries helps determine the health of a service. The default value is <code>False</code>.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D000000000123</code>.
OPERATION	Type String Description The name of the B2B service. For example: <code>CreateCart</code> or <code>KeywordSearch</code>.
OPERATION_STAGE	Type String Description This field is optional. Used to capture more granular operation level stages.
OPERATION_STATE	Type String Description This field is optional. An enum for the state of the operation. For example: <code>CartLocked</code>, <code>OrderCancelled</code>, <code>InProgress</code>, <code>New</code>, <code>Update</code>, and <code>Pending</code>.

Field	Details
OPERATION_STATUS	Type String Description Enum with the outcome of the operation. For example: <code>Success</code> or <code>Fail</code>.
OPERATION_TIME	Type String Description Total time of the operation in milliseconds.
OS_VERSION	Type String Description Code used to identify the operating system and version. The value is equal to 9999 for an unknown platform.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.
REQUEST_STATUS	Type String Description The status of the request for a page view or user interface action. For example: • <code>S</code>—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • <code>F</code>—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • <code>U</code>—Undefined • <code>A</code>—Authorization Error • <code>R</code>—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.

Field	Details
	• N—Not Found. 404 error. This field can have a blank value.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit.  Note: HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.
SERVICE_NAME	Type String Description Enum of B2B Services. For example: Cart, Pricing, Products, Order, Search, and so on.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

Field	Details
	For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_TYPE	Type String Description The category of user license. Possible values are: • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.

Field	Details
	• CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
WEBSTORE_ID	Type String Description This field is optional. The ID of the webstore associated with the store (site).
WEBSTORE_TYPE	Type String Description The type of webstore. For example: B2B, B2C, and OMS.

Package Install Event Type

Package Install events contain details about package installation in the organization.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always <code>PackageInstall</code>.
FAILURE_TYPE	Type String Description A general categorization of any error that's encountered.
IS_MANAGED	Type Boolean Description True if the operation is performed on a managed package.
IS_PUSH	Type Boolean Description True if the package was installed as a result of a push upgrade.
IS_RELEASED	Type Boolean

	Description True if the operation is performed on a released package.
IS_SUCCESSFUL	Type Boolean Description True if the package was successfully installed.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
OPERATION_TYPE	Type String Description The type of package operation. Possible Values • INSTALL • UPGRADE • EXPORT • UNINSTALL • VALIDATE_PACKAGE • INIT_EXPORT_PKG_CONTROLLER
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
PACKAGE_NAME	Type String Description The name of the package that's being installed.
REQUEST_ID	Type String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: 3nWgxWbDKWWDIk0FKfF5DV.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID

	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Permission Update Event Type

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Note: This event type tracks if Salesforce updates object or field permissions in standard profiles, in addition to changes you make to your custom profiles, permission sets, and permission set groups.

Fields

Field	Details
CONTEXT	Type String Description Reserved for future use.
DESCRIPTION	Type String

Field	Details
	Description A description of the update that occurred in the profile, permission set, or permission set group. Example UserPerm: ConvertLeads disabled
EVENT_TYPE	Type String Description The type of event. The value is always <code>PermissionUpdate</code>.
FEATURE_ID	Type Id Description The ID of the feature, such as a profile, permission set, or permission set group, that was updated.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2I
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. Example 00DXXXXXXXXXXXXX
PERMISSION_TYPE	Type String Description The type of permission, such as user, object, or field, or setup entity access, such as tab settings or Apex class access, that was updated. Example EntityObject
REQUEST_ID	Type String

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. Example 3nWgxWbDKWWDIk0FKfF5DV
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. Example d7DEq/ANa7nNZZVD
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z
UPDATE_TYPE	Type String Description For object permissions, user permissions, and setup entity access, the type of update that occurred. For example, a permission was updated or deleted. For other changes in profiles, permission sets, or permission set groups, this information is tracked in the <code>DESCRIPTION</code> field. Example delete
USER_ID	Type Id

Field	Details
	Description The 15-character ID of the user who made the permission update.
	Example 005XXXXXXXXXXXXXX

Platform Encryption Event Type

Platform Encryption event contains information about tenant secret and derived encryption key usage. This event type is available in API versions 41.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
ACTION	Type String
	Description The name and type of the event.
	Possible Values • TS Imported: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, imported by a customer. • TS Generated: A tenant secret generated by the Shield Key Management Service (KMS). • Key Derived: An encryption key derived from a tenant secret for encryption or decryption. • TS Wrapped: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, encrypted for storage. • Key Delivered: A data encryption key delivered for encryption or decryption. • TS Stored: A tenant secret generated by the Shield Key Management Service (KMS), or customer-supplied key material, stored encrypted in the database. • TS Read: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted customer-supplied key material, that is loaded for encryption or decryption. • TS Unwrapped: An encrypted tenant secret generated by the Shield Key Management Service (KMS), or encrypted

	customer-supplied key material, unwrapped for use by the KMS. • TS Exported: An encrypted tenant secret exported by a customer. • TS Destroyed: A tenant secret and related data encryption key destroyed by a customer.
BOT_IDENTIFIER	Type String Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type String Description The bot session ID.
CLIENT_IP	Type String Description The IP address of the client that is using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always PlatformEncryption.
KEY_ID	Type String Description The 15-character ID of the tenant secret. Example 02GD000000096Cb

KEY_ID_DERIVED

Type

String

Description

The 18-character ID of the derived encryption key.

Example

02GD000000096CbMAI

KEY_TYPE

Type

String

Description

The type of tenant secret.

Possible Values

- Data
- DeterministicData
- Analytics
- OAuthSecret (internal use only)
- SearchIndex

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

METHOD

Type

String

Description

The string that identifies a change in tenant secret Active state.

For example, tenant secrets become active when they're created, and are made inactive when they're exported.

Examples

- TS Exported: User ID
- TS Generated: HSM or BYOK
- TS Unwrapped: Tenant Secret or BYOK

ORGANIZATION_ID

Type

ID

Description

The 15-character ID of the organization.

For example: 00D000000000123.

PLANNER_IDENTIFIER

Type

String

Description

The ID of the agent planner.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

	Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type ID Description The 18-character case insensitive ID of the user who is using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the user who is using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

SEE ALSO:[EventLogFile Supported Event Types](#)[EventLogFile](#)

Pricing Event Type

Pricing events contain information about pricing procedures that were executed, including details such as pricing procedures used, the pricing APIs, and pricing details and status.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String

	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always <code>Pricing</code> .
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D0000000000062.
PRICING_API_ENDPOINT	Type String Description The starting point of the Pricing API or Headless Pricing API. For example: <code>Pricing API</code> .
PRICING_DETAILS	Type String Description The details of the pricing event that describes if the pricing API was executed or failed. For example: <code>Pricing element was processed..</code>

PRICING_ERROR_CODE

Type

String

Description

The API error code that appears when pricing execution fails.
If there is no error, the value is null.

For example: `INTERNAL_ERROR`.

PRICING_LOG_NAME

Type

String

Description

The detailed pricing log message generated.

For example: `The Headless Pricing API was run in:{0}`.

PRICING_PROCEDURE

Type

String

Description

The name of the pricing procedure used to perform pricing calculations.

For example: `Default Pricing Procedure`.

PRICING_STATUS

Type

String

Description

The status of the request for pricing execution.

For example: `Completed` or `Failed`.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

For example: `1851629863`.

SESSION_KEY

Type

String

	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
TIMESTAMP	Type String Description The time that the pricing was executed in GMT. For example: 20170606170000.000.
TIMESTAMP_DERIVED	Type DateTime Description The time that the pricing was executed in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2017-06-06T1700.000Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who executed pricing through the UI or the API. For example: 005SG000000eu6j
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 001xx0000000useAAA.

Queued Execution Event Type

Queued Execution events contain details about queued executions—for example, batch Apex.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds that it took to complete the batch apex request. This field indicates the amount of activity taking place in the app server layer, allowing you to identify pieces of Apex or Visualforce code that need refactoring.
DB_TOTAL_TIME	Type Number Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
ENTRY_POINT	Type String Description The name of the Apex class that serves as the execution point for the batch job.  Note: This field contains data only for Batch Apex. It is unpopulated for Future and Queueable processes.

Field	Details
	Example TaskPhoneExtensionBatchUpdate
EVENT_TYPE	Type String Description The type of event. The value is always <code>QueuedExecution</code> .
JOB_ID	Type String Description The ID of the batch Apex job. Example 7073000000IDquo
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code> .
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D0000000000123</code> .
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code> .
REQUEST_STATUS	Type String Description The status of the request for a page view or user interface action.

Field	Details
	For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

Field	Details
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
USER_TYPE	Type String Description The category of user license. Possible values are: • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.

Field	Details
	• Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Report Event Type

Report events contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, plus more. For example, it has user activity for reports exported as both Formatted Report and Details Only output.

Note: Exporting a report directly from the report result captures the event in both the Report and Report Export logs.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
AVERAGE_ROW_SIZE	Type Number Description The average row size of all rows in the Report event, in bytes. A large average size, coupled with a high ROW_COUNT, can indicate that a user is downloading information for fraudulent

purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

Example

700

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96 . 43 . 144 . 26.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

DISPLAY_TYPE

Type

String

	Description The report display type, indicating the run mode of the report. Possible values are: • D—Dashboard • S—Show Details • H—Hide Details
ENTITY_NAME	Type String Description The name of the object affected by the trigger.
EVENT_TYPE	Type String Description The type of event. The value is always Report.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
NUMBER_BUCKETS	Type Number Description The number of buckets that were used in the report.
NUMBER_COLUMNS	Type Number Description The number of columns in the report.
NUMBER_EXCEPTION_FILTERS	Type Number Description The number of exception filters that are used in the report.
ORGANIZATION_ID	Type Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

ORIGIN

Type

String

Description

The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.

Possible Values

- **ReportOpenedFromMobileDashboard:** Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report.
 - **DashboardComponentUpdated:** Report executed when a user refreshed a dashboard component.
 - **DashboardComponentPreviewed:** Report executed from a Lightning dashboard component preview.
 - **ReportRunUsingSynchronousApi:** Report executed from a synchronous API.
 - **ReportRunUsingAsynchronousApi:** Report executed from an asynchronous API.
 - **ReportRunUsingApexSynchronousApi:** Report executed from the synchronous Apex API.
 - **ReportRunUsingApexAsynchronousApi:** Report executed from the asynchronous Apex API.
 - **ReportExported:** Report executed from a printable view or report export that was not asynchronous nor an API export.
 - **ReportRunFromClassic:** Report executed from the Run Report option of Salesforce Classic.
 - **ReportRunFromMobile:** Report executed from the Run Report option of the mobile Salesforce app.
 - **ReportRunFromLightning:** Report executed from the Run option in Lightning Experience from a non-mobile browser.
 - **ReportRunFromRestApi:** Report executed from REST API.
 - **ReportPreviewed:** Report executed when a user got preview results while using the report builder.
 - **ReportScheduled:** Report was scheduled.
 - **ProbeQuery:** Report executed from a probe query.
-

- **ReportRunFromReportingSnapshot:** Report executed through Snapshot Analytics.
- **ReportExportedAsynchronously:** Report was exported asynchronously.
- **ReportExportedUsingExcelConnector:** Report was exported using the Excel connector.
- **ChartRenderedOnVisualforcePage:** Report executed from a rendered chart on a VisualForce Page.
- **ChartRenderedInEmbeddedAnalyticsApp:** Report executed from a rendered chart in an embedded Analytics app.
- **ReportRunAndNotificationSent:** Report executed through the notifications API.
- **ChartRenderedOnHomePage:** Report executed from a rendered chart on the home page.
- **ReportResultsAddedToWaveTrending:** Report executed when a user trended a report in CRM Analytics.
- **ReportAddedToCampaign:** Report was added from an Add to Campaign action.
- **ReportResultsAddedToEinsteinDiscovery:** Report executed synchronously from Einstein Discovery.
- **Unknown:** Report execution origin is unknown.
- **Test:** Report execution resulted from a test.

RENDERING_TYPE
Type

String

Description

Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

Possible Values

- **W:** Web (HTML)
- **E:** Email
- **P:** Printable
- **X:** Excel
- **C:** Comma-separated values (CSV)
- **J:** JavaScript Object Notation (JSON)
- **D:** Dummy data

REPORT_ID
Type

Id

Description

The 15-character ID of the report that was run.

REPORT_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the report that was run.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

For example:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

This field can have a blank value.

ROW_COUNT

Type

Number

Description

The number of rows that were processed in the Report event. High row counts, coupled with a high AVERAGE_ROW_SIZE, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor.

Example

150

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

SORT

Type

String

Description

The sort column and order that was used in the report.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

UI_NUMBER_COLUMNS

Type

Number

Description

The number of columns in the report. The fields that have multiple components (for example, addresses) are considered as a single column.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through

a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.

- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Usage

Example: Identify Large Report Exports by User

Get Report event type data from the EventLogFile object using REST:

```
/services/data/v40.0/query?q=SELECT+Id+,+EventType+,+LogFile+,+LogDate+,+LogFileLength+FROM+EventLogFile+WHERE+
LogDate+>+Yesterday+AND+EventType+=+'Report '
```

After you download the report data to a ReportData database table, query it and filter on reports that were exported with high row counts and size:

```
SELECT USER_ID FROM ReportData WHERE (RENDERING_TYPE=C OR RENDERING_TYPE=X OR
RENDERING_TYPE=P) AND ROW_COUNT>150000 AND AVERAGE_ROW_SIZE>1500
```

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Report Export Event Type

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String

	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CLIENT_INFO	Type String Description Information about the client that's using Salesforce services.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EVENT_TYPE	Type String Description The type of event. The value is always ReportExport.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
REPORT_DESCRIPTION	Type String Description Information about the report that was run.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

REST API Event Type

REST API events contain details about REST-specific requests.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BOT_IDENTIFIER	Type string Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type string Description The bot session ID.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

CLIENT_NAME

Type

String

Description

The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls.

CONNECTED_APP_ID

Type

Reference

Description

The 15-character ID of the connected app associated with the API call. For example, 0H4RM00000000Kx0AI.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

	Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
ENTITY_NAME	Type Set Description The name of the object accessed by the API request. For example: Account, Opportunity, Contact, and so on.
EVENT_TYPE	Type String Description The type of event. The value is always RestApi.
EXCEPTION_MESSAGE	Type String Description The returned exception message, used to debug issues. Provide this message when seeking support.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
MEDIA_TYPE	Type String Description The media type of the response.
METHOD	Type String Description The HTTP method of the request. For example: GET, POST, PUT, and so on.

NUMBER_FIELDS

Type

Number

Description

The number of fields or columns, where applicable.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D0000000000123.

PLANNER_IDENTIFIER

Type

string

Description

The ID of the agent planner.

QUERY

Type

String

Description

The data that was queried.

REQUEST_SIZE

Type

Number

Description

The size of the callout request body, in bytes.

REQUEST_STATUS

Type

String

Description

The status of the request for a page view or user interface action.

For example:

- S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- U—Undefined
- A—Authorization Error
- R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- N—Not Found. 404 error.

This field can have a blank value.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

RESPONSE_SIZE

Type

Number

Description

The size of the callout response, in bytes.

ROWS_PROCESSED

Type

Number

Description

The number of rows that were processed in the request.

For example: 150.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

STATUS_CODE

Type

Number

Description

The HTTP response status code for the request.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp.

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_AGENT

Type

Number

Description

The numeric code for the type of client used to make the request (for example, the browser, application, or API).

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

`USER_TYPE`**Type**

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- `SelfService`—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

SEE ALSO:[EventLogFile Supported Event Types](#)[EventLogFile](#)

Sandbox Event Type

Sandbox events contain details about sandbox copies.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CURRENT_SANDBOX_ORG_ID	Type Id Description The 15-character ID of the current sandbox organization.
EVENT_TYPE	Type String Description The type of event. The value is always <code>Sandbox</code> .
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
PENDING_SANDBOX_ORG_ID	Type Id Description The 15-character ID of the target sandbox org.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: 3nWgxWbDKWWDIk0FKfF5DV.
SANDBOX_ID	Type Id Description The 15-character ID of the sandbox organization.
STATUS	Type String Description The status of the sandbox copy.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

SEE ALSO:[EventLogFile Supported Event Types](#)[EventLogFile](#)

Search Event Type

Search events contain details about the user's search query. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

EVENT_TYPE

Type

String

Description

The type of event. The value is always `Search`.

NUM_RESULTS

Type

Number

Description

Number of results returned by the search query.

Possible Values

- 0
- 25
- 1000

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

PREFIXES_SEARCHED

Type

String

Description

Space-separated list of key prefixes that were searched.

Example

001 006 ka0

QUERY_ID

Type

String

Description

Unique ID of the search query.

Example

-2vx8relit08r

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

SEARCH_QUERY

Type

String

Description

The first 100 characters of the search query.

Example

Salesforce

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

USER_ID

Type

Id

Description

The 15-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000011SNIA0.

SEE ALSO:[EventLogFile Supported Event Types](#)[EventLogFile](#)

Search Click Event Type

Search Click events contain details about the user's interaction with the search results in the search results page. Interactions with search results in the instant result dialog are not recorded by this event. All searches within the app, including Experience Cloud sites, are included. However, unauthenticated users won't have a unique Salesforce user ID.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

CLICKED_RECORD_ID

Type

String

Description

The 15-character ID of the result the user clicked in the search results page.

Example

a07B00000031pRV

EVENT_TYPE

Type

String

Description

The type of event. The value is always `SearchClick`.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

QUERY_ID

Type

String

Description

Unique ID of the search query.

Example

-2vx8relit08r

RANK

Type

Number

Description

Ranking of the result clicked in the search results page.

Example

2

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

TIMESTAMP

Type

String

	Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
USER_ID	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 005900000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)
[EventLogFile](#)

Sites Event Type

Sites events contain details of Site.com requests. Requests can originate from the browser (UI).

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number

	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_TOTAL_TIME	Type Number Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	Type String Description The type of event. The value is always Sites.
HTTP_HEADERS	Type String Description The HTTP headers that were sent in the request.
HTTP_METHOD	Type String Description The HTTP method of the request. For example: GET, POST, PUT, and so on.
IS_API	Type Boolean Description True if this page was an API or Web Services request.
IS_ERROR	Type Boolean Description True if this page was an error page.
IS_FIRST_REQUEST	Type Boolean

	Description 1 if this page is the first Visualforce transaction in the request, or 0 if it isn't.
IS_GUEST	Type Boolean Description True if this page was a guest (unauthenticated) request.
IS_SECURE	Type Boolean Description True if this request is secure.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D0000000000123.
PAGE_NAME	Type String Description The name of the Visualforce page that was requested.
QUERY	Type String Description The SOQL query, if one was performed.
REQUEST_ID	Type String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

`REQUEST_STATUS`

Type

String

Description

The status of the request for a page view or user interface action.

For example:

- `S`—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- `F`—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- `U`—Undefined
- `A`—Authorization Error
- `R`—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- `N`—Not Found. 404 error.

This field can have a blank value.

`REQUEST_TYPE`

Type

String

Description

The request type.

Possible values are:

- `page`—a normal request for a page
- `content_UI`—a content request for a page that originated in the user interface
- `content_apex`—a content request initiated by an Apex call
- `PDF_UI`—a request for a page in PDF format through the user interface
- `PDF_apex`—a request for PDF format by an Apex call (usually a Web Service call)

`RUN_TIME`

Type

Number

	Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nZZVD.
SITE_ID	Type Id Description The 15-character ID of the Site.com site.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

- `SelfService`—Users whose access is limited because they’re organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

[EventLogFile](#)

SOAP API Event Type

SOAP API events contain details about your org's SOAP API request activity.
For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
<code>API_TYPE</code>	Type String Description The type of API request. Possible values are: • <code>D</code>—Apex Class • <code>E</code>—SOAP Enterprise • <code>M</code>—SOAP Metadata • <code>P</code>—SOAP Partner • <code>S</code>—SOAP Apex • <code>T</code>—SOAP Tooling • <code>F</code>—Feed • <code>L</code>—Live Agent • <code>p</code>—SOAP ClientSync
<code>API_VERSION</code>	Type String Description The version of the API that’s being used. For example: <code>36.0</code>.

CLIENT_IP

Type

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96 . 43 . 144 . 26.

CLIENT_NAME

Type

String

Description

The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

ENTITY_NAME

Type

Set

Description

The name of the object accessed by the API request.

For example: Account, Opportunity, Contact, and so on.

EVENT_TYPE

Type

String

Description

The type of event. The value is always API.

EXCEPTION_MESSAGE

Type

String

Description

The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed.

For example: `common.exception.ApiException: startDate cannot be more than 30 days ago.`

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I.`

METHOD_NAME

Type

String

Description

The name of the calling Apex method.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123.`

QUERY

Type

String

	Description The data that was queried.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_SIZE	Type Number Description The size of the callout request body, in bytes.
REQUEST_STATUS	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RESPONSE_SIZE	Type Number Description The size of the callout response, in bytes.
ROWS_PROCESSED	Type Number

	Description The number of rows that were processed in the request. For example: 150.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- `CsnOnly`—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- `CspLitePortal`—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- `CustomerSuccess`—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- `Guest`—Users whose access is limited so that your customers can view and interact with your site without logging in.
- `PowerCustomerSuccess`—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
- `PowerPartner`—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

- `SelfService`—Users whose access is limited because they’re organization customers and access the application through a self-service portal.
- `Standard`—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Time-Based Workflow Event Type

Time-Based Workflow events contain details about queue activity monitoring.
For details about event monitoring, see the [Trailhead Event Monitoring module](#) or the [REST API Developer’s Guide](#).

Fields

 **Note:** Time-Based Workflow events only support workflow rules, and not flow scheduled path time-queue records. Event logs do not show flow scheduled path time-queue records.

Field	Details
CLIENT_IP	Type String Description The IP address of the client that’s using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as “Salesforce.com IP”. For example: 96 . 43 . 144 . 26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DATA	Type String Description The record details of time queue activity.

EVENT_TYPE

Type

String

Description

The type of event. The value is always `TimeBasedWorkflow`.

LOG_GROUP_ID

Type

String

Description

Marks log records that are committed or rolled back.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: `GeJCsym5eyvtEK2I`.

NUMBER_OF_RECORDS

Type

Number

Description

The number of processed records.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: `00D000000000123`.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same `REQUEST_ID`.

For example: `3nWgxWbDKWWDIk0FKfF5DV`.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TYPE

Type

String

Description

The type of time-based workflow event.

- **UIDEL**—An entry was deleted from the Time-Based Automations page in Setup.
- **ERRDEL**—An entry was deleted from the workflow queue, because there was an error reading the record that triggered the workflow rule. The associated time-dependent actions weren't processed.
- **DELETE**—An entry was deleted from the workflow queue, because it's no longer relevant. For example, the criteria are no longer met by the associated record. If the evaluation date for the entry changed, the entry is re-added with the updated evaluation date.
- **PROC**—An entry was deleted from the workflow queue after processing a time-dependent action.

URI

Type

String

	Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 005300000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.

SEE ALSO:

[EventLogFile Supported Event Types](#)
[EventLogFile](#)

Transaction Security Event Type

Transaction Security events contain details about policy execution. This event type is supported in API version 55.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BOT_IDENTIFIER	Type String Description The ID of the bot.

BOT_SESSION_IDENTIFIER

Type

String

Description

The bot session ID.

CLIENT_IP

Type

String

Description

The IP address of the client that is using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP".

For example: 96.43.144.26

CPU_TIME

Type

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVALUATION_TIME_MS

Type

Number

Description

The time in milliseconds used to evaluate the policy.

EVENT_TIMESTAMP

Type

String

Description

The time at which the Transaction Security event was generated in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). This value can be earlier than TIMESTAMP_DERIVED by the amount of time taken to log the event.

For example:

2015-07-27T11:32:59.555Z

EVENT_TYPE

Type

String

	Description The type of event. The value is always <code>TransactionSecurity</code> .
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCSym5eyvtEK2I</code>
ORGANIZATION_ID	Type ID Description The 15-character ID of the organization. For example: <code>00D000000000123</code>
PLANNER_IDENTIFIER	Type String Description The ID of the agent planner.
POLICY_ID	Type ID Description The 15-character ID of the policy being evaluated. For example: <code>00530000009M943</code>
POLICY_ID_DERIVED	Type ID Description The 18-character case-insensitive ID of the policy being evaluated. For example: <code>00590000000I1SNIA0</code>
REQUEST_ID	Type String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV
RESULT	Type String Description The outcome of evaluating the policy. For example: TRIGGEREDzzz or NOT TRIGGERED
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example:

2015-07-27T11:32:59.555Z.

Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request.

For example: /home/home.jsp

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

ID

Description

The 15-character ID of the user who is using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the user who is using Salesforce services through the UI or the API.

For example:

00590000000I1SNIA0

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

UI Telemetry Navigation Timing Event Type

UI Telemetry Navigation Timing events capture network performance metrics related to page navigation. The event extends from the [UI Telemetry Resource Timing Event](#) on page 2412 and includes requests initiated with either the [Fetch API](#) or the [XMLHttpRequest API](#). This object is available in API version 61.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

For information about navigation timing attributes, including a diagram of the order that attributes follow, see section 4.1 of the W3 Standards on [Navigation Timing Level 2](#).

Fields

Field	Details
APP_NAME	Type String Description The name of the application that the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, Safari
BROWSER_VERSION	Type String Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> . Example United States/California
CLIENT_ID	Type String Description The API client ID.

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as <code>Salesforce.com</code> IP. Example <code>96.43.144.26</code>
CONNECT_END	Type Number Description The time in milliseconds when the browser establishes a connection to a server so that it can retrieve a resource. To calculate the Transport Control Protocol (TCP) handshake time, subtract the <code>CONNECT_START</code> time from the <code>CONNECT_END</code> time.
CONNECT_START	Type Number Description The time in milliseconds after the browser completes the Domain Name System (DNS) lookup and begins connecting to a server so that it can retrieve a resource. To calculate the Transport Control Protocol (TCP) handshake time, subtract the <code>CONNECT_START</code> time from the <code>CONNECT_END</code> time.
CONNECTION_TYPE	Type String Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE

Field	Details
	WIFI
DECODED_BODY_SIZE	Type Number Description The size in octets of the HTTP message body after the removal of any applied content encoding.
DEVICE_MODEL	Type String Description The name of the device model. Example iPad, iPhone
DEVICE_PLATFORM	Type String Description The type of application experience in <code>name:experience:form</code> format. Possible Values <code>name: APP_BUILDER, CUSTOM, S1, SFX</code> <code>experience: BROWSER, HYBRID</code> <code>form: DESKTOP, PHONE, TABLET</code>
DEVICE_SESSION_ID	Type String Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DOM_COMPLETE	Type Number Description The time in milliseconds when the page's <code>readyState</code> property is set to <code>complete</code>. Indicates that the page and its subresources have finished loading.
DOM_CONTENT_LOADED_EVENT_END	Type Number

Field	Details
	Description The time in milliseconds when the page's <code>DOMContentLoaded</code> event handler completes. To calculate the processing time for the <code>DOMContentLoaded</code> event handler, subtract the <code>DOM_CONTENT_LOADED_EVENT_START</code> time from the <code>DOM_CONTENT_LOADED_EVENT_END</code> time.
<code>DOM_CONTENT_LOADED_EVENT_START</code>	Type Number Description The time in milliseconds when the page's <code>DOMContentLoaded</code> event handler starts. To calculate the processing time for the <code>DOMContentLoaded</code> event handler, subtract the <code>DOM_CONTENT_LOADED_EVENT_START</code> time from the <code>DOM_CONTENT_LOADED_EVENT_END</code> time.
<code>DOM_INTERACTIVE</code>	Type Number Description The time in milliseconds when the page's <code>readyState</code> is set to <code>interactive</code>. Indicates that the page has finished loading, but subresources, such as images and scripts, are still loading.
<code>DOMAIN_LOOKUP_END</code>	Type Number Description The time in milliseconds when the browser completes a DNS lookup for a resource. To calculate the DNS lookup time, subtract the <code>DOMAIN_LOOKUP_START</code> time from the <code>DOMAIN_LOOKUP_END</code> time.
<code>DOMAIN_LOOKUP_START</code>	Type Number Description The time in milliseconds when the browser starts a DNS lookup for a resource. To calculate the DNS lookup time, subtract the <code>DOMAIN_LOOKUP_START</code> time from the <code>DOMAIN_LOOKUP_END</code> time.
<code>DURATION</code>	Type Number Description The total duration in milliseconds of the event from the <code>START_TIME</code> to the <code>LOAD_EVENT_END</code> time.

Field	Details
ENCODED_BODY_SIZE	Type Number Description The size in octets of the HTTP message body before the removal of any applied content encoding.
EVENT_TYPE	Type String Description The type of event. The value is always <code>UITelemetryNavigationTiming</code>.
FETCH_START	Type Number Description The time in milliseconds when the browser starts to fetch a resource from the server, not including redirects. Occurs before the DNS lookup and the connection to the server is established. To calculate the total time used to fetch a resource without redirects, subtract the <code>FETCH_START</code> time from the <code>RESPONSE_END</code> time.
FIRST_INTERIM_RESPONSE_START	Type Number Description The time in milliseconds when the browser receives the first byte of the interim 1xx response from the server. To calculate the time from when the browser sends a request to when it starts to receive an interim response, subtract the <code>REQUEST_START</code> time from the <code>FIRST_INTERIM_RESPONSE_START</code> time.
INITIATOR_TYPE	Type String Description The HTML element that initiates the resource load. Example <code>css, image, link</code>
LOAD_EVENT_END	Type Number Description The time in milliseconds when the page's <code>load</code> event handler completes.

Field	Details
	To calculate the processing time for the <code>load</code> event handler, subtract the <code>LOAD_EVENT_START</code> time from the <code>LOAD_EVENT_END</code> time.
<code>LOAD_EVENT_START</code>	Type Number Description The time in milliseconds when the page's <code>load</code> event handler begins. To calculate the processing time for the <code>load</code> event handler, subtract the <code>LOAD_EVENT_START</code> time from the <code>LOAD_EVENT_END</code> time.
<code>LOGIN_KEY</code>	Type String Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example <code>GeJCsym5eyvtEK2I</code>
<code>NAVIGATION_TYPE</code>	Type String Description The type of navigation timing data. Possible Values • <code>navigate</code>: a user interaction or a script initiated navigation. • <code>reload</code>: a reload initiated navigation. • <code>back_forward</code>: navigation traverses the browser's history. • <code>prerender</code>: a prerender hint initiated navigation.
<code>NEXT_HOP_PROTOCOL</code>	Type String Description The Application-Layer Protocol Negotiation (ALPN) Protocol ID that fetches the resource. Possible Values <code>http/0.9</code>, <code>http/1.0</code>, <code>h2</code>, <code>h2c</code>, <code>h3</code>
<code>ORGANIZATION_ID</code>	Type String Description The 15-character ID of the org. Example <code>00D000000000123</code>

Field	Details
OS_NAME	Type String Description The operating system name, derived from USER_AGENT. Example Android, iOS, OSX
OS_VERSION	Type String Description The operating system version, derived from USER_AGENT.
PAGE_CONTEXT	Type String Description The name of the component hosting the main content of the page. Example clients:cardsContainer
PAGE_ENTITY_ID	Type String Description The unique entity identifier of the event. Example 0013000000I3zJAAAZ
PAGE_ENTITY_TYPE	Type String Description The entity type of the event. Example task, contacts
PAGE_URL	Type String Description The relative URL of the top-level Lightning Experience page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. Example /sObject/0064100000JXITSAA5/view

Field	Details
REDIRECT_COUNT	Type Number Description The total number of redirects since the last non-redirect navigation in the current browsing context.
REDIRECT_END	Type Number Description The time in milliseconds when the browser receives the last byte of the response of the final redirect. To calculate the total redirection time, subtract the REDIRECT_START time from the REDIRECT_END time.
REDIRECT_START	Type Number Description The time in milliseconds when the browser starts to fetch a resource that initiates a redirect. To calculate the total redirection time, subtract the REDIRECT_START time from the REDIRECT_END time.
RENDER_BLOCKING_STATUS	Type String Description The status that indicates whether the resource can block or delay the browser from rendering page content. Possible Values • blocking: the resource can block rendering. • codenon-blocking: the resource doesn't block rendering.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
REQUEST_START	Type Number

Field	Details
	Description The time in milliseconds when the browser starts to request the resource from the server. To calculate the total request time, subtract the REQUEST_START time from the RESPONSE_START time.
RESPONSE_END	Type Number Description The time in milliseconds when the browser receives the resource's last byte or when the transport connection closes, whichever comes first. To calculate the total time used to fetch a resource without redirects, subtract the FETCH_START time from the RESPONSE_END time.
RESPONSE_START	Type Number Description The time in milliseconds when the browser receives the first byte of the response from the server. To calculate the total request time, subtract the REQUEST_START time from the RESPONSE_START time.
RESPONSE_STATUS	Type Number Description The HTTP response status code. Example 200
SDK_APP_TYPE	Type String Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE

Field	Details
SDK_APP_VERSION	Type String Description The mobile SDK application version number. Example 5 . 0
SDK_VERSION	Type String Description The mobile SDK version number. Example 2 . 1 . 0
SECURE_CONNECT_START	Type Number Description The time in milliseconds when the browser begins the handshake process that secures the connection. To calculate the Transport Layer Security (TLS) time, subtract the SECURE_CONNECT_START time from the REQUEST_START time.
SERVER_REQUEST_ID	Type String Description The request ID for the server request that's used to find associated server logs. Example 346000000087551ecb
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session starts. Example cdd09305cb6babf34059e27f70e47f1b11dec868
START_TIME	Type Number Description The time in milliseconds when the browser starts to fetch the resource, including redirects.

Field	Details
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z. The timezone is GMT.
TRANSFER_SIZE	Type Number Description The size in octets of the resource, including the response header and the response payload body.
UI_EVENT_RELATIVE_TIMESTAMP	Type Number Description The difference in milliseconds between when the event is logged and when the browser tab is opened. Example 29322.23
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurs, measured in milliseconds. Example 1479769912796
UI_ROOT_ACTIVITY_ID	Type String Description The ID of the root activity when the event occurs.

Field	Details
UI_THREAD_RESPONSE_DELAY	Type Number Description The time in milliseconds from when the browser receives the response to when it executes the callback. This delay occurs if the main Javascript thread is busy when the response is received.
UNLOAD_EVENT_END	Type Number Description The time in milliseconds when the page's <code>unload</code> event handler completes. To calculate the processing time for the <code>unload</code> event handler, subtract the <code>UNLOAD_EVENT_START</code> time from the <code>UNLOAD_EVENT_END</code> time.
UNLOAD_EVENT_START	Type Number Description The time in milliseconds when the page's <code>unload</code> event handler starts. To calculate the processing time for the <code>unload</code> event handler, subtract the <code>UNLOAD_EVENT_START</code> time from the <code>UNLOAD_EVENT_END</code> time.
URL	Type String Description The URL of the request.
USER_ID	Type String Description The 15-character ID of the user accessing Salesforce services through the UI or API. Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0

Field	Details
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self-Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator
WORKER_START	Type Number Description If a service worker is installed, the time in milliseconds when the active service worker receives the <code>fetch</code> event. To measure the service worker processing time, subtract the <code>WORKER_START</code> time from the <code>FETCH_START</code> time.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

UI Telemetry Resource Timing Event

UI Telemetry Resource Timing events capture network performance metrics related to loading an application's resources. The event includes requests initiated with either the [Fetch API](#) or the [XMLHttpRequest API](#). This object is available in API version 61.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer Guide](#).

For information about resource timing attributes, including a diagram of the order that attributes follow, see section 4.6 of the W3 Standards on [Resource Timing](#).

Fields

Field	Details
APP_NAME	Type String Description The name of the application that the user accessed.
BROWSER_NAME	Type String Description The name of the browser that the user accessed. Example Chrome, Safari
BROWSER_VERSION	Type String Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
CLIENT_GEO	Type String Description The geolocation of the client in the form of <code><Country>/<State Province></code> . Example United States/California
CLIENT_ID	Type String Description The API client ID.
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP." Example 96.43.144.26

Field	Details
CONNECT_END	Type Number Description The time in milliseconds when the browser establishes a connection to a server so that it can retrieve a resource. To calculate the Transport Control Protocol (TCP) handshake time, subtract the CONNECT_START time from the CONNECT_END time.
CONNECT_START	Type Number Description The time in milliseconds after the browser completes the Domain Name System (DNS) lookup and begins connecting to a server so that it can retrieve a resource. To calculate the Transport Control Protocol (TCP) handshake time, subtract the CONNECT_START time from the CONNECT_END time.
CONNECTION_TYPE	Type String Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DECODED_BODY_SIZE	Type Number Description The size in octets of the HTTP message body after the removal of any applied content encoding.

Field	Details
DEVICE_MODEL	Type String Description The name of the device model. Example iPad, iPhone
DEVICE_PLATFORM	Type String Description The type of application experience in <code>name:experience:form</code> format. Possible Values • <code>name: APP_BUILDER, CUSTOM, S1, SFX</code> • <code>experience: BROWSER, HYBRID</code> • <code>form: DESKTOP, PHONE, TABLET</code>
DEVICE_SESSION_ID	Type String Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
DOMAIN_LOOKUP_END	Type Number Description The time in milliseconds when the browser completes a DNS lookup for a resource. To calculate the DNS lookup time, subtract the <code>DOMAIN_LOOKUP_START</code> time from the <code>DOMAIN_LOOKUP_END</code> time.
DOMAIN_LOOKUP_START	Type Number Description The time in milliseconds when the browser starts a DNS lookup for a resource. To calculate the DNS lookup time, subtract the <code>DOMAIN_LOOKUP_START</code> time from the <code>DOMAIN_LOOKUP_END</code> time.
DURATION	Type Number

Field	Details
	Description The total duration in milliseconds of the event from the <code>START_TIME</code> to the <code>RESPONSE_END</code> time.
ENCODED_BODY_SIZE	Type Number Description The size in octets of the HTTP message body before the removal of any applied content encoding.
EVENT_TYPE	Type String Description The type of event. The value is always <code>UITelemetryResourceTiming</code> .
FETCH_START	Type Number Description The time in milliseconds when the browser starts to fetch a resource from the server, not including redirects. Occurs before the DNS lookup and the connection to the server is established. To calculate the total time used to fetch a resource without redirects, subtract the <code>FETCH_START</code> time from the <code>RESPONSE_END</code> time.
FIRST_INTERIM_RESPONSE_START	Type Number Description The time in milliseconds when the browser receives the first byte of the interim 1xx response from the server. To calculate the time from when the browser sends a request to when it starts to receive an interim response, subtract the <code>REQUEST_START</code> time from the <code>FIRST_INTERIM_RESPONSE_START</code> time.
INITIATOR_TYPE	Type String Description The HTML element that initiates the resource load. Example <code>css, image, link</code>
LOGIN_KEY	Type String

Field	Details
	Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2I
NEXT_HOP_PROTOCOL	Type String Description The Application-Layer Protocol Negotiation (ALPN) Protocol ID that fetches the resource. Possible Values http/0.9, http/1.0, h2, h2c, h3
ORGANIZATION_ID	Type String Description The 15-character ID of the org. Example 00D000000000123
OS_NAME	Type String Description The operating system name, derived from USER_AGENT. Example Android, iOS, OSX, Window
OS_VERSION	Type String Description The operating system version, derived from USER_AGENT.
PAGE_CONTEXT	Type String Description The name of the component hosting the main content of the page. Example clients:cardsContainer
PAGE_ENTITY_ID	Type String

Field	Details
	Description The unique entity identifier of the event. Example 0013000000I3zJAAAZ
PAGE_ENTITY_TYPE	Type String Description The entity type of the event. Example task, contacts
PAGE_URL	Type String Description Relative URL of the top-level Lightning Experience page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with PAGE_URL. Example /sObject/0064100000JXITSAA5/view
REDIRECT_END	Type Number Description The time in milliseconds when the browser receives the last byte of the response of the final redirect. To calculate the total redirection time, subtract the REDIRECT_START time from the REDIRECT_END time.
REDIRECT_START	Type Number Description The time in milliseconds when the browser starts to fetch a resource that initiates a redirect. To calculate the total redirection time, subtract the REDIRECT_START time from the REDIRECT_END time.
RENDER_BLOCKING_STATUS	Type String Description The status that indicates whether the resource can block or delay the browser from rendering page content.

Field	Details
	Possible Values • <code>blocking</code>: the resource can block rendering. • <code>codenon-blocking</code>: the resource doesn't block rendering.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
REQUEST_START	Type Number Description The time in milliseconds when the browser starts to request the resource from the server. To calculate the total request time, subtract the REQUEST_START time from the RESPONSE_START time.
RESPONSE_END	Type Number Description The time in milliseconds when the browser receives the resource's last byte or when the transport connection closes, whichever comes first. To calculate the total time used to fetch a resource without redirects, subtract the FETCH_START time from the RESPONSE_END time.
RESPONSE_START	Type Number Description The time in milliseconds when the browser receives the first byte of the response from the server. To calculate the total request time, subtract the REQUEST_START time from the RESPONSE_START time.
RESPONSE_STATUS	Type Number Description The HTTP response status code.

Field	Details
	Example 200
SDK_APP_TYPE	Type String Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
SDK_APP_VERSION	Type String Description The mobile SDK application version number. Example 5.0
SDK_VERSION	Type String Description The mobile SDK version number. Example 2.1.0
SECURE_CONNECT_START	Type Number Description The time in milliseconds when the browser begins the handshake process that secures the connection. To calculate the Transport Layer Security (TLS) time, subtract the SECURE_CONNECT_START time from the REQUEST_START time.
SERVER_REQUEST_ID	Type String Description The requestId for the server request that's used to find associated server logs.

Field	Details
	Example 346000000087551ecb
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session starts. Example cdd09305cb6babf34059e27f70e47f1b11dec868
START_TIME	Type Number Description The time in milliseconds when the browser starts to fetch the resource, including redirects.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. Example 20130715233322.670
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). Example 2015-07-27T11:32:59.555Z. The timezone is GMT.
TRANSFER_SIZE	Type Number Description The size in octets of the resource, including the response header and the response payload body.
UI_EVENT_RELATIVE_TIMESTAMP	Type Number Description The difference in milliseconds between when the event is logged and when the browser tab is opened.

Field	Details
	Example 29322.23
UI_EVENT_TIMESTAMP	Type Number Description The time at which this event occurs, measured in milliseconds. Example 1479769912796
UI_ROOT_ACTIVITY_ID	Type String Description The ID of the root activity when the event occurs.
UI_THREAD_RESPONSE_DELAY	Type Number Description The time in milliseconds from when the browser receives the response to when it executes the callback. This delay occurs if the main Javascript thread is busy when the response is received.
URL	Type String Description The URL of the request.
USER_ID	Type String Description The 15-character ID of the user accessing Salesforce services through the UI or API. Example 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case-insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0

Field	Details
USER_TYPE	Type String Description The category of user license of the user accessing Salesforce services through the UI or API. Possible Values • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • F: Self-Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator
WORKER_START	Type Number Description The time in milliseconds when the active service worker receives the <code>fetch</code> event, if a service worker is installed. To measure the service worker processing time, subtract the <code>WORKER_START</code> time from the <code>FETCH_START</code> time.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Unique Query Event Type

Unique Query events capture specific search queries (SOQL), filter IDs, and report IDs that are processed, along with the underlying database queries (SQL). This event type is available in API versions 64.0 and later.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
BOT_IDENTIFIER	Type string Description The ID of the bot.
BOT_SESSION_IDENTIFIER	Type string Description The bot session ID.
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
PLANNER_IDENTIFIER	Type string Description The ID of the agent planner.
QUERY_IDENTIFIER	Type String Description The text of the SOQL query run or the Id of the report or list view run.
QUERY_TYPE	Type String Description The input type to the optimizer that was translated.

	Possible Values • soql • filter • report
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
SQL_ID	Type String Description The unique identifier generated for the database query.

URI Event Type

URI events contain details about user interaction with the web browser UI.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

DB_BLOCKS

Type

Number

Description

Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.

DB_CPU_TIME

Type

Number

Description

The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.

DB_TOTAL_TIME

Type

Number

Description

The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.

EVENT_TYPE

Type

String

Description

The type of event. The value is always URI.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

REFERRER_URI

Type

String

	Description The referring URI of the page that's receiving the request.
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
REQUEST_STATUS	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

URI

Type

String

Description

The URI of the page that's receiving the request. For more granular URI information for Lightning Experience and the Salesforce app, see the Lightning Error, Lightning Interaction, Lightning Page View, and Lightning Performance event types.

Examples

/aura (Lightning Experience), /lightning (Lightning Experience and the Salesforce app), /home/home.jsp (Salesforce Classic)

URI_ID_DERIVED

Type

ID

Description

The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 005900000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- **CsnOnly**—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
 - **CspLitePortal**—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
 - **CustomerSuccess**—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
 - **Guest**—Users whose access is limited so that your customers can view and interact with your site without logging in.
 - **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy.
 - **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
 - **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
 - **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.
-

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Visualforce Request Event Type

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI).

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CONTROLLER_TYPE	Type Number Description The type of controller that's used by the requested Visualforce page. Possible Values • 0: NOT_SPECIFIED—The controller type is not specified. • 1: STANDARD—The controller is a standard controller. • 2: CUSTOM—The controller is a custom controller or controller extension. • 3: JAVA—For internal use only. • 4: STANDARD_SET—The controller is a standard list controller. • 5: SPRING—Not used.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DB_BLOCKS	Type Number

	Description Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
DB_CPU_TIME	Type Number Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
DB_TOTAL_TIME	Type Number Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
EVENT_TYPE	Type String Description The type of event. The value is always VisualforceRequest.
HTTP_METHOD	Type String Description The HTTP method of the request. For example: GET, POST, PUT, and so on.
IS_AJAX_REQUEST	Type Boolean Description The value is true if the request is a partial page request.
IS_FIRST_REQUEST	Type Boolean Description 1 if this page is the first Visualforce transaction in the request, or 0 if it isn't.

LOGIN_KEY

Type

String

Description

The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

For example: GeJCsym5eyvtEK2I.

MANAGED_PACKAGE_NAMESPACE

Type

String

Description

If the page is part of a managed package, the namespace of that package.

ORGANIZATION_ID

Type

Id

Description

The 15-character ID of the organization.

For example: 00D000000000123.

PAGE_NAME

Type

String

Description

The name of the Visualforce page that was requested.

QUERY

Type

String

Description

The query string used to access the requested Visualforce page.

Example

Let's assume that the requested Visualforce page (/apex/myAccountDetailPage?id=001xx000003GYv6AAG) shows details of the account whose ID is in the URL. The value of QUERY in this case is ?id=001xx000003GYv6AAG.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxWbDKWWDIk0FKfF5DV.

`REQUEST_SIZE`**Type**

Number

Description

The size of the request body, in bytes. Value is -1 if the request body content is larger than 2GB, or if the request has no body (for example, a typical GET request).

`REQUEST_STATUS`**Type**

String

Description

The status of the request for a page view or user interface action.

For example:

- **S**—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned.
- **F**—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only.
- **U**—Undefined
- **A**—Authorization Error
- **R**—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page.
- **N**—Not Found. 404 error.

This field can have a blank value.

`REQUEST_TYPE`**Type**

String

Description

The request type.

Possible values are:

- **page**—a normal request for a page
 - **content_UI**—a content request for a page that originated in the user interface
 - **content_apex**—a content request initiated by an Apex call
 - **PDF_UI**—a request for a page in PDF format through the user interface
 - **PDF_apex**—a request for PDF format by an Apex call (usually a Web Service call)
-

`RESPONSE_SIZE`**Type**

Number

	Description The size of the response, in bytes.
RUN_TIME	Type Number
	Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TIMESTAMP	Type String
	Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime
	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String
	Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID
	Description The 18-character case insensitive ID of the URI of the page that's receiving the request.

USER_AGENT

Type

Number

Description

The numeric code for the type of client used to make the request (for example, the browser, application, or API).

USER_ID

Type

Id

Description

The 15-character ID of the user who's using Salesforce services through the UI or the API.

For example: 00530000009M943

USER_ID_DERIVED

Type

Id

Description

The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API.

For example: 00590000000I1SNIA0.

USER_TYPE

Type

String

Description

The category of user license.

Possible values are:

- **CsnOnly**—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.
- **CspLitePortal**—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site.
- **CustomerSuccess**—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.
- **Guest**—Users whose access is limited so that your customers can view and interact with your site without logging in.
- **PowerCustomerSuccess**—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared

with users below them in the customer portal role hierarchy.

- **PowerPartner**—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.
- **SelfService**—Users whose access is limited because they're organization customers and access the application through a self-service portal.
- **Standard**—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

VIEW_STATE_SIZE

Type

Number

Description

The size of the Visualforce view state, in bytes.

SEE ALSO:

[EventLogFile Supported Event Types](#)

[EventLogFile](#)

Wave Change Event Type

Wave Change events represent route or page changes made in the CRM Analytics user interface. A Wave Change event type is captured every time the user opens a new CRM Analytics asset or tab, switches between tabs, or changes dashboard pages. Wave Change events are logged when opening new tabs and switching back to previously opened tabs.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field

Details

ANALYTICS_MODE

Type

String

Description

The location in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as `embedded` first. When a user interacts with the dashboard, a full-screen dashboard is displayed to allow for user interaction, and is logged as `mobileNative`.

Possible values are:

- `studio`—Analytics Studio
 - `tab`—Analytics tab
-

- `embedded`— Embedded in Aura or Lightning.
- `embeddedInCommunities`— Embedded in Experience Cloud.
- `mobileNative`— CRM Analytics mobile app for iOS/Android or Salesforce mobile app for iOS/Android

`CLIENT_IP`**Type**

String

Description

The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".

For example: 96.43.144.26.

`CPU_TIME`**Type**

Number

Description

The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

`EVENT_TYPE`**Type**

String

Description

The type of event. The value is always `WaveChange`.

`IS_MOBILE`**Type**

Boolean

Description

If `true`, the dashboard is displayed in the Tableau CRM mobile app for iOS and Android, in the Salesforce mobile app for iOS and Android, or in a mobile browser.

`IS_NEW`**Type**

Boolean

Description

The field indicates that this action opens a new tab or goes back to a previously opened tab. If the change routes to a new page, the value of this field is true. If it routes to an existing page, this field is false.

`LOGIN_KEY`**Type**

String

	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D000000000123.
PAGE_CONTEXT	Type String Description The context of the page in which the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as <code>aura</code> first. When a user interacts with the dashboard, a full-screen dashboard is displayed to allow for user interaction, and is logged as <code>iOS</code> or <code>android</code> . Possible values are: • <code>aura</code>—Lightning Components • <code>vf</code>—Visualforce • <code>iOS</code>— CRM Analytics or Salesforce mobile app for iOS • <code>android</code>— CRM Analytics or Salesforce mobile app for Android
PAGE_ID	Type String Description The ID of the CRM Analytics dashboard page. This field is only available in v58.0 and higher.
RECORD_ID	Type String Description The Salesforce ID of the CRM Analytics object.
REOPEN_COUNT	Type Number Description If <code>IS_NEW</code> is false, the number of times that an existing page opens.

REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SAVED_VIEW_ID	Type String Description The ID of the CRM Analytics dashboard saved view.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TAB_ID	Type String Description The ID of the particular Analytics tab in the user interface. For example: dashboard-0FKB0000000Ec64GDK.
TIMESTAMP	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime

	Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
TYPE	Type String Description The CRM Analytics object type.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
VIEW_MODE	Type String Description The view mode for the CRM Analytics asset. Possible values include <code>view</code>, <code>edit</code>, <code>present</code>, <code>json</code>, or <code>print</code>.

WAVE_SESSION_ID

Type

String

Description

The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.

WAVE_TIMESTAMP

Type

Number

Description

The time at which this log line was generated.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Wave Download Event Type

Wave Download events represent downloads made from lens explorations and dashboard widgets in the CRM Analytics user interface. A Wave Download event type is captured when a user downloads images (.png), Microsoft® Excel® data (.xls), or comma-separated values (.csv) files.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field**Details**

ASSET_ID

Type

ID

Description

The ID of the asset the user downloads from.

ASSET_TYPE

Type

String

Description

The type of the asset the user downloads from.

Values

- **Lens**—A *lens* is a view into a dataset used in an exploratory mode or to get insight to a specific business question. The lens can be saved and shared independently. It can also be clipped to a dashboard.
- **Dashboard**—A *dashboard* is a curated set of charts, metrics, and tables based on the data in one or more lenses.

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". Example 96.43.144.26
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DATASET_IDS	Type String Description Comma-separated list of IDs of utilized data sets.
DOWNLOAD_ERROR	Type String Description The message for the error blocking the download request, if any.
DOWNLOAD_FORMAT	Type String Description The data format of the export. Values • <code>png</code>—Image • <code>csv</code>—Comma-separated values • <code>xls</code>—Microsoft Excel
EVENT_TYPE	Type String Description The type of event. The value is always <code>WaveDownload</code>.
LOGIN_KEY	Type String

Field	Details
	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. Example GeJCsym5eyvtEK2l
NUMBER_OF_RECORDS	Type Number Description The number of records exported.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. Example 00D000000000123
REQUEST_ID	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID. Example 3nWgxWbDKWWDIk0FKfF5DV
RUN_TIME	Type Number Description The amount of time that the request took in milliseconds.
SESSION_KEY	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. Example d7DEq/ANa7nNZZVD
TIMESTAMP	Type String

Field	Details
	Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
TIMESTAMP_DERIVED	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
URI	Type String Description The URI of the page that's receiving the request. Example /home/home.jsp
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. Example 005300000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. Example 005900000000I1SNIA0
USER_TYPE	Type String

Field	Details
	Description The type of Salesforce user.
WAVE_SESSION_ID	Type String Description The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
WAVE_TIMESTAMP	Type Number Description The time at which this log line was generated.

Wave Interaction Event Type

Wave Interaction events represent route or page changes made in the CRM Analytics user interface. A Wave Interaction event type is captured when a tab is closed. It also collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and return, and logged only once when the tab is closed.

 **Note:** Because Wave Interaction events are logged only when the tab or browser window is closed, these events might not match Wave Change events exactly if a user allows their Salesforce session to time out before closing.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

EVENT_TYPE	Type String Description The type of event. The value is always <code>WaveInteraction</code> .
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code> .
NUM_CLICKS	Type Number Description The number of clicks performed on a page in the CRM Analytics user interface.
NUM_SESSIONS	Type Number Description The number of times a user returned to a particular page.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: <code>00D0000000000123</code> .
READ_TIME	Type Number Description The amount of time a user spent on a particular tab.
RECORD_ID	Type String Description The Salesforce ID of the CRM Analytics object.
REQUEST_ID	Type String

	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> . For example: 3nWgxWbDKWWDIk0FKfF5DV.
<code>RUN_TIME</code>	Type Number Description The amount of time that the request took in milliseconds.
<code>SESSION_KEY</code>	Type String Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
<code>TAB_ID</code>	Type String Description The ID of the particular Analytics tab in the user interface. Example dashboard-0FKB0000000Ec64GDK
<code>TIMESTAMP</code>	Type String Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
<code>TIMESTAMP_DERIVED</code>	Type DateTime Description The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ). For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.
<code>TOTAL_TIME</code>	Type Number

	Description The total amount of time a tab was open in milliseconds.
TYPE	Type String Description The CRM Analytics object type.
URI	Type String Description The URI of the page that's receiving the request. For example: /home/home.jsp.
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: 00590000000I1SNIA0.
VIEW_MODE	Type String Description The view mode for the CRM Analytics asset. Possible values include <code>view</code> , <code>edit</code> , <code>present</code> , <code>json</code> , or <code>print</code> .
WAVE_SESSION_ID	Type String

	Description The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
WAVE_TIMESTAMP	Type Number Description The time at which this log line was generated.

SEE ALSO:

[EventLogFile Supported Event Types](#)[EventLogFile](#)

Wave Performance Event Type

Wave Performance events help you track trends in your Analytics performance.

For details about event monitoring, see the [Trailhead Event Monitoring module](#) or [REST API Developer's Guide](#).

Fields

Field	Details
CLIENT_IP	Type String Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CPU_TIME	Type Number Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EPT	Type Number Description The experienced page time in milliseconds.

EVENT_TYPE	Type String Description The type of event. The value is always WavePerformance.
IS_INITIAL	Type Boolean Description Indicates whether the event is for the initial load of dashboard (<code>true</code>) or not (<code>false</code>).
LOGIN_KEY	Type String Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
NAME	Type String Description The asset title or query string.
ORGANIZATION_ID	Type Id Description The 15-character ID of the organization. For example: 00D0000000000123.
QUERY_ID	Type String Description This field is deprecated in API version 50.0. The number of queries can be determined using the Uri Event type logs, referenced here on page 2425
RECORD_ID	Type String Description The Salesforce ID of the CRM Analytics object.

REQUEST_ID

Type

String

Description

The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

For example: 3nWgxBbDKWWDIk0FKfF5DV.

RUN_TIME

Type

Number

Description

The amount of time that the request took in milliseconds.

SESSION_KEY

Type

String

Description

The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.

For example: d7DEq/ANa7nNZZVD.

TAB_ID

Type

String

Description

The ID of the particular Analytics tab in the user interface.

Example

dashboard-0FKB0000000Ec64GDK

TIMESTAMP

Type

String

Description

The access time of Salesforce services in GMT.

For example: 20130715233322.670.

TIMESTAMP_DERIVED

Type

DateTime

Description

The access time of Salesforce services in ISO8601-compatible format (YYYY-MM-DDTHH:MM:SS.sssZ).

For example: 2015-07-27T11:32:59.555Z. Timezone is GMT.

TYPE	Type String Description The CRM Analytics object type. This field is scheduled for deprecation in v59.0. Use the new <code>IS_INITIAL</code> field to determine the log line type.
URI	Type String Description The URI of the page that's receiving the request. For example: <code>/home/home.jsp</code> .
URI_ID_DERIVED	Type ID Description The 18-character case insensitive ID of the URI of the page that's receiving the request.
USER_ID	Type Id Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: <code>00530000009M943</code>
USER_ID_DERIVED	Type Id Description The 18-character case insensitive ID of the user who's using Salesforce services through the UI or the API. For example: <code>00590000000I1SNIA0</code> .
VIEW_MODE	Type String Description The view mode for the CRM Analytics asset. Possible values include <code>view</code> , <code>edit</code> , <code>present</code> , <code>json</code> , or <code>print</code> .
WAVE_SESSION_ID	Type String

Description

The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.

