
Object Reference for the Salesforce Platform

Version 66.0, Spring '26

CONTENTS

Chapter 1: Overview of Salesforce Objects and Fields	1
Release Notes	2
Primitive Data Types	2
Field Types	4
API Field Properties	10
Required Fields	11
System Fields	12
Frequently Occurring Fields	13
Compound Fields	15
Address Compound Fields	15
Geolocation Compound Field	18
Compound Field Considerations and Limitations	19
Custom Objects	21
Custom Fields	24
AppExchange Object Prefixes and the API	25
Relationships Among Standard Objects and Fields	25
Factors that Affect Data Access	27
Field and Type Differences in Salesforce Apps and APIs	29
External Objects	29
Big Objects	31
Define and Deploy Custom Big Objects	33
Object Interfaces	39
REFERENCE	40
Chapter 2: Salesforce Object Behavior	40
Object Groups	43
Salesforce Common Objects	43
Salesforce Cloud Objects	44
Salesforce High-Scale Objects	44
Salesforce External Data Objects	50
Salesforce Object Types	51
Object Cheatsheet	52
Chapter 3: Associated Objects (Feed, History, OwnerSharingRule, Share, and ChangeEvent Objects)	55
StandardObjectName Feed Feed	55
StandardObjectName History History	63
StandardObjectName OwnerSharingRule OwnerSharingRule	65

StandardObjectName Share	67
StandardObjectNameChangeEvent	68
Chapter 4: Custom Objects	78
FSL__Time_Dependency__c	78
Custom Metadata Type __mdt __mdt	80
Custom Object __c __c	83
Custom Object __Feed __Feed	87
Chapter 5: Object Interfaces	95

- [Factors that Affect Data Access](#)
- [Field and Type Differences in Salesforce Apps and APIs](#)
- [External Objects](#)
- [Big Objects](#)
- [Object Interfaces](#)

Salesforce objects and fields are analogous to database tables and the table columns. Objects and fields structure data. For example, the central object in the Salesforce data model represents accounts—companies and organizations involved with your business, such as customers, partners, and competitors.

The term “record” describes a particular occurrence of an object (such as a specific account like “IBM” or “United Airlines” that is represented by an Account object). A record is analogous to a row in a database table.

Objects already created for you by Salesforce are called standard objects. Objects that you create in your organization with the user interface or with the Metadata API are called custom objects. Objects you create that map to data stored outside your organization are called external objects.

While this document describes all of the objects available in the API, your applications work with only the objects that you are authorized to access. Programmatic access to objects is determined by the objects defined in your organization, your organization configuration, your user permissions and access settings (which are configured by your organization’s Salesforce admin), your data sharing model, and other factors related specifically to the object.

Most of the objects accessible through the API are read-write objects. However, there are a few objects that are read-only. This fact is noted in the description for the object.

For details about the data types and size restrictions for each object’s fields, see the [Salesforce Field Reference Guide](#).

Salesforce Objects Release Notes

Use the Salesforce Release Notes to learn about the most recent updates and changes to Salesforce Objects.

For information on updates to Salesforce Objects with broad availability, see [New and Changed Objects](#) in the Salesforce Release Notes.

For changes to objects with limited availability, see the release notes for each product area. Browse all of the most recent [Salesforce Release Notes](#).

Primitive Data Types

The API uses the following primitive data types:

Value	Details
base64	Base 64-encoded binary data. Fields of this type are used for storing binary files in Attachment records, Document records, and Scontrol records. In these objects, the <code>Body</code> or <code>Binary</code> field contains the (base64 encoded) data, while the <code>BodyLength</code> field defines the length of the data in the <code>Body</code> or <code>Binary</code> field. In the Document object, you can specify a URL to the document instead of storing the document directly in the record.
boolean	Boolean fields have one of these values: <code>true</code> (or 1), or <code>false</code> (or 0).
byte	A set of bits.
date	Date data. Fields of this type contain date values, such as <code>ActivityDate</code> in the Event object. Unlike <code>dateTime</code> fields, date fields contain no time value—the time portion of a date field is not relevant and is always set to midnight in the Coordinated Universal Time (UTC) time zone. If you specify a date value in a query, you can filter on date fields only.
dateTime	Date/time values (timestamps). Fields of this type handle date/time values (timestamps), such as <code>ActivityDateTime</code> in the Event object or the <code>CreatedDate</code>, <code>LastModifiedDate</code>, or <code>SystemModstamp</code> in many objects. Regular <code>dateTime</code> fields are full timestamps with a precision of one second. They are always transferred in the Coordinated Universal Time (UTC) time zone. In your client application, you might need to translate the timestamp to or from a local time zone. If you specify a <code>dateTime</code> value in a query, you can filter on <code>dateTime</code> fields only. Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time zone. To determine how your development tool handles time values, refer to its documentation. The Event object has a <code>DurationInMinutes</code> field that specifies the number of minutes for an event. Even though this is a temporal value, it is an integer type—not a <code>dateTime</code> type.
double	Double values. Fields of this type can contain fractional portions (digits to the right of the decimal place), such as <code>ConversionRate</code> in <code>CurrencyType</code>. In the API, all non-integer values (such as Currency Field Type and Percent Field Type) contain values of type double. Some restrictions may be applied to double values: • <code>scale</code>: Maximum number of digits to the right of the decimal place. • <code>precision</code>: Total number of digits, including those to the left and the right of the decimal place

Value	Details
	The maximum number of digits to the left of the decimal place is equal to <code>precision</code> minus <code>scale</code>. In the Salesforce user interface, precision is defined differently—it is the maximum number of digits allowed to the left of the decimal place. Values can be stored in scientific notation if the number is large enough (or, for negative numbers, small enough), as indicated by the W3C XML Schema Part 2: Datatypes Second Edition specification. When the user sets the precision in custom fields in the Salesforce application, it displays the precision set by the user, even if the user enters a more precise value than defined for those fields. However, when you set the precision in custom fields using the API, no rounding occurs when the user retrieves the number field.
int	Fields of this type contain numbers with no fractional portion (digits to the right of a decimal place), such as the <code>NumberOfEmployees</code> in an Account. For integer fields, <code>digits</code> specifies the maximum number of digits that an int can have.
long	Large integers. They are similar to the int type but can hold a wider range of numbers. The smallest possible value for long is -9223372036854775808 and the largest possible value is 9223372036854775807. For long fields, <code>digits</code> specifies the maximum number of digits that the number can have.
string	Character strings. Fields that are of data type <code>string</code> contain text and some have length restrictions depending on the data being stored. For example, in the Contact object, the <code>FirstName</code> field is 40 characters, the <code>LastName</code> field is 80 characters, the <code>MailingStreet</code> is 255 characters. For fields that contain strings, behavior is different beginning with API version 15.0. In API versions previous to 15.0, if you specify a value for a field, and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and the fault code <code>STRING_TOO_LONG</code> is returned. <code>AllowFieldTruncationHeader</code> allows you to specify that the previous behavior, truncation, be used instead of the new behavior in API versions 15.0 and later. This header has no effect in versions 14.0 and earlier. The affected fields are: <code>anyType</code>, <code>email</code>, <code>encryptedstring</code>, <code>multipicklist</code>, <code>phone</code>, <code>picklist</code>, <code>string</code>, and <code>textarea</code>.
time	Time values. Fields of this type handle time values, such as <code>FridayEndTime</code> in the BusinessHours object, with a precision of one millisecond. Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time zone. To determine how your development tool handles time values, refer to its documentation.

These data types are used in the SOAP messages that are exchanged between your client application and the API. When writing your client application, follow the data typing rules defined for your programming language and development environment. Your development tool handles the mapping of typed data in your programming language with these SOAP data types.

The primitive data types are:

- specified in the World Wide Web Consortium's publication *XML Schema Part 2: Data Types* at the following URL: <http://www.w3.org/TR/xmlschema-2/>.
- enumerated in the `SOAPType` field of the Field type, which is described in the `fields` property of the DescribeObjectResult.

Primitive types are used as a standardized way to define, send, receive, and interpret basic data types in the SOAP messages exchanged between client applications and the API. In addition, primitive data types are interpreted in a Salesforce-specific way, which is useful for display formatting and for numeric conversion (adding values of different currencies).

For example, Salesforce chooses to interpret a double value passed via SOAP as a `double` in a number of possible ways, depending on the field definition. If the field type for that data is currency, Salesforce handles the display of the data by prepending it with a currency symbol and inserting a decimal for precision. Similarly, if the field type is percent, Salesforce handles the display of the data by appending a percent sign (%). Regardless of the field type, however, the value is sent in the SOAP message as a double.

The API uses data types called field types that are defined in the WSDLs. For more information, see [Field Types](#).

Field Types

In addition to the primitive data types, the API defines the following data types for fields.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Note: For fields that contain strings, behavior is different beginning with API version 15.0. In API versions previous to 15.0, if you specify a value for a field, and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and the fault code `STRING_TOO_LONG` is returned. `AllowFieldTruncationHeader` allows you to specify that the previous behavior, truncation, be used instead of the new behavior in API versions 15.0 and later. This header has no effect in versions 14.0 and earlier. The affected fields are: `anyType`, `email`, `encryptedstring`, `multipicklist`, `phone`, `picklist`, `string`, and `textarea`.

Field Type	What the Field Contains
address	A compound data type that contains address field data.
anyType	Polymorphic data type that returns string, picklist, reference, Boolean, currency, int, double, percent, ID, date, datetime, url, or email data depending on the kind of field involved. See AnyType Field Type .
calculated	Fields that are defined by a formula. See Calculated Field Type .
combobox	A combobox, which includes a set of enumerated values and allows the user to specify a value not in the list. See ComboBox Field Type .
currency	Currency values. See Currency Field Type .
DataCategoryGroupReference	Reference to a data category group or a category unique name. See DataCategoryGroupReference Field Type .
email	Email addresses. See Email Field Type .
encryptedstring	Encrypted text fields contain any combination of letters, numbers, or symbols that are stored in encrypted form. You can set a maximum length of up to 175 characters. Available in API versions 11.0 and later.
floatarray	Reserved for future use.
ID	Primary key field for the object. See ID Field Type . Most Web services tools, including .NET and WSC, map the ID simple type defined in the API WSDL (Enterprise or Partner) to a string. However, other tools generate a specific ID class to represent the ID simple type. Consult your Web services toolkit documentation for more information.

Field Type	What the Field Contains
JunctionIdList	A string array of referenced ID values that represent the many-to-many relationship of an underlying junction entity. Query and manipulate the string array to query and manipulate the underlying junction entities in a single API call. See JunctionIdList Field Type . Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.
location	A compound data type that contains latitude and longitude values for geolocation fields.
masterrecord	When records are merged, the ID of the record that is saved (the other records are deleted).
multipicklist	Multi-select picklists, which include a set of enumerated values from which multiple values can be selected. See Multi-Select Picklist Field Type .
percent	Percentage values. See Percent Field Type .
phone	Phone numbers. Values can include alphabetic characters. Client applications are responsible for phone number formatting. See Phone Field Type .
picklist	Picklists, which include a set of enumerated values from which one value can be selected. See Picklist Field Type .
reference	Cross-references to a different object. Analogous to a foreign key field in SQL. See Reference Field Type .
textarea	String that's displayed as a multiline text field. See Textarea Field Type .
textarray	Reserved for future use.
url	URL values. Client applications commonly display URLs as hyperlinks. See URL Field Type .

These field types extend [primitive data types](#). Many of these field types follow common data typing conventions that are made explicit in their metadata. However, certain field types have unique characteristics that you must understand before using them in your client application.

These field types apply to both standard and custom fields. They're enumerated in the `type` field of the [Field Types](#) type, which is described in the `fields` property of the `DescribeObjectResult`.

Note: Some numeric fields have precision and scale limits. In addition, certain text fields have length restrictions. These restrictions are enforced when you `create()` or `update()` objects. However, the API can return data that doesn't meet these restrictions.

AnyType Field Type

The `anyType` field type is dynamic and returns `string`, `date`, `number`, or `boolean` data depending on the kind of field involved. For example, the element in a SOAP message has an `xsi:type="xsd:string"` attribute if the field is of type `string`. This field type is used in history objects for the `NewValue` and `OldValue` fields. It's also a valid field type for `fieldType` and `soapType`.

Note: Most SOAP toolkits automatically deserialize this element into the correct native type.

Calculated Field Type

Calculated fields are read-only fields in the API. These fields are defined by a formula, which is an algorithm that derives its value from other fields, expressions, or values. You can filter on these fields in SOQL, but you don't replicate these fields. The length of text calculated fields is 3,900 characters or less—anything longer is truncated.

Calculated fields are called formula fields in the Salesforce user interface.

ComboBox Field Type

A combobox is a picklist that also allows users to type a value that isn't already specified in the list. A combobox is defined as a string value.

Currency Field Type

Currency fields contain currency values, such as the `ExpectedRevenue` field in a Campaign, and are defined as type `double`.

For orgs that have the multicurrency option enabled, the `CurrencyIsoCode` field is defined for any object that can have currency fields. The `CurrencyIsoCode` field and currency fields are linked in a special way. On any specific record, the `CurrencyIsoCode` field defines the currency of that record. Therefore, the values of all currency fields on that record are expressed in that currency.

For most cases, clients don't need to consider the linking of the `CurrencyIsoCode` field and the currency fields on an object. However, consider these points.

- The `CurrencyIsoCode` field exists only for those orgs that have enabled multicurrency support.
- When you display the currency values in a user interface, it's recommended that you prepend each currency value with its `CurrencyIsoCode` value and a space separator.
- The `CurrencyIsoCode` field is a restricted picklist field. The set of allowable values, defined in the `CurrencyType` object, can vary from org to org. Attempting to set it to a value that isn't defined for an org causes the operation to be rejected.
- If you update the `CurrencyIsoCode` field on an object, it implicitly converts all currency values on that object to the new currency code. The field uses the conversion rates that are defined for that org in the Salesforce user interface. If you specify currency values in that same `update()` call, the new currency values you specify are interpreted in the new `CurrencyIsoCode` field value, without conversion.
- The picklist values in a `CurrencyIsoCode` field don't exactly match the labels displayed in Salesforce.

To perform currency conversions, client applications can look up the `CurrencyIsoCode` in the `CurrencyType` object.

DataCategoryGroupReference Field Type

A data category group has categories that classify articles in Salesforce Knowledge and questions in the Answers feature. Every article and question object has two fields of type `DataCategoryGroupReference` which contain the category group and category unique name. You can use the `describeDataCategoryGroups()` and `describeDataCategoryGroupStructures()` calls to retrieve the category groups and categories related to these objects.

Email Field Type

Email fields contain email addresses. Client applications are responsible for specifying valid and properly formatted email addresses in `create()` and `update()` calls.

ID Field Type

With rare exceptions, all objects in the API have a field of type ID. The field is named `Id` and contains a unique identifier for each record in the object. It's analogous to a primary key in relational databases. When you `create()` a new record, the Web service generates an ID value for the record, ensuring that it's unique within your org's data. You can't use the `update()` call on ID fields. Because the ID value stays constant over the lifetime of the record, you can refer to the record by its ID value in subsequent API calls. Also, the ID value contains a three-character code that identifies the object type, which client applications can retrieve via the `describeSObjects()` call.

In addition, certain objects, including custom objects, have one or more fields of type `reference` that contain the ID value for a related record. These fields have names that end in the suffix "Id", for example, `OwnerId` in the account object. `OwnerId` contains the ID of the user who owns that object. Unlike the field named `Id`, `reference` fields are analogous to foreign keys and can be changed via the `update()` call.

Some API calls, such as `retrieve()` and `delete()`, accept an array of IDs as parameters—each array element uniquely identifies the row to retrieve or delete. Similarly, the `update()` call accepts an array of `sObject` records—each `sObject` contains an `Id` field that uniquely identifies the `sObject`.

 **Note:** Most Web services tools, including .NET and WSC, map the ID simple type defined in the API WSDL (Enterprise or Partner) to a string. However, other tools generate a specific ID class to represent the ID simple type. Consult your web services toolkit documentation for more information.

Salesforce IDs are often represented by 15-character, base-62, strings. Each of the 15 characters can be a numeric digit (0-9), a lowercase letter (a-z), or an uppercase letter (A-Z). These 15-character IDs are *case-sensitive*. To Salesforce, `000000000000Abc` isn't the same as `000000000000aBC`.

Don't use 15-character IDs in case-insensitive applications like Microsoft Access™. These applications incorrectly consider `000000000000Abc` to be the same as `000000000000aBC`.

To avoid these issues, all API calls return an 18-character ID that's *case-safe*, meaning that it's compared correctly by case-insensitive applications. The extra 3 characters at the end of the ID encode the case of the preceding 15 characters. Use 18-character IDs in all API calls when creating, editing, or deleting data.

 **Note:** 18-character IDs are *case-safe*, but not *case-insensitive*. In other words, if you manually change the case of an 18-character ID, Salesforce detects that the three extra characters don't match the case of the preceding characters and returns an error.

To convert the 18-character ID to a 15-character version, you may truncate the last three characters. However, Salesforce recommends that you use the 18-character ID.

JunctionIdList Field Type

Starting in API version 34.0, the `JunctionIdList` field type lets you directly manipulate the many-to-many relationship of an entity. You no longer need to manipulate underlying junction entity records. `JunctionIdList` fields can be queried and updated like any other field on the entity. Queries or updates to `JunctionIdList` fields act as queries or updates to the underlying junction entity records. Fields of type `JunctionIdList` appear in the WSDL as an unbounded array of type ID.

Query `JunctionIdList` fields like any other field. For example, this SOQL query includes `TaskWhoIds`, which is a `JunctionIdList` field.

```
SELECT Id, Subject, TaskWhoIds
FROM Task
WHERE LastModifiedDate > LAST_WEEK
```

The total number of records allowed in a single SOQL query can't exceed 500 when one of the fields being queried on is a `JunctionIdList` type. If the number of IDs in the query exceeds 500, the query fails and returns the `MALFORMED_QUERY` exception.

The restriction is (total number of entity records) * (total number of records in the entity's `JunctionIdList` field) must equal less than 500. For example, you query on the `EventWhoIds` `JunctionIdList` field for a list of events. There are 101 events and for each event, there are 5 records in the `EventWhoIds` `JunctionIdList`. Therefore, the Salesforce Object Query Language query would be querying for 505 records in total, which is over the 500 limit, and you get an exception.

To avoid exceeding the record limit, reformulate the query so it includes fewer than 500 junction IDs or query a parent/child relationship instead of junction IDs. For example, this Salesforce Object Query Language query includes `CcIds`, which is a `JunctionIdList` field.

```
SELECT Subject, CcIds
FROM EmailMessage
```

This example shows the conversion of a `JunctionIdList` query into a parent/child query.

```
SELECT Subject, (SELECT Id FROM EmailMessageRelations WHERE RelationType = 'CcAddress')
FROM EmailMessage
```

All `JunctionIdLists` are read-only in Apex. Attempting to set a new value on an existing object results in an exception.

Multi-Select Picklist Field Type

Multi-select picklist fields contain a list of one or more items from which a user can choose multiple items. One of the items can be configured as the default item. Selections are maintained as a string containing a series of attributes delimited by semicolons. For example, a query can return the values of a multivalue picklist as “first value; second value; third value”. For information on querying multi-select picklists, see Query Multi-Select Picklists in the [Salesforce SOQL and SOSL Reference Guide](#).

Percent Field Type

Percent fields contain percent values. Percent fields are defined as type `double`.

Phone Field Type

Phone fields contain phone numbers, which can include alphabetic characters. Client applications are responsible for phone number formatting.

Picklist Field Type

Picklist fields contain a list of one or more items from which a user chooses a single item. They display as dropdown lists in the Salesforce user interface. One of the items can be configured as the default item.

In the `Field` object associated with the `DescribeObjectResult`, the `restrictedPicklist` field defines whether the field is a restricted picklist or not. The API doesn’t enforce the list of values for advisory (unrestricted) picklist fields on `create()` or `update()`. When inserting an unrestricted picklist field that doesn’t have a `PicklistEntry`, the system creates an “inactive” picklist value. This value can be promoted to an “active” picklist value by adding the picklist value in the Salesforce user interface.

When creating new, inactive picklists, the API checks to see if there’s a match. This check is case-insensitive.

In the `Field` object associated with the `DescribeObjectResult`, the `picklistValues` field contains an array of items (`PicklistEntry` objects). Each `PicklistEntry` defines the item’s label, value, and whether it’s the default item in the picklist (a picklist has no more than one default value).

Enumerated fields support localization of the labels to the language of the user. For example, for the `Industry` field on an `Account`, the value “Agriculture” can be translated to various languages. The enumerated field values are fixed and don’t change with a user’s language. However, each value may have a specified “label” field that provides the localized label for that value. Always use the value when inserting or updating a field. The `query()` call always returns the value, not the label. Use the corresponding label for a value in the `describeObjectResult` when displaying the value to the user in any user interface.