WAVE_TIMESTAMP

Type

Number

Description

The time at which this log line was generated.

SEE ALSO:

- [EventLogFile Supported Event Types](#)
- [EventLogFile](#)

EventRelation

Represents a person (a user, lead, or contact) or a resource (such as a conference room) invited to an event. This object lets you add or remove invitees from an event and use the API to manage invitees’ responses to invitations. If Shared Activities is enabled, EventRelation can also represent other objects that are related to an event. EventRelation does not support triggers, workflow, or data validation rules. EventRelation allows a variable number of relationships and handles deleted events differently, depending on whether Shared Activities is enabled.

A non-recurring event can have up to 1,000 invitees. A recurring event can have up to 100 invitees.

If Shared Activities Isn’t Enabled

- EventRelation records only represent invitees (contacts, users, and resources).
- An event can be related to one contact or lead.

If Shared Activities Is Enabled

- EventRelation records can represent:
 - Invitees (IsInvitee= is set to true)
 - OR
 - Related contacts or lead (IsParent is set to true)
- An event can be related to up to 50 contacts or one lead. These people may or may not be invitees. The number of allowed invitees is not affected by the number of related contacts. If a contact or lead is also an invitee, there is one EventRelation record for that person with IsInvitee and IsParent are set to true.
- An event can be related to a lead, contact, resource, account, or opportunity.
- An event can be related to a custom object that has the HasActivities attribute set to true.
- If you delete an event, then relations between the event and any specified contacts, leads, and other records are also deleted.
- If you delete the EventRelation record representing a relation then the corresponding relation field may be cleared on the event.
- If you delete the EventRelation record representing the whoId on an event, then another Who, if any, from the event’s EventWhoIds field will be promoted to the whoId.

- If you restore a deleted event, relations between the event and any specified contacts, leads, and records are also restored. The `WhoId`, `WhatId`, and `AccountId` field values are recalculated using the field values on `EventRelation`.

Whether or not Shared Activities is enabled, an event can be related to one other kind of record, such as an account, an opportunity, or a custom object.

 Note:

- With API versions 26.0 and later, the `EventRelation` object replaces the `EventAttendee` object, and the `EventAttendee` object is no longer visible. You can still query the `EventAttendee` object using packages that support API versions 25.0 and earlier, or by using Apex.
- An `EventRelation` object can't be created for a child event.
- `EventRelation` includes deactivated users.
- In API versions 25.0 and earlier, you can't use `query()`, `delete()`, or `update()` with events related to more than one contact.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>AccountId</code>	Type reference Properties Filter, Group, Nillable, Sort Description Contains the Account ID of the relation. For information on IDs, see ID Field Type. <code>AccountId</code> is visible when Shared Activities is enabled.
<code>EventId</code>	Type reference Properties Create, Filter, Group, Sort Description Contains the ID of the event. This value can't be changed after it's been specified. This is a relationship field. Relationship Name Event Relationship Type Lookup

Field	Details
	Refers To Event
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsInvitee	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the relation is an invitee. • <code>IsInvitee</code> is visible while Shared Activities is being enabled, after it has been enabled, and while it is being disabled. • <code>IsInvitee</code> defaults to <code>true</code> while Shared Activities is being enabled, after it has been enabled, and while it is being disabled if <code>IsInvitee</code>, <code>IsParent</code>, and <code>IsWhat</code> are not set. This configuration ensures compatibility when Shared Activities isn't enabled and EventRelation represents event invitees only. • <code>IsInvitee</code> defaults to <code>false</code> when Shared Activities is enabled if <code>IsParent</code> is set to <code>true</code>.
IsParent	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description <code>IsParent</code> is visible only when Shared Activities is enabled. When <code>false</code> , indicates that the relation is an invitee (a contact, lead, or user). When <code>true</code> , indicates that the relation is a Who or What, as determined by <code>IsWhat</code> field.
IsWhat	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description <code>IsWhat</code> is visible only when Shared Activities is enabled. The value is relevant only if <code>IsParent</code> is <code>true</code> . When <code>IsWhat</code> is <code>true</code> , the relation specified by

Field	Details
	<code>RelationId</code> is a What (an account, opportunity, custom object, etc.). When <code>IsWhat</code> is <code>false</code>, the relation specified by <code>RelationId</code> is a Who (a contact, lead, or user).
<code>RelationId</code>	Type reference Properties Create, Filter, Group, Sort Description Contains the ID of the person (User, Contact, or Lead) or the resource invited to an event. When Shared Activities is enabled, <code>RelationId</code> can also contain the ID of an account, opportunity, or other object related to an event. This value can't be changed after it's been specified. This is a polymorphic relationship field. Relationship Name Relation Relationship Type Lookup Refers To Calendar, Contact, Lead, User
<code>RespondedDate</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the most recent date and time when the invitee responded to an invitation to an event.
<code>Response</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Contains optional text that the invitee can enter when responding to an invitation to an event.
<code>Status</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates the invitee status with one of the following values: • New: Invitee has received the invitation but hasn't yet responded. This value is the default. • Declined: Invitee has declined the invitation. • Accepted: Invitee has accepted the invitation.  Note: Uninvited and Maybe aren't currently supported.

Usage

- Invitee related lists display slightly different content. In the Salesforce mobile app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner. To reproduce the full site functionality in the Salesforce mobile app, use the following API queries.

If you use Shared Activities in your Salesforce org, use this query:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where *Event_Id* is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a **WHERE** clause.

Assigning resource attendance status

You can add a resource to an event only when the resource is available. The only attendance status that can be assigned to resources is **Accepted**. Events can't be saved when resources you've added aren't available.

Create an invitee if Shared Activities is enabled (or during the process of enabling it or rolling back)

If the invitee is already a contact or lead, update **IsInvitee** to **true**.

If the invitee is not already a contact or lead, create an **EventRelation** object for the invitee with **IsInvitee** set to **true**.

Create an invitee if Shared Activities is not enabled

Create an **EventRelation** object for the invitee.

Insert a contact or lead relation

```
EventRelation er = new EventRelation(EventId = '00UD0000005zijH',
    RelationId = '003D000000Q8aeV', isParent = true, isInvitee = false);
insert er;
```

Determine what events a given invitee is attending

To determine all the events that a particular person is attending during a given time period (for example, next week), you can have a client application query the **Event** object for a given date range, iterate through the results, and, for each event, query the **EventRelation** object to determine whether the particular person (**RelationId**) has accepted an invitation to that event.

Insert an invitee relation

If `isParent`, `isWhat` and `IsInvitee` are not set, and `RelationId` is a contact, lead, user, or calendar, `IsInvitee` defaults to `true`. This means if an `EventRelation` isn't specifically inserted as a relation to a contact or lead, it's treated as an Invitee relation by default.

```
EventRelation er = new EventRelation(EventId = '00UD0000005zjH',
    RelationId = '003D000000Q8adV');
insert er;
```

Query relations to a contact or a lead

```
List<EventRelation> whoRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zjD' AND isParent = true AND isWhat =
    false];
```

Query invitee relations

```
List<EventRelation> inviteeRelations = [SELECT Id, Relation.Name FROM
    EventRelation WHERE EventId = '00UD0000005zjD' AND isInvitee = true];
```

Update an invitee relation to a contact or lead invitee relation

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zjD' AND isInvitee = true and isParent = false LIMIT 1];
er.isParent = true;
update er;
```

Update a contact or lead relation to a contact or lead invitee relation

```
EventRelation er = [SELECT Id FROM EventRelation WHERE EventId =
    '00UD0000005zjD' AND isParent = true and isInvitee = false LIMIT 1];
er.isInvitee = true;
update er;
```

Reproduce invitee related list functionality in the Salesforce mobile app

Invitee related lists display slightly different content in the Salesforce mobile app and the full site. In the app, the invitee related list includes invitees only, whereas in the full site, it also includes the event owner.

If you use Shared Activities in your Salesforce org, use the following query to reproduce the full site functionality in the Salesforce mobile app:

```
SELECT RelationId FROM EventRelation WHERE isInvitee = true AND eventId='[Event_Id]'
```

where `Event_Id` is the child event's ID.

If you don't use Shared Activities, use this query:

```
SELECT RelationId FROM EventRelation WHERE eventId='[Event_Id]'
```

These queries get the main event's relations and display them for the given child event. To further filter the results, add a `WHERE` clause.

Send email notifications

To send email notifications for a given event, query `EventRelation` for the event, iterate through the list, examine the status, and send email notifications to every person who accepted the invitation.

Syncing Events with Lightning Sync

Attendee statuses (Accepted or Maybe, Declined, or No Response) sync from Microsoft® Exchange or Google to Salesforce, but not from Salesforce to Exchange or Google. Be wary of creating API flows that update attendee status in Salesforce for users set up to sync both ways. Eventually the original Exchange or Google status overrides the update made in Salesforce.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[EventRelationChangeEvent](#) (API version 44.0)

Change events are available for the object.

[Overview of Salesforce Objects and Fields](#)

EventBusSubscriber

Represents a trigger, process, or flow that's subscribed to a platform event or a change data capture event. Doesn't include CometD or Pub/Sub API subscribers.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

EventBusSubscriber is read only and can only be queried. As of Summer '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field	Details
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the subscriber. For example, the trigger ID.
IsPartitioned	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the platform event Apex trigger is configured with parallel subscriptions (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. See Platform Event Processing at Scale with Parallel Subscriptions for Apex Triggers in the <i>Platform Events Developer Guide</i>. This field is available in API version 62.0 and later.
LastError	Type string Properties Filter, Group, Nillable, Sort Description The error message that the last thrown <code>EventBus.RetryableException</code> contains. This field applies to Apex triggers only. Available in API version 43.0 and later.
LastProcessed	Type string Properties Filter, Group, Nillable, Sort Description The replay ID of the last event that the subscriber processed. This field replaces <code>Position</code> as of API level 66.0.
LastPublished	Type string Properties Filter, Group, Nillable, Sort Description The replay ID of the last published event. This field replaces <code>Tip</code> as of API level 66.0.  Note: For high-volume platform events and change events, the value for <code>Tip</code> isn't available and is always -1.
Name	Type string Properties Filter, Group, Nillable, Sort Description The name of the subscribed item, such as the trigger or process name. If the subscribed item's name is "Process", at least one flow Pause element is subscribed to the event.

Field	Details
Position	Type int Properties Filter, Group, Nillable, Sort Description The replay ID of the last event that the subscriber processed. This field has been deprecated as of API level 66.0 and should no longer be used. Use <code>LastProcessed</code> instead. This field may not be properly represented if the value exceeds the maximum integer size.
Retries	Type int Properties Filter, Group, Nillable, Sort Description The number of times the trigger was retried due to throwing the <code>EventBus.RetryableException</code>. This field applies to Apex triggers only. Available in API version 43.0 and later.
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the status of the subscriber. Can be one of these values: • Error—The subscriber was disconnected and stopped receiving published events. A trigger reaches this state when it exceeds the number of maximum retries with the <code>EventBus.RetryableException</code>. Trigger assertion failures and unhandled exceptions don't cause the error state. We recommend limiting the retries to fewer than nine times to avoid reaching this state. When you fix and save the trigger, or for a managed package trigger, if you redeploy the package, the trigger resumes automatically from the tip, starting from new events. Also, you can resume a trigger subscription in the subscription detail page that you access from the platform event page. • Repartitioning—The system is in the process of modifying the trigger's parallel subscription configuration. • Running—The subscriber is actively listening to events. If you modify the subscriber, the subscription continues to process events. • Suspended—The subscriber is disconnected and can't receive events because a Salesforce admin suspended it or due to an internal error. You can resume a trigger subscription in the subscription detail page that you access from the platform event page. To resume a process, deactivate it and then reactivate it. If you modify the subscriber, the subscription resumes automatically from the tip, starting from new events. For more information, see View and Manage an Event's Subscribers on the Platform Event's Detail Page in the <i>Platform Events Developer Guide</i>.

Field	Details
Tip	Type int Properties Filter, Group, Nillable, Sort Description The replay ID of the last published event. This field has been deprecated as of API level 66.0 and should no longer be used. Use <code>LastPublished</code> instead. This field may not be properly represented if the value exceeds the maximum integer size.  Note: For high-volume platform events and change events, the value for Tip isn't available and is always -1.
Topic	Type string Properties Filter, Group, Nillable, Sort Description The name of the subscription channel that corresponds to a platform event or change event. For a platform event, the topic name is the event name appended with <code>__e</code>, such as <code>MyEvent__e</code>. For a change event, the topic is the name of the change event, such as <code>AccountChangeEvent</code>.
Type	Type string Properties Filter, Group, Nillable, Sort Description The subscriber type (<code>ApexTrigger</code>). If the subscriber is a process or flow Pause element, the type is blank.

Usage

Use `EventBusSubscriber` to query details about subscribers to a platform event. You can get all subscribers for a particular event by filtering on the `Topic` field, as follows.

```
SELECT ExternalId, Name, Position, Status, Tip, Type
FROM EventBusSubscriber
WHERE Topic='Low_Ink__e'
```

EventRelayConfig

Represents the configuration of an event relay, which relays platform events and change data capture events from Salesforce to Amazon EventBridge. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- To retrieve or query this object, you must have the View Setup and Configuration permission.
- This object is read-only. To configure an event relay, use [EventRelayConfig](#) in Tooling API or [EventRelayConfig](#) in Metadata API.

Fields

Field	Details
<code>DestinationResourceName</code>	Type string Properties Filter, Group, Sort Description The developer name of the named credential, which stores the AWS account information. The <code>destinationResourceName</code> value contains the <code>callout:</code> prefix. For example: <code>callout:MyRelayNamedCredential</code>
<code>DeveloperName</code>	Type string Properties Filter, Group, Sort Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Record Type Name. This field is automatically generated, but you can supply your own value if you create the record using the API.
<code>EventChannel</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The full name of the event channel used in the event relay. For example: <code>MyRelayChannel__chn</code>

Field	Details
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the EventRelayConfig. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label for the EventRelayConfig. In the UI, this field is Event Relay Config.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values: - In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer. - In organizations that are not Developer Edition organizations, <code>NamespacePrefix</code> is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.
RelayOption	Type textarea Properties Nullable Description A JSON-encoded string that contains an option for resuming an event relay after the system recovers from an error. This option is used if the event relay can't resume after the last relayed event. The options available are: <code>{"ReplayRecovery\":\"LATEST\"}</code>—(Default) Start relaying events from new events received in the event bus. Use this option if you aren't interested in missed events while the relay was down. <code>{"ReplayRecovery\":\"EARLIEST\"}</code>—Resend all events stored in the event bus and relay new events thereafter. The event bus stores events for up to three days. Use this option if you want to reprocess all stored events and catch up on missed events.
State	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The execution state of the event relay. Possible values are: <code>RUN</code>—The event relay is running and actively relaying event messages from Salesforce to Amazon EventBridge. <code>PAUSE</code>—An administrator paused the event relay. No events are relayed to Amazon EventBridge during this status. All current state information is saved. <code>STOP</code>—(Default) The event relay is stopped and no events are relayed to Amazon EventBridge. All current state information is deleted.

Field	Details
UsageType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Reserved for future use.

EventRelayFeedback

Represents execution state information about an event relay from Salesforce to Amazon EventBridge for platform events and change data capture events. Query this object to get information such as the event relay status and any error message. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ErrorCode	Type string Properties Filter, Group, Nillable, Sort Description The error code of the last error that occurred during the relay of event messages. For a list of possible error codes and messages, see Error Codes .
ErrorIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The identifier of an unexpected system error that occurred during the relay of event messages.
ErrorMessage	Type textarea Properties Nillable

Field	Details
	Description The error message of the last error that occurred during the relay of event messages. For a list of possible error codes and messages, see Error Codes.
ErrorTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time in the UTC time zone when the last error occurred during the relay of event messages.
EventRelayConfigId	Type reference Properties Filter, Group, Sort Description The ID of the event relay configuration that this feedback record is collecting the execution information of. This field is a relationship field. Relationship Name EventRelayConfig Relationship Type Lookup Refers To EventRelayConfig
EventRelayNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The number that identifies the EventRelayFeedback record. This field is of type Auto Number.
LastRelayedEventTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time in the UTC time zone when the last event was relayed to Amazon EventBridge.

Field	Details
RemoteResource	Type string Properties Filter, Group, Nillable, Sort Description The name of the partner event source associated with the event relay. It is in the format <code>aws.partner/salesforce.com/orgID/channelID</code>. For example: <code>aws.partner/salesforce.com/00DRM000000Fxts2AC/0YLRM0000004Dfg4AE</code>.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The status of the event relay. Possible values are: • ERROR— The event relay encountered an error while running or during a state change that the administrator initiates. During the ERROR state, no events are relayed to Amazon EventBridge. The system attempts periodically to recover from the error. If it succeeds, the Status field value changes to RUNNING or to the new state that the administrator selected. The event relay attempts to resume sending events from the event bus from where it left off. In rare occasions, if it can't resume after the last relayed event, it uses the error recovery option in the relayOption field of EventRelayConfig to determine where to resume from. • DELETED—Reserved for future use. • PAUSED— An administrator paused the event relay. No events are relayed to Amazon EventBridge during this status. When an administrator resumes the event relay, events are relayed from the last position in the event bus, as long as they're within the retention window. • RUNNING— The event relay is running and actively relaying events from Salesforce to Amazon EventBridge. • STOPPED—The event relay is stopped and no events are relayed to Amazon EventBridge. Some state information stored in EventRelayFeedback fields is deleted, such as LastRelayedEventTime and error fields. When the event relay is resumed, only new events are relayed. The default value is STOPPED.
UsageType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reserved for future use.

Error Codes

This table contains the error codes and messages that a query on `EventRelayFeedback` can return in the `ErrorCode` and `ErrorMessage` fields.

Error Code	Error Description
<code>sfdc.platform.eventbus.relay.aws.partner.eventsource.invalid</code>	The configured event relay's AWS named credentials are invalid.
<code>sfdc.platform.eventbus.relay.aws.partner.eventsource.connect.error</code>	The configured event relay encountered an error while connecting to Amazon EventBridge.
<code>sfdc.platform.eventbus.relay.feature.not.supported</code>	The event relay is configured with an unsupported feature, such as event encryption and change data capture event enrichment.
<code>sfdc.platform.eventbus.relay.event.delivery.limit.error</code>	You've exceeded the event delivery limit for your org.
<code>sfdc.platform.eventbus.relay.temporarily.unavailable</code>	The event relay is temporarily unavailable due to an internal error.

EventStagedInviteeEmail

Represents the relationship between an event and an email address invited to the event that doesn't match to a user, contact, or lead record. Data about the unmatched email address is represented in `StagedInviteeEmail`. This object represents event-related details, such as the invitee's attendance response to the event. This object is available in API version 66.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

This object is available with Einstein Activity Capture when Sync Email as Salesforce Activity is turned on.

Fields

Field	Details
EventId	Type reference Properties Filter, Group, Sort Description The unique ID of the related event record. This field is a relationship field. Relationship Name Event Refers To Event
IsArchived	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the event is archived (<code>true</code>) or not (<code>false</code>). This value helps manage high volumes of archived events, improving query performance. The default value is <code>false</code>.
IsOrganizer	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the invitee is the event organizer (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The invited email address.
StagedInviteeEmailId	Type reference

Field	Details
	Properties Filter, Group, Sort Description The unique ID of the related invitee email address record. This field is a relationship field. Relationship Name StagedInviteeEmail Relationship Type Master-detail Refers To StagedInviteeEmail
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The attendance response to the event from the invitee. Possible values are: - Accepted - Declined - Maybe - New - Uninvited

EventTag

Associates a word or short phrase with an Event.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference

Field Name	Details
	Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

EventTag stores the relationship between its parent TagDefinition and the Event being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

EventWhoRelation

Represents the relationship between an event and a lead or contacts. This derived object is a filtered version of the [EventRelation](#) on page 2453 object; that is, `IsParent` is `true` and `IsWhat` is `false`. It doesn't represent relationships to invitees or to accounts, opportunities, or other objects. This object is available in API versions 29.0 and later.

EventWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

 **Note:** EventWhoRelation objects aren't created for child events.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
EventId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the event.
RelationId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the contacts or lead related to the event.
Type	Type string Properties Filter, Group, Nillable, Sort Description Indicates whether the person related to the event is a contact or lead.

Usage

Apex example that queries relations to a contact or lead

```
List<EventWhoRelation> whoRelations = [SELECT Id, Relation.Name FROM
EventWhoRelation WHERE EventId = '00UD0000005z1jD'];
```

SEE ALSO:

- [Event](#)
- [EventRelation](#)

Expense

Represents an expense linked to a work order. Service resource technicians can log expenses, such as tools or travel costs. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the account associated with the linked work order.
Amount	Type currency Properties Create, Filter, Sort, Update Description The amount of the expense.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.
Description	Type textarea Properties Create, Nillable, Update Description A description for the expense.
Discount	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage deducted from the <code>Subtotal</code> price. Available in version 51.0 and later.
ExpenseEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description If the expense was incurred over multiple days, the Expense End Date is the last day that the expense covers.
ExpenseNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The number that uniquely identifies the expense.
ExpenseStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description If the expense was incurred over multiple days, the Expense Start Date is the first day that the expense covers.

Field	Details
ExpenseType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type of expense. Possible values are: • Billable • Non-Billable The default value is Billable.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns the expense record.
Quantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The number of items purchased in this record. Available in version 51.0 and later.
Subtotal	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description The subtotal price calculated as the product of <code>Quantity</code> and <code>UnitPrice</code>. Available in version 51.0 and later. This is a calculated field.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A title that identifies the expense. This field is available in API version 50.0 and later.
TotalPrice	Type currency Properties Filter, Nillable, Sort Description The total price of the transaction which is equal to the discounted subtotal: <code>Subtotal - (Discount * Subtotal)</code>. Available in version 51.0 and later. This is a calculated field.
TransactionDate	Type date Properties Create, Filter, Group, Sort, Update Description The day that the expense was incurred, or the payment date for the expense.
UnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The price of one item on the record. Available in version 51.0 and later.
WorkOrderId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the work order associated with the expense.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ExpenseChangeEvent (API version 55.0)

Change events are available for the object.

ExpenseFeed

Feed tracking is available for the object.

ExpenseHistory

History is available for tracked fields of the object.

ExpenseOwnerSharingRule

Sharing rules are available for the object.

ExpenseShare

Sharing is available for the object.

ExpenseReport

Represents a report that summarizes expenses. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description A description for the expense report.
ExpenseReportNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number identifying the expense report.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns the expense report record.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description A title that identifies the expense report.
TotalExpenseAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all expense entries in the report. This is a calculated field.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ExpenseReportFeed](#)

Feed tracking is available for the object.

[ExpenseReportHistory](#)

History is available for tracked fields of the object.

[ExpenseReportShare](#)

Sharing is available for the object.

ExpenseReportEntry

Represents an entry in an expense report. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Amount	Type currency Properties Filter, Nillable, Sort Description The amount of the expense.

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization.
ExpenseId	Type reference Properties Create, Filter, Group, Sort, Update Description The expense that corresponds to the expense report entry.
ExpenseReportEntryNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number identifying the expense report entry.
ExpenseReportId	Type reference Properties Create, Filter, Group, Sort Description The expense report that's associated with the expense report entry.
ExpenseType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description The type of expense. Possible values are: • Billable • Non-Billable The default value is Billable.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
Title	Type string Properties Filter, Group, Nillable, Sort Description A title that identifies the expense.
TransactionDate	Type date Properties Filter, Group, Nillable, Sort Description The day that the expense was incurred, or the payment date for the expense.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ExpenseReportEntryFeed](#)

Feed tracking is available for the object.

[ExpenseReportEntryHistory](#)

History is available for tracked fields of the object.

ExpressionFilter

Represents a logical expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ContextId	Type reference Properties Create, Filter, Group, Sort Description Required. The ID of the MacroInstruction object that contains the expression.
FilterConditionLogic	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. The filter conditions to use and the order in which to apply them. For example, '1 AND 2' evaluates condition 1 and then condition 2.
FilterDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. A description of the filter expression that helps to explain the logic to users. For example, 'Applies to New cases.'
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Optional. A label for the expression.

Usage

The ExpressionFilter object is used with the `IF` and `ELSEIF` operations in a [MacroInstruction](#). It lets you specify a logical expression that determines whether macro instructions are executed. The object indicates whether any or all conditions must be true.

To represent the conditions that are evaluated, this object uses one or more [ExpressionFilterCriteria](#) child objects. The ExpressionFilter to be used with each criteria is specified in the ExpressionFilterCriteria's ExpressionFilterId field.

For example, to represent the following conditional statement, the ExpressionFilter object specifies the FilterConditionLogic field as 1 AND 2, where 1 and 2 are ExpressionFilterCriteria objects. In this example, condition 1 is Case.Status EQUALS New, and condition 2 is Case.Origin EQUALS Phone.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
    Select Email QuickAction
    Set Subject...
    Set To...
    Set Body...
    Submit
ENDIF
```

ExpressionFilterCriteria

Represents a condition in an expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ExpressionFilterId	Type reference Properties Create, Filter, Group, Sort Description Required. The ID of the ExpressionFilter object that references this condition.
FilterTarget	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The target object or field used in the condition. For example, to create a condition that applies to new cases, use Case.Status as the FilterTarget.
FilterTargetValue	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. The value that's compared to the value of the FilterTarget. For example, to create a condition that applies to new cases, use <code>New</code> as the <code>FilterTargetValue</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Optional. A label for the condition.
Operation	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Required. Specifies the operator used to compare the target field and the target value. For example, to create a condition that applies to new cases, use <code>EQUALS</code> for the <code>Operation</code> field, as in <code>Case.Status EQUALS New</code>. • <code>EQUALS</code> • <code>NOTEQUALS</code> • <code>CONTAINS</code> • <code>NOTCONTAIN</code>
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The order in which the criteria are evaluated.

Usage

ExpressionFilterCriteria is a child object of the [ExpressionFilter](#) object. Use these objects with the `IF` and `ELSEIF` operations in a [MacroInstruction](#) to control instruction execution. Each condition in a ExpressionFilterCriteria compares a target object or field to a value using a condition operator; for example, `Case.Status EQUALS New`.

ExpressionSetConstraintObj

Represents the association between a Product object and the constraint model tags defined in a given constraint model. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in orgs where Revenue Cloud is enabled.

Fields

Field	Details
ConstraintModelTag	Type string Properties Create, Filter, Group, Sort, Update Description The product tag that is defined in the constraint model, for example, Laptop.
ConstraintModelTagType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The type of the product tag that is defined in the constraint model. Possible values are: - Port - Type The default value is Type.
ExpressionSetId	Type reference Properties Create, Filter, Group, Sort, Update Description The expression set associated with the expression set constraint object. This field is a relationship field.

Field	Details
	Relationship Name ExpressionSet Refers To ExpressionSet
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view (LastReferencedDate) but didn't view it.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the expression set constraint.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description For internal use only. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User

Field	Details
ReferenceObjectId	Type reference Properties Create, Filter, Group, Sort, Update Description The object associated with the expression set constraint object. This field is a polymorphic relationship field. Relationship Name ReferenceObject Refers To Product2, ProductClassification, ProductRelatedComponent

ExtConvParticipantIntegDef

Represents the integration configuration for external conversation participants, used for communication between Salesforce and external messaging platforms. This object is available in API version 66.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccountKey	Type textarea Properties Create, Nillable, Update Description Encrypted JSON format key for secure storage of authentication credentials for external bot API calls.
BotProvider	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Bot provider for integration of authentication and request and response logic. Possible value:

Field	Details
	• Custom
ChannelMode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Possible values for the type of channel: • Messaging • Voice The default value is Messaging.
ClientIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description API client ID of the bot provider.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Unique name of the object in the API.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Language of the master label.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for the ExtConvParticipantIntegDef object.

Field	Details
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description If it's part of a managed package, the namespace of the package that contains integration definition for the external conversation participant.
ProjectIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Identifier of the project in the provider framework to scope API calls and resource access.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Status of the integration. Possible values are: • Active • Deleted • Inactive The default value is <code>Active</code>.

ExtDataShare

Represents a data share, which is a collection of Data Cloud objects that can be shared with other Data Cloud orgs or third-party partners. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataShareType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of data share, indicating the direction of data flow. If <code>Outbound</code>, the data share was created on this Data Cloud org and is shared to third-party partners or with another Data Cloud org. If <code>Inbound</code>, the data share comes from another Data Cloud org and is shared to this Data Cloud org. Possible values are: • <code>Inbound</code> • <code>Outbound</code> The default value is <code>Outbound</code>.
DataSpaceId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the data space under which the data share was created. This field is a relationship field. Relationship Name DataSpace Refers To DataSpace
InboundDataShareName	Type string Properties Create, Filter, Group, Nillable, Sort Description The name of the data share in the source Data Cloud org.
InboundDataShareOrgIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort Description The ID of the source Data Cloud org that shared a data share with the target org.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the data share.
ObjectCount	Type int Properties Filter, Group, Nillable, Sort Description The number of Data Cloud objects added to this data share.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ExtDataShareChangeEvent](#) on page 68

Change events are available for the object.

[ExtDataShareFeed](#) on page 55

Feed tracking is available for the object.

[ExtDataShareHistory](#) on page 63

History is available for tracked fields of the object.

ExtDataShareOwnerSharingRule on page 65

Sharing rules are available for the object.

ExtDataShareShare on page 67

Sharing is available for the object.

SEE ALSO:

[Salesforce Help: Create a Data Stream](#)

ExternalAccountHierarchy

Represents the external account hierarchy, which works like a role-based hierarchy. Use ExternalAccountHierarchy to allow partner and customer users to share data with other external accounts in their hierarchy.This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have a Partner or Customer Community Plus license.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Sort Description The ID of the account in the external account hierarchy.
CurrencyISOCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Possible values are: • GBP— British Pound • USD— U.S. Dollar The default value is USD.

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the external account hierarchy.
HierarchyType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description Possible values are: • CustomerPortal — Customer • Partner The default value is Partner.
IsAccessibleToParent	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Allows data to be shared with parent account in the account hierarchy. The default value is true.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description When true, the hierarchy is turned on. The default value is false.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the external account hierarchy.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account owner.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the parent account.

ExternalAccountHierarchyHistory

Represents the history of changes to values in the fields of an external account hierarchy. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

You must have a Partner or Customer Community Plus license.

Fields

Field	Details
DataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Possible values are: • Address • AnyType • AutoNumber • Base64 • BitVector • Boolean • Content • Currency • DataCategoryGroupReference • DateOnly • DateTime • Division • Double • DynamicEnum • Email • EncryptedBase64 • EncryptedText • EntityId • EnumOrId • ExternalId • Fax • File • HtmlMultiLineText • HtmlStringPlusClob • InetAddress • Json • Location • MultiEnum • MultiLineText • Namespace • Percent

Field	Details
	• PersonName • Phone • Raw • RecordType • SfdcEncryptedText • SimpleNamespace • StringPlusClob • Switchable_PersonName • Text • TimeOnly • Url • YearQuarter
ExternalAccountHierarchyId	Type reference Properties Filter, Group, Sort Description The ID of the external account hierarchy.
Field	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Possible values are: • Account • HierarchyType - Hierarchy Type • IsAccessibleToParent - Is Accessible to Parent • IsActive - Is Hierarchy Active • Name • Owner • Parent • Created - Created. • FeedEvent - Feed Event • IndividualMerged - Individual Merged • Locked - Record Locked • OwnerAccepted - Owner (Accepted) • OwnerAssignment - Owner (Assignment)

Field	Details
	• Unlocked - Record unlocked
NewValue	Type anyType Properties Nillable, Sort Description The updated value of the changed field.
OldValue	Type anyType Properties Nillable, Sort Description The previous value of the changed field.

ExternalClientApplication

For internal use only.

ExternalDataSource

Represents an external data source, which defines connection details for integration with data and content that are stored outside the Salesforce org. This object is available in API version 27.0 and later.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

From API version 48.0 onwards, only authenticated internal and external users can access this object.

Fields

Field Name	Details
AuthProviderId	Type reference Properties Filter, Group, Nillable, Sort Description Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field. This field is available in API version 39.0 and later. This is a relationship field. Relationship Name AuthProvider Relationship Type Lookup Refers To AuthProvider
CustomConfiguration	Type textarea Properties Nillable Description A JSON-encoded configuration string that defines parameters specific to the type of external data source.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization.

Field Name	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
Endpoint	Type textarea Properties Nillable Description The URL of the external system, or if that URL is defined in a named credential, the named credential URL. A named credential URL contains the scheme <code>callout:</code>, the name of the named credential, and an optional path. For example: <code>callout:My_Named_Credential/some_path</code>. You can append a query string to a named credential URL. Use a question mark (?) as the separator between the named credential URL and the query string. For example: <code>callout:My_Named_Credential/some_path?format=json</code>.
isWritable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Lets the Lightning Platform and users in this org create, update, and delete records for external objects associated with the external data source. The external object data is stored outside the org. By default, external objects are read only. Available only for Salesforce Connect external data sources. Available in API version 35.0 and later. However, with the cross-org adapter for Salesforce Connect, you can set this field to <code>true</code> only in API version 39.0 and later.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the <code>MasterLabel</code>.
MasterLabel	Type string Properties Filter, Group, Sort Description Master label for the external data source. This internal label doesn't get translated.

Field Name	Details
NamedCredentialId	Type reference Properties Filter, Group, Nillable, Sort Description The Salesforce ID of the referenced named credential for an external data source. Required for Salesforce Connect adapters for Amazon DynamoDB, Amazon Athena, GraphQL, and OData 4.01. For connecting to other external data sources, the field must be null. This field is available in API version 58.0 and later. This is a relationship field. Relationship Name NamedCredential Relationship Type Lookup Refers To NamedCredential
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.
PrincipalType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Specifies whether the org uses one set (NamedUser), multiple sets (PerUser), or no (Anonymous) credentials to access the external system. Each set of credentials corresponds to a login account on the external system. Corresponds to <code>Identity Type</code> in the user interface.
Protocol	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description Specifies whether to use OAuth, password authentication, or no authentication to access the external system. Some types of external data sources support only one value. - For cloud-based Files Connect external systems, select OAuth 2.0. - For on-premises systems, select Password Authentication. - For Simple URL data sources, select No Authentication. Additional authentication protocols are supported for the Amazon DynamoDB, Amazon Athena, Snowflake, GraphQL, and OData 4.01 external data sources. - AwsSv4 - Basic - Custom - Jwt - JwtExchange
Repository	Type string Properties Filter, Group, Nillable, Sort Description Used for SharePoint Online. An optional name of the repository in the data source. Not applicable to all data source types.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Specifies the adapter that connects to the external system.

Usage

Define an external data source to connect to data or content that's stored outside the Salesforce org. Then create external objects, which map to the external system's data and behave similarly to custom objects.

Note: Some external data source fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

SEE ALSO:

[ExternalDataUserAuth](#)

[NamedCredential](#)

ExternalDataUserAuth

Stores authentication settings for a Salesforce user to access an external system. The external system must be defined in an external data source or a named credential that's configured to use per-user authentication. This object is available in API version 27.0 and later.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
AuthProviderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the "Customize Application" and "Manage AuthProviders" permissions can view this field. This field is available in API version 39.0 and later. This is a relationship field. Relationship Name AuthProvider Relationship Type Lookup Refers To AuthProvider
ExternalDataSourceId	Type reference Properties Create, Filter, Group, Sort Description Salesforce ID of the external data source or named credential that defines the external system. This is a polymorphic relationship field.

Field Name	Details
	Relationship Name ExternalDataSource Relationship Type Lookup Refers To ExternalDataSource, NamedCredential
Password	Type textarea Properties Create, Nillable, Update Description Password portion of the credentials for the Salesforce user to access the external system.
Protocol	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether to use OAuth, password authentication, or no authentication when the user accesses the external system. Additional authentication protocols are supported for the Amazon DynamoDB, Amazon Athena, Snowflake, GraphQL, and OData 4.01 external data sources. • AwsSv4 • Basic • Custom • Jwt • JwtExchange
UserId	Type reference Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description ID of the Salesforce user who's accessing the external system. This is a relationship field. Relationship Name User Relationship Type Lookup

Field Name	Details
	Refers To User
Username	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Username portion of the credentials for the Salesforce user to access the external system.

Usage

These authentication settings enable a Salesforce user to access an external system. The external system is defined in Salesforce as one of the following.

- External data source—Provides access to external objects, whose data is stored outside the Salesforce organization.
- Named credential—Enables the user's actions to trigger authenticated callouts to the endpoint that's specified in the named credential.

If you grant users access to the external data source or named credential via permission sets or profiles, those users can manage their own authentication settings. See [Store Authentication Settings for External Systems](#) in the Salesforce Help.

SEE ALSO:

[ExternalDataSource](#)

[NamedCredential](#)

ExternalEncryptionRootKey

Represents metadata about root keys stored in third-party key stores that are used to generate and secure keys that encrypt Salesforce data. This object is available in API version 58.0 and later.

Root keys are used to generate data encryption keys (DEKs) in Salesforce, which are in turn used to encrypt and decrypt data. Root keys are also used as wrapping keys to secure DEKs in the Salesforce database.

Supported Calls

`describeSObjects()`, `query()`, `update()`

Special Access Rules

This object is available as part of the Shield and Salesforce Platform Encryption add-on subscriptions. Access to this object also requires the Cache-Only Key Service add-on subscription.

Fields

Field	Details
ActivatedDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The date the key was activated in Salesforce.
CreatedBy	Type string Properties Filter, Group, Nillable, Sort, Update Description The email address of the user who created the root key. For example, <code>user@example.com</code>.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description The user-defined description of the root key.
LastModifiedBy	Type string Properties Filter, Group, Nillable, Sort, Update Description The email address of the user who most recently modified the key. For example, <code>user@example.com</code>.
Region	Type string Properties Filter, Group, Nillable, Sort, Update Description The region for the customer managed key. For example, if the <code>RootKeyService</code> is <code>AWS</code>, the region is an Amazon Web Services (AWS) region such as <code>us-east1</code>.
RootKeyIdentifier	Type string

Field	Details
	Properties Filter, Nillable, Sort, Update Description The unique key identifier from the external KMS, such as an AWS Amazon Resource Name (ARN). For example, arn:aws:kms:us-west-2:123456789000:key/123ab456-7cd8-9012-3e4f-5gh678i901j2
RootKeyService	Type string Properties Filter, Group, Nillable, Sort, Update Description The external key management service connected to Salesforce. For example, AWS.
Status	Type string Properties Filter, Group, Nillable, Sort, Update Description The status of the key. This is the only value that can be changed using update(). You can only change the status from Active to Inactive, or from Inactive to Active. Possible values are: • Activation Pending—Salesforce is waiting for confirmation of a valid key policy in the external key store. • Active—Can be used to encrypt new DEKs and decrypt existing DEKs. • Archived—Can't encrypt new DEKs. Can be used to decrypt previously created DEKs. • Canceled—Root key activation canceled by a user. • Inactive—The root key, and the DEKs that it encrypts, are inaccessible. Inaccessible DEKs can't be used to decrypt data, which renders that data also inaccessible. • Unavailable—The root key, and the DEKs that it encrypts, cannot be accessed. The root key has been removed or deactivated by the managing KMS.

Usage

Three functions are available: `describeObjects()`, `query()`, and `update()`

Use your preferred developer environment to run the examples. Use the Salesforce developer [Introduction to REST API](#) for basic information on making REST calls into Salesforce. Also, [Introducing the Salesforce Shield Platform Encryption REST API](#) gives you starter information on using REST to work with Shield Platform Encryption.

Describe an external root key with `describeSObjects ()`

To get information about the ExternalEncryptionRootKey sObject, use `describe`.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/sobjects/' \
  ExternalEncryptionRootKey/describe'
--header 'Content-Type: application/json' \
--header 'Authorization: Bearer TOKEN'
```

On success, the response is the full JSON description of the ExternalEncryptionRootKey sObject.

Get info on an external root key with `query ()`

To get information about a specific root key, use `query` on the ExternalEncryptionRootKey sObject. Use the Identifier value as listed on the Key Management Page for the root key Id in the WHERE clause.

```
curl --location 'https://DOMAIN.my.salesforce.com/services/data/v62.0/query?' \
  ?q=SELECT+FIELDS (ALL) +FROM+ExternalEncryptionRootKey+WHERE+Id='48q001t5ddzbucnAAA'+\
--header 'Content-Type: application/json' \
--header 'Authorization: Bearer TOKEN'
```

On success, the response is be similar to

```
{
  "totalSize": 1,
  "done": true,
  "records": [
    {
      "attributes": {
        "type": "ExternalEncryptionRootKey",
        "url":
"/services/data/v62.0/sobjects/ExternalEncryptionRootKey/48q001t5ddzbucnAAA"
      },
      "Id": "48q001t5ddzbucnAAA",
      "RootKeyIdentifier": "97ee8238-c5ac-4320-a2d0-a728aaefd567",
      "CreatedDate": "2024-08-05T17:32:11.841+0000",
      "CreatedBy": "charley.t.pulasky@wise-raccoon-odlly6.com",
      "LastModifiedDate": "2025-02-12T18:36:11.063+0000",
      "LastModifiedBy": "charley.t.pulasky@wise-raccoon-odlly6.com",
      "RootKeyService": "SF",
      "Region": "KEY REGION",
      "Status": "Active",
      "Description": null,
      "ActivatedDate": null
    }
  ]
}
```

Update Status on an external root key with `update ()`

To update the status of an ExternalEncryptionRootKey from Active to Inactive, or from Inactive to Active, use PATCH on the specific key object. Use the vaule for `Identifier` as listed on the Key Management Page for the root key identifier.

```
curl --location --request PATCH
'https://DOMAIN.my.salesforce.com/services/data/v62.0/sobjects/ExternalEncryptionRootKey/ROOTKEYIDENTIFIER' \
--header 'Content-Type: application/json' \
```

```
--header 'Authorization: Bearer TOKEN'\n--data '{\n  "Status": "Active"\n}'
```

On success, the response is be similar to I SEE NO RESPONSE.

ExternalEvent

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Salesforce Today app is available in Salesforce for Android and Salesforce for iOS. It's not available in the Salesforce desktop site. Access to Today is available only if you grant Calendar permission to the Salesforce mobile app.

Fields

Field	Details
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the external event.
Location	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The site where the external event takes place.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description The name of the external event's organizer.
Notes	Type textarea Properties Create, Nillable, Update Description Additional details about the external event.
Time	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The time the external event is held.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The title of the external event.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ExternalChangeEvent](#) on page 68

Change events are available for the object.

ExternalEventMapping

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Salesforce Today app is available in Salesforce for Android and Salesforce for iOS. It's not available in the Salesforce desktop site. Access to Today is available only if you grant Calendar permission to the Salesforce mobile app.

Fields

Field	Details
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the external event ends.
EventId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Salesforce event created by the external event. This field is a relationship field. Relationship Name Event Refers To Event
ExternalId	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The ID of the external event.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Returns <code>true</code> if the external event is locked, or <code>false</code> if it's not. The default value is <code>false</code>.

Field	Details
IsRecurring	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the external event is recurring (true) or not (false). The default value is <code>false</code>.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Indicates whether the external event can be edited (true) or not (false). The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the external event's organizer.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the creator of the external event. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the external event begins.

ExternalSocialAccount

Represents a managed social media account on a social network such as Facebook or Twitter. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
AuthorizedBy	Type string Properties Filter, Group, Nillable, Sort Description Name of the Radian6 user who added the social account to Radian6.
DataSourceId	Type string Properties Filter, Group, Nillable, Sort Description ID of the Radian6 data source for the social account.
DefaultResponseAccountId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the managed social account to use by default when responding. This is a relationship field. Relationship Name DefaultResponseAccount Relationship Type Lookup Refers To ExternalSocialAccount
DeveloperName	Type string

Field Name	Details
	Properties Filter, Group, Sort Description The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ExternalAccountId	Type string Properties Filter, Group, Sort Description ID of the social account on the social network.
ExternalPictureURL	Type url Properties Filter, Group, Nillable, Sort Description URL to the picture of the social account on the social network.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether the social account is active or not.
IsAuthenticated	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether the social account is authenticated or not.

Field Name	Details
IsCaseCreationEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether case creation for the social account is enabled or not.
IsDataSourceActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether the data source is active or not.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Specifies the language of the social account.
MasterLabel	Type string Properties Filter, Group, Sort Description Master label for the social account. This display value is the internal label and does not get translated.
ProfileUrl	Type url Properties Filter, Group, Nillable, Sort Description URL for the profile.
Provider	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description Social network, such as Facebook or Twitter, of the social account.
ProviderUserId	Type string Properties Filter, Group, Sort Description User ID for the social network of the social account.
RuleId	Type string Properties Filter, Group, Nillable, Sort Description ID of the Radian6 rule for the account.
SocialPropertyId	Type string Properties Filter, Group, Nillable, Sort Description ID of the Radian6 social property for the account.
TopicId	Type string Properties Filter, Group, Nillable, Sort Description ID of the topic for the social account.
UniqueName	Type string Properties Filter, Group, Nillable, Sort Description Unique name for the social account.
Username	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Username for the social account.

Usage

Although available, many of the Radian6-related fields are no longer accurate or used. We recommend using [Social Engagement Resources](#) in *Connect REST API Developer Guide*.

ExtKnowledgeConnector

Represents a connector to a third-party knowledge source for Unified Knowledge. This object is available in API version 60.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Salesforce Knowledge users, unlike customer and partner users, must also be granted the Knowledge User feature license.

Fields

Field	Details
<code>IsLocked</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action condition record is locked or not. The default value is <code>false</code> .
<code>LastSyncDate</code>	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the connector last synced with the third-party knowledge source to import articles into Salesforce.

Field	Details
LastSyncStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the status of the connector's last sync of articles from the third-party knowledge source into Salesforce. Possible values are: • <code>articleLimitExceeded</code>—Exceeded article or version limits • <code>completed</code>—Completed • <code>completedWithErrors</code>—Completed with errors • <code>ended</code>—Ended • <code>failed</code>—Failed • <code>initiating</code>—Started • <code>invalidCredentials</code>—Invalid credentials • <code>polling</code>—Polling for Zoomin sync to complete • <code>queued</code>—Queued • <code>syncing</code>—Syncing • <code>timedOut</code>—Timed Out • <code>unavailable</code>—Zoomin unavailable
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated import article condition record can be edited or not. The default value is <code>false</code>.
Name	Type string Properties Filter, Group, idLookup, Sort Description The connector's label in Unified Knowledge setup.
NamedCredentialId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description Salesforce ID of the named credential that's used for a request. The named credential identifies the third-party system and the third-party authentication settings. This field is a relationship field. Relationship Name NamedCredential Relationship Type Lookup Refers To NamedCredential
OwnerId	Type reference Properties Filter, Group, Sort Description The user ID of the owner of the connector. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PartnerConnectorIdentifier	Type string Properties Filter, Group, Nillable, Sort Description
ShouldOpenInSource	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether articles imported into Salesforce open in the third-party source from links in Salesforce. The default value is <code>false</code>.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ExtKnowledgeConnectorOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[ExtKnowledgeConnectorShare](#) on page 67

Sharing is available for the object.

ExtlCIntAppOauthPlcyCnfg

For internal use only.

ExtlCIntAppOauthSettings

For internal use only.

ExtlCIntAppPlcyCnfg

For internal use only.

ExtlIntrIdMapping

Represents a mapping between a Salesforce record and its corresponding record in an external system, such as Workday. This object is available in API version 66.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
ExternalIdentifier	Type string
	Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The ID of the external event.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the record was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the record was last viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the external event's organizer.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the creator of the external event. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
RecordIdentifier	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the Salesforce record that is linked to a record in an external system.
RelatedExternalIdentifier	Type string
	Properties Create, Filter, Group, idLookup, Nillable, Sort, Update
	Description The ID of an associated record from the external system that provides additional context for the integration.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ExtlIntrIdMappingOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[ExtlIntrIdMappingShare](#) on page 67

Sharing is available for the object.

ExtlRecShrCnct

Represents authentication data to make outbound calls to and inbound calls from an external system to publish events for Partner Connect. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
CnctName	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort, Update Description Name of the connection.
CnctRole	Type picklist Properties Filter, Group, Restricted picklist, Sort Description System's role in the connection. Possible values are: • Partner • Vendor
CnctStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the connection. Possible values are: • Disabled • Enabled • Error • Pending • Unknown
ExternalClientApplicationId	Type reference Properties Filter, Group, Nillable, Sort Description ID of external client app representing your org's connection to the external system. This field is a relationship field. Relationship Name ExternalClientApplication Refers To ExternalClientApplication

Field	Details
ExtlSystem	Type string Properties Filter, Group, idLookup, Nillable, Sort Description ID of the external system.
NamedCredentialId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the named credential. This field is a relationship field. Relationship Name NamedCredential Refers To NamedCredential

ExtlRecShrCnctAcctnt

Represents an association between an account and an external record share connection for Partner Connect. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
AccountId	Type reference

Field	Details
	Properties Filter, Group, Sort Description ID of the account. This field is a relationship field. Relationship Name Account Refers To Account
ExtlRecShrCnctId	Type reference Properties Filter, Group, Sort Description ID of the ExtlRecShrCnct record. This field is a relationship field. Relationship Name ExtlRecShrCnct Refers To ExtlRecShrCnct
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.

ExtlRecShrField

Represents an imported, exported, or updated external record share field for Partner Connect. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ExtlRecShrObjectId	Type reference Properties Create, Filter, Group, Sort Description ID of the ExtlRecShrObject record. This field is a relationship field. Relationship Name ExtlRecShrObject Refers To ExtlRecShrObject
FieldDefaultValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Default value of the field.
FieldSetType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Set of fields associated with this record. Possible values are: - ExportedFields - ImportedFields - InternalFields
IsFieldNillable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether this field can be set to null (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
SendFieldUpdates	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether updates are tracked for this field, sent to the connected org, and stored in the ExtlRecShrLead or ExtlRecShrOpportunity objects (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
SharedFieldDevName	Type string Properties Create, Filter, Group, Sort Description Developer name of the field.
SharedFieldLabel	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Label of the field.
SharedFieldLength	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Maximum length of the field.
SharedFieldType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Field type of the imported, exported, or updated field. Possible values are:

Field	Details
	• Address • AddressCountry • AddressState • Boolean • Currency • DateOnly • DateTime • Double • DynamicEnum • Email • EntityId • EnumOrId • Fax • Integer • MultiLineText • Percent • Phone • StaticEnum • Text • Url

ExtlRecShrFieldMap

Represents the external record share field mapping between the sender and receiver for Partner Connect. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ImportedFieldId	Type reference Properties Create, Filter, Group, Sort Description ID of the ExtlRecShrField record containing the field data sent from the external system. This field is a relationship field. Relationship Name ImportedField Refers To ExtlRecShrField
InternalFieldId	Type reference Properties Create, Filter, Group, Sort Description ID of the ExtlRecShrField record containing the field data received on the internal system. This field is a relationship field. Relationship Name InternalField Refers To ExtlRecShrField

ExtlRecShrLead

Represents the Lead record of a vendor org if you're a partner. If you're a vendor for Partner Connect, this object represents a partner org. This object is available in API version 62.0 and later.

In a related list, the label of this object is Connected External Leads.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ExtlRecShrCnctId	Type reference Properties Filter, Group, Sort Description ID of the external record share connection. This field is a relationship field. Relationship Name ExtlRecShrCnct Refers To ExtlRecShrCnct
LeadId	Type reference Properties Filter, Group, Sort Description ID of the partner lead. This field is a relationship field. Relationship Name Lead Relationship Type Master-detail Refers To Lead (the master object)
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.

ExtlRecShrObject

Represents a shared object for Partner Connect. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
DefaultRecordOwnerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the shared record owner. The owner can be a user or a queue, represented by a Group ID. This field is a polymorphic relationship field. Relationship Name DefaultRecordOwner Refers To Group, User
ExtlObjectType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Object type in the external org or system that is part of the object field mapping. Possible values are: - ExtlRecShrLead - ExtlRecShrOpportunity - Lead - Opportunity

Field	Details
ExtlRecShrCnctId	Type reference Properties Create, Filter, Group, Sort Description ID of the external record share connection. This field is a relationship field. Relationship Name ExtlRecShrCnct Refers To ExtlRecShrCnct
FieldMapStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Exporter's status of the field mapping. Possible values are: • ActiveMapping • Selected • SystemOverride
InternalObjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Object type in your org or system used to group field selections and field mappings. Possible values are: • ExtlRecShrLead • ExtlRecShrOpportunity • Lead • Opportunity

ExtlRecShrOpportunity

Represents the opportunity for Partner Connect in the vendor org if you're a partner and the partner org if you're the vendor. This object is available in API version 62.0 and later.

The label of this object in the related list is Connected External Leads.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ExtlRecShrCnctId	Type reference Properties Filter, Group, Sort Description ID of the external record share connection. This field is a relationship field. Relationship Name ExtlRecShrCnct Refers To ExtlRecShrCnct
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.
OpportunityId	Type reference Properties Filter, Group, Sort Description ID of the associated opportunity. This field is a relationship field.

Field	Details
	Relationship Name Opportunity
	Relationship Type Master-detail
	Refers To Opportunity (the master object)

ExtlRecShrPcklstOptn

Represents a picklist option of an external record share picklist field shared between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ExtlRecShrFieldId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the associated external record share field of type picklist. This field is a relationship field. Relationship Name ExtlRecShrField Refers To ExtlRecShrField
IsDefaultOption	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this picklist option is set as the default option (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
SharedOptionLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label of the picklist option.
SharedOptionValue	Type string Properties Create, Filter, Group, Sort, Update Description Value of the picklist option.

ExtlRecShrPicklistMap

Represents the external record share picklist field mapping between the partner and vendor system for Partner Connect. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ImportedPcklstOptionId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort
	Description ID of the external record share picklist option of the external system. This field is a relationship field.
	Relationship Name ImportedPcklstOption
	Refers To ExtlRecShrPcklstOptn
InternalPcklstOptionId	Type reference
	Properties Create, Filter, Group, Sort
	Description ID of the external record share picklist option of the internal system. This field is a relationship field.
	Relationship Name InternalPcklstOption
	Refers To ExtlRecShrPcklstOptn

ExtlRecShrRecordMap

Represents the lead or opportunity being mapped between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see this object, enable Partner Connect or Partner Connect for Vendors. See [Set Up Partner Connect as a Partner](#) and [Set Up Partner Connect as a Vendor](#) in *Salesforce Help*.

Fields

Field	Details
ExtlRecShrCnctId	Type reference Properties Filter, Group, Sort Description ID of the external record share connection. This field is a relationship field. Relationship Name ExtlRecShrCnct Refers To ExtlRecShrCnct
ExtlRecord	Type string Properties Filter, Group, Nillable, Sort Description ID of the lead or opportunity record on the external system.
InboundStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of imports and updates received. Possible values are: • ImportSuccess • ImportConctExtlRecError • UpdateSuccess • UpdateFieldMapError • UpdateConctExtlRecError • UpdateUnknownError
InternalRecordId	Type reference Properties Filter, Group, Sort

Field	Details
	Description ID of the lead or opportunity record on the internal system. This field is a polymorphic relationship field. Relationship Name InternalRecord Relationship Type Master-detail Refers To Lead, Opportunity (the master object)
IsImported	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the record originated on the internal system (<code>true</code>) or external system (<code>false</code>). The default value is <code>false</code>.
LastModifiedSent	Type dateTime Properties Filter, Nillable, Sort Description Timestamp of the last record update between the vendor and partner. This field doesn't capture when the result is received.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.
OutboundStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of exports, updates, and results received. Possible values are:

Field	Details
	• <code>ExportSuccess</code> • <code>ExportInProgress</code> • <code>ExportSuccessSkipped</code> • <code>ExportSuccessPartial</code> • <code>ExportPublishFieldMapError</code> • <code>ExportSubscribeFieldMapError</code> • <code>ExportPublishEventError</code> • <code>ExportPublishUnknownError</code> • <code>ExportSubscribeUnknownError</code> • <code>ExportPublishConnectionError</code> • <code>UpdateInProgress</code> • <code>UpdateInProgressUpdateSuccess</code> • <code>UpdatePublishFieldMapErrorUpdateSubscribeRecordNotFound</code> • <code>UpdatePublishFieldMapError</code> • <code>UpdateSubscribeFieldMapError</code> • <code>UpdatePublishConnectionError</code> • <code>UpdatePublishEventError</code> • <code>UpdatePublishUnknownError</code> • <code>UpdateSubscribeUnknownError</code>
<code>UniqueRecordKey</code>	Type string Properties Filter, Group, Nillable, Sort Description Record key used internally for indexing. If <code>IsImported</code> is <code>false</code>, then this field contains the <code>InternalRecordId</code> value. If <code>IsImported</code> is <code>true</code>, this field contains the <code>ExtlRecord</code> value. This field is a calculated field.

FeedAttachment

Represents an attachment to a feed item, such as a file attachment or a link. Use `FeedAttachment` to add various attachments to one feed item. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `isEnabled()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- You can read, create, update, or delete a FeedAttachment only if you have the corresponding access to the associated FeedItem.
- Inline images aren't creatable, updatable, or deletable through SOAP API.

Fields

Field Name	Details
FeedEntityId	Type reference Properties Create, Filter, Group, Sort Description The ID of the associated feed entity that contains this attachment.
RecordId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the record that this feed attachment contains. For inline images, RecordId is a ContentDocument ID. For content attachments, RecordId is a ContentVersion ID, For feed items, RecordId is a FeedItem ID.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The title of this feed attachment. When Type is Link, Title value is the label for the attachment link. Otherwise, Title value isn't used.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of this feed attachment. Valid values are: • 0 Content—A content attachment. • 1 InlineImage—An inline image. The system creates an inline image attachment when an image is added to the body of the associated FeedItem. You can't add an inline image directly using FeedAttachment. • 2 Link—A link.

Field Name	Details
	3 <code>FeedEntity</code>—A feed entity, for example, a post that is shared. Available in API version 39 and later in Lightning Experience. 4 <code>ChatterExtension</code>—a Rich Publisher App that's integrated with the Chatter publisher. 5 <code>Record</code>—A record.
Value	Type string Properties Create, Filter, Nillable, Sort, Update Description The string value of this FeedAttachment. This field is optional. If the feed attachment is a Link FeedAttachment, the value is the link URL string.

Usage

- This Apex example shows how to add an attachment to a Lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- You can create only one link attachment (`FeedAttachment` of type `Link`) per feed item.
- If the feed item type is one of the following, you can add content or link feed attachments to a `FeedItem`.
 - AdvancedTextPost
 - TextPost
 - ContentPost
 - LinkPost
 - QuestionPost
- When a `FeedAttachment` is added or removed from a feed item, Salesforce updates the type of the feed item to its most appropriate value, as follows.

- If all content feed attachments are removed from a feed item of type `ContentPost`, the type of this feed item is updated to `TextPost`.
- Conversely, if a content feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `ContentPost`.
- If all link feed attachments are removed from a feed item of type `LinkPost`, the type of this feed item is updated to `TextPost`.
- Conversely, if a link feed attachment is added to a feed item of type `TextPost`, the type of this feed item is updated to `LinkPost`.
- The type of all other feed items, such as `QuestionPost` or `AdvancedTextPost` feed items, doesn't change when any feed attachments are added or removed.
- If a content feed attachment is added to a feed item of type `LinkPost`, the feed item type is updated to `ContentPost`.
- If all content attachments are removed from a feed item of type `ContentPost`, but there's also a link attachment, the feed item type is updated to `LinkPost`.
- Users without administrator privileges can't retrieve a `FeedAttachment` by its ID in a SOQL query. They can retrieve attachments by specifying the associated `FeedEntityId`, as follows:

```
SELECT Id FROM FeedAttachment WHERE FeedEntityId = 'some_feedItem_id'
```

- Alternatively, retrieve attachments by using a SOQL query on `FeedItem` with a subquery on the `FeedAttachments` child relationship, as follows.

```
SELECT Body, (SELECT RecordId, Title, Type, Value FROM FeedAttachments)
FROM FeedItem
WHERE Id = 'some_feedItem_id'
```

- `FeedAttachment` is not a triggerable object. You can access feed attachments in `FeedItem` *update* triggers by retrieving them through a SOQL query. For a trigger example, and to learn about trigger considerations for `FeedAttachment`, see [Triggers for Chatter Objects](#) in the *Apex Developer Guide*.

FeedComment

Represents a comment added to a feed by a user. This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Note the following when working with feed comments.

- You must have read access to the feed's parent type to see a `FeedComment` record.
- You must be able to access the feed to add a comment.
- If the comment is related to a user record, the user can delete the comment. For example, if John Smith makes a comment on Sasha Jones' profile feed, Sasha can delete the comment.

- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- Modify All Data
- Modify All Records on the object associated with the feed and delete permission on the parent feed
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups
Only users with this permission can delete items in unlisted groups.

Fields

Field	Details
<code>CommentBody</code>	Type textarea Properties Create, Filter, Sort, Update Description The text in the comment.
<code>CommentType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of comment: • <code>ContentComment</code>—an uploaded file on a comment • <code>TextComment</code>—a direct text entry on a comment Before API version 24.0, a text entry was required on a comment. As of version 24.0, a text entry is optional if the <code>CommentType</code> is <code>ContentComment</code>.
<code>FeedItemId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the feed item containing the comment.

Field	Details
HasEntityLinks	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed <code>CommentBody</code> includes at least one link to a record.  Note: This field is available starting in API version 43.0.
InsertedById	Type reference Properties Filter, Group, Sort Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user. This is a relationship field. Relationship Name InsertedBy Relationship Type Lookup Refers To User
IsRichText	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the feed <code>CommentBody</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the comment is rendered as plain text. Rich text supports the following HTML tags: • <code><p></code>  Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp; </p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code>

Field	Details
	• <code><i></code> • <code><u></code> • <code><s></code> • <code></code> • <code></code> • <code></code> • <code></code> The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code>  Note: This attribute is available as of API version 38.0. In API version 38.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 37.0 and prior, all rich text appears as a plain-text representation.
IsVerified	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Determines whether a comment on a question is marked as Company Verified. This field is available in API version 41.0 and later.
LastEditById	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the user who last edited the feed comment.
LastEditDate	Type datetime Properties Create, Filter, Nillable, Sort Description The date the feed comment was last edited.
ParentId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of a record associated with the feed comment. For example, if you are commenting on a change to a field on Account, <code>ParentId</code> is set to the account ID.
RelatedRecordId	Type reference Properties Create, Group, Nillable, Sort Description ID of the <code>ContentVersion</code> record associated with a <code>ContentComment</code>. This field is null for all comments except <code>ContentComment</code>. For example, set this field to an existing <code>ContentVersion</code> ID and set the <code>CommentType</code> to <code>ContentComment</code>.
Revision	Type int Properties Create, Filter, Group, Nillable, Sort Description The number of times the comment was revised.
Status	Type picklist Properties Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether this feed comment is published and visible to all who can access the parent feed item. To change a comment's status, the comment's parent feed item must be in a published state. This field is available in API version 38.0 and later. Possible values are: • <code>Published</code>—The comment is visible to all who can access the parent feed item. • <code>PendingReview</code>—The comment is visible to its author. Users see the parent feed item and have View All Data or Can Approve Feed Post and Comment permission also see the comment. The author can delete the comment as can users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission. If the parent feed item is published, the author can edit the comment. Users who see the comment and have Can Approve Feed Post and Comment or Modify All Data permission can also edit the comment. Users with Can Approve Feed Post and Comment or Modify All Data permission can change comment status from <code>Published</code> to <code>PendingReview</code> and from <code>PendingReview</code> to <code>Published</code>. Some actions are blocked when a feed comment is pending review:

Field	Details
	– Select as Best—When a feed comment that is marked as best answer becomes unpublished, it's removed as the best answer. If the comment is published, its best answer status is not restored. – Like and unlike • Isolated—The comment is visible only to admins. After an item is isolated, the author no longer has view or edit access. The admin user can edit, view, and delete isolated feed comments.
SystemModstamp	Type datetime Properties Defaulted on create, Filter Description Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. <code>SystemModstamp</code> is a read-only system field, available in FeedComment as of API version 37.0.
ThreadChildrenCount	Type int Properties Create, Filter, Group, Nillable, Sort Description The count of comments associated with this parent feed object. The feed object can be either a Feed Item or a Feed Comment. The count shows how many comments are directly subordinate to the parent. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later.
ThreadLastUpdatedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date and time the thread on this comment was last updated. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later.
ThreadLevel	Type int Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description The identifier that shows the level of this Feed Comment in a thread. By default, there are a maximum of three levels in a thread. The <code>ThreadLevel</code> value shows in which of the three levels this comment falls. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later.
ThreadParentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The identifier of the feed item that is the parent of this comment. This field is available on the object when Allow discussion threads is selected in the Administration Workspace. This field is available in API version 44.0 and later. This is a relationship field. Relationship Name ThreadParent Relationship Type Lookup Refers To FeedComment

Usage

- As of API version 23.0 and later, if you have View All Data permission, you can query FeedComment records directly without an ID filter. If you don't have View All Data permission, you can't query FeedComment records directly, with or without an ID filter.

For example, the following query returns general information about a feed:

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName,
       CreatedBy.LastName, ParentId, Parent.Name, Body
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC, Id DESC
```

- You can search for text in comments using SOSL. For example, the following Java class uses `search()` to find the string "foo" in any field of a record:

```
public void searchSample() {
    try {
        SearchResult sr = connection.search("find {foo} in all fields " +
            "returning feedcomment(Id, FeedItemId, CommentBody)");
        // Put the results into an array of SearchRecords
        SearchRecord[] records = sr.getSearchRecords();
        // Check the length of the returned array of records to see
```

```
// if the search found anything
if (records != null && records.length > 0) {
    System.out.println("Found " + records.length + " comments: ");
    // Display each comment
    for (SearchRecord record : records) {
        FeedComment comment = (FeedComment) record.getRecord();
        System.out.println(comment.getId() + ": " +
            comment.getCommentBody());
    }
} else {
    System.out.println("No records were found for the search.");
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
```

- If you use an Apex trigger to modify the `Body` of a `FeedComment` object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.

 **Note:** This object is hard deleted. It isn't sent to the Recycle Bin.

SEE ALSO:

[Custom Object __Feed __Feed](#)

FeedItem

`FeedItem` represents an entry in the feed, such as changes in a record feed, including text posts, link posts, and content posts. This object is available in API version 21.0 and later. This object replaces `FeedPost`.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:
 - Modify All Data
 - Modify All Records on the feed item's parent object, for example, Account for a feed item on an account feed
 - Moderate Chatter

 **Note:** Users with the Moderate Chatter permission can delete only the feed items and comments that they can see.

Only users with this permission can delete items in unlisted groups.

- Guest users can't insert system field values for Chatter feeds. Even if you try to assign the `CanInsertFeedSystemFields` permission to a Guest User, the permission isn't granted.

Only users with the Modify All Data permission can delete a feed item of Type `TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field Name	Details
<code>BestCommentId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the comment marked as best answer on a question post. This is a relationship field. Relationship Name BestComment Relationship Type Lookup Refers To FeedComment
<code>Body</code>	Type textarea Properties Create, Nillable, Sort, Update Description The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>. Although a value for <code>Body</code> isn't required for the <code>ContentPost</code> type, an attachment is required. If an attachment isn't present, the type changes to <code>TextPost</code> or <code>AdvancedTextPost</code>, depending on the API version. <code>TextPost</code> and <code>AdvancedTextPost</code> do require a value for <code>Body</code>.  Tip: See the IsRichText field for a list of HTML tags supported in the body of rich text posts.
<code>CommentCount</code>	Type int Properties Filter, Group, Sort

Field Name	Details
	Description The number of comments associated with this feed item.  Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>. Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.
<code>ConnectionId</code>	Type reference Properties Filter, Group, Nillable, Sort Description When a <code>PartnerNetworkConnection</code> modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the <code>PartnerNetworkConnection</code>. Available if Salesforce to Salesforce is enabled for your org.
<code>ContentData</code>	Type base64 Properties Create, Nillable Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.
<code>ContentDescription</code>	Type textarea Properties Create, Nillable, Sort Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The description of the file specified in <code>ContentData</code>.

Field Name	Details
ContentFileName	Type string Properties Create, Group, Nillable, Sort Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. The name of the file uploaded to the feed. Setting ContentFileName automatically sets Type to ContentPost.
ContentSize	Type int Properties Group, Nillable, Sort Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.
ContentType	Type string Properties Group, Nillable, Sort Description This field was removed in API version 35.0, and is available in earlier versions for backward compatibility only. This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.
FeedPostId	Type reference Properties Filter, Group, Nillable, Sort Description This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only. ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.
HasContent	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the feed item has content.
HasFeedEntity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed item has a feed entity, for example, a post, as an attachment. Available in API version 39 and later when sharing a feed entity in Lightning Experience.
HasLink	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed item has a link attached.
HasVerifiedComment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Determines whether a question has an answer that is marked as Company Verified. This field is available in API version 41.0 and later.
InsertedById	Type reference Properties Filter, Group, Sort Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user. This is a polymorphic relationship field. Relationship Name InsertedBy Relationship Type Lookup

Field Name	Details
	Refers To User
IsClosed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description As of API version 43, a read-only field that indicates whether the feed item is open or closed to new actions. A value of <code>true</code> places restrictions on the actions a user can take on a feed item and its comments. For more information, see the Usage section.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Standard system field. Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>).
IsRichText	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the feed item <code>Body</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • <code><p></code> •  Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp; </p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code> • <code><i></code> • <code><u></code> • <code><s></code> • <code></code>

Field Name	Details
	• <code></code> • <code></code> • <code></code> The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code>  Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
LastEditById	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the user who last edited the feed item.
LastEditDate	Type datetime Properties Create, Filter, Nillable, Sort Description The date the feed item was last edited.
LikeCount	Type int Properties Filter, Group, Sort Description The number of likes associated with this feed item.
LinkUrl	Type url Properties Create, Nillable, Sort Description The URL of a <code>LinkPost</code>.
NetworkScope	Type picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. <code>NetworkScope</code> can have the following values: <code>NetworkId</code>—The ID of the Experience Cloud site in which the <code>FeedItem</code> is available. If left empty, the feed item is only available in the default Experience Cloud site. <code>AllNetworks</code>—The feed item is available in all Experience Cloud sites. Note the following exceptions for <code>NetworkScope</code>: - Only feed items with a Group or User parent can set a <code>NetworkId</code> or a null value for <code>NetworkScope</code>. - For feed items with a record parent, users can set <code>NetworkScope</code> only to <code>AllNetworks</code>. - You can't filter a feed item on the <code>NetworkScope</code> field.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the object type to which the feed item is related. For example, set this field to a <code>UserId</code> to post to someone's profile feed, or an <code>AccountId</code> to post to a specific account. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee,

Field Name	Details
	CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentDocument, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, Topic, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
RelatedRecordId	Type reference Properties Create, Group, Nillable, Sort Description ID of the ContentVersion record associated with a ContentPost. For WDC thanks posts, it's the ID of the WorkThanks object associated with a RypplePost. This field is typically null for all posts except ContentPost and RypplePost. For example, set this field to an existing ContentVersion ID and post it to a feed with Type set to ContentPost.

Field Name	Details
Revision	Type int Properties Create, Filter, Group, Nillable, Sort Description The revision number of the feed item.
Status	Type picklist Properties Create, Defaulted on create, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether this feed item is published and visible to all who can access the feed. This field is available in API version 37.0 and later. Possible values are: • Published—The item's visible to all with access to the feed. • PendingReview—The item's visible to its author and users who see the item and have View All Data or Can Approve Feed Post and Comment permission. Some people can delete and edit the item. They include the author and users who see the item and have Can Approve Feed Post and Comment or Modify All Data permission.  Note: These permissions don't apply when you retrieve feed items using SOQL. To filter out Pending Review feed items you must add an explicit clause. Some actions are blocked when a feed item is pending review: — Comment — Like and unlike — Bookmark — Share • Isolated—The item is visible only to admins. After an item is isolated, the author no longer has view or edit access. The admin user can edit, view, and delete isolated feed items.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The title of the feed item. When the Type is LinkPost, the LinkUrl is the URL and this field is the link name. The Title field can be updated on posts of Type QuestionPost.

Field Name	Details
Type	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of feed item. Except for <code>ContentPost</code>, <code>LinkPost</code>, <code>QuestionPost</code>, and <code>TextPost</code>, all the <code>FeedItem</code> types listed here are system-generated. In most situations, we recommend that you don't create system-generated fields using Apex or our APIs. One exception is during Chatter data migrations, which can require admins to migrate system-generated post types. • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a <code>Task</code> associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or <code>Event</code> associated with a case record (excluding email and call logging). For a recurring <code>Task</code> with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring <code>Task</code> with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence. • <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • <code>AnnouncementPost</code>—Not used. • <code>ApprovalPost</code>—generated when a user submits an approval. • <code>BasicTemplateFeedItem</code>—Not used. • <code>CanvasPost</code>—a post made by a canvas app posted on a feed. • <code>CollaborationGroupCreated</code>—generated when a user creates a public group. • <code>CollaborationGroupUnarchived</code>—Not used. • <code>ContentPost</code>—a post with an attached file. • <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher. • <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold. • <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed. • <code>LinkPost</code>—a post with an attached URL. • <code>PollPost</code>—a poll posted on a feed. • <code>ProfileSkillPost</code>—generated when a skill is added to a user's Chatter profile. • <code>QuestionPost</code>—generated when a user posts a question. • <code>ReplyPost</code>—generated when Chatter Answers posts a reply.

Field Name	Details
	• <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC. • <code>TextPost</code>—a direct text entry on a feed. • <code>TrackedChange</code>—a change or group of changes to a tracked field. • <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated. The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>: • <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case. • <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object. • <code>ChangeStatusPost</code>—generated event when a user changes the status of a case. • <code>ChatTranscriptPost</code>—generated event when Chat transcript is saved to a case. • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received. • <code>FacebookPost</code>—generated when a Facebook post is created from a case. Deprecated. • <code>MilestoneEvent</code>—generated when a case milestone is completed or reaches violation status. • <code>SocialPost</code>—generated when a social post is created from a case.  Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.
Visibility	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. <code>Visibility</code> can have the following values: • <code>AllUsers</code>—The feed item is available to all users who have permission to see the feed item. • <code>InternalUsers</code>—The feed item is available to internal users only. Note the following exceptions for <code>Visibility</code>:

Field Name	Details
	- For record posts, <code>Visibility</code> is set to <code>InternalUsers</code> for all internal users by default. - External users can set <code>Visibility</code> only to <code>AllUsers</code>. <code>Visibility</code> can be updated on record posts. - The <code>Update</code> property is supported only for feed items posted on records.

Usage

- When a feed item's `IsClosed` field is set to true, some actions are blocked and others are blocked to most users. This table sets out the actions that are blocked when a feed item is closed.

Action	Availability on a Closed Conversation
Add a comment	Blocked
Answer a question	Blocked
Vote on a poll	Blocked
Edit a feed item or its comments or answers	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission Editing is blocked specifically for the feed item title, feed item body, and feed content body fields.
Edit a topic	Available
Delete a feed item or its comments or answers	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission
Publish a pending review comment (moderation)	Available to admins and moderators
Like or unlike; upvote or downvote	Available
Select or remove a best answer	Blocked to author; available to admins, moderators, and people with the Close Conversation Threads in Feeds permission
Company verify; remove verification	Available only to people with the Verify Answers to Chatter Questions permission
Flag	Available
Share	Available
Bookmark	Available
Mute and unmute	Available
Escalate to case	Available only to people permitted to escalate a feed item to a case

- This Apex example shows how to add a feed item with an attachment to a lead using API version 36.0 and later. First, post a feed item.

```
//create and insert post
FeedItem post = new FeedItem();
post.Body = 'HelloThere';
post.ParentId = 'ID_OF_LEAD_ENTITY';
post.Title = 'FileName';
insert post;
```

Then insert the attachment.

```
//create and associate a content attachment to the post
FeedAttachment feedAttachment = new FeedAttachment();
feedAttachment.FeedEntityId = post.Id;
feedAttachment.RecordId = 'ID_OF_CONTENT_VERSION';
feedAttachment.Title = 'FileName';
feedAttachment.Type = 'CONTENT';
insert feedAttachment;
```

- If you're using API version 23.0 or later and have View All Data permission, you can directly query for a FeedItem. The following example returns the 20 most recent feed items.

```
SELECT ID, CreatedDate, CreatedById, CreatedBy.FirstName, CreatedBy.LastName, ParentId,
       Parent.Name, Body,
       (SELECT ID, FieldName, OldValue, NewValue FROM FeedTrackedChanges ORDER BY ID DESC)
FROM FeedItem
WHERE CreatedDate > LAST_MONTH
ORDER BY CreatedDate DESC
```

- If you're using an earlier API version than version 23.0, query FeedItem objects through a feed (such as AccountFeed or OpportunityFeed). The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedItem.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

 **Note:** Provide the `ParentId` for API version 22.0 and earlier.

- A feed item of type `UserStatus` is automatically created when a user adds a post to update the status. You can't explicitly create a feed item of type `UserStatus`.
- The `FeedItem` object doesn't support aggregate functions in queries.
- If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.
- The size limit for an attachment on a feed is 2 GB.
- You can't use the content fields to update or delete the content.
- You can't filter or update the content fields.
- Deleting a feed item via the API also deletes the associated content. Likewise, undeleting a feed item restores associated content.

 **Note:** This object is hard deleted. It isn't sent to the Recycle Bin.

- After uploading to a feed, it's possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in a `FeedItem` object appear as `null` in a SOQL query.
- You can't explicitly create or delete a [FeedTrackedChange](#) record.
- Imagine that you insert a feed item or feed comment of `Type ContentPost` on a [User](#) or [Group](#) to create a file. Then the `NetworkScope` field value of the feed item is passed to the file.
- If you use an Apex trigger to modify the `Body` of a `FeedItem` object, all mentions hyperlinks are converted to plain text. The mentioned users don't get email notifications.
- If you insert rich text into the feed item body, make sure that the case of the opening and closing HTML tags matches. For example, `<b>This is bold text</B>` generates an error.
- To check file sharing with Apex triggers, write triggers on `ContentDocumentLink` instead of `FeedItem`. For an example, see [ContentDocumentLink](#).
- In API version 36.0 and later, use [FeedAttachment](#) to attach one or more content items to a feed item. As a result of support for multiple attachments through `FeedAttachment`, all fields related to content attachments have been removed. These fields are: `ContentData`, `ContentDescription`, `ContentFileName`, `ContentSize`, and `ContentType`.
- For all API versions of `FeedItem`, you can't query a `FeedItem` object using the `System ModStamp` filter.
- When you use the `FeedItem` object to create a record-triggered flow, and the flow tries to update a field on the parent record, the field may not update in the UI until the page is refreshed.

FeedLike

Indicates that a user has liked a feed item. This object is available in API version 21.0 and later.

`FeedLike` records represent likes on posts and not likes on comments. Likes on comments can't be queried via the API. A `FeedLike` is a child object of an associated `FeedItem`, `FeedTrackedChange`, or object feed, such as `AccountFeed`.

Supported Calls

`create()`, `delete()`, `describeSObjects()`

Special Access Rules

If the context user has the `Insert System Field Values for Chatter Feeds` user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field Name	Details
<code>FeedItemId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the feed item that the user liked.

Field Name	Details
FeedEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of a feed item or feed comment the user liked. If the user liked a comment, <code>FeedEntityId</code> is set to the ID of the comment. If the user liked a feed item, <code>FeedEntityId</code> is set to the ID of the feed item. This field is optional. The default value is the ID of the feed item.
InsertedById	Type reference Properties Filter, Group, Sort Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user. This is a relationship field. Relationship Name InsertedBy Relationship Type Lookup Refers To User

Usage

You can't query `FeedLike` records directly. They can only be queried via the entity feed, such as `AccountFeed`.

`FeedLike` records represent likes on posts and not likes on comments. Likes on comments can't be queried via the API.

FeedPollChoice

Shows the choices for a poll posted in the feed. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All Records on the parent object, for example on Account for a poll on an AccountFeed
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

Fields

Field Name	Details
ChoiceBody	Type textarea Properties Group Description A choice in the poll.
FeedItemId	Type reference Properties Filter, Group, Sort Description ID of the feed item for the poll.
Position	Type int Properties Group, Sort Description Shows the position of the poll choice.

Usage

Use this object to query all of the choices associated with a particular poll. To view how people voted on the poll, see the FeedPollVote object.

FeedPollVote

Shows how users voted on a poll posted in the feed. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ChoiceId	Type reference Properties Filter, Group Description Indicates which choice a user selected on a poll posted in a feed. This is a relationship field. Relationship Name Choice Relationship Type Lookup Refers To FeedPollChoice
FeedItemId	Type reference Properties Filter, Group, Sort Description ID of the feed item for the poll.

Usage

Use this object to query how users voted on a particular poll.

FeedPost

FeedPost represents the following types of changes in a record feed, such as AccountFeed: text posts, link posts, and content posts. This object is available in API version 18.0 through 21.0. FeedPost is no longer available in later versions. Starting with API version 21.0, use FeedItem to represent text posts, link posts, and content posts in feeds.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `search()`

Special Access Rules

You can delete all feed items you created. To delete feed items you didn't create, you must have one of these permissions:

- "Modify All Data"
- "Modify All Records" on the object associated with the feed and delete permission on the parent feed
- "Moderate Chatter"

Note: Users with the "Moderate Chatter" permission can delete only the feed items and comments they can see.

- Manage Unlisted Groups

Only users with this permission can delete items in unlisted groups.

Only users with the Modify All Data permission can delete a feed item of `Type TrackedChange`.

If the context user has the Insert System Field Values for Chatter Feeds user permission, the `create` field property is available on `CreatedBy` and `CreatedDate` system fields. During migration, the context user can set these fields to the original post's author and creation date. The fields can't be updated after migration.

Fields

Field	Details
Body	Type string Properties Create, Filter, Nillable, Sort Description The content of the FeedPost. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.
ContentData	Type base64 Properties Create, Nillable Description This field is required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.
ContentDescription	Type string Properties Create, Nillable, Sort

Field	Details
	Description The description of the file specified in <code>ContentData</code> .
<code>ContentFileName</code>	Type string Properties Create, Group, Nillable, Sort Description This field is required if <code>Type</code> is <code>ContentPost</code> . The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code> .
<code>ContentSize</code>	Type int Properties Group, Nillable, Sort Description This field is the size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.
<code>ContentType</code>	Type string Properties Group, Nillable, Sort Description This field is the MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.
<code>FeedItemId</code>	Type reference Properties Filter, Group, Sort Description ID of the feed containing the <code>FeedPost</code> .
<code>InsertedById</code>	Type reference Properties Filter, Group, Sort

Field	Details
	Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). This field is a standard system field.
LinkUrl	Type url Properties Create, Filter, Nillable, Sort Description The URL of a <code>LinkPost</code>.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the object type to which the <code>FeedPost</code> is related. For example, set this field to a <code>UserId</code> to post to someone's profile feed, or an <code>AccountId</code> to post to a specific account.
Title	Type string Properties Create, Filter, Group, Nillable, Sort Description The title of the <code>FeedPost</code>. When the <code>Type</code> is <code>LinkPost</code>, the <code>Body</code> is the URL and the <code>Title</code> is the label for the link.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The type of FeedPost: • <code>UserStatus</code>—automatically generated when a user updates their status • <code>TrackedChange</code>—ignore • <code>TextPost</code>—a direct text entry on a feed • <code>LinkPost</code>—a URL posting on a feed • <code>ContentPost</code>—an uploaded file on a feed  Note: If you set <code>Type</code> to <code>ContentPost</code>, you must specify <code>ContentData</code> and <code>ContentFileName</code>.

Usage

- You can't directly query for a FeedPost. FeedPosts are always associated with a feed item, so you can query for them through the feeds. The following example returns all feed items for a given account, ordered by date descending:

```
SELECT Id, Type, FeedPost.Body
FROM AccountFeed
WHERE ParentId = AccountId ORDER BY CreatedDate DESC
```

- A FeedPost of type `UserStatus` is automatically created when a user adds a post to update the current status. You can't explicitly create a FeedPost of type `UserStatus`.
 - The size limit for an attachment on a profile, news, or record feed is 2 GB.
 - You can't use the content fields to update or delete the content.
 - You can't filter or update the content fields.
 - Deleting a FeedPost via the API also deletes the associated content and FeedPost objects. Likewise, undeleting a FeedPost restores associated content and FeedPost objects.
-  **Note:** This object is hard deleted. It isn't sent to the Recycle Bin.
- After uploading to a feed, it is possible for an attachment or document to be deleted, marked private, or hidden by sharing rules. In this case, all content fields in FeedPost appear as `null` in a SOQL query.
 - You can't explicitly create or delete a FeedTrackedChange record.

FeedRevision

Holds the revision history of a specific feed item or comment, including a list of attributes that changed for each revision. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
Action	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Holds the type of modification to the underlying feed item or comment attribute. <code>Action</code> can have the value <code>Changed</code>.
EditedAttribute	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Identifies the part of the feed item or comment which was modified. A single revision can have many edited attributes.
FeedEntityId	Type reference Properties Filter, Group, Sort Description Identifies the modified feed item or comment.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). This field is a standard system field.
IsValueRichText	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed item <code>Body</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags:

Field Name	Details
	• <code><p></code> Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp;</p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code> • <code><i></code> • <code><u></code> • <code><s></code> • <code></code> • <code></code> • <code></code> • <code></code> The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code> In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
OriginNetworkId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Experience Cloud site in which a user modified the feed item or comment. This field is only available, if digital experiences is enabled for your org.
Revision	Type int Properties Filter, Group, Nillable, Sort Description The revision number of the feed item or comment.
Value	Type textarea Properties Nillable

Field Name	Details
	Description Identifies the value of the <code>EditedAttribute</code> field before the update.

Usage

This object tracks the changes made to a feed item or feed comment and stores a list of attributes that changed for each revision.

- To query the `FeedRevision` object, users need the View All Data permission or supply a WHERE clause on the `FeedEntityId`.

feedSignal

Attach feed signals, like `UpDownVote`, `UserVerified`, and `Verified`, to a feed post or comment. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`

Fields

Field	Details
<code>FeedEntityId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the Feed entity.
<code>FeedItemId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the feed post or comment. Possible values are: • <code>FeedItem</code> • <code>FeedComment</code>
<code>InsertedById</code>	Type reference

Field	Details
	Properties Filter, Group, Sort Description ID of user who inserted the signal. This is a relationship field. Relationship Name InsertedBy Relationship Type Lookup Refers To User
SignalType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of signal. Possible values are: • UpDownVote • UserVerified • Verified
SignalValue	Type int Properties Create, Filter, Group, Nillable, Sort Description The value of the signal. For example, for <code>UpDownVote</code> , the value specifies whether the signal is an upvote or a downvote.

FeedTrackedChange

Represents an individual field change or set of field changes. A `FeedTrackedChange` is a child object of a record feed, such as `AccountFeed`. This object is available in API version 18.0 and later.

Supported Calls

`describeObjects()`

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Group, Restricted picklist, Sort Description Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the field, if <code>FieldName</code> is a currency field.
FeedItemId	Type reference Properties Filter, Group, Sort Description ID of the parent feed that tracks the field change.
FieldName	Type string Properties Group, Sort Description The name of the field that was changed.  Note: This field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of <code>leadConverted</code> indicates that a lead has been converted to an opportunity. For a full list of values, see Tracking of Special Events.
NewValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
OldCurrencyIsoCode	Type string Properties Group, Nillable, Sort Description Available only for organizations with the multicurrency feature enabled. Contains the ISO currency code for the <code>OldValue</code> field, if <code>FieldName</code> is a currency field.

Field	Details
OldValue	Type anyType Properties Nillable, Sort Description The last value of the field before it was changed.

Usage

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

If you move a custom field to the Recycle Bin, all FeedTrackedChange records that track historical changes to the custom field are automatically deleted and are not restored if the custom-field is undeleted.

The following sections outline the difference between standard feeds and custom feeds.

Standard Feeds

A standard feed is a record feed, such as AccountFeed. FeedTrackedChange records for standard feeds can only be queried via the parent feed object.

Note the following when working with standard feed items:

- Feed items for standard feeds are read only in the API.
- A FeedTrackedChange record is visible when you have read access on the record feed, and when the field is visible in the field-level security settings.

Custom Feeds

If you want more control over the information provided in a record feed, such as AccountFeed, you can create a custom feed. A custom feed can replace or augment an existing record feed. For example, you might want to:

- Disable the standard account record feed and use an Apex trigger to generate FeedTrackedChange records for the events that you want to track in the feed instead.
- Augment the standard contact record feed by writing an API client that inserts feed items for events that are not tracked in the standard feed.

Tracking of Special Events

The `FieldName` field also tracks other events that are not related to an individual field for a parent feed. These events occur as the parent record advances through its pipeline. For example, a value of `LeadConverted` indicates that a lead has been converted to an opportunity.

Valid values for the `FieldName` field for multiple objects:

- `created`

- ownerAccepted
- ownerAssignment

Additional valid values for the `FieldName` field for individual objects:

Account

- accountCreatedFromLead
- accountMerged
- accountUpdatedByLead
- personAccountUpdatedByLead

Case

- closed
- ownerEscalated

Contact

- contactCreatedFromLead
- contactMerged
- contactUpdatedByLead

Contract

- contractActivation
- contractApproval
- contractConversion
- contractExpiration
- contractTermination

Lead

- leadConverted
- leadMerged

Opportunity

- opportunityCreatedFromLead

[Custom Object __Feed __Feed](#)

FieldHistoryArchive

Represents field history values for all objects that retain field history. `FieldHistoryArchive` is a big object, available only to users with the “Retain Field History” permission. This object is available in API version 29.0 and later.

Each instance of the `FieldHistoryArchive` object represents a single change in the value of a field. `FieldHistoryArchive` stores history for both standard and custom fields.

The `Field` field returns the name of the field unless the parent field or object is deleted, in which case it returns the field ID. You can use the ID to retrieve the old field and object name from the `FieldNameAfterArchival` and `ParentNameAfterArchival` fields, respectively.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
ArchiveFieldName	Type string Properties Nillable Description The name of the field at the time the data was archived. If the field name changed, the name is sometimes not the same for all records related to a single field.
ArchiveParentName	Type string Properties Nillable Description The name of the parent object at the time the data was archived. If the object name changed, the name is sometimes not the same for all records related to a single field.
ArchiveParentType	Type string Properties Nillable Description The type of the field at the time the data was archived. If the field type changed, the type is sometimes not the same for all records related to a single field.
ArchiveTimestamp	Type dateTime Properties Nillable Description The date and time at which the data was archived.
CreatedById	Type reference Properties Nillable

Field Name	Details
	Description The user ID of the user who created the original record.
CreatedDate	Type dateTime Properties Nillable, Sort Description The date and time at which the original record was created.
Field	Type picklist Properties Restricted picklist Description The name of the field that was changed. If the field is deleted from the parent object, the <code>Field</code> field contains the field ID instead.
FieldHistoryType	Type picklist Properties Filter, Nillable, Restricted picklist, Sort Description The name of the object that contains the field history. Possible values are: - Account - Article - Asset - AuthorizationFormConsent – Available in version 58.0 and later. - Case - CommSubscriptionConsent – Available in version 58.0 and later. - Contact - ContactPointConsent – Available in version 58.0 and later. - ContactPointTypeConsent – Available in version 58.0 and later. - Contract - ContractLineItem - Crisis - Employee - EmployeeCrisisAssessment - Entitlement - Individual

Field Name	Details
	- InternalOrganizationUnit - Knowledge - Lead - Opportunity - Order - OrderItem - PartyConsent – Available in version 58.0 and later. - Pricebook2 - PricebookEntry - Product2 - ServiceAppointment - ServiceContract - Solution - WorkOrder - WorkOrderLineItem
HistoryId	Type reference Properties Filter, Sort Description The ID of the relevant history object (for example, AccountHistory). This field is available in versions 42.0 and later.
Id	Type ID Properties Defaulted on create, Filter, idLookup Description The ID of the archived record. It's useful to have a field's ID for fields that you've deleted. (Field names aren't retained in history when you delete fields from Salesforce.)
NewValue	Type anyType Properties Nillable Description The new value of the modified field.

Field Name	Details
OldValue	Type anyType Properties Nillable Description The previous value of the modified field.
ParentId	Type reference Properties Filter, Sort Description The ID of the object that contains the field (the parent object).

Usage

When sorting fields, order them as follows:

1. FieldHistoryType ASC
2. ParentID ASC
3. CreatedDate DESC

SEE ALSO:

[Developer Guide:Big Objects Implementation Guide](#)

FieldChangeSnapshot

Use this virtual object to learn which opportunities' close dates changed during the specified time period. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To use FieldChangeSnapshot, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

Fields

Field	Details
CurrentValueDateOnly	Type date Properties Filter, Group, Nillable Description The current value of a date field on the opportunity.
FieldName	Type string Properties Filter, Group Description The name of the field to get the change history for. Possible values are: • CloseDate
ParentId	Type reference Properties Filter, Group Description The ID of the opportunity to get the change history for. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Opportunity
ValidFrom	Type dateTime Properties Filter Description The date and time that specifies the beginning of the time period.
ValidTo	Type dateTime

Field	Details
	Properties Filter
	Description The date and time that specifies the end of the time period.

Usage

Use FieldChangeSnapshot to learn about the first change made to the specified opportunity during the specified time period. Subsequent changes are not returned.

Example: Suppose that last week you changed an opportunity's close date to June 1, 2021. Assuming the opportunity had the ID '006R0000XXXXXXXXXX', the following query would return the CurrentValueDateOnly of June 1, 2021:

```
Select CurrentValueDateOnly from FieldChangeSnapshot where ParentID =
'006R0000XXXXXXXXXX' and FieldName = 'CloseDate' and ValidTo = LAST_WEEK AND ValidFrom
= LAST_WEEK and CurrentValueDateOnly < 2021-07-01
```

FieldPermissions

Represents the enabled field permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to a field, associate a FieldPermissions record with a PermissionSet that's assigned to a user. FieldPermissions records are only supported in PermissionSet, not in Profile.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, only users with the View Setup and Configuration permission can access this object.

Fields

In API version 50.0 and later, for lookup field inserts and queries, you can leave off the Id in the field name or include it. The rows returned always use the API name. For example:

```
SELECT SubjectType, Field
FROM FieldPermissions
WHERE Field='Contact.Account'
```

and

```
SELECT SubjectType, Field
FROM FieldPermissions
WHERE Field='Contact.AccountId'
```

both return

```
Contact, Contact.AccountId
```

Field Name	Details
Field	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The field's API name. This name must be prefixed with the <code>ObjectType</code>. For example, <code>Merchandise__c.Description__c</code>
ParentId	Type reference Properties Create, Filter, Group, Sort Description The <code>Id</code> of the field's parent PermissionSet. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To PermissionSet
PermissionsEdit	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, users assigned to the parent <code>PermissionSet</code> can edit this field. Requires <code>PermissionsRead</code> for the same field to be <code>true</code>.
PermissionsRead	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, users assigned to the parent <code>PermissionSet</code> can view this field. A <code>FieldPermissions</code> record must have at minimum <code>PermissionsRead</code> set to <code>true</code>, or it will be deleted.

Field Name	Details
SubjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The object's API name. For example, <code>Merchandise__c</code>.

Usage

FieldPermissions work similarly to ObjectPermissions. However, FieldPermissions includes a `Field` attribute to return the name of the field.

For example, the following query returns all FieldPermissions records that have at least the “Read” permission. The results include the field, object, and permission set names.

```
SELECT SubjectType, Field, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE PermissionsRead = True
```

Include the field's parent object when querying FieldPermissions. For example, to find all rows that match the Account object's `Type` field, create the following query:

```
SELECT Id, SubjectType, Field
FROM FieldPermissions
WHERE Field = 'Account.Type' AND SubjectType = 'Account'
```

To find which permission sets are backed by profiles with the Account object, you can use a query like the following example:

```
SELECT Id, ParentId, SubjectType, Field, PermissionsEdit, PermissionsRead, Parent.Name
FROM FieldPermissions
WHERE SubjectType = 'Account' and Parent.IsOwnedByProfile = true
ORDER BY SubjectType, Field
```

Both `SubjectType` and `Field` must be included in the `SELECT` line of the query. Provide the full API name of the field in the form of `SubjectType.Field` when querying for a field.

Note: When using the FieldPermission object to download records, depending on the SOQL query you use, you might not receive all expected records. Results can also appear incomplete. However, all records do download; fields that don't support field security and rows for entities not visible to the org are hidden.

Special Properties for Field Permissions

The auto-number and formula fields have special rules for how field permissions work. Both have FieldPermissions records, but inserting and updating is limited to `PermissionsRead`. `PermissionsEdit` isn't allowed for either field type, since these fields must be read-only for users.

The following field types don't return a FieldPermissions record because they are assumed to always be readable.

- `Id`
- `CreatedById`

- CreatedDate
- IsDeleted
- LastModifiedById
- LastModifiedDate
- SystemModStamp

The following field types don't return a FieldPermissions record because they are assumed to always be readable and writable.

- OwnerId
- Master-detail custom (relationship) fields
- Universally required custom fields

As a result, the following query returns no records, even though users do have some access to some of the fields.

```
SELECT Field, SubjectType, PermissionsRead
FROM FieldPermissions
WHERE Field='Id'
```

To determine if a field can return a FieldPermissions record, you can call a `describeSObject()` on the field. For example, `describeSObject('Merchandise__c')`, returns all the properties of the Merchandise custom object, including field properties. If you use a field whose `permissionable` property is `false` (like the field types listed in this section), you can't query, insert, update, or delete field permissions records, because they don't exist.

If the View All Fields object permission is enabled for an object in the permission set, the `PermissionsRead` field equals `true` for all queried fields for that object.

Working with Custom Activity Fields

While tasks and events are considered separate objects, they share a common set of activity custom fields. As a result, when a custom task field is created, a custom event field is also created, and vice versa. You can display the custom field on the event layout, task layout, or both event and task layouts.

Although custom activity fields are shared between tasks and events, you see separate FieldPermissions records for the task and event. However, changes made to one field permission record are automatically made to the other. For example, if you create a custom activity field, assign field permissions to it in a permission set, and run the following query, the query returns two records with the same permission value.

```
SELECT Field, Id, ParentId, PermissionsEdit, PermissionsRead, SubjectType
FROM FieldPermissions
WHERE SubjectType = 'event' OR SubjectType = 'task'
```

If you then update one of the records with another set of field permission values and run the query, the same permission values for both records are returned.

Nesting Field Permissions

You can nest FieldPermissions in a PermissionSet query. For example, the following returns any permission sets where "Edit Read Only Fields" is `true`. Also, the result set includes both the "Read" and "Edit" field permission on the Merchandise object. Get similar results by nesting the SOQL with a field permission query using the relationship name for field permissions: `FieldPerms`.

```
SELECT PermissionsEditReadOnlyFields,
(SELECT SubjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
```

```
WHERE SubjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadOnlyFields = true
```

As a result, it's possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, FieldPermissions). You can do this from the PermissionSet object by using the child relationship (ObjectPerms, FieldPerms, and so on) or from the child object by referencing the PermissionSet with `Parent.permission_set_attribute`.

It's important to consider when to use a conditional `WHERE` statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT PermissionsEditReadOnlyFields,
(SELECT SubjectType, Field, PermissionsRead, PermissionsEdit
FROM FieldPerms
WHERE SubjectType = 'Merchandise__c')
FROM PermissionSet
WHERE PermissionsEditReadOnlyFields = true
```

Versus:

```
SELECT SubjectType, Field, PermissionsRead, PermissionsEdit, Parent.Name,
Parent.PermissionsEditReadOnlyFields
FROM FieldPermissions
WHERE SObjectType='Merchandise__c'
```

Muting Permissions

Field permissions with a parent muting permission set act differently than those enabled in a regular permission set. For a regular permission set, if a FieldPermissions record grants full access to a field (for example, granting read and edit access), users have full access to that field.

With muting permission sets, a FieldPermissions record defines the muting of access. So if a muting permission set is set for read and edit, the read and edit access is muted.

For example, we have a permission set and a muting permission set that controls access to the Account object's fields. Each permission set has settings for the Website field.

Regular Permission Set

Field	PermissionsRead	PermissionsEdit	Result
Account.Website	true	false	The Account.Website field is read only.
Account.Website	true	true	The Account.Website field has both read and edit permissions.

Muting Permission Set

Field	PermissionsRead	PermissionsEdit	Result
Account.Website	false	true	Edit permissions on the Account.Website fields are muted.
Account.Website	true	true	Read and edit permissions on the Account.Website field are muted.

Field permissions are aggregated by combining the permissions granted by the permission set and the permissions muted by the muting permission set. For example, if you have a permission set that grants read and edit permissions for a field, and a muting permission that mutes the same field's edit permission, the result is that only the read permission is enabled.

[ObjectPermissions](#)

FieldSecurityClassification

Represents a field's data sensitivity value selected from the SecurityClassification picklist. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To view this object, you need the Customize Application or Modify Data Classification permission.

Fields

Field Name	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description The API name of the data sensitivity picklist value. Default values: - Public - Internal - Confidential

Field Name	Details
	• Restricted • MissionCritical
Description	Type textarea Properties Filter, Group, Nillable, Sort Description The description of the data sensitivity picklist value.
IsHighRiskLevel	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that fields with this picklist value contain data highly sensitive to your company.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description The data sensitivity picklist value. Default values: • Public • Internal • Confidential • Restricted • MissionCritical
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description The value's position in the picklist.

Usage

Use this object to return information about data sensitivity values in the SecurityClassification picklist. This object is read-only, but you can update the SecurityClassification picklist using the [StandardValueSet](#) Metadata API type.

FieldServiceMobileSettings

Represents a configuration of settings that control the Field Service iOS and Android mobile app experience. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
<code>AscAutomaticMode</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Describes how status changes are handled. Possible values are: <code>Off</code>—No automatic status changes. <code>Manual</code>—The mobile worker can cancel or update the status change. <code>Timed</code>—The mobile worker has a time period to prevent the status change. When the timer ends, the status changes. <code>Automated</code>—The mobile worker is notified that the status has changed.
<code>AscCancellationTimerInSec</code>	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description For the Timed mode only. Time that the user has to cancel the appointment status change.
<code>AscCompletedStatus</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Status that indicates that a mobile worker completed a service appointment. Possible values are: • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Scheduled
AscOnSiteStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Status that indicates that a mobile worker is at a service appointment. Possible values are: • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Scheduled
AscRadiusInMeters	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Service appointment radius that can trigger a status change.
AscTimeLimitationInMin	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A time period when status changes can occur, before an appointment's scheduled start time and after the scheduled end time. The time is applied only if <code>IsAscTimeLimitEnabled</code> is <code>true</code>.
AscTravelStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Status that indicates that a mobile worker is traveling to a service appointment. Possible values are: • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Scheduled
BgGeoLocationAccuracy	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The accuracy of geolocation tracking of services resources while the app is running in the background. Lowering accuracy reduces battery consumption for mobile devices. Available in API version 41.0 and later. Picklist options: • Medium—Accurate to within about 100 meters. • Coarse—Accurate to within about 1 kilometer. • Very Coarse—Accurate to within about 3 kilometers. The default value is <code>Coarse</code>.
BgGeoLocationMinUpdateFreqMins	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The frequency of geolocation polling of services resources while the app is running in the background. Less frequent polling decreases battery consumption for

Field Name	Details
	mobile devices. The label in the UI is Minimum Update Frequency of Geo Location in Minutes (Background) . Available in API version 41.0 and later.
BrandInvertedColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of toasts and the contrast color of the floating action button.
ContrastInvertedColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of secondary backgrounds in the UI.
ContrastPrimaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of primary text.
ContrastQuaternaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of secondary lines that delineate different areas of the UI.
ContrastQuinaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of primary backgrounds in the UI.
ContrastSecondaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The color of secondary text.
ContrastTertiaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of the icons on the settings screen and of primary lines that delineate different areas of the UI.
DaysBeforeCurrentServiceDate	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Days before the current service date during which to prime service documents for offline use.
DayAfterCurrentServiceDate	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Days after the current service date during which to prime service documents for offline use.
DefaultListViewDeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of the default service appointment list view on the schedule screen.
DestinationType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines if the mobile worker navigates to the destination based on the address or based on the latitude and longitude. Possible values are: Address

Field Name	Details
	Latitude and Longitude The default value is Address.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The API name of the set of field service mobile settings. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
FeedbackPrimaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of error messages.
FeedbackSecondaryColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of success messages.
FeedbackSelectedColor	Type string Properties Create, Defaulted on create, Group, Sort, Update Description The color indicating the user's current selection.
FutureDaysInDatePicker	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The number of days into the future that a user can select from the date picker on the schedule screen.

Field Name	Details
GeoLocationAccuracy	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The accuracy of service resource geolocation tracking. Lowering accuracy reduces battery consumption for mobile devices. Picklist values: • Fine—Accurate to within 10 meters. • Medium—Accurate to within 100 meters. • Coarse—Accurate to within 1 kilometer. The default value is Medium.
GeoLocationMinUpdateFreqMins	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The minimum number of minutes between attempts to poll geolocation.
IsAscTimeLimitEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether AscTimeLimitationInMin is applied. Default is true
IsAssignmentNotification	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Controls whether service appointment notifications are sent when the service resource is assigned the appointment. Default is false. This field is available in API version 46.0 and later.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates that the set of field service mobile settings is the default set that is automatically assigned to users. You can't make a different settings record the default, but you can modify the default settings record. Default is <code>false</code>. Available in API version 41.0 and later.
IsDispatchNotification	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Controls whether service appointment notifications are sent when the service resource is dispatched for the appointment. Default is <code>false</code>. This field is available in API version 46.0 and later.
IsLimitedLocTrackingEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description When limited tracking for Appointment Assistant is enabled, the mobile worker's location is shown only on the way to a service appointment. The default value is <code>false</code>.
IsOptimizedImageUploadEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to configure the size of images uploaded by your mobile workers. To optimize upload speeds, you can limit your file size to a defined maximum size using the <code>OptimizeImageSizeInMb</code> field. Resizing your images affects the resolution of your images. The default value is <code>false</code>.
IsScheduleViewResourceAbsences	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether resource absences appear in the Schedule tab of the mobile app. This field is available in API version 55.0 and later.

Field Name	Details
IsSendLocationHistory	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Controls whether geolocation tracking of services resources is enabled. Default is <code>false</code>.
IsShowEditFullRecord	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Controls whether users can edit records with the field service mobile app. Default is <code>false</code>.
IsTimeSheetEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Controls whether users can access time sheets on their mobile devices (Beta). Default is <code>false</code>.
IsTimeZoneEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Controls whether the time zone of timesheet entries on the mobile app is recorded. The current time zone is recorded in the <code>LocationTimeZone</code> field of the <code>TimeSheetEntry</code> object. Default is <code>false</code>. Available in API version 50.0 and later.
IsUseSalesforceMobileActions	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Reserved for future use.

Field Name	Details
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The localization preference for a user. The format is a two letter language code and, if there's a dialect, followed by the two letter dialect, for example, <code>fr</code> for French, and <code>fr_BE</code> for Belgian French
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label in the UI for the set of field service mobile settings. Available in API version 41.0 and later.
MaxNumberOfServiceAppointments	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Sets the maximum number of service appointments to use for offline priming of service documents. If you don't have dates on your service appointments, this setting helps to optimize offline priming in place of <code>DaysBeforeCurrentServiceDate</code> and <code>DaysBeforeCurrentServiceDate</code> fields.
MetadataCacheTimeDays	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The number of days that org metadata, such as layouts, is kept in the app's local cache of memory.
NavbarBackgroundColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of the top bar in the app.

Field Name	Details
NavbarInvertedColor	Type string Properties Create, Defaulted on create, Group, Sort, Update Description The secondary color of the tap bar in the app.
OptimizeImageSizeInMb	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Configure the size of images uploaded by your mobile workers. To optimize upload speeds, you can limit your file size to a defined maximum size. Resizing your images affects the resolution of your images. Enter 0.2 or higher. Used only if IsOptimizedImageUploadEnabled is <code>true</code>.
PastDaysInDatePicker	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The number of days into the past that a user can select from the date picker on the schedule screen.
PrimaryBrandColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The main branding color used throughout the UI.
QuickStatusChangeFlowName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of an existing Field Service flow with a Quick Status Change action to change the work order or service appointment status or both. This applies to flows invoked on the mobile app only. This field is available in API version 51.0 and later.

Field Name	Details
RecordDataCacheTimeMins	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The number of minutes that record data is kept in the app's local cache of memory.
SecondaryBrandColor	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The color of action buttons.
TimeIntervalSetupMins	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Controls the spacing of picklist options for time values such as when creating resource absences.
UpdateScheduleTimeMins	Type int Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The minimum number of minutes between attempts to update a user's schedule. The user's schedule might not refresh on this cadence if the user's device isn't connected to a network or doesn't have adequate battery life.

Usage

Field Service Mobile settings allow you to create sets of settings to apply to different field service mobile users. The settings apply to both the Android and iOS versions of the app.

For example, suppose you want to accommodate workers that are color blind, or who work in dark or bright conditions. You can choose different branding options for different workers to suit their needs, and assign them to their profiles.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

FieldServiceMobileSettingsChangeEvent (API version 55.0)

Change events are available for the object.

FieldServiceOrgSettings

Represents the org settings for Field Service, such as Appointment Assistant settings. If Field Service is enabled, the org contains one read-only record of this object. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To see this object, Field Service must be enabled. For specified fields in the table, Appointment Assistant must also be enabled.

Fields

Field	Details
ApptAssistantExpiration	Type int Properties Filter, Group, Nillable, Sort Description The expiry time in minutes of when the customer stops seeing the mobile worker's location. Appointment Assistant must also be enabled to see this field.
ApptAssistantInfoUrl	Type string Properties Filter, Group, Nillable, Sort Description The page URL that enables Appointment Assistant. Appointment Assistant must also be enabled to see this field.
ApptAssistantRadiusUnit	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The unit of the radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.

Field	Details
	Possible values are: • Kilometer • Meter • Mile • Yard
ApptAssistantRadiusValue	Type int Properties Filter, Group, Nillable, Sort Description The radius of the service appointment that prompts the Last Mile event for Appointment Assistant. Appointment Assistant must also be enabled to see this field.
ApptAssistantStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description The value that prompts the En Route event for Appointment Assistant. Appointment Assistant must also be enabled to see this field. Possible values are: • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Scheduled • TestSharing The default value is 'None'.
CanPopulateGoogleAddress	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Allows desktop and mobile to send geolocation and map data to Google and Apple. Available in API version 57.0 and later. The default value is <code>true</code>.

Field	Details
CanSendAppCenterCrashReports	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Allows Salesforce to send crash reports to Microsoft App Center. Available in API version 57.0 and later. The default value is <code>true</code>.
CanStoreMobileAnalytics	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Allows third parties to store mobile analytics. Available in API version 57.0 and later. The default value is <code>true</code>.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
DoesAvlCalcInclOvertime	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether overtime is included in work capacity availability calculations. Available in API version 59.0 and later. The default value is <code>false</code>.
DoesAvlCalcInclPrimOnly	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Specifies if primary members only are included in work capacity availability calculations. If the value is <code>false</code> both primary and secondary members of the service territory are included. Available in API version 59.0 and later. The default value is <code>false</code>.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the field service org settings. The format for the values is a two-letter language code in small letters, for example, <code>fr</code> for French. If the language has regional dialects, add the two-letter country code in capital letters, for example, use <code>fr_BE</code> for Belgian French.
MasterLabel	Type string Properties Filter, Group, Sort Description The label of the field service org settings.

FileSearchActivity

Represents search activity on a file. This object is available in API version 38.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
AvgNumResults	Type double Properties Filter, Sort

Field	Details
	Description The number of search results returned for the search term. If Period is also included, this value is aggregated based on the time period specified.
ClickRank	Type double Properties Filter, Nillable, Sort Description The order that the file appeared in the search results when users clicked it from the list of results.
CountQueries	Type int Properties Filter, Group, Sort Description The number of searches for the period (day, month, or year).
CountUsers	Type int Properties Filter, Group, Sort Description The number of individual users who clicked the file.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of search activity.
Period	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The time period that the search count is applied to. For example, a record where the Count is 70 and the Period is Monthly indicates that 70 searches took place over the past month. Totals are aggregated daily for the current month, monthly from the past full month through the past full year, and yearly beyond that.

Field	Details
	Possible values are: • DAY • MONTH • YEAR
QueryDate	Type date Properties Filter, Group, Sort Description The date of the search.
QueryLanguage	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language filter that's applied to the user's search.
SearchTerm	Type string Properties Filter, Group, Sort Description The first 100 characters of the search term that was used to search published files.

FiscalYearSettings

Settings to define a custom or standard fiscal year for your organization. This object has a parent-child relationship with the Period object.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only partner users and standard users can access this object.

Fields

Field	Details
Description	Type string Properties Filter, Group, Nillable, Sort Description Description of the setting.
EndDate	Type date Properties Filter, Group, Nillable, Sort Description End date of the fiscal year.
IsStandardYear	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the fiscal year is a standard calendar year (<code>true</code>) or a custom fiscal year (<code>false</code>).
Name	Type string Properties Filter, Group, idLookup, Sort Description A name for the fiscal year. Limit: 80 characters.
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the associated fiscal period.
PeriodLabelScheme	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The numbering scheme used for fiscal periods.
PeriodPrefix	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description The prefix of fiscal periods. For example, if <i>p</i> is the prefix, then the first period is "P1."
QuarterLabelScheme	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The numbering scheme used for fiscal quarters.
QuarterPrefix	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description The prefix of fiscal quarters. For example, if "Q" is the prefix, then the fourth quarter would be "Q4."
StartDate	Type date Properties Filter, Group, Nillable, Sort Description Start date of the fiscal year.
WeekLabelScheme	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The numbering scheme used for weeks.
WeekStartDay	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The name of the day that starts the week, for example <code>Monday</code> or <code>Sunday</code>
YearType	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description Indicates one of two types of fiscal years, Standard or Custom. Standard denotes the standard Gregorian calendar, while Custom means a fiscal year with a custom structure.

[Overview of Salesforce Objects and Fields](#)

FldSvcObjChg

Represents a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Field Service must be enabled.
- The Field Service managed package must be installed.
- The **Track the lifecycle of service appointments** setting in **Setup > Field Service Settings** must be enabled.
- The Platform Integration User must have the Manage Service Appointment Lifecycle and the View Service Appointment Lifecycle permissions.
- To view this object, users must have the View Service Appointment Lifecycle user permission.

Fields

Field	Details
Activity	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description The available scheduling activities for the service appointment. Possible values are: • AddedToBundle—Currently not supported • BundleMemberAdded—Currently not supported • BundleMemberRemoved—Currently not supported • Created • Deleted • RemovedFromBundle—Currently not supported • Rescheduled—An appointment is considered rescheduled if a change is made to its assigned service resource or to its scheduled start time. • Scheduled • ServiceResourceAssigned • StatusChanged—The service appointment status was changed. The manual activities of scheduling, rescheduling, and unscheduling are also reported as status changes because they change the status of an appointment. • Unscheduled • Updated—Captures changes made to one or more of the tracked scheduling fields that aren't associated with another activity.
ActivityDetails	Type string Properties Filter, Nillable, Sort Description Details about the scheduling activity such as the scheduling policy that was used and the unscheduling reason (when applicable).
ActivityTimeStamp	Type dateTime Properties Filter, Nillable, Sort Description Date and time of when the change to the service appointment was made.
IsPrimary	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the change was made directly to the service appointment or indirectly. If the change was made directly to the appointment, it's flagged as Primary. If it was made to another appointment and affected this one, it's flagged as Secondary.
OriginalSvcAppointment	Type string Properties Filter, Group, Nillable, Sort Description The ID of the service appointment that was changed. The field value isn't deleted when the Service Appointment object is deleted.
ServiceAppointmentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the service appointment that was changed. Because this is a relationship field, the field value is deleted when the Service Appointment object is deleted. This field is a relationship field. Relationship Name ServiceAppointment Relationship Type Lookup Refers To ServiceAppointment
TimeZone	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The time zone of the service appointment or the assigned resource.
Transaction	Type string Properties Filter, Nillable, Sort

Field	Details
	Description The last transaction ID of the scheduling and optimization request that updated this object. The transaction ID is automatically generated and populated by the Enhanced Scheduling and Optimization engine.
UserId	Type reference Properties Filter, Group, Nillable, Sort Description The user who made the change to the service appointment. If an activity is a scheduled job, it's registered with the System Administrator user who configured it. This field is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

SEE ALSO:

[FldSvcObjChgDtl](#)

FldSvcObjChgDtl

Represents the details of a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Field Service must be enabled.
- The Field Service managed package must be installed.
- The **Track the lifecycle of service appointments** setting in **Setup > Field Service Settings** must be enabled.
- The Platform Integration User must have the Manage Service Appointment Lifecycle and the View Service Appointment Lifecycle permissions.
- To view this object, users must have the View Service Appointment Lifecycle user permission.

Fields

Field	Details
FieldChangedName	Type string Properties Filter, Group, Sort Description The API name of the field that was changed.
FieldChangedValue	Type string Properties Filter, Nillable, Sort Description The updated value of the field that was changed.
FldSvcObjChgId	Type reference Properties Filter, Group, Sort Description The parent record associated with the details of the change. The parent record has multiple detail records associated with it. Each record includes the name and the current value of the tracked fields. This field is a relationship field. Relationship Name FldSvcObjChg Relationship Type Lookup Refers To FldSvcObjChg

SEE ALSO:

[FldSvcObjChg](#)

FlexQueueItem

Represents an asynchronous Apex job in the Apex flex queue. Provides information about the job type and flex queue position of the AsyncApexJob. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
<code>AsyncApexJobId</code>	Type reference Properties Filter, Group, Sort Description The ID of an AsyncApexJob that's waiting in the flex queue. This is a relationship field. Relationship Name <code>AsyncApexJob</code> Relationship Type Lookup Refers To <code>AsyncApexJob</code>
<code>FlexQueueItemId</code>	Type string Properties Filter, Group, Nillable, Sort Description The primary key for this <code>FlexQueueItem</code>.
<code>JobPosition</code>	Type int Properties Filter, Group, Sort Description The position in the flex queue of the waiting job. The highest-priority job in the queue is at position 0.
<code>JobType</code>	Type picklist

Field Name	Description
	Properties Filter, Group, Restricted picklist, Sort
	Description The type of the job. Valid values are: • ApexToken • BatchApex • BatchApexWorker • Future • Queueable • ScheduledApex • SharingRecalculation • TestRequest • TestWorker Currently, queries are supported only on BatchApex jobs.

Usage

To find the position of an AsyncApexJob in the flex queue, query `JobPosition`. For example:

```
SELECT JobPosition FROM FlexQueueItem WHERE JobType = 'BatchApex' AND AsyncApexJobId = '707xx000000DABC'
```

To find the job at a given position, query `AsyncApexJobId`. For example:

```
SELECT AsyncApexJobId FROM FlexQueueItem WHERE JobType = 'BatchApex' AND JobPosition = '2'
```

To find all batch jobs in the flex queue, query `JobType`. To get other information about the jobs, include `AsyncApexJob` in your query. For example:

```
SELECT JobType, JobPosition, AsyncApexJob.ApexClass.Name, AsyncApexJob.CreatedDate, AsyncApexJob.CreatedById FROM FlexQueueItem WHERE JobType='BatchApex' AND AsyncApexJob.ApexClass.Name LIKE '%BatchAJob%' ORDER BY JobPosition DESC
```

FlowDefinitionView

Represents the description of a flow definition. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects(), query()`

Fields

Field	Details
ActiveVersionId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the active flow version.
ApiName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the flow definition.
ApiVersion	Type string Properties Filter, Group, Nillable, Sort Description The API version of the flow definition. Available in API version 59.0 and later.
AreMetricsLoggedToDataCloud	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later.
Builder	Type string Properties Filter, Group, Nillable, Sort Description The name of the tool that created this flow. Possible values are: • Cloud Flow Designer • Flow Builder • Swing Designer

Field	Details
	This field is available in API version 47.0 and later.
CapacityCategory	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category that determines the usage limits of the flow. Possible values are: Marketing Cloud Flow This field is available in API version 62.0 and later.
Description	Type string Properties Filter, Group, Nillable, Sort Description Flow definition information, specified by the org's admin.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the flow definition.
Environments	Type multipicklist Properties Filter, Nillable Description The environment in which the flow can run. Valid values are: Default—The flow can run from a Visualforce component, Lightning page, flow action, or custom Aura component. Offline—The flow can run only offline. Flow types that support offline flows must set this value. This value is available in API version 62.0 and later. Slack—The flow can run in Slack and the default environment. You specify the Slack flow environment when you save the flow. This field is available in API version 55.0 to 62.0. This field is deprecated in API version 63.0 and later.

Field	Details
HasAsyncAfterCommitPath	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the scheduled path runs asynchronously after a save. The default value is false. This field is available in API version 54.0 and later.
InstalledPackageName	Type string Properties Filter, Group, Nillable, Sort Description The name of the installed package that includes this flow definition. This field is available in API version 47.0 and later.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the latest version of the flow definition is the active flow version. This field is available in API version 47.0 and later.
IsOutOfDate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the active flow version is the latest version of the flow definition. This field is available in API version 47.0 and later.
IsOverridable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow is overridable. The default value is false. This field is available in API version 53.0 and later.

Field	Details
IsSwingFlow	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow is built with Desktop Flow Designer. This field is available in API version 49.0 and later.
IsTemplate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the process or flow is a template. The default value is <code>false</code>. When installed from managed packages, subscribers can't view or clone processes or flows because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones. This field is available in API version 47.0 and later.
Label	Type string Properties Filter, Group, Nillable, Sort Description The label of the flow definition.
LastModifiedBy	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who last updated this flow definition. This field is available in API version 47.0 and later.
LatestVersionId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the latest flow version, regardless of the flow's status.

Field	Details
ManageableState	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the manageable state of the flow that is contained in a package. Possible values are: • beta • deleted • deprecated • deprecatedEditable • installed • installedEditable • released • unmanaged This field is available in API version 47.0 and later.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix associated with the flow definition.
OverriddenById	Type string Properties Filter, Nillable, Sort Description The flow that's overriding the current flow. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name OverriddenBy Relationship Type Lookup Refers To FlowDefinitionView
OverriddenFlowId	Type string

Field	Details
	Properties Filter, Nillable, Sort Description The flow that the current flow is overriding. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name OverriddenFlow Relationship Type Lookup Refers To FlowDefinitionView
ProcessType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the flow. Valid values are: • ActionableEventManagermentFlow—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later. • ActionCadenceAutolaunchedFlow—A flow that's executed when a user completes a cadence step. This value is available in API version 56.0 and later. • ActionCadenceStepFlow—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • ActivityObjectMatchingFlow—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later. • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • ApprovalWorkflow—An orchestration that's used for an approval process. This value is available in API version 63.0 and later. • AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request to be contacted by customer support. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available

Field	Details
	in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • DataCaptureFlow— In the UI, Data Capture flows configure the Form tab in the Field Service mobile app. When the Data Capture flow is launched, its Flow metadata is publicly available in JavaScript format. This value is available in API version 62.0 and later. • DcvrFrameworkDataCaptureFlow—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later. • EvaluationFlow—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the <code>isOrchestrationConditionMet</code> output variable and discards values from any other output variables. This value is available in API version 54.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • FSClending—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • IdentityUserRegistrationFlow—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later. • IndicatorResultFlow—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • IndividualObjectLinkingFlow—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later. • InvocableProcess—A process that another process or the Invocable Actions resource in REST API invokes. This value is available in API version 38.0 and later. • Journey—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later.

Field	Details
	• LoginFlow—A flow for login. This value is available in API version 51.0 and later. • LoyaltyManagementFlow—A flow for the Loyalty Management app that's invocable by loyalty program processes. This value is available in API version 54.0 and later. • Orchestrator—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later. • PromptFlow—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later. • RecommendationStrategy—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies. • RoutingFlow—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • Survey—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • SurveyEnrich—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • Workflow—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use: • ActionPlan • AppProcess • ApprovalWorkflow • CartAsyncFlow • DigitalForm • JourneyBuilderIntegration • LoginFlow • ManagedContentFlow • OrchestrationFlow • SalesEntryExperienceFlow • TransactionSecurityFlow • UserProvisioningFlow This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type. Across flow versions, you can change the type only from Flow to AutoLaunchedFlow or vice versa. Before you change the flow type, make sure that

Field	Details
	the flow contains only the elements, resources, and functionality that the new flow type supports.
RecordTriggerType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies what type of record changes can start the flow. Possible values are: • Create • CreateAndUpdate • Delete • None • Update Available only when <code>triggerType</code> is <code>RecordBeforeSave</code>. This field is available in API version 54.0 and later.
SourceTemplateId	Type string Properties Filter, Nillable, Sort Description The template that the current flow was created from. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name SourceTemplate Relationship Type Lookup Refers To FlowDefinitionView
SupportedEnvironments	Type string Properties Filter, Nillable Description The environment in which the flow can run. Valid values are: • <code>Default</code>—The flow can run from a Visualforce component, Lightning page, flow action, or custom Aura component. • <code>Offline</code>—The flow can run only offline. Flow types that support offline flows must set this value.

Field	Details
	• Slack—The flow can run in Slack and the default environment. You specify the Slack flow environment when you save the flow. This field is available in API version 63.0 and later.
TriggerObjectOrEventId	Type string Properties Filter, Nillable, Sort Description ID of the object or platform event that triggers this flow. This field is available in API version 53.0 and later. This is a relationship field. Relationship Name TriggerObjectOrEvent Relationship Type Lookup Refers To EntityDefinition
TriggerObjectOrEventLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the object or platform event that triggers this flow. This field is available in API version 53.0 and later.
TriggerOrder	Type int Properties Filter, Group, Nillable, Sort Description The run order of a record-triggered flow, from 1 to 2,000. See "Guidelines for Defining the Run Order of Record-Triggered Flows for an Object" in Salesforce Help. Available in API version 54.0 and later.
TriggerType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field

Details

Description

Specifies what causes the flow to run. If you exclude this field, the flow has no trigger and starts only when a user or app launches the flow. Valid values are:

- **AutomationEvent**—The flow starts when an automation event such as an SMS subscription occurs. This value is available in API version 62.0 and later.
- **Capability**—The flow starts when the specified capability that the flow integrates with is invoked. This value is available in API version 60.0 and later.
- **DataCloudDataChange**—The flow starts when data model object (DMO) or calculated insight object (CIO) conditions are met. This value is available in API version 59.0 and later.
- **DataGraphDataChange**—The flow starts when conditions are met in the specified data graph field. This value is available in API version 63.0 and later.
- **EventDrivenJourney**—Reserved for internal use.
- **ExternalSystemChange**—The flow starts when an external system change event is received. This value is available in API version 61.0 and later.
- **FormSubmissionEvent**—The flow runs when a user submits data via a webform. In Flow Builder, this value corresponds to **Form**. This value is available in API version 60.0 and later.
- **IndivRelatedRecord**—The flow starts when an object or an object with fields related to an individual is created or updated. This value is available in API version 66.0 and later.
- **PlatformEvent**—The flow starts when a platform event message is received. This value is available in API version 49.0 and later.
- **RecordAfterSave**—The flow starts after a record is saved. This value is available in API version 49.0 and later.
- **RecordBeforeDelete**—Deleting a record triggers an autolaunched flow before the record is deleted from the database. This value is available in API version 50.0 and later.
- **RecordBeforeSave**—Creating and/or updating a record triggers an autolaunched flow to make additional updates to that record before it's saved to the database. This value is available in API version 48.0 and later.
- **Scheduled**—The flow starts at the scheduled time. This value is available in API version 47.0 and later.
- **Segment**—At the scheduled time, the flow send emails to individuals included in the chosen segment. This value is available in API version 56.0 and later.

Available only when **processType** is **AutoLaunchedFlow** or **PromptFlow**. This field is available in API version 47.0 and later.

VersionNumber

Type

int

Properties

Filter, Group, Nillable, Sort

Field	Details
	Description The flow's version number. This field is available in API version 54.0 and later.

Usage

Use this object to query information about flow definitions.

FlowInterview

Represents a flow interview. A *flow interview* is a running instance of a flow. This object is available in API version 32.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To delete a flow interview, you must have the “Manage Flow” user permission. All other calls require the “Run Flows” user permission or the `Flow User` field enabled on the user detail page. If **Override default behavior and restrict access to enabled profiles or permission sets** is selected for an individual flow, access to that specific flow and its interviews is given to users by profile or permission set.

Fields

Field Name	Details
<code>CurrentElement</code>	Type string Properties Filter, Group, Nillable, Sort Description The flow element at which the interview is paused.
<code>CurrentFlowVersion</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.

Field Name	Details
EngineType	Type picklist Properties Filter, Group, Sort Description The engine type used to run the flow interview.
Error	Type textarea Properties Create, Nillable, Update Description The error message that explains why the flow interview failed. This field is available in API version 62.0 and later.
FlowVersionViewId	Type string Properties Filter, Nillable, Sort Description This field is a relationship field. This field is available in API version 51.0 and later. Relationship Name FlowVersionView Relationship Type Lookup Refers To FlowVersionView
Guid	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Globally unique identifier for the interview.
InterviewLabel	Type string Properties Filter, Nillable, Sort

Field Name	Details
	Description Label for the interview. This label helps users and administrators differentiate interviews from the same flow. In the user interface, this label appears in the Paused Flow Interviews component on the user's Home tab and in the list of paused flow interviews in Setup.
InterviewStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Status of the interview. Valid values are: - Completed—This flow is complete. There are no more records to process. - Error—This flow has one or more errors. To resolve each error, check the error code for instructions. - Paused—This flow is paused. No new processes are added until the flow is resumed. - Running—This flow is running or is ready to run. - VersionPaused—This flow version is paused. No more records are processed until the flow is resumed. This value is available in API version 60.0 and later. This field is available in API version 50.0 and later.
MasterFlowVersion	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name for the interview.
OwnerId	Type reference Properties Filter, Group, Sort

Field Name	Details
	Description The ID of the user who owns the interview. Only this user or an admin can resume the interview. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PauseLabel	Type string Properties Filter, Nillable, Sort Description Information about why the interview was paused. This string is entered by the user who paused the flow interview. The label is Why Paused.
SerializedView	Type textarea Properties Create, Nillable, Update Description For internal use only.
WasPausedFromScreen	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the flow interview was paused by a user from a flow Screen element (<code>true</code>) or not (<code>false</code>). This field is available in API version 46.0 and later.

Associated Objects

This object has these associated objects. Unless noted, these objects are available in the same API version as this object.

[FlowInterviewOwnerSharingRule](#)

Sharing rules are available for the object.

[FlowInterviewShare](#)

Sharing is available for the object.

FlowInterviewLog

Represents the logs of a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

By default, only users with the View All Data permission can access the logs for flows that are run by other users. To let users access other users' flow logs, set up sharing settings with the `FlowInterviewLogOwnerSharingRule` object.

Fields

Field Name	Details
FlowDeveloperName	Type string Properties Filter, Group, Nillable, Sort Description The flow's API name.
FlowInterviewGuid	Type string Properties Filter, Group, idLookup, Sort Description Globally unique identifier for the interview.
FlowLabel	Type string Properties Filter, Group, Nillable, Sort Description The flow's label. Only shows up in API results when users query FlowInterviewLog, or when they include this field in a report.
FlowNamespace	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Namespace of the flow interview logged in the FlowInterviewLog.
FlowVersionNumber	Type int Properties Filter, Group, Nillable, Sort Description The number of the flow version for a flow definition. Flow versions are counted sequentially from 1.
InterviewDurationInMinutes	Type double Properties Filter, Nillable, Sort Description Total number of minutes between InterviewStartTimestamp and InterviewEndTimestamp, even if flow interview is paused.
InterviewEndTimestamp	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the interview ended.
InterviewStartTimestamp	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the interview started.
InterviewStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Status of the interview. Valid values are: • Autosaved—This value is available in API version 62.0 and later. • Completed

Field Name	Details
	• <code>Error</code> • <code>Expired</code>—This value is available in API version 62.0 and later. • <code>Paused</code> • <code>Running</code> • <code>VersionPaused</code>—This value is available in API version 60.0 and later.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Autogenerated name of the flow interview log record.
OwnerId	Type reference Properties Filter, Group, Sort Description The user who owns the FlowInterviewLog record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[FlowInterviewOwnerSharingRule](#)

Sharing rules are available for the object.

FlowInterviewLogEntry

Represents the log of a specific element that's executed by a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

By default, only users with the View All Data permission can access the log entries for flows that are run by other users.

Fields

Field Name	Details
<code>DurationSinceStartInMinutes</code>	Type double Properties Filter, Nillable, Sort Description Number of minutes that elapsed since the flow interview started, even if flow interview is paused.
<code>ElementApiName</code>	Type string Properties Filter, Group, Nillable, Sort Description API name of the flow element.
<code>ElementDurationInMinutes</code>	Type double Properties Filter, Nillable, Sort Description Number of minutes that elapsed since the element executed. For example, if a screen element takes users a long time to complete, consider simplifying the screen.
<code>ElementLabel</code>	Type string Properties Filter, Group, Nillable, Sort Description The flow element's label.
<code>FlowInterviewLogId</code>	Type reference

Field Name	Details
	Properties Filter, Group, Sort Description This field is a relationship field. Relationship Name FlowInterviewLog Relationship Type Lookup Refers To FlowInterviewLog
LogEntryTimestamp	Type datetime Properties Filter, Sort Description Date and time when the flow element started to execute.
LogEntryType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of screen flow user action triggered the log entry. Valid values are: • Error • FlowFinish-Finished Flow • FlowPause-Paused Flow • FlowResume-Resumed Flow • FlowStart-Started Flow • ScreenFinish-Clicked Finish • ScreenNext-Clicked Next • ScreenPrevious-Clicked Previous
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Autogenerated name of the flow interview log entry.

FlowInterviewLogOwnerSharingRule

Represents the rules for sharing a FlowInterviewLog with users other than the owner.This object is available in API version 49.0 and later.

Supported Calls