The API supports the retrieval of the certain picklists in the following objects: `CaseStatus`, `ContractStatus`, `LeadStatus`, `OpportunityStage`, `PartnerRole`, `SolutionStatus`, `TaskPriority`, and `TaskStatus`. Each object represents a value in the respective picklist. These picklist entries always specify some other piece of information, such as whether the status is converted. Your client application can invoke the `query()` call on any of these objects (such as `CaseStatus`) to retrieve the set of values in the picklist. The application can then use that information while processing other objects (such as `Case` objects) to find more information about those objects (such as a given case). These objects are read-only via the API. To modify items in picklists, you must use the Salesforce user interface.

Reference Field Type

A reference field contains an `Id` value that points to a unique record (usually the parent record) on another object. A reference field is analogous to the concept of a foreign key in relational databases. The name of a reference field ends, by convention, with the letters `Id` (such as `CaseId` or `OpportunityId`). For example, in the `OpportunityCompetitor` object, the `OpportunityId` field is a reference field that points to the `Opportunity` object. It contains an ID value that uniquely identifies an `Opportunity` record.

Sometimes, an object can refer to another object of its same type. For example, an `Account` can have a parent link that points to another `Account`.

The `Event` and `Task` objects both have `whoId` and `whatId` cross-reference ID fields. Each of these cross-reference fields can point to one of several other objects. The `whoId` field can point to a `Contact` or `Lead`, and the `whatId` field can point to an `Account`, `Opportunity`, `Campaign`, or `Case`. In addition, if the `whoId` field refers to a `Lead`, then the `whatId` field must be empty.

You can describe and query each cross-referenced object. When you query a cross-reference ID field, it returns an object ID of the appropriate type. You can then query that ID to get additional information about the object, using the ID in the `id` field for that query.

The cross-reference ID field value is either:

- a valid record in your organization, or
- an empty value, which indicates an empty reference

The cross-reference ID field value, if non-`null`, is guaranteed to be an object in your org. However, it isn't guaranteed that you can query that object. Users with the "View All Data" permission can always query that object. Other users can be restricted from viewing or editing the referenced object.

When specifying a value for a cross-reference ID field in a `create()` or `update()` call, the value must be a valid value of type ID, and the user must have appropriate access to that object. The exact requirements vary from field to field.

Textarea Field Type

Textarea fields contain text that can be longer than 4,000 bytes. Unlike string fields, textarea fields can't be specified in the `WHERE` clause of a `queryString` of a `query()` call. To filter records on this field, you must do so while processing records in the `QueryResult`. For fields with this restriction, its `filterable` field in the Field type (described in the `fields` property of the `DescribeObjectResult`) is `false`.

URL Field Type

URL fields contain URLs. Client applications are responsible for specifying valid and properly formatted URLs in `create()` and `update()` calls.

API Field Properties

Fields on objects represent the details of each object and are analogous to columns in a database table. Each field on each object has one or more of the following properties:

Property	Description
Aggregatable	Can be used by one of the SOQL aggregate functions.
Autonumber	The API creates an autonumber.
Create	Value for the field can be specified during create using the API.
Defaulted on create	If no other value is specified when created, a default value is supplied.
Delete	Value for the field can be deleted using the API.
Filter	Can be used as filter criteria in a SOQL query FROM or WHERE clause.
Group	Can be included in the GROUP BY clause of a SOQL query (<code>true</code>) or not (<code>false</code>). Available in API version 18.0 and later.
idLookup	Can be used to specify a record in an upsert call. The <code>Id</code> field of each object has this property and some <code>Name</code> fields. There are exceptions, so check for the property in any object you wish to upsert.
Namepointing	Indicates whether the field's value is the Name of the parent of this object (<code>true</code>) or not (<code>false</code>). Used for objects whose parents can be more than one type of object. For example, a task can have an account or a contact as a parent.
Nullable	The field can contain a null value.
Query	The field can be queried with SOQL using the API.
Restricted picklist	A picklist whose values are restricted to those values defined by a Salesforce admin. Users can't load unapproved values through the API.
Retrieve	Value of the field can be retrieved using the API.
Sort	Indicates whether a query can sort on this field (<code>true</code>) or not (<code>false</code>).
Update	Can be updated using the API.

Required Fields

Required fields must have a non-`null` value. This rule affects the create and update calls:

- In a create call, the system automatically populates the data for certain required fields (such as system fields and the object ID fields). Similarly, if a required field has a default value (its `defaultedOnCreate` attribute is set to `true`, then the system implicitly assigns a value for this field when the object is created, even if a value for this field is not explicitly passed in on the create call. For all other required fields, such as ID fields that are analogous to foreign keys in SQL, a client application must explicitly assign a value when the object is created (it cannot be `null`).
- In updates, a required field cannot be set to `null`, and many required fields can't be changed.

Any field not specified as required in the object description is optional, that is, it can be `null` when updated or created.

Some required fields for some objects require special handling.

System Fields

System fields are read-only fields found on most objects. These fields are automatically updated during API operations. For example, the `ID` field is automatically generated during a create operation and the `LastModifiedDate` is automatically updated when a user modifies a record.

Field	Field Type	Description
<code>Id</code>	ID	Globally unique string that identifies a record. For information on IDs, see ID Field Type . Because this field exists in every object, it is not listed in the field table for each object. <code>Id</code> fields have Defaulted on create and Filter access.
<code>IsDeleted</code>	boolean	Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>).
<code>LastReferencedDate</code>	dateTime	Date and time when the current user last viewed or modified this record, a record related to this record, or a list view. If this value is <code>null</code> , the current user has never viewed or modified a record related to this object. This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query .
<code>LastViewedDate</code>	dateTime	Date and time when the current user last viewed or modified this record. If this value is <code>null</code> , the current user has never viewed or modified this record. This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query .
Audit Fields		
<code>CreatedById</code>	reference	ID of the User who created this record. <code>CreatedById</code> fields have Defaulted on create and Filter access.
<code>CreatedDate</code>	dateTime	Date and time when this record was created. <code>CreatedDate</code> fields have Defaulted on create and Filter access.
<code>LastModifiedById</code>	reference	ID of the User who last updated this record. <code>LastModifiedById</code> fields have Defaulted on create and Filter access.
<code>LastModifiedDate</code>	dateTime	Date and time when a user last modified this record. <code>LastModifiedDate</code> fields have Defaulted on create and Filter access.
<code>SystemModstamp</code>	dateTime	Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. <code>SystemModstamp</code> fields have Defaulted on create and Filter access.

Note: In general, `SystemModstamp` shows the date and time when a user or automated process last modified the record. However, in certain cases, `SystemModstamp` doesn't capture every field change. For example, if object A retrieves values from object B, then the changes to

Field	Field Type	Description
		field values in records on object B are reflected in the <code>SystemModstamp</code> field for records on object B, but not on object A.

 **Note:** Audit Fields with the `dateTime` field type have a certain range of valid dates. Unlike other `dateTime` fields, the earliest valid date is 1970-01-01T00:00:00Z GMT, or just after midnight on January 1, 1970. The latest valid date is 4000-12-31T00:00:00Z GMT, or just after midnight on December 31, 4000. These values are offset by your time zone. For example, in the Pacific time zone, the earliest valid date is 1969-12-31T16:00:00, or 4:00 PM on December 31, 1969.

If you import data into Salesforce and want to retain the audit field values of the source system, you can set the values for audit fields on the following objects: Account, ArticleVersion, Attachment, CampaignMember, Case, CaseComment, Contact, ContentVersion, Contract, Event, Idea, IdeaComment, Lead, Opportunity, Question, Task, Vote, and custom objects. The only audit field you cannot set a value for is `systemModstamp`.

1. From Setup, enter *User Interface* in the *Quick Find* box, then select **User Interface** under *Customize*.
2. Under Setup, select **Enable “Set Audit Fields upon Record Creation” and “Update Records with Inactive Owners” User Permissions**.
3. In the permission set or profile that you want to set audit fields with, enable the permission **Set Audit Fields upon Record Creation**.
4. Using the API, create a record and set its audit fields.

Not all standard objects have all audit fields. Check the Enterprise WSDL to verify which audit fields are available for a given object.

Parent Reference Fields

If an object has a relationship to a parent object, two fields are added.

- `Parent_Name` contains the object name of the parent. For example, Case has a `Contact` field that contains a reference to the contact parent of the case.
- `Parent_NameId` contains the ID of the parent. For example, Case has a `ContactId` field that refers to the contact parent of the case. This field is used in SOQL relationship queries such as the following:

```
SELECT Case.ContactId, Case.Contact.Name FROM Case
```

Even if the object can parent itself, these fields occur. For example, the Campaign object has a `CampaignName` and `CampaignId` field for referencing the parent Campaign.

Frequently Occurring Fields

In addition to system fields, these fields are found on many objects.

- `OwnerId`
- `RecordTypeId`
- `CurrencyIsoCode`

OwnerId

Objects have an `OwnerId` field that is a reference to the user who owns that object. Ownership is an important concept that affects the security model and has other implications throughout the system. Any user can query the owner field for any record they can access. However, setting the `OwnerId` field has the following limitations:

- For most users and most objects, this field can't be set directly upon insert. It is implicitly set to the current user when inserting an object.
- When creating or updating a Case or Lead, a client application (that is logged in with sufficient permissions to transfer a record) can set this field to any valid User in the organization or to any valid queue of the appropriate type in the organization.
- Updating this field via the API changes only the owner of that record. The change of ownership does not cascade to associated records as it does when you transfer record ownership in the Salesforce user interface.
- Updating this field on an account deletes the existing sharing information and reapplies the organization-wide sharing defaults and sharing rules.
- To update the `OwnerId` field, the user must have the "Transfer Record" permission and Read access to the new owner.

In API version 12.0 and later, if your organization has set up opportunity teams, `OwnerId` fields behave the same for Account and Opportunity objects as for other objects. That is, if you update the `OwnerId` field in either object, any AccountShare or OpportunityShare records with `RowCause` set to Sales Team are kept. In API version 11.0 and earlier, the sharing records are deleted.

RecordTypeId

Record types are used to offer different business processes and subsets of picklist values to different User records based on their Profile settings. (In addition, person accounts use record types to manage a number of additional elements.)

Record types are configured in the user interface or by creating, editing, or deleting the RecordType object in the API. Retrieve the list of valid record type IDs (String) for an object by querying the RecordType object.

The `RecordTypeId` field in an object contains the ID of the RecordType record that is associated with a standard or custom object. You can create or update this field.

 **Note:** You can't create or update the `RecordTypeId` field on the CampaignMember records. Set the CampaignMember record type using the `CampaignMemberRecordTypeId` field on Campaign.

When specified in a create or update call, the record type ID (String) must refer to a valid record type for that object.

 **Note:** The `RecordTypeId` field is in your organization's WSDL only if at least one record type is configured for your organization in the Salesforce user interface.

CurrencyIsoCode

For organizations that have multicurrency enabled, the `CurrencyIsoCode` field contains the string representation of the currency ISO code associated with currency values in the object. Note that the User object also has a `DefaultCurrencyIsoCode` field, which is the default currency for that user. For example, a user in France could have a `DefaultCurrencyIsoCode` set to Euros, and that would be their default currency in the application. However, the User object could have currency custom fields stored in a different currency, that correspond to the organization currency at the time the user record is created.

Compound Fields

Compound fields group together multiple elements of primitive data types, such as numbers or strings, to represent complex data types, such as a location or an address. Compound fields are an abstraction that can simplify application code that handles the values, leading to more concise, understandable code.

Address compound fields are available in the SOAP and REST APIs in API version 30.0 and later. Geolocation fields are available in the SOAP and REST APIs in API version 26.0 and later, with some limitations on SOAP for API versions below 30.0.

Compound fields are accessible as a single, structured field, or as individual component fields. The values contained within the compound field and the values in individual fields both map to the same underlying data stored in Salesforce; they always have identical values. Code that references individual component fields is unaffected by the new compound fields.

Compound fields are read-only. Changes are performed by writing to the individual component fields. This maintains a single, consistent method for performing updates, and avoids the possibility of conflicts. For example, if both the `BillingAddress` compound field and `BillingCity` individual component field were updated in the same API call, it would be unclear which value should be saved.

Compound fields are available only through the SOAP and REST APIs. Compound fields are described in both the Enterprise and Partner WSDLs. Update your WSDL to at least API 30.0 to access the new compound data types.

Address Compound Fields

Standard addresses—addresses built into standard objects in Salesforce—are accessible in the SOAP API and REST API as an `Address`, a structured compound data type, as well as individual address elements. If you enabled Custom Address Fields, you can also add custom fields that mimic the standard address field behavior.

Geolocation Compound Field

Geolocation fields are accessible in the SOAP and REST APIs as a `Location`—a structured compound data type—or as individual latitude and longitude elements.

Compound Field Considerations and Limitations

Address and geolocation compound fields are convenient and result in more concise, clear code. Here are some things to consider when using them in your apps.

Address Compound Fields

Standard addresses—addresses built into standard objects in Salesforce—are accessible in the SOAP API and REST API as an `Address`, a structured compound data type, as well as individual address elements. If you enabled Custom Address Fields, you can also add custom fields that mimic the standard address field behavior.

The `Address` type extends the `Location` type, the data type used for compound geolocation fields. Using API 30.0 and later, standard addresses are available in the SOAP and REST APIs as a compound field of type `Address`, a structured data type that combines these fields.

Field	Type	Description
Accuracy	picklist	Accuracy level of the geocode for the address. For example, this field is known as <code>MailingGeocodeAccuracy</code> on Contact.
City	string	The city component of the address. For example, this field is known as <code>MailingCity</code> on Contact.
Country	string	The country component of the address. For example, this field is known as <code>MailingCountry</code> on Contact.

Field	Type	Description
CountryCode	picklist	The ISO country code for the address. For example, this field is known as <code>MailingCountryCode</code> on Contact. For Standard Address Fields, <code>CountryCode</code> is only available when state and country/territory picklists are enabled in your organization. For Custom Address Fields, <code>CountryCode</code> is always available, whether or not state and country/territory picklists are enabled in your organization.
Latitude	double	Used with <code>Longitude</code> to specify the precise geolocation of the address. For example, this field is known as <code>MailingLatitude</code> on Contact.
Longitude	double	Used with <code>Latitude</code> to specify the precise geolocation of the address. For example, this field is known as <code>MailingLongitude</code> on Contact.
PostalCode	string	The postal code for the address. For example, this field is known as <code>MailingPostalCode</code> on Contact.
State	string	The state component of the address. For example, this field is known as <code>MailingState</code> on Contact.
StateCode	picklist	The ISO state code for the address. For example, this field is known as <code>MailingStateCode</code> on Contact. <code>StateCode</code> is available only when state and country/territory picklists are enabled in your organization.
Street	textarea	The street component of the address. For example, this field is known as <code>MailingStreet</code> on Contact.

Address fields are provided on many standard objects, such as Account, Contact, Quote, and User. Some objects provide fields for multiple addresses. For example, Account provides four different addresses. In this case, address field names are prefixed with the type of address, for example, `BillingAddress` and `ShippingAddress`.

Note: Standard address compound fields are read-only, and are only accessible using the SOAP and REST APIs. To learn about the limitations of compound fields, see [Compound Field Considerations and Limitations](#) on page 19.

When an address is geocoded, its latitude and longitude fields are populated with coordinates. A related geolocation field is also populated. Typically, geocoding service providers geocode addresses, and rate the accuracy of the geocodes.

The accuracy subfield `GeocodeAccuracy` stores the accuracy data for a geocoded location. External geolocation apps can get the accuracy level of a geocoded address via the API. When you retrieve an address via the API, any accuracy data is included. You can also retrieve the accuracy information by itself, if needed.

Like its parent, the compound `Address` field, the `GeocodeAccuracy` field is only available for standard address fields on standard objects.

Custom Address Fields

If you enabled Custom Address Fields, the `Address` field type is available in Object Manager when you add a custom field. Custom address fields mimic the behavior of standard address fields with some limitations.

For more information, see the [Custom Address Fields Developer Guide](#).

Retrieving Compound Address Fields

Using compound fields can simplify code that works with addresses, especially for SOQL queries. SOQL `SELECT` clauses can reference addresses directly, instead of all of the individual component fields.

```
SELECT Name, BillingAddress
FROM Account
```

To write a SOQL query that's compatible with API versions earlier than 30.0, as well as API 30.0 and later, use the individual fields:

```
SELECT Name, BillingStreet, BillingCity, BillingState, BillingPostalCode,
       BillingCountry, BillingLatitude, BillingLongitude
FROM Account
```

Compound address field values are returned as a structured data type, `Address`. Code that works with compound address fields must reference the individual components of the returned value. See the code sample below.

Example: Retrieve a Standard Address Compound Field with the SOAP API

This Java method uses the Salesforce SOAP API to retrieve and display the Mailing Address for a list of contacts.

```
// Modified version of code in the SOAP API QuickStart
private void querySample() {
    String soqlQuery = "SELECT FirstName, LastName, MailingAddress FROM Contact";
    try {
        QueryResult qr = connection.query(soqlQuery);
        boolean done = false;

        if (qr.getSize() > 0) {
            System.out.println("\nLogged-in user can see "
                               + qr.getRecords().length + " contact records.");

            while (!done) {
                System.out.println("");
                SObject[] records = qr.getRecords();
                for (int i = 0; i < records.length; ++i) {
                    Contact con = (Contact) records[i];
                    String fName = con.getFirstName();
                    String lName = con.getLastName();

                    // Access the compound address field MailingAddress
                    Address addr = (Address) con.getMailingAddress();
                    String streetAddr = "";
                    if (null != addr) streetAddr = addr.getStreet();

                    if (fName == null) {
                        System.out.println("Contact " + (i + 1) + ": " + lName +
                                           " -- " + streetAddr);
                    } else {
                        System.out.println("Contact " + (i + 1) + ": " + fName +
                                           " " + lName +
                                           " -- " + streetAddr);
                    }
                }

                if (qr.isDone()) {
```

```

        done = true;
    } else {
        qr = connection.queryMore(qr.getQueryLocator());
    }
}
} else {
    System.out.println("No records found.");
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Using Compound Address Fields as Locations

Compound address fields include latitude and longitude fields. Address fields can be used as locations in SOQL `WHERE` and `ORDER BY` clauses. For example, here's a SOQL query that uses the `GEOLOCATION` function to retrieve the 10 accounts closest to San Francisco.

```

SELECT Id, Name, BillingAddress
FROM Account
WHERE DISTANCE(BillingAddress, GEOLOCATION(37.775,-122.418), 'mi') < 20
ORDER BY DISTANCE(BillingAddress, GEOLOCATION(37.775,-122.418), 'mi')
LIMIT 10

```

 **Note:** In Developer, Professional, Enterprise, Unlimited, and Performance editions, Salesforce can automatically add or update geolocation fields for Account, Contact, Lead, and WorkOrder records. To use this feature, your administrator must enable the geo data integration rule for each object. For all other objects and editions, set values for latitude and longitude by using SOQL, SOAP or REST API, or a geocoding service. You can then use address fields as locatable values. To find geocoding services, search AppExchange.

Geolocation Compound Field

Geolocation fields are accessible in the SOAP and REST APIs as a `Location`—a structured compound data type—or as individual latitude and longitude elements.

In API versions 26.0 and later, geolocation fields are available in the SOAP and REST APIs as a compound field of type `Location`. This structured data type contains the following fields.

- `latitude`
- `longitude`

 **Note:** SOAP calls that use API versions earlier than 30.0 return geolocation compound values as strings. See “Returned Geolocation Data Types” later in this topic.

Geolocation fields are provided on many standard objects, such as Account, Contact, Quote, and User, as part of their address field or fields. Geolocation fields can also be added as custom fields to standard or custom objects.

 **Note:**

- A geolocation compound field is read-only, although its `latitude` and `longitude` subfields are editable. You can only access compound fields using the SOAP or REST API. For more information about working with compound fields and their subfields, see [Compound Field Considerations and Limitations](#) on page 19.

- Although geolocation fields appear as a single field in the user interface, custom geolocation fields count as *three* custom fields towards your organization's limits: one for latitude, one for longitude, and one for internal use.

Retrieving Compound Geolocation Fields

Using compound fields can simplify code that works with geolocations, especially for SOQL queries. SOQL `SELECT` clauses can reference geolocations directly, instead of the individual component fields.

```
SELECT location__c
FROM Warehouse__c
```

To write code that's compatible with API versions earlier than 26.0 and with API versions 26.0 and later, use the individual latitude and longitude fields.

```
SELECT location__latitude__s, location__longitude__s
FROM Warehouse__c
```

Returned Geolocation Data Types

A compound geolocation field value is returned as the structured data type `Location`. Code that works with compound geolocation fields must reference the individual components of the returned value. See the sample code in [Address Compound Fields](#) on page 17.

In API versions earlier than 30.0, SOAP calls return compound geolocation field values as strings, instead of as a structured data type, for backward compatibility. If you plan to display your latitude and longitude values or pass them to a service that expects strings, use the values that are returned. If you plan to use the values in mathematical calculations or pass them to a map service that expects numbers, cast the results to numbers.

The string value format is:

```
API location: [latitudeValue longitudeValue]
```

An example of a regular expression to parse out the latitude and longitude values is:

```
API location: \([[-+]?[0-9]{1,2}(\.[0-9]+)?\)[[-+]?[0-9]{1,3}(\.[0-9]+)?\]
```

The first capture is the latitude, and the third is the longitude.

Compound Field Considerations and Limitations

Address and geolocation compound fields are convenient and result in more concise, clear code. Here are some things to consider when using them in your apps.

Both address and geolocation compound fields have the following limitations.

- Compound fields are read-only. To update field values, modify the individual field components.
- Compound fields are accessible only through SOAP API, REST API, and Apex. The compound versions of fields aren't accessible anywhere in the Salesforce user interface.
- Although compound fields can be queried with the `Location` and `Address` Apex classes, they're editable only as components of the actual field. Read and set geolocation field components by appending "`__latitude__s`" or "`__longitude__s`" to the field name, instead of the usual "`__c`." For example:

```
Double theLatitude = myObject__c.aLocation__latitude__s;
myObject__c.aLocation__longitude__s = theLongitude;
```

You can't access or set the compound value.

- You can't use compound fields in Visualforce—for example, in an `<apex:outputField>`. To access or update field values, use the individual field components.
- If you select compound fields for export in the Data Loader, they cause error messages. To export values, use individual field components.
- Custom geolocation and location fields on standard addresses aren't supported with email templates.
- You can't use compound fields in lookup filters, except to filter distances that are within or not within given ranges. You can use distance lookup filters only in the Metadata API.
- The only formula functions that you can use with compound fields are `ISBLANK`, `ISCHANGED`, and `ISNULL`. You can't use `BLANKVALUE`, `CASE`, `NULLVALUE`, `PRIORVALUE`, or the equality and comparison operators with compound fields. The equality and comparison operators include `=` and `==` (equal), `<>` and `!=` (not equal), `<` (less than), `>` (greater than), `<=` (less than or equal), `>=` (greater than or equal), `&&` (AND), and `||` (OR).

Address compound fields have the following limitations.

- Compound address fields are available only for address fields that exist as part of the standard objects included in Salesforce.
- To add custom address fields on standard and custom objects, enable Custom Address Fields. For more information see the [Custom Address Fields Developer Guide](#).
- In Developer, Professional, Enterprise, Unlimited, and Performance editions, Salesforce can automatically add or update geolocation fields for Account, Contact, Lead, and WorkOrder records. To use this feature, your administrator must enable the geo data integration rule for each object. For all other objects and editions, set values for latitude and longitude by using Salesforce CLI, SOAP or REST API, or a geocoding service. You can then use address fields as locatable values. To find geocoding services, search AppExchange.
- The accuracy subfield of address fields is populated only when an address is geocoded. Typically, geocoding service providers provide accuracy data for an address's latitude and longitude coordinates.
- Address fields can't be used in `WHERE` statements in SOQL. Address fields aren't filterable, but the `isFilterable()` method of the `DescribeFieldResult` Apex class erroneously returns `true` for address fields.

Geolocation compound fields have the following limitations.

- Geolocation fields aren't supported in custom settings.
- Geolocation fields aren't available in dashboards or Schema Builder.
- Geolocation fields are available in Visual Workflow and in formula-based workflow and approvals, but they can't be used in filter-based workflow updates and approvals.
- `DISTANCE` formulas are supported in:
 - Entry criteria for workflow rules and approval processes
 - Field update actions in workflow rules and approval processes
 - Custom validation rules
 - Lookup filters (in the Metadata API only)
- Geolocation fields and latitude and longitude on standard addresses aren't supported in Salesforce to Salesforce.
- In Developer, Professional, Enterprise, Unlimited, and Performance editions, Salesforce can automatically add or update geolocation fields for Account, Contact, Lead, and WorkOrder records. To use this feature, your administrator must enable the geo data integration rule for each object. For all other objects and editions, set values for latitude and longitude by using SOQL, SOAP or REST API, or a geocoding service. You can then use address fields as locatable values. To find geocoding services, search AppExchange.
- Geolocation fields are supported in SOQL with the following limitations.
 - `DISTANCE` and `GEOLOCATION` are supported in `WHERE` and `ORDER BY` clauses in SOQL, but not in `GROUP BY`. `DISTANCE` is supported in `SELECT` clauses.

- `DISTANCE` supports only the logical operators `>` and `<`, returning values within (`<`) or beyond (`>`) a specified radius.
- When using the `GEOLOCATION` function in SOQL queries, the geolocation field must precede the latitude and longitude coordinates. For example, `DISTANCE(warehouse_location__c, GEOLOCATION(37.775,-122.418), 'km')` works but `DISTANCE(GEOLOCATION(37.775,-122.418), warehouse_location__c, 'km')` doesn't work.
- Apex bind variables aren't supported for the units parameter in the `DISTANCE` function. This query doesn't work.

```
String units = 'mi';
List<Account> accountList =
    [SELECT ID, Name, BillingLatitude, BillingLongitude
     FROM Account
     WHERE DISTANCE(My_Location_Field__c, GEOLOCATION(10,10), :units) < 10];
```

For more information and examples, see the [SOQL and SOSL Reference](#).

Custom Objects

In the user interface, you can extend your org's data by defining custom objects. Custom objects are custom database tables that allow you to store information unique to your organization. For custom objects, the `custom` flag—a Boolean field in the describe results—is `true`.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Client applications with sufficient permissions can invoke API calls on existing custom objects. You can create custom objects with the user interface, or by using the metadata WSDL with a client application or using the Salesforce Extensions for Visual Studio Code. For more information about using the metadata WSDL to create custom objects, see the [Lightning Platform Metadata API Developer's Guide](#). For more information about Visual Studio Code, see [Salesforce Extensions for Visual Studio Code](#).

Naming Conventions for Custom Objects

Your Salesforce admin defines an associated name field for each custom object during setup. Custom objects must have unique names within your org.

In the API, the names of custom objects include a suffix of two underscores followed by a lowercase “c”. For example, a custom object labeled “Issue” in the Salesforce user interface is `Issue__c` in that organization's WSDL.

Relationships change the naming convention.

For a custom object record to appear in the Salesforce user interface, its name field must be populated. If you use the API to create a custom object record that doesn't have a name, the record's ID is used as its name.

Relationships Among Custom Objects

Custom objects behave and relate to other objects just like standard objects do. For example, cascading deletes are supported in custom objects in a master-detail relationship.

Custom objects can also have many-to-many relationships with other custom objects or standard objects. A many-to-many relationship allows each record of one object to be linked to multiple records from another object and vice versa.

Custom objects require special treatment so that they can participate in Relationship Queries. For the relationship field name of a custom object, `__r` is appended to the name to create the ID. Also, `__c` is appended to the name to create the parent object pointer. For

example, if the relationship field name is `MyRel`, the name of the ID becomes `MyRelId__r`, the parent object pointer becomes `MyRel__c`, and the relationship name is `MyRel__r`. For more information, see [Understanding Relationship Names, Custom Objects, and Custom Fields in the Salesforce SOQL and SOSL Reference Guide](#).

This table summarizes whether a standard object can be:

- The master in a master-detail relationship with a custom object. Master-detail relationships involve cascading deletes and sharing rules that the parent controls.
- The lookup in a lookup relationship on a custom object. In other words, whether a custom object can have a lookup to the standard object.
- Extended with custom fields.

Standard Object	Master-Detail	Lookup	Custom Fields
Account	Yes	Yes	Yes
Campaign	Yes	Yes	Yes
Case	Yes	Yes	Yes
Contact	Yes	Yes	Yes
Contract	Yes	Yes	Yes
Event	No	No	Yes
Lead	No	No	Yes
Opportunity	Yes	Yes	Yes
Product2	No	Yes	Yes
Solution	Yes	Yes	Yes
Task	No	No	Yes
User	No	Yes	Yes

Audit Fields for Custom Objects

Custom objects can have the same audit fields as standard objects. When you create a custom object, the four audit fields, `CreatedById`, `CreatedDate`, `LastModifiedById`, and `LastModifiedDate`, are created and populated for the object. These fields are read only. If you import data into Salesforce custom objects and want to retain the audit field values from the source system, you can set the values when you create the custom objects. The only audit field you can't set a value for is `SystemModstamp`. Your organization must be API enabled, and you must have the "Modify All Data" permission.

1. From Setup, enter *User Interface* in the **Quick Find** box, then select **User Interface** under Customize.
2. Under Setup, select **Enable "Set Audit Fields upon Record Creation" and "Update Records with Inactive Owners" User Permissions**.
3. In the permission set or profile that you want to set audit fields with, enable the permission **Set Audit Fields upon Record Creation**.
4. Using the API, create a record and set its audit fields.

Note these restrictions:

- `CreatedDate` can't be greater than the `LastModifiedDate`.

- You can't set any date field to be greater than the current time.

Sharing and Custom Objects

A sharing rule object is created for each custom object that doesn't have a master-detail relationship to another object. They're similar to standard object sharing rules, for example `AccountOwnerSharingRule`. If the user creating the custom object has the "Manage Sharing" permission, a sharing rule object is automatically created for it.

Apex sharing reasons can be retrieved describing the custom object's sharing object, and examining the information in the `rowCause` field. The name of a sharing object for each custom object is of the form: `MyObjectName__Share`, similar to `AccountShare` and other standard object sharing objects.

Tags and Custom Objects

When a custom object is created, a Tag object related to it's also created. These object names are of the form: `MyObjectName__Tag`, similar to `AccountTag` and other standard object tag objects.

Standard Fields for Custom Objects

When a custom object is created, Salesforce assigns some standard fields to the object or entity. For details, see [Custom Objects](#).

Required Fields in Custom Objects

In the user interface, you can mark a custom field as required, and this rule is also enforced in the API. Each custom field has a `nullable` attribute, with a data type boolean. The default value is `false`. If set to `true`, each request supplies a value (or leaves the current value) to this field. Otherwise, the request fails. When the value is set to `true`, the next time the field is edited or created, the validation applies. If no value is supplied or default value specified, the request fails.

To edit the `nullable` attribute, you must log in as a user with the "Customize Application" permission.

If you change a custom object field to be required in an existing client application or integration, be sure that a value is supplied for that field. For example, if the custom picklist field `Education_Level` on the contact object is required, supply a default value for that custom field. If a required field doesn't have a specified or default value, an error with the status code `REQUIRED_FIELD_MISSING` is returned.

Managed Packages and API Names

If you have an unmanaged package and a managed package version becomes available, the API names of custom fields, custom objects, and Scontrol objects in the package change. A namespace prefix is added to each component to make it unique: `name__c` becomes `prefix__name__c`. To move from an unmanaged package to a managed package version of the same application, export your data, uninstall the old package, and install the new package. Then review the name changes and import your data with the relevant mapping. For details, see the [ISVforce Guide](#).

SEE ALSO:

[Custom Objects](#)

Custom Fields

Salesforce administrators can define custom fields for standard or custom objects in their organization using the user interface. During creation, the `custom` flag—a Boolean field in the Field object—is set to true. Client applications cannot define custom fields via the API. Usually, client applications do not need to know whether a field is a standard field or a custom field.

Note that all numeric custom fields are handled as type double.

Objects That Support Custom Fields

Standard Object	Master-Detail	Lookup	Custom Fields
Account	Yes	Yes	Yes
Campaign	Yes	Yes	Yes
Case	Yes	Yes	Yes
Contact	Yes	Yes	Yes
Contract	Yes	Yes	Yes
Event	No	No	Yes
Lead	No	No	Yes
Opportunity	Yes	Yes	Yes
Product2	No	Yes	Yes
Solution	Yes	Yes	Yes
Task	No	No	Yes
User	No	Yes	Yes

Naming Conventions for Custom Fields

Custom objects have an associated name field that is defined by your Salesforce administrator. Custom fields must have unique names within the same object.

In the API, the names of custom fields are identified by a suffix of two underscores immediately followed by a lowercase “c” character. For example, a custom object labeled “Issue” in the user interface is seen as `Issue__c` in that organization's WSDL. Similarly, a custom field labeled “Hire Date” in the user interface is seen as `Hire_Date__c` in that organization's WSDL.

External ID Attribute on Custom Fields

In the user interface, you can identify one custom field on an object as being an external ID field. The field type must be a text, number, or email field. An external ID contains record IDs from a system outside of Salesforce. You can match against this field during import or integration, or when upserting records.

Uniqueness for Custom Fields

In the user interface, you can specify that a custom field on a custom object contain unique values across all the records of that custom object type. The uniqueness can be either case sensitive or case insensitive. In the API, you can find out if a field is unique by issuing a describe call against the custom object and inspecting two attribute values:

- If the `unique` field is set to `true`, the custom field values must be unique across all records of that custom object type in the organization. A value of `false` means the field can have the same value in different records of that custom object type.
- If the `caseSensitive` field is set to `true`, the uniqueness (if enabled) is case sensitive. For example “ABC” and “abc” are considered two unique values. If the value is `false`, then “ABC” and “abc” are considered the same value.

These values cannot be set or modified using API calls. If a custom field on a custom object has `unique` set to `true`, and you try to insert a duplicate value, a `DUPLICATE_VALUE` exception code is returned.

Default Values in Custom Fields

You can set a default value on a custom field using a formula field:

- The user logged in for API activity must have the “Customize Application” permission.
- The field must have a data type of currency, date, datetime, int, double, percent, string, textarea, email, phone, or url. You cannot use composite fields like Address, Person, Names, nor Fiscal Periods. Note that you can set a checkbox as checked or unchecked by default using the user interface, but you cannot set it using a formula field.
- Default formulas run on fields, and the results are saved, even if the fields are hidden by field-level security.
- Default values are not used for lead conversion, importing, or merging records.

Managed Packages and API Names

If you have an unmanaged package and a managed package version becomes available, the API names of custom fields, custom objects, and Scontrol objects in the package change. A namespace prefix is added to each component to make it unique: `name__c` becomes `prefix__name__c`. To move from an unmanaged package to a managed package version of the same application, export your data, uninstall the old package, and install the new package. Then review the name changes and import your data with the relevant mapping.

AppExchange Object Prefixes and the API

If you have an unmanaged package and a managed package version becomes available, the API names of custom fields, custom objects, and Scontrol objects in the package change. A namespace prefix is added to each component to make it unique: `name__c` becomes `prefix__name__c`. To move from an unmanaged package to a managed package version of the same application, export your data, uninstall the old package, and install the new package. Then review the name changes and import your data with the relevant mapping. For details, see the [ISVforce Guide](#).

Relationships Among Standard Objects and Fields

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Relationships associate objects with other objects. For example, a relationship can link a custom object to standard object in a related list, such as linking a custom object called Issues to cases to track product defects associated with customer cases. To view the parent and child relationships among standard objects, see the ERD diagrams in [Data Model](#).

 Note:

- You can use parent-child relationships in SOQL queries. For more information, see Relationship Queries in the [Salesforce SOQL and SOSL Reference Guide](#).
- Only lookup, external lookup, and indirect lookup relationships are available for external objects. No other relationship types are supported. See Salesforce Help: External Object Relationships.

You can define different types of relationships by creating custom relationship fields on an object. The differences between relationship types include how they handle data deletion, record ownership, security, and required fields in page layouts:

- **Master-Detail (1:n)** — A parent-child relationship where the master object controls certain behaviors of the detail object.
 - When a record of the master object is deleted, its related detail records are also deleted.
 - The `Owner` field on the detail object isn't available and is automatically set to the owner of its associated master record. Custom objects on the detail side of a master-detail relationship can't have sharing rules, manual sharing, or queues, because these elements require the `Owner` field.
 - The detail record inherits the sharing and security settings of its master record.
 - The master-detail relationship field is required on the page layout of the detail record.
 - By default, records can't be reparented in master-detail relationships. But administrators can allow child records in master-detail relationships on custom objects to be reparented to different parent records by selecting the `Allow reparenting` option in the master-detail relationship definition.

You can define master-detail relationships between custom objects or between a custom object and a standard object. But the standard object can't be on the detail side of a relationship with a custom object. And you can't create a master-detail relationship where these standard objects are the primary object.

- BusinessHours
- Idea
- Lead
- OrderItem
- PriceBook2
- Product2
- QuoteLineItem
- User

When you define a master-detail relationship, the custom object that you're working on is the detail side. Its data can appear as a custom related list on page layouts for the other object.

- **Many-to-many** — You can use master-detail relationships to model *many-to-many* relationships between any two objects. A many-to-many relationship allows each record of one object to be linked to multiple records from another object and vice versa. For example, you create a custom object called Issue that relates to the standard Case object. In this example, an issue could be related to multiple cases and a case could also be related to multiple issues. To create a many-to-many relationship, simply create a custom junction object with two master-detail relationship fields, each linking to the objects that you want to relate.

Custom objects with two master-detail relationships are supported in API version 11.0 and later.

Starting in API version 34.0, the `JunctionIdList` field type lets you manipulate the many-to-many relationship of an entity directly. You no longer manipulate underlying junction entity records. `JunctionIdList` fields can be queried and updated like any other field on the entity. Queries or updates to `JunctionIdList` fields act as queries or updates to the underlying junction

entity records. Fields of type `JunctionIdList` appear in the WSDL as an unbounded array of type `ID`. `JunctionIdList` is implemented in the `Task` and `Event` objects. All `JunctionIdLists` are read-only in Apex. Attempting to set a new value on an existing object will result in an exception.

- **Lookup (1:n)** — This type of relationship links two objects, but has no effect on deletion or security. Unlike master-detail fields, lookup fields aren't automatically required. When you define a lookup relationship, data from one object can appear as a custom related list on page layouts for the other object.

To create relationships, use the user interface or Salesforce Metadata API.

Factors that Affect Data Access

Some factors affect access to your organization's data.

When using the API, the following factors affect access to your organization's data:

Access

Your organization must be enabled for API access.

Objects may not be available until you contact Salesforce and request access. For example, `Territory2` is visible only if Enterprise Territory Management has been enabled in the application. Such requirements are in the "Usage" section for each object.

Sometimes a feature must be used once before objects related to it can be accessed with the API. For example, the `recordTypeIds` is available only after at least one record type has been created for your organization in the user interface.

To investigate data access issues, you can start by inspecting the WSDL:

- **Enterprise WSDL:** The generated enterprise WSDL file contains all of the objects that are available to your organization. By using the API, a client application can access objects that are defined in your enterprise WSDL file.
- **Partner WSDL:** When using the generated partner WSDL file, a client application can access objects that are returned in the `describeGlobal()` call.

Object-Level and Field-Level Security

The API respects object-level and field-level security configured in the user interface. You can access objects and fields only if the logged-in user's permissions and access settings allow such access. For example, fields that are not visible to a given user are not returned in a `query()` or `describeObjects()` call. Similarly, read-only fields can't be updated.

User Permissions

A user attempting to access the API must have the permission "API Enabled" selected. It's selected by default.

Your client application logs in as a user called a *logged-in* user. The logged-in user's permissions grant or deny access to specific objects and fields in your organization:

- **Read**—Users can only view objects of this type.
- **Create**—Users can read and create objects of this type.
- **Edit**—Users can read and update objects of this type.
- **Delete**—Users can read, edit, and delete objects of this type.

User permissions do not affect field-level security. If field-level security specifies that a field is hidden, users with "Read" on that object can view only those fields that are not hidden on the record. In addition, users with "Read" on an object can view only those records that sharing settings allow. The one exception is the "Edit Read Only Fields" permission, which gives users the ability to edit fields marked as read only via field-level security.

Sharing

For most API calls, data that is outside of the logged-in user's sharing model is not returned. Users are granted the most permissive access that is available to them, either through organization-wide defaults or manual record sharing, just as in the application.

User Permissions that Override Sharing

- **View All Records**—Users can view all records associated with this object regardless of sharing settings.
- **View All Data**—Users can view all records regardless of sharing settings. This permission is a user permission, not an object-level permission like View All Records.
- **Modify All Records**—Users can read, edit, delete, transfer, and approve all records associated with this object, regardless of sharing settings.
- **Modify All Data**—Users can read, edit, delete, transfer, and approve all records regardless of sharing settings. This permission is a user permission, not an object-level permission like Modify All Records.

To protect the security of your data, give the logged-in user only the permissions needed to successfully execute all the calls made by the application. For large integration applications, “Modify All Data” may speed up call response times. If you are loading a large number of records, use [Bulk API 2.0](#) instead.

Related Objects

Some objects depend on other objects for permission. For example, AccountTeamMember follows sharing on the associated permission-assigned object such as the Account record. Similarly, a Partner depends on the permissions in the associated .

Ownership changes to a record do not automatically cascade to related records. For example, if ownership changes for a given Account, ownership does not then automatically change for any Contract associated with that Account—each ownership change must be made separately and explicitly by the client application.

Object Properties

To create an object with the `create()` call, the object's `createable` attribute must be set to `true`. To determine what operations are allowed on a given object, your client application can invoke the `describeObjects()` call on the object and inspect the properties in the `DescribeObjectResult`.

Note: `replicable` allows `getUpdated()` and `getDeleted()` calls.

Page Layouts and Record Types

Requirements defined in the Salesforce user interface for page layouts and record types are not enforced by the API:

- Page layouts can specify whether a given field is required, but the API does not enforce such layout-specific field restrictions or validations in `create()` and `update()` calls. It's up to the client application to enforce any such constraints, if applicable.
- Record types can control which picklist values can be chosen in a given record and which page layouts users with different profiles can see. However, such rules that are configured and enforced in the user interface are not enforced in the API. For example, the API does not validate whether the value in a picklist field is allowed per any record type restrictions associated with the profile of the logged-in user. Similarly, the API does not prevent a client application from adding data to a particular field simply because that field does not appear in a layout associated with the profile of the logged-in user.

Referential Integrity

To ensure referential integrity, the API forces or prevents certain behaviors:

- ID values in [reference fields](#) are validated in `create()` and `update()` calls.
- If a client application deletes a record, then its children are automatically deleted as part of the call if the `cascadeDelete` property on `ChildRelationship` for that child has a value of `true`. For example, if a client application deletes an Opportunity, then any associated OpportunityLineItem records are also deleted. However, if an OpportunityLineItem is not deletable or is currently being used, then deletion of the parent Opportunity fails. For example, if a client application deletes an Invoice_Statement, then any associated Line_Item records are also deleted. However, if a Line_Item is not deletable or is currently being used, then deletion of the parent Invoice_Statement fails. Use `DescribeObjectResult` to view the `ChildRelationship` value if you want to be sure what will be deleted.

There are certain exceptions that prevent the execution of a `cascadeDelete`. For example, you can't delete an account if it has associated cases, if it has related opportunities that are owned by other users, or if associated contacts are enabled for the

Customer Portal. In addition, if you attempt to delete an account that has closed/won opportunities owned by you or has active contracts, then the delete request for that record will fail.

Field and Type Differences in Salesforce Apps and APIs

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Generally, API data types and field types in the user interface have the same names. For example, a date field is represented by a date data type in the API. However, some field types are represented differently depending on whether you inspect an object via the API or the user interface. This table contains the mapping for field types and data types that are different.

API Data Type	Corresponding Field Types in the User Interface
ID	Lookup relationship, master-detail relationship
string	Auto number, email, phone, picklist, multi-select picklist, text, text area, long text area, rich text area, data category group reference, and URL. Different maximum lengths are specified in the WSDL for text, text area, and long text area.
boolean	Checkbox
double	Currency, formula, number, percent, and roll-up summary
Varies by type	When formula fields are created in the user interface, a type must be specified. This type corresponds to the API data type of the same name: currency, date, date/time, number, percent, or text.

All other fields that you can create in the user interface fall into one of these categories.

- The field isn't available in both the user interface and the API. For example, the BusinessHours object has fields of API data type time, but you can't create a custom field of this type.
- Field types are the same as their corresponding API data type. For example, if you create a date field in the user interface, that field is the date data type in the API.

Additionally, the user interface allows you to change the labels on some fields and tabs. Although you can't relabel fields or tabs using the API, you can retrieve the current values. To do so, issue a `describeSObjects()` call and inspect the label field of the returned `DescribeSObjectResult`.

For more information about API data types, see [Primitive Data Types](#) and [Field Types](#).

External Objects

External objects are supported in API version 32.0 and later. External objects are similar to custom objects, but external object record data is stored outside your Salesforce organization. For example, perhaps you have data that's stored on premises in an enterprise resource planning (ERP) system. Instead of copying the data into your org, you can use external objects to access the data in real time via web service callouts.

External objects are available with Salesforce Connect and Files Connect. Each external object is associated with an external data source definition in your Salesforce organization.

An external data source specifies how to access an external system. Salesforce Connect uses external data sources to access data that's stored outside your Salesforce organization. Files Connect uses external data sources to access third-party content systems. External data sources have associated external objects, which your users and the Lightning Platform use to interact with the external data and content.

By accessing record data on demand, external objects always reflect the current state of the external data. You don't have to manage a copy of that data in Salesforce, so you're not wasting storage and resources keeping data in sync.

External objects are best used when you have a large amount of data that you can't or don't want to store in your Salesforce organization, and you need to use only a small amount of data at any one time.

See [Define External Objects](#) in Salesforce Help for how to create and modify external objects.

Naming Conventions for External Objects

Object names must be unique across all standard, custom, and external objects in the org.

In the API, the names of external objects are identified by a suffix of two underscores immediately followed by a lowercase "x" character. For example, an external object named "ExtraLogInfo" in the Salesforce user interface is seen as `ExtraLogInfo__x` in that organization's WSDL.

We recommend that you make object labels unique across all standard, custom, and external objects in the org.

External Object Relationships

External objects support standard lookup relationships, which use the 18-character Salesforce record IDs to associate related records with each other. However, data that's stored outside your Salesforce org often doesn't contain those record IDs. Therefore, two special types of lookup relationships are available for external objects: external lookups and indirect lookups. See [External Object Relationships](#) in Salesforce Help for details.

Feature Support for External Objects

Most of the Salesforce features that support custom objects also support external objects. However, there are exceptions, and some features have special limitations and considerations for external objects. See the following topics in the Salesforce Help.

- [External Objects in Salesforce Connect](#)
- [Salesforce Platform Features Supported by Salesforce Connect](#)

Salesforce Connect Adapters

Salesforce Connect uses a protocol-specific adapter to connect to an external system and access its data. This table describes the available adapters.

Salesforce Connect Adapter	Description	When to Use
Cross-org	Uses the Lightning Platform REST API to access data that's stored in other Salesforce orgs.	To seamlessly connect data between your Salesforce orgs. For example, provide your service representatives a unified view of customer transactions by integrating data from different Salesforce orgs.

Salesforce Connect Adapter	Description	When to Use
OData 2.0 OData 4.0	Uses Open Data Protocol to access data that's stored outside Salesforce. The external data must be exposed via OData producers.	To integrate external data sources into your org that support the ODATA protocol and publish an OData provider. For example, give your account executives a unified data view by pulling data from legacy systems such as SAP, Microsoft, and Oracle in real time.
Custom adapter created via Apex	You use the Apex Connector Framework to develop your own custom adapter when the other available adapters aren't suitable for your needs. A custom adapter can obtain data from anywhere. For example, some data can be retrieved from anywhere in the Internet via callouts, while other data can be manipulated or even generated programmatically.	To develop your own adapter with the Apex Connector Framework when the other available adapters aren't suitable for your needs. For example, when you want to retrieve data via callouts from a REST API.

Files Connect Adapters

Several Files Connect adapters are also available:

- Google Drive
- Box
- SharePoint Online
- OneDrive for Business

For more information about Salesforce Connect, see [Salesforce Connect](#) in the Salesforce Help.

For details on using the Apex Connector Framework, see "Salesforce Connect" and "DataSource Namespace" in the [Apex Code Developer's Guide](#).

Big Objects

A big object stores and manages massive amounts of data on the Salesforce platform. You can archive data from other objects or bring massive datasets from outside systems into a big object to get a full view of your customers. Clients and external systems use a standard set of APIs to access big object data. A big object provides consistent performance, whether you have 1 million records, 100 million, or even 1 billion. This scale gives a big object its power and defines its features.

There are two types of big objects.

- Standard big objects—Objects defined by Salesforce and included in Salesforce products. `FieldHistoryArchive` is a standard big object that stores data as part of the Field Audit Trail product. Standard big objects are always available and can't be customized.
- Custom big objects—New objects that you create to store information unique to your org. Custom big objects extend the functionality that Lightning Platform provides. For example, if you're building an app to track product inventory, create a custom big object called `HistoricalInventoryLevels` to track historical inventory levels for analysis and future optimizations. This implementation guide is for configuring and deploying custom big objects.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions for up to 1 million records

Custom Big Object Use Cases

- 360° view of the customer—Extend your Salesforce data model to include detailed information from loyalty programs, feeds, clicks, billing and provisioning information, and more.
- Auditing and tracking—Track and maintain a long-term view of Salesforce or product usage for analysis or compliance purposes.
- Historical archive—Maintain access to historical data for analysis or compliance purposes while optimizing the performance of your core CRM or Lightning Platform applications.

Differences Between Big Objects and Other Objects

Because a big object can store data on an unlimited scale, it has different characteristics than other objects, like sObjects. Big objects are also stored in a different part of the Lightning Platform.

Big Objects	sObjects
Horizontally scalable distributed database	Relational database
Non-transactional database	Transactional database
Hundreds of millions or even billions of records	Millions of records

These big object behaviors ensure a consistent and scalable experience.

- Big objects support only object and field permissions, not regular or standard sharing rules.
- Features like triggers, flows, processes, and the Salesforce mobile app aren't supported on big objects.
- When you insert an identical big object record with the same representation multiple times, only a single record is created so that writes can be idempotent. This behavior is different from an sObject, which creates a record for each request to create an object.

API Support for Big Objects

It's easy to integrate custom big objects with your live Salesforce data. You can process big objects with SOQL, Bulk, Chatter and SOAP APIs.

 **Note:** These APIs are the only APIs supported for big objects. The REST API, for example, isn't supported.

Define and Deploy Custom Big Objects

You can define custom big objects with Metadata API or in Setup. After you define and deploy a big object, you can view it or add fields in Setup. After you've deployed a big object, you can't edit or delete the index. To change the index, start over with a new big object. To define a big object in Setup, see Salesforce Help.

Define and Deploy Custom Big Objects

You can define custom big objects with Metadata API or in Setup. After you define and deploy a big object, you can view it or add fields in Setup. After you've deployed a big object, you can't edit or delete the index. To change the index, start over with a new big object. To define a big object in Setup, see Salesforce Help.

EDITIONS

Available in: both Salesforce Classic and Lightning Experience

Available in: **Enterprise, Performance, Unlimited, and Developer** Editions for up to 1 million records.

Define a Custom Big Object

Define a custom big object through Metadata API by creating XML files that contain its definition, fields, and index.

- **object** files—Create a file for each object to define the custom big object, its fields, and its index.
- **permissionset/profile** files—Create a permission set or profile file to specify permissions for each field. These files aren't required, but they're required to grant access to users. By default, access to a custom big object is restricted.
- **package** file—Create a file for Metadata API to specify the contents of the metadata you want to migrate.

Note: The package file is unrelated to the packaging feature for Salesforce. This file isn't an unlocked, unmanaged, or managed package. It's simply a file used by Metadata API.

Note: While custom big objects use the CustomObject metadata type, some parameters are unique to big objects and others aren't applicable. The specific metadata parameters that apply to big objects are outlined in this document.

Naming Conventions for Custom Big Objects

Object names must be unique across all standard objects, custom objects, external objects, and big objects in the org. In the API, the names of custom big objects have a suffix of two underscores immediately followed by a lowercase "b" (__b). For example, a big object named "HistoricalInventoryLevels" is seen as HistoricalInventoryLevels__b in that organization's WSDL. We recommend that you make object labels unique across all objects in the org - standard, custom, external and big objects.

CustomObject Metadata

Field Name	Field Type	Description
deploymentStatus	DeploymentStatus (enumeration of type string)	Custom big object's deployment status (Deployed for all big objects)
fields	CustomField[]	Definition of a field in the big object
fullName	string	Unique API name of the big object
indexes	Index[]	Definition of the index
label	string	Big object's name as displayed in the UI
pluralLabel	string	Field plural name as displayed in the UI

CustomField Metadata

Field Name	Field Type	Description
fullName	string	Unique API name of a field.
label	string	Field name as displayed in the UI.
length	int	Length of a field in characters (Text and LongTextArea fields only). The total number of characters across all text fields in an index can't exceed 100. To increase this value, contact Salesforce Customer Support.  Note: Email fields are 80 characters. Phone fields are 40 characters. Keep these lengths in mind when designing your index because they count toward the 100 character limit.
pluralLabel	string	Field plural name as displayed in the UI.
precision	int	Number of digits for a number value. For example, the number 256.99 has a precision of 5 (number fields only).
referenceTo	string	Related object type for a lookup field (lookup fields only).
relationshipName	string	Name of a relationship as displayed in the UI (lookup fields only).
required	boolean	Specifies whether the field is required. All fields that are part of the index must be marked as required.
scale	int	Number of digits to the right of the decimal point for a number value. For example, the number 256.99 has a scale of 2 (number fields only).
type	FieldType	Field type. Supports DateTime, Email, Lookup, Number, Phone, Text, LongTextArea, and URL.  Note: You can't include LongTextArea and URL fields in the index.

 **Note:** Uniqueness isn't supported for custom fields.

Index Metadata

Represents an index defined within a custom [big object](#). Use this metadata type to define the composite primary key (index) for a custom big object.

Field Name	Field Type	Description
fields	IndexField[]	The definition of the fields in the index.
label	string	Required. This name is used to refer to the big object in the user interface. Available in API version 41.0 and later.

IndexField Metadata

Defines which fields make up the index, their order, and sort direction. The order in which the fields are defined determines the order fields are listed in the index.

Note: The total number of characters across all text fields in an index can't exceed 100. To increase this value, contact Salesforce Customer Support.

Field Name	Field Type	Description
name	string	Required. The API name for the field that's part of the index. This value must match the <code>fullName</code> value for the corresponding field in the fields section and be marked as required. Warning: When querying a big object record via SOQL and passing the results as arguments to the delete API, if any index field name has a leading or trailing white space, you can't delete the big object record.
sortDirection	string	Required. The sort direction of the field in the index. Valid values are <code>ASC</code> for ascending order and <code>DESC</code> for descending order.

Example: Create Metadata Files for Deployment

The following XML excerpts create metadata files that you can deploy. Each Customer Interaction object represents customer data from a single session in an online video game. The `Account__c`, `Game_Platform__c`, and `Play_Date__c` fields define the index, and a lookup field relates the Customer Interactions to the Account object.

Customer_Interaction__b.object