```
create(), delete(), describeObjects(), getDeleted(), getUpdated(), query(), retrieve(),
update(), upsert()
```

Fields

Field	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. Possible values are: - Edit—Read/Write - Read—Read Only
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1,000 characters.
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization. Corresponds to Rule Name in the user interface.

Field	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
OptionsIncludeHVUOwnedRecords	Type boolean Properties Create, Filter, Update Description
OptionsIncludeRecordsOwnedByAll	Type boolean Properties Create, Filter, Update Description
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the target user or group that's given access.

Usage

Use this object to manage the sharing rules for FlowInterviewLog records. General sharing uses this object.

FlowInterviewOwnerSharingRule

Represents the rules for sharing a FlowInterview with users other than the owner. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit—In API version 42.0 and later, when Let users resume shared flow interviews is enabled for your org, users can resume all flow interviews that they have edit access to.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.

Field	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the target user or group that's given access.

Usage

Use this object to manage the sharing rules for FlowInterview records. General sharing uses this object.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

FlowInterviewShare

Represents a sharing entry on a FlowInterview. This object is available in API version 33.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

 **Note:** While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>AccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the FlowInterview. The possible values are: • <code>Read</code> • <code>Edit</code>—In API version 42.0 and later, when Let users resume shared flow interviews is enabled for your org, users can resume all flow interviews that they have edit access to. • <code>All</code>—This value is not valid for creating or deleting records.
<code>ParentId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the FlowInterview associated with this sharing entry. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To FlowInterview
<code>RowCause</code>	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the <code>FlowInterview</code> with them. <code>Owner</code>—The User is the owner of the <code>FlowInterview</code>. <code>Rule</code>—The User or Group has access via a <code>FlowInterview</code> sharing rule. <code>GuestRule</code>—The User or Group has access via a <code>FlowInterview</code> guest user sharing rule.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the <code>FlowInterview</code>. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object lets you determine which users and groups can view and edit flow interviews that are owned by other users.

In API version 42.0 and later, when **Let users resume shared flow interviews** is enabled for your org, users can resume all flow interviews that they have edit access to. When that setting is disabled, only the owner or a flow admin can resume a flow interview. To disable this setting, go to your org's Process Automation Settings in Setup.

FlowNavMetricEventLog

Flow Navigation Metric event logs contain metric data for flow interviews such as total execution time, number of interviews, and number of errors. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>BotIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
<code>BotSessionIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The bot session ID.
<code>ErrorCount</code>	Type int Properties Filter, Nillable, Sort Description The number of errors for all flow interviews after the flow version was executed.
<code>FlowLoadTime</code>	Type double Properties Filter, Nillable, Sort Description The time in milliseconds to load the flow's metadata.

Field	Details
FlowVersionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the flow version that was executed.
InterviewCount	Type int Properties Filter, Nillable, Sort Description The number of flow interviews that started after the flow version was executed.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.
ProcessType	Type string Properties Filter, Group, Nillable, Sort Description The type of the flow. Valid values are: • ActionableEventManagermentFlow—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later. • ActionCadenceAutolaunchedFlow—A flow that's executed when a user completes a cadence step. This value is available in API version 56.0 and later. • ActionCadenceStepFlow—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • ActivityObjectMatchingFlow—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later. • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • ApprovalWorkflow—An orchestration that's used for an approval process. This value is available in API version 63.0 and later.

Field	Details
	• AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request to be contacted by customer support. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • DataCaptureFlow— In the UI, Data Capture flows configure the Form tab in the Field Service mobile app. When the Data Capture flow is launched, its Flow metadata is publicly available in JavaScript format. This value is available in API version 62.0 and later. • DcvrFrameworkDataCaptureFlow—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later. • EvaluationFlow—A flow for evaluating custom entry and exit conditions in an orchestration. Uses the <code>isOrchestrationConditionMet</code> output variable and discards values from any other output variables. This value is available in API version 54.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab. • FSClending—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • IdentityUserRegistrationFlow—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later. • IndicatorResultFlow—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • IndividualObjectLinkingFlow—A flow that associates individuals with interactions such as voice calls, messaging sessions, or case-related emails. This value is available in API version 58.0 and later. • InvocableProcess—A process that another process or the Invocable Actions resource in REST API invokes. This value is available in API version 38.0 and later.

Field	Details
	• Journey—An audience-driven flow for Marketing Cloud. This value is available in API version 57.0 and later. • LoginFlow—A flow for login. This value is available in API version 51.0 and later. • LoyaltyManagementFlow—A flow for the Loyalty Management app that's invocable by loyalty program processes. This value is available in API version 54.0 and later. • Orchestrator—An orchestration that organizes flows into groups of steps contained in a series of stages. This value is available in API version 53.0 and later. • PromptFlow—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later. • RecommendationStrategy—Build recommendations for your users. A recommendation launches its assigned flow. This value is available in API version 54.0 and later. See Flow Builder Strategies. • RoutingFlow—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • Survey—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • SurveyEnrich—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • Workflow—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use. • ActionPlan • AppProcess • ApprovalWorkflow • CartAsyncFlow • DigitalForm • JourneyBuilderIntegration • LoginFlow • ManagedContentFlow • OrchestrationFlow • SalesEntryExperienceFlow • TransactionSecurityFlow • UserProvisioningFlow
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code> . For example: <code>TID:000000000000c00fff</code> .
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The time that the flow was executed in GMT. For example, <code>2020-01-20T19:12:26.965Z</code> . Milliseconds are the most granular setting.
TotalExecutionTime	Type double Properties Filter, Nillable, Sort Description The total time in milliseconds to start and finish all flow interviews.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who executed the flow through the UI or the API. For example: <code>00530000009M943</code> .

FlowOrchestration

Represents the details of an orchestration definition. This object is available in API version 62.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Fields

Field	Details
ActiveVersionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the active orchestration version. This field is a relationship field. This field is a relationship field. Relationship Name ActiveVersion Refers To FlowOrchestrationVersion
ApiName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the the orchestration.
ApiVersion	Type int Properties Filter, Group, Nillable, Sort Description The API version of the active orchestration or the last saved orchestration.
AverageRunTime	Type int Properties Filter, Group, Nillable, Sort Description The average duration of an orchestration run that has completed without error.
CompletionRate	Type percent Properties Filter, Nillable, Sort Description The percentage of the total number of orchestration runs that have completed without error.

Field	Details
Description	Type textarea Properties Nillable, Update Description The description of the flow orchestration.
FailedRunCount	Type int Properties Filter, Group, Nillable, Sort Description The number of orchestration runs that have failed.
InstalledPackageName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the installed package that the orchestration is a part of.
IsCitizenEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the orchestration can be modified by non-admins. Valid value is False. The default value is <code>false</code>.
IsOverridable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the orchestration that's part of a managed package is overridable. The default value is <code>false</code>.
IsTemplate	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the orchestration record is a template. The default value is <code>false</code> .
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record.
<code>ManageableState</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the manageable state of the orchestration that's contained in a package. Valid values are: • <code>beta</code>—Managed-Beta • <code>deleted</code>—Managed-Proposed-Deleted • <code>deprecated</code>—Managed-Proposed-Deprecated • <code>deprecatedEditable</code>—SecondGen-Installed-Deprecated • <code>installed</code>—Managed-Installed • <code>installedEditable</code>—SecondGen-Installed-Editable • <code>released</code>—Managed-Released • <code>unmanaged</code>—Unmanaged
<code>Name</code>	Type string Properties Filter, Group, idLookup, Sort, Update Description The label of the orchestration.

Field	Details
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix associated with the orchestration record.
OrchestrationDefinition	Type string Properties Filter, Group, Nillable, Sort Description Represents the orchestration definition.
OrchestrationLabel	Type string Properties Filter, Group, Nillable, Sort, Update Description The label of the orchestration.
OrchestrationType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The orchestration's flow type. FlowType consolidates ProcessType and TriggerType into one field. FlowType is used with permissions, so admins can control access to each flow type. Valid values are: - OrchAutoInch—Autolaunched No Trigger Orchestration: Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process. - OrchRecTrigAftSave—Record-Triggered After Save Orchestration: Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction. - CmsOrchAutoInch —CMS Workflow Orchestration Autolaunched: Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location
OverriddenById	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description The ID of the orchestration that's overriding the current orchestration. This field is a relationship field. Relationship Name OverriddenBy Refers To FlowOrchestration
OverriddenOrchestrationId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the orchestration that the current orchestration is overriding. This field is a relationship field. Relationship Name OverriddenOrchestration Refers To FlowOrchestration
RunCount	Type int Properties Filter, Group, Nillable, Sort Description The number of orchestration runs that have been started across all orchestration versions.
SourceTemplateId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the template that the orchestration was created from. This field is a relationship field. Relationship Name SourceTemplate Refers To FlowOrchestration

Field	Details
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of the record. Valid values are: • <code>Active</code>—Active • <code>Draft</code>—Inactive • <code>InvalidDraft</code>—Draft • <code>Obsolete</code>—Inactive • <code>UnderReview</code>—Under Review
TriggerType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the trigger type for a record-triggered orchestration. Valid values are: • <code>RecordAfterSave</code>—Record—Run After Save

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[FlowOrchestrationChangeEvent](#) on page 68

Change events are available for the object.

FlowOrchestrationInstance

Represents a run-time instance of an orchestration. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationInstance, they determine access to specific orchestration run records. Or the user must have the View All Data permission.

Fields

Field	Details
AuxiliaryTriggeringRecord	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The related object ID or service appointment ID. This field isn't used by flow approval processes or orchestrations. This field is available in API version 65.0 and later.
CurrentStage	Type string Properties Filter, Group, Nillable, Sort Description The API name of the stage that was running when the orchestration run was paused or failed because of an error in an action called by a step. This field is available in API version 62.0 and later.
Duration	Type long Properties Filter, Group, Nillable, Sort Description The duration of the orchestration instance in seconds. Durations are incremented until the orchestration is completed, canceled, or ends in an error. This field is available in API version 62.0 and later.
FlowDefinitionVersionName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The fully qualified API name of the underlying orchestration. Possible values are active flow approval processes and orchestrations in the org. This field is available in API version 62.0 and later.

Field	Details
FlowType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The flow type of the orchestration that created the orchestration work item. Valid values are: - ApprovalOrchAutoInch—Autolaunched Flow Approval Process - ApprovalOrchRecTrigAftSave—Record-Triggered After Save Flow Approval Process - ExtSysChgFlowAppv1—External System Change-Triggered Flow Approval Process - ExtSysChgOrch—External System Change-Triggered Orchestration - OrchAutoInch—Autolaunched No Trigger Orchestration - OrchRecTrigAftSave—Record-Triggered After Save Orchestration This field is available in API version 62.0 and later.
InterviewId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The globally unique flow interview ID associated with the orchestration instance. This field is a relationship field. Relationship Name Interview Relationship Type Lookup Refers To FlowInterview
IsDebugRun	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the instance was executed from a debug run. The default value is <code>false</code>. This field is available in API version 65.0 and later.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The most recent time a user viewed a record related to the orchestration run. This field is available in API version 55.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent time a user viewed the orchestration run. This field is available in API version 55.0 and later.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name for the orchestration instance.
OrchestrationDeveloperName	Type string Properties Filter, Group, Nillable, Sort Description The developer name of the flow definition associated with the orchestration run. This field is available in API version 55.0 and later.
OrchestrationLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the orchestration. This field is available in API version 63.0 and later.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the automated process user. This field is available in API version 56.0 and later.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To User
Status	Type picklist
	Properties Filter, Group, Restricted picklist, Sort, Update
	Description The status of the orchestration run. Valid values are: • Canceled—The orchestration instance was canceled. • Completed—The orchestration instance completed. • Error—The orchestration instance, or a stage or step within the orchestration instance, encountered an error. • InProgress—The orchestration instance is in progress. • Suspended—The orchestration instance was suspended.
TriggeringRecord	Type string
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the record that triggered the record-triggered orchestration. This field is available in API version 62.0 and later.
TriggeringRecordType	Type string
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The name of the Salesforce object configured to trigger the orchestration. This field is available in API version 64.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationInstanceFeed on page 55

Feed tracking is available for the object.

FlowOrchestrationInstanceHistory on page 63

History is available for tracked fields of the object.

FlowOrchestrationInstanceOwnerSharingRule on page 65

Sharing rules are available for the object. This object is available in API version 56.0 and later.

FlowOrchestrationInstanceShare on page 67

Sharing is available for the object. This object is available in API version 56.0 and later.

FlowOrchestrationLog

Represents logging data for a FlowOrchestrationInstance. This object is available in API version 54.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()` `update()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationInstance and the Inherit orchestration run sharing rules to control orchestration run log record access setting is enabled, then orchestration run log record access is inherited from related orchestration run records. If the Inherit orchestration run sharing rules to control orchestration run log record access setting isn't enabled, a user must have the Manage Flow permission. Or the user must have the View All Data permission.

Fields

Field	Details
Actor	Type string Properties Filter, Group, idLookup, Nillable, Sort Description For an interactive step, the user that completed the work item. For a background or MuleSoft step, the username of the user that the step ran as.
Assignee	Type string Properties Filter, Group, Nillable, Sort Description For an interactive step, the user, group, or queue assigned to a work item when the FlowOrchestrationLog relates to an interactive FlowOrchestrationStep.

Field	Details
AssigneeType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description For an interactive step, the assignee type associated with an interactive step's work item. Valid values are: • Group • Invalid • Queue • User
Comments	Type string Properties Filter, Nillable, Sort Description The string stored in an output variable with the API name of Comments from a flow called by a completed orchestration step.
Context	Type string Properties Filter, Group, Nillable, Sort Description The ID of the record where the assigned user completed the flow associated with an interactive step in the Work Guide component.
Duration	Type long Properties Filter, Group, Nillable, Sort Description A long number that indicates the duration, in seconds, of the associated FlowOrchestrationInstance, FlowOrchestrationStage, FlowOrchestrationStep, or FlowOrchestrationWorkItem.
Kind	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description The milestone associated with the FlowOrchestrationLog. Valid values are: • <code>CancelInstance</code>—The associated FlowOrchestrationInstance was canceled. • <code>DiscontinueStage</code>—The associated FlowOrchestrationStage was discontinued. • <code>DiscontinueStep</code>—The associated FlowOrchestrationStep was discontinued. • <code>EndInstance</code>—The associated FlowOrchestrationInstance was completed successfully. • <code>EndStage</code>—The associated FlowOrchestrationStage was exited successfully. • <code>EndStep</code>—The associated FlowOrchestrationStep was exited successfully. • <code>EndWorkItem</code>—The associated FlowOrchestrationWorkItem was completed successfully. • <code>FailInstance</code>—The associated FlowOrchestrationInstance encountered an error. • <code>FailStage</code>—The associated FlowOrchestrationStage encountered an error. • <code>FailStep</code>—The associated FlowOrchestrationStep encountered an error. • <code>ResumeInstance</code>—A failed or paused orchestration instance was resumed. • <code>ReassignWorkItem</code>—The associated FlowOrchestrationWorkItem was reassigned. • <code>RunRecallPath</code>—The associated approval submission was recalled. • <code>StartInstance</code>—The associated FlowOrchestrationInstance started. • <code>StartStage</code>—The associated FlowOrchestrationStage started. • <code>StartStep</code>—The associated FlowOrchestrationStep started. • <code>StartWorkItem</code>—The associated FlowOrchestrationWorkItem started. • <code>SuspendInstance</code>—The associated FlowOrchestrationInstance was suspended. • <code>SuspendStage</code>—The associated FlowOrchestrationStage was suspended.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The name for the FlowOrchestrationLog record.
OrchestrationInstanceId	Type reference Properties Filter, Sort, Group Description The FlowOrchestrationInstance associated with the FlowOrchestrationLog. This field is a relationship field. Relationship Name OrchestrationInstance

Field	Details
	Relationship Type Lookup Refers To FlowOrchestrationInstance
OrchestrationName	Type string Properties Filter, Group, idLookup , Sort Description The API name of the orchestration.
OrchestrationVersion	Type int Properties Filter, Group, Sort Description An integer for the FlowDefinitionVersion of the orchestration associated with the FlowOrchestrationLog.
StageName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the stage in the associated orchestration.
StepName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the step in the associated orchestration.
Timestamp	Type dateTime Properties Filter, Sort Description The date and time when the FlowOrchestrationLog milestone occurred.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowOrchestrationLogFeed on page 55

Feed tracking is available for the object.

FlowOrchestrationLogHistory on page 63

History is available for tracked fields of the object.

FlowOrchestrationLogOwnerSharingRule on page 65

Sharing rules are available for the object.

FlowOrchestrationLogShare on page 67

Sharing is available for the object.

FlowOrchestrationStageInstance

Represents a run-time instance of a stage in a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

If sharing rules are defined for FlowOrchestrationStageInstance, they determine access to specific orchestration stage run records. Or the user must have the View All Data permission.

Fields

Field	Details
Label	Typestring PropertiesCreate, Filter, Group, Sort, Update DescriptionThe label for the flow orchestration stage instance. This label helps users and administrators differentiate between step instances from the same orchestration.
Name	Typestring PropertiesCreate, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The API name for the flow orchestration stage instance.
OrchestrationInstanceId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the FlowOrchestrationInstance associated with the orchestration stage instance. This field is a relationship field. Relationship Name OrchestrationInstance Relationship Type Lookup Refers To FlowOrchestrationInstance
OrchestrationName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of flow orchestration stage instance. This field is available in API version 66.0 and later.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the automated process user. This field is available in API version 56.0 and later. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Position	Type int

Field	Details
	Properties Create, Filter, Group, Sort, Update Description For internal use only.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The run status of the orchestration stage instance. Valid values are: • Completed—The stage instance completed. • Discontinued—The stage was in progress or completed when the orchestration instance encountered an error. • Error—The stage instance encountered an error, an instance of a background step within the stage encountered an error, or an autolaunched flow called by a background step within the stage encountered an error. • InProgress—The stage instance is in progress. • Suspended—The stage was in progress when the orchestration instance was manually suspended.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[FlowOrchestrationStageInstanceFeed](#) on page 55

Feed tracking is available for the object.

[FlowOrchestrationStageInstanceHistory](#) on page 63

History is available for tracked fields of the object.

[FlowOrchestrationStageInstanceOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[FlowOrchestrationStageInstanceShare](#) on page 67

Sharing is available for the object.

FlowOrchestrationStepInstance

Represents a run-time instance of a step in a run-time instance of a stage of a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

If sharing rules are defined for `FlowOrchestrationStepInstance`, they determine access to specific orchestration step run records. Or the user must have the View All Data permission.

Fields

Field	Details
Description	Type string Properties Filter, Group, Nillable, Sort Description The description of the step.
Label	Type string Properties Filter, Group, Sort Description The label of the step.
Name	Type string Properties Filter, Group, idLookup, Sort Description The API name of the step.
OrchestrationInstanceId	Type reference Properties Filter, Group, Sort Description The ID of the <code>FlowOrchestrationInstance</code> associated with the orchestration step instance. This field is a relationship field. Relationship Name OrchestrationInstance

Field	Details
	Relationship Type Lookup Refers To FlowOrchestrationInstance
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The ID of the automated process user. This field is available in API version 56.0 and later. Relationship Name Owner Relationship Type Lookup Refers To User
StageInstanceId	Type reference Properties Filter, Group, Sort Description The ID of the FlowOrchestrationStageInstance associated with the orchestration step instance. This field is a relationship field. Relationship Name StageInstance Relationship Type Lookup Refers To FlowOrchestrationStageInstance
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the orchestration step instance. Valid values are: Completed—The step instance completed.

Field	Details
	• Discontinued—The step instance was in progress or completed when it's associated stage instance completed, or the step was in progress or completed when the orchestration instance encountered an error. • Error—The step instance encountered an error or the autolaunched flow associated with a step instance encountered an error. • InProgress—The step instance is running, the step instance was in progress when its associated stage encountered an error, or the screen flow associated with the step instance encountered an error. • NotStarted—The step instance was created, but hasn't met its entry condition.
StepType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of step. Valid values are: • InteractiveStep—Interactive Step • BackgroundStep—Background Step • AsynchronousBackgroundStep—Asynchronous Background Step This value is available in API version 54.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[FlowOrchestrationStepInstanceFeed](#) on page 55

Feed tracking is available for the object.

[FlowOrchestrationStepInstanceHistory](#) on page 63

History is available for tracked fields of the object.

[FlowOrchestrationStepInstanceOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[FlowOrchestrationStepInstanceShare](#) on page 67

Sharing is available for the object.

FlowOrchestrationVersion

Represents the version of an orchestration. This object is available in API version 62.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ActivatedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user that activated the orchestration. This field is a relationship field. Relationship Name ActivatedBy Refers To User
ActivatedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the orchestration was activated.
ApiVersion	Type double Properties Filter, Nillable, Sort Description The API version of this orchestration record version.
Description	Type textarea Properties Nillable Description The description of the flow orchestration version.
FlowOrchestrationId	Type reference

Field	Details
	Properties Filter, Group, Sort Description The ID of the parent orchestration running this version. This field is a relationship field. Relationship Name FlowOrchestration Relationship Type Master-detail Refers To FlowOrchestration
IsOverridable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the orchestration that's part of a managed package is overridable. The default value is <code>false</code>.
IsTemplate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the orchestration record version is a template. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort Description The label of the orchestration.
OrchestrationType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The orchestration's flow type. FlowType consolidates ProcessType and TriggerType into one field. FlowType is used with permissions, so admins can control access to each flow type. Valid values are: • OrchAutoInch—Autolaunched No Trigger Orchestration: Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process. • OrchRecTrigAftSave—Record-Triggered After Save Orchestration: Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction. • CmsOrchAutoInch—CMS Workflow Orchestration Autolaunched: Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location
OverriddenById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the orchestration that's overriding the current orchestration. This field is a relationship field. Relationship Name OverriddenBy Refers To FlowOrchestration
OverriddenOrchestrationId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description The ID of the orchestration that the current orchestration is overriding. This field is a relationship field. Relationship Name OverriddenOrchestration Refers To FlowOrchestration
RunInMode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The mode that the orchestration runs in. Possible values are: • DefaultMode—The orchestration version runs in system or user context, depending on how the orchestration is launched. • SystemModeWithSharing—The orchestration version always runs in system mode with sharing. The orchestration respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user. • SystemModeWithoutSharing—The orchestration version can access all data. In the UI, this value appears as System Context without Sharing—Access All Data.
SourceTemplateId	Type reference Properties Filter, Group, Nillable, Sort Description This field is a relationship field. Relationship Name SourceTemplate Refers To FlowOrchestration
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The ID of the template that the orchestration was created from. This is a relationship field.(Refers to Orchestration Record). Possible values are: • <code>Active</code>—Active • <code>Draft</code>—Inactive • <code>InvalidDraft</code>—Draft • <code>Obsolete</code>—Inactive • <code>UnderReview</code>—Under Review
TriggerObjectOrEventLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the object or platform event that triggers this flow.
VersionNumber	Type int Properties Filter, Group, Nillable, Sort Description The version number of the orchestration version.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[FlowOrchestrationVersionChangeEvent](#) on page 68

Change events are available for the object.

FlowOrchestrationWorkItem

Represents a work item associated with a run-time instance of an interactive step in a run-time instance of an orchestration. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

An assignee can see all work item records assigned to them. If sharing rules are defined for FlowOrchestrationWorkItem, they determine access to specific orchestration work item records for users other than the assignee. Or the user must have the View All Data permission.

Fields

Field	Details
AssigneeId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the user, group, or queue assigned to the orchestration work item. This field is a polymorphic relationship field. Relationship Name Assignee Relationship Type Lookup Refers To Group (Type = Regular), Group (Type = Queue), User
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the orchestration work item.
ElapsedTimeSinceAsgntInSec	Type long Properties Filter, Group, Nillable, Sort Description When status is Assigned, the number of seconds that have passed since the work item was last assigned. When status is Completed, this value is null. This field is available in API version 63.0 and later.
ElapsedTimeSinceCreationInSec	Type long Properties Filter, Group, Nillable, Sort

Field	Details
	Description When status is Assigned, the number of seconds that have passed since the work item was created. When status is Completed, this value is null. This field is available in API version 63.0 and later.
FlowType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The flow type of the orchestration that created the orchestration work item. Valid values are: - ApprovalOrchAutoInch—Autolaunched Flow Approval Process - ApprovalOrchRecTrigAftSave—Record-Triggered After Save Flow Approval Process - ExtSysChgFlowAppv1—External System Change-Triggered Flow Approval Process - ExtSysChgOrch—External System Change-Triggered Orchestration - OrchAutoInch—Autolaunched No Trigger Orchestration - OrchRecTrigAftSave—Record-Triggered After Save Orchestration This field is available in API version 62.0 and later.
Label	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The label of the orchestration work item.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent time a user viewed a record related to the orchestration work item. This field is available in API version 55.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The most recent time a user viewed the orchestration work item. This field is available in API version 55.0 and later.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The API name of the orchestration work item.
OrchestrationName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of the orchestration associated with the orchestration work item. This field is available in API version 56.0 and later.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description - When the assignee is an internal user: the ID of the internal user - When the assignee is a credentialed Experience Cloud site visitor: the ID of the credentialed Experience Cloud site visitor - When the assignee is a group or queue: the ID of the automated process user This field is available in API version 56.0 and later. Relationship Name Owner Relationship Type Lookup Refers To Group (Type = Regular), Group (Type = Queue), User
RelatedRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the context record, such as an account, case, or expense, that the orchestration work item is related to. An assigned user completes the associated orchestration work item on the page for this record. This field is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To All objects except AccountContactRelation, AccountTeamMember, ActiveScratchOrg, ActivityMetric, ActivityMetricRollup, CampaignMember, CartCheckoutSession, CartDeliveryGroup, CartDeliveryGroupMethod, ChatterActivity, CollaborationGroupMember, ContentDesignKit, ContentDesignKitVersion, ConversationBroadcastEntry, ConversationReason, ConversationReasonExcerpt, ConversationReasonGroup, CustomPersonDataTemplate, ElectronicMediaGroup, EngagementScore, Event, FeedItem, FlowOrchestrationWorkItem, FtestDelPlatform1, FtestDelPlatform2, FtestFormulaFieldRefSql, HighScaleSample, HighScaleSampleItem, LegalEntity, LocationWaitlist, LocationWaitlistedParty, LocWaitlistMsgTemplate, ManagedContentVersion, MessagingEndUser, MessagingSession, MLModel, MLModelFactor, MLModelFactorComponent, NetworkMember, NetworkMemberChunk, OpportunityContactRole, OpportunityLineItem, OpportunityScore, OpportunityTeamMember, OrgSnapshot, PaymentTermItem, RequestsForAccessSIQ, ScoreIntelligence, ScratchOrgInfo, SharingRecordCollection, SharingRecordCollectionItem, SharingRecordCollectionMember, StreamActivityAccess, Survey, SurveyMessagingChannel, SurveyPage, SurveyQuestionChoice, SurveyVersion, Task, TenantSecurityAlertRuleSelectedTenant, TenantSecurityApiAnomaly, TenantSecurityConnectedApp, TenantSecurityCredentialStuffing, TenantSecurityHealthCheckBaselineTrend, TenantSecurityHealthCheckDetail, TenantSecurityHealthCheckTrend, TenantSecurityLogin, TenantSecurityMetricDetail, TenantSecurityMetricDetailLink, TenantSecurityMobilePolicyTrend, TenantSecurityMonitorMetric, TenantSecurityNotification, TenantSecurityNotificationRule, TenantSecurityPackage, TenantSecurityPolicy, TenantSecurityPolicyChangeLog, TenantSecurityPolicyDeployment, TenantSecurityPolicySelectedTenant, TenantSecurityReportAnomaly, TenantSecuritySessionHijacking, TenantSecurityTenantChangeLog, TenantSecurityTenantInfo, TenantSecurityTrustedIpRangeTrend, TenantSecurityUserActivity, TenantSecurityUserPerm, TenantSecurityWebsite, TopicAssignment, UserExternalCredential, VoiceCall
ScreenFlow	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The screen flow associated with the orchestration work item.

Field	Details
	Possible values are screen flows in the org.
ScreenFlowInputs	Type textarea Properties Create, Nillable, Update Description The input parameters required by the screen flow.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the work item. Valid values are: - Assigned - Completed
StepInstanceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the flow orchestration step associated with the orchestration work item. This field is a relationship field. Relationship Name StepInstance Relationship Type Lookup Refers To FlowOrchestrationStepInstance

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[FlowOrchestrationWorkItemFeed](#) on page 55

Feed tracking is available for the object.

FlowOrchestrationWorkItemHistory on page 63

History is available for tracked fields of the object.

FlowOrchestrationWorkItemOwnerSharingRule on page 65

Sharing rules are available for the object.

FlowOrchestrationWorkItemShare on page 67

Sharing is available for the object.

FlowRecord

Represents the details of a flow. This object is available in API version 58.0 and later.

Supported Calls

`delete()`, `query()`, `update()`

Fields

Field Name	Details
ActivationId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the marketing segment activation. This field is available in API version 64.0 and later. This field is a relationship field. Relationship Name Activation Relationship Type Lookup Refers To MarketSegmentActivation
ActiveVersionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the active flow version. This field is available in API version 61.0 and later. This field is a relationship field.

Field Name	Details
	Relationship Name ActiveVersion Relationship Type Lookup Refers To FlowRecordVersion
ApiVersion	Type double Properties Filter, Group, Nillable, Sort Description The API version of the flow record. This field is available in API version 61.0 and later.
AreMetricsLoggedToDataCloud	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later.
AssociatedRecordId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the record the flow is associated with. This field is a polymorphic relationship field. Relationship Name AssociatedRecord Relationship Type Lookup Refers To Campaign
Builder	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The name of the tool that created this flow. Valid values are: • Cloud Flow Designer • Flow Builder • Swing Designer This field is available in API version 61.0 and later.
CapacityCategory	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category that determines the usage limits of the flow. Possible values are: • Marketing Cloud Flow This field is available in API version 62.0 and later.
Description	Type textarea Properties Filter, Group, Nillable, Sort Description The description of the flow.
ErrorCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The error code if the flow element run encountered an error. Valid values are: • ACTIVATING_USER_ACCOUNT_DEACTIVATED—We can't run this flow because the user who activated it has a deactivated user record. • ACTIVATING_USER_LOST_PERMISSIONS—We can't run this flow because the user that activated it no longer has permission to it. • CANNOT_PUBLISH_SEGMENT—We can't run this flow because we can't publish the segment it's using. Contact Salesforce Customer Support and ask for help with the error ID. • CANNOT_QUERY_SEGMENT_MEMBER_DATA—We can't run this flow because we can't query the segment membership data it's using. Contact Salesforce Customer Support and ask for help with the error ID.

Field Name	Details
	CANNOT_RUN_ACTIVATION_TRIGGERED_FLOW—Something went wrong with your automation. Contact Salesforce Customer Support and ask for help with the error ID. CANNOT_REFRESH_DATA_STREAM—We can't run this flow because we can't refresh your data stream metadata. Contact Salesforce Customer Support and ask for help with the error ID. CANNOT_REFRESH_IDENTITY_RES_DATA—We can't run this flow because we can't refresh your identity resolution data. Contact Salesforce Customer Support and ask for help with the error ID. CANNOT_REFRESH_IDENTITY_RES_METADATA—We can't run this flow because we can't refresh your identity resolution metadata. Contact Salesforce Customer Support and ask for help with the error ID. CANNOT_UPDATE_DATASTREAM_METADATA—We can't run this flow because we can't update your DataStream metadata. Contact Salesforce Customer Support and ask for help with the error ID. CREATE_EXPERIMENT_ERROR—We can't run this flow because an error occurred while executing the Path Experiment element. To try again, save and activate a new version of the flow. DATA_ACTION_STATUS_ERROR—We can't run this flow because we couldn't create the data action. To try again, save and activate a new version of the flow. FLOW_FAILED_TO_START—This flow failed to start. Contact Salesforce Customer Support and ask for help with the error ID. This field is available in API version 59.0 and later.
ErrorDetails	Type string Properties Filter, Group, Nillable, Sort Description The error ID. This field is available in API version 59.0 and later.
FlowCategory	Type string Properties Filter, Group, Nillable, Sort, Update Description The API name of a category. Sharing rules assign permissions to view and edit flows by category and subcategory. This field is available in API version 60.0 and later.
FlowDefinition	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description Represents the flow definition.
FlowSubcategory	Type string Properties Filter, Group, Nillable, Sort, Update Description The API name of a subcategory. Sharing rules assign permissions to view and edit flows by category and subcategory. This field is available in API version 60.0 and later.
FlowType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The label of a flow type. FlowType consolidates ProcessType and TriggerType into one field. FlowType is used with permissions, so admins can control access to each flow type. Valid values are: • Action Cadence Step Screen Flow—Launches from a cadence step. This type of flow collects or displays information and requires user interaction. • Action Plan Autolaunched Flow—Launches an action plan task from an action plan when conditions in the associated action plan template process are met. This type of flow runs in the background without user interaction. • Activity-Object Matching No Trigger Flow—Launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. Requires Sync Email as Salesforce Activity to be enabled. • Activation-Triggered Autolaunched Flow—Launches when an activation is published. This type of flow runs in the background without user interaction. • Admin Automation Event-Triggered Flow—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. • Autolaunched Approval Orchestration—Launches when invoked by Apex, REST API, custom buttons, or custom links. An approval orchestration lets you create a multi-step, multi-user approval process.

Field Name	Details
	• Autolaunched No Trigger Flow—Launches when invoked by processes or code such as Apex and REST API. This type of flow runs in the background without user interaction. • Autolaunched No Trigger Orchestration—Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process. • Automation Event-Triggered Autolaunched Flow—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. • Automation Event-Triggered Flow—Launches when a user performs an automation event, like subscribing to SMS messages. This type of flow runs in the background without user interaction. • Automation Event-Triggered Flow v0—Deprecated. Launches when a user performs an automation event, like subscribing to SMS messages. This type of flow runs in the background without user interaction. • Cart Async Autolaunched Flow—Launches when invoked by a cart change, such as an Add to Cart. This type of flow runs in the background without user interaction. • Checkout Screen Flow—Create a screen flow that implements a Commerce Cloud checkout process. This type of flow collects or displays information and requires user interaction. • CMS Workflow Orchestration Autolaunched—Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location. • Contact Request Screen Flow—Launches when invoked by a customer, allowing them to enter contact details into a self-service form. This type of flow collects or displays information and requires user interaction. • Customer Lifecycle Record-Triggered After Save Flow—Launches after a customer lifecycle map is saved and changes records related to the triggering record. This type of flow runs in the background without user interaction. • Data Cloud Data Change Flow—Launches when a record from a Data Cloud data model object or a calculated insight object is changed and meets the specified conditions. This type of flow runs in the background without user interaction. • Data Graph-Triggered Autolaunched Flow—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. • Data Graph-Triggered Flow—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction.

Field Name	Details
	• Data Graph-Triggered Flow v0—Deprecated. Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. • Digital Form Screen Flow—Launches from app extensions. This type of flow collects or displays information and requires user interaction. • Discovery Framework Data Capture Screen Flow (Beta)—Launches when invoked by a user on a mobile device and presents assessment questions from Discovery Framework. This type of flow collects or displays information and requires user interaction. • Employee Service Catalog Item Screen Flow—Launches when invoked by a user and allows them to browse and order items from the Employee Service Catalog. This type of flow collects or displays information and requires user interaction. • Evaluation Autolaunched Flow—Launches when invoked by an orchestration to evaluate custom criteria for a stage or step. To indicate that the criteria are met, set the output variable <code>isOrchestrationConditionMet</code> to <code>true</code>. This type of flow runs in the background without user interaction. • External System Change-Triggered Flow—Launches when an event is received from an external system. This type of flow runs in the background without user interaction. • Event-Driven Flow—Launches when an event is received. This type of flow runs in the background without user interaction. • Field Service Mobile Screen Flow—Launches when invoked by a user in the Field Service mobile app. This type of flow collects or displays information and requires user interaction. • Field Service Web Screen Flow—Launches from the Field Service app and lets users schedule, modify, or cancel an appointment in a web browser. This type of flow requires user interaction. • Form-Triggered Autolaunched Flow—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction. • Form-Triggered Flow—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction. • Form-Triggered Flow v0—Deprecated. Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction. • Identity User Registration Flow—Launches when a user logs in via a single sign-on process that uses the authentication provider framework. After the third-party identity provider authenticates the user, the flow creates a user or updates an existing user. This type of flow runs in the background without user interaction.

Field Name	Details
	• Indicator Result Screen Flow—Launches a screen flow when initiated by a user to calculate and create indicator results for a selected indicator performance period. • Individual-Object Linking Screen Flow—Launches when invoked by an agent to link a record like a case or messaging session to a contact, lead, person account, or employee. This type of flow collects or displays information and requires user interaction. • Login Screen Flow—Launches when a user tries to log in to Salesforce. This type of flow extends Salesforce's default authentication process by sending users with certain profiles through a flow when they log in and requires user interaction. • Loyalty Management Autolaunched Flow—Launches when invoked by a loyalty program process, and contains Assignment, Decision, and Action elements. The Action element in this type of flow supports Apex and quick actions. This type of flow runs in the background without user interaction. • Managed Content Autolaunched Flow—Launches when invoked by the ManagedContentRelease translator. This type of flow runs in the background without user interaction. • Mortgage Lending Screen Flow—Launches when invoked by a user and allows them to provide Financial Service Cloud mortgage application details. This type of flow requires user interaction. • Platform Event Triggered Flow—Launches when a platform event occurs. This type of flow runs in the background without user interaction. • Process Builder Autolaunched Process—Launched when invoked from a Process Builder process. This type of flow runs in the background without user interaction. • Process Builder Custom Event Process—A process created in Process Builder that launches when a custom event message is received. This type of process runs in the background without user interaction. • Process Builder Workflow—Launches when a record is created or updated. This type of process runs in the background without user interaction. • Prompt Template Capability-Triggered Flow—Launches from a prompt template. This type of flow adds prompt instructions to the associated prompt template and runs in the background without user interaction. • Recommendation Strategy Autolaunched Flow—Build a personalized list of recommendations. When a recommendation is selected, it launches its assigned flow. Used by Einstein Next Best Action. Show recommendations in Lightning App Builder with the Einstein Next Best Action component and in Experience Builder with the Suggested Actions component.

Field Name	Details
	• Record-Triggered After Save Flow—Launches after a record is created or updated and has been saved. This type of flow can make changes only to records related to the triggering record and runs in the background without user interaction. • Record-Triggered After Save Approval Orchestration—Launches when a record is created or updated. An approval orchestration lets you create a multi-step, multi-user approval process. • Record-Triggered After Save Orchestration—Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction. • Record-Triggered Before Delete Flow—Launches when a record is deleted. This type of flow runs in the background without user interaction. • Record-Triggered Before Save Flow—Launches after a record is created or updated, but hasn't been saved. This type of flow can make changes only to the triggering record and runs in the background without user interaction. • Routing Autolaunched Flow—Launches when a customer initiates a chat, voice, or messaging conversation and routes the work item to a queue, skill, agent, or bot. This type of flow runs in the background without user interaction. • Schedule-Triggered Flow—Launches at a specified time and frequency for each record that meets the flow criteria. This type of flow runs in the background without user interaction. • Scheduler Appointments Screen Flow—Launches when invoked by a user and lets them schedule appointments in Salesforce Scheduler. This type of flow collects or displays information and requires user interaction. • Screen Flow—Launches from Lightning pages, Experience Cloud sites, quick actions and more. This type of flow collects or displays information and requires user interaction. • Segment-Triggered Autolaunched Flow—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction. • Segment-Triggered Flow—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction. • Segment-Triggered Flow v0—Deprecated. Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction. • Stage Management Evaluation Autolaunched Flow—Launches when invoked by a stage transition in Stage Management

Field Name	Details
	to evaluate custom criteria for a stage or step. To indicate that the criteria are met, set the output variable <code>isCriteriaMet</code> to <code>True</code>. • Survey Enrich Autolaunched Flow—Launches in the context of a survey response and can't execute without a corresponding survey. Use it to conditionally map a response to a record, create records, or send notifications. This type of flow runs in the background without user interaction. • Survey Screen Flow—Launches when invoked by an internal or external survey participant. This type of flow saves participant feedback as survey response records and requires user interaction. • Transaction Security Autolaunched Flow—Used by Condition Builder to declaratively build customized security policies to protect data. This type of flow runs in the background without user interaction. • User Provisioning Screen Flow—Launches when invoked by a user and allows them to create a user account and link it to a third-party service or app. This type of flow requires user interaction. This field is available in API version 60.0 and later.
<code>Id</code>	Type text Properties Filter, Group, Sort Description The ID of the flow.
<code>IsLightningAppEnabled</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this flow's flow type has been enabled in Lightning Experience apps. The default value is <code>false</code>. This field is available in API version 61.0 and later.
<code>IsOverridable</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow record version is overridable. The default value is <code>false</code>. This field is available in API version 61.0 and later.

Field Name	Details
IsPaused	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the segment-triggered flow is paused (<code>true</code>) or not (<code>false</code>). When the value is <code>true</code>, no additional records are processed until the flow is resumed. The default value is <code>false</code>. This field is available in API version 60.0 and later.
IsTemplate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow record version is a template. Template flow record versions are automatically shared with all users in your Salesforce org. The default value is <code>false</code>. This field is available in API version 61.0 and later.
LogsEnabledFlowVersion	Type int Properties Filter, Group, Nillable, Sort Description The version number of the flow that enabled persistent logging. This field is available in API version 66.0 and later.
Manageable State	Type boolean Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the manageable state of the flow record that is contained in a package. Valid values are: • beta • deleted • deprecated • deprecatedEditable • installed • installedEditable • released

Field Name	Details
	unmanaged This field is available in API version 60.0 and later.
Name	Type string Properties Filter, Group, idLookup, Sort Description The label of the flow.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix associated with the flow record. This field is available in API version 61.0 and later.
OverriddenById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the flow that's overriding the current flow. This field is available in API version 61.0 and later. This field is a relationship field. Relationship Name OverriddenBy Relationship Type Lookup Refers To FlowRecord
OverriddenFlowId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the flow that the current flow is overriding. This field is available in API version 61.0 and later. This field is a relationship field.

Field Name	Details
	Relationship Name OverriddenFlow Relationship Type Lookup Refers To FlowRecord
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The ID of the user who owns the flow. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ProgressStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The progress status of the flow. Valid values are: • Canceled— Indicates a flow that has been deactivated by a user who doesn't process previously added records. No additional records are added to this flow. • Completed— Indicates a flow that is complete. No additional records are eligible to be processed in this flow. • Draft— Indicates a flow that is under construction and isn't active yet. This status can be invalid because it needs additional information before it can be activated by the user. • Error— Indicates a flow that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce. • Finishing— Indicates a flow that has been deactivated by a user, but is finishing previously added records that are eligible to run to completion. No additional records are added to this flow.

Field Name	Details
	InProgress— Indicates a flow that is running or ready to run. PreparingData— Indicates a flow that is preparing the necessary data to run. This process can take up to 2 hours. Scheduled— Indicates a flow scheduled to start on the date and time selected by the user. UnderReview—Indicates a flow that is under review before it is activated. This value is available in API version 64.0 and later.
ScheduledStartDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the flow is scheduled to start.
SegmentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the segment used in the flow. This field is a relationship field. Relationship Name Segment Relationship Type Lookup Refers To MarketSegment
SourceTemplateId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the template from which the current flow was created. This field is available in API version 61.0 and later. This field is a relationship field. Relationship Name SourceTemplate Relationship Type Lookup

Field Name	Details
	Refers To FlowRecord
TriggerObjectOrEventLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the object or platform event that triggers this flow. This field is available in API version 61.0 and later.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The trigger type of the flow. Specifies what causes the flow to run. Valid values are: • Activation—The flow starts when an activation is published. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • AdminAutomationEvent—The flow starts when an automation event is received. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Automation Event—The flow starts when an automation event such as an SMS subscription occurs. This value is available in API version 62.0 and later. • Capability—The flow starts when the specified capability that the flow integrates with is invoked. This value is available in API version 60.0 and later. • DataCloudDataChange—The flow starts when data model object (DMO) or calculated insight object (CIO) conditions are met. This value is available in API version 59.0 and later. • DataGraphDataChange—The flow starts when conditions are met in the specified data graph field. This value is available in API version 63.0 and later. • EventDrivenJourney—Reserved for internal use. • ExternalSystemChange—The flow starts when an external system change event is received. This value is available in API version 61.0 and later. • FormSubmissionEvent—The flow runs when a user submits data via a webform. In Flow Builder, this value corresponds to Form. This value is available in API version 60.0 and later.

Field Name	Details
	• <code>PlatformEvent</code>—The flow starts when a platform event message is received. This value is available in API version 49.0 and later. • <code>RecordAfterSave</code>—The flow starts after a record is saved. This value is available in API version 49.0 and later. • <code>RecordBeforeDelete</code>—Deleting a record triggers an autolaunched flow before the record is deleted from the database. This value is available in API version 50.0 and later. • <code>RecordBeforeSave</code>—Creating and/or updating a record triggers an autolaunched flow to make additional updates to that record before it's saved to the database. This value is available in API version 48.0 and later. • <code>Scheduled</code>—The flow starts at the scheduled time. This value is available in API version 47.0 and later. • <code>Segment</code>—The flow runs at the scheduled time of a segment.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[FlowRecordChangeEvent](#) (API version 62.0)

Change events are available for the object.

[FlowRecordOwnerSharingRule](#)

Sharing rules are available for the object.

[FlowRecordShare](#)

Sharing is available for the object.

FlowRecordElement

Represents a single element within a flow version. This object is available in API version 58.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
<code>DataSpaceId</code>	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The ID of the data space for this flow record element. This field is available in API version 66.0 and later. This field is a relationship field. Relationship Name DataSpace Refers To DataSpace
ElementName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the flow element.
FlowRecordVersionId	Type reference Properties Filter, Group, Sort Description The ID of the flow version the flow element is part of. This field is a relationship field. Relationship Name FlowRecordVersion Relationship Type Master-detail Refers To FlowRecordVersion (the master object)
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the flow element was last used.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The date and time that the flow element was last viewed.
Name	Type string Properties Filter, Group, idLookup, Sort Description The label of the flow element.

FlowRecordElementChangeEvent (API version 62.0)

Change events are available for the object.

FlowRecordElementOccurrence

Represents the execution metrics for a single element within a flow version. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The ISO code for the currency associated with the flow. Possible values are: • USD—U.S. Dollar The default value is USD.
Entries	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of times the element was initiated in all flow interviews after the flow version was executed.
Errors	Type int Properties Filter, Group, Nillable, Sort Description The number of errors for the element in all flow interviews after the flow version was executed.
Exits	Type int Properties Filter, Group, Nillable, Sort Description The number of times the element was executed to completion in all flow interviews after the flow version was executed.
FlowRecordElementId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the flow element. This field is a relationship field. Relationship Name FlowRecordElement Refers To FlowRecordElement
FlowRecordId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the flow. This field is a relationship field.

Field	Details
	Relationship Name FlowRecord
	Refers To FlowRecord
FlowRecordVersionId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the flow version. This field is a relationship field.
	Relationship Name FlowRecordVersion
	Refers To FlowRecordVersion
FlowRecordVersionOccurrenceId	Type reference
	Properties Filter, Group, Sort
	Description The ID of the flow occurrence. This field is a relationship field.
	Relationship Name FlowRecordVersionOccurrence
	Relationship Type Master-detail
	Refers To FlowRecordVersionOccurrence (the master object)
Name	Type string
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description The API name of the flow element.
Stopped	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The number of times execution of the element was stopped in all flow interviews after the flow version was executed.
TotalDuration	Type long
	Properties Filter, Group, Nillable, Sort
	Description The total time in milliseconds spent executing the element in all flow interviews.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[FlowRecordElementOccurrenceChangeEvent](#) on page 68

Change events are available for the object.

[FlowRecordElementOccurrenceFeed](#) on page 55

Feed tracking is available for the object.

[FlowRecordElementOccurrenceHistory](#) on page 63

History is available for tracked fields of the object.

[FlowRecordElementOccurrenceOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[FlowRecordElementOccurrenceShare](#) on page 67

Sharing is available for the object.

FlowRecordRelation

Represents a relationship between a record and a flow interview. When a flow interview is paused, Salesforce uses the `$Flow.CurrentRecord` global variable in the flow to associate the interview with a record. Available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated ID of this relation.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The flow interview that the record is related to. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To FlowInterview
RelatedRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description The record that the flow interview is related to. Make sure that this field contains only one ID, and that the ID is for a valid object. Custom objects and most standard objects are supported. This is a relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To Account, AccountContactRole, AccountPartner, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, Address, AlternativePaymentMethod, Announcement, ApexTestQueueItem, AppAnalyticsQueryRequest, AppUsageAssignment, AssessmentIndicatorDefinition, AssessmentTask,

FlowRecordVersion

Represents the version of a flow. This object is available in API version 58.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Fields

Field Name	Details
ActivatedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user that activated the flow. This field is available in API version 60.0 and later. This field is a relationship field. Relationship Name ActivatedBy Relationship Type Lookup Refers To User
ActivatedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the flow was activated. This field is available in API version 60.0 and later.
ApiVersion	Type double Properties Filter, Nillable, Sort Description The API version of the flow record version. This field is available in API version 61.0 and later.
AreMetricsLoggedToDataCloud	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later.

Field Name	Details
Builder	Type string Properties Filter, Group, Nillable, Sort Description The name of the tool that created this flow. Valid values are: • Cloud Flow Designer • Flow Builder • Swing Designer This field is available in API version 61.0 and later.
CapacityCategory	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category that determines the usage limits of the flow. Possible values are: • Marketing Cloud Flow This field is available in API version 62.0 and later.
DataSpaceId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the data space for this flow record version. This field is available in API version 65.0 and later. This field is a relationship field. Relationship Name DataSpace Refers To DataSpace
Description	Type textarea Properties Nillable Description The description of the flow record version. This field is available in API version 61.0 and later.

Field Name	Details
Entries	Type int Properties Filter, Group, Sort Description The number of entries in this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later.
Errors	Type int Properties Filter, Group, Sort Description The number of errors in this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later.
Exits	Type int Properties Filter, Group, Sort Description The number of exits from this flow. To use this field, your org must use Salesforce Enterprise and Unlimited Editions with Marketing Cloud Growth Edition. This field is available in API version 60.0 and later.
FlowRecordId	Type reference Properties Filter, Group, Sort Description The ID of the parent flow running this version. This field is a relationship field. Relationship Name FlowRecord Relationship Type Lookup Refers To FlowRecord

Field Name	Details
FlowType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The label of a flow type. FlowType consolidates ProcessType and TriggerType into one field. FlowType is used with permissions, so admins can control access to each flow type. Valid values are: • Action Cadence Step Screen Flow—Launches from a cadence step. This type of flow collects or displays information and requires user interaction. • Activation-Triggered Autolaunched Flow—Launches when an activation is published. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Action Plan Autolaunched Flow—Launches an action plan task from an action plan when conditions in the associated action plan template process are met. This type of flow runs in the background without user interaction. • Admin Automation Event-Triggered Flow—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Agentic Guided Experience Background Flow—Creates, retrieves, updates, or deletes records. This autolaunched flow runs in the background. This value is available in API version 65.0 and later. • Agentic Guided Experience Orchestration Flow—Launches when a mobile worker invokes it from the Field Service mobile app. With Agentic Guided Experience, configure the mobile experience to follow a tailored work completion process. This value is available in API version 65.0 and later. • Agentic Guided Experience Screen Data Flow—Retrieve records for use throughout AGX Screen and AGX Orchestration flows. This autolaunched flow runs in the background. This value is available in API version 65.0 and later. • Agentic Guided Experience Screen Flow—A screen flow that can launch from an interactive step on an AGX orchestration flow. This value is available in API version 65.0 and later. • Autolaunched Approval Orchestration—Launches when invoked by Apex, REST API, custom buttons, or custom links. An approval orchestration lets you create a multi-step, multi-user approval process. • Autolaunched No Trigger Flow—Launches when invoked by processes or code such as Apex and REST API. This type of flow runs in the background without user interaction.

Field Name	Details
	• Autolaunched No Trigger Orchestration—Launches when invoked by Apex, REST API, custom buttons, or custom links. An orchestration lets you create a multi-step, multi-user process. • Automation Event-Triggered Flow—Launches when invoked by Apex, processes, REST API, and more. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Automation Event-Triggered Flow—Launches when an automation event is received. This type of flow runs in the background without user interaction. • Broadcast Flow—Launches when referenced by Apex, REST API, or subflow element. This value is available in API version 65.0 and later. • Cart Async Autolaunched Flow—Launches when invoked by a cart change, such as an Add to Cart. This type of flow runs in the background without user interaction. • Checkout Screen Flow—Create a screen flow that implements a Commerce Cloud checkout process. This type of flow collects or displays information and requires user interaction. • CMS Workflow Orchestration Autolaunched—Launches when invoked from the Workflows component in a CMS workspace. This type of orchestration lets you create a multi-step, multi-user process to create, edit, organize, and manage digital content from a centralized location. • Contact Request Screen Flow—Launches when invoked by a customer, allowing them to enter contact details into a self-service form. This type of flow collects or displays information and requires user interaction. • Customer Lifecycle Record-Triggered After Save Flow—Launches after a customer lifecycle map is saved and changes records related to the triggering record. This type of flow runs in the background without user interaction. • Data Cloud Data Change Flow—Launches when a record from a Data Cloud data model object or a calculated insight object is changed and meets the specified conditions. This type of flow runs in the background without user interaction. • Data Graph-Triggered Flow—Launches when conditions are met in the specified data graph field. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Data Graph-Triggered Flow v0—Launches when conditions are met in the specified data graph field. This type of flow runs in the background without user interaction. • Digital Form Screen Flow—Launches from app extensions. This type of flow collects or displays information and requires user interaction. • Discovery Framework Data Capture Screen Flow (Beta) —Launches when invoked by a user on a mobile device and

Field Name	Details
	presents assessment questions from Discovery Framework. This type of flow collects or displays information and requires user interaction. • Employee Service Catalog Item Screen Flow—Launches when invoked by a user and allows them to browse and order items from the Employee Service Catalog. This type of flow collects or displays information and requires user interaction. • Evaluation Autolaunched Flow—Launches when invoked by an orchestration to evaluate custom criteria for a stage or step. To indicate that the criteria are met, set the output variable <code>isOrchestrationConditionMet</code> to <code>true</code>. This type of flow runs in the background without user interaction. • External System Change-Triggered Flow Approval Process—Launches when data changes in a supported external system. A flow approval process lets you create a multi-step, multi-user approval process. This value is available in API version 65.0 and later. • External System Change-Triggered Orchestration—Launches when data changes in a supported external system. An orchestration lets you create a multi-step, multi-user process. This value is available in API version 65.0 and later. • External System Change-Triggered Flow—Launches when an event is received from an external system. This type of flow runs in the background without user interaction. • Event-Driven Flow—Launches when an event is received. This type of flow runs in the background without user interaction. • Field Service Mobile Screen Flow—Launches when invoked by a user in the Field Service mobile app. This type of flow collects or displays information and requires user interaction. • Field Service Web Screen Flow—Launches from the Field Service app and lets users schedule, modify, or cancel an appointment in a web browser. This type of flow requires user interaction. • Form-Triggered Flow—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Form-Triggered Flow v0—Launches when a web visitor submits a marketing form. This type of flow runs in the background without user interaction. • Identity User Registration Autolaunched Flow—Launches when a user logs in via a single sign-on process that uses the authentication provider framework. After the third-party identity provider authenticates the user, the flow creates a user or updates an existing user. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later.

Field Name	Details
	• Indicator Result Screen Flow—Launches a screen flow when initiated by a user to calculate and create indicator results for a selected indicator performance period. • Individual-Object Linking Screen Flow—Launches when invoked by an agent to link a record like a case or messaging session to a contact, lead, person account, or employee. This type of flow collects or displays information and requires user interaction. • Login Screen Flow—Launches when a user tries to log in to Salesforce. This type of flow extends Salesforce's default authentication process by sending users with certain profiles through a flow when they log in and requires user interaction. • Loyalty Management Autolaunched Flow—Launches when invoked by a loyalty program process, and contains Assignment, Decision, and Action elements. The Action element in this type of flow supports Apex and quick actions. This type of flow runs in the background without user interaction. • Managed Content Autolaunched Flow—Launches when invoked by the ManagedContentRelease translator. This type of flow runs in the background without user interaction. • Mortgage Lending Screen Flow—Launches when invoked by a user and allows them to provide Financial Service Cloud mortgage application details. This type of flow requires user interaction. • On-Demand Flow—Launches when referenced by the REST API. This autolaunched flow runs asynchronously in the background. This value is available in API version 65.0 and later. • Platform Event Triggered Flow—Launches when a platform event occurs. This type of flow runs in the background without user interaction. • Process Builder Autolaunched Process—Launched when invoked from a Process Builder process. This type of flow runs in the background without user interaction. • Process Builder Custom Event Process—A process created in Process Builder that launches when a custom event message is received. This type of process runs in the background without user interaction. • Process Builder Workflow—Launches when a record is created or updated. This type of process runs in the background without user interaction. • Prompt Template Capability-Triggered Flow—Launches from a prompt template. This type of flow adds prompt instructions to the associated prompt template and runs in the background without user interaction. • Recommendation Strategy Autolaunched Flow—Build a personalized list of recommendations. When a recommendation is selected, it launches its assigned flow. Used by Einstein Next Best Action. Show

Field Name	Details
	recommendations in Lightning App Builder with the Einstein Next Best Action component and in Experience Builder with the Suggested Actions component. • Record-Triggered After Save Flow—Launches after a record is created or updated and has been saved. This type of flow can make changes only to records related to the triggering record and runs in the background without user interaction. • Record-Triggered After Save Orchestration—Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction. • Record-Triggered After Save Orchestration—Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process. This type of flow runs in the background without user interaction. • Record-Triggered Before Delete Flow—Launches when a record is deleted. This type of flow runs in the background without user interaction. • Record-Triggered Before Save Flow—Launches after a record is created or updated, but hasn't been saved. This type of flow can make changes only to the triggering record and runs in the background without user interaction. • Routing Autolaunched Flow—Launches when a customer initiates a chat, voice, or messaging conversation and routes the work item to a queue, skill, agent, or bot. This type of flow runs in the background without user interaction. • Schedule-Triggered Flow—Launches at a specified time and frequency for each record that meets the flow criteria. This type of flow runs in the background without user interaction. • Scheduler Appointments Screen Flow—Launches when invoked by a user and lets them schedule appointments in Salesforce Scheduler. This type of flow collects or displays information and requires user interaction. • Screen Flow—Launches from Lightning pages, Experience Cloud sites, quick actions and more. This type of flow collects or displays information and requires user interaction. • Segment-Triggered Flow—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction. This value is available in API version 64.0 and later. • Segment-Triggered Flow v0—Launches when activated or when scheduled for qualified Data Cloud segment members. This type of flow runs in the background without user interaction. • Survey Enrich Autolaunched Flow—Launches in the context of a survey response and can't execute without a corresponding survey. Use

Field Name	Details
	it to conditionally map a response to a record, create records, or send notifications. This type of flow runs in the background without user interaction. • Survey Screen Flow—Launches when invoked by an internal or external survey participant. This type of flow saves participant feedback as survey response records and requires user interaction. • Transaction Security Autolaunched Flow—Used by Condition Builder to declaratively build customized security policies to protect data. This type of flow runs in the background without user interaction. • User Provisioning Screen Flow—Launches when invoked by a user and allows them to create a user account and link it to a third-party service or app. This type of flow requires user interaction. This field is available in API version 60.0 and later.
Id	Type text Properties Filter, Group, Sort Description The ID of the flow version.
IsOverridable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow record version is overridable. The default value is <code>false</code>. This field is available in API version 61.0 and later.
IsPaused	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the segment-triggered flow is paused (<code>true</code>) or not (<code>false</code>). When the value is <code>true</code>, no additional records are processed until the flow is resumed. The default value is <code>false</code>. This field is available in API version 60.0 and later.
IsTemplate	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the flow record version is a template. Template flow record versions are automatically shared with all users in your Salesforce org. The default value is <code>false</code>. This field is available in API version 61.0 and later.
OverriddenById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the flow that's overriding the current flow. This field is available in API version 61.0 and later. This field is a relationship field. Relationship Name OverriddenBy Relationship Type Lookup Refers To FlowRecord
OverriddenFlowId	Type text Properties Filter, Group, Nillable, Sort Description The ID of the flow that the current flow is overriding. This field is available in API version 61.0 and later. This field is a relationship field. Relationship Name OverriddenFlow Relationship Type Lookup Refers To FlowRecord
PausedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The date and time the segment-triggered flow was paused. This field is available in API version 60.0 and later.
PausingUserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who paused the segment-triggered flow. This field is available in API version 60.0 and later. This field is a relationship field. Relationship Name PausingUser Relationship Type Lookup Refers To User
ProgressStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The running status of the flow. Valid values are: • Canceled— Specifies a flow that was deactivated by a user. The flow doesn't process previously added records and no additional records are added to this flow. • Completed— Indicates a flow that is complete. No additional records are eligible to be processed in this flow. • Draft— Indicates a flow that is under construction and isn't active yet. This status can be invalid because it needs additional information before a user can activate it. • Error— Indicates a flow that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce. • Finishing— Indicates a flow that was deactivated by a user, but is finishing records previously added that are eligible to run to completion. No additional records are added to this flow. • InProgress— Indicates a flow that is running or ready to run. • PreparingData— Indicates a flow that is preparing the resources it requires to run. This process can take up to 2 hours.

Field Name	Details
	Scheduled— Indicates a flow scheduled to start on the date and time selected by the user.
ReasonPaused	Type textarea Properties Filter, Group, Nillable, Sort Description The reason the segment-triggered flow was paused. This field is available in API version 60.0 and later.
ResumedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time the segment-triggered flow resumed. This field is available in API version 60.0 and later.
ResumingUserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who resumed the segment-triggered flow. This field is available in API version 60.0 and later. This field is a relationship field. Relationship Name ResumingUser Relationship Type Lookup Refers To User
RunInMode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The mode that the flow runs in. Valid values are: DefaultMode—The flow record version runs in system or user context, depending on how the flow is launched.

Field Name	Details
	<code>SystemModeWithSharing</code>—The flow record version always runs in system mode with sharing. The flow respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user. <code>SystemModeWithoutSharing</code>—The flow record version can access all data. In the UI, this value appears as System Context without Sharing—Access All Data. This value is available in API version 49.0 and later. This field is available in API version 61.0 and later.
<code>ScheduledStartDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date and time the flow started. This field is available in API version 60.0 and later.
<code>SourceTemplateId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the template from which the current flow was created. This field is available in API version 61.0 and later. This field is a relationship field. Relationship Name SourceTemplate Relationship Type Lookup Refers To FlowRecord
<code>Status</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The flow's status. Valid values are: - Active - Draft - InvalidDraft

Field Name	Details
	• <code>Obsolete</code> • <code>UnderReview</code>— This value is available in API version 64.0 and later. This field is available in API version 61.0 and later.
<code>TriggerObjectOrEventLabel</code>	Type string Properties Filter, Group, Nillable, Sort Description The label of the object or platform event that triggers this flow. This field is available in API version 61.0 and later.
<code>VersionNumber</code>	Type int Properties Filter, Group, Nillable, Sort Description The version number of the flow version.

FlowRecordVersionOccurrence

Represents an instance of a recurring flow that runs on a schedule. For example, a flow that runs weekly on Wednesdays creates an occurrence each time it runs. This object is available in API version 60.0 and later.

Supported Calls

`describe()`, `read()`

Fields

Field	Details
<code>DataSpaceId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the data space for this occurrence. This field is available in API version 65.0 and later. This field is a relationship field.

Field	Details
	Relationship Name DataSpace Refers To DataSpace
Entries	Type integer Properties Filter, Group, Query, Retrieve, Sort Description The number of entries for this occurrence.
Errors	Type integer Properties Filter, Group, Query, Retrieve, Sort Description The number of errors for this occurrence.
ErrorDetail	Type string Properties Filter, Group, Nillable, Sort Description A description of the error. This field is available in API version 63.0 and later.
Exits	Type integer Properties Filter, Group, Query, Retrieve, Sort Description The number of exits for this occurrence.
FlowRecordId	Type string Properties Filter, Group, Query, Retrieve, Sort Description The ID of the associated flow record.
FlowRecordVersionId	Type string

Field	Details
	Properties Filter, Group, Query, Retrieve, Sort Description The ID of the associated version of the flow record.
ProgressStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The running status of the flow interview. Valid values are: • Canceled Specifies a flow interview that was deactivated by a user. The flow doesn't process previously added records and no additional records are added to this flow. • Completed Indicates a flow interview that is complete. No additional records are eligible to be processed in this flow. • Error Indicates a flow interview that has been deactivated because it encountered an error. When the error occurs, the error details are emailed to up to 5 users with the Manage Flows permission who most recently logged into Salesforce. • Finishing Indicates a flow interview that was deactivated by a user, but is finishing records previously added that are eligible to run to completion. No additional records are added to this flow. • InProgress Indicates a flow interview that is running or ready to run. • PreparingData Indicates a flow interview that is preparing the resources it requires to run. This process can take up to 2 hours.
ScheduledDate	Type dateTime Properties Filter, Group, Query, Retrieve, Sort Description The scheduled time and date of the occurrence.

Field	Details
Stopped	Type integer Properties Filter, Group, Query, Retrieve, Sort Description The number of flows that were stopped for this occurrence.

FlowTestResult

Represents the results for a flow test associated with a flow version. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To view test run details, you must have the View All Data user permission. You can view flow tests and test results without the View All Data permission.

Fields

Field	Details
FlowDefinitionViewId	Type string Properties Filter, Nillable, Sort Description The ID of the flow definition associated with the flow test result. This is a relationship field. Relationship Name FlowDefinitionView Relationship Type Lookup Refers To FlowDefinitionView
FlowTestViewId	Type string

Field	Details
	Properties Filter, Nillable, Sort Description The ID of the flow test associated with the flow test result. This is a relationship field. Relationship Name FlowTestView Relationship Type Lookup Refers To FlowTestView
FlowVersionNumber	Type int Properties Filter, Group, Nillable, Sort Description The version number for the flow.
FlowVersionViewId	Type string Properties Filter, Nillable, Sort Description The ID of the flow version associated with the flow test result. This is a relationship field. Relationship Name FlowVersionView Relationship Type Lookup Refers To FlowVersionView
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the flow test result.

Field	Details
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the user who owns this test result. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Result	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the flow test result. Possible values are: • Error • Fail • Pass • skip—The test run was skipped because the test doesn't exist for that flow version. This value appears only when you trigger tests by using Salesforce CLI. This value is available in API version 66.0 and later.
TestEndDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the flow test ended.
TestStartDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the flow test started.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

FlowTestResultShare

Sharing is available for the object.

FlowTestView

Represents the description of a flow test associated with a flow definition. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
Description	Type textarea Properties Nillable Description The description of the flow test associated with the flow test view.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the flow test associated with this flow test view.
FlowDefinitionViewId	Type string Properties Filter, Nillable, Sort Description The ID of the flow definition associated with the flow test view. This is a relationship field. Relationship Name FlowDefinitionView

Field	Details
	Relationship Type Lookup Refers To FlowDefinitionView
FlowTestApiName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the flow test associated with the flow test view.
FlowTestLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the flow test associated with the flow test view.

FlowStageRelation

Represents a relationship between a paused flow interview and its stages. When a flow interview is paused, Salesforce creates a FlowStageRelation record for each stage that's set to the `$Flow.CurrentStage` or `$Flow.ActiveStages` global variable. Available in API version 43.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated ID of this relation.

Field	Details
ParentId	Type reference Properties Filter, Group, Sort Description The flow interview that the record is related to. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To FlowInterview
StageLabel	Type string Properties Filter, Nillable, Sort Description Label for the stage. If the stage is translated, the label respects the language of the user who is querying the label.
StageOrder	Type int Properties Filter, Group, Sort Description The order of this stage when the flow interview was paused. This order may differ from the order in the stage definition. • If the type is Active, the order corresponds to the order of the stage in <code>\$Flow.ActiveStages</code>. • If the type is Current and corresponds to an active stage, the order matches the order of the active stage. • If the type is Current and doesn't correspond to an active stage, the order is 0.
StageType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Type of stage. The valid values are:

Field	Details
	- Current: Identifies that the stage is set to <code>\$Flow.CurrentStage</code>. - Active: Identifies that the stage is set to <code>\$Flow.ActiveStages</code>.

Usage

You can use the FlowStageRelation records to represent the paused interview and its active and current stages visually.

For example, an Online Purchasing flow interview starts with several stages in `$Flow.ActiveStages`. If the interview is paused, Salesforce creates a FlowStageRelation record for each stage in `$Flow.ActiveStages` or `$Flow.CurrentStage`.

StageLabel	StageType	StageOrder
Review Cart	Active	0
Shipping Details	Active	1
Billing Details	Active	2
Payment Details	Active	3
Order Confirmation	Active	4
Shipping Details	Current	1

FlowVariableView

Represents a variable within the flow version. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, Nillable, Sort Description The API name of the flow variable.
DataType	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The data type of the flow variable. Valid values are: • Apex—This value is available in API version 46.0 and later. • Boolean • Currency • Date • DateTime—This value is available in API version 30.0 and later. • Number • Multipicklist—This value is available in API version 34.0 and later. • Picklist—This value is available in API version 34.0 and later. • String • sObject
Description	Type string Properties Filter, Group, Nillable, Sort Description Flow variable information, specified by the org's admin.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description The Id of the flow variable.
FlowVersionViewId	Type string Properties Filter, Nillable, Sort Description The Id of the flow version. This is a relationship field. Relationship Name FlowVersionView Relationship Type Lookup

Field	Details
	Refers To FlowVersionView
IsCollection	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether or not the flow variable is a collection of values.
IsInput	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicated whether or not the flow variable is available for input.
IsOutput	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether or not the flow variable is available for output.
ObjectType	Type string Properties Filter, Group, Nillable, Sort Description If the data type is sObject, this field indicates which object.

Usage

Use this object to query information about flow variables. A query must be filtered by `FlowVersionViewId` to get results. Only variables with `IsInput` or `IsOutput` marked as true are visible.

FlowVersionView

Represents the version of a flow definition. This object is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
<code>ApiVersion</code>	Type double Properties Filter, Nillable, Sort Description The API version for the flow definition. Every flow version has an API version specified at creation. This field is available in API version 50.0 and later.
<code>ApiVersionRuntime</code>	Type double Properties Filter, Nillable, Sort Description The API version for running the flow. This value determines which versioned run-time behavior improvements are adopted by the flow version. If not specified when the flow or flow version is created, the latest available API version is used as the API version for running the flow. When an existing flow is saved as a new flow or flow version, the existing flow's run-time API version is used in the new flow or flow version. This field is available in API version 50.0 and later.
<code>AreMetricsLoggedToDataCloud</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this flow's metrics are logged in Data Cloud. The default value is false. This field is available in API version 63.0 and later.
<code>CapabilityType</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The capability that integrates with the flow. An example value is <code>PromptTemplateType://SalesEmail</code> .
CapacityCategory	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category that determines the usage limits of the flow. Possible values are: Marketing Cloud Flow This field is available in API version 62.0 and later.
Description	Type string Properties Filter, Group, Nillable, Sort Description Flow version information, specified by the org's admin.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the flow version.
FlowDefinitionViewId	Type string Properties Filter, Nillable, Sort Description The ID of the flow definition. This field s a relationship field. Relationship Name FlowDefinitionView Relationship Type Lookup Refers To FlowDefinitionView

Field	Details
IsSwingFlow	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow is built with Desktop Flow Designer. This field is available in API version 49.0 and later. Default: false
IsTemplate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the process or flow is a template. When installed from managed packages, processes and flows can't be viewed or cloned by subscribers because of intellectual property (IP) protection. But when those processes and flows are templates, subscribers can open them in a builder, clone them, and customize the clones. Available in API version 46.0 and later. Default: false
Label	Type string Properties Filter, Group, Nillable, Sort Description The label of the flow version.
ProcessType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the flow. Valid values are: • <code>ActionableEventManagerFlow</code>—A flow that triggers an actionable event orchestration process in the background and automatically executes different types of actions based on the event type. This value is available in API version 62.0 and later. • <code>ActionCadenceAutoLaunchedFlow</code>—A flow executed when a user completes a cadence step. This value is available in API version 56.0 and later.

Field	Details
	• ActionCadenceStepFlow—A screen flow used as a cadence step. This value is available in API version 56.0 and later. • ActivityObjectMatchingFlow—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 64.0 and later. • Appointments—A flow for Lightning Scheduler. This value is available in API version 44.0 and later. • ActivityObjectMatchingFlow—A flow that launches when Einstein Activity Capture detects and captures a new activity, such as an email. This type of flow runs in the background without user interaction. This value is available with Sync Email as Salesforce Activity in API version 63.0 and later. • ApprovalWorkflow—An orchestration for approvals. This value is available in API version 62.0 and later. • AutoLaunchedFlow—A flow that doesn't require user interaction. • CheckoutFlow—A flow used in Lightning B2B Commerce to create a checkout in a store. This value is available in API version 48.0 and later. • ContactRequestFlow—A flow that lets customers request that customer support get back to them. This flow is used to create contact request records. This value is available in API version 45.0 and later. • CustomerLifecycle—A Salesforce Surveys flow that lets you associate survey questions with different stages in customer lifecycles. This value is available in API version 49.0 and later and only when the Customer Lifecycle Designer license is enabled. • CustomEvent—A process that is invoked when it receives a platform event message. In the UI, it's an event process. This value is available in API version 41.0 and later. • DataCaptureFlow—A flow that configures the Form tab on Work Order Overview or the related list for a service appointment or a work order line item. This value is available in API version 62.0 and later. • DcvrFrameworkDataCaptureFlow—A screen flow that presents assessment questions from Discovery Framework. Launches when invoked by a user on a mobile device. This type of flow collects or displays information, requires user interaction, and works offline or online. This value is available in API version 62.0 and later. • FieldServiceMobile—A flow for the Field Service mobile app. This value is available in API version 39.0 and later. • FieldServiceWeb—A flow for embedded Appointment Booking. Its UI label is Field Service Embedded Flow. This value is available in API version 41.0 and later. • Flow—A flow that requires user interaction because it contains one or more screens or local actions, choices, or dynamic choices. In the UI and Salesforce Help, it's a screen flow. Screen flows can be launched from the UI, such as with a flow action, Lightning page, or web tab.

Field	Details
	• <code>FSClending</code>—A flow for Financial Services Cloud Mortgage. This value is available in API version 46.0 and later. • <code>FSClending</code>—A flow for login. This value is available in API version 51.0 and later. • <code>IdentityUserRegistrationFlow</code>—A flow to handle user registration and updates for single sign-on with the authentication provider framework. Available in API version 64.0 and later. • <code>IndicatorResultFlow</code>—A flow for Outcome Management that calculates and creates indicator results for a selected indicator performance period. This value is available with the Outcome Management license in API version 60.0 and later. • <code>IndividualObjectLinkingFlow</code>—A screen flow that helps search for contacts, leads, person accounts, and employees and links them to support interactions. This value is available in API version 58.0 and later. • <code>InvocableProcess</code>—A process that can be invoked by another process or the Invocable Actions resource in REST API. This value is available in API version 38.0 and later. • <code>LoyaltyManagementFlow</code>—A flow for the Loyalty Management app and can be invoked by loyalty program processes. This value is available in API version 54.0 and later. • <code>PromptFlow</code>—A flow for Prompt Builder. Pass data between Prompt Builder and the flow. This value is available in API version 60.0 and later. • <code>RoutingFlow</code>—A flow for Salesforce Omni-Channel routing and other business logic. This value is available in API version 52.0 and later. • <code>StageManagementEvaluationFlow</code>—A flow for evaluating custom criteria for a stage or step in Stage Management. This value is available in API version 63.0 and later. • <code>Survey</code>—A flow for Salesforce Surveys. From the UI, this type of flow is created in Survey Builder. This value is available in API version 42.0 and later. • <code>SurveyEnrich</code>—A Salesforce Surveys flow that uses the Survey Data Mapper. From the UI, this type of flow is created in the Survey Builder and requires an associated survey flow type. This value is available in API version 49.0 or later and only when the Customer Lifecycle Designer license is enabled. • <code>Workflow</code>—A process that is invoked when a record is created or edited. In the UI and Salesforce Help, it's a record change process. These values are reserved for future use. • <code>ActionCadenceFlow</code> • <code>ActionPlan</code> • <code>ActivitySmartMatchingFlow</code> • <code>AppProcess</code> • <code>CartAsyncFlow</code> • <code>DigitalForm</code>

Field	Details
	• Journey • JourneyBuilderIntegration • LoginFlow • ManagedContentFlow • OrchestrationFlow • RecommendationStrategy • SalesEntryExperienceFlow • TransactionSecurityFlow • UserProvisioningFlow This value has significant impact on validation when saving the flow and on the flow's runtime behavior. Don't change this value unless you understand the flow properties of the specified type. Across flow versions, you can change the type only from <code>Flow</code> to <code>AutoLaunchedFlow</code> or vice versa. Before you change the flow type, make sure that the flow contains only elements, resources, and functionality that the new flow type supports.
RunInMode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The mode that the flow runs in. Valid values are: • <code>DefaultMode</code> — The flow version runs in system or user context, depending on how the flow is launched. • <code>SystemModeWithSharing</code> — The flow version always runs in system mode with sharing. The flow respects org-wide default settings, role hierarchies, sharing rules, manual sharing, teams, and territories. But it doesn't respect object permissions, field-level access, or other permissions of the running user.
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The flow's status. • Active • Draft • Obsolete • InvalidDraft

Field	Details
VersionNumber	Type int Properties Filter, Group, Nillable, Sort Description The flow's version number.

Usage

Use this object to query information about flow versions. A query must be filtered by `DurableId` or `FlowDefinitionViewId` to get results.

Folder

Represents a repository for a Dashboard, Document, EmailTemplate, Macro, QuickText, or Report. Only one type of item can be contained in a folder.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- You must have the “Modify All Data” permission to create, update, or delete document folders and email template folders.
- Guest and Customer Portal users can’t access this object.
- To query this object, no special permissions are needed.
- As of API version 35.0, when a folder is shared with a role, it is only visible to users in that role. Superior roles in the role hierarchy don’t gain visibility.
- If analytics folder sharing is turned on, then users need these permissions to create and manage report folders and dashboard folders:
 - “Create Dashboard Folders”
 - “Create Report Folders”
- To use folders for macros and quick text, enable folders for these objects in Setup on the Macro Settings and Quick Text Settings pages.

Fields

Field	Details
AccessType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. Indicates who can access the Folder. Available values include: • Hidden—Folder is hidden from everyone. • Public—Folder is accessible by all users. • Shared—Folder is accessible only by a User in a particular Group or UserRole. The API doesn't allow you to view, insert, or update which group or Role the Folder is shared with.  Note: If analytics folder sharing is turned on for your organization, then this field is present but not used.
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Folder Unique Name.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
IsReadOnly	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this Folder is read-only (<code>true</code>) or editable (<code>false</code>). Label is <i>Read Only</i>.  Note: If analytics folder sharing is turned on for your organization, then this field is present but not used.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Label of the folder as it appears in the user interface. Label is Document Folder Label.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the parent object, if any.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Required. Type of objects contained in the Folder. This field can't be updated. Available values include: • Dashboard • Document

Field	Details
	- Email (for Salesforce Classic email templates) - EmailTemplate (for Lightning email templates) - Macro - QuickText - Report

Usage

Only one type of item can be contained in a folder, either Dashboard, Document, EmailTemplate, Macro, QuickText, or Report.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

FolderedContentDocument

Represents the relationship between a parent and child ContentFolderItem in a ContentWorkspace.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
ContentDocumentId	Type reference Properties Filter, Group, Sort Description ID of the ContentDocument that can be in a folder. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument

Field Name	Details
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the document in bytes for files smaller than 2 GB. In API version 66.0 and later, we recommend that you use the <code>ContentSizeLong</code> field even for documents smaller than 2 GB.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the document in bytes up to 10 GB. This field is available in API version 66.0 and later.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the ContentDocument.
FileType	Type string Properties Filter, Group, Nillable, Sort Description File type of the ContentDocument.
IsFolder	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the FolderedContentDocument is a folder, rather than a file.
ParentContentFolderId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description ID of the ContentFoldr the ContentDocument resides in. This is a relationship field. Relationship Name ParentContentFolder Relationship Type Lookup Refers To ContentFolder
Title	Type string Properties Filter, Group, idLookup, Sort Description Name of the file or folder in a ContentFolder.

ForecastingAdjustment

This object represents an individual forecast manager's adjustment for a subordinate's or child territory's forecast via a ForecastingItem. Available in API versions 26.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents forecast users' adjustments of their own forecasts, including territory forecasts they own.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
AdjustedAmount	Type double Properties Create, Filter, Sort, Update Description The revenue amount of an individual forecast item, after an adjustment.
AdjustedQuantity	Type double Properties Create, Filter, Sort, Update Description The quantity amount of an individual forecast item, after an adjustment. This field is available in API version 28.0 and later.
AdjustmentNote	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description A text note providing information about the adjustment. The maximum length is 255 characters. This field doesn't appear in reports.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The currency code of the adjustment. If omitted, the default is the user's personal currency.
ForecastCategoryName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case,

Field Name	Details
	Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.
ForecastingGroupItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description If a forecast group is assigned to the forecast type, the ID of the group value that the manager adjustment belongs to. This field is a relationship field. Available in API version 60.0 and later. Relationship Name ForecastingGroupItem Relationship Type Lookup Refers To ForecastingGroupItem
ForecastingItemCategory	Type picklist Properties Create, Filter, Group, Sort Description The category the forecast belongs to. For individual forecast category rollups, the possible values are: • PipelineOnly—Rollup from Pipeline opportunities only. • BestCaseOnly—Rollup from Best Case opportunities only. The value in this category is adjustable. • MostLikelyOnly—Rollup from Most Likely opportunities only. The value in this category is adjustable. • CommitOnly—Rollup from Commit opportunities only. The value in this category is adjustable. For cumulative forecast rollups, the possible values are: • OpenPipeline—Rollup from Pipeline, Best Case, Most Likely, and Commit opportunities. • BestCaseForecast—Rollup from Best Case, Most Likely, Commit, and Closed opportunities. The value in this category is adjustable. • MostLikelyForecast—Rollup from Most Likely, Commit, and Closed opportunities. The value in this category is adjustable.

Field Name	Details
	- CommitForecast—Rollup from Commit and Closed opportunities. The value in this category is adjustable. For either cumulative or individual forecast category rollups, the possible values are: - ClosedOnly —Rollup from Closed opportunities only.
ForecastingItemId	Type reference Properties Filter, Group, Sort Description The ID of the related ForecastingItem.
ForecastingTypeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related ForecastingType.
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a revenue amount. If <code>false</code>, then <code>IsQuantity</code> must be <code>true</code>. This field is available in API version 28.0 and later.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a quantity amount. If <code>false</code>, then <code>IsAmount</code> must be <code>true</code>. This field is available in API version 28.0 and later.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description The ID of the forecast owner.
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description Period ID for the adjustment. Read only.
ProductFamily	Type picklist Properties Create, Filter, Group, Nillable, Sort Description The Product Family for the adjustment. Read only. This field is available in API version 29.0 and later.
StartDate	Type date Properties Create, Filter, Group, Sort Description The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to obtain a manager's adjustment detail for a specified `ForecastingItem`. The `ForecastingAdjustment` object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write `ForecastingAdjustment` records.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType`

object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

When inserting manager adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. The following pairs are valid.

For individual forecast category rollups:

- `ForecastCategoryName: BestCase, ForecastingItemCategory: BestCaseOnly`
- `ForecastCategoryName: MostLikely, ForecastingItemCategory: MostLikelyOnly`
- `ForecastCategoryName: Commit, ForecastingItemCategory: CommitOnly`

For cumulative forecast category rollups:

- `ForecastCategoryName: null, ForecastingItemCategory: BestCaseForecast`
- `ForecastCategoryName: null, ForecastingItemCategory: MostLikelyForecast`
- `ForecastCategoryName: null, ForecastingItemCategory: CommitForecast`

ForecastingColumnDefinition

Represents a custom calculated column or a custom reference data column in a forecast type. This object is available in API version 56.0 and later.

For a custom calculated column, a `Formula` field value is required. For a custom reference data column, a `ReferenceField` field value is required.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer (API) name of the custom calculated column or custom reference data column.
ForecastingTypeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast type. This field is a relationship field. Relationship Name ForecastingType Relationship Type Lookup Refers To ForecastingType
Formula	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required for custom calculated columns. The formula for the custom calculated column. Use API column names in your formula (such as ForecastAmount0), not column header names (such as Closed or Closed Only). For details on API column names, operators, and functions to use in formulas, see ForecastingColumnDefinition Formula Field Details. Example The following formula calculates the gap to quota: <code>ForecastingQuotaAmount - ForecastAmount0</code>
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the custom calculated column or custom reference data column.

Field	Details
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for this object, which displays in Setup and in the column header on the forecasts page. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.
ReferenceField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required for custom reference data columns. The number or currency custom field from the ForecastingCustomData object. For example, <code>ForecastingCustomData.Realized_Revenue__c</code>. Data from this field appears in a column in the forecasts summary. This field is available in API version 58.0 and later.
ResultField	Type string Properties Create, Filter, Group, Sort, Update Description The field name to represent the custom calculated column or custom reference data column result. Possible values are: Custom Calculated Column Result • CalculatedAmount0 or CalculatedQuantity0 • CalculatedAmount1 or CalculatedQuantity1 • CalculatedAmount2 or CalculatedQuantity2 • CalculatedAmount3 or CalculatedQuantity3 • CalculatedAmount4 or CalculatedQuantity4 If the formula's result is null or invalid, "-" is the value. For example, if the formula divided by 0. If you want to show "-" for 0 or negative values in your forecast, use the IF function in your formula to detect 0 or negative numbers. Custom Reference Data Column Result Use the appropriate field based on whether your column output is of Currency or Number type. • ExtensionCurrency0 or ExtensionNumber0 • ExtensionCurrency1 or ExtensionNumber1 • ExtensionCurrency2 or ExtensionNumber2 • ExtensionCurrency3 or ExtensionNumber3

Field	Details
	ExtensionCurrency4 or ExtensionNumber4

Usage

Each forecast type can include any combination of custom calculated columns and reference data columns, as long as they don't exceed five in number. For example, a forecast type can have two custom calculated columns and three custom reference data columns.

Custom calculated columns can't be adjusted and aren't included in rollups. In the UI, custom calculated columns can't indicate changes in the last 7 days.

If you have at least one custom calculated column in an active or inactive forecast type, you can't do the following until you've removed the column.

- Switch from single category to cumulative rollups in Forecast Settings
- Enable the Most Likely category
- Disable Show Quotas (only if your custom calculated column's formula refers to a quota value)

ForecastingColumnDefinition Formula Field Details

Use these API names, operators, and functions to construct formulas for the Formula field in the ForecastingColumnDefinition object. The API names apply to both singular and cumulative category rollups. For simplification, we included only the single category rollup column header name next to each API name.

ForecastingColumnDefinition Formula Field Details

Use these API names, operators, and functions to construct formulas for the Formula field in the ForecastingColumnDefinition object. The API names apply to both singular and cumulative category rollups. For simplification, we included only the single category rollup column header name next to each API name.

API Column Names – General

- ForecastingQuotaAmount – Quota (currency)
- ForecastingQuotaQuantity – Quota quantity (double)
- DeveloperName* of any custom calculated column or custom reference data column shown in the forecasts page

API Column Names for Forecast Category Columns

If the Most Likely category isn't enabled:

- ForecastAmount0 or ForecastQuantity0 – Closed
- ForecastAmount1 or ForecastQuantity1 – Commit
- ForecastAmount2 or ForecastQuantity2 – Best Case
- ForecastAmount3 or ForecastQuantity3 – Pipeline

If the Most Likely category is enabled:

- ForecastAmount0 or ForecastQuantity0 – Closed
- ForecastAmount1 or ForecastQuantity1 – Commit
- ForecastAmount2 or ForecastQuantity2 – Most Likely
- ForecastAmount3 or ForecastQuantity3 – Best Case

- ForecastAmount4 or ForecastQuantity4 – Pipeline

API Column Names for Adjustment Columns – Original Forecast Value Without Adjustments

If your org shows adjustments in columns, use these API column names for the original forecast value without adjustments. Adjustment columns are available in API version 60.0 and later.

If the Most Likely category isn't enabled:

- AmountWithoutAdjustments1 or QuantityWithoutAdjustments1 – Commit
- AmountWithoutAdjustments2 or QuantityWithoutAdjustments2 – Best Case

If the Most Likely category is enabled:

- AmountWithoutAdjustments1 or QuantityWithoutAdjustments1 – Commit
- AmountWithoutAdjustments2 or QuantityWithoutAdjustments2 – Most Likely
- AmountWithoutAdjustments3 or QuantityWithoutAdjustments3 – Best Case

API Column Names for Adjustment Columns – Team Adjustment Value

If your org shows adjustments in columns, use these API column names for the team's adjusted value that includes a subordinate's owner and manager adjustments, but not a forecast manager's owner and manager adjustments. These adjustment columns are available in API version 61.0 and later.

If the Most Likely category isn't enabled:

- SubordinateOverrideAmount1 or SubordinateOverrideQuantity1 - Commit
- SubordinateOverrideAmount2 or SubordinateOverrideQuantity2 - Best Case

If the Most Likely category is enabled:

- SubordinateOverrideAmount1 or SubordinateOverrideQuantity1 - Commit
- SubordinateOverrideAmount2 or SubordinateOverrideQuantity2 - Most Likely
- SubordinateOverrideAmount3 or SubordinateOverrideQuantity3 - Best Case

Use these API column names for the team's adjusted value that includes owner adjustments without manager adjustments. The adjustment value includes a subordinate's manager adjustments that they made. These adjustment columns are available in API version 60.0 and later.

If the Most Likely category isn't enabled:

- AmountWithoutManagerAdjustment1 or QuantityWithoutManagerAdjustment1 – Commit
- AmountWithoutManagerAdjustment2 or QuantityWithoutManagerAdjustment2 – Best Case

If the Most Likely category is enabled:

- AmountWithoutManagerAdjustment1 or QuantityWithoutManagerAdjustment1 – Commit
- AmountWithoutManagerAdjustment2 or QuantityWithoutManagerAdjustment2 – Most Likely
- AmountWithoutManagerAdjustment3 or QuantityWithoutManagerAdjustment3 – Best Case

API Column Names for Adjustment Columns – My Adjusted Value

The column that represents the adjusted value from the forecast user viewing the page is the same as the API column name for the standard forecast category. Adjustment columns are available in API version 60.0 and later.

If the Most Likely category isn't enabled:

- ForecastAmount1 or ForecastQuantity1 – My Commit
- ForecastAmount2 or ForecastQuantity2 – My Best Case

If the Most Likely category is enabled:

- ForecastAmount1 or ForecastQuantity1 – My Commit
- ForecastAmount2 or ForecastQuantity2 – My Most Likely
- ForecastAmount3 or ForecastQuantity3 – My Best Case

API Column Names for Custom Reference Data

Use the appropriate field based on whether the custom reference data is of Currency or Number type.

- ExtensionCurrency0
- ExtensionCurrency1
- ExtensionCurrency2
- ExtensionCurrency3
- ExtensionCurrency4
- ExtensionNumber0
- ExtensionNumber1
- ExtensionNumber2
- ExtensionNumber3
- ExtensionNumber4

Supported Math Operators

- + (Add) – Calculates the sum of two values.
- - (Subtract) – Calculates the difference of two values.
- * (Multiply) – Multiplies its values.
- / (Divide) – Divides its values.
- () (Open Parenthesis and Closed Parenthesis) – Specifies that the expressions within the open parenthesis and close parenthesis are evaluated first. All other expressions are evaluated using standard operator precedence.

Supported Logical Operators

- = and == (Equal) – Evaluates if two values are equivalent. The = and == operators are interchangeable.
- <> and != (Not Equal) – Evaluates if two values aren't equivalent.
- < (Less Than) – Evaluates if a value is less than the value that follows this symbol.
- > (Greater Than) – Evaluates if a value is greater than the value that follows this symbol.
- <= (Less Than or Equal) – Evaluates if a value is less than or equal to the value that follows this symbol.
- >= (Greater Than or Equal) – Evaluates if a value is greater than or equal to the value that follows this symbol.

Supported Functions

- IF – Determines if expressions are true or false. Returns a given value if true and another value if false.
- NULL can be used as a constant. For example, `IF ( (expression) < 0, NULL, (expression) )`.

ForecastingColumnDefinitionLocalization

Represents the translated value of a custom calculated column or custom reference data column label when the Translation Workbench is enabled for your organization. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Translation Workbench must be enabled for your org.

Fields

Field	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language of the translated label. Possible values are: • <code>af</code>—Afrikaans • <code>am</code>—Amharic • <code>ar</code>—Arabic • <code>ar_AE</code>—Arabic (United Arab Emirates) • <code>ar_BH</code>—Arabic (Bahrain) • <code>ar_DZ</code>—Arabic (Algeria) • <code>ar_EG</code>—Arabic (Egypt) • <code>ar_IQ</code>—Arabic (Iraq) • <code>ar_JO</code>—Arabic (Jordan) • <code>ar_KW</code>—Arabic (Kuwait) • <code>ar_LB</code>—Arabic (Lebanon) • <code>ar_LY</code>—Arabic (Libya) • <code>ar_MA</code>—Arabic (Morocco) • <code>ar_OM</code>—Arabic (Oman) • <code>ar_QA</code>—Arabic (Qatar) • <code>ar_SA</code>—Arabic (Saudi Arabia) • <code>ar_SD</code>—Arabic (Sudan) • <code>ar_SY</code>—Arabic (Syria) • <code>ar_TN</code>—Arabic (Tunisia) • <code>ar_YE</code>—Arabic (Yemen) • <code>bg</code>—Bulgarian

NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This

Field	Details
	field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related custom column definition. This field is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To ForecastingColumnDefinition
Value	Type textarea Properties Create, Filter, Sort, Update Description The translated label of the custom calculated column or custom reference data column.

ForecastingCustomCategory

Represents a custom forecasting category used for forecast rollups. This object is available in API version 62.0 and later.

In API version 62.0, this object is available for rollup of Manager Judgments only.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CanHaveQuotas	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether forecasts in the custom category can have quotas. The default value is <code>false</code>. Available in API version 63.0 and later.
Description	Type textarea Properties Filter, Group, Nillable, Sort Description A user-defined description of the custom category.
DeveloperName	Type string Properties Filter, Group, Sort Description The developer name of the custom category.
DisplayPosition	Type int Properties Filter, Group, Nillable, Sort Description Indicates the placement of the custom category column among the other columns on the forecasts page.
ForecastingSourceDefinitionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the forecasting source definition. This field is a relationship field. Relationship Name ForecastingSourceDefinition

Field	Details
	Refers To ForecastingSourceDefinition
ForecastingTypeId	Type reference Properties Filter, Group, Sort Description The ID of the related ForecastingType. This field is a relationship field. Relationship Name ForecastingType Refers To ForecastingType
IsAdjustable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether forecast managers can adjust forecasts in the custom category. The default value is <code>false</code> .
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code> , then the adjustment is made in a revenue amount. If <code>false</code> , then <code>IsQuantity</code> must be <code>true</code> . The default value is <code>false</code> . Available in API version 63.0 and later.
IsHidden	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the custom category is hidden. The default value is <code>false</code> . Available in API version 63.0 and later.
IsOwnerAdjustable	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether all forecast users can adjust their own forecasts in the custom category, including the territory forecasts that they own. The default value is <code>false</code>.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a quantity amount. If <code>false</code>, then <code>IsAmount</code> must be <code>true</code>. The default value is <code>false</code>. Available in API version 63.0 and later.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the custom category.
MasterLabel	Type string Properties Filter, Group, Sort Description The label for this column. The label is in the default language locale for the organization. If there's no default language locale, the label is in <code>en_US</code>.
MeasureFieldOverride	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The measure that this custom category supports. Possible values are: • <code>Opportunity.Amount</code> • <code>Opportunity.AmountCustom__c</code> • <code>Opportunity.AmountRSF__c</code> • <code>Opportunity.TotalOpportunityQuantity</code> • <code>OpportunityLineItem.Quantity</code>

Field	Details
	• <code>OpportunityLineItem.TotalPrice</code> • <code>OpportunityLineItem.oliCustomAmount__c</code> • <code>OpportunityLineItemSplit.SplitAmount</code> • <code>OpportunitySplit.SplitAmount</code> • <code>OpportunitySplit.customAmount__c</code>
UnitOfMeasure	Type string Properties Filter, Group, Nillable, Sort Description The unit of measure for the specified custom category measure. Available in API version 63.0 and later.

ForecastingCustomData

Represents forecast data from external sources to display in the forecasts page. For example, risk or last year's revenue. This object is available in API version 58.0 and later.

This object doesn't support forecast rollups or adjustments. Number and currency columns are supported only.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Available in Enterprise Edition and above, and in Professional Edition with an add-on license. Access to this object requires the Manage Forecasts Custom Data user permission.

Fields

Field	Details
ForecastOwnerId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast owner. This field is a relationship field.

Field	Details
	Relationship Name ForecastOwner Relationship Type Lookup Refers To User
ForecastingGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort Description If a forecast group is assigned to the forecast type, the ID of the group value that the custom data belongs to. This field is a relationship field. Available in API version 60.0 and later. Relationship Name ForecastingGroupItem Relationship Type Lookup Refers To ForecastingGroupItem
ForecastingTypeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast type. This field is a relationship field. Relationship Name ForecastingType Relationship Type Lookup Refers To ForecastingType
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description Read only. Period ID for the custom data. This field is a relationship field.

Field	Details
	Relationship Name Period
	Relationship Type Lookup
	Refers To Period
ProductFamily	Type picklist
	Properties Create, Filter, Group, Nillable, Sort
	Description The user-defined product family available to forecast on. Each product family is unique. Possible values are: • <i>[user-defined]</i>—For example, Electronics or Appliances. • None
StartDate	Type date
	Properties Create, Filter, Group, Sort
	Description The start of the custom data, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
Territory2Id	Type reference
	Properties Create, Filter, Group, Nillable, Sort
	Description The ID of the territory to forecast on.

Usage

Each record displays as a custom column on the forecasts summary page.

ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
DisplayPosition	Type int Properties Filter, Group, idLookup, Nillable, Sort Description The order in which product families are displayed on the forecasts page. Each value is unique to a product family.
ProductFamily	Type picklist Properties Filter, Group, Sort Description The product family available to forecast on. Each product family is unique.

ForecastingFact

This object is read-only and links a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
ForecastCategoryName	Type picklist Properties Filter, Group, Restricted picklist, Sort Description A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can customize the forecast category names.
ForecastedObjectId	Type reference Properties Filter, Group, Nillable, Sort Description Contains the Split ID of the forecasted OpportunitySplit object if the forecast data source is opportunity splits or the OpportunityLineItem ID of the forecasted opportunity if the data source is product families. If the data source is product families and the opportunity has no line item, this field is null. If the forecast data source is opportunities, this field is null. This field is available in API version 29 and later. Read-only.
ForecastedSubObjectId	Type reference Properties Filter, Group, Nillable, Sort Description Possible values: • If the forecast data source is OpportunityLineItemSplit, and the opportunity has line items and line item splits, then this field contains the ID of the forecasted OpportunityLineItemSplit object. • If the forecast data source is OpportunityLineItemSplit, and the opportunity has line items but no line item splits, this field contains the ID of the forecasted OpportunitySplit object. • If the forecast data source is OpportunityLineItemSchedule, this field contains the OpportunityLineItemSchedule ID of the forecasted opportunity. • If the forecast data source is OpportunityLineItemSplit and the opportunity has no line item, this field is null. • If the forecast data source is OpportunityLineItemSchedule and the opportunity has no line item, this field is null.

Field Name	Details
	This field is available in API version 58.0 and later. Read-only. This field is a polymorphic relationship field. Relationship Name null Relationship Type Lookup Refers To OpportunityLineItem, OpportunityLineItemSplit
ForecastingItemId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the ForecastingItem.
ForecastingTypeId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related ForecastingType.
OpportunityId	Type reference Properties Filter, Group, Sort Description The opportunity ID.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the opportunity owner.
PeriodId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description Period ID for the forecast.
TargetValue	Type double Properties Filter, Nillable, Sort Description Target value of the forecast amount.
Territory2Id	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the territory to forecast on. Available in API version 43 and later.

Usage

Use this object to get information about opportunities linked to forecasting items.

 **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

- [ForecastingAdjustment](#)
- [ForecastingItem](#)
- [ForecastingQuota](#)

ForecastingFilter

Represents the custom filter for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts permission OR Allow Forecasting permission OR delegated forecast manager status can access this object.

Fields

Field Name	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer name of the forecast filter.
FilterLogic	Type string Properties Filter, Group, Nillable, Sort Description The logic that controls the evaluation of conditions. Only AND is supported. For example, 1 AND 2 AND 3.
ForecastingTypeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later. This is a relationship field. Relationship Name ForecastingType Relationship Type Lookup Refers To ForecastingType

Field Name	Details
ForecastingTypeSourceId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast type source. Can be linked only to forecast type sources created in Summer '21 or later and with a forecast source definition with source object of 'Opportunity.' This is a relationship field. Relationship Name ForecastingTypeSource Relationship Type Lookup Refers To ForecastingTypeSource
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the forecast filter.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.

ForecastingFilterCondition

Represents the custom filter condition logic for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts permission OR Allow Forecasting permission OR delegated forecast manager status can access this object.

Fields

Field Name	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer name of the forecast filter condition.
FieldName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the opportunity field to be filtered.
ForecastingFilterId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast filter. This is a relationship field. Relationship Name ForecastingFilter Relationship Type Lookup Refers To ForecastingFilter
Language	Type picklist

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the forecast filter condition.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.
Operation	Type string Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The operator in the filter condition. Possible values are: • equals • greaterOrEqual – greater than or equal to • greaterThan • lessOrEqual – less than or equal to • lessThan • notEqual
SortOrder	Type int Properties Create, Filter, Group, Sort Description The index value for the condition. This value represents the condition in the FilterLogic field in the ForecastingFilter object. For example, 1.
Value	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The value of the filter condition. If multiple values are specified, they must be separated by a comma delimiter.  Note: If you have multiple currencies enabled, and add a custom filter on a currency field as part of your forecast type definition, the corporate currency at the time the filter was created is used. If you have a single currency enabled, the absolute value is used in your filter condition.

Usage

A forecast type can contain up to three filter conditions.

ForecastingGroup

Represents groups used to roll up forecast totals on the forecasts page. For example, group forecasts by industry or sales type. This object is available in API version 60.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Available for forecast types created in Spring '24 or later and that are based on the Opportunity and Opportunity Product objects. You can only add groups to new forecast types.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer (API) name of the forecast group.

Field	Details
DisplayPosition	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The order in which forecasting dimensions are displayed on the forecasts page. Each value is unique to a dimension.
ForecastingTypeId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the forecast type associated with the forecasting group. This field is a relationship field. Relationship Name ForecastingType Refers To ForecastingType
GroupField	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The field name of the custom picklist used as a group. Possible values include custom, single-selection picklists available in <code>SourceObject</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the custom picklist identified as the group.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The label for this object, which displays in Setup. The label is in the default language locale for the organization. If there's no default language locale, the label is in en_US.
SourceObject	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The entity the picklist used for the forecast group is on. Possible values are: • Opportunity • OpportunityLineItem • Product2

Usage

Each forecast group can apply to only one forecast type.

ForecastingGroupItem

Represents the value within the picklist that is specified as the forecasting group for a forecast type. For example, if you have a forecasting group that identifies the industry an opportunity is part of, this object represents the value in the the industry picklist that's chosen to be part of the group. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DisplayPosition	Type int Properties Create, Filter, Group, Sort, Update Description Indicates the order in which the value displays among other values in the group on the forecasts page.

Field	Details
ForecastingGroupId	Type reference Properties Create, Filter, Group, Sort Description This field is a relationship field. Relationship Name ForecastingGroup Relationship Type Lookup Refers To ForecastingGroup
SourceValueApiName	Type string Properties Create, Filter, Nillable, Sort Description The API name that's derived from the group value.
SourceValueLabel	Type string Properties Filter, Nillable, Sort Description The label that's derived from the group value.
SourceValueTranslatedLabel	Type string Properties Filter, Nillable, Sort Description If one exists, the translated version of the group value.

Usage

New forecast types based on opportunities or opportunity products can include a forecasting group. This group is based on a custom, single-selection picklist that's defined on the Opportunity, OpportunityLineItem, or Product2 objects. The picklist that's chosen for the group can contain more values than are needed for the type.

ForecastingItem

This object is read-only used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of these values when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of these values when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API version 26.0 and later.

Other users can see the `ForecastingItem` object, but not its records. See these access guidelines.

- Users with the “View All Forecasts” permission have access to all `ForecastingItem` fields.
- Users without the “View All Forecasts” permission have access to all fields for their own subordinates and child territories.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>AmountWithoutAdjustments</code>	Type double Properties Filter, Sort, Nillable Description The sum of a person's owned revenue opportunities and the person's subordinates' and child territories' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the role-based forecast hierarchy. This amount is visible only on reports.
<code>AmountWithoutManagerAdjustment</code>	Type double Properties Filter, Sort, Nillable Description The forecast number as seen by the forecast owner. This number is the sum of the owner's revenue opportunities and the owner's subordinates' and child territories' opportunities, including adjustments made by the forecast owner on the owner's or subordinates' and child territories' forecasts. It doesn't include

Field Name	Details
	adjustments made by forecast managers above the owner in the forecast hierarchy.
AmountWithoutOwnerAdjustment	Type double Properties Filter, Sort, Nillable Description The forecast amount as seen by the forecast owner without the owner's adjustment. This amount is the sum of the subordinate's and child territories' opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. <i>It doesn't include adjustments made by the forecast owner.</i>
ForecastAmount	Type double Properties Filter, Sort, Nillable Description The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' and child territories' opportunities, including all forecast adjustments.
ForecastCategoryName	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description A forecast category is the category within the sales cycle to which an opportunity is assigned based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted (not included in forecasts), and Closed. Salesforce admins can add a Most Likely category and can customize the forecast category names in single category rollups. Change the forecast category name only. Changing a forecast category's API name can have unintended results.
ForecastQuantity	Type double Properties Filter, Sort, Nillable

Field Name	Details
	Description The quantity forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments. This field is available in API version 28 and later.
ForecastingGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort Description If a forecast group is assigned to the forecast type, the ID of the group value that the forecast total belongs to. This field is a relationship field. Available in API version 60.0 and later. Relationship Name ForecastingGroupItem Relationship Type Lookup Refers To ForecastingGroupItem
ForecastingItemCategory	Type picklist Properties Filter, Group, Sort Description This field indicates which type of forecast rollup the forecasting item belongs to. Depending on whether your organization uses individual forecast category rollups or cumulative forecast rollups, you have these possible values for the <code>ForecastingItemCategory</code> field. Individual forecast category rollups: • PipelineOnly - Rollup from Pipeline opportunities only. • BestCaseOnly - Rollup from Best Case opportunities only. Adjustable. • MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable. • CommitOnly - Rollup from Commit opportunities only. Adjustable. Cumulative forecast rollups: • OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities. • BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable. • MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.

Field Name	Details
	- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable. Either cumulative or individual forecast category rollups: - ClosedOnly - Rollup from Closed opportunities only. The <code>ForecastingItemCategory</code> field differs from the <code>ForecastCategoryName</code> field. - The <code>ForecastCategoryName</code> field represents the forecast category of the <i>underlying opportunities</i> rolling up to forecast amounts. In organizations using cumulative forecast rollups, the <code>ForecastCategoryName</code> field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories. - The new <code>ForecastingItemCategory</code> field represents the <i>type of rollup</i> a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.
ForecastingTypeId	Type reference Properties Filter, Group, Sort Description The ID of the related ForecastingType.
HasAdjustment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description A flag that indicates the forecasting item includes a <i>manager</i> adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment.
HasOwnerAdjustment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description A flag that indicates the forecasting item includes an <i>owner</i> adjustment. This flag is true only when the item includes an adjustment and the user performing the query has read access to the adjustment. Available in API version 33.0 and later.

Field Name	Details
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True indicates that the adjustment is made in a revenue amount. If false, then <code>IsQuantity</code> must be true. This field is available in API version 28.0 and later.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True indicates that the adjustment is made in a quantity amount. If false, then <code>IsAmount</code> must be true. This field is available in API version 28.0 and later.
IsUpToDate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description A flag indicating whether a specific forecasting item reflects current information. For example, if users are making adjustments that are in process, the item isn't up to date.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the forecast owner.
OwnerOnlyAmount	Type double Properties Filter, Sort, Nillable Description The sum of a person's revenue opportunities, without adjustments.

Field Name	Details
OwnerOnlyQuantity	Type double Properties Filter, Sort, Nillable Description The sum of a person's quantity opportunities, without adjustments. This field is available in API version 28.0 and later.
ParentForecastingItemId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the ForecastingItem that the current item rolls up to.
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description Period ID for the forecast.
ProductFamily	Type picklist Properties Filter, Group, Nillable, Sort Description The product family of the forecast item. This field is available in API version 29.0 and later. Read only.
QuantityWithoutAdjustments	Type double Properties Filter, Nillable, Sort Description The sum of a person's owned quantity opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy. This field is available in API version 28.0 and later.

Field Name	Details
QuantityWithoutManagerAdjustment	Type double Properties Filter, Nillable, Sort Description The forecast number as seen by the forecast owner. This number is the sum of the owner's quantity opportunities and subordinates' opportunities, including adjustments made on the subordinates' forecasts. It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy. This field is available in API version 28 and later.
QuantityWithoutOwnerAdjustment	Type double Properties Filter, Nillable, Sort Description The forecast quantity as seen by the forecast owner without the owner's adjustment. This number is the sum of the subordinate's opportunities, including adjustments made by their manager or by the subordinate themselves, plus the rollup of the owner's own opportunities. <i>It doesn't include adjustments made by the forecast owner.</i> This field is available in API version 38.0 and later.
SubordinateOverrides	Type int Properties Filter, Group, Sort Description The total number of adjustments made to a forecast down the hierarchical chain. For example, User A has a forecast without adjustments. If User A adjusts User B's forecast, User A's SubordinateOverrides value is 1. Then if User B adjusts User C's forecast, User A's SubordinateOverrides value is 2. If User A removes his adjustment from User B's forecast, User A's SubordinateOverrides value is 1. This field is available in API version 38.0 and later.
Territory2Id	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to obtain individual forecast amounts, either with or without adjustments, based on a user’s perspective and forecast role. The ForecastingItem object is visible to all users, but only forecast managers and users above them in the forecast hierarchy can read or write ForecastingAdjustment records.

 **Note:** Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The ForecastingQuota, ForecastingAdjustment, ForecastingOwnerAdjustment, ForecastingItem, and ForecastingFact objects can all have records with different ForecastingTypeId values. Use the ForecastingType object to determine the ID for each forecast type and then filter ForecastingQuota, ForecastingAdjustment, ForecastingItem, or ForecastingFact records as necessary.

SEE ALSO:

- [ForecastingAdjustment](#)
- [ForecastingFact](#)
- [ForecastingQuota](#)

ForecastingOwnerAdjustment

This object represents an individual forecast user’s adjustment of their *own* forecast, including territory forecasts they own, via a ForecastingItem. Available in API versions 33.0 and later. This object is different from the ForecastingAdjustment object, which represents managers’ adjustments of *subordinates’* and child territories’ forecasts.

Supported Calls

create(), delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), update(), upsert()

Special Access Rules

As of Spring ’20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency code of the adjustment. If omitted, the default is the importing user’s personal currency.

Field Name	Details
ForecastCategoryName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can add a Most Likely category and can customize forecast category names in single category rollups. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.
ForecastOwnerId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the forecast owner.
ForecastingGroupItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description If a forecast group is assigned to the forecast type, the ID of the group value that the owner adjustment belongs to. This field is a relationship field. Available in API version 60.0 and later. Relationship Name ForecastingGroupItem Relationship Type Lookup Refers To ForecastingGroupItem
ForecastingItemCategory	Type picklist Properties Create, Filter, Group, Sort Description This field indicates which type of forecast rollup the owner adjustment belongs to. Depending on whether your organization uses individual forecast category

Field Name

Details

rollups or cumulative forecast rollups, you have these possible values for the `ForecastingItemCategory` field.

Individual forecast category rollups:

- PipelineOnly - Rollup from Pipeline opportunities only.
- BestCaseOnly - Rollup from Best Case opportunities only. Adjustable.
- MostLikelyOnly - Rollup from Most Likely opportunities only. Adjustable.
- CommitOnly - Rollup from Commit opportunities only. Adjustable.

Cumulative forecast rollups:

- OpenPipeline - Rollup from Pipeline + Best Case + Most Likely + Commit opportunities.
- BestCaseForecast - Rollup from Best Case + Most Likely + Commit + Closed opportunities. Adjustable.
- MostLikelyForecast - Rollup from Most Likely + Commit + Closed opportunities. Adjustable.
- CommitForecast - Rollup from Commit + Closed opportunities. Adjustable.

Either cumulative or individual forecast category rollups:

- ClosedOnly - Rollup from Closed opportunities only.

The `ForecastingItemCategory` field differs from the `ForecastCategoryName` field.

- The `ForecastCategoryName` field represents the forecast category of the *underlying opportunities* rolling up to forecast amounts. In organizations using cumulative forecast rollups, the `ForecastCategoryName` field can be null because the cumulative forecast amounts include opportunities from multiple forecast categories.
- The new `ForecastingItemCategory` field represents the *type of rollup* a forecast amount or adjustment is from. In organizations using individual forecast category columns, it contains the individual forecast rollup categories. In organizations using cumulative forecast rollups, it contains the cumulative rollup categories.

When inserting owner adjustments, the values you insert for `ForecastCategoryName` and `ForecastingItemCategory` must be compatible with each other. In organizations using cumulative forecast rollups, the `ForecastCategoryName` is nillable. These pairs are the valid pairs.

Individual forecast category rollups:

- `ForecastCategoryName`: BestCase,
`ForecastingItemCategory`: BestCaseOnly
- `ForecastCategoryName`: Commit,
`ForecastingItemCategory`: CommitOnly

Field Name	Details
	Cumulative forecast category rollups: - ForecastCategoryName:null,ForecastingItemCategory:BestCaseForecast - ForecastCategoryName:null,ForecastingItemCategory:CommitForecast
ForecastingItemId	Type reference Properties Filter, Group, Sort Description The ID of the related ForecastingItem.
ForecastingTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the related ForecastingType.
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a revenue amount. If <code>false</code>, then <code>IsQuantity</code> must be <code>true</code>.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a quantity amount. If <code>false</code>, then <code>IsAmount</code> must be <code>true</code>.
OwnerAdjustedAmount	Type currency Properties Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The revenue amount of an individual forecast item, after an adjustment.
OwnerAdjustedQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The quantity amount of an individual forecast item, after an adjustment.
OwnerAdjustmentNote	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description A text note providing information about the adjustment. The maximum length is 255 characters. This field does not appear in reports.
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description Period ID for the adjustment. Read only.
ProductFamily	Type picklist Properties Create, Filter, Group, Nillable, Sort Description The Product Family for the adjustment. Read only.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort Description The start of the adjustment, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.

Field Name	Details
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to obtain a user's adjustment details for a specified `ForecastingItem` in their own forecast.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

ForecastingOwnerAdjustmentChangeEvent (API version 62.0)

Change events are available for the object.

ForecastingQuota

This object represents an individual user's or territory's quota for a specified time period. The Managed Quotas user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The View All Forecasts permission is required to view any user's forecast, regardless of the forecast hierarchy. Available in API versions 25.0 and later. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
CurrencyIsoCode	Type picklist

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The currency code of the quota. If omitted, the default is the importing user's personal currency.
ForecastingGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort Description If a forecast group is assigned to the forecast type, the ID of the group value that the quota belongs to. This field is a relationship field. Available in API version 60.0 and later. Relationship Name ForecastingGroupItem Relationship Type Lookup Refers To ForecastingGroupItem
ForecastingTypeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related ForecastingType.
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a revenue amount. If <code>false</code>, then <code>IsQuantity</code> must be <code>true</code>. This field is available in API version 28.0 and later.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description If <code>true</code> , then the adjustment is made in a quantity amount. If <code>false</code> , then <code>IsAmount</code> must be <code>true</code> . This field is available in API version 28.0 and later.
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description Period ID for the quota. Read only.
ProductFamily	Type picklist Properties Create, Filter, Group, Nillable, Sort Description The product family for the quota. This field is available in API version 29.0 and later.
QuotaAmount	Type currency Properties Create, Filter, Sort, Update Description The revenue quota amount for an individual user or territory and for a specific period.
QuotaOwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID that identifies the quota owner.
QuotaQuantity	Type double Properties Create, Filter, Sort, Update

Field Name	Details
	Description The quantity quota amount for an individual user and for a specific period. This field is available in API version 28.0 and later.
StartDate	Type date Properties Create, Filter, Group, Sort, Update Description The start of the quota, expressed as month and year. The date can include any day in a given month. Stored using the first date of the month.
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the territory to forecast on. Available in API version 43.0 and later.

Usage

Use this object to get an individual user's or territory's quota for a specified time period.

Note: Beginning with API version 30.0, organizations can have more than one forecasting type enabled. The `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingItem`, and `ForecastingFact` objects can all have records with different `ForecastingTypeId` values. Use the `ForecastingType` object to determine the ID for each forecast type and then filter `ForecastingQuota`, `ForecastingAdjustment`, `ForecastingItem`, or `ForecastingFact` records as necessary.

SEE ALSO:

[ForecastingAdjustment](#)

[ForecastingFact](#)

[ForecastingItem](#)

ForecastingShare

Represents forecasts shared between a forecast manager and a user. Available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>AccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Whether the user you're sharing your forecasts with can view and adjust the forecasts or view only. This field is new since the pilot. Picklist values: • <code>ViewAndEdit</code> • <code>ViewOnly</code>
<code>SharedForecastManagerRoleId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of either: • The role of the manager whose forecasts you want to share. • The territory whose forecasts you want to share.
<code>RoleType</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of hierarchy associated with the forecast share. • <code>R</code> - Role-based • <code>T</code> - Territory-based • <code>Y</code> - Territory2-based

Field Name	Details
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user with whom the forecast is shared.

Usage

Use this object to let any stakeholder at your company view and adjust forecast managers' forecasts.

ForecastingSourceDefinition

Represents the object, measure, date type, and hierarchy that a forecast uses to project sales. This object is available in API version 52.0 and later.

Note: The information in this topic applies only to forecast types created in Summer '21 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CategoryField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Name of the forecast category that is associated with the forecast type. Possible values are: • <code>Opportunity.ForecastCategoryName</code>
DateField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Field that is used for the forecast type's date type. For example, the CloseDate field on Opportunity is used for opportunity close date-based forecast types. Possible values are: • <code>Opportunity.CloseDate</code> • <code>OpportunityLineItem.ServiceDate</code> • <code>OpportunityLineItemSchedule.ScheduleDate</code>
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer name of the forecasting source definition.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
FamilyField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Use this field to group forecasts by product family. Possible values are: • <code>Product2.Family</code>
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Language of the forecasting source definition. For example, English.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. Controlling label for this forecasting source definition.
MeasureField	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Field that is used for the forecast type's measure. For example, the Amount field on Opportunity is associated with revenue-based forecast types. Possible values are*: • <code>Opportunity.Amount</code> • <code>Opportunity.Custom</code> • <code>Opportunity.TotalOpportunityQuantity</code> • <code>OpportunityLineItem.Custom</code> • <code>OpportunityLineItem.Quantity</code> • <code>OpportunityLineItem.TotalPrice</code> • <code>OpportunityLineItemSchedule.Custom</code> • <code>OpportunityLineItemSchedule.Quantity</code> • <code>OpportunityLineItemSchedule.Revenue</code> • <code>OpportunitySplit.Custom</code> • <code>OpportunitySplit.SplitAmount</code> *Where Custom represents the name of the custom field that a forecast type's measure is based on. Example: Use <code>Megawatts__c</code> to forecast energy consumption.
SourceObject	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Object associated with this forecasting source definition. Possible values are: • <code>Opportunity</code> • <code>OpportunityLineItem</code> • <code>OpportunityLineItemSchedule</code> • <code>OpportunitySplit</code> • <code>Product2</code>
Territory2Field	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description For a territory-based forecast type, indicates the field that is used for territory information.

Field	Details
	Possible values are: • Opportunity.Territory2Id For user role-based forecast types, this value is null.
UserField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Specifies who owns the forecast. Possible values are: • Opportunity.OwnerId • OpportunitySplit.SplitOwnerId

Usage

Use ForecastingSourceDefinition to define a forecast type’s structure. A forecasting source definition is joined via ForecastingTypeSource to ForecastingType.

In this example, a user role-based forecast type called Custom Amount Forecast is based on the Amount and Close Date fields on opportunities.