```

Deploy Custom Big Objects Using Metadata API

Use Metadata API and the [Ant Migration Tool](#) to deploy. When building files to deploy a custom big object, make sure the `object` file is in a folder called `objects` and the `permissionset` file is in a folder called `permissionsets`. Put the `package.xml` file in the root directory and not in a subfolder.

View a Custom Big Object in Setup

After you've deployed your custom big object, you can view it by logging in to your organization and, from Setup, entering *Big Objects* in the Quick Find box, then selecting **Big Objects**.

SETUP
Big Objects

Big Objects [Help for this Page](#)

Big Objects are custom objects for storing very large customer data. This includes data such as historical event data, web log files, and archival data. Once you create a Big Object, you can correlate it with your core customer data using tools such as SOQL and Async SOQL.

Action	Label	Deployed	Description

Object Interfaces

An object interface defines the business logic that an object implements. The object that implements the interface, called the **implementor**, stores the data and implements the business logic.

An API that accepts a parameter with an object interface data type can accept any implementor of the object interface. For example, `/calculate-price` accepts the `SalesTransaction` object interface. You can use any implementor of `SalesTransaction`, such as an `Order` object, in the `/calculate-price` request.

REFERENCE

CHAPTER 2 Salesforce Object Behavior

In this chapter ...

- [Object Groups](#)
- [Salesforce Object Types](#)
- [Object Cheatsheet](#)

Learn how objects are related and how to choose the right Salesforce object for your data and transactions. Objects are categorized by data flow, storage, and transaction type, with some requiring specific licenses or managed packages.

Prefer listening to reading? Check out our AI-generated podcast on object behavior.

 [Watch a video](#)

Just as you pick different tools from your toolbox for different jobs, pick an object type based on the type of data you have and the kind of transactions you expect.

The type of object that you need is determined by the data you want to store in it and how you expect to interact with it.

Determine the properties of the data that you want to store:

- Structure—hierarchical, tabular, or unstructured
- Volume—high-scale or average
- Size - maximum size of data to store
- Storage—short-term or long-term storage

Determine how you want to interact with the data:

- Transaction—ACID, OLAP, OLTP
- Operation—Create, Read, Update, Delete
- Latency—How often you must process or update the data for it to be useful

Objects by Data Flow

Data flows into Salesforce from a variety of data sources. With the addition of Data Cloud, data also flows between objects that contain the same data but are of different types. For example, let's say that the data for an account is entered into a Sales org and then ingested into Data Cloud via the CRM connector. Any object that contains data for your org, including standard, custom, or external objects, can use the CRM connector to ingest data into Data Cloud. Other systems also connect to Data Cloud and store account data or metadata inside Data Cloud in their own schemas as Data Lake Objects (DLOs). The different schemas for objects containing account data are mapped to a single Account data model object (DMO) schema and then harmonized into an Account unified data model object.

Objects by Data Domain

CRM objects are stored on every org as long as you have a license for the feature that uses them. These objects include standard objects, custom objects, and entity interfaces. Big Objects are available only via licenses or managed packages and are stored differently, but are accessible to any org. Data Cloud objects are stored in Data Cloud and are packaged in data kits. Additional data can be represented in your org, but stored in third-party systems using custom external objects. You can also store data in systems that participate in our zero copy program and query them like native Data Cloud objects.

Data Cloud objects are stored in Data Cloud.

External data is stored outside Salesforce.

Objects by Transaction Type

For data stored outside Salesforce, the transaction type can't be guaranteed. However, the objects are grouped according to how most data of each type is stored and integrated with Salesforce.

ACID transactions are supported for standard objects, custom objects, entity interfaces, and custom external objects.

OLTP transactions are supported for standard and custom Big Objects.

OLAP transactions are supported for Data Cloud objects.

Object Groups

Objects can be grouped in any number of ways. Object groups are based on where data is stored, how it's used, and which licenses are required to access it.

- [Salesforce Common Objects](#)—available for any org
- [Salesforce Cloud Objects](#)—available for specific clouds or features
- [High-Scale Objects](#)—available when purchased for specific clouds
- [External Data](#)—stored outside Salesforce

[Salesforce Common Objects](#)

Common objects are available in any standard org for any cloud. They don't require any special licensing.

[Salesforce Cloud Objects](#)

Cloud objects are used only by a specific cloud. These objects sometimes have different limitations, APIs, or querying behavior than standard common objects.

[Salesforce High-Scale Objects](#)

Use high-scale objects when you have a large number of transactions, large objects, or you must store data over a long period. These objects sometimes have different limitations, APIs, or querying behavior than Salesforce common objects do.

[Salesforce External Data Objects](#)

You can store data outside Salesforce and still access in your org or Data Cloud.

Salesforce Common Objects

Common objects are available in any standard org for any cloud. They don't require any special licensing.

Optimized for: ACID transactions

Object types: Original, Base, and Setup.

Database storage: Relational and transactional database that scales to millions of records

Reference information: *Object Reference for the Salesforce Platform*

Documentation: Documented in Salesforce Help by product

Original Platform Objects

Original platform objects are sometimes called *hero* or *legacy* objects. They're the oldest of the Salesforce objects.

Objects: Account, Contact, Lead, Opportunity

Customizable: Yes

Cloud: Common. These objects are available in any cloud that uses an org.

Packaging: Every form of packaging except data kits. See the Metadata Coverage Report.

Object Examples: [Account](#), [Contact](#), [Lead](#), [Opportunity](#)

Documentation: [Apex Developer Guide](#), [Salesforce DX Developer Guide](#)

Reference: [Object Reference for the Salesforce Platform](#)

Base Platform Objects

Base platform objects (BPOs) are the objects common to most Salesforce orgs that contain data.

Object Examples: [SocialPersona](#)

Customizable: Yes

Cloud: Common. These objects are available on any cloud that uses an org.

Packaging: Every form of packaging except data kits.

Setup Platform Objects

Setup platform objects (SPOs) are the objects common to most Salesforce orgs that contain setup configuration information. Data about the platform is created using org Setup is stored in Setup platform objects.

Object Examples: [CompactLayout](#), [CustomField](#)

Customizable: Yes

Cloud: Common. These objects are available on any cloud that uses an org.

Packaging: The packaging available depends on the cloud, product, and feature that the objects are associated with.

Custom Objects

You can create custom objects and define the schema for the object.

Transaction type: ACID

Object type(s): All custom objects are user defined, so they don't have subtypes.

Object suffix: __c

Customizable: N/A

Cloud: Common

Packaging: Depends on the object.

Object Examples: N/A

Documentation: [Manage Custom Objects](#) in Salesforce Help.

Reference: N/A

Salesforce Cloud Objects

Cloud objects are used only by a specific cloud. These objects sometimes have different limitations, APIs, or querying behavior than standard common objects.

Some Salesforce objects require special licensing or purchase. If an object is included in the *Object Reference for the Salesforce Platform*, the special-access section of the page about the object indicates licensing or purchasing requirements. In most cases, these objects are documented in implementation guides for their cloud, not in the *Object Reference*.

Salesforce High-Scale Objects

Use high-scale objects when you have a large number of transactions, large objects, or you must store data over a long period. These objects sometimes have different limitations, APIs, or querying behavior than Salesforce common objects do.

Big Objects

Usage: Auditing, tracking, feeds, and historical archives.

Transaction Type: OLTP transactions

Database Storage: Horizontally scalable distributed databases that are non-transactional and scale to hundreds of millions or even billions of records. Big objects can contain data that's larger than the data that Data Cloud or standard objects support.

Object Type: BO

Object Suffix: __b

Customizable: Yes

Cloud: Any cloud that provides an org. However, Big Objects requires an additional license.

Packaging: Use the `deploy()` and `retrieve()` calls to deploy and retrieve a .zip file. Standard AppExchange packaging isn't available.

Object Examples: [FieldHistoryArchive](#)

Documentation: [Big Objects Implementation Guide](#)

Reference: [Object Reference for the Salesforce Platform](#)

High-Scale Order Objects

Optimized for: OLTP transactions

Objects: PendingOrderSummary

Documentation: [Order Management Implementation Guide](#)

Reference: [Object Reference for the Salesforce Platform](#)

Data Cloud Objects

Optimized for: OLAP transactions

Object types: DLO, DMO, CIO, DG

Documentation: [Data Object Concepts and Schema in Data Cloud](#)

[Salesforce Data Cloud Objects](#)

Data Cloud objects are high-scale objects that are used to store large amounts of data over time.

Salesforce Data Cloud Objects

Data Cloud objects are high-scale objects that are used to store large amounts of data over time.

Optimized for: OLAP transactions

Object Type(s): DLO, DMO, CIO, DG

Documentation: [Data Object Concepts and Schema in Data Cloud](#) in Salesforce Help

DMO Object Creation

Data Cloud objects are created from ingested data and from various operations on that data. Here's how it works.

1. Data ingested into Data Cloud is stored in data lake objects (DLOs) in the native schema of the system it was created in. Formula fields are also supported for DLOs.
2. Data lake objects are mapped to the schema for data model objects (DMOs), which is the C360 Data Model. data model objects don't store data, only the references to data stored in data lake objects.
3. Data lake objects and data model objects can be transformed into new DLOs and DMOs by using the Data Cloud [data prep and transform feature](#).
4. Data model objects undergo identity resolution to match and resolve data across different records in the same type of DMO and combine the best data from different DMOs in a unified DMO. The unified DMO is often used to create other types of objects, such as data graphs and calculated insights, so it's usually created before other object types. However, it's an optional step.
5. Data in DMOs can be aggregated or calculated to create calculated insight objects (CIOS).
6. A subset of DMO data can also be used as a data graph for faster processing in near real-time transactions with high-scale data.
7. You configure search index objects for DMOs by using the Data Cloud app. These objects aren't DMOs, but they're used to generate DMOs.
8. Search index objects automatically generate chunk-content DMOs and vector-embedding DMOs.

UDMO Object Creation

1. Unstructured data ingested into Data Cloud is stored in unstructured data lake objects (UDLOs).
2. Unstructured data lake objects are automatically mapped to the C360 Data Model schema for unstructured data model objects (UDMOs).
3. Configure a search index object on UDMOs and DMOs, so it can be used for Retrieval Augmented Generation (RAG) with Gen AI applications.
4. You can generate chunk content DMOs and vector embedding DMOs from (search) index DMOs.

Zero Copy Object Creation

Some external data sources are deeply integrated with Data Cloud, so that you can create a connection that doesn't require data syncing or ingestion. When you share an external data source with Data Cloud, external objects are defined. You configure additional metadata about these objects so you can use the objects with Salesforce features and APIs. For example, you can configure label names that are used in apps and reports.

Calculated Insight Objects (CIO)

Usage: These objects contain data aggregated or calculated from DMO objects.

Customizable: Yes. There are no standard CIOs.

Cloud: Data Cloud.

Packaging: Data kits

Documentation: [Calculated Insights](#) in Salesforce Help

Reference: N/A

Data Lake Objects (DLO)

Usage: Data lake objects are used to store data ingested into Data Cloud.

Object suffix: __dlo.

Customizable: Yes

Cloud: Data Cloud

Packaging: DLOs can be packaged via data kits. Data streams to ingest DLOs can also be packaged.

Documentation: [Data Object Concepts and Schema in Data Cloud](#) in Salesforce Help

Reference: DLO objects can be ingested from any external source and retain the schema from the data stream. Consult the reference documentation for the system you're ingesting the DLO from.

In addition to standard data lake objects, there are also unstructured and external data lake objects.

Data Model Objects (DMO)

Usage: data model objects use the C360 Data Model to provide a common representation of data. Data stored in data lake objects is mapped to data model objects. data model objects don't store data, but they contain information on where data is stored in DLO objects. Data Cloud APIs and features use DMO objects to access data that's stored in data lake objects.

Object suffix: __dlm.

 **Note:** All API Names for DMO object fields have a __c suffix for both standard and custom fields.

Customizable: Yes

Cloud: Data Cloud.

Packaging: Data kits (recommended). Unmanaged packages and managed packages support data kit packaging only from the default data space. However, you can deploy data kits in any data space. It's also possible to import DMOs in unmanaged packages or through comma separated value (CSV) files.

Documentation: [Data Object Concepts and Schema in Data Cloud](#) in Salesforce Help

Reference: data model objects don't have a single reference. Most Salesforce DMOs mirror existing Salesforce base platform objects and original platform objects. A few of these use slightly different data types. Some Salesforce DMOs are referenced in the [Standard Data Model Objects \(DMOs\)](#) section of the *Data Cloud Reference Guide*. However, additional DMO objects are available for specific features or clouds. DMOs are also documented as a part of data kit or bundle mappings.

In addition to data model objects, there are also unified data model objects and unstructured data model objects (UDMO)

Data Graphs (DG)

Usage: You can create a precalculated, materialized view of your data to improve query speed with high-scale data. A data graph contains a JSON blob that combines data structures from multiple DMOs and is used for real-time operations in apps.

Customizable: Yes. All data graphs are customizable. There are no standard data graphs.

Cloud: Data Cloud.

Packaging: Data kits. Data graphs can be added to data kits, but they aren't packageable directly.

Documentation: [Data Graphs](#) in Salesforce Help

Reference: N/A

Unified Objects

Usage: You can create a precalculated, materialized view of your data to improve query speed with high-scale data. A data graph contains a JSON blob that combines data structures from multiple DMOs and is used for real-time operations in apps.

Customizable: Yes. All data graphs are customized. There are no standard data graphs.

Cloud: Data Cloud.

Packaging: Data kits. Data graphs can be added to data kits, but they aren't packageable directly.

Documentation: [Data Graphs](#) in Salesforce Help

Reference: N/A

Unstructured Data Lake Objects (UDLO)

Usage: Unstructured data lake objects (UDLOs) reference unstructured data in Data Cloud. A UDLO is created manually. Unstructured data is ingested from a blob store.

Object suffix: __dlo.

Customizable: Yes

Cloud: Data Cloud

Packaging: Not packageable. UDLOs aren't packaged. However, connections to ingest UDLOs can be packaged.

Documentation: [Unstructured Data Lake Objects](#) in Salesforce Help

Reference: In addition to standard data lake objects, there are also unstructured data lake objects (UDLO) and external data lake objects.

Unstructured Data Model Objects (UDMO)

Usage: Unstructured data model objects represent data created from unstructured data sources.

Object suffix: __dlm.

Note: All API names for DMO object fields have a __c suffix for both standard and custom fields.

Customizable: Yes

Cloud: Data Cloud.

Packaging: Data kits (recommended). It's also possible to import DMOs in unmanaged packages or through CSV files.

Documentation: [Data Object Concepts and Schema in Data Cloud](#) in Salesforce Help

Reference: N/A

Salesforce External Data Objects

You can store data outside Salesforce and still access in your org or Data Cloud.

External Objects

External objects are similar to custom objects, but external object record data is stored outside your org. You can access data in external objects by using OData and other adaptors.

Zero Copy Objects

In some cases, Salesforce is deeply integrated into data stored in other products, such as Snowflake or AWS. In this case, the data is stored outside Salesforce, but it's accessible through Data Cloud.

Salesforce Object Types

In the Salesforce Platform, an object type used to refer to whether an object was standard or custom. A standard object has a schema determined by Salesforce. A custom object has a schema determined or created by you. However, as the platform has continued to evolve, there are now many more types of objects.

The objects in the table are grouped by how objects are identified and accessed in Salesforce. These include objects that are visible via your org or an API, even if they are used for internal purposes.

Suffix	Object Type	Object Group
__b	Big object	High Scale
__c	Custom object	Common
__ChangeEvent	Custom Object Change Event	Common
__chn	PlatformEventChannel	Common
__cio	Calculated insight object	High Scale
__dg	Data graph	High Scale
__DataCategorySelection	Knowledge DataCategorySelection	Common
__dlm	Data Model Object (DMOs used for queries have this extension)	High Scale
__dlo	Data Lake Object	High Scale
__dmo	Data Model Object	High Scale
__dso	Data source object	High Scale
__e	Platform event	Common
__Feed	Knowledge article feed or custom object feed	Common
__hd	Historical data	Common
__History	Field History Tracking for custom objects	Common
__hst	A historical field for a custom report type .	Common
__ka	Knowledge article	Common
__kav	Knowledge article version	Common
__latitude__s	Geolocation custom field with latitude coordinates	Common
__longitude__s	Geolocation custom field with longitude coordinates	Common
__mdt	Custom metadata type	Common
__pc	Custom person account field	Common

__pr	Person account relationship field	Common
__r	Custom relationship field as used in a SOQL query to traverse the relationship	Common
__Share	Custom object sharing object	Common
__Tag	Salesforce tags	Common
__ViewStat	KnowledgeArticleViewStat	Common
__VoteStat	KnowledgeArticleVoteStat	Common
__x	External object	Common
__xo	Salesforce-to-Salesforce (S2S) spoke/proxy object	Common
ChangeEvent	Standard object change event	Common
Feed	Standard object feed	Common

Identifying an Object Type

You can identify an object type by its developer API name. The developer API name is a unique identifier with a standard suffix that indicates the type. You can see platform objects in the Object Manager, along with their suffix. Object Manager shows the object type.

Many different types of Data Cloud objects share the same suffix. To determine the type of a Data Cloud object, view it in Data Cloud [Data Explorer](#) and filter by the object type.

Accessing an Object

Access to an object type is determined by the products and features you're licensed for and relevant user in object permissions. In some cases, you need permissions in multiple clouds to access objects for a feature. For example, you need permission from Data Cloud and your Sales Cloud org to access Data Cloud objects for Data Cloud-powered features in Sales Cloud. The security model for an org is different from the security model of Data Cloud, because objects are stored differently.

Object Cheatsheet

At a glance, see how objects compare to each other.

Object Groups

- Common Objects: Used to store data available in any standard org for any cloud. Optimized for ACID transactions. Relational and transactional database that scales to millions of records.
- High-scale objects: Used for large numbers of transactions and data storage over time
- External Objects: Used to represent data stored outside Salesforce

Object Types

Object Type	Group	Description	Customizable	Cloud	Packaging	Documentation	Reference
Base Platform Objects	common objects	Used for data common to most orgs	Yes	Common	Every form of packaging except data kits	DX and Developer Tools	Object Reference for the Platform
Big Objects	high-scale objects	Used for large transactions and data storage over time	Yes	Any cloud that provides an org	Deploy/retrieve with .zip files; no standard AppExchange packaging	Big Objects Implementation Guide	Object Reference for the Platform
Calculated Insight Objects (CIO)	high-scale objects	Contains data aggregated or calculated from DMOs	Yes	Data Cloud	Data kits	Calculated Insights in Help	N/A
Custom Objects	common objects	User-defined objects	N/A	Common	Depends on the object	Create a Custom Object in Help	N/A
Data Graphs (DG)	high-scale objects	Create a materialized view of data to improve query speed	Yes	Data Cloud	Data kits	Create a Data Graph in Help	N/A
Data Lake Objects (DLO)	high-scale objects	Store data ingested into Data Cloud	Yes	Data Cloud	DLOs and data streams can be packaged via data kits	Data Objects in Data Cloud in Help	Consult the reference documentation for the system storing the data
Data Model Objects (DMO)	high-scale objects	Provide a common representation of data by using C360 data model	Yes	Data Cloud	Data kits (recommended)	Data Objects in Data Cloud in Help	Data Cloud Reference Guide
External Objects	External Objects	Represent data stored outside Salesforce	N/A	N/A	N/A	N/A	N/A
High Scale Order Objects	high-scale objects	Optimized for OLTP transactions	N/A	N/A	N/A	Order Management Implementation Guides in Help	Object Reference for the Platform

Object Type	Group	Description	Customizable	Cloud	Packaging	Documentation	Reference
Setup Platform Objects	common objects	Common objects containing setup configuration information created using Setup	Yes	Common	Depends on the cloud, product, and feature	DX and Developer Tools	Object Reference for the Platform
Unified Objects	high-scale objects	Created as a golden record of data through identity resolution	Yes	Data Cloud	Packageable through data kits	Unify Source Profiles in Help	N/A
Unstructured Data Lake Objects (UDLO)	high-scale objects	References unstructured data in Data Cloud and is created manually	Yes	Data Cloud	No, but connections can be packaged	Unstructured Data Lake Objects in Help	N/A
Unstructured Data Model Objects (UDMO)	high-scale objects	Represents data from unstructured data sources	Yes	Data Cloud	Data kits (recommended)	Data Objects in Data Cloud in Help	N/A
Zero Copy Objects	External objects	Deep integration with external data sources, so no data syncing required	N/A	N/A	N/A	N/A	N/A

CHAPTER 3 Associated Objects (Feed, History, OwnerSharingRule, Share, and ChangeEvent Objects)

This section provides a list of objects associated to standard objects and their standard fields.

Some fields may not be listed for some objects. To see the system fields for each object, see [System Fields](#).

To verify the complete list of fields for an object, use a describe call from the API or inspect with an appropriate tool. For example, inspect the WSDL or use a schema viewer.

[StandardObjectName Feed Feed](#)

StandardObjectNameFeed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

[StandardObjectName History History](#)

StandardObjectNameHistory is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

[StandardObjectName OwnerSharingRule OwnerSharingRule](#)

StandardObjectNameOwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

[StandardObjectName Share](#)

StandardObjectNameShare is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

[StandardObjectNameChangeEvent](#)

A *ChangeEvent* object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

StandardObjectName Feed Feed

StandardObjectNameFeed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

The object name is variable and uses *StandardObjectNameFeed* syntax. For example, *AccountFeed* represents the posts and feed-tracked changes on an account record. We list the available associated feed objects at the end of this topic. For specific version information, see the documentation for the standard object.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in Experience Cloud sites where threaded discussions and delete-blocking are enabled. Site members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All Records on the parent object, like Account for AccountFeed
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

For more special access rules, if any, see the documentation for the standard object. For example, for AccountFeed, see the special access rules for Account.

Fields

Field	Details
BestCommentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later.
Body	Type textarea Properties Nillable, Sort Description The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.
CommentCount	Type int Properties Filter, Group, Sort

Field	Details
	Description The number of comments associated with this feed item.  Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>. Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.
ConnectionId	Type reference Properties Filter, Group, Nillable, Sort Description When a <code>PartnerNetworkConnection</code> modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the <code>PartnerNetworkConnection</code>. Available if Salesforce to Salesforce is enabled for your organization.
ContentData	Type base64 Properties Nillable Description Available in API version 36.0 and earlier only. Required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>. Only visible when <code>Type</code> is set to <code>ContentPost</code>.
ContentDescription	Type textarea Properties Nillable, Sort Description Available in API version 36.0 and earlier only. The description of the file specified in <code>ContentData</code>. Only visible when <code>Type</code> is set to <code>ContentPost</code>.
ContentFileName	Type string

Field	Details
	Properties Group, Nillable, Sort Description Available in API version 36.0 and earlier only. This field is required if <code>Type</code> is <code>ContentPost</code>. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>. Only visible when <code>Type</code> is set to <code>ContentPost</code>.
ContentSize	Type int Properties Group, Nillable, Sort Description Available in API version 36.0 and earlier. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert. Only visible when <code>Type</code> is set to <code>ContentPost</code>.
ContentType	Type string Properties Group, Nillable, Sort Description Available in API version 36.0 and earlier. The MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert. Only visible when <code>Type</code> is set to <code>ContentPost</code>.
FeedPostId	Type reference Properties Filter, Group, Nillable, Sort Description This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only. ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.
InsertedById	Type reference Properties Group, Nillable, Sort

59

Field	Details
LinkUrl	Type url Properties Nillable, Sort Description The URL of a LinkPost.
NetworkScope	Type picklist Properties Group, Nillable, Restricted picklist, Sort Description Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. NetworkScope can have the following values: • NetworkId—The ID of the Experience Cloud site in which the FeedItem is available. If left empty, the feed item is only available in the default Experience Cloud site. • AllNetworks—The feed item is available in all Experience Cloud sites. Note the following exceptions for NetworkScope: • Only feed items with a Group or User parent can set a NetworkId or a null value for NetworkScope. • For feed items with a record parent, users can set NetworkScope only to AllNetworks. • You can't filter a feed item on the NetworkScope field.
ParentId	Type reference Properties Filter, Group, Sort Description ID of the record that is tracked in the feed. The detail page for the record displays the feed.
RelatedRecordId	Type reference Properties Group, Nillable, Sort Description ID of the ContentVersion record associated with a ContentPost. This field is null for all posts except ContentPost.

Field	Details
Title	Type string Properties Group, Nillable, Sort Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of feed item: • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or Event associated with a case record (excluding email and call logging). For a recurring <code>Task</code> with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring <code>Task</code> with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence. • <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • <code>AnnouncementPost</code>—Not used. • <code>ApprovalPost</code>—generated when a user submits an approval. • <code>BasicTemplateFeedItem</code>—Not used. • <code>CanvasPost</code>—a post made by a canvas app posted on a feed. • <code>CollaborationGroupCreated</code>—generated when a user creates a public group. • <code>CollaborationGroupUnarchived</code>—Not used. • <code>ContentPost</code>—a post with an attached file. • <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher. • <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold. • <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed. • <code>LinkPost</code>—a post with an attached URL. • <code>PollPost</code>—a poll posted on a feed. • <code>ProfileSkillPost</code>—generated when a skill is added to a user's Chatter profile. • <code>QuestionPost</code>—generated when a user posts a question. • <code>ReplyPost</code>—generated when Chatter Answers posts a reply.

Field	Details
	• <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC. • <code>TextPost</code>—a direct text entry on a feed. • <code>TrackedChange</code>—a change or group of changes to a tracked field. • <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated. The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>: • <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received • <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • <code>ChangeStatusPost</code>—generated event when a user changes the status of a case • <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case  Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.
Visibility	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your organization. <code>Visibility</code> can have the following values: • <code>AllUsers</code>—The feed item is available to all users who have permission to see the feed item. • <code>InternalUsers</code>—The feed item is available to internal users only. Note the following exceptions for <code>Visibility</code>: • For record posts, <code>Visibility</code> is set to <code>InternalUsers</code> for all internal users by default. • External users can set <code>Visibility</code> only to <code>AllUsers</code>. • On user and group posts, only internal users can set <code>Visibility</code> to <code>InternalUsers</code>.

Usage

A feed for an object is automatically created when a user enables feed tracking for the object. Use feeds to track changes to records. For example, `AccountFeed` tracks changes to an account record. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

- NewsFeed and UserProfileFeed are available in API version 18.0 through API version 26.0. In API version 27.0 and later, NewsFeed and UserProfileFeed are no longer available in SOAP API. Use Connect REST API to access NewsFeed and UserProfileFeed.

Use the NewsFeed object to query and retrieve lead feed items associated with a converted lead record.

- For NewsFeed and UserProfileFeed, users who don't have the View All Data permission have the following limitations when querying records: Must specify a LIMIT clause and the limit must be less than or equal to 1000. Can include a WHERE clause that references object fields, but can't include references to fields in related objects. For example, you can filter by CreatedDate or ParentId, but not by Parent.Name. Can include an ORDER BY clause that references object fields, but can't include references to fields in related objects. For example, ORDER BY CreatedDate or ParentId, but not by Parent.Name. To query for the most recent feed items, ORDER BY CreatedDate DESC, Id DESC.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a LIMIT clause of 1,000 records or fewer. SOQL ORDER BY on fields using relationships isn't available. Use ORDER BY on fields on the root object in the SOQL query.

- The name *Article Type__Feed* is variable, where *Article Type* is the object name for the article type associated with the article. For example, *Offer__Feed* represents a feed on an article of type *Offer*.
- Field Service must be enabled in your organization for ServiceAppointmentFeed, ServiceCrewFeed, ServiceMemberFeed, ServiceResourceCapacityFeed, ServiceResourceFeed, ServiceResourceSkillFeed, ServiceTerritoryFeed, ServiceTerritoryMemberFeed, and SkillRequirementFeed.
- For WorkOrderFeed, Work Orders or Field Service must be enabled in your organization.
- On UserFeed, if you use the FeedComment object to comment on a user record, the user can delete the comment. For example, if John Smith adds a comment to the feed on Sasha Jones' user record, Sasha can delete the comment.

StandardObjectName History History

StandardObjectNameHistory is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

The object name is variable and uses *StandardObjectNameHistory* syntax. For example, AccountHistory represents the history of changes to the values of an account record's fields. We list the available associated history objects at the end of this topic. For specific version information, see the documentation for the standard object.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for AccountHistory, see the special access rules for Account.

Fields

Field Name	Details
<i>StandardObjectId</i>	Type reference Properties Filter, Group, Sort Description ID of the standard object.
<i>DataType</i>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<i>Field</i>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Name of the field that was changed.
<i>NewValue</i>	Type anyType Properties Nillable, Sort Description New value of the field that was changed.
<i>OldValue</i>	Type anyType Properties Nillable, Sort Description Old value of the field that was changed.