```
ForecastingType type = new sforce.SObject("ForecastingType");
type.DeveloperName = "Custom_Amount_Forecast";
type.MasterLabel = "Custom Amount Forecast";
type.IsAmount = true;
type.IsQuantity = false;
type.RoleType = "R";
type.DateType = "OpportunityCloseDate";
String typeId = insert(type);

ForecastingSourceDefinition sourceDefinition = new
sforce.SObject("ForecastingSourceDefinition")
sourceDefinition.DeveloperName = "Custom Amount Source";
sourceDefinition.MasterLabel = "Custom_Amount_Source";
sourceDefinition.SourceObject = "Opportunity";
sourceDefinition.MeasureField = "Opportunity.Amount";
sourceDefinition.DateField = "Opportunity.CloseDate";
sourceDefinition.UserField = "Opportunity.OwnerId";
sourceDefinition.CategoryField = "Opportunity.ForecastCategoryName";
String sourceDefinitionId = insert(sourceDefinition);

ForecastingTypeSource typeSource = new sforce.SObject("ForecastingTypeSource");
typeSource.MasterLabel = "Custom Amount Type Source";
typeSource.DeveloperName = "Custom_Amount_Type_Source";
typeSource.ForecastingTypeId = typeId;
typeSource.ForecastingSourceDefinitionId = sourceDefinitionId;
```

```
typeSource.SourceGroup = 1;  
insert(typeSource);
```

ForecastingSrcRecJudgment

Represents forecast managers' judgment of whether they consider an opportunity-related deal to be certain to close. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency code of the judgment. If omitted, the default is USD.
JudgmentOwnerId	Type reference Properties Create, Filter, Group, Sort Description The ID of the forecast manager. This field is a relationship field. Relationship Name JudgmentOwner Relationship Type Lookup Refers To User
JudgmentValue	Type picklist Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Whether the deal is likely to close (IN) or not (OUT).
ReferenceObjectId	Type reference Properties Create, Filter, Group, Sort Description The ID of the opportunity-related object. This field is a polymorphic relationship field. Relationship Name ReferenceObject Relationship Type Lookup Refers To Opportunity
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the territory that the judgment is on. This field is a polymorphic relationship field. Relationship Name ReferenceObject Relationship Type Lookup Refers To Territory2

ForecastingSubmission

Represents a submitted forecast. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available for forecast types that aren't grouped by product family forecast.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The currency code of the forecast submission. If omitted, the default is USD.
ForecastOwnerId	Type reference Properties Filter, Group, Sort Description The ID of the forecast owner. This field is a relationship field. Relationship Name ForecastOwner Refers To User
ForecastingGroupItemId	Type reference Properties Filter, Group, Nillable, Sort Description Reserved for future use. Forecast submissions aren't supported in forecast types with groups. Relationship Name ForecastingGroupItem Refers To ForecastingGroupItem
ForecastingTypeId	Type reference Properties Filter, Group, Sort

Field	Details
	Description The ID of the forecast type. This field is a relationship field. Relationship Name ForecastingType Refers To ForecastingType
IsLatest	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if the forecast submission is the most recent submission. The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only. ID of this record.
Note	Type textarea Properties Filter, Nillable, Sort Description The note attached to the submitted forecast.
PeriodId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the period to which the submission applies. This field is a relationship field. Relationship Name Period Refers To Period

Field	Details
PeriodStartDate	Type date Properties Filter, Group, Sort Description Indicates the start date of the forecast period.
ProductFamily	Type picklist Properties Filter, Group, Nillable, Sort Description Must be set to <code>none</code>. Forecast submissions aren't supported in forecast types grouped by product families.
SubmissionDateTime	Type dateTime Properties Filter, Sort Description The date and time that the forecast submission was made. Calculated internally.
Territory2Id	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the territory to forecast on. This field is a relationship field. Relationship Name Territory2 Refers To Territory2

Usage

ForecastingSubmission is a detail object that contains the submitted item category values. Each record represents the values for a single item category. ForecastingSubmission is always used as a detail object for the submission, and inserted only as part of a transaction that includes all detail objects.

ForecastingSubmissionItem

Represents the values for each forecast category in a submitted forecast. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Amount	Type currency Properties Filter, Nillable, Sort Description For forecasting types that use Amount as the measure, the amount for the forecast category. Amounts must be provided in the corporate currency.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The currency code of the forecast submission. If omitted, the default is USD.
ForecastingItemCategory	Type picklist Properties Create, Filter, Group, Sort Description The category the forecast belongs to. For individual forecast category rollups, the possible values are: • PipelineOnly—Rollup from Pipeline opportunities only. • BestCaseOnly—Rollup from Best Case opportunities only. • MostLikelyOnly—Rollup from Most Likely opportunities only. • CommitOnly —Rollup from Commit opportunities only. For cumulative forecast rollups, the possible values are: • OpenPipeline—Rollup from Pipeline, Best Case, Most Likely, and Commit opportunities.

Field	Details
	• <code>BestCaseForecast</code> —Rollup from Best Case, Most Likely, Commit, and Closed opportunities. • <code>MostLikelyForecast</code>—Rollup from Most Likely, Commit, and Closed opportunities. • <code>CommitForecast</code> —Rollup from Commit and Closed opportunities. For either cumulative or individual forecast category rollups, the possible values are: • <code>ClosedOnly</code>—Rollup from Closed opportunities only.
ForecastingSubmissionId	Type reference Properties Filter, Group, Sort Description The ID of the forecast submission. This field is a relationship field. Relationship Name ForecastingSubmission Relationship Type Master-detail Refers To ForecastingSubmission (the master object)
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only. The ID of this record.
Quantity	Type double Properties Filter, Nillable, Sort Description For forecasting types that use Quantity as the measure, the quantity for the forecast category. Quantities must be provided in the corporate currency.

ForecastingType

Used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API version 30.0 and greater.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
<code>CanDisplayQuotas</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether a forecast type can show quota information. The default value is <code>false</code>. Available in API version 38.0 and later.
<code>DateType</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The date type that forecast amounts are based on. These values are available for forecast types that were available before Summer '21. • <code>OpportunityCloseDate</code>: Base forecasts on opportunity close dates. • <code>ProductDate</code>: Base forecasts on opportunity product line item dates, if available. • <code>ScheduleDate</code>: Base forecasts on opportunity product schedule dates, if available. These values are available in API version 52.0 and later in Performance Edition and in Unlimited Edition with the Sales Cloud.

Field Name	Details
	• <code>OLIMeasureCloseDateOnly</code>: Base forecasts on opportunity close dates. • <code>ProductDateOnly</code>: Base forecasts on opportunity product line item dates, if available. • <code>ScheduleDateOnly</code>: Base forecasts on opportunity product schedule dates, if available. These values to create forecasts on custom date fields are available in API version 57.0 and later in Performance, Professional, Enterprise, and Unlimited Edition with the Sales Cloud. • <code>OLIMeasureOppCustomDateOnly</code>: Base forecasts on custom opportunity dates, if available. • <code>OpportunityCustomDate</code>: Base forecasts on custom opportunity dates. The custom date field used must be on the opportunity object and based on the date type.
<code>DeveloperName</code>	Type string Properties Create, Filter, Group, Sort, Update Description The name of the forecasting type. The <code>DeveloperName</code> is called name in the Metadata API and Forecasting Type in custom reports.
<code>ForecastingGroupID</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description Indicates whether the forecasting type has a group assignment, and if so, the name of the group. This field is a relationship field. Available in API version 60.0 and later. Relationship Name ForecastingGroup Relationship Type Lookup Refers To ForecastingGroup
<code>HasAdjustments</code>	Type boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether forecast managers can adjust forecasts of their immediate subordinates and child territories. The default value is <code>false</code>. Available in API version 60.0 and later.
HasOwnerAdjustments	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether all forecast users can adjust their own forecasts, including the territory forecasts that they own. The default value is <code>false</code>. Available in API version 60.0 and later.
HasProductFamily	Type boolean Properties Create, Defaulted on create, Group Description Indicates whether a forecasts view includes product families. The default value is <code>false</code>. Available in API version 40.0 and later.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the forecasting type is enabled. The default value is <code>false</code>.
IsAmount	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the forecasting type is based on the revenue measure. The default value is <code>false</code>.
IsPlatformType	Type boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates a legacy forecast type that wasn't available before Summer '21. The default value is <code>false</code>. Available in API version 52.0 and later.
IsQuantity	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the forecasting type is based on the quantity measure. The default value is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the forecasting type.
LastActivatedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date when a forecast type was activated. Read only. Available in API version 53.0 and later.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Controlling label for this forecasting type value. This display value is the internal label that doesn't get translated.
OpportunitySplitTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Indicates whether the forecasting type has a split type, and if so, the name of the split type. This field is a relationship field. Available in API version 41.0 and later. Relationship Name OpportunitySplitType Relationship Type Lookup Refers To OpportunitySplitType
OpptyLineItemSplitTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Indicates whether the forecasting type has a product split type, and if so, the name of the product split type. This field is a relationship field. Available in API version 58.0 and later. Relationship Name OpptyLineItemSplitType Relationship Type Lookup Refers To OpptyLineItemSplitType
RoleType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Indicates whether the role type has a forecasting type, and if so, which forecasting type. Available in API version 41.0 and later. Possible values are: • R—User role-based forecasting type • T—Territory1-based forecasting type; not used • Y—Territory2-based forecasting type
Territory2ModelId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Indicates whether the forecasting type has a Territory2 model, and if so, the name of the Territory2 model. Available in API version 41.0 and later.

ForecastingTypeSource

Maps a forecasting source definition to a forecast type. This object is available in API version 52.0 and later.

Note: The information in this topic applies only to forecast types created in Summer '21 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer name of the forecasting type source.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ForecastingSourceDefinitionId	Type reference Properties Create, Filter, Group, Sort Description ID of the forecasting source definition. This field is a relationship field. Relationship Name ForecastingSourceDefinition Relationship Type Lookup

Field	Details
	Refers To ForecastingSourceDefinition
ForecastingTypeId	Type reference Properties Create, Filter, Group, Sort Description ID of the forecast type. Can be linked only to forecast types created in Summer '21 and later. This field is a relationship field. Relationship Name ForecastingType Relationship Type Lookup Refers To ForecastingType
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Language of the forecasting type source.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. Controlling label for this forecasting type source.
ParentSourceDefinitionId	Type reference Properties Create, Filter, Group, Nillable, Sort Description For forecast types not based on the opportunity object and not based on a custom measure, this value represents the parent ForecastingSourceDefinition of the linked ForecastingSourceDefinition. This field is a relationship field. - Opportunity Product is the parent of Opportunity. - Opportunity Split is the parent of Opportunity.

Field	Details
	Line Item Schedule is the parent of Opportunity Product. Relationship Name ParentSourceDefinition Relationship Type Lookup Refers To ForecastingSourceDefinition
RelationField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Represents the field linking the source objects of the parent ForecastingSourceDefinition to the child ForecastingSourceDefinition. Possible values are: - OpportunityLineItem.OpportunityId - OpportunityLineItem.Product2Id - OpportunityLineItemSchedule.OpportunityLineItemId - OpportunitySplit.OpportunityId
SourceGroup	Type int Properties Create, Filter, Group, Sort Description Required. Represents a grouping of forecasting source definitions.

Usage

Use this object to define a forecast type’s structure. This junction object links `ForecastingSourceDefinition` to `ForecastingType`.

For an example, see [ForecastingSourceDefinition](#).

ForecastingUserPreference

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard users with the View All Forecasts or Allow Forecasting permission or delegated forecast manager status can access this object.

Fields

Field Name	Details
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A unique system-generated numerical identifier for the user.
ForecastingDisplayedTypeId	Type reference Properties Create, Group, Sort, Update Description An identifier for the forecasting type that's displayed.
ForecastingPeriodDuration	Type int Properties Create, Group, Nillable, Sort, Update Description How long the forecasting period lasts.
ForecastingPeriodType	Type picklist Properties Create, Group, Nillable, Restricted picklist, Sort, Update Description The forecasting period's type. Valid values include: Month, Quarter, Week, or Year
ForecastingStartPeriod	Type int

Field Name	Details
	Properties Create, Group, Nillable, Sort, Update Description The date when the forecasting period begins.
ForecastingViewCurrency	Type string Properties Create, Group, Nillable, Sort, Update Description The currency shown on the forecasts page.
IsForecastingHideZeroRows	Type boolean Properties Create, Defaulted on create, Group, Sort, Update Description Whether the forecasts page shows zero-value rows.
IsForecastingShowQuantity	Type boolean Properties Create, Defaulted on create, Group, Sort, Update Description Whether the forecasts page shows forecast quantity.
IsHideForecastingGuidedTour	Type boolean Properties Create, Defaulted on create, Group, Sort, Update Description Whether the forecasts page shows the guided tour.
IsHideForecastingQuotaColumn	Type boolean Properties Create, Defaulted on create, Group, Sort, Update Description Whether the forecasts page shows a quota column.

Field Name	Details
IsShowForecastingChangeSignals	Type boolean Properties Create, Defaulted on create, Group, Sort, Update Description Whether the forecasts page shows changes in the last 7 days.
IsShowForecastingQuotaAttainment	Type boolean Properties Create, Defaulted on create, Group, Sort, Update Description Whether the forecasts page shows quota attainment information.

FormulaFunction

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
CategoryId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the FormulaFunctionCategory. This is a relationship field. Relationship Name Category Relationship Type Lookup Refers To FormulaFunctionCategory

Field	Details
Description	Type string Properties Filter, Group, Nillable, Sort Description Description of the formula function.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.
ExampleString	Type string Properties Filter, Group, Nillable, Sort Description Describes the function and what arguments you can use with it.
IsAllowedInEntityContext	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether you can use the formula function on an Entity (<code>true</code>) or not (<code>false</code>). For example, you cannot use the PRIORVALUE function in a custom Account formula field. The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2813 object instead.
IsAllowedInFlowContext	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the formula function is allowed in a Flow (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2813 object instead.

Field	Details
IsAllowedInVisualforceContext	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the formula function is allowed in Visualforce (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is removed in API version 48.0 and later. Use the FormulaFunctionAllowedType on page 2813 object instead.
Label	Type string Properties Filter, Group, Nillable, Sort Description The formula function label that appears in the user interface.
Name	Type string Properties Filter, Group, Nillable, Sort Description The name of the formula function.

Usage

Query `FormulaFunction` to search for available formula functions, such as `AND()`, `ISBLANK()`, `MAX()`, `MIN()`, and others.

FormulaFunctionAllowedType

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
DurableId	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.
FunctionId	Type string Properties Filter, Group, Nillable, Sort Description Unique identifier for the supported function. This is a relationship field. Relationship Name Function Relationship Type Lookup Refers To FormulaFunction
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The name of the formula type in which the function is supported. Possible values are: • FLOW • VALIDATION • VISUALFORCE

FormulaFunctionCategory

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
DurableId	Type string Properties Filter, Group, Nillable, Sort Description Unique identifier for the field. Always retrieve this value before using it, as the value isn't guaranteed to stay the same from one release to the next. To simplify queries, use this field.
Label	Type string Properties Filter, Group, Nillable, Sort Description Label of the FormulaFunctionCategory that appears in the user interface.
Name	Type string Properties Filter, Group, Nillable, Sort Description Name of the FormulaFunctionCategory.

Usage

Query FormulaFunctionCategory to search for categories of available formula functions, such as `Math`, `Logical`, `Date` and `Time`, and others.

FrcstCustmCatgRampRateSrc

Represents the total contract value used for custom bulk adjustments. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
BaseValueFrcstSrcDefinitionId	Type reference Properties Create, Filter, Group, Sort, Update Description The DMO that contains the field in which the total contract value exists. This field is a relationship field. Relationship Name BaseValueFrcstSrcDefinition Refers To ForecastingSourceDefinition
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
ForecastingCustomCategoryId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the forecasting custom category. This field is a relationship field. Relationship Name ForecastingCustomCategory

Field	Details
	Refers To ForecastingCustomCategory
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code, which controls the language of the FrcstCustmCatgRampRateSrc.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for this FrcstCustmCatgRampRateSrc value. This display value is the internal label that doesn't get translated.

FrcstCustmzAdjustment

Represents an individual forecast manager's adjustment of a subordinate's consumption forecast. Available in API version 63.0 and later. This object is different from the ForecastingAdjustment object, which represents managers' adjustments of subordinates' pipeline forecasts.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AdjustedAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The revenue amount of an individual forecast item, after an adjustment.

Field	Details
AdjustedQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The quantity amount of an individual forecast item, after an adjustment.
AdjustmentNote	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description A text note providing information about the adjustment. The maximum length is 255 characters. This field doesn't appear in reports.
ForecastingCustomCategoryId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the forecasting custom category. This field is a relationship field. Relationship Name ForecastingCustomCategory Refers To ForecastingCustomCategory
ForecastingTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the related forecasting type. This field is a relationship field. Relationship Name ForecastingType Refers To ForecastingType

Field	Details
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a revenue amount. If <code>false</code>, IsQuantity must be set to <code>true</code>. The default value is <code>false</code>.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the adjustment is made in a quantity amount. If <code>false</code>, IsAmount must be set to <code>true</code>. The default value is <code>false</code>.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the forecast owner. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
PeriodId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Period ID for the adjustment. This field is a relationship field. Relationship Name Period Refers To Period

Field	Details
Territory2Id	Type reference Properties Reserved for future use. Description Reserved for future use.

FrcstCustmzOwnerAdjustment

Represents an individual forecast user's adjustment of their own consumption forecast. Available in API version 63.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents users' adjustments of their pipeline forecasts.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AdjustedAmount	Type currency Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The revenue amount of an individual forecast item, after an adjustment.
AdjustedQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The quantity amount of an individual forecast item, after an adjustment.
AdjustmentNote	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description A text note providing information about the adjustment. The maximum length is 255 characters. This field doesn't appear in reports.
CustomDimension	Type string Properties Create, Filter, Group, Nillable, Sort Description The ID of the additional dimension of the forecasting adjustment. For example, account ID, use case ID. Any data imported from an external source must be exactly 15 characters.
ForecastingCustomCategoryId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the forecasting custom category. This field is a relationship field. Relationship Name ForecastingCustomCategory Refers To ForecastingCustomCategory

Field	Details
ForecastingTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the related forecasting type. This field is a relationship field. Relationship Name ForecastingType Refers To ForecastingType
IsAmount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, then the adjustment is made in a revenue amount. If <code>false</code>, <code>IsQuantity</code> must be set to <code>true</code>. The default value is <code>false</code>.
IsQuantity	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the adjustment is made in a quantity amount. If <code>false</code>, <code>IsAmount</code> must be set to <code>true</code>. The default value is <code>false</code>.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the forecast owner. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User

Field	Details
PeriodId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Period ID for the adjustment. This field is a relationship field. Relationship Name Period Refers To Period
Territory2Id	Type reference Properties Reserved for future use. Description Reserved for future use.

FulfillmentOrder

Represents a group of products, fees, and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The FulfillmentOrderLineItems belonging to a FulfillmentOrder are associated with OrderItemSummary objects belonging to a single OrderSummary. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Account or Person Account associated with the FulfillmentOrder. It represents the shopper in the storefront. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActiveDate	Type datetime Properties Filter, Group, Nillable, Sort Description Date when the FulfillmentOrder becomes active. This field is available in API version 61.0 and later.
BillToContactId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Contact associated with the FulfillmentOrder. It represents the shopper in the storefront when not using person accounts.

Field	Details
	This field is available in API version 49.0 and later. This field is a relationship field. Relationship Name BillToContact Relationship Type Lookup Refers To Contact
ClosedDate	Type datetime Properties Filter, Group, Nillable, Sort Description Date the FulfillmentOrder closed. Automatically entered. This field is available in API version 61.0 and later.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the FulfillmentOrder. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD. This field is available in API version 49.0 and later.
DeliveryDate	Type datetime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the FulfillmentOrder was delivered. This field is a relationship field.

Field	Details
DeliveryMethodId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the DeliveryMethod used for this FulfillmentOrder. This field is a relationship field. Relationship Name DeliveryMethod Relationship Type Lookup Refers To OrderDeliveryMethod
FulfilledFromLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Location handling this FulfillmentOrder. This field is a relationship field. Relationship Name FulfilledFromLocation Relationship Type Lookup Refers To Location
FulfilledToAddress	Type address Properties Filter, Nillable Description Address of the recipient.
FulfilledToCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address city.

Field	Details
FulfilledToCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address country.
FulfilledToEmailAddress	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the recipient.
FulfilledTo GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy of the geocode for the recipient address. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
FulfilledToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.

Field	Details
FulfilledToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
FulfilledToName	Type string Properties Create, Filter, Group, Sort, Update Description Name on the recipient address.
FulfilledToPhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the recipient.
FulfilledToPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address postal code.
FulfilledToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address state.
FulfilledToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Recipient address street.
FulfillmentOrderNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the FulfillmentOrder.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, including adjustments and tax, of the products, fees, and delivery charges on the FulfillmentOrder. This amount includes all FulfillmentOrderLineItems associated with the FulfillmentOrder. This amount is equal to TotalAmount + TotalTaxAmount.
InvoiceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Invoice associated with the FulfillmentOrder. This field is a relationship field. Relationship Name Invoice Relationship Type Lookup Refers To Invoice
IsReship	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the FulfillmentOrder is for a reshipment. The default value is false. This field is available in API version 53.0 and later.

Field	Details
IsSuspended	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the FulfillmentOrder is suspended. The default value is false.
ItemCount	Type double Properties Filter, Nillable, Sort Description Sum of the quantities of the FulfillmentOrderLineItems included in the FulfillmentOrder.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
OrderId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the original Order that generated the FulfillmentOrder. This field is a relationship field. Relationship Name Order Relationship Type Lookup

Field	Details
	Refers To Order
OrderSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the OrderSummary associated with the FulfillmentOrder. This field is a relationship field. Relationship Name OrderSummary Relationship Type Lookup Refers To OrderSummary
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User who currently owns this FulfillmentOrder. Default value is the User logged in to the API to perform the create. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ProcessingTimeInMinutes	Type long Properties Create, Filter, Nillable, Sort, Update Description How many minutes it took to process the FulfillmentOrder, from the start of processing to completion.

Field	Details
StartFulfillmentDate	Type datetime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the fulfillment process was started for the FulfillmentOrder.
Status	Type picklist Properties Create, Filter, Group, Sort, Update Description Status of the FulfillmentOrder. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category. Default values are: • Allocated (Activated) • Assigned (Fulfilling) • Cancelled (Cancelled) • Draft (Draft) • Fulfilled (Closed) • Pick Complete (Fulfilling) This value is available in API v56.0 and later. • Pickpack (Fulfilling) • Printed (Fulfilling) This value is available in API v56.0 and later. • Rejected (Rejected) This value is available in API v56.0 and later.
StatusCategory	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Status category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each status category corresponds to one or more statuses. Possible values are: • ACTIVATED—Activated • CANCELLED—Cancelled • CLOSED—Closed • DRAFT—Draft • FULFILLING—Fulfilling

Field	Details
	REJECTED—Rejected This value is available in API v56.0 and later.
TaxLocaleType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The system used to handle tax on the original Order associated with the FulfillmentOrder. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. Possible values are: - Gross (displays most prices and taxes as combined values) - Net (displays most prices and taxes as separate values) This field is available in API version 49.0 and later.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the products on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type code Product, not adjustments to delivery charges or fees.
TotalAdjustmentAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the products on the Fulfillment Order, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type code Product. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustmentAmount.

Field	Details
TotalAmount	Type currency Properties Filter, Nillable, Sort Description Adjusted total, not including tax, of the FulfillmentOrderLineItems, including products, fees, and delivery charges, on the Fulfillment Order.
TotalDeliveryAdjustAmount	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the delivery charges on the Fulfillment Order. This value only includes adjustments to FulfillmentOrderLineItems of type Delivery Charge.
TotalDeliveryAdjustAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the delivery charges on the Fulfillment Order, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type Delivery Charge. This amount is equal to TotalDeliveryAdjustAmount + TotalDeliveryAdjustTaxAmount. This field is available in API version 49.0 and later.
TotalDeliveryAdjustTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalDeliveryAdjustAmount.
TotalDeliveryAmount	Type currency Properties Filter, Nillable, Sort Description Total of the delivery charges on the FulfillmentOrder. This value only includes FulfillmentOrderLineItems of type Delivery Charge.

Field	Details
TotalDeliveryAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the delivery charges on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type Delivery Charge. This amount is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount. This field is available in API version 49.0 and later.
TotalDeliveryTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalDeliveryAmount.
TotalFeeAdjustAmount	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the fees on the FulfillmentOrder. This value only includes adjustments to FulfillmentOrderLineItems of type Fee. This field is available in API version 56.0 and later.
TotalFeeAdjustAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the fees on the FulfillmentOrder, inclusive of tax. This value only includes adjustments to FulfillmentOrderLineItems of type Fee. This amount is equal to TotalFeeAdjustAmount + TotalFeeAdjustTaxAmount. This field is available in API version 56.0 and later.
TotalFeeAdjustTaxAmount	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Tax on the TotalFeeAdjustAmount. This field is available in API version 56.0 and later.
TotalFeeAmount	Type currency Properties Filter, Nillable, Sort Description Total amount of the fees on the FulfillmentOrder, excluding adjustments and tax. This value only includes FulfillmentOrderLineItems of type Fee. This field is available in API version 56.0 and later.
TotalFeeAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total price of the fees on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type Fee. This amount is equal to TotalFeeAmount + TotalFeeTaxAmount. This field is available in API version 56.0 and later.
TotalFeeTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalFeeAmount. This field is available in API version 56.0 and later.
TotalProductAmount	Type currency Properties Filter, Nillable, Sort Description Total price of the products on the FulfillmentOrder, excluding order adjustments, delivery charges, and fees. This value only includes FulfillmentOrderLineItems of type code Product.
TotalProductAmtWithTax	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Total price of the products on the FulfillmentOrder, inclusive of tax. This value only includes FulfillmentOrderLineItems of type code Product. This amount is equal to TotalProductAmount + TotalProductTaxAmount. This field is available in API version 49.0 and later.
TotalProductTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalProductAmount.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAmount.
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Type of the FulfillmentOrder. Each type corresponds to one type category, shown here in parentheses. You can customize the type picklist to represent your business processes, but the type category picklist is fixed because processing is based on those values. If you customize the type picklist, include at least one type value for each type category. Default values are: • Download (Digital) • Email (Digital) • In Store Pickup (Physical) • Retail Store (Physical) • Supplier (Drop Ship) • Warehouse (Physical)
TypeCategory	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type category of the FulfillmentOrder. Processing of the FulfillmentOrder depends on this value. Each type category corresponds to one or more types. Possible values are: • DIGITAL—Digital • DROPSHIP—Drop Ship • PHYSICAL—Physical

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

FulfillmentOrderItemAdjustment

Represents a price adjustment on a FulfillmentOrderLineItem. Corresponds to an OrderItemAdjustmentLineSummary associated with the corresponding OrderItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort Description Amount, not including tax, of the adjustment.
CampaignName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Campaign associated with the adjustment.
CouponName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Coupon associated with the adjustment.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description ISO code for the currency of the FulfillmentOrderLineItem to which the adjustment applies. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description Text description of the adjustment.
FulfillmentOrderId	Type reference Properties Create, Filter, Group, Sort Description ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem to which the adjustment applies.
FulfillmentOrderItemAdjustmentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the FulfillmentOrderLineItemAdjustment.
FulfillmentOrderLineItemId	Type reference Properties Create, Filter, Group, Sort Description ID of the FulfillmentOrderLineItem to which this adjustment applies.
OrderItemAdjustLineSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the OrderItemAdjustmentLineSummary associated with the adjustment.
PromotionName	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Promotion associated with the adjustment.
TotalAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount. This field is available in API version 49.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the Amount.

FulfillmentOrderItemTax

Represents the tax on a FulfillmentOrderLineItem or FulfillmentOrderItemAdjustment. Corresponds to an OrderItemTaxLineItemSummary. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort Description Amount of tax represented by the FulfillmentOrderItemTax.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description ISO code for the currency of the FulfillmentOrderLineItem to which the tax applies. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
Description	Type textarea Properties Create, Nillable, Update Description Description of the FulfillmentOrderItemTax.
FulfillmentOrderId	Type reference Properties Create, Filter, Group, Sort Description ID of the associated FulfillmentOrder.
FulfillmentOrderItemAdjustId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderItemAdjustment to which the tax applies. If this value is null, the adjustment applies to a FulfillmentOrderLineItem.
FulfillmentOrderItemTaxNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the FulfillmentOrderItemTax.
FulfillmentOrderLineItemId	Type reference Properties Create, Filter, Group, Sort Description If this object represents tax on a FulfillmentOrderLineItem, this value is the ID of that FulfillmentOrderLineItem. If this object represents tax on an adjustment, this value is the ID of the FulfillmentOrderLineItem to which the adjustment applies.
OrderItemTaxLineItemSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the OrderItemTaxLineItemSummary associated with the OrderItemSummary that corresponds to the FulfillmentOrderLineItem to which the tax applies.
Rate	Type percent Properties Create, Filter, Nillable, Sort, Update Description Tax rate used to calculate the Amount.
TaxEffectiveDate	Type date Properties Create, Filter, Group, Sort, Update Description Date on which the Amount was calculated. Important due to tax rate changes over time.

Field	Details
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates whether the Amount is actual or estimated. Possible values are: • Actual • Estimated

FulfillmentOrderItemTaxChangeEvent (API version 62.0)

Change events are available for the object.

FulfillmentOrderLineItem

Represents a product or delivery charge belonging to a FulfillmentOrder. Corresponds to an OrderItemSummary. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
CurrencyIsoCode	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the FulfillmentOrder associated with the FulfillmentOrderLineItem. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD. This field is available in API version 49.0 and later.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the FulfillmentOrderLineItem.
EndDate	Type dateTime Properties Create, Filter, Nillable, Sort Description End date of the FulfillmentOrderLineItem.
FulfillmentOrderId	Type reference Properties Create, Filter, Group, Sort Description ID of the FulfillmentOrder associated with the FulfillmentOrderLineItem. This field is a relationship field. Relationship Name FulfillmentOrder Relationship Type Lookup Refers To FulfillmentOrder

Field	Details
FulfillmentOrderLineItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the FulfillmentOrderLineItem.
GrossUnitPrice	Type currency Properties Create, Filter, Nillable, Sort Description Unit price, including tax, of the FulfillmentOrderLineItem. This value is equal to TotalPrice + TotalTaxAmount. This field is available in API version 49.0 and later.
IsReship	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the FulfillmentOrderLineItem belongs to a reshipment. The default value is false. This field is available in API version 53.0 and later.
MainFulfillmentOrderLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the original FulfillmentOrderLineItem. This field is a relationship field. This field is available in API version 63.0 and later. Relationship Name FulfillmentOrderLineItem Relationship Type Lookup Refers To FulfillmentOrderLineItem

Field	Details
OrderItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the original OrderItem for the OrderItemSummary associated with the FulfillmentOrderLineItem. This field is a relationship field. Relationship Name OrderItem Relationship Type Lookup Refers To OrderItem
OrderItemSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the OrderItemSummary associated with the FulfillmentOrderLineItem. This field is a relationship field. Relationship Name OrderItemSummary Relationship Type Lookup Refers To OrderItemSummary
OriginalQuantity	Type double Properties Create, Filter, Sort Description Original quantity of the FulfillmentOrderLineItem.
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description ID of the product represented by the FulfillmentOrderLineItem. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
Quantity	Type double Properties Create, Filter, Sort, Update Description Current quantity of the FulfillmentOrderLineItem. Equal to the original quantity minus any canceled quantity.
QuantityUnitOfMeasure	Type string Properties Create, Filter, Group, Nillable, Sort Description Unit of measure of the quantity, for example: unit, gallon, ton, or case.
RejectedQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description Used by the Distributed Order Management package and Store Fulfillment app to store the quantity that has been rejected by a fulfillment location. This field is available in API version 57.0 and later.
RejectReason	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description If the FulfillmentOrderLineItem was rejected by a fulfillment location, the reason for the rejection.

Field	Details
	Default values are: • Damaged • Just Sold • Other • Out of Packing Supplies • Out of Stock This field is available in API version 56.0 and later.
ReshipReason	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description If the FulfillmentOrderLineItem belongs to a reshipment, the reason for the reshipment. Default values are: • Damaged • Lost • Unknown • Wrong Item This field is available in API version 53.0 and later.
ServiceDate	Type dateTime Properties Create, Filter, Nillable, Sort Description Service or start date of the FulfillmentOrderLineItem.
ScopeIdentifierText	Type string Properties Create, Filter, Group, Nillable, Sort Description Unique identifier used to identify the scope in which this fulfillment order line item record is created.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Total of any price adjustments applied to the FulfillmentOrderLineItem.
TotalAdjustmentAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustmentAmount.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, including adjustments and tax, of the FulfillmentOrderLineItem.
TotalLineAmount	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort Description Total, not including adjustments or tax, of the FulfillmentOrderLineItem.
TotalLineAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total price of the FulfillmentOrderLineItem, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later.

Field	Details
TotalLineTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalLineAmount.
TotalPrice	Type currency Properties Filter, Nillable, Sort Description Total, including adjustments but not tax, of the FulfillmentOrderLineItem. Equal to UnitPrice times Quantity.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalPrice.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Type of the FulfillmentOrderLineItem. Matches the type of the associated OrderItemSummary. Delivery Charge indicates that the FulfillmentOrderLineItem represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses. Possible values are: • <code>Delivery Charge</code> (Charge) • <code>Fee</code> (Charge) This value is available in API v56.0 and later. • <code>Order Product</code> (Product)
TypeCode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Type code of the FulfillmentOrderLineItem. Matches the type code of the associated OrderItemSummary. Processing depends on this value. Charge indicates that the FulfillmentOrderLineItem represents a charge or fee. Product indicates that it represents any other type of product, service, or charge. A type code can be associated with one or more types. Possible values are: • Charge • Product
UnitPrice	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort Description Unit price of the FulfillmentOrderLineItem.

FulfillmentOrderChangeEvent

Change events are available for the object.

FunctionConnection

Represents a connection between an org and Salesforce Functions. This object is available in API version 52.0 and later.

In API version 53.0, the name of this object was changed from SffunctionsConnection to FunctionConnection.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Error	Type string Properties Filter, Group, Nillable, Sort Description The error string, if any, for the connection between the org and Salesforce Functions.
FunctionsAccountLoginOrg	Type string Properties Filter, Group, Nillable, Sort Description The Salesforce Functions account login org.
FunctionsAccountName	Type string Properties Filter, Group, Nillable, Sort Description The Salesforce Functions account name.
FunctionsAccountUuid	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The unique Salesforce Functions account UUID. This is a generated ID that is not in Salesforce object ID format.
Sequence	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description Sequence number for the record.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The status of the connection between the org and Salesforce Functions. Possible values are: • <code>Attempted</code> • <code>None</code> • <code>TrustedBiDirection</code> • <code>TrustedUniDirection</code> The default value is 'None'. <code>TrustedBiDirection</code> indicates the connection is fully established.

Usage

FunctionConnection is not intended for direct use and should be treated as a read-only object that represents the current connection information between your org and Salesforce Functions. To create and manage connections between your org and Salesforce Functions use the steps and commands described in the [Salesforce Functions developer documentation](#).

FunctionConnection is not supported in Trialforce templates or org snapshots.

FunctionInvocationRequest

Represents invocation information for a Salesforce Function. This object is available in API version 51.0 and later.

When a Salesforce Function is invoked using the Apex `functions.Function` invoke methods, a FunctionInvocationRequest record is created that contains information on the status and results of the invocation.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`

Fields

Field	Details
CallbackStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The status of the callback for asynchronous invocations. This field is new in API version 52.0. Possible values are: • <code>Completed</code> - Not used for the Salesforce Functions beta.

Field	Details
	• Enqueued - The Function has completed (either successfully or unsuccessfully), and the callback has been enqueued for asynchronous execution in the Salesforce org. • Failed - Not used for the Salesforce Functions beta. • PendingResponse - The Function has not yet completed, so the callback has not been called yet. The default value is 'PendingResponse'.
ExecutionTime	Type long Properties Filter, Group, Nillable, Sort, Update Description The execution time of the Function in milliseconds.
ExtendedResponse	Type textarea Properties Nillable, Update Description JSON object with additional information about the result of the Function execution.
FunctionName	Type string Properties Filter, Group, idLookup, Sort Description Name of the Function that was invoked. This name is case-sensitive and uses the format "project name-function name"
InvokingNamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Prefix of the namespace that invokes the function. A namespace can invoke the global function using an installed package via Apex.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The namespace prefix that is associated with this object. This object is available in API version 53.0 and later. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The owner of the FunctionInvocationRequest. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ResponseBody	Type base64 Properties Nillable, Update Description Response body of the invoked Function.
ResponseContentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Content type of the response body of the invoked Function. For example, the content type could be <code>application/json</code>, <code>text/csv</code>, or various other values depending on what the Function returned.
ResponseLength	Type int Properties Filter, Group, Nillable, Sort Description Length of the response body.
ResponseName	Type string Properties Filter, Group, Nillable, Sort, Update Description Name of response, not currently used.
ResponseUncompressedLength	Type int Properties Filter, Group, Nillable, Sort, Update Description Uncompressed length of the Function response, if the response content was compressed.
StackTrace	Type textarea Properties Nillable, Update Description If there was an error invoking the function, this field contains the Function stack trace.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Status of the invoked Function. Functions that are invoked asynchronously can be in a queued <code>InProgress</code> state before they are invoked. Possible values are:

Field	Details
	• <code>Dispatched</code> - Not used for the Salesforce Functions beta. • <code>Error</code> - The Function failed to execute due to either an error starting the Function, or an error while the Function was running. • <code>FunctionInProgress</code> - The Function invocation has been sent to the Salesforce Functions compute environment, and is running. • <code>InProgress</code> - The Function invocation request has been enqueued. • <code>New</code> - The Function invocation request has been created, but not enqueued yet. • <code>Success</code> - The Function has completed execution. For status on whether the callback has been called, see the <code>CallbackStatus</code> field. The default value is 'New'.

Usage

Treat `FunctionInvocationRequest` records as read-only records used to get information about a specific Function invocation. To invoke Functions, use the Apex `functions.Function` class invoke methods.

`FunctionInvocationRequest` is not supported in Trialforce templates or org snapshots.

FunctionReference

Represents a deployed Salesforce Function associated with an org. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>Access</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The label for whether managed components can access across namespaces. Possible values are: • <code>Global</code>—The managed components can access across namespaces. • <code>Public</code>—The managed components can access within the same namespace. The default value is <code>Public</code>.

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the Function.
FunctionName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The developer name of the Function. This name is case sensitive and uses the format "project name-function name". This field is unique within your organization.
ImageReference	Type reference Properties Filter, Group, Nillable, Sort Description Stores details about an image associated with a function. This is internal only, used by packaging only, and should not be editable or set by the customer.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language code for the Function, such as "en_US".
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label for the Function.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The namespace prefix that is associated with this object. This object is available in API version 53.0 and later. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Treat `FunctionReference` records as read-only records used to get information about a specific Function associated with your org. To invoke Functions, use the Apex `functions.Function` class invoke methods. To deploy and associate Functions with your org, use Salesforce CLI commands associated with Functions, as described in the [Salesforce Functions developer documentation](#).

`FunctionReference` is not supported in Salesforce templates or org snapshots.

GenAIConversationSummary

Represents a generated summary of a voice or video call. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, Einstein Conversation Insights and Einstein for Sales must be enabled in your org.

Fields

Field	Details
<code>ConversationRecordId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description The unique ID of the related voice or video call record. This field is a polymorphic relationship field. Relationship Name ConversationRecord Relationship Type Master-detail Refers To VideoCall, VoiceCall (the master object)
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. Possible values are: • MXN—Mexican Peso • USD—U.S. Dollar The default value is USD.
ErrorMessage	Type string Properties Filter, Group, Nillable, Sort Description An error message when there is a problem with sharing the conversation summary.
Source	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Whether the summary shown is content generated by Einstein or subsequently edited by a user. Possible values are: • EINSTEIN_GPT—Einstein

Field	Details
	USER_EDITED—User Edited
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The status of the summary. Possible values are: - ERROR—Error - GENERATING—Generating - SUCCESS—Success
Summary	Type textarea Properties Create, Nillable, Update Description The summary text content.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

GenAIConversationSummaryChangeEvent on page 68

Change events are available for the object.

GenAIConversationSummaryFeed on page 55

Feed tracking is available for the object.

GenAIConversationSummaryHistory on page 63

History is available for tracked fields of the object.

GenAIConversationSummaryOwnerSharingRule on page 65

Sharing rules are available for the object.

GenAIConversationSummaryShare on page 67

Sharing is available for the object.

GenAiFunctionDefinition

Represents an agent action. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Agents must be enabled in your org.

Fields

Field	Details
Description	Type textarea Properties Create, Update Description A description explaining the general purpose and domain of the action.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name for this object.
InvocationTarget	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Target invocation used by invocation operations.
InvocationTargetType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Invocable action types used by invocation operations. Possible values are: - apex - flow - generatePromptResponse

Field	Details
IsConfirmationRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether confirmation is required for this action. The default value is <code>false</code>.
IsLocal	Type boolean Properties Defaulted on create, Filter, Group, Sort Description This field is a calculated field and is set to <code>true</code> if this action is an edited version of a standard action. The default value is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the GenAiFunctionDefinition. The value for this field is the language value of the org.
LocalDeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name for this action within a topic.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label for the generative AI action.
NamespacePrefix	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The namespace of the GenAiFunctionDefinition.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the object that owns the action. This field is a relationship field. Relationship Name Parent Refers To GenAiPlannerFunctionDef
PlannerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The agent planner service for this action. This field is a relationship field. Relationship Name Planner Refers To GenAiPlannerDefinition
PluginId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The agent topic for this agent action. This field is a relationship field. Relationship Name Plugin Refers To GenAiPluginDefinition

Field	Details
Source	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The optional source standard or custom action from which this action's configuration, including description, input, and output, is copied. If there's no value, the action is used only within the parent topic.

GenAiPlannerDefinition

Represents an agent planner service that uses a large language model (LLM) and a reasoning strategy to decompose a given task into smaller subtasks, identify the most suitable actions for each subtask, and invoke them. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Agents must be enabled in your org.

Fields

Field	Details
Capabilities	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A set of tags associated with the agent planner service definition.
Description	Type textarea Properties Create, Filter, Group, Sort, Update Description A description explaining the general purpose and domain of the agent planner service definition.

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name for this object.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the GenAiPlannerDefinition. The value for this field is the language value of the org.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label of the agent planner service definition.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace of the GenAiPlannerDefinition.
PlannerType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A particular approach to problem solving that is given as prompt instructions to a large language model (LLM). Possible values are: • <code>AiCopilot__ReAct</code>—Uses a reactive planning strategy to solve problems with the LLM. This strategy consists of prompting the LLM to generate the next step in response to an event and the current context. It differs from a sequential planner in that it doesn't plan more than one step ahead of time.

Field	Details
	<code>AiCopilot__SequentialPlannerIntentClassifier</code>—Uses an intent classifier prompt and a sequential planner prompt. With each text input, the planner asks the LLM to generate a step-by-step plan to finish the goal. It plans first, then executes.

GenAiPlannerFunctionDef

Represents a relationship between the agent planner service and agent actions. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Agents must be enabled in your org.

Fields

Field	Details
PlannerId	Type reference Properties Create, Filter, Group, Sort, Update Description This field is a relationship field. Relationship Name Planner Relationship Type Lookup Refers To GenAiPlannerDefinition
Plugin	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A set of actions that contextualize the agent planner service.

GenAiPluginDefinition

Represents an agent topic, which is a category of actions related to a particular job to be done by AI agents. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Agents must be enabled in your org.

Fields

Field	Details
CanEscalate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this topic is eligible for escalation to a rep. The default value is <code>false</code>.
Description	Type textarea Properties Create, Update Description The description of the topic.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Represents the API name of the topic. Can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
IsLocal	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description This field is a calculated field and is set to <code>true</code> if this topic is an edited version of a standard topic. The default value is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the topic.
LocalDeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name for this topic within an agent.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label for the topic.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of these values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This

Field	Details
	field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the object that owns the topic. This field is a polymorphic relationship field. Relationship Name Parent Refers To GenAiPlannerDefinition, GenAiPlannerFunctionDef
PlannerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The agent planner service for this topic. This field is a relationship field. Relationship Name Planner Refers To GenAiPlannerDefinition
PluginType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description Possible values are: <code>APICustomTopic</code> <code>Topic</code>
Scope	Type textarea

Field	Details
	Properties Create, Nillable, Update Description A specific job description for a topic.
Source	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The optional source standard or custom topic from which this topic's configuration, including description, instructions, and utterances, is copied. If there's no value, the topic is used only within this agent version.

GenOpPlanRequest

Represents a request to generate a service plan. This object is available in API version 67.0 and later.

Each request is stored as record data. We support all delete operations at the record or bulk level. For example, you can [use Bulk API 2.0 to delete multiple records in Marketing Cloud Next](#).

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

To access this object, you must have the Service Planner Access add-on license.

Fields

Field Name	Details
CopilotId	Type reference Properties Filter, Group, Sort, Nillable Description (Optional) The ID of the Einstein Copilot associated with the plan request. This field is a relationship field.

Field Name	Details
	Relationship Name Copilot
	Refers To GenAiPlannerDefinition
CopilotName	Type string
	Properties Filter, Group, Sort, Nillable
	Description (Optional) The name of the Einstein Copilot associated with the plan request.
ErrorCode	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description (Optional) The standard error code when plan generation fails. Possible values are: • AgentNotActive • AgentNotFound • CaseGroundingNotEnabled (Service AI Grounding isn't enabled) • InstructionsOrActionsNotFound • InsufficientData • InvalidRecordId • NoEligibilityDefined (No eligibility criteria defined) • NotEligible • RagConfigurationError • StepSummaryEmpty • TopicIdNotFound • TopicNotFound • Unknown
ErrorMessage	Type string
	Properties Filter, Group, Sort, Nillable
	Description (Optional) The error message when plan generation fails.

Field Name	Details
LlmModelName	Type string Properties Filter, Group, Sort, Nillable Description (Optional) The name of the large language model used for plan generation. The maximum length is 80 characters.
LlmProviderName	Type string Properties Filter, Group, Sort, Nillable Description (Optional) The name of the LLM provider. The maximum length is 80 characters.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description (Required) The auto-generated name of the generated operation plan request.
ParentId	Type reference Properties Filter, Group, Sort Description (Required) The ID of the service plan parent record. This field is a polymorphic relationship field. Relationship Name Parent Relationship Type Master-detail Refers To Case, Incident, MessagingSession, Opportunity (the master object)
PromptTemplateDevName	Type string Properties Filter, Group, Sort, Nillable

Field Name	Details
	Description (Optional) The developer name of the prompt template used for plan generation. The maximum length is 80 characters.
PromptTemplateVersionNo	Type int Properties Filter, Group, Sort, Nillable Description (Optional) The version number of the prompt template.
Reason	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description (Required) The reason why plan generation failed or returned no steps. Possible values are: • CannotGeneratePlan • NoEligibilityConfig (no eligibility criteria set) • None (default) • NoPlanGenerated PlanEmpty • PlanEmptyInsufficientData • RagConfigurationError • ThresholdError (eligibility not met for unknown reason) • ThresholdNotMet
RequestSource	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description (Optional) The source where the plan request originated. Possible values are: • CASE • EINSTEIN_LEX (Einstein Chat LEX component) • INCIDENT

Field Name	Details
RequestType	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description (Required) The type of service plan request. Possible values are: • Close • Generation • Summary (default)
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description (Required) The status of the plan generation request. Possible values are: • Error • Incomplete • InProgress (default) • Success
Utterance	Type textarea Properties Nullable Description (Optional) The natural language input or prompt used for plan generation. The maximum length is 32,000 characters.

GeoCountry

Represents a country. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The GeoCountry object is available if B2B Commerce or D2C Commerce is enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of this record.
IsoCode	Type string Properties Create, Filter, Group, idLookup, Sort Description Two-letter ISO code of the country as defined in the org's State-Country picklist. This field is unique within your organization
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The name of the country that corresponds with the ISO code.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the GeoCountry record. By default, the asset owner is the user who created the record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

GeoCountryOwnerSharingRule on page 65

Sharing rules are available for the object.

GeoCountryShare on page 67

Sharing is available for the object.

SEE ALSO:

[GeoState](#)

[TaxGeoConfig](#)

GeolocationBasedAction

Represents a geolocation-based action, which is an action that’s triggered when a user enters, exits, or is within the area of the associated object. Available in API version 61.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ActionData	Type textarea Properties Create, Nillable, Update Description The details of the selected action type.
ActionType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of action. Possible values are: - PlatformAlert - QuickAction - ViewRecord
Description	Type textarea Properties Create, Nillable, Update Description The description of the action.
InitialTimeInvoked	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Captures the first time the mobile worker invoked this action.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastTimeInvoked	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Captures the last time the mobile worker invoked this action.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate isn't null, the user accessed this record or list view indirectly.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the action.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner Relationship Type Lookup Refers To Group, User
Radius	Type int Properties Create, Filter, Group, Sort, Update Description The distance in meters from the location of the associated object that triggers the action.
ReferenceRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the record that the action is associated with. This field is a relationship field. Relationship Name ReferenceRecord Relationship Type Lookup Refers To ServiceAppointment
TriggerType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The event that triggered this action. Possible values are: - GeoFenceEnter—Enter - GeoFenceExit—Exit

GeoState

Represents a state. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The GeoState object is available if B2B Commerce or D2C Commerce is enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of this record.
GeoCountryId	Type reference Properties Create, Filter, Group, Sort Description ID of the GeoCountry associated with this GeoState. This field is a relationship field. Relationship Name GeoCountry Relationship Type Lookup Refers To GeoCountry
IsoCode	Type string Properties Create, Filter, Group, Sort

Field	Details
	Description Two-letter ISO code of the state as defined in the org's State-Country picklist. This field is unique within your organization
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.
Name	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The name of the state that corresponds with the ISO code.

SEE ALSO:

[GeoCountry](#)

GtwyProvPaymentMethodType

The gateway provider payment method type allows integrators and payment providers to choose an active payment to receive an order's payment data rather than allowing the Salesforce Order Management platform to select a default payment method. This object is available in API version 50.0 and later.

Supported Calls