StandardObjectName OwnerSharingRule OwnerSharingRule

StandardObjectNameOwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

The object name is variable and uses *StandardObjectNameOwnerSharingRule* syntax. For example, *ChannelProgramOwnerSharingRule* is a rule for sharing a channel program with users other than the channel program owner. The available associated owner sharing rule objects are listed at the end of this topic. For specific version information, see the standard object documentation.

 **Note:** To enable access to this object, contact Salesforce customer support. But we recommend that you use Metadata API to programmatically update owner sharing rules instead because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *ChannelProgramOwnerSharingRule*, see the special access rules for *ChannelProgram*.

Fields

Field Name	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Determines the level of access users have to records. Values are: - Read (read only) - Edit (read/write)
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the sharing rule. Maximum length is 1,000 characters.

Field Name	Details
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package, and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance can slow while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the source group. Records that are owned by users in the source group trigger the rule to give access.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the user or group that you're granting access to.

StandardObjectName Share

StandardObjectNameShare is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

The object name is variable and uses *StandardObjectNameShare* syntax. For example, *AccountBrandShare* is a sharing entry on an account brand. For specific version information, see the standard object documentation.

You can only create, edit, and delete sharing entries for standard objects whose *RowCause* field is set to *Manual*. Sharing entries for standard objects with different *RowCause* values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *AccountBrandShare*, see the special access rules for *AccountBrand*.

Fields

Field Name	Details
<code>AccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The level of access allowed. Values are: • <code>All</code> (owner) • <code>Edit</code> (read/write) • <code>Read</code> (read only)
<code>ParentId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the parent record.

Field Name	Details
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that the sharing entry exists.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the user or group that has been given access to the object.

StandardObjectNameChangeEvent

A ChangeEvent object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

Supported Calls

`describeSObjects()`

Special Access Rules

- All objects may not be available in your org. Some objects require specific feature settings and permissions to be enabled.
- For more special access rules, if any, see the documentation for the standard object. For example, for AccountChangeEvent, see the special access rules for Account.

Change Event Support

Change events are available for all custom objects and a subset of standard objects. Change events that correspond to custom settings are partially supported. They aren't supported in Apex triggers but are supported in other types of subscribers. For more information about standard object support, see the Objects That Support Change Events section below.

Change Event Name

The name of a change event is based on the name of the corresponding object for which it captures the changes.

Standard Object Change Event Name

```
<Standard_Object_Name>ChangeEvent
```

Example: AccountChangeEvent

Custom Object Change Event Name

```
<Custom_Object_Name>__ChangeEvent
```

Example: MyCustomObject__ChangeEvent

Change Event Fields

The fields that a change event can include correspond to the fields on the associated parent Salesforce object, with a few exceptions. For example, AccountChangeEvent fields correspond to the fields on Account.

The fields that a change event doesn't include are:

- The `IsDeleted` system field.
- The `SystemModStamp` system field.
- Any field whose value isn't on the record and is derived from another record or from a formula, except roll-up summary fields, which are included. Examples are formula fields. Examples of fields with derived values include `LastActivityDate` and `PhotoUrl`.

Each change event also contains header fields. The header fields are included inside the `ChangeEventHeader` field. They contain information about the event, such as whether the change was an update or delete and the name of the object, like Account.

In addition to the event payload, the event schema ID is included in the `schema` field. Also included is the event-specific field, `replayId`, which is used for retrieving past events.

Event Message Example

This example is an event message in JSON format for a new account record creation.

```
{
  "schema": "IeRuaY6cbI_HsV8Rv1Mc5g",
  "payload": {
    "ChangeEventHeader": {
      "entityName": "Account",
      "recordIds": [
        "<record_ID>"
      ],
      "changeType": "CREATE",
      "changeOrigin": "com/salesforce/api/soap/51.0;client=SfdcInternalAPI/",
      "transactionKey": "0002343d-9d90-e395-ed20-cf416ba652ad",
      "sequenceNumber": 1,
      "commitTimestamp": 1612912679000,
      "commitNumber": 10716283339728,
      "commitUser": "<User_ID>"
    },
    "Name": "Acme",
    "Description": "Everyone is talking about the cloud. But what does it mean?",
    "OwnerId": "<Owner_ID>",
    "CreatedDate": "2021-02-09T23:17:59Z",
    "CreatedById": "<User_ID>",
```

```

    "LastModifiedDate": "2021-02-09T23:17:59Z",
    "LastModifiedById": "<User_ID>"
  },
  "event": {
    "replayId": 6
  }
}

```

API Version and Schema

When you subscribe to change events, the subscription uses the latest API version and the event messages received reflect the latest field definitions. For more information, see [API Version and Event Schema](#) in the *Change Data Capture Developer Guide*.

Usage

For more information about Change Data Capture, see [Change Data Capture Developer Guide](#).

Objects That Support Change Events

These objects have associated ChangeEvent objects.

- Account (including Person Account)
- AccountCleanInfo
- AccountContactRelation
- AccountContactRole
- ActionCadence
- ActionCadenceStep
- ActionCadenceStepTracker
- ActionCadenceTracker
- AdOrderLineAdTarget
- AdProductTargetCategory
- AdQuoteLineAdTarget
- AdTargetCategory
- AdTargetCategorySegment
- AgentWork
- AgentWorkSkill
- AppExtension
- Asset
- AssetWarranty
- AssetRelationship
- AssignedResource
- AssociatedLocation
- AuthorizationForm
- AuthorizationFormConsent

- AuthorizationFormDataUse
- AuthorizationFormText
- Automotive Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Automotive Cloud Developer Guide*.
- BriefcaseAssignment
- BriefcaseDefinition
- BroadcastTopicNetwork
- BusinessBrand
- CalendarView
- CallTemplate
- Campaign
- CampaignMember
- CampaignMemberStatus
- CartDeliveryGroup
- CartItem
- CartItemPriceAdjustment
- CartTax
- CartValidationOutput
- Case
- CaseRelatedIssue
- ChangeRequest
- ChangeRequestRelatedIssue
- ChangeRequestRelatedItem
- CollaborationGroupRecord
- CollabTemplateMetric
- CommerceEntitlementBuyerGroup
- CommerceEntitlementPolicy
- CommerceEntitlementProduct
- CommSubscription
- CommSubscriptionChannelType
- CommSubscriptionConsent
- CommSubscriptionTiming
- ConferenceNumber
- Consumer Goods Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Consumer Goods Cloud Developer Guide*.
- Contact
- ContactCleanInfo
- ContentDocument
- ContentDocumentLink
- ContentFolder
- ContactPointAddress

- ContactPointConsent
- ContactPointEmail
- ContactPointPhone
- ContactPointTypeConsent
- ContentVersion
- Contract
- ContractLineItem
- Conversation Reason objects: ConversationContextEntry, ConversationReason, ConversationReasonExcerpt, and ConversationReasonGroup. See [Einstein Conversation Insights](#) in *Salesforce Help*.
- Coupon
- CustomFieldDisplayValue
- DataUseLegalBasis
- DataUsePurpose
- DigitalSignature
- DynamicDataCapture
- EmailMessage
- EmailTemplate
- EngagementAttendee
- EngagementChannelType
- EngagementInteraction
- EngagementTopic
- Entitlement
- Event
- EventRelation
- Expense
- ExternalClientAppSettings
- ExternalEvent
- FieldServiceMobileSettings
- Financial Services Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Financial Services Cloud Developer Guide*.
- FlowRecord
- FlowRecordElement
- FlowRecordVersion
- FlowOrchestration
- FlowOrchestrationVersion
- ForecastingOwnerAdjustment
- FulfillmentOrderItemTax
- Health Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Salesforce Health Cloud Developer Guide*.
- Incident Related Item
- Individual

- LandingPage
- Lead
- LinkedArticle
- ListEmail
- LiveAgentSession
- LiveChatTranscript
- LiveChatTranscriptEvent
- LiveChatVisitor
- Location
- LocationGroup
- LocationGroupAssignment
- Loyalty Management. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Loyalty Management Developer Guide*.
- Macro
- MacroInstruction
- MaintenanceAsset
- MaintenancePlan
- ManagedContent
- Manufacturing Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Manufacturing Cloud Developer Guide*.
- MarketingForm
- MarketingLink
- MarketSegmentActivation
- MerchantAccount
- MessagingEndUser
- MessagingSession
- Mortgage loan applicant and application objects. See [Mortgage Lending Objects Supported by Out-of-the-Box Components and Pages in Experience Builder Templates](#) in the *Financial Services Cloud Administrator Guide*.
- Net Zero Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Net Zero Cloud Developer Guide*.
- Nonprofit Cloud. Some objects are supported. See [StandardObjectNameChangeEvent](#) in the *Nonprofit Cloud Developer Guide*.

- WebStoreSearchProdSettings
- WorkOrder
- WorkOrderLineItem
- WorkThanks
- WorkType

CHAPTER 4 Custom Objects

This section provides details on custom objects, entities that support custom objects, and their standard fields.

When you create or enable features for a custom object, Salesforce creates entities to support your custom object. For example, when you enable sharing rules for a custom object, Salesforce creates a *MyObjectName__Share* object.

To verify the complete list of fields for an object or entity, you can use a describe call from the API, or inspect with an appropriate tool, for example, inspecting the WSDL or using a schema viewer.

[FSL__Time_Dependency__c](#)

Represents a dependency between two service appointments. This object is used to define scheduling relationships between two appointments. It allows you to determine the order and timing in which dependent appointments should be scheduled.

[Custom Metadata Type __mdt __mdt](#)

Represents a custom metadata record. This object is available in API version 34.0 and later.

[Custom Object __c __c](#)

Represents a custom object.

[Custom Object __Feed __Feed](#)

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

FSL__Time_Dependency__c

Represents a dependency between two service appointments. This object is used to define scheduling relationships between two appointments. It allows you to determine the order and timing in which dependent appointments should be scheduled.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in orgs that have the Field Service managed package installed. Records of this object are subject to standard sharing and security settings.

Fields

Field	Details
FSL__Dependency__c	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type of the dependency. Possible values are: • Immediately Follow • Same Start • Start After Finish • Start After Finish And Same Day The default value is Same Start.
FSL__Root_Service_Appointment__c	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The service appointment that's the root appointment of the entire dependency chain. The root appointment is the same service appointment for all the dependencies in the chain. This field is automatically populated by the system when creating a dependency. When creating a dependency via API, the API user must have permissions for this field. We recommend leaving this field empty when a dependency is created and avoiding any custom modifications. This field is a relationship field. Relationship Name FSL__Root_Service_Appointment__r Relationship Type Lookup Refers To ServiceAppointment
FSL__Same_Resource__c	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description An indication of whether the two service appointments that share a dependency should be assigned to the same service resource.

Field	Details
	The default value is <code>false</code> .
FSL__Service_Appointment_1__c	Type reference Properties Create, Filter, Group, Sort Description The first service appointment on which the second service appointment is dependent. This field is a relationship field. Relationship Name FSL__Service_Appointment_1__r Relationship Type Master-detail Refers To ServiceAppointment (the master object)
FSL__Service_Appointment_2__c	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The second service appointment that's dependent on the first service appointment. This field is a relationship field. Relationship Name FSL__Service_Appointment_2__r Relationship Type Lookup Refers To ServiceAppointment
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated unique identifier for the appointment dependency record.

Custom Metadata Type __mdt __mdt

Represents a custom metadata record. This object is available in API version 34.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

The object name is a variable with the syntax *Custom Metadata Type__mdt*, where *Custom Metadata Type* is the `ObjectName` for the custom metadata type associated with the custom metadata record. For example, `PicklistUsage__mdt` represents a custom metadata record based on the `PicklistUsage` custom metadata type.

Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`

Fields

Field	Details
<code>Custom Field__c</code>	Type Any Type Properties Filter, Group, Nillable, Sort Description A custom field on the record.
<code>DeveloperName</code>	Type string Properties Defaulted on create, Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
<code>isProtected</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description When a custom metadata type's records are released in a managed package, access to them is limited in specific ways. • Code that's in the same managed package as custom metadata records can read the records. • Code that's in the same managed package as custom metadata types can read the records that belong to that type.

Field	Details
	- Code that's in a managed package that doesn't contain either the type or the protected record can't read the protected records. - Code that the subscriber creates and code that's in an unmanaged package can't read the protected records. - The developer can modify protected records only with a package upgrade. The subscriber can't read or modify protected records. The developer name of a protected record can't be changed after release. Records that are hidden by these access rules are also unavailable to REST, SOAP, SOQL, and Setup.
Label	Type picklist Properties Filter, Group, Nillable, Sort Description The custom metadata record label. This label value is always the same as the <code>MasterLabel</code> value.
Language	Type string Properties Filter, Group, restrictedPicklist, Sort Description The language of the custom metadata record. This value is always the default language of the developing organization.
MasterLabel	Type string Properties Filter, Group, Sort Description The primary label for the custom metadata record.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.

Field	Details
QualifiedApiName	Type string Properties Filter, Group, Nillable, Sort Description A concatenation of the namespace prefix and developer name. The format is <i>NamespacePrefix__DeveloperName</i>.
SystemModStamp	Type dateTime Properties Defaulted on create, Filter, Sort Description Date and time when a user or automated process such as a trigger last modified this record. In this context, trigger refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger. This field is available in API version 56.0 and later.

SEE ALSO:

[System Fields](#)[Field Types](#)[API Field Properties](#)

Custom Object __c __c

Represents a custom object.

The custom object name is a variable with the syntax `Custom_Object__c`, where `Custom_Object` is the object's Name associated with the record, followed by two underscores and `c`. For example, a custom object labeled "Issue" in the Salesforce user interface is `Issue__c` in that organization's WSDL.

System fields and properties behave the same on custom objects as they do on standard objects, unless otherwise noted in the following details.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ConnectionReceivedId	Type reference Properties Filter, Nillable Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Nillable Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
CreatedById	Type reference Properties Aggregatable, Defaulted on create, Filter, Group, Sort Description ID of the User who created this record.
CreatedDate	Type dateTime Properties Aggregatable, Defaulted on create, Filter, Sort Description Date and time when this record was created.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.

Field	Details
Id	Type Id Properties Aggregatable, Defaulted on create, Filter, Group, idLookup, Sort Description Globally unique string that identifies a record. For information on IDs, see ID Field Type.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
LastActivityDate	Type dateTime Properties Filter, Group, Nillable, Sort Description Value is one of the following, whichever is the most recent: • Due date of the most recent event logged against the object. • Due date of the most recently closed task associated with the object.
LastModifiedDate	Type dateTime Properties Aggregatable, Defaulted on create, Filter, Sort Description Date and time when a user last modified this record.
LastModifiedById	Type reference Properties Aggregatable, Defaulted on create, Filter, Group, Sort Description ID of the User who last updated this object.
LastReferencedDate	Type dateTime

Field	Details
	Properties Aggregatable, Filter, Sort, Nillable Description Date and time when the current user last viewed or modified this record, a record related to this record, or a list view. If this value is <code>null</code>, the current user has never viewed or modified a record related to this object. This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query.
LastViewedDate	Type dateTime Properties Aggregatable, Filter, Sort, Nillable Description Date and time when the current user last viewed or modified this record. If this value is <code>null</code>, the current user has never viewed or modified this record. This field doesn't exist on records for a custom object unless a custom object tab is created for that object. See Use LastReferencedDate and LastViewedDate fields in a SOQL query.
Name	Type string Properties Aggregatable, Create, Defaulted on create, Filter, Group, idLookup, Sort, Update Description Label is Object Name. Name of the object. Maximum size is 80 characters. When the object is created using an API <code>update()</code> call, and the Name field is null, Salesforce sets the value to the record ID. When the object is created using an API <code>create()</code> call, Salesforce sets the initial value to the record ID. You can't set the Name field to null.
OwnerId	Type reference Properties Aggregatable, Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update Description The ID of the user who currently owns this object. Default value is the user logged in to the API to perform the <code>create()</code> call.
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update

Field	Details
	Description ID of the record type assigned to this object. Create at least one record type before this field appears for custom or standard objects.
SystemModStamp	Type dateTime Properties Aggregatable, Defaulted on create, Filter, Sort Description Date and time when a user or automated process such as a trigger last modified this record. In this context, trigger refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger.

[Field Types](#)

[API Field Properties](#)

Custom Object __Feed __Feed

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

A custom object feed shows posts and changes to the object's tracked fields. The object name is variable and uses *Custom Object__Feed* syntax, where *Custom Object* is the name of the custom object. For example, *Textile__Feed* represents a feed on the custom object *Textile__c*.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in Experience Cloud sites where threaded discussions and delete-blocking are enabled. Site members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All Records on the parent object, like *Textile__c*.
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

Fields

Field	Details
BestCommentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later.
Body	Type textarea Properties Nillable, Sort Description The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.
CommentCount	Type int Properties Filter, Group, Sort Description The number of comments associated with this feed item.  Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>. Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.
ConnectionId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description When a PartnerNetworkConnection modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your org.
ContentData	Type base64 Properties Nullable Description Available in API version 36.0 and earlier only. Required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.
ContentDescription	Type textarea Properties Nullable, Sort Description Available in API version 36.0 and earlier only. The description of the file specified in <code>ContentData</code>.
ContentFileName	Type string Properties Group, Nullable, Sort Description Available in API version 36.0 and earlier only. This field is required if <code>Type</code> is <code>ContentPost</code>. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>.
ContentSize	Type int Properties Group, Nullable, Sort Description Available in API version 36.0 and earlier only. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.
ContentType	Type string

Field	Details
	Properties Group, Nillable, Sort Description Available in API version 36.0 and earlier only. The MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.
FeedPostId	Type reference Properties Filter, Group, Nillable, Sort Description This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only. ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.
InsertedById	Type reference Properties Group, Nillable, Sort Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.
IsRichText	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed item <code>Body</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • <code><p></code> •  Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp; </p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code> • <code><i></code>

Field	Details
	• <u> • <s> • • • • The tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code>  Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
LikeCount	Type int Properties Filter, Group, Sort Description The number of likes associated with this feed item.
LinkUrl	Type url Properties Nillable, Sort Description The URL of a <code>LinkPost</code>.
NetworkScope	Type picklist Properties Group, Nillable, Restricted picklist, Sort Description Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. <code>NetworkScope</code> can have the following values: • <code>NetworkId</code>—The ID of the Experience Cloud site in which the <code>FeedItem</code> is available. If left empty, the feed item is only available in the default Experience Cloud site. • <code>AllNetworks</code>—The feed item is available in all Experience Cloud sites. Note the following exceptions for <code>NetworkScope</code>:

Field	Details
	- Only feed items with a Group or User parent can set a <code>NetworkId</code> or a null value for <code>NetworkScope</code>. - For feed items with a record parent, users can set <code>NetworkScope</code> only to <code>AllNetworks</code>. - You can't filter a feed item on the <code>NetworkScope</code> field.
ParentId	Type reference Properties Filter, Group, Sort Description ID of the custom object record that is tracked in the feed. The feed is displayed on the detail page for this record.
RelatedRecordId	Type reference Properties Group, Nillable, Sort Description ID of the <code>ContentVersion</code> object associated with a <code>ContentPost</code>. This field is null for all posts except <code>ContentPost</code>.
Title	Type string Properties Group, Nillable, Sort Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of feed item: <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or Event associated with a case record (excluding email and call logging).

Field	Details
	For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence. • AdvancedTextPost—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • AnnouncementPost—Not used. • ApprovalPost—generated when a user submits an approval. • BasicTemplateFeedItem—Not used. • CanvasPost—a post made by a canvas app posted on a feed. • CollaborationGroupCreated—generated when a user creates a public group. • CollaborationGroupUnarchived—Not used. • ContentPost—a post with an attached file. • CreatedRecordEvent—generated when a user creates a record from the publisher. • DashboardComponentAlert—generated when a dashboard metric or gauge exceeds a user-defined threshold. • DashboardComponentSnapshot—created when a user posts a dashboard snapshot on a feed. • LinkPost—a post with an attached URL. • PollPost—a poll posted on a feed. • ProfileSkillPost—generated when a skill is added to a user's Chatter profile. • QuestionPost—generated when a user posts a question. • ReplyPost—generated when Chatter Answers posts a reply. • RypplePost—generated when a user creates a Thanks badge in WDC. • TextPost—a direct text entry on a feed. • TrackedChange—a change or group of changes to a tracked field. • UserStatus—automatically generated when a user adds a post. Deprecated. The following values appear in the Type picklist for all feed objects but apply only to CaseFeed: • CaseCommentPost—generated event when a user adds a case comment for a case object • EmailMessageEvent—generated event when an email related to a case object is sent or received • CallLogPost—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • ChangeStatusPost—generated event when a user changes the status of a case • AttachArticleEvent—generated event when a user attaches an article to a case  Note: If you set Type to ContentPost, also specify ContentData and ContentFileName.

Field	Details
Visibility	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org. Visibility can have the following values: • AllUsers—The feed item is available to all users who have permission to see the feed item. • InternalUsers—The feed item is available to internal users only. Note the following exceptions for Visibility: • For record posts, Visibility is set to InternalUsers for all internal users by default. • External users can set Visibility only to AllUsers. • On user and group posts, only internal users can set Visibility to InternalUsers.

Usage

A feed for a custom object is automatically created when a user enables feed tracking for the custom object. Use feeds to track changes to the custom objects they serve. For example, `Textile__Feed` tracks changes to a `Textile__c` object. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.

What About *StandardObjectName*Feed Objects?

Similar to custom objects, standard objects can have associated feed objects. For a list of *StandardObjectName*Feed objects, see [StandardObjectName Feed Feed](#).

CHAPTER 5 Object Interfaces

In this chapter ...

- [PriceAdjustmentGroup](#)
- [PriceAdjustmentItem](#)
- [SalesTransaction](#)
- [SalesTransactionItem](#)

This section provides a list of standard object interfaces and their standard fields.

Some fields may not be listed for some object interfaces. To see the system fields for each object interface, see [System Fields](#).

To verify the complete list of fields for an object interface, you can use a describe call from the API.

PriceAdjustmentGroup

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object interface is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object interface is available with Subscription Management or B2B Commerce.

Fields

Field	Details
AdjustmentSource	Type picklist Properties Filter, Restricted picklist, Sort Description Indicates the source of the adjustment. This field is available with B2B Commerce. Possible values are: • Discretionary—The adjustment is entered manually, for example, by a sales rep. • Promotion—The adjustment is part of a promotion. • Rule—Reserved for future use. • System—The adjustment is configured by the system data, for example, as part of a pricing rule or discount schedule.
AdjustmentType	Type picklist Properties Filter, Restricted picklist, Sort Description Indicates whether the adjustment is a percentage, an amount, or an override. Possible values are: • AdjustmentAmount—Reserved for future use. • AdjustmentPercentage • OverrideAmount

Field	Details
AdjustmentValue	Type double Properties Filter, Sort Description The value of the adjustment. To indicate a discount, use a negative number.
Description	Type textarea Properties Nillable Description User-entered description of the price adjustment group. Available in API versions 55.0 to 57.0.
ImplementorType	Type string Properties Filter, Group, Nillable, Sort Description The object that is implementing this entity interface, for example, a WebCartAdjustmentGroup object.
PriceAdjustmentCauseId	Type reference Properties Filter, Nillable, Sort Description The ID of the record that is the source of the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the price adjustment tier record. This field is a relationship field. Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To PriceAdjCauseInterface
Priority	Type int

Field	Details
	Properties Filter, Nillable, Sort Description A positive integer indicating the order in which this price adjustment group is applied, relative to other price adjustment groups. A <code>Priority</code> of 1 indicates this price adjustment group is applied first. Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied before amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.  Note: The value of <code>Priority</code> must be unique among price adjustment groups in the same sales transaction.
<code>SalesTransactionId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the sales transaction that the price adjustment group belongs to. This field is a relationship field. Relationship Name SalesTransaction Relationship Type Lookup Refers To SalesTransaction
<code>TotalAmount</code>	Type currency Properties Filter, Sort Description The total amount of adjustments of all related price adjustment items, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to the sum of the <code>TotalAmount</code> fields in the related price adjustment items.

PriceAdjustmentItem

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object interface is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object interface is available with Subscription Management or B2B Commerce.

Fields

Field	Details
AdjustmentAmountScope	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Used with <code>AdjustmentValue</code> to determine the amount of the adjustment. Possible values are: • Total—The adjustment applies to the line item's total and isn't multiplied by the quantity, prorated for the duration of the subscription. For example, let's say a sales transaction item quantity is 10 and the <code>TotalLineAmount</code> is 1000. If the price adjustment item has an <code>AdjustmentValue</code> of -10, an <code>AdjustmentType</code> of <code>AdjustmentAmount</code>, and an <code>AdjustmentAmountScope</code> of <code>Total</code>, the \$10 discount is applied to the total line amount. The <code>TotalAmount</code> of the price adjustment item is $\\$1000 + (-\\$10) = \\$990$. • Unit—The adjustment is multiplied by the line item's quantity. For example, let's say a sales transaction item quantity is 5 and the <code>TotalLineAmount</code> is 1000. If the price adjustment item has an <code>AdjustmentValue</code> of -10, an <code>AdjustmentType</code> of <code>AdjustmentAmount</code>, and an <code>AdjustmentAmountScope</code> of <code>Unit</code>, the \$10 discount is applied to each line amount. The <code>TotalAmount</code> of the price adjustment item is $\\$1000 + (-\\$10 \times 5) = \\$950$.
AdjustmentSource	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates the source of the adjustment. Possible values are: • Discretionary—The adjustment is entered manually; for example, by a sales rep.

Field	Details
	• Promotion—The adjustment is a promotion. • Rule—Reserved for future use. • System—The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule.
AdjustmentType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates whether the adjustment is a percentage, an amount, or an override. Possible values are: • AdjustmentAmount • AdjustmentPercentage • OverrideAmount
AdjustmentValue	Type double Properties Filter, Sort Description The value of the adjustment. Used together with AdjustmentAmountScope to determine the amount of the adjustment.
Description	Type textarea Properties Nillable Description The user-entered description of the price adjustment item. Available in API version 55.0 to 57.0.
ImplementorType	Type string Properties Filter, Group, Nillable, Sort Description The object that is implementing this object interface, for example, a CartItemPriceAdjustment object.

Field	Details
PriceAdjustmentCauseId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the record that caused the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the Promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the PriceAdjustmentTier record. This field is a relationship field. Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To PriceAdjCauseInterface
PriceAdjustmentGroupId	Type reference Properties Filter, Group, Nillable, Sort Description A reference to the object interface or object that summarizes the values from multiple price adjustment items. If the related entity is an object, the object must implement the PriceAdjustmentGroup object interface. Relationship Name PriceAdjustmentGroup Relationship Type Lookup Refers To PriceAdjustmentGroup
Priority	Type int Properties Filter, Group, Nillable, Sort Description A positive integer indicating the order in which this price adjustment item is applied, relative to other price adjustment items. A <code>Priority</code> of 1 indicates this price adjustment item is applied first. Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are

Field	Details
	applied before amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.  Note: The value of <code>Priority</code> must be unique among price adjustment items related to the same price adjustment group. For example, you can't have two price adjustment items with a priority of 1. For example, let's say that two price adjustment items apply to the same item to be priced. The first price adjustment, <code>Spring_Promotion</code>, defines a 10% discount and has <code>Priority</code> of 1. The second price adjustment, <code>Early_Renewal_Discount</code>, defines a \$2,000 discount and has a <code>Priority</code> of 2. In this case, the <code>Spring_Promotion</code> price adjustment is applied before the <code>Early_Renewal_Discount</code> price adjustment.
<code>SalesTransactionItemId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the sales transaction item that the price adjustment item applies to. This field is a relationship field. Relationship Name <code>SalesTransactionItem</code> Relationship Type Lookup Refers To <code>SalesTransactionItem</code>
<code>TotalAmount</code>	Type currency Properties Filter, Sort Description The total amount of the adjustment that applies to the item to be priced, inclusive of quantity, prorated for the duration of the subscription. For example, let's say the price adjustment item has an <code>AdjustmentAmountScope</code> of <code>Unit</code>, an <code>AdjustmentType</code> of <code>AdjustmentAmount</code>, and an <code>AdjustmentValue</code> of <code>-10</code>. This configuration indicates a \$10 per-unit discount. If the subscription is priced for 12 months and the pricing term is 1, the <code>PricingTermCount</code> on the sales transaction item is 12. If the quantity is 5, the value of <code>TotalAmount</code> is $5 \times 12 \times -10 = -600$.

SalesTransaction

Defines the business logic for a sales transaction, for example, an order or a cart. This object interface is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object interface is available with Subscription Management and B2B Commerce.

Fields

Field	Details
ImplementorType	Type string Properties Default on create, Filter, Group, Restricted picklist, Sort Description The object that is implementing this object interface, for example, an Order object.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all adjustments applied to the sales transaction, inclusive of quantity, prorated for the duration of the subscription. Includes distributed price adjustment items and price adjustment items applied directly. This is a calculated field equal to the sum of <code>TotalAdjustmentAmount</code> on the related sales transaction items.
TotalAdjustmentDistAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the distributed price adjustment items applied to the related sales transaction items, inclusive of quantity, prorated for the duration of the subscription. Does not include price adjustment items that are applied directly. This is a calculated field equal to the sum of <code>TotalAdjustmentDistAmount</code> on the related sales transaction items.

Field	Details
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The final price of the sales transaction, after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This is a calculated field equal to the sum of <code>TotalPrice</code> on the related sales transaction items.
TotalListAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the list price of the related sales transaction items, inclusive of quantity, prorated for the duration of the subscription. This is a calculated field equal to the sum of <code>ListPriceTotal</code> on the related sales transaction items.
TotalProductAmount	Type currency Properties Filter, Nillable, Sort Description The total price of all related sales transaction items of type <code>Product</code>, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This is a calculated field equal to the sum of <code>TotalLineAmount</code> on the related sales transaction items of type <code>Product</code>.

SalesTransactionItem

Defines the business logic for a sales transaction item, for example, an item in an order. This object interface is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object interface is available with Subscription Management or B2B Commerce.

Fields

Field	Details
BasisTransactionItemId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the transaction item to use as a reference when pricing this transaction. For example, let's say an order item is renewed. In this case, a renewal order item is created from the new sale order item, and the <code>BasisTransactionItemId</code> on the new sale order item is updated to contain the ID of the renewal order item. This field is a polymorphic relationship field. Relationship Name BasisTransactionItem Relationship Type Lookup Refers To SalesTransactionItem
BillingFrequency	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The time period that indicates how often the sales transaction item is billed. Possible values are: • Annual • Monthly
EndDate	Type date Properties Filter, Group, Nillable, Sort Description The last day the sales transaction item is available. For example, the last day that the service purchased in the order item is available.
ImplementorType	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The object that is implementing this entity interface, for example, an OrderProduct object.
ListPrice	Type currency Properties Filter, Nillable, Sort Description The list price for the sales transaction item. This value is inherited from the related price book entry.
ListPriceTotal	Type currency Properties Filter, Nillable, Sort Description The list price, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to ListPrice times Quantity times PricingTermCount.
NetUnitPrice	Type currency Properties Filter, Nillable, Sort Description The unit price after all adjustments are applied.
ObligatedAmount	Type currency Properties Filter, Nillable, Sort Description In a subscription, the amount a subscriber is billed for products used during the subscription period that the subscriber returns before the subscription end date. This field's value is the price for use of the product. This field is available in version 57.0 and later. This field is available when Subscription Management is enabled.  Note: - A subscriber must submit a quantity amendment in order to change the subscription's product quantity. A quantity amendment request is only valid until the subscription end date. - A subscriber is eligible for a refund only for the periods when the products weren't used.

Field	Details
	The subscription's proration policy indicates whether the obligated amount and the refund are prorated for partial periods.
ParentSalesTransactionItem	Type reference Properties Filter, Group, Nillable, Sort Description The parent transaction of <code>BasisTransactionItemId</code>. This field is available in API version 58.0 and later. This field is a polymorphic relationship field. Relationship Name ParentSalesTransactionItem Relationship Type Lookup Refers To SalesTransactionItem
PeriodBoundary	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The period boundary helps determine the start and end date of the billing periods. Possible values are: <code>AlignToCalendar</code>—The period starts on the first day of the term unit, for example, the first day of the month. <code>Anniversary</code>—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. <code>DayOfPeriod</code>—The period starts on the day indicated by <code>PeriodBoundaryDay</code>. <code>LastDayOfPeriod</code>—The period starts on the last day of the pricing term unit; for example, the last day of the month.
PeriodBoundaryDay	Type int Properties Filter, Group, Nillable, Sort Description Required when <code>PeriodBoundary</code> is <code>DayOfPeriod</code>. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31.

Field	Details
PeriodBoundaryStartMonth	Type picklist Properties Create, Filter, Group, Restricted picklist, Nillable, Sort, Update Description Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency is Annual or by manual user entry. Possible values are: • 1-January • 2-February • 3-March • 4-April • 5-May • 6-June • 7-July • 8-August • 9-September • 10-October • 11-November • 12-December
PricebookEntryId	Type reference Properties Filter, Group, Nillable, Sort Description The unique identifier of the related price book entry. This field is a relationship field. Relationship Name PricebookEntry Relationship Type Lookup Refers To PricebookEntryInterface
PricingTermCount	Type double Properties Filter, Nillable, Sort Description A calculated field indicating the number of pricing terms in the subscription.

Field	Details
PricingTransactionType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the type of pricing transaction, for example, a new sale, a cancellation, an amendment, or a renewal. Possible values are: • AmendmentAtLastNegotiatedPrice—calculate the price of the amended sales transaction item using the same price book and price adjustments as the new sale item. For example, an order item that is amended using a pricing transaction type of AmendmentAtLastNegotiatedPrice is priced using the same price book information and price adjustments as the new sale item. The amended order item has the same price as the new sale order item. This value is available in version 57.0 and later. • AmendmentStartingFromListPrice—calculate the price of the amended sales transaction item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, an amended transaction item has a different price than the new sale transaction item. This value is available in version 57.0 and later. • Cancellation—calculate the price of the canceled transaction. For example, let's say that a 1-year subscription was purchased on January 1, then canceled on July 31. The price of the canceled products and services from August 1 through Dec 31 is calculated. • NewSale—the price of a new transaction is calculated. • RenewalAtLastNegotiatedPrice—calculate the price of the renewal transaction item using the same price book and price adjustments as the new sale item. For example, an order item that is renewed using a pricing transaction type of RenewalAtLastNegotiatedPrice is priced using the same price book information and price adjustments as the new sale item. The renewal order item has the same price as the new sale order item. • RenewalAtListPrice—calculate the price of the renewal transaction item using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, a renewal transaction item has a different price than the new sale transaction item.
ProductId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the related product. This field is a relationship field.

Field	Details
	Relationship Name Product Relationship Type Lookup Refers To ProductInterface
ProductSellingModelId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related product selling model. The product selling model defines one method by which a product can be sold, for example, as a one-time sale, an evergreen subscription, or a termed subscription. This field is a relationship field. Relationship Name ProductSellingModel Relationship Type Lookup Refers To ProductSellingModel
ProrationPolicyId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related proration policy. The proration policy defines how the price is calculated for each subscription period, for example, whether partial periods are allowed, and how remainder amounts are handled. This field is a relationship field. Relationship Name ProrationPolicy Relationship Type Lookup Refers To ProrationPolicy
Quantity	Type double

Field	Details
	Properties Filter, Sort Description Required. Number of units in the sales transaction item.
SalesItemType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Required. The type of sale. Possible values are: • Charge • Product
SalesTransactionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related sales transaction. This field is a polymorphic relationship field. Relationship Name SalesTransaction Relationship Type Lookup Refers To SalesTransaction
StartDate	Type date Properties Filter, Group, Nillable, Sort Description The start date of the service or charge.
StartingPriceTotal	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The starting unit price, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to <code>StartingUnitPrice</code> times <code>Quantity</code> times <code>PricingTermCount</code> .
<code>StartingUnitPrice</code>	Type currency Properties Filter, Nillable, Sort Description The unit price before any adjustments.
<code>StartingUnitPriceSource</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Required. Indicates whether the starting unit price was inherited, entered manually, or calculated. Possible values are: • <code>Inherited</code>—The starting unit price is copied from a previous transaction, for example, from the order item being renewed. • <code>Manual</code>—The starting unit price is entered manually, for example, by a sales rep. • <code>System</code>—The starting unit price is calculated using pricing information that was configured by an administrator, for example, a pricing tier.
<code>StockKeepingUnit</code>	Type string Properties Filter, Group, Nillable, Sort Description The SKU assigned to the related product.
<code>SubscriptionTerm</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of terms in the subscription. You can indicate a subscription's length using either the start and end dates, or by using the start date and the subscription term.

Field	Details
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the adjustments applied to the sales transaction item, inclusive of quantity, prorated for the duration of the subscription. Includes distributed price adjustment items and price adjustment items applied directly.
TotalAdjustmentDistAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the distributed price adjustment items applied to the sales transaction item, prorated for the duration of the subscription. Doesn't include price adjustment items that are applied directly. A distributed price adjustment is automatically created to apply a transaction-level adjustment to the transaction items. For example, let's say that you have an order with two order items: one for a file storage service and another for a video streaming service. A 10% volume discount and a 15% manual discount are applied to the entire order. An additional 20% discount is applied to the file storage service. To distribute the order-level discounts, the system creates a 10% price adjustment item and a 15% price adjustment item for each order item. In this example, the file storage service's sales transaction item has the following field values: • TotalAdjustmentAmount the sum of all item-level adjustments, including the 10% price adjustment item, the 15% price adjustment item, and the 20% price adjustment item. • TotalAdjustmentDistAmount the sum of the distributed item-level adjustments, including the 10% price adjustment item and the 15% price adjustment item.
TotalLineAmount	Type currency Properties Filter, Nillable, Sort Description The total price of the sales transaction item, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to <code>TotalPrice</code> times <code>Quantity</code> times <code>PricingTermCount</code>.
TotalPrice	Type currency

Field	Details
	Properties Filter, Nillable, Sort
	Description The price after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This calculated field is equal to <code>TotalAdjustmentAmount</code> plus <code>TotalLineAmount</code> .

CHAPTER 6 Standard Objects

This section provides a list of standard objects and their standard fields. Only a subset of standard objects appear in Object Manager.

Some fields may not be listed for some objects. To see the system fields for each object, see [System Fields](#).

To verify the complete list of fields for an object, use a describe call from the API, or inspect with an appropriate tool. For example, inspecting the WSDL or using a schema viewer.

[AbnExperiment](#)

Represents an A/B/n experiment that's used with Marketing Cloud Next content, Experience Cloud websites, and platform automations. This object is available in API version 63.0 and later.

[AbnExperimentCohort](#)

Represents the specified audience that's participating in an A/B/n experiment. This object is available in API version 63.0 and later.

[AcceptedEventRelation](#)

Represents event participants (invitees or attendees) with the status `Accepted` for a given event.

[Account](#)

Represents an individual account, which is an organization or person involved with your business (such as customers, competitors, and partners).

[AccountBrand](#)

Represents the brand details of a Partner Account. This object is available in API version 43.0 and later.

[AccountContactRelation](#)

Represents a relationship between a contact and one or more accounts.

[AccountCleanInfo](#)

Stores the metadata Data.com Clean uses to determine an account record's clean status. AccountCleanInfo helps you automate the cleaning or related processing of account records.

[AccountContactRole](#)

Represents the role that a Contact plays on an Account.

[AccountInsight](#)

Represents an individual insight (a key business development) related to an account record.

[AccountOwnerSharingRule](#)

Represents the rules for sharing an account with a User other than the owner.

[AccountPartner](#)

This object represents a partner relationship between two Account records. An AccountPartner record is created automatically when a Partner record is created for a partner relationship between two accounts. An AccountPartner record is also created automatically between an account and an opportunity's account when a Partner record is created between an account and an opportunity.

Standard Objects

[AccountPlan](#)

Represents customer information with measurable objectives and executable steps to proactively manage and grow customer relationships. This object is available in API version 62.0 and later.

[AccountPlanObjective](#)

Represents strategic objectives or initiatives pursued by a relationship team with a customer to enhance customer engagement and satisfaction. This object is available in API version 62.0 and later.

[AccountPlanObjectiveMeasure](#)

Represents the performance of target metrics for an objective associated with the account plan. This object is available in API version 62.0 and later.

[AccountPlanObjMeasCalcCond](#)

Represents a field and value combination for filtering records to include in the calculation of a sales account plan objective measure's current value. This object is available in API version 63.0 and later.

[AccountPlanObjMeasCalcDef](#)

Represents the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later.

[AccountPlanObjMeasCalcDefLocalization](#)

Represents the translated value of the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later when the Translation Workbench is enabled.

[AccountPlanObjMeasRela](#)

Represents a junction between an account plan objective measure and the related objects. This object is available in API version 62.0 and later.

[AccountRelationship](#)

Represents a relationship of a given type between two accounts. This object is available in API version 45.0 and later.

[AccountRelationshipShareRule](#)

Represents the rule that determines which object records are shared, how they are shared, the account relationship type that shares the records, and the level of access granted to the records. This object is available in API version 45.0 and later.

[AccountShare](#)

Represents a sharing entry on an account.

[AccountTag](#)

Associates a word or short phrase with an Account.

[AccountTeamMember](#)

Represents a User who is a member of an Account team.

[AccountTerritoryAssignmentRule](#)

An account assignment rule that assigns accounts to territories based on account fields. Available if Sales Territories has been enabled.

[AccountTerritoryAssignmentRuleItem](#)

A row of selection criteria for an AccountTerritoryAssignmentRule object. Available if Sales Territories has been enabled.

[AccountTerritorySharingRule](#)

Represents the rules for sharing an Account within a territory.

[AccountUserTerritory2View](#)

Represents the view of the Users in Assigned Territories related list in Lightning Experience for Sales Territories. Available in API version 42.0 and later.

Standard Objects

[ActionCadence](#)

Represents the definition of a cadence. This object is available in API version 45.0 and later.