```
create(), delete(), describeSObjects(), query(), retrieve(), search(), update(), upsert()
```

Fields

Field	Details
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Users can provide additional details about the gateway provider payment method type record. Supports a maximum of 1000 characters.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, Salesforce generates one for each record, which slows performance.
GtwyProviderPaymentMethodType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Links the Salesforce payment method to the payment method used in the Salesforce Order Management storefront. Your payment gateway integration uses this field when finding a payment method to link to a payment. The value of <code>GtwyProviderPaymentMethodType</code> must match the payment method value sent to the order's Payment Instrument in Salesforce Order Management. Listed below are several examples of payment method values that Salesforce could receive from Salesforce Order Management. • <code>CREDIT_CARD</code> • <code>BASIC_CREDIT</code> • <code>CreditCard</code> • <code>GooglePay</code>

Field	Details
	ApplePay
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Language of the payment gateway integration.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
MasterLabel	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The gateway provider payment method type name that appears in the user interface.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Namespace of the payment gateway integration classes.
PaymentGatewayProviderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the payment gateway provider that Salesforce Order Management should use when processing payments. One payment gateway provider can be related to multiple payment method types. This is a relationship field.

Field	Details
	Relationship Name PaymentGatewayProvider Relationship Type Lookup Refers To PaymentGatewayProvider
PaymentMethodType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of payment method used on an order in Salesforce Order Management. Possible values are: - AlternativePaymentMethod - CardPaymentMethod - DigitalWallet
RecordTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the record type entity related to the gateway provider payment method type. This is a relationship field. Relationship Name RecordType Relationship Type Lookup Refers To RecordType

Usage

The Salesforce Order Management payment record must have a `ProcessorId` field with the same value as the payment gateway's `ExternalReferenceId` field. The gateway provider payment method type record must have a `PaymentMethodType` field that looks up to the payment method that you want to associate to your payment. Finally, the payment gateway and gateway provider payment method type must have matching `PaymentGatewayProviderId` fields. When you've established these relationships, the payment record can infer your payment method from the gateway provider payment method type record.

Goal

The Goal object represents the components of a goal such as its name, description, and status.

 **Note:** The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
CompletionDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The completion date of the goal.
Description	Type textarea

Field Name	Details
	Properties Create, Nillable, Update Description The description of the goal. The maximum length is 65,535 characters.
DueDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the goal is due.
ImageUrl	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to Goal objects of Type: Goal.
IsKeyCompanyGoal	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the goal is a key company goal.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when a user last viewed a record that is related to this goal.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp that indicates when a user last viewed this goal. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, Sort, Update Description The name of the goal. The maximum length is 255 characters.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who owns the goal.
Progress	Type percent Properties Filter, Nillable, Sort Description The progress of the goal measured as a percentage.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The start date of the goal.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the goal. Possible values: • Draft

Field Name	Details
	• Published • Completed • Canceled • Not Completed

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

GoalFeed

Feed tracking is available for the object.

GoalHistory

History is available for tracked fields of the object.

GoalOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

GoalShare

Sharing is available for the object.

GoalLink

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The auto-generated name of the goal link.

Field Name	Details
ParentGoalId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the parent goal.
SubgoalId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the subgoal.

GoogleDoc

Represents a link to a Google Document. This object is available in API version 14.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in **All** Editions except **Database.com** for Google Apps Premier Edition accounts. See the Salesforce online help for more information.

Fields

Field	Details
Name	Type string Properties Create, Filter, Group, Sort, Update Description The name of the Google document.
Owner	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Nillable, Update
	Description The ID of the user who currently owns this Google Document. Default value is the user logged in to the API to perform the create.
ParentId	Type reference
	Properties Create, Filter
	Description Required. ID of the attachment's parent object. The following objects are supported as parents of Google documents: Account, Asset, Campaign, Case, Contact, Contract, Custom Object Behavior, Lead, Opportunity, Product2, and Solution.
Url	Type string
	Properties Create, Filter, Nillable, Update
	Description The URL of the Google document.

Group

A set of User records.

Groups are sets of users. They can contain individual users, other groups, the users in a particular role or territory, or the users in a particular role or territory plus all the users below that role or territory in the hierarchy.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `search()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Authenticated internal and external users can access this object.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The description of the group. This field is available in API version 62.0 and later.
DefaultDivision	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description This record's default division. Only applicable if divisions are enabled.
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. This name is unique by group type and corresponds to Group Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record. Only your Salesforce org's internal users can access this field.
DoesIncludeBosses	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether records shared with users in this group are also shared with users higher in the role hierarchy (<code>true</code>) or not (<code>false</code>). This field is only available for public

Field	Details
	groups. This field corresponds to the Grant Access Using Hierarchies checkbox in Setup. This field is available in API version 18.0 and later.
DoesSendEmailToMembers	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the email is sent (<code>true</code>) or not sent (<code>false</code>) to the group members. The email is sent to queue members as well.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address for a group of type Case. Applies only for a case queue.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the group. Corresponds to Label on the user interface.
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the user who owns the group. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Organization, User
QueueRoutingConfigId	Type reference

Field	Details
	Properties Create, Delete, Query, Retrieve, Update Description The ID of the queue routing configuration associated with the queue.
RelatedId	Type reference Properties Filter, Group, Nillable, Sort Description Represents the ID of the associated groups. For groups of type "Role," the ID of the associated UserRole. The RelatedId field is polymorphic. This is a polymorphic relationship field. Relationship Name Related Relationship Type Lookup Refers To User, UserRole
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Required. Type of the group. One of the following values: • AllCustomerPortal—Public group that includes all Customer Portal or Customer Community Plus users. This type is only available when a Customer Portal or a Customer Site is enabled for your org. • ChannelProgramGroup—Public group for partners in a channel program. • CollaborationGroup—Chatter group. • Manager—Public group that includes a user's direct and indirect managers. This group is read-only. • ManagerAndSubordinatesInternal—Public group that includes a user and the user's direct and indirect reports. This group is read-only. • Organization—Public group that includes all the User records in the organization. This group is read-only. • Participant—Compliant Data Sharing group that includes internal users who have the Use Compliant Data Sharing permission. A group can contain other participant groups only, or a group can contain both internal users with the Use

Field	Details
	Compliant Data Sharing permission and other participant groups. This value is only available when Compliant Data Sharing is enabled for your org. • <code>PRMOrganization</code>—Public group that includes all the partners in an organization that has the partner site or portal feature enabled. • <code>Queue</code>—Public group that includes all the User records that are members of a queue. • <code>Regular</code>—Standard public group. When you <code>create()</code> a group, its type must be <code>Regular</code>, unless a partner site or portal is enabled for the organization, in which case the type can be <code>Regular</code> or <code>PRMOrganization</code>. • <code>Role</code>—Public group that includes all the User records in a particular <code>UserRole</code>. • <code>RoleAndSubordinates</code>—Public group that includes all the User records in a particular <code>UserRole</code> and all the User records in any subordinate <code>UserRole</code>. Only available when digital experiences is enabled for your org and Experience Cloud site users are created with external account roles other than a shared person account role. • <code>RoleAndSubordinatesInternal</code>—Public group that includes all the User records in an internal <code>UserRole</code>, excluding customer and partner roles, and all the User records in any subordinate internal <code>UserRole</code>. • <code>SharingRecordCollGroup</code>—Public group that has access to a <code>SharingRecordCollection</code>. • <code>Territory</code>—Public group that includes all the User records in an organization that has the territory feature enabled. • <code>TerritoryAndSubordinates</code>—Public group that includes all the User records in a particular <code>UserRole</code> and all the User records in any subordinate <code>UserRole</code> in an organization that has the territory feature enabled. Only <code>Personal</code>, <code>Regular</code>, and <code>Queue</code> can be used when creating a group. The other values are reserved.

Usage

Unlike users, this object can be deleted.

Only public groups are accessible via the API. Personal groups are not available.

In API version 34.0 and later, you can query a group using `Related.Name` to retrieve the group's name. `Related.Name` is supported for public groups, user roles, territories, manager groups, and user names.

In API version 13.0 and later, if you delete a public group, it is deleted even if it has been used in sharing, consistent with the behavior for `UserRole`. In versions before 13.0, such sharing prevents the record from being deleted.

SEE ALSO:

[GroupMember](#)

[Overview of Salesforce Objects and Fields](#)

GroupMember

Represents a User or Group that is a member of a public group.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
GroupId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Group. This is a relationship field. Relationship Name Group Relationship Type Lookup Refers To Group
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the User or Group that is a direct member of the group. This field is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

If your group contains more than 10,000 members, for improved performance, you can adjust group membership using the GroupMember API object instead of the group's detail page in Setup. You can also adjust membership using the public group's access summary or user access policies in Setup.

A record exists for every User or Group who is a direct member of a public group whose `Type` field is set to Regular. User records that are indirect members of Regular public groups aren't listed as group members. A User can be an indirect member of a group if he or she is in a UserRole above the direct group member in the hierarchy, or if he or she is a member of a group that is included as a subgroup in that group.

If you attempt to create a record that matches an existing record, the system simply returns the existing record.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

GroupMembershipEventLog

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue. This object is available in API version 64.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ClientId	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionIP address of the client employing salesforce.com services.
CpuTime	Typedouble PropertiesFilter, Nillable, Sort

Field	Details
	Description Amount of cpu cycles used by the request
GroupIdentifier	Type string Properties Filter, Group, Nillable, Sort Description ID of the group whose membership changed.
GroupType	Type string Properties Filter, Group, Nillable, Sort Description The type of group being updated.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
MemberIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the member added to or removed from the group. Public groups can contain individual users, other groups, or users in a specified role or territory. Queues can contain individual users, roles, public groups, territories, connections, or partner users.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The type of operation that occurred, such as a group member being added or removed from a group.

Field	Details
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The 15-character ID of the user who's using Salesforce services through the UI or the API.

GuestBuyerProfile

Represents a store's guest buyer profile, which allows unauthenticated buyers to browse the store. This object is available in API version 51.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
<code>CurrencyIsoCode</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Currency displayed to the guest buyer when they're viewing the store. Possible values are: • <code>USD</code>—U.S. Dollar
<code>Description</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Detailed description of the profile. Includes information like which store the profile is used in.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The last date and time when one or more of the fields were modified

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The last date and time when one or more of the fields were viewed
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the guest buyer profile. Including a reference to the store helps with later identification.

HashtagDefinition

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

 **Important:** Starting in Spring '16, API access to HashtagDefinition is disabled across all API versions. Any integrations relying on API queries to this object stop working. You can continue to use hashtags in posts and comments, and the hashtags continue to create corresponding topics. We recommend that you redirect all API queries and reports using the HashtagDefinition object to use the Topic object instead. For more information, see [Retiring the Legacy HashtagDefinition Object—FAQs](#).

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
HashtagCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times a hashtag topic is used.

Field Name	Details
Name	Type string Properties Filter, Nillable, Sort Description The string of characters following the hashtag (#) in a hashtag topic.
NameNorm	Type string Properties Filter, Nillable, Sort Description The string of characters following the hashtag (#) in a hashtag topic, normalized to remove capitalization and punctuation.
NetworkId	Type reference Properties Filter, Group, Nillable, Sort Description Identifier of the community to which the HashtagDefinition belongs. This field is available only if digital experiences is enabled in your org.

Usage

Use this object to identify public hashtag topics and see how often they're used.

SEE ALSO:

[Topic](#)

HealthCareDiagnosis

Represents information related to industry-standard healthcare diagnosis codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

 **Example:** The Code Set and Code Set Bundle objects improve on the old objects by adding support for terminology system information. This added support comes in the form of the Source System and Version fields.

 **Note:** Objects, flows, and apps that previously used Healthcare Diagnosis and Healthcare Procedure have been or will be extended to support the use of Code Set and Code Set Bundle. Healthcare Diagnosis and Healthcare Procedure are to be gradually phased out with future releases.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Indicates the category for this diagnosis such as newborn, pediatric, maternity, or adult.
Code	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Industry-standard diagnosis code.
CodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the diagnosis code.
CodeType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Type of diagnosis code represented in the record such as ICD-9 or ICD-10.
EffectiveDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Start date for the code.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description End date for the code.
Gender	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Indicates whether this diagnosis is for males, females, or all genders.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the diagnosis code is available for use.
IsComplicationOrComorbidity	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this diagnosis is used to represent a complication or comorbidity.

Field Name	Details
IsHospitalAcquiredCondition	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this diagnosis represents a condition acquired while in the hospital.
IsMajorComplicationOrComorbidity	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this diagnosis is used to represent a major complication or comorbidity.
IsPresentOnAdmissionExempt	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether diagnosis code is exempt from the diagnosis present on admission requirement.
IsPrimaryDiagnosis	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether diagnosis code can be used as primary diagnosis only, or can be used in any diagnosis sequence.
IsUnacceptablePrincipalDxIpAdmit	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether diagnosis code is an unacceptable principal diagnosis for inpatient admission per Medicare Code Edits.

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as (E08.37X9 - Diabetes mellitus due to underlying condition).
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns this record. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

HealthCareDiagnosisChangeEvent (API version 60.0)

Change events are available for the object.

HealthCareDiagnosisHistory

History is available for tracked fields of the object.

HealthCareDiagnosisOwnerSharingRule

Sharing rules are available for the object.

HealthCareDiagnosisShare

Sharing is available for the object.

HealthCareProcedure

Represents information related to industry-standard healthcare procedure codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

Example: The Code Set and Code Set Bundle objects improve on the old objects by adding support for terminology system information. This added support comes in the form of the Source System and Version fields.

Note: Objects, flows, and apps that previously used Healthcare Diagnosis and Healthcare Procedure have been or will be extended to support the use of Code Set and Code Set Bundle. Healthcare Diagnosis and Healthcare Procedure are to be gradually phased out with future releases.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Category of the procedure code such as anesthesia, surgery, radiology, and so on.
Code	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Industry standard procedure code such as CPT or HCPCS.
CodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the procedure code.
CodeShortDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Short description of the procedure code.
CodeType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Type of procedure code represented in the record such as CPT or HCPCS.
EffectiveDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Start date for the code.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description End date for the code.

Field Name	Details
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the diagnosis code is available for use.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the code that displays in search and lookup fields. Salesforce recommends using the code along with the description to populate this field. For example, use <Code>: <Description> or <Code>-<Description> such as 95115: Allergy injection.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns this record.

Field Name	Details
	This is a polymorphic relationship field.
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[HealthCareProcedureChangeEvent](#) (API version 60.0)

Change events are available for the object.

[HealthCareProcedureHistory](#)

History is available for tracked fields of the object.

[HealthCareProcedureOwnerSharingRule](#)

Sharing rules are available for the object.

[HealthCareProcedureShare](#)

Sharing is available for the object.

Holiday

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

All users, even those without the "View Setup and Configuration" user permission, can view holidays via the API.

Fields

Field	Details
ActivityDate	Type date

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description If the Holiday <code>IsAllDay</code> flag is set to <code>true</code> (indicating that it is an all-day holiday), then the holiday due date information is contained in the <code>ActivityDate</code> field. This field is a date field with a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant, and you should not attempt to alter it to account for any time zone differences.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the holiday.
EndTimeInMinutes	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The end time of the holiday in minutes.
IsAllDay	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the duration of the holiday is all day (<code>true</code>) or not (<code>false</code>).
IsRecurrence	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the holiday is scheduled to repeat itself (<code>true</code>) or only occurs once (<code>false</code>). This is a read only field on update, but not on create. If this field value is <code>true</code>, then any recurrence fields associated with the given recurrence type must be populated.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the holiday.
NextOccurrenceDate	Type date Properties Filter, Group, Nillable Description The next date of the holiday. Applies to recurring holidays only. Available in API version 58.0 and later. To access this field, you must have Field Service enabled and the Field Service Standard permission. This field isn't sortable. To compare this date to other dates, you must parse the string into a date value to compare it to other dates.
RecurrenceDayOfMonth	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The day of the month on which the holiday repeats.
RecurrenceDayOfWeekMask	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The day or days of the week on which the holiday repeats. This field contains a bitmask. For each day of the week, the values are as follows: • Sunday = 1 • Monday = 2 • Tuesday = 4 • Wednesday = 8 • Thursday = 16 • Friday = 32 • Saturday = 64 Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.

Field	Details
RecurrenceEndDateOnly	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The last date on which the holiday repeats. For multiday recurring events, this is the day on which the last occurrence starts.
RecurrenceInstance	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The frequency of the recurring holiday. For example, 2nd or 3rd.
RecurrenceInterval	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The interval between recurring holidays.
RecurrenceMonthOfYear	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The month of the year on which the event repeats.
RecurrenceStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the recurring holiday begins. Must be a date and time before RecurrenceEndDateOnly.
RecurrenceType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates how often the holiday repeats. For example, daily, weekly, or every Nth month (where “Nth” is defined in <code>RecurrenceInstance</code>).
<code>StartTimeInMinutes</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The start time of the holiday in minutes.

Usage

Use this object to view and update holidays, which specify dates and times at which associated business hours and escalation rules are suspended.

IconDefinition

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
<code>ContentType</code>	Type string Properties Filter, Group, Nillable, Sort Description The tab icon’s content type, for example, “image/png.”
<code>DurableId</code>	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description A unique virtual Salesforce ID for the icon.
Height	Type int Properties Filter, Group, Nillable, Sort Description The tab icon's height in pixels. If the icon content type is an SVG type, height and width values are not used.
TabDefinitionId	Type string Properties Filter, Nillable, Sort Description The <code>TabDefinition</code> ID. This is a relationship field. Relationship Name TabDefinition Relationship Type Lookup Refers To TabDefinition
Theme	Type string Properties Filter, Group, Nillable, Sort Description The icon's theme.
Url	Type string Properties Filter, Group, Nillable, Sort Description The fully qualified URL for this icon.

Field Name	Details
Width	Type int Properties Filter, Group, Nillable, Sort Description The tab icon's width in pixels. If the icon content type is an SVG type, height and width values are not used.

Idea

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Note: For other standard objects, the `describeLayout()` call returns the `recordTypeMappings` section that contains the layout ID and picklist values for each record type. However, the `recordTypeMappings` section and the fields it includes are not available for the Idea object.

When performing a SOSL search on Idea objects, IdeaComment objects are also searched.

Fields

Field	Details
AttachmentBody	Type base64 Properties Create, Nillable, Update Description File data for the attachment. This field is available in API version 28.0 and later.
AttachmentContentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Type of the attachment. This field is available in API version 28.0 and later.

Field	Details
AttachmentLength	Type int Properties Filter, Group, Nillable, Sort Description Size of the attachment in bytes. This field is available in API version 28.0 and later.
AttachmentName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the attachment. This field is available in API version 28.0 and later.
Body	Type textarea Properties Create, Nillable, Update Description Description of the Idea.
Categories	Type multipicklist Properties Create, Filter, Nillable, Update Description Customizable multi-select picklist used to organize Ideas into logical groupings.  Note: This field is only available if your organization has the <code>Categories</code> field enabled. This field is enabled by default in organizations created after API version 14 was released. If the <code>Categories</code> field is enabled, API versions 13 and earlier do not have access to either the <code>Categories</code> or <code>Category</code> fields.
Category	Type picklist Properties Create, Filter, Nillable, Update Description Customizable picklist of values used to organize Ideas into logical groupings.  Note: This field is not available if your organization has the multi-select <code>Categories</code> field enabled.

Field	Details
CommunityId	Type reference Properties Create, Filter, Group, Sort Description The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.  Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access. This is a relationship field. Relationship Name Community Relationship Type Lookup Refers To Community
CreatorFullPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo. This field is available in API version 28.0 and later.
CreatorName	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo. This field is available in API version 28.0 and later.

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
IdeaThemeID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Identifies the idea theme associated with the idea.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsHtml	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. If this value is <code>true</code>, your organization has the Ideas HTML editor enabled, and the Idea Body may contain HTML. If this value is <code>false</code>, the HTML editor is disabled and the Idea Body only contains regular text.
IsMerged	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. Indicates whether the idea has been merged with a parent idea (<code>true</code>) or not (<code>false</code>). You can't vote for or add comments to a merged idea.  Note: In API version 27, <code>IsMerged</code> replaces <code>IsLocked</code>. Existing formula fields that use <code>IsLocked</code> must be edited to use <code>IsMerged</code>.

Field	Details
LastCommentDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time the last comment (child IdeaComment object) was added.
LastCommentId	Type reference Properties Filter, Group, Nillable, Sort Description Read only. The ID of the last comment (child IdeaComment object). This is a relationship field. Relationship Name LastComment Relationship Type Lookup Refers To IdeaComment
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
NumComments	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort

Field	Details
	Description The number of comments (child IdeaComment objects) that users have submitted for the given idea.
ParentIdeaId	Type reference Properties Filter, Group, Nillable, Sort Description The ID associated with this idea's parent idea. When multiple ideas are merged together, one idea becomes the parent (master) of the other ideas. The <code>ParentIdeaId</code> is automatically set when you merge ideas. This is a relationship field. Relationship Name ParentIdea Relationship Type Lookup Refers To Idea
RecordTypeId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the record type assigned to this object. This is a relationship field. Relationship Name RecordType Relationship Type Lookup Refers To RecordType
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Customizable picklist of values used to specify the status of an idea.

Field	Details
Title	Type string Properties Create, Filter, Group, Sort, Update Description The descriptive title of the idea.
VoteScore	Type double Properties Filter, Nillable, Sort Description The internal score of the Idea, used to sort Ideas on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself does not display in the application user interface.  Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.
VoteTotal	Type double Properties Filter, Nillable, Sort Description An Idea's total number of points. Each vote a user makes is worth ten points, therefore the value of this field is ten times the number of votes an idea has received.  Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.

 **Note:** If you are importing Idea data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

Use this object to track ideas, which are written suggestions on which users can vote and comment.

SEE ALSO:

[IdeaComment](#)

[Vote](#)

IdeaComment

Represents a comment that a user has submitted in response to an idea.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

 **Note:** When performing a SOSL search on IdeaComment objects, Idea objects are also searched.

Fields

Field	Field Type
CommentBody	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Body of the submitted comment.
CommunityId	Type reference Properties Filter, Group, Nillable, Sort Description The zone ID associated with the idea. Once you create an idea, you can't change the zone ID associated with that idea.  Note: API version 12 does not support zone ID. If you create an idea in version 12, your idea is automatically posted to the oldest zone that you have permission to access.
CreatorFullPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo. This field is available in API version 28.0 and later.
CreatorName	Type string

Field	Field Type
	Properties Filter, Group, Nillable, Sort Description Name of the user who posted the idea or commented on the idea. This field is available in API version 28.0 and later.
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo. This field is available in API version 28.0 and later.
IdeaId	Type reference Properties Create, Filter, Group, Sort Description ID of the idea on which this comment was made. This is a relationship field. Relationship Name Idea Relationship Type Lookup Refers To Idea
IsHtml	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. If this value is <code>true</code> , your organization has the Ideas HTML editor enabled, and the <code>CommentBody</code> field may contain HTML. If this value is <code>false</code> , the HTML editor is disabled and the <code>CommentBody</code> field only contains regular text.
UpVotes	Type int Properties Filter, Group, Nillable, Sort

Field	Field Type
	Description
	Total number of up votes for the question.

 **Note:** If you import these records, and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

Use this object to track comments on ideas, which are users' text responses to ideas.

SEE ALSO:

[Idea](#)

[Vote](#)

IdeaReputation

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

Supported Calls

`query()`, `retrieve()`,

Fields

Field	Details
<code>CommentCount</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of comments a user has created in a zone or the internal organization. This number excludes comments the user creates on his or her own idea.
<code>CommentsReceivedCount</code>	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of comments a user has received in a zone or the internal organization.
ContextId	Type reference Properties Filter, Group, Namepointing, Nillable, Sort Description The ID of the zone or internal organization.
DownVotesGivenCount	Type int Properties Filter, Group, Nillable, Sort Description The number of down votes a user has given in a zone or the internal organization.
DownVotesReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of down votes a user has received in a zone or the internal organization.
IdeaCount	Type int Properties Filter, Group, Nillable, Sort Description The number of ideas a user has created in a zone or the internal organization.
ReputationLevel	Type string Properties Nillable Description The reputation level that a user has achieved based on their score in a zone or within an organization.
Score	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The total score of a user's activity within a zone or within an organization.
UpVotesGivenCount	Type int Properties Filter, Group, Nillable, Sort Description The number of up votes a user has given in a zone or the internal organization. This number doesn't include the default vote the system applies when the user creates the idea.
UpVotesReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of up votes a user has received in a zone or the internal organization.
UserId	Type reference Properties Filter, Group, Sort Description The user ID associated with the reputation.

Usage

Use to query a user's reputation within a zone.

IdeaReputationLevel

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ContextId	Type reference Properties Create, Filter, Group, Namepointing, Sort, Update Description The ID of the zone or internal organization.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Name of the reputation level. The name must be unique within the zone or internal organization. Maximum size is 50 characters.
Threshold	Type int Properties Create, Filter, Group, Sort, Update Description Minimum number of points for this level. The threshold must be unique within the zone or internal organization and must be greater than or equal to zero.

Usage

Use to create or edit reputation levels for an Ideas zone or internal organization.

IdeaTheme

Represents an invitation to zone members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`,

Fields

Field Name	Details
Categories	Type multipicklist Properties Create, Filter, Nillable, Update Description Customizable multi-select picklist used to organize ideas and idea themes into logical groupings.
CommunityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Description The zone ID associated with the idea theme.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	Type textarea Properties Create, Nillable, Update Description Description of the idea theme.
EndDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date marking the end of the idea theme.
LastReferencedDate	Type date

Field Name	Details
	Properties Filter, Nillable, Sort, Update Description The timestamp for when the current user last viewed a record related to this record.
StartDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date that the idea theme begins.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Customizable picklist of values used to specify the status of the idea theme.
Title	Type string Properties Create, Filter, Group, idLookup, Namefield, Sort, Update Description Title of the idea theme.

Usage

Use the object to track ideas that are submitted to an idea theme.

IdpEventLog

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
AppId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the app provider seeking authentication.
AuthSessionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the authentication session.
ErrorCode	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The error code for the authentication issue. Possible values are: • AppAccessDenied—Error: App access denied • AppBlocked—Error: App blocked • ClientUnapproved—Error: Invalid grant • CodeExpired—Error: Expired authorization code • ForceAuthNLogout—User logged out due to forced authentication request • InternalError—Error: Internal Error • InvalidAuthnRequest—Error: Unable to parse AuthnRequest from service provider • InvalidClientCredentials—Error: Invalid client credentials • InvalidCode—Error: Invalid authorization code • InvalidDeviceId—Error: Invalid device ID • InvalidIdpEndpoint—Error: Invalid Identity Provider Endpoint URL • InvalidIssuer—Error: Invalid Issuer • InvalidScope—Error: Invalid scope(s) • InvalidSessionLevel—Error: Invalid session level • InvalidSettings—Error: IdP certificate is invalid or does not exist • InvalidSignature—Error: Invalid Signature

Field	Details
	- InvalidSp—Error: Misconfigured or invalid service provider - InvalidSpokeSp—Error: Invalid spoke SP settings - InvalidUserCredentials—Error: Invalid user credentials - NoAccess—Error: User does not have access to this service provider - NoCustomAttrValue—Error: User does not have a value for the subject custom attribute - NoCustomField—Error: Custom field not found - NoSpokeId—Error: No Spoke ID found - NoSubdomain—Error: No My Domain deployed in the org - NoUserFedId—Error: User does not have a Federation Identifier selected - OAuthError—OAuth Error - Success - UnableToResolve—Error: Unable to resolve request into a Service Provider - UnknownError—Unknown Error
IdentityUsed	Type string Properties Filter, Nillable, Sort Description The identity (username) of the user being authenticated.
InitiatedBy	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The code describing how the authentication request was initiated. Possible values are: - IdP—IdP-Initiated SAML - OAuthAuthorize—OAuth Authorization - OAuthTokenExchange—OAuth Token Exchange - SP—SP-Initiated SAML
OptionsHasLogoutUrl	Type boolean Properties Filter

Field	Details
	Description Whether a logout URL has been assigned to the app. This URL is where users are redirected when they log out.
SamLEntityUrl	Type string Properties Filter, Sort Description The authentication URL of the SAML provider.
SsoType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of SSO. Options are: • 0–SAML • 1–OpenID Connect
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The date and time on which the event occurred.
UserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user seeking authentication.

IframeWhiteListUrl

Represents a list of trusted external domains that you allow to frame your Embedded Service, Surveys, and Visualforce pages. This object is available in API version 45.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
Context	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The type of content in the iframe. Valid values are: • Surveys • VisualforcePages • DisclosureAndComplianceHubConnector
Url	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique domain that is allowed to frame your Visualforce pages, surveys, or Disclosure and Compliance Hub Connector. Accepts these formats: example.com, *example.com, and https://example.com.

Usage

To use this object for framing Visualforce pages, on Session Settings in Setup, select **Enable clickjack protection for customer Visualforce pages** either **with headers disabled** or **with standard headers**. These options both allow framing of Visualforce pages on trusted external domains and provide clickjack protection.

Alternatively, you can customize session settings via the SecuritySettings Metadata API type. To use the `IframeWhiteListUrl` object, set either the `enableClickjackNonsetupUser` or `enableClickjackNonsetupUserHeaderless` field to `true`. For more information, see [SecuritySettings](#) in the Metadata API Developer Guide.

Image

Represents the details of an image. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AlternateText	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Accessibility text to explain the image in words.
CapturedAngle	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Angle at which the image was captured.
ContentDocumentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Unique identifier of the content document where image is stored. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
ImageClass	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The image category.

Field	Details
	Possible values are: - FOOD - LOGOS - OBJECTS - SCENES
ImageClassObjectType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of image. Used in Einstein Object Detection to identify whether the image is used to detect objects or build a model. Possible values are: - DETECTION—Actual Image - FEEDBACK - TRAINING
ImageViewType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Orientation of the image.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if an image is active. The default value is False. An active image can be used for building or updating a model in Einstein Object Detection.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the image was last referenced.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the image was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description Name of the record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Unique identifier of the record owner. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Title of the image.
Url	Type url Properties Create, Filter, Nillable, Sort, Update Description Public URL of the image file.

Incident

An Incident is any unplanned business interruption that has wide-sweeping impacts and requires an urgent fix. This object contains the details of the incident, documenting the history of the incident from registration to closure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Category	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of incident.
Description	Type textarea Properties Create, Nillable, Update Description A description of the incident. This field can store up to 32 KB of data, but only the first 255 characters appear in reports.
DetectedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the incident was first detected.
EndDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the incident ended.

Field	Details
Impact	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The incident's impact. Possible values are: • High • Low • Medium The default value is 'High'.
IncidentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique, system-generated number for the incident.
IsMajorIncident	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the incident is business-critical. If set to <code>true</code>, the incident is widespread and business-critical. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time (in UTC) when the current user last accessed this record, a list view, or another related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description A polymorphic relationship field that represents the user or group assigned to resolve the incident. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentIncidentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The unique ID of an incident above one or more related incidents in an incident hierarchy. This is a relationship field. Relationship Name ParentIncident Relationship Type Lookup Refers To Incident
Priority	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The impact and urgency of the incident. Possible values are: • Critical

Field	Details
	• High • Low • Moderate The default value is 'Critical'.
PriorityOverrideReason	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The reason why a priority should be changed or edited.
ReportedMethod	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates how the incident was reported to customer service.
ResolutionDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the incident was resolved.
ResolutionSummary	Type textarea Properties Create, Nillable, Update Description A description of possible steps to resolve the incident.
ResolvedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The unique ID of the user who resolved the incident. This is a relationship field.

Field	Details
	Relationship Name ResolvedBy Relationship Type Lookup Refers To User
StartDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the incident began.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Any custom or granular stages a customer may want to track. Possible values are: - Completed - In Progress - New - Open - Problem Created - Resolved The default value is 'New'.
StatusCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The incident's status. Possible values are: - Completed - InProgress - New - Open

Field	Details
	• ProblemCreated • Resolved The default value is 'New'.
SubCategory	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of incident. One level deeper than Category. Administrators set field values.
Subject	Type string Properties Create, Filter, Group, Sort, Update Description A brief description of the incident.
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of incident, for example, question or problem. Administrators set field values.
Urgency	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description A measure of how long the resolution can be delayed until an incident, problem, or change has a significant business impact. Possible values are: • High • Low • Medium The default value is 'High'.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IncidentChangeEvent on page 68

Change events are available for the object.

IncidentFeed on page 55

Feed tracking is available for the object.

IncidentHistory on page 63

History is available for tracked fields of the object.

IncidentOwnerSharingRule on page 65

Sharing rules are available for the object.

IncidentShare on page 67

Sharing is available for the object.

IncidentRelatedItem

Represents a junction object that relates an Incident to an Asset or Product. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The Asset ID that's linked to the Incident. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset

Field	Details
Comment	Type textarea Properties Create, Nillable, Update Description A description of the incident as it relates to the item.
ImpactLevel	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The related item's impact on the incident. Possible values are: • High • Low • Medium The default value is High.
ImpactType	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The effect of the related item on business operations. Possible values are: • Business-Blocking • Not Business-Blocking • Partially Business-Blocking The default value is Business-Blocking.
IncidentId	Type reference Properties Create, Filter, Group, Sort Description The Incident ID that's linked to the Asset. This field is a relationship field.

Field	Details
	Relationship Name Incident
	Relationship Type Lookup
	Refers To Incident
Name	Type string
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description The auto-generated ID of the incident-related item.
Product2Id	Type reference
	Properties Create, Filter, Group, Nillable, Sort
	Description The product (Product2) ID that's linked to the Incident.. This field is a relationship field.
	Relationship Name Product2
	Relationship Type Lookup
	Refers To Product2

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[IncidentRelatedItemChangeEvent](#) on page 68

Change events are available for the object.

[IncidentRelatedItemFeed](#) on page 55

Feed tracking is available for the object.

[IncidentRelatedItemHistory](#) on page 63

History is available for tracked fields of the object.

Individual

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
BirthDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The customer's birthdate.
CanStorePiiElsewhere	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indication that you can store the customer's personally identifiable information (PII) outside of their legislation area. For example, you could store an EU citizen's PII data in the US.
ChildrenCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of children the customer has.
ConsumerCreditScore	Type int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The person's credit score (for example, 740).
ConsumerCreditScoreProviderName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the company that provided the credit score.
ConvictionsCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of convictions for the customer.
DeathDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The customer's death date.
FirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The customer's first name. Maximum size is 40 characters.
HasOptedOutGeoTracking	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to not track geolocation on mobile devices.
HasOptedOutProcessing	Type boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to not process personal data, which can include collecting, storing, and sharing personal data.
HasOptedOutProfiling	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to not process data for predicting personal attributes, such as interests, behavior, and location.
HasOptedOutSolicit	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to not solicit products and services.
HasOptedOutTracking	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to not track customer web activity and whether the customer opens email sent through Salesforce.
HasPrivacyHold	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates the Privacy Hold status.
IndividualsAge	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates whether the customer is considered to be a minor.

Field Name	Details
InfluencerRating	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description A measure of the person's influence, irrespective of how we do business with them.
IsHomeOwner	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the customer owns a home.
LastName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The customer's last name. Maximum size is 80 characters.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record.
MasterRecordId	Type reference Properties Filter, Group, Nillable, Sort Description If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or hasn't been deleted, the value is <code>null</code>. This is a relationship field. Relationship Name MasterRecord

Field Name	Details
	Relationship Type Lookup Refers To Individual
MilitaryService	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates whether the customer has served in the military.
Name	Type string Properties Filter, Group, Sort Description Concatenation of <code>FirstName</code> and <code>LastName</code> . Maximum size is 203 characters, including whitespaces.
Occupation	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The customer's occupation. Maximum size is 150 characters.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User

Field Name	Details
Salutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The title for addressing the customer, such as Dr. or Mrs.
SendIndividualData	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to export personal data for delivery to the customer.
ShouldForget	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Preference to delete records and personal data related to this customer.
Website	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description The URL for the customer's website.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndividualChangeEvent (API version 47.0)

Change events are available for the object.

IndividualHistory

History is available for tracked fields of the object.

IndividualShare

Sharing is available for the object.

IndividualApplicationItem

Captures individual application input data that is used during run-time. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

Fields

Field	Details
IndividualApplicationId	Type reference Properties Create, Filter, Group, Sort, Update Description The Individual Application parent object associated with the Individual Application Item. This field is a relationship field. Relationship Name IndividualApplication Relationship Type Lookup Refers To IndividualApplication
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the object related to the Individual Application.
RelatedItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The related object associated with the Individual Application Item. This field is a polymorphic relationship field. Relationship Name RelatedItem Relationship Type Lookup Refers To Benefit, ProgramProduct
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the approval status of the Individual Application. Possible values are: • Approved • Declined • In Progress • Pending

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

IndividualApplicationItemChangeEvent

Change events are available for the object.

IndividualApplicationItemFeed

Feed tracking is available for the object.

IndividualApplicationItemHistory

History is available for tracked fields of the object.

IndividualApplicationItemOwnerSharingRule

Sharing rules are available for the object.

IndividualApplicationItemShare

Sharing is available for the object.

IndividualHistory

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

Fields

Field Name	Details
<code>DataType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<code>Field</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the changed field.
<code>IndividualId</code>	Type reference Properties Filter, Group, Sort Description ID of the data privacy record. Label is Individual ID . This is a relationship field. Relationship Name Individual

Field Name	Details
	Relationship Type Lookup
	Refers To Individual
NewValue	Type anyType
	Properties Nillable, Sort
	Description The updated value of the changed field.
OldValue	Type anyType
	Properties Nillable, Sort
	Description The previous value of the changed field.

Usage

Use this object to identify changes to data privacy records.

This object respects field-level security on the parent object.

IndividualShare

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is `Owner`. This object is available in API version 42.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available if Data Protection and Privacy is enabled.
- The Individual object isn't available to Customer Community, Partner Community, and Customer Portal users.

Fields

Field Name	Details
IndividualAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the user or group has to the data privacy record. The possible values include: • Read • Edit • All (Except for create or update.) Set this field to an access level that's higher than your default access level for individuals.
IndividualId	Type reference Properties Create, Filter, Group, Sort Description ID of the Individual associated with this sharing entry. This field isn't available for updates. This is a relationship field. Relationship Name Individual Relationship Type Lookup Refers To Individual
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the data privacy record with them. <code>Owner</code>—The User is the owner of the data privacy record. <code>Rule</code>—The User or Group has access to the data privacy record via an Individual sharing rule. <code>Implicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the data privacy record. This field isn't available for updates. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object lets you determine which users and groups can view or edit Individual records owned by other users.

InsufficientAccessEventLog

Insufficient Access event logs contain details about errors relating to insufficient account, case, contact, and opportunity record access. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

 **Note:** The Insufficient Access event type is disabled by default. You can enable this event type for a period of 24 hours by contacting Salesforce Customer Support.

These insufficient access error scenarios are logged:

- The user can't share a case, contact, or opportunity because the user doesn't have permission to share the parent account or the recipient of the share doesn't currently have read access to the parent account.
- The user can't change ownership of a case, contact, or opportunity because the user doesn't have permission to share the parent account or the new owner doesn't currently have read access to the parent account.
- The user can't change the parent account of a case, contact, or opportunity because the user doesn't have permission to share the new parent account or the owner of the case, contact, or opportunity doesn't have read access to the new parent account.

Insufficient access errors resulting from bulk operations involving two or more records aren't logged.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>AccessError</code>	Type String Description The type of insufficient access error that the user received. Valid values are: • <code>DATA_NOT_AVAILABLE</code>—The record is no longer accessible. For example, a record was deleted and moved to the Recycle Bin. • <code>INVALID_TYPE</code>—The record type doesn't exist. • <code>NO_ACCESS</code>—The user doesn't have the required access level to complete the attempted action on the record. Example <code>NO_ACCESS</code>
<code>ActualLoggedInUserIdentifier</code>	Type Id Description The ID of the user who initiated the action that caused the insufficient access error. For example, a user attempts to transfer ownership of a record to a teammate, but the operation fails because the teammate doesn't have the required access. Example <code>005XXXXXXXXXXXXX</code>
<code>ErrorDescription</code>	Type String

Field	Details
	Description Description of the insufficient access error that the user received. Example User 005XXXXXXXXXXXX doesn't have full access for the record 001XXXXXXXXXXXX.
ObjectType	Type string Properties Filter, Group, Nillable, Sort Description The object for which the user received the insufficient access error.
RecordIdentifier	Type String Description The ID of the record that the user doesn't have access to. Example 001XXXXXXXXXXXX
RequestIdentifier	Type String Description The unique ID of a single transaction. A transaction can contain one or more events. Example 3nWgxWbDKWWDIk0FKfF5DV
RequestedAccessLevel	Type String Description The access level required by the user's attempted action on the record. Valid values are: • DELETE • FULL • READ • TRANSFER • WRITE Example FULL
Timestamp	Type dateTime

Field	Details
	Description The access time of Salesforce services in GMT. Example 20130715233322.670
UserIdentifier	Type Id Description The ID of the user for whom the insufficient access error occurred, either when the user couldn't access a record, the user couldn't complete an operation, or the user was the intended recipient of a record transfer that failed because the user didn't have the required access. Example 005XXXXXXXXXXXXX

InternalOrganizationUnit

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, you have either a Workplace Command Center permission set license and the Provides access to Workplace Command Center features system permission, or the Employee Management and Employee User add-on licenses. This object is also available with the Referral Marketing license.

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description A description of the organization the Employee is working in.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OrganizationCode	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The code of the organization the Employee is working in.
OrganizationName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the organization the Employee is working in.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this record. Default value is the user logged in to the API to perform the create operation.
ParentOrganizationId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description A reference to the parent organization.
Type	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether the record is for an internal or an external organization. This field is available in API version 60.0 and later. Possible values are: - EXTERNAL_BUSINESS_UNIT - INTERNAL_ORGANIZATION

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

InternalOrganizationUnitHistory (API version 49.0)

History is available for tracked fields of the object.

InternalOrganizationUnitOwnerSharingRule

Sharing rules are available for the object.

InternalOrganizationUnitShare (API version 49.0)

Sharing is available for the object.

SEE ALSO:

[Workplace Command Center for Work.com Developer Guide: Extend Work.com with Custom Solutions](#)

InventoryItemReservation

Used to store inventory item reservation information for a specific product and location. This object is available in API version 60.0 and later.

Supported Calls

```
create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(),
retrieve(), undelete(), update(), upsert()
```

Special Access Rules

This object is available only if a B2B Commerce, D2C Commerce, B2C Commerce or Salesforce Order Management license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the inventory items. Possible values are: • EUR—Euro • USD—U.S. Dollar The default value is USD.
ErrorCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The error code if the reservation isn't successful.
ErrorMessage	Type textarea Properties Create, Nillable, Update Description If an error occurred, this field contains the error message.
InventoryItemReservationName	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the inventory item reservation (autogenerated, for example: PIR-0033).
InventoryReservationId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description The ID of the inventory reservation. This field is a relationship field. Relationship Name InventoryReservation Relationship Type Lookup Refers To InventoryReservation
ItemReservationSourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the entity associated with the inventory item reservation. This field is a relationship field. Relationship Name ItemReservationSource Relationship Type Lookup Refers To CartItem
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
ProductId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the product on the inventory item reservation. This field is unique within your organization. This field is a relationship field. Relationship Name Product Relationship Type Lookup Refers To Product2
Quantity	Type double Properties Create, Filter, Sort, Update Description Number of products on the inventory item reservation.
ReservedAtLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location or location group where the inventory item reservation originated. This field is a polymorphic relationship field. Relationship Name ReservedAtLocation Relationship Type Lookup Refers To Location, LocationGroup

Field	Details
StockKeepingUnit	Type string Properties Create, Filter, Group, Nillable, Sort Description The stock keeping unit (SKU) of the reserved item.

InventoryReservation

Stores information about the status of cart inventory reservations in B2B and D2C Commerce. This object is available in API version 60.0 and later.

This object only applies to cart inventory reservation APIs in B2B and D2C Commerce. It isn't related to inventory reservation Connect APIs used with Omnichannel Inventory and Order Management.

If your org is using Omnichannel Inventory as its inventory system, the inventory reservation record related to the cart also represents a reservation in Omnichannel Inventory. If the org uses a different inventory system, the inventory reservation record related to the cart represents a reservation in that inventory system.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if a B2B Commerce, D2C Commerce, B2C Commerce, or Salesforce Order Management license is enabled.

Fields

Field	Details
ErrorCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The error code if the reservation isn't successful.
ErrorMessage	Type textarea Properties Create, Nillable, Update

Field	Details
	Description If an error occurred, this field contains the error message.
InventoryReservationName	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the inventory reservation (autogenerated, for example: PIR-0033).
IsAsyncOperationInProgress	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if there's an async operation in progress that could affect the reservation. The default value is <code>false</code> .
IsSuccess	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the most recent inventory system operation was successful. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user could have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user who owns the inventory reservation. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ReservationDate	Type dateTime Properties Create, Filter, Sort, Update Description The timestamp when the inventory reservation was created.
ReservationDurationInSeconds	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total duration of the inventory reservation in seconds.
ReservationIdentifier	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The unique identifier (text value) for the reservation.

Field	Details
ReservationSourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the entity associated with the inventory reservation. This field is a polymorphic relationship field. Relationship Name ReservationSource Relationship Type Lookup Refers To Export_FOI__c, WebCart

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[InventoryReservationOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[InventoryReservationShare](#) on page 67

Sharing is available for the object.

InvocableActionEventLog

Invocable Action events capture the calls to Salesforce Invocable Actions. This is particularly useful to monitor actions invoked during Agentforce flows. This object is available in API version 64.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ActionName	Type string Properties Filter, Group, Nillable, Sort Description Name of the action.
ActionType	Type string Properties Filter, Group, Nillable, Sort Description InvokableActionType being referenced.
ActionVersion	Type string Properties Filter, Group, Nillable, Sort Description The invocable action version.
ApiCaller	Type string Properties Filter, Group, Nillable, Sort Description Identifier of the API caller. This is only populated when the action is invoked from a REST API call
BotIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
BotSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The bot session ID.
Duration	Type double Properties Filter, Nillable, Sort Description Time (in nanos) taken to process this set of requests.
FlowProcessType	Type string Properties Filter, Group, Nillable, Sort Description The process type of the calling flow.
FlowVersionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the version of the calling flow.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.
RequestCount	Type int Properties Filter, Group, Nillable, Sort Description The number of invoked requests.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description ID of the user employing salesforce.com services, whether through the user interface or API.

Invoice

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

Users can edit non-posted invoices. Posted invoices can't be deleted. After an invoice is posted, users can make payments against it to reduce its balance.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Salesforce Order Management or D2C Commerce license, and Billing (Revenue Cloud). A few fields require Commerce Subscriptions to be enabled. These fields are available only in Lightning Experience.

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Balance	Type currency Properties Filter, Nillable, Sort Description The outstanding balance for this invoice. Equal to the invoice's total amount with tax, ignoring payments and adjustments.
BillToContactId	Type reference Properties Filter, Group, Nillable, Sort, Update Description Inherited from the account's Bill to Account. This field is a relationship field. Relationship Name BillToContact Relationship Type Lookup Refers To Contact
BillingAccountId	Type reference Properties Filter, Group, Sort, Update Description The customer account for this invoice. This field is a relationship field. Relationship Name BillingAccount Relationship Type Lookup Refers To Account
CurrencyIsoCode	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The three-letter ISO 4217 currency code associated with the invoice. The default value is <code>USD</code>. This field is available in API version 55.0 and later.
DaysInvoiceOpen	Type int Properties Filter, Group, Nillable, Sort Description Number of days since the invoice was created before it was paid. This field is a calculated field. This field is available in API version 55.0 and later.
DaysInvoiceOverdue	Type int Properties Filter, Group, Nillable, Sort Description Number of days since the date when payment was due. This field is a calculated field. This field is available in API version 55.0 and later.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Users can add more information about this invoice. Maximum of 1,000 characters.
DocumentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The system-generated number that is used to organize financial documents. The number can be sequential or random.

Field	Details
DueDate	Type date Properties Filter, Group, Sort, Update Description The customer must pay the invoice by the due date. Unpaid invoices past the due date can be sent to collections.
FullSettlementDate	Type date Properties Filter, Group, Nillable, Sort Description Date when the invoice is paid in full. This field is available in API version 55.0 and later.
InvoiceBatchRunId	Type reference Properties Filter, Group, Nillable, Sort Description Id of the invoice batch run that generated this invoice. This field is a relationship field. This field is available in API version 55.0 and later. Relationship Name InvoiceBatchRun Relationship Type Lookup Refers To InvoiceBatchRun
InvoiceDate	Type date Properties Filter, Group, Sort, Update Description The date that the invoice was posted. Used with payment terms to determine the invoice's DueDate. For example, an invoice with an InvoiceDate of 04/01 and Net 30 payment terms has a DueDate of 05/01.

Field	Details
InvoiceNumber	Type string Properties Filter, Group, Nillable, Sort, Update Description System-created unique ID for this invoice.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view. This field is available in API version 55.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view. If this value is null, it's possible the user accessed this record or list view (<code>LastReferencedDate</code>) but didn't view it. This field is available in API version 55.0 and later.
NetCreditsApplied	Type currency Properties Filter, Nillable, Sort Description Represents the net credits applied to an invoice. Calculated by subtracting the sum of all unapplied lines from the sum of all applied lines. This field is a calculated field. This field is available in API version 55.0 and later.
NetPaymentsApplied	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Represents net payments applied to an invoice. Calculated by subtracting the sum of unapplied payments from the sum of payments applied to the invoice. This field is a calculated field. This field is available in API version 55.0 and later.
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The user who owns an invoice record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentExclusionReason	Type string Properties Filter, Group, Nillable, Sort Description The reason for skipping creation of payment schedules and payment schedule items for the invoice. This field is only available if Commerce Subscriptions is enabled for your org. Available in API version 63.0 and later.
PaymentTermId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the payment term used on this invoice. This field is a relationship field. This field is available in API version 55.0 and later. Relationship Name PaymentTerm Relationship Type Lookup Refers To PaymentTerm

Field	Details
PostedDate	Type date Properties Filter, Group, Nillable, Sort Description The date the invoice was posted. This field is available in API version 60.0 and later.
ReferenceEntityId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the order or order summary that created this invoice. This field is a polymorphic relationship field. Relationship Name ReferenceEntity Relationship Type Lookup Refers To Order, OrderSummary
SettlementStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The state of the invoice's payment. Possible values are: • Not Applicable • Not Settled • Partially Settled • Settled This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later.
ShouldExcludePayment	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Required. Indicates whether to skip creating payment schedules and payment schedule items for the invoice (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is only available if Commerce Subscriptions is enabled for your org. Available in API Version 63.0 and later.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The state of the invoice. Possible values are: • Canceled— Indicates that the invoice was generated and later canceled. • Draft— Indicates that the invoice is a draft. Available in API version 60.0 and later. • Draft In Progress— Indicates that the draft invoice is in progress. Available in API version 60.0 and later. • Error— Indicates that an error occurred when processing the invoice. • Pending— Indicates that the invoice is being processed. • Posted— Indicates that the invoice has been generated and sent to the customer. • Posting In Progress— Indicates that the invoice posting is in progress. Available in API version 60.0 and later. • Void In Progress— Indicates that the invoice is pending a status change. • Voided— The invoice's status after the API successfully voids the invoice.
TaxLocaleType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The system used to handle tax on the original Order associated with the Invoice. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. This field is available when Order Management or B2B Commerce is enabled. Possible values are: • Gross: Displays most prices and taxes as combined values • Net: Displays most prices and taxes as separate values This field is available in API version 56.0 and later.
TotalAdjustmentAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description The sum of the invoice's adjustment line amounts.
TotalAdjustmentAmountWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of the amount fields on the invoice's adjustment-type invoice lines, including tax. This field is available in API version 55.0 and later.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description The total amount of tax applied to the invoice line's adjustment lines. This field is available in API version 55.0 and later.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The sum TotalAmount values on the invoice's lines. This field is a calculated field.
TotalAmountWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of TotalAmountWithTax values on the invoice's lines.
TotalChargeAmount	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The sum of the invoice's charges. This field is a calculated field.
TotalChargeAmountWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of the amount fields on the invoice's charge-type invoice lines, including tax. This field is available in API version 55.0 and later.
TotalChargeTaxAmount	Type currency Properties Filter, Nillable, Sort Description The total amount of tax applied to the invoice's charge lines. This field is available in API version 55.0 and later.
TotalConvertedNegAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all negative invoice lines that were converted to a credit memo. For example, if one negative invoice line was for -\$10 and one was for -\$15, the total amount that's converted to a credit memo is -\$25. This field is a calculated field. This field is available when Subscription Management is enabled. This field is available in API version 56.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description The sum of TaxAmount values on the invoice lines. This field is a calculated field.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceFeed on page 55

Feed tracking is available for the object.

InvoiceHistory on page 63

History is available for tracked fields of the object.

InvoiceOwnerSharingRule on page 65

Sharing rules are available for the object.

InvoiceShare on page 67

Sharing is available for the object.

InvoiceAddressGroup

Stores the buyer's address information. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Address	Type address Properties Filter, Nillable Description Buyer's address. Compound field that summarizes the invoice address group's address component fields.
City	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The buyer's city.
Country	Type string Properties Filter, Group, Nillable, Sort Description The buyer's country.
GeocodeAccuracy	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The accuracy rating for the geocode of the address group. The accuracy rating contains information about the location of a latitude and longitude.
InvoiceAddressGroupNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number, such as DOC-000001.
InvoiceId	Type reference Properties Filter, Group, Sort Description ID of the invoice associated with the address group. This field is a relationship field. Relationship Name Invoice Relationship Type Lookup Refers To Invoice
Latitude	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The buyer's latitude.
Longitude	Type double Properties Filter, Nillable, Sort Description The buyer's longitude.
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description The buyer's postal code or ZIP code.
State	Type string Properties Filter, Group, Nillable, Sort Description The buyer's state.
Street	Type textarea Properties Filter, Group, Nillable, Sort Description The buyer's street.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[InvoiceAddressGroupHistory](#) on page 63

History is available for tracked fields of the object.

InvoiceBatchRun

Represents a batch processing job in Subscription Management or Billing (Revenue Cloud). During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

An invoice batch run, controlled by a scheduler, tells the system to start the run at a scheduled date and time. The scheduler also includes matching criteria, which are used to evaluate the billing schedules. Billing schedules that meet the specified criteria are included for processing in the invoice batch run.

When an invoice batch run is started, Subscription Management or Billing (Revenue Cloud):

- Evaluates the billing schedule to see if it meets the criteria for inclusion in the batch invoice run.
- Generates an invoice record with a pending state.
- Makes calls to an external tax provider.
- Adds the tax to the invoice.
- Summarizes information about the billing schedules that were included in the invoice batch run and displays this information in the Invoice Batch Run record.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
BillingBatchSchedulerId	Type reference Properties Filter, Group, Sort Description The ID of the related billing batch scheduler. This field is a relationship field. Relationship Name BillingBatchScheduler Relationship Type Lookup

Field	Details
	Refers To BillingBatchScheduler
Comments	Type textarea Properties Filter, Nillable, Sort, Update Description Optional user-defined information about the scheduler.
CompletionTime	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the invoice batch run finished processing.
InvoiceBatchRunNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated sequential number.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the invoice batch run was last modified. Its UI label is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the invoice batch run was last viewed.
OwnerId	Type reference

Field	Details
	Properties Filter, Group, Sort, Update Description System-generated field. The ID of the user who created the BillingBatchScheduler record. Its UI label is Owner. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RecoveryStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the state of the invoice batch run recovery process. This field is available in API version 56.0 and later. Possible values are: • CompletelyRecovered—All billing schedules included in the recovery run were reset to <i>Ready for Invoicing</i>. These billing schedules are included in the next scheduled invoice batch run. • PartiallyRecovered—Some, but not all, billing schedules that were part of the recovery run were reset to <i>Ready for Invoicing</i>. The billing schedules that were recovered are included in the next scheduled invoice batch run. The billing schedules that weren't successfully recovered must be manually reset to <i>Ready for Invoicing</i> so they can be processed. • RecoveryFailed—The recovery job was unsuccessful. This value is available in API version 57.0 and later. • RecoveryStarted—The recovery job is in process.
StartTime	Type dateTime Properties Filter, Sort Description Timestamp when the invoice batch run started processing.
Status	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The state of the invoice batch run. Possible values are: • Canceled—This value is available in API version 57.0 and later. • Completed • Failed • Started • Stopped—This value is available in API version 57.0 and later. The default value is Started.
TotalBillSchedRecovered	Type int Properties Filter, Group, Nillable, Sort Description The number of billing schedules that were part of the recovery run that were reset to <i>Ready for Invoicing</i>. These billing schedules are included in the next scheduled invoice batch run. This field is available in API version 57.0 and later.
TotalBillSchedUnrecovered	Type int Properties Filter, Group, Nillable, Sort Description The number of billing schedules that were part of the recovery run that weren't reset to <i>Ready for Invoicing</i>. These billing schedules that weren't successfully recovered must be manually reset to <i>Ready for Invoicing</i> so they can be processed. This field is available in API version 57.0 and later.
TotalBillingSchedulesFailed	Type int Properties Filter, Group, Nillable, Sort Description The total number of billing schedules that weren't successfully processed. When a billing schedule isn't successfully processed, then the system doesn't generate an invoice for it. For details about errors, check the Revenue Transaction Error Log. This field is available in API version 56.0 and later.

Field	Details
TotalBsSuccessfullyProcessed	Type int Properties Filter, Group, Nillable, Sort Description The total number of billing schedules for which the system was able to generate and process invoices. This field is available in API version 56.0 and later.
TotalDraftInvoiceAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the invoice amounts for invoices in <code>Draft</code> status. This field is available when Billing (Revenue Cloud) is enabled. This field is available in API version 62.0 and later.
TotalDraftInvoices	Type int Properties Filter, Group, Nillable, Sort Description The total number of invoices in <code>Draft</code> status generated in the batch run. This field is available when Billing (Revenue Cloud) is enabled. This field is available in API version 62.0 and later.
TotalFilteredBillingSchedules	Type int Properties Filter, Group, Nillable, Sort Description The total number of billing schedules that met the invoice run scheduler's matching criteria. The matching criteria specify which billing schedules are included in the invoice batch run. Its field label is Total Matching Billing Schedules. This field is available in API version 56.0 and later.
TotalInvSuccessfullyProcessed	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The total number of invoices that were successfully processed. When Billing (Revenue Cloud) is enabled, the field's value is either the same as <code>TotalPostedInvoices</code> or <code>TotalDraftInvoices</code> based on the Invoice Status selected when the Invoice Scheduler is set up. This field is available in API version 56.0 and later.
<code>TotalInvoicedAmount</code>	Type currency Properties Filter, Nillable, Sort Description The total amount of income including taxes represented by the successfully processed invoices. This field is available in API version 56.0 and later.
<code>TotalInvoicesCanceled</code>	Type int Properties Filter, Group, Nillable, Sort Description The total number of invoices that weren't processed. To find out what went wrong, check the Revenue Transaction Error Log. Fix the errors, then run the invoice batch run recovery process. This field is available in API version 57.0 and later.
<code>TotalInvoicesFailed</code>	Type int Properties Filter, Group, Nillable, Sort Description The total number of invoices that weren't processed successfully. To find out what went wrong, check the Revenue Transaction Error Log. Then fix the errors and run the invoice batch run recovery process. This field is available in API version 56.0 and later.
<code>TotalInvoicesGenerated</code>	Type int Properties Filter, Group, Nillable, Sort Description The total number of invoices that were generated from the billing schedules processed by the invoice batch run. This field is available in API version 56.0 and later.

Field	Details
TotalPostedInvoices	Type int Properties Filter, Group, Nillable, Sort Description The total number of invoices in <code>Posted</code> status generated during the batch run. This field is available when Billing (Revenue Cloud) is enabled. This field is available in API version 62.0 and later.
TotBillSchdUpdtDurDrftToPost	Type int Properties Filter, Group, Nillable, Sort Description The total billing schedules updated during the draft to posted run. This field is available when Billing (Revenue Cloud) is enabled. This field is available in API version 62.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceBatchRunChangeEvent on page 68

Change events are available for the object.

InvoiceBatchRunFeed on page 55

Feed tracking is available for the object.

InvoiceBatchRunHistory on page 63

History is available for tracked fields of the object.

InvoiceBatchRunOwnerSharingRule on page 65

Sharing rules are available for the object.

InvoiceBatchRunShare on page 67

Sharing is available for the object.

InvoiceBatchRunCriteria

Represents a batch processing job and its required criteria in Subscription Management. During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

A scheduled invoice batch run tells the system to start the run at a scheduled date and time by using certain criteria. The scheduler includes the matching criteria, which are used to evaluate the billing schedules. Billing schedules that meet the specified criteria are included for processing in the invoice batch run.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Comments	Type textarea Properties Filter, Nillable, Sort Description Optional user-defined information about the batch run criteria.
CriteriaExpression	Type textarea Properties Filter, Nillable, Sort Description The formula that specifies criteria for filtering the billing schedules. For example, we can filter billing schedules by currency code.
CriteriaMatchType	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The type of matching criteria required for the batch. Valid value is <code>MatchAll</code>. The default value is <code>MatchAll</code>.
ExpectedInvoiceStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The type of invoice a batch run generates. Valid values are: • Draft • Posted This field is available in API version 60.0 and later.
InvoiceBatchRunCriteriaNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated sequential number.
OwnerId	Type reference Properties Filter, Group, Sort Description System-generated field. The ID of the user who created the BillingBatchScheduler record. Its UI label is Owner. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

InvoiceBatchRunRecovery

Provides information about an invoice batch run recovery procedure. This object is available in API version 57.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Comments	Type textarea Properties Filter, Nillable, Sort, Update Description Optional user-defined information about the scheduler.
CompletionTime	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the invoice batch run recovery procedure was completed.
InvoiceBatchRunId	Type reference Properties Filter, Group, Sort Description The unique identifier of the invoice batch run related to this recovery run. This field is a relationship field. Relationship Name InvoiceBatchRun Relationship Type Lookup Refers To InvoiceBatchRun
InvoiceBatchRunRecoveryNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique identifier of the invoice batch run recovery process.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user indirectly accessed this record (LastReferencedDate), but did not view it.
StartTime	Type dateTime Properties Filter, Sort Description The timestamp when the invoice batch run recovery started.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The final state of the invoice batch run recovery process. Possible values are: • Completed—The recovery run successfully reset all billing schedules to <i>Ready for Invoicing</i>. • CompletedWithErrors—Some, but not all, billing schedules included in the recovery run were reset to <i>Ready for Invoicing</i>. The billing schedules that were recovered are included in the next scheduled invoice batch run. The billing schedules that weren't successfully recovered must be manually reset to <i>Ready for Invoicing</i> so they can be processed. • Failed—The recovery run was unable to complete the reset process. • Started—Indicates that the recovery run reset process began, is ongoing, and has not yet produced a result. The default value is <i>Started</i>.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

InvoiceBatchRunRecoveryChangeEvent on page 68

Change events are available for the object.

InvoiceBatchRunRecoveryFeed on page 55

Feed tracking is available for the object.

InvoiceBatchRunRecoveryHistory on page 63

History is available for tracked fields of the object.

InvoiceBatchRunRecoveryOwnerSharingRule on page 65

Sharing rules are available for the object.

InvoiceBatchRunRecoveryShare on page 67

Sharing is available for the object.

InvoiceDocument

Tracks and displays the status of documents generated for invoices. Invoice documents are available in the related lists of invoice entity records. This object is available in API version 61.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

This object is available with Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
ContentDocumentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the generated PDF document. This field is a relationship field. Relationship Name ContentDocument

Field	Details
	Refers To ContentDocument
DateGenerated	Type date Properties Filter, Group, Nillable, Sort Description The date on which the PDF is generated.
DocumentGenerationProcessId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the entity that contains the information used to create the PDF invoice. This field is a relationship field. Relationship Name DocumentGenerationProcess Refers To DocumentGenerationProcess
DocumentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The ID of the generated document.
ErrorMessage	Type string Properties Filter, Group, Nillable, Sort Description Errors that occur during PDF generation.
InvoiceId	Type reference Properties Filter, Group, Sort

Field	Details
	Description The ID of the invoice entity to which the invoice document is attached. This field is a relationship field. Relationship Name Invoice Relationship Type Master-detail Refers To Invoice (the master object)
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of the PDF generation process. Possible values are: • Blocked • Cancelled • Failure • Pending • Success

InvoiceLine

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Order Management, Subscription Management, and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
AdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description Sum of adjustments made to the invoice line.
AdjustmentAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Sum of adjustment amounts, including associated taxes related to the invoice line.
AdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Sum of tax adjustments to the invoice line. This field is available in API version 55.0 and later.
Balance	Type currency Properties Filter, Nillable, Sort Description The outstanding balance for an invoice line. This is equal to the invoice's total amount with tax after deducting the payments made.
BillingAddressId	Type reference Properties Filter, Group, Nillable, Sort Description Lookup field to an InvoiceAddressGroup containing the billing address for the invoice line. Assign one InvoiceAddressGroup to the invoiceLine's BillingAddressID, and another InvoiceAddressGroup to the invoiceLine's ShippingAddressId. This field is a relationship field. This field is available in API version 55.0 and later.

Field	Details
	Relationship Name BillingAddress
	Relationship Type Lookup
	Refers To InvoiceAddressGroup
BillingScheduleGroupId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description This field is a relationship field.
	Relationship Name BillingScheduleGroup
	Refers To BillingScheduleGroup
BillingScheduleId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description ID of the billing schedule for the invoice line. This field is a relationship field. This field is available in API version 55.0 and later.
	Relationship Name BillingSchedule
	Relationship Type Lookup
	Refers To BillingSchedule
ChargeAmount	Type currency
	Properties Filter, Nillable, Sort, Update
	Description Sum of charges made to the invoice line.
ChargeAmountWithTax	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Amount on a charge invoice line, including tax. This field is available in API version 55.0 and later.
ChargeTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax to be applied on a charge invoice line. This field is available in API version 55.0 and later.
ConvertedNegAmount	Type currency Properties Filter, Nillable, Sort Description The amount from an invoice line that is converted to credit. This field is available in API version 56.0 and later.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Description of the invoice line.
GroupReferenceEntityItemId	Type reference Properties Filter, Group, Nillable, Sort, Update Description Grouping field for adjustment line items. This field is a polymorphic relationship field. Relationship Name GroupReferenceEntityItem Relationship Type Lookup

Field	Details
	Refers To OrderItem, OrderItemAdjustmentLineItem
HasMultipleItems	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this field merges items from the same billing period. The default value is <code>false</code> .
InvoiceId	Type reference Properties Filter, Group, Sort Description The invoice that contains this invoice line. This field is a relationship field. Relationship Name Invoice Relationship Type Lookup Refers To Invoice
InvoiceLineEndDate	Type date Properties Filter, Group, Sort, Update Description For invoice lines made from a time-based service, the end date of the billing for the service.
InvoiceLineStartDate	Type date Properties Filter, Group, Sort, Update Description For invoice lines made from a time-based service, the first date of the billing for the service.
InvoiceStatus	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description State of the invoice line. Inherited from the invoice's status.
LegalEntityAccountingPeriodId	Type reference Properties Filter, Group, Nillable, Sort, Update Description This field is a relationship field. Relationship Name LegalEntityAccountingPeriod Refers To LegalEntyAccountingPeriod
LegalEntityId	Type reference Properties Filter, Group, Nillable, Sort, Update Description This field is a relationship field. Relationship Name LegalEntity Refers To LegalEntity
LineAmount	Type currency Properties Filter, Nillable, Sort Description The amount of the invoice line. This field is a calculated field. This field is available in API version 55.0 and later.
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description Name of the invoice line.

Field	Details
NetCreditsApplied	Type currency Properties Filter, Nillable, Sort Description The total credit memo line amount applied to the invoice line. This amount is calculated by subtracting the unapplied credit memo line amount from the applied credit memo line amount. This field is a calculated field.
NetPaymentsApplied	Type currency Properties Filter, Nillable, Sort Description The total payment applied to the invoice line. This amount is calculated by subtracting the unapplied payment amount from the applied payment amount. This field is a calculated field.
Product2Id	Type reference Properties Filter, Group, Nillable, Sort, Update Description The product that was charged or ordered to create the invoice line. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
Quantity	Type double Properties Filter, Nillable, Sort, Update Description Number of units of the order product that created the invoice line.

Field	Details
ReferenceEntityItemId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The order item or adjustment item that created the invoice line. This field is a polymorphic relationship field. Relationship Name ReferenceEntityItem Relationship Type Lookup Refers To OrderItem, OrderItemAdjustmentLineItem
ReferenceEntityType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of transaction that created the invoice line. Possible values are: • DeliveryCharge—Charge • Fee—Charge. This value is available in API version 56.0 and later. • OrderProduct—Product
ReferenceEntityTypeCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of object that created the invoice line. Possible values are: • Charge • Product
RelatedLineId	Type reference Properties Filter, Group, Nillable, Sort, Update

Field	Details
	Description The original invoice line that was adjusted or taxed. This field is a relationship field. Relationship Name RelatedLine Relationship Type Lookup Refers To InvoiceLine
ShippingAddressId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the shipping address associated with the invoice line. This field is a relationship field. This field is available in API version 55.0 and later. Relationship Name ShippingAddress Relationship Type Lookup Refers To InvoiceAddressGroup
TaxAmount	Type currency Properties Filter, Nillable, Sort, Update Description Total tax for the invoice line.
TaxCode	Type string Properties Filter, Group, Nillable, Sort, Update Description The code used to calculate tax rate for the invoice line.
TaxDocumentNumber	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Represents the latest record in the external tax engine in which this invoice line item is included. This field is available in API version 55.0 and later.
TaxEffectiveDate	Type date Properties Filter, Group, Nillable, Sort, Update Description The date used to calculate the invoice line's TaxAmount.
TaxName	Type string Properties Filter, Group, Nillable, Sort, Update Description User-defined name for the applied tax.
TaxRate	Type percent Properties Filter, Nillable, Sort, Update Description Percentage value used for calculating tax.
TaxTransactionNumber	Type string Properties Filter, Group, Nillable, Sort Description Represents the transaction in the external tax engine in which the taxes for the line were calculated for the invoice line. This field is available in API version 55.0 and later.
TaxTreatmentId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The tax treatment used on this invoice line. This field is a relationship field. This field is available in API version 55.0 and later. Relationship Name TaxTreatment Relationship Type Lookup Refers To TaxTreatment
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Shows the type of transaction for the invoice line. Possible values are: • Adjustment • Charge • Tax
UnitPrice	Type currency Properties Filter, Nillable, Sort, Update Description Price for one unit of the item on the invoice line.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[InvoiceLineFeed](#) on page 55

Feed tracking is available for the object.

[InvoiceLineHistory](#) on page 63

History is available for tracked fields of the object.

[InvoiceLineOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[InvoiceLineShare](#) on page 67

Sharing is available for the object.

JobProfile

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the current user last viewed a related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the current user last viewed this record.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the job profile.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the owner of the job profile.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[JobProfileFeed](#)

Feed tracking is available for the object.

[JobProfileHistory](#)

History is available for tracked fields of the object.

[JobProfileOwnerSharingRule](#)

Sharing rules are available for the object.

[JobProfileShare](#)

Sharing is available for the object.

JobProfileQueueGroup

JobProfileQueueGroup defines the mapping between Queue and JobProfile and configurations for capacity plans in Workforce Engagement. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Org must have the Workforce Engagement, Workforce Engagement Configuration, and Omni org preferences enabled. User must have the Workforce Engagement Analyst or Planner user permission set.

Fields

Field	Details
AnswerTime	Type int Properties Create, Filter, Group, Sort, Update Description The answer time (in seconds) for a specific group.

Field	Details
CapacityPerJobProfile	Type int Properties Create, Filter, Group, Sort, Update Description The max number of work units that an agent can handle for a specific job profile.
GroupCapacity	Type int Properties Create, Filter, Group, Sort, Update Description The distributed number of work units among groups to which a specific job profile is associated.
GroupId	Type reference Properties Create, Filter, Group, Sort, Update Description Identifies the group or queue record. This is a relationship field. Relationship Name Group Relationship Type Lookup Refers To Group
JobProfileId	Type reference Properties Create, Filter, Group, Sort, Update Description Identifies the job profile record. This is a relationship field. Relationship Name JobProfile Relationship Type Lookup

Field	Details
	Refers To JobProfile
JobProfileShrinkage	Type double Properties Create, Filter, Sort, Update Description The shrinkage for a specific job profile.
Priority	Type int Properties Create, Filter, Group, Sort, Update Description The priority of a group per job profile.
ServiceLevelAgreementPerc	Type double Properties Create, Filter, Sort, Update Description The expected SLA percentage for a specific group.
WorkType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description A type of group, indicating whether a queue is synchronous or asynchronous. Possible values are: • A—Async • S—Sync The default value is 'S'.

Knowledge__Feed

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

For additional information about feeds, see [FeedItem](#) on page 2549.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Lightning Knowledge must be enabled in your org.

Fields

Field	Details
<code>BestCommentId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the comment marked as best answer on a question post.
<code>Body</code>	Type textarea Properties Nillable, Sort Description The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>. Although a value for <code>Body</code> is not required for the <code>ContentPost</code> type, an attachment is required. If an attachment isn't present, the type changes to <code>TextPost</code> or <code>AdvancedTextPost</code>, depending on the API version. <code>TextPost</code> and <code>AdvancedTextPost</code> do require a value for <code>Body</code>.  Tip: See the <code>IsRichText</code> field for a list of HTML tags supported in the body of rich text posts.
<code>CommentCount</code>	Type int Properties Filter, Group, Sort Description The number of comments associated with this feed item.

Field	Details
	 Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>. Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.
<code>InsertedById</code>	Type reference Properties Group, Nillable, Sort Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.
<code>IsRichText</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed item <code>Body</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • <code><p></code> •  Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp;</p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code> • <code><i></code> • <code><u></code> • <code><s></code> • <code></code> • <code></code> • <code></code>

Field	Details
	• <code></code> The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code>  Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
LikeCount	Type int Properties Filter, Group, Sort Description The number of likes associated with this feed item.
LinkUrl	Type url Properties Nillable, Sort Description The URL of a <code>LinkPost</code>.
ParentId	Type reference Properties Filter, Group, Sort Description ID of the Knowledge article to which the feed item is related.
RelatedRecordId	Type reference Properties Group, Nillable, Sort Description ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code>. For WDC thanks posts, it's the ID of the <code>WorkThanks</code> object associated with a <code>RypplePost</code>. This field is typically null for all posts except <code>ContentPost</code> and <code>RypplePost</code>. For example, set this field to an existing <code>ContentVersion</code> ID and post it to a feed with <code>Type</code> set to <code>ContentPost</code>.
Title	Type string

Field	Details
	Properties Group, Nillable, Sort Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name. The <code>Title</code> field can be updated on posts of <code>Type</code> <code>QuestionPost</code>.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of feed item. Except for <code>ContentPost</code>, <code>LinkPost</code>, and <code>TextPost</code>, don't create feed items of other types directly from the API. • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or Event associated with a case record (excluding email and call logging). For a recurring <code>Task</code> with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring <code>Task</code> with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence. • <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • <code>AnnouncementPost</code>—Not used. • <code>ApprovalPost</code>—generated when a user submits an approval. • <code>BasicTemplateFeedItem</code>—Not used. • <code>CanvasPost</code>—a post made by a canvas app posted on a feed. • <code>CollaborationGroupCreated</code>—generated when a user creates a public group. • <code>CollaborationGroupUnarchived</code>—Not used. • <code>ContentPost</code>—a post with an attached file. • <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher. • <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold. • <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed. • <code>LinkPost</code>—a post with an attached URL. • <code>PollPost</code>—a poll posted on a feed. • <code>ProfileSkillPost</code>—generated when a skill is added to a user's Chatter profile. • <code>QuestionPost</code>—generated when a user posts a question. • <code>ReplyPost</code>—generated when Chatter Answers posts a reply.

Field	Details
	• <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC. • <code>TextPost</code>—a direct text entry on a feed. • <code>TrackedChange</code>—a change or group of changes to a tracked field. • <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated. The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>: • <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case. • <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object. • <code>ChangeStatusPost</code>—generated event when a user changes the status of a case. • <code>ChatTranscriptPost</code>—generated event when Chat transcript is saved to a case. • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received. • <code>FacebookPost</code>—generated when a Facebook post is created from a case. Deprecated. • <code>MilestoneEvent</code>—generated when a case milestone is completed or reaches violation status. • <code>SocialPost</code>—generated when a social post is created from a case.  Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.

Knowledge__ka

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

This object is derived from [KnowledgeArticle](#) on page 3033.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field	Details
ArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the article.
ArchivedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was archived.
ArticleNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
CaseAssociationCount	Type int Properties Filter, Group, Sort Description The number of cases attached to the article.
FirstPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was first published.
LastPublishedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date when the article was last published.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
MasterLanguage	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The article's original language. Only accessible if your knowledge base supports multiple languages.
MigratedToFromArticle	Type string Properties Filter, Group, Nillable, Sort Description The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.
TotalViewCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description Total number of views for this article. This field is available in API version 39.0 and later.

Knowledge__kav

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

 **Note:** By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

This object is derived from [KnowledgeArticleVersion](#) on page 3045.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

This object doesn't retrieve `<ActionOverrides>`.

Special Access Rules

Lightning Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field	Details
ArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the article.
ArchivedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article version was archived.

Field	Details
ArticleArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the article.
ArticleArchivedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article was archived.
ArticleCaseAttachCount	Type int Properties Filter, Group, Nillable, Sort Description The number of cases where this article is attached.
ArticleCreatedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who created the article.
ArticleCreatedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article was created.
ArticleMasterLanguage	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The article's original language. Only accessible if your knowledge base supports multiple languages.
ArticleNumber	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
ArticleTotalViewCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of views for the article.
AssignedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who assigned the article.
AssignedToId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user assigned to the article.
AssignmentDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article was assigned to a user.
AssignmentDueDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The due date when an article is assigned.
AssignmentNote	Type textarea Properties Filter, Nillable, Sort Description Notes to the assignee from the user who assigned the article.
ExternalRef	Type string Properties Filter, Group, Nillable, Sort Description The ID of the item being referenced on the external system. For example, the ID of a document on a Google Drive or a page on Confluence.
ExternalSourceId	Type reference Properties Filter, Group, Nillable, Sort Description Reference to the external Knowledge data source object.
ExternalUrl	Type url Properties Filter, Nillable, Sort Description The URL of the knowledge content referenced in an external system. For example, the ID of a document in Google Drive or a page in Confluence.
FirstPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was first published.

Field	Details
IsExternalData	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the data is external to the customer's knowledge base (<code>true</code>) or not (<code>false</code>).
IsLatestVersion	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the article is the most current version. (<code>true</code>) or not (<code>false</code>). This field can be <code>true</code> on the online or published version, a draft version in the primary language, a draft version in a translation, and the latest archived version. However, you can't filter by (<code>PublishState='Online'</code>) and (<code>IsLatestVersion=false</code>) because the online version is also the latest version. This field is available in API version 24.0 and later.
IsMasterLanguage	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the article has one or more translations associated with it (<code>true</code>) or not (<code>false</code>).
IsOutOfDate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the source article has been updated since this translated version was created (<code>true</code>) or not (<code>false</code>).
IsVisibleInApp	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Required. Indicates whether the article is visible in the Articles tab (<code>true</code>) or not (<code>false</code>).

Field	Details
IsVisibleInCsp	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. Indicates whether the article is visible in the Customer Portal (<code>true</code>) or not (<code>false</code>).
IsVisibleInPkb	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. Indicates whether the article is visible in the public knowledge base (<code>true</code>) or not (<code>false</code>).
IsVisibleInPrm	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. Indicates whether the article is visible in the partner portal (<code>true</code>) or not (<code>false</code>).
KnowledgeArticleId	Type reference Properties Filter, Group, Sort Description The ID of the article independent from its version. The value for this field is retrieved from the <code>Id</code> field of the KnowledgeArticle object.
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>. Querying or searching articles in SOSL require that you specify the <code>Language</code> field in the <code>WHERE</code> clause. The language must be the same for all article types.

Field	Details
	Before API version 47.0, you must include the <code>Language</code> field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without <code>Language</code> depending on what you are querying.
<code>LastPublishedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was last published.
<code>MasterVersionId</code>	Type reference Properties Filter, Group, Nillable, Sort Description ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.
<code>MigratedToFromArticleVersion</code>	Type string Properties Filter, Group, Nillable, Sort Description The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.
<code>NextReviewDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date when the article must next be reviewed for accuracy. Available in API version 58.0 and later.
<code>OwnerId</code>	Type reference Properties Filter, Group, Sort Description The ID of the article's owner.

Field	Details
PublishStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The publication status for the article: • Draft: any draft articles. • Online: articles published in Salesforce Knowledge. • Archived: archived articles. A user must have the “Manage Articles” permission enabled to use Online. Article queries and searches in SOQL or SOSL require that you specify either the PublishStatus or the Id field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a PublishStatus of Archived, also check that IsLatestVersion equals false in your WHERE clause.
RecordTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the API Name that describes the type of article. Use the record type to determine the article structure and other settings for different types of content.
SourceId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the source from which the article was created (Case or Reply). This field is only accessible from the API and isn’t visible in the Salesforce UI.
Summary	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Summary of the article. Maximum size is 1000 characters.
Title	Type string

Field	Details
	Properties Create, Defaulted on create, Filter, Group, idLookup, Sort, Update Description Required. Article's title. Maximum size is 255 characters.
TranslationCompletedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.
TranslationExportedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.
TranslationImportedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.
UrlName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. Use a unique value regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with <code>SeeAllData</code> set to <code>false</code>.) <code>UrlName</code> is case-sensitive and its maximum size is 255 characters.
ValidationStatus	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group
	Description Shows whether the content of the article has been validated. Possible values are <code>Validated</code> and <code>Not Validated</code> . The default value is <code>Not Validated</code> . This field is available in API version 24.0 or later.
VersionNumber	Type int
	Properties Group, Sort
	Description The number assigned to a version of an article. This field is available in API version 24.0 and later.

Knowledge__DataCategorySelection

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

Note: By default, the prefix for this object name is `Knowledge` and that is the value shown in this reference. However, this prefix can be modified by changing the **Object Name** for the `Knowledge__kav` object in Object Manager.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Lightning Knowledge must be enabled in your org.

Fields

Field	Details
DataCategoryGroupName	Type datacategorygroupreference
	Properties Create
	Description Unique name of the data category group which has categories associated with the article.

Field	Details
DataCategoryName	Type datacategorygroupreference Properties Create Description Unique name of the data category associated with the article.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the article associated with the data category selection.

Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use this object to query and manage article categorization in your organization. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

Note: When using this object to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

KnowledgeableUser

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
NetworkId	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description ID of the Experience Cloud site the topic exists in. This field is available only if digital experiences is enabled for your org.
RawRank	Type int Properties Filter, Group, Nillable, Sort Description Rank of this user's knowledge on the topic relative to other users.
TopicId	Type reference Properties Filter, Group, Sort Description Unique ID for the topic in Salesforce.
UserId	Type reference Properties Filter, Group, Sort Description Unique ID for the user in Salesforce.

KnowledgeArticle

Provides read-only access to an article and the ability to delete the primary article. This object is available in API version 19.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike KnowledgeArticleVersion, the ID of a KnowledgeArticle record is identical irrespective of the article's version (status).

[Knowledge__ka](#) on page 3019 is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field Name	Details
ArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the article.
ArchivedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was archived.
ArticleNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
CaseAssociationCount	Type int Properties Filter, Group, Sort Description The number of cases attached to the article.
FirstPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was first published.

Field Name	Details
IsGeneratedByLlm	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True if the first version of an article was created with an LLM. This object is available in API version 59.0 and later.
LastPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was last published.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user has not viewed this record or list view, though they might have accessed it (LastReferencedDate)
MasterLanguage	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The article's original language. Only accessible if your knowledge base supports multiple languages.
MigratedToFromArticle	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The ID for the corresponding pre- or post-migration article. Contains values only in orgs that migrate from Knowledge in Salesforce Classic to Lightning Knowledge. This field is available in API version 45.0 and later.
TotalViewCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of views for this article. This field is available in API version 39.0 and later.

Usage

Use this object to query or retrieve articles. KnowledgeArticle can be used in a SOQL clause, but doesn't provide access to the fields from the article. Provides read-only access to an article and the ability to delete the primary article.

Usage for SOQL with KnowledgeArticle

To expose the `migrated_to_from_id` column on KnowledgeArticle and KnowledgeArticleVersion to the sObject API: expose `MigratedToFromArticle` in KnowledgeArticle.

For SOQL:

- To filter by `MigratedToFromArticle`, remove any other filters.
- When filtering by `MigratedToFromArticle`, use the '=' or 'IN' operator.
- When filtering by `MigratedToFromArticle`, the value can't be null or empty.

SEE ALSO:

[KnowledgeArticleVersion](#)

KnowledgeArticleEventLog

Knowledge Article View event logs contain user activity with your knowledge base. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ArticleIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The id of the article. For example: 00Dxx0000001gEb.
ArticleStatus	Type string Properties Filter, Group, Nillable, Sort Description The status of the article. Possible values are: • D—Draft • O—Online • A—Archived
ArticleVersion	Type double Properties Filter, Nillable, Sort Description The article version number. For example: 2.
ArticleVersionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the article version. For example: ka0R00000005rt6.
Context	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Context of the request.
IsLargeLanguageModel	Type string Properties Filter, Group, Nillable, Sort Description Whether the article was written with an LLM.
IsLastVersion	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True if it is the last version of the article. The default value is <code>false</code> .
Language	Type string Properties Filter, Group, Nillable, Sort Description The ISO code of the language. For example: <code>en_US/</code>
ObjectType	Type string Properties Filter, Group, Nillable, Sort Description The object requested. For example: <code>Knowledge__kav</code> .
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
SessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description Session ID of the request. For example: gV7pCSW2vGaaJNFj3GSpuPIjNbKVbSxRvx34LJsIvuc=.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description User type of the request. Possible values are: • A—App • C—Customer Portal • P—Partner Portal • G—Guest

KnowledgeArticleFeedback

Represents information about feedback from users on Knowledge articles and details about assignment of feedback to the article owner or team to take action. This object is available in API version 64.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `delete()`, `update()`

 **Note:** A KnowledgeArticleFeedback record is created only when a user submits feedback.

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license. Knowledge Article Feedback Org Preference should also be enabled.

Fields

Field Name	Details
AssignedToId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The queue name or user ID of the feedback assignee, who reviews and takes action on the feedback. This field is a polymorphic relationship field. Relationship Name AssignedTo Refers To Queue, User
FeedbackResponseId	Type reference Properties Filter, Group, Sort Description The unique ID of the feedback response associated with the feedback record. This field is a relationship field.

Field Name	Details
	Relationship Name FeedbackResponse Refers To SurveyResponse
FeedbackSource	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The source of feedback. Possible values are: • Internal • Community
FeedbackSubmitterId	Type reference Properties Filter, Group, Sort Description The ID of the user who submitted feedback. This field is a relationship field. Relationship Name FeedbackSubmitter Refers To User
IsLiked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description The answer to the Article Liked question in the feedback form. The default value is false
KnowledgeArticle	Type string Properties Filter, Group, Sort Description The ID of the article associated with the feedback response.

Field Name	Details
KnowledgeArticleUrl	Type url Properties Filter, Sort Description The URL of the article version associated with the feedback response.
KnowledgeArticleVersion	Type string Properties Filter, Group, idLookup, Sort Description The version of the article associated with the feedback response.
KnowledgeArticleVersionTitle	Type string Properties Filter, Group, Nillable, Sort Description The title of the article version associated with the feedback response.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the feedback record was last accessed or referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the feedback record was last viewed.
LinkedArticleEntityId	Type reference Properties Filter, Group, Nillable, Sort Description Internal entity that links a Knowledge article version and survey invitation.

Field Name	Details
	This field is a relationship field. Relationship Name LinkedArticleEntity Refers To LinkedArticle
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description A unique name automatically assigned to the Knowledge article feedback when it's created. You can't change the format or value of this field.
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The user ID of the article feedback owner. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
ReviewActionTaken	Type picklist Properties Filter, Group, Sort, Nillable, Update Description The review action taken to address the feedback. You can configure the possible values for this picklist field.
ReviewComment	Type textArea Properties Filter, Nillable, Sort, Update Description The review comment provided by the feedback assignee. This is optional. The maximum length is 1,212 characters.

Field Name	Details
ReviewCompletionDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The date when the review was completed.
ReviewDueDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The due date for completing the feedback review.
ReviewStatus	Type picklist Properties Filter, Group, Sort, Nillable, Update Description The review status of the feedback. You can configure the possible values for this picklist field.

Usage

Use this object to query, retrieve, or search for article feedback based on your access level to the articles. You can filter feedback records by Knowledge article, article version, or other criteria.

SOQL Samples

The SOQL clause queries KnowledgeArticleFeedback records which aren't reviewed.

```
SELECT FeedbackResponseId, IsLiked, KnowledgeArticleVersion
FROM KnowledgeArticleFeedback
WHERE ReviewCompletionDate = NULL
```

The SOQL clause queries KnowledgeArticleFeedback records for a specific article version.

```
SELECT FeedbackResponseId, IsLiked, KnowledgeArticleVersion, AssignedToId, ReviewStatus
FROM KnowledgeArticleFeedback
WHERE KnowledgeArticleVersion = 'ka0SG00000KSjjRYAT'
```

KnowledgeArticleVersion

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Use this object to:

- Query or search generically across multiple types of articles.
- Filter on a specific version.
- Update standard fields in draft versions.

When you query on the archived article, the results include both the article and the article's archived versions.

[Knowledge__kav](#) on page 3022 is derived from this object.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`

 **Note:**

- You can only update draft versions.
- You can't update draft translations with the `knowledgeManagement` REST API.
- For Lightning Knowledge, to create, update, or delete a Knowledge article version, use the call on `Knowledge__kav`. For example, to delete, use `Knowledge__kav.delete()`.
- For Knowledge in Salesforce Classic, to create, update, or delete a Knowledge article version, use the call on `ArticleType__kav`, where `ArticleType` is the name of the article's type. For example, to delete, use `ArticleType__kav.delete()`.

Special Access Rules

Knowledge must be enabled in your org. A user must have the View Articles permission enabled. Salesforce Knowledge users, unlike customer and partner users, must also be granted the `Knowledge User` feature license.

Fields

Field Name	Details
ArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the article.

Field Name	Details
ArchivedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article version was archived.
ArticleArchivedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who archived the article.
ArticleArchivedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article was archived.
ArticleCaseAttachCount	Type int Properties Filter, Group, Nillable, Sort Description The number of cases where this article is attached.
ArticleCreatedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who created the article.
ArticleCreatedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article was created.

Field Name	Details
ArticleMasterLanguage	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The article's original language. Only accessible if your knowledge base supports multiple languages.
ArticleNumber	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The unique number automatically assigned to the article when it's created. You can't change the format or value for this field.
ArticleTotalViewCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of views for the article.
ArticleType	Type string Properties Defaulted on createFilter Description Indicates the API Name of the article type. The <code>ArticleType</code> is assigned to the article when it's created. You can't change the value of this field. This field is available in orgs using Knowledge in Salesforce Classic in API version 26.0 and later.
AssignedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who assigned the article.
AssignedToId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The ID of the user assigned to the article.
AssignmentDate	Type dateTime Properties Filter, Nillable, Sort Description The date the article was assigned to a user.
AssignmentDueDate	Type dateTime Properties Filter, Nillable, Sort Description The due date when an article is assigned.
AssignmentNote	Type textarea Properties Filter, Nillable, Sort Description Notes to the assignee from the user who assigned the article.
FirstPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was first published.
IsLatestVersion	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the article is the most current version. (<code>true</code>) or not (<code>false</code>). This field can be <code>true</code> on the online or published version, a draft version in the primary language, a draft version in a translation, and the latest archived version. However, you can't filter by (<code>PublishState='Online'</code>) and (<code>IsLatestVersion=false</code>) because

Field Name	Details
	the online version is also the latest version. This field is available in API version 24.0 and later.
IsMasterLanguage	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the article has one or more translations associated with it (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.
IsOutOfDate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the source article has been updated since this translated version was created (<code>true</code>) or not (<code>false</code>). Only accessible if your knowledge base supports multiple languages.
IsVisibleInApp	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Required. Indicates whether the article is visible in the Articles tab (<code>true</code>) or not (<code>false</code>).
IsVisibleInCsp	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Required. Indicates whether the article is visible in the Customer Portal (<code>true</code>) or not (<code>false</code>).
IsVisibleInPkb	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Required. Indicates whether the article is visible in the public knowledge base (<code>true</code>) or not (<code>false</code>).
IsVisibleInPrm	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Required. Indicates whether the article is visible in the partner portal (<code>true</code>) or not (<code>false</code>).
KnowledgeArticleId	Type reference Properties Filter, Group, Sort Description The ID of the article independent from its version. The value for this field is retrieved from the <code>Id</code> field of the KnowledgeArticle object.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code> . Querying or searching articles in SOSL require that you specify the <code>Language</code> field in the WHERE clause. The language must be the same for all article types. Before API version 47.0, you must include the <code>Language</code> field to filter queries on Knowledge article versions. In API version 47.0 and later, you can filter queries on Knowledge article versions with or without <code>Language</code> depending on what you are querying.
LargeLanguageModel	Type string Properties Filter, Group, Nillable, Sort Description Shows the LLM used to create an article version. This object is available in API version 59.0 and later.

Field Name	Details
LastPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article was last published.
MasterVersionId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the source article, if the article is the translation of a source article. Only accessible if your knowledge base supports multiple languages.
MigratedToFromArticleVersion	Type string Properties Filter, Group, Nillable, Sort Description The ID for the corresponding pre- or post-migration article version. Contains values only in orgs that migrate from Classic to Lightning Knowledge. Available in API version 43.0 and later.
NextReviewDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the article must next be reviewed for accuracy. Available in API version 58.0 and later.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the article's owner.
PublishStatus	Type picklist

Field Name	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The publication status for the article: • Draft: any draft articles. • Online: articles published in Salesforce Knowledge. • Archived: archived articles. A user must have the “Manage Articles” permission enabled to use Online. Article queries and searches in SOQL or SOSL require that you specify either the PublishStatus or the Id field in the WHERE clause. You can search for only one publication status per article type in a single SOSL query. When searching for articles with a PublishStatus of Archived, also check that IsLatestVersion equals false in your WHERE clause.
SourceId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the source from which the article was created (Case or Reply).
Summary	Type textarea Properties Filter, Nillable, Sort Description Summary of the article. Maximum size is 1000 characters.
Title	Type string Properties Filter, Group, idLookup, Sort Description Required. Article's title. Maximum size is 255 characters.
TranslationCompletedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description Date and time when the article was last translated. Only accessible if your knowledge base supports multiple languages.
TranslationExportedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the article was last exported for translation. Only accessible if your knowledge base supports multiple languages.
TranslationImportedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the article was last imported for translation. Only accessible if your knowledge base supports multiple languages.
UrlName	Type string Properties Filter, Group, idLookup, Sort Description Required. Represents the article's URL. Can contain alphanumeric characters and hyphens but can't begin or end with a hyphen. This value must be unique regardless of context. (For example, a unique value allows you to get expected results when running an Apex test with <code>SeeAllData</code> set to <code>false</code> .) <code>UrlName</code> is case-sensitive and its maximum size is 255 characters.
ValidationStatus	Type picklist Properties Defaulted on create, Filter, Group Description Shows whether the content of the article has been validated. Possible values are <code>Validated</code> and <code>Not Validated</code> . The default value is <code>Not Validated</code> . This field is available in API version 24.0 or later.
VersionNumber	Type int

Field Name	Details
	Properties Group, Sort
	Description The number assigned to a version of an article. This field is available in API version 24.0 and later.

Usage

Use this object to query, retrieve, or search for articles across all types of articles depending on their version. You can update draft primary articles. Also, you can delete articles that aren't drafts. Client applications can use KnowledgeArticleVersion with `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` to return the category groups and the category structure associated with Salesforce Knowledge.

To access an article independent of its version, use the KnowledgeArticle object.

In Lightning Knowledge, the type of article is determined by the `RecordType` field on the concrete derived object (for example, [Knowledge__kav](#) on page 3022). For Knowledge in Salesforce Classic, the type of article is determined by the `ArticleType` field and the concrete derived object uses the prefix of the article type name (for example, `FAQ__kav` for the FAQ article type).

SOQL Samples

The following SOQL clause uses KnowledgeArticleVersion to query all published articles from all articles complying with the classification specified in the WITH DATA CATEGORY clause:

```
SELECT Title, Summary
FROM KnowledgeArticleVersion
WHERE PublishStatus='Online'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c ABOVE_OR_BELOW europe__c AND Product__c BELOW All__c
```

The following SOQL clause for Lightning Knowledge uses the `Offer` record type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Knowledge__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
AND RecordTypeId = '<specify RecordTypeId for Offer here>'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause for Salesforce Classic uses the `Offer` article type to limit the query to all draft articles:

```
SELECT Id, Title
FROM Offer__kav
WHERE PublishStatus='Draft'
AND Language = 'en_US'
WITH DATA CATEGORY Geography__c AT (france__c,usa__c) AND Product__c ABOVE dsl__c
```

The following SOQL clause uses KnowledgeArticleVersion to query the IDs of all archived versions of a particular article:

```
SELECT Id
FROM KnowledgeArticleVersion
```

```
WHERE PublishStatus='Archived'
AND IsLatestVersion=false
AND KnowledgeArticleId='kA1D00000001PQ6KAM'
```

SOQL and SOSL with KnowledgeArticleVersion

- Filter on a single value of `PublishStatus` for best results. To find all versions of each article, omit the `PublishStatus` filter, but do filter on one or more master key IDs. To retrieve all archived versions for a given article, specify a SOQL filter where `IsLatestVersion` is `false`.
- In API version 46.0 and earlier, queries without a filter on `PublishStatus` return published articles by default. In API version 47.0 and later, draft, published, and archived articles are returned when Lightning Knowledge is enabled.
- To support security, only users with the “View Draft Articles” permission see articles whose `PublishStatus` value is `Draft`. Similarly, only users with the “View Archived Articles” permission see articles whose `PublishStatus` value is `Archived`.
- Archived article versions are stored in the **Knowledge__kav** object. To query archived article versions, specify the article `Id` and set `IsLatestVersion='0'`.
- You can't use binding variables in Apex SOQL statements with `KnowledgeArticleVersion` objects. For example, the following SOQL statement causes a compilation error.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
List<Knowledge__kav> articles = [
    SELECT Id FROM Knowledge__kav
    WHERE PublishStatus = :PUBLISH_STATUS_ONLINE
];
```

Instead, use dynamic SOQL as follows. See [Dynamic SOQL](#) in *Apex Developer Guide*.

```
final String PUBLISH_STATUS_ONLINE = 'Online';
final String q = 'SELECT Id, PublishStatus FROM Knowledge__kav
WHERE PublishStatus = :PUBLISH_STATUS_ONLINE';
List<Knowledge__kav> articles = Database.query(q);
```

Other Usage for SOQL and SOSL with KnowledgeArticleVersion

To expose the *migrated_to_from_id* on **KnowledgeArticle** and **KnowledgeArticleVersion** to the sObject API: expose **MigratedToFromArticleVersion** in **KnowledgeArticleVersion**.

- For SOQL:
 - To filter by **MigratedToFromArticleVersion**, remove any other filters.
 - When filtering by **MigratedToFromArticleVersion**, use the '=' or 'IN' operator.
 - When filtering by **MigratedToFromArticleVersion**, the value can't be null or empty.
- SOSL doesn't support **MigratedToFromArticleVersion**.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

KnowledgeArticleVersionHistory

History is available for tracked fields of the object.

SEE ALSO:

- [KnowledgeArticle](#)
- [KnowledgeArticleViewStat](#)
- [KnowledgeArticleVoteStat](#)

KnowledgeArticleVersionHistory

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later. Knowledge__VersionHistory is derived from this object. To access this derived object, [turn on field history tracking](#) for Knowledge objects.

Supported Calls