[ActionCadenceRule](#)

Represents the logic that a branch step uses to determine which branch an action cadence tracker follows in an action cadence. Use ActionCadenceRule to learn about a branch step, including its logic and what the next step is. This object is available in API version 48.0 and later.

[ActionCadenceRuleCondition](#)

Represents the logic for a branch step. This object is available in API version 48.0 and later.

[ActionCadenceStep](#)

Represents a step in a cadence. Use ActionCadenceStep to learn which steps belong to a cadence, and how the steps are connected to each other. This object is available in API version 48.0 and later.

[ActionCadenceStepTracker](#)

Represents a step in an active cadence for a specific cadence target. This object is available in API version 48.0 and later.

[ActionCadenceStepVariant](#)

Represents an email template or call script variant associated with an action cadence step. Email and call steps can have up to 3 variants associated so sales teams can compare the engagement results. This object is available in API version 53.0 and later.

[ActionCadenceTracker](#)

Represents an active cadence target. This object is available in API version 45.0 and later.

[ActionCdncStpMonthlyMetric](#)

Represents the monthly engagement metrics for an action cadence step. This object is available in API version 49.0 and later.

[ActionLinkGroupTemplate](#)

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking on an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. Every action link belongs to an action link group and action links within the group are mutually exclusive. This object is available in API version 33.0 and later.

[ActionLinkTemplate](#)

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. This object is available in API version 33.0 and later.

[ActionPlan](#)

Represents the instance of an action plan, a set of tasks created from an action plan template. This object is available in API version 44.0 and later.

[ActionPlanItem](#)

Represents the instance of an action plan item. This object is available in API version 44.0 and later.

[ActionPlanTemplate](#)

Represents the instance of an action plan template. This object is available in API version 44.0 and later.

[ActionPlanTemplateItem](#)

Represents the instance of an item on an action plan template version. This object is available in API version 44.0 and later.

[ActionPlanTemplateItemValue](#)

Represents the value associated with an action plan template item. This object is available in API version 44.0 and later.

Standard Objects

[ActionPlanTemplateVersion](#)

Represents the version of an action plan template. This object is available in API version 44.0 and later.

[ActiveFeatureLicenseMetric](#)

Represents the number of active, assigned, and purchased feature licenses in the org. This object is available in API version 52.0 and later.

[ActivePermSetLicenseMetric](#)

Represents the number of active, assigned, and purchased permission set licenses in the org. This object is available in API version 52.0 and later.

[ActiveProfileMetric](#)

Represents the profile associated with the active, assigned, and purchased user licenses. This object is available in API version 52.0 and later.

[ActiveScratchOrg](#)

Represents an active scratch org. This object is available in API version 41.0 and later.

[ActivityFieldHistory](#)

Represents a change in a field value for a tracked object or field. This object is a big object. This object is available in API version 55.0 and later.

[ActivityHistory](#)

This read-only object is displayed in a related list of closed activities—past events and closed tasks—related to an object. It includes activities for all contacts related to the object. ActivityHistory fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

[ActivityMetric](#)

Represents activities that were added to Salesforce automatically by Einstein Activity Capture and manually by users.

[ActivityUsrConnectionStatus](#)

Represents the status of the email connections for Einstein Activity Capture users. You can also see whether users accepted the required terms of service to capture emails. This object is available in API version 54.0 and later.

[AdditionalNumber](#)

Represents an optional additional number for a call center. This additional number is visible in the call center's phone directory.

[Address](#)

Represents a mailing, billing, or home address.

[AgentWork](#)

Represents a work assignment that's been routed to an agent. If the work is transferred to another agent, a new AgentWork record is created. This object is available in API version 32.0 and later.

[AgentWorkConversationalData](#)

Stores conversation data for agent work sessions, such as agent interactions, transfer information, and operational metrics. This object is available in API version 66.0 and later.

[AgentWorkSkill](#)

Represents a skill used to route a work assignment to an agent. AgentWorkSkill is used for reporting and represents the result of a routing decision. This object is available in API version 42.0 and later.

[AIApplication](#)

Represents an AI application such as Einstein Prediction Builder. This object is available in API version 50.0 and later.

[AIApplicationConfig](#)

Additional prediction information related to an AI application. This object is available in API version 50.0 and later.

Standard Objects

[AiGenActionItem](#)

Represents business actions suggested by generative AI. AI-generated action items are sent to either agents for automatic execution or human users for review, depending on org preference and if there are any errors in the process. This object is available in API version 64.0 and later.

[AllInsightAction](#)

Represents an Einstein prediction insight action. This object is available in API version 47.0 and later.

[AllInsightFeedback](#)

Represents an Einstein prediction insight feedback. This object is available in API version 47.0 and later.

[AllInsightReason](#)

Represents an Einstein prediction insight reason. This object is available in API version 47.0 and later.

[AllInsightValue](#)

Represents an Einstein prediction insight value. This object is available in API version 47.0 and later.

[AiJobRun](#)

Represents an execution instance of an AI job. This object tracks the overall status and manages the lifecycle of the job from initiation to completion. This object is available in API version 63.0 and later.

[AiJobRunItem](#)

Stores an individual item associated with a parent AiJobRun, including the inputs and resulting response. This object is available in API version 63.0 and later.

[AiModelLanguage](#)

An object that stores language related information that is generated for each AI model. This object is available in API version 55.0 and later.

[AIRecordInsight](#)

Represents an Einstein prediction insight. This object is available in API version 47.0 and later.

[AIResearchPromptResult](#)

Represents the research result generated by Agentforce or by Einstein from a standard or custom prompt template. This object is available in API version 64.0 and later.

[AllowedEmailDomain](#)

Represents an allowed email domain for users in your organization. You can define an allowlist to restrict the email domains allowed in a user's `Email` field. This object is available in API version 29.0 and later.

[AlternativePaymentMethod](#)

Represents a payment method that isn't cash, a debit card, or a credit card. This object defines methods that aren't defined by the [CardPaymentMethod](#) or [DigitalWallet](#) objects. Examples of alternative payment methods include CashOnDeliver, Klarna, and Direct Debit. `AlternativePaymentMethod` functions the same as any other type of payment method for processing transactions through a payment gateway. This object is available in API version 51.0 and later.

[AnalyticsChangeEventLog](#)

Analytics Change Event Logs represent route or page changes made in the CRM Analytics. This object is available in API version 61.0 and later.

[AnalyticsDashboard](#)

Represents a Tableau Next dashboard. This object is available in API version 64.0 and later.

[AnalyticsDownloadEventLog](#)

`AnalyticsDownloadEventLog` represent downloads made from lens and dashboard in the CRM Analytics. This object is available in API version 61.0 and later.

Standard Objects

[AnalyticsInteractEventLog](#)

Analytics Interact Event Log represents route or page changes made in the CRM Analytic UI. This object is available in API version 61.0 and later.

[AnalyticsLicensedAsset](#)

Represents a licensed Analytics asset. In this context, Analytics is CRM Analytics, Sonic, or Mulesoft Data Path. Available in API version 52.0 and later.

[AnalyticsPerfEventLog](#)

Analytics Perf Event Log helps track trends in your Analytics performance. This object is available in API version 61.0 and later.

[AnalyticsVisualization](#)

Represents a Tableau Next viusalization. This object is available in API version 64.0 and later.

[AnalyticsVizField](#)

Represents a Tableau Next viusalization field. This object is available in API version 65.0 and later.

[AnalyticsVizViewDef](#)

Represents a Tableau Next viusalization view definition. This object is available in API version 64.0 and later.

[AnalyticsWorkspace](#)

Represents a Tableau Next workspace. This object is available in API version 54.0 and later.

[AnalyticsWorkspaceAsset](#)

Represents a Tableau Next asset in a workspace. This object is available in API version 54.0 and later.

[Announcement](#)

Represents a Chatter group announcement. This object is available in API version 30.0 and later.

[ApexCalloutEventLog](#)

Apex Callout event logs contain details about callouts (external requests) during Apex code execution. This object is available in API version 55.0 and later.

[ApexClass](#)

Represents an Apex class.

[ApexComponent](#)

Represents a definition for a custom component that can be used in a Visualforce page alongside standard components such as `<apex:relatedList>` and `<apex:dataTable>`.

[ApexEmailNotification](#)

Stores a Salesforce user ID or external email address to be notified when unhandled Apex exceptions occur. This object is available in API version 35.0 and later.

[ApexExecutionEventLog](#)

Apex Execution event logs contain details about Apex classes that are used. This object is available in API version 55.0 and later.

[ApexExtlCalloutEventLog](#)

Apex Extl Callout EventLog represent external data callouts via custom adapters for Salesforce Connect. This object is available in API version 61.0 and later.

[ApexInlineEventLog](#)

This object is reserved for future use. This object is available in API version 66.0 and later.

[ApexLog](#)

Represents a debug log containing information about a transaction, including information about Apex, Visualforce, and workflow and validation rules. This object is available in API version 19.0 and later.

Standard Objects

[ApexPage](#)

Represents a single Visualforce page.

[ApexPageInfo](#)

Represents metadata about a single Visualforce page. This object is available in API version 48.0 and later.

[ApexRestApiEventLog](#)

Apex REST API event logs capture information about every Apex REST API request. This object is available in API version 55.0 and later.

[ApexSoapApiEventLog](#)

Apex SOAP event logs contain details about custom SOAP web service calls. This object is available in API version 55.0 and later.

[ApexTestQueueItem](#)

Represents a single Apex class in the Apex job queue. This object is available in API version 23.0 and later.

[ApexTestResult](#)

Represents the result of an Apex test method execution. This object is available in API version 23.0 and later.

[ApexTestResultLimits](#)

Captures the Apex test limits used for a particular test method execution. An instance of this object is associated with each ApexTestResult record. This object is available in API version 37.0 and later.

[ApexTestRunResult](#)

Contains summary information about all the test methods that were run in a particular Apex job. This object is available in API version 37.0 and later.

[ApexTestSuite](#)

Represents a suite of Apex classes to include in a test run. A TestSuiteMembership object associates each class with the suite. This object is available in API version 36.0 and later.

[ApexTrigger](#)

Represents an Apex trigger.

[ApexTriggerEventLog](#)

Apex Trigger event logs contain details about triggers that fire in an organization. This object is available in API version 55.0 and later.

[ApexTypeImplementor](#)

Represents Apex classes that directly or indirectly implement an interface. Using a SOQL query, this object gets information about public or global classes and only global classes for installed managed packages. This object is available in API version 54.0 and later.

[ApexUnexpectedExcpEventLog](#)

Apex Unexpected Excp Event Log captures information about unexpected exceptions in Apex code execution. This object is available in API version 61.0 and later.

[ApiTotalUsageEventLog](#)

API Total Usage Event Log contains details about Platform SOAP API, Platform REST API, and Bulk API requests. This object is available in API version 61.0 and later.

[AppAnalyticsQueryRequest](#)

Represents a request for AppExchange App Analytics data.

[AppDefinition](#)

Represents the metadata of an app and its navigation items. Metadata is returned only for apps that the current user can access. This object is available in API version 43.0 and later.

Standard Objects

[AppExtension](#)

Represents a connection between the Field Service mobile app and another app, typically for passing record data to the Salesforce mobile app or other apps. This object is available in API version 41.0 and later.

[ApplicationFormTemplate](#)

Represents the fields to capture application metadata as a template which is used in application tracking and processing. This object is available in API version 59.0 and later.

[AppMenuItem](#)

Represents the organization's default settings for items in the app menu or App Launcher.

[AppointmentAssignmentPolicy](#)

Stores information about resource assignment rules. This object is available in API version 52.0 and later.

[AppointmentScheduleAggr](#)

Records the utilization of a service resource, by date, for the Load Balancing appointment assignment policy. This object is available in API version 52.0 and later.

[AppointmentScheduleLog](#)

Stores service appointments of each service Resource. This object is used to calculate the utilization of a service resource for the AppointmentScheduleAggr object. This object is available in API version 52.0 and later.

[AppointmentSchedulingPolicy](#)

Represents a set of rules for scheduling appointments using Salesforce Scheduler. This object is available in API version 45.0 and later.

[AppointmentTopicTimeSlot](#)

Represents a lookup to a work type or a work type group for a time slot. This object is available in API version 52.0 and later.

[Approval](#)

Represents an approval request for a Contract.

[ApprovalAlertContentDef](#)

Represents the mapping that links specific user-created email templates to different notification events such as initial assignment or reassignment within an Advanced Approvals flow. This object is available in API version 66.0 and later.

[ApprovalSubmission](#)

Represents the instance of an approval request that's submitted for a record of the related object. This object is available in API version 62.0 and later.

[ApprovalSubmissionDetail](#)

ApprovalSubmissionDetail contains additional information about operations happening during the approval lifecycle. It will not hold any information that's already captured in the existing ApprovalSubmission and ApprovalWorkItem entities. This object is available in API version 62.0 and later.

[ApprovalWorkItem](#)

Contains run-time information about each step in an approval workflow, such as assignees and their decisions regarding the object's approval. Has a master-detail relationship with ApprovalSubmission. This object is available in API version 61.0 and later.

[ApprovalWorkItemCondition](#)

Represents a condition for starting and concluding an approval step that's evaluated as part of the smart approval process. This object is available in API version 64.0 and later.

[ApprovalWorkItemCriteria](#)

Represents the logic by which a smart approval request is evaluated. This object is available in API version 64.0 and later.

Standard Objects

[AppTabMember](#)

Represents the list of tabs for each of the available apps. This object is available in API version 43.0 and later.

[ApptBundleAggrDurDnscale](#)

Sums the duration of the bundle members, reduced by a predefined percentage. This object is available in API version 54.0 and later.

[ApptBundleAggrPolicy](#)

Policy that defines how the property values of the bundle members are aggregated and assigned to the bundle. This object is available in API version 54.0 and later.

[ApptBundleConfig](#)

Represents the general parameters that define the behavior of the bundle. This object is available in API version 54.0 and later.

[ApptBundlePolicy](#)

Policy that defines how the bundling of service appointments should be handled. This object is available in API version 54.0 and later.

[ApptBundlePolicySvcTerr](#)

Represents a link between the BundlePolicy and the ServiceTerritory. This object is available in API version 54.0 and later.

[ApptBundlePropagatePolicy](#)

Policy that defines which property values are inherited from the bundle to the bundle members or are assigned as constant values in the bundle members. This object is available in API version 55.0 and later.

[ApptBundleRestrictPolicy](#)

Policy that defines the restrictions that are considered while forming a bundle. This object is available in API version 54.0 and later.

[ApptBundleSortPolicy](#)

Policy that defines the properties by which the bundle members are sorted within the bundle. Can also be used in the automatic mode for determining the order of the automatic selection of bundle members. This object is available in API version 54.0 and later.

[AppUsageAssignment](#)

Provides application context for a record. A record can have different allowed actions or different related objects when it's created for different applications. For example, a Revenue Lifecycle Management order has a related `RevenueLifecycleManagementAppUsageAssignment`, so Salesforce knows it can create assets for that order. Available in API version 50.0 and later.

[ArchiveActivity](#)

Represents metadata retrieved for a single Archive process initiated by an action. Retrieved metadata can include status tracking, start and end times, record counts, and monitoring and auditing outcomes. This object is available in API version 65.0 and later.

[ArchivePolicyDefinition](#)

Represents a data lifecycle policy that, in each row, defines the scope, frequency, and rules for automated archiving or purging of records from a root entity, such as Contact or Lead. This object is available in API version 65.0 and later.

[Article Type __DataCategorySelection __DataCategorySelection](#)

A data category selection represents a data category that classifies an article. This object is available in API version 19.0 and later.

[Asset](#)

Represents an item of commercial value, such as a product sold by your company or a competitor, that a customer has purchased.

[AssetAction](#)

Represents a change made to a lifecycle-managed asset. The fields can't be edited. This object is available in API version 50.0 and later.

Standard Objects

[AssetActionSource](#)

Represents an optional way to record what transactions caused changes to lifecycle-managed assets. Use it to trace financial and other information about asset actions. This object supports Salesforce order products and work order line items, and transaction IDs from other systems. The fields can't be edited. This object is available in API version 50.0 and later.

[AssetAttribute](#)

Stores asset attributes to track and analyze asset conditions to improve their uptime. This object is available in API version 57.0 and later.

[AssetContractRelationship](#)

Represents a relationship between an asset and a contract. This object is available in API version 60.0 and later.

[AssetDowntimePeriod](#)

Represents a period during which an asset is not able to perform as expected. Downtime periods include planned activities, such as maintenance, and unplanned events, such as mechanical breakdown. This object is available in API version 49.0 and later.

[AssetOwnerSharingRule](#)

Represents the rules for sharing an Asset with users other than the owner. This object is available in API version 33.0 and later.

[AssetRateAdjustment](#)

Stores the tier rate adjustments for the asset rate card entries. This object is available in API version 62.0 and later.

[AssetRateCardEntry](#)

Stores the negotiated rate card entries that are associated with an asset in Revenue Cloud. This object is available in API version 62.0 and later.

[AssetRelationship](#)

Represents a non-hierarchical relationship between assets due to an asset modification; for example, a replacement, upgrade, or other circumstance. In Revenue Lifecycle Management, this object represents an asset or assets grouped in a bundle or set. This object is available in API version 41.0 and later.

[AssetShare](#)

Represents a sharing entry on an Asset. This object is available in API version 33.0 and later.

[AssetStatePeriod](#)

Represents a time span when an asset has the same quantity, amount, and monthly recurring revenue (MRR). An asset has as many asset state periods as there are changes to it (asset actions) during its lifecycle. The dashboard and related pages show the current asset state period. The fields can't be edited. This object is available in API version 50.0 and later.

[AssetStatePeriodAttribute](#)

Represents a virtual object that holds the key-value pair of the asset attribute in a specified asset state period. This object is a child object of AssetStatePeriod. This object is available in API version 60.0 and later.

[AssetTag](#)

Associates a word or short phrase with an Asset.

[AssetTokenEvent](#)

The documentation has moved to [AssetTokenEvent](#) in the *Platform Events Developer Guide*.

[AssetWarranty](#)

Defines the warranty terms applicable to an asset along with any exclusions and extensions. This object is available in API version 50.0 and later.

[AssignedResource](#)

Represents a service resource who is assigned to a service appointment in Field Service and Lightning Scheduler. Assigned resources appear in the Assigned Resources related list on service appointments. This object is available in API version 38.0 and later.

Standard Objects

[AssignmentRule](#)

Represents an assignment rule associated with a Case or Lead.

[AssociatedLocation](#)

Represents a link between an account and a location in Field Service. You can associate multiple accounts with one location. For example, a shopping center location may have multiple customer accounts.

[AsyncApexJob](#)

Represents an individual Apex sharing recalculation job, a batch Apex job, a method with the `future` annotation, or a job that implements `Queueable` or `Schedulable`. Use this object to query Apex batch jobs in your organization.

[AsyncOperationLog](#)

Represents an async operations log containing progress and status information about external synchronizations to the Omnichannel Inventory service. This object is available in API version 51.0 and later.

[AsyncOperationTracker](#)

Represents the status of an asynchronous request initiated from the Quote, Order, and CreditMemo objects. This object is available in API version 61.0 and later.

[AsyncOpSyndicationFeedFile](#)

Represents the sync status of file-related information shared with external channels such as Facebook and Instagram. This object is available in API version 64.0 and later.

[AttachedContentDocument](#)

This read-only object contains all `ContentDocument` objects associated with an object.

[AttachedContentNote](#)

This read-only object contains all `ContentNote` objects associated with an object. This object is available in API version 35.0 and later.

[Attachment](#)

Represents a file that a User has uploaded and attached to a parent object.

[AttachmentEventLog](#)

Attachment event logs contain information about attachments. This object is available in API version 65.0 and later.

[AttribModel](#)

Represents an attribution model used with Personalization, Attribution, and Campaign Influence, including model weights and touch type. This object is available in API version 62.0 and later.

[AttribModelStage](#)

Represents a funnel stage that's used in a predefined or custom attribution configuration. Available in API version 62.0 and later.

[AttribModelStageMetric](#)

Represents the engagement signal metrics that you select when you configure a funnel stage for an attribution configuration. Available in API version 63.0 and later.

[AttributeDefinition](#)

Represents a product, asset, or object attribute, for example, a hardware specification or software detail. This object is available in API version 57.0 and later.

[AttributePicklist](#)

Represents a custom picklist for an asset attribute. This object is available in API version 57.0 and later.

[AttributePicklistValue](#)

Represents the values of an asset attribute picklist. This object is available in API version 57.0 and later.

Standard Objects

[AsyncReportRunEventLog](#)

Async Report Run Event Log is used for reporting scheduled requests. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots. This object is available in API version 61.0 and later.

[Audience](#)

Represents an audience that is defined by criteria and can be assigned and used for targeting in an Experience Cloud site. This object is available in API version 44.0 and later.

[AuraDefinition](#)

Represents an Aura component definition, such as component markup, a client-side controller, or an event. This object is available in API version 32.0 and later.

[AuraDefinitionBundle](#)

Represents a Lightning Aura component definition bundle, such as a component or application bundle. A bundle contains a Lightning Aura component definition and all its related resources. This object is available in API version 32.0 and later.

[AuraDefinitionBundleInfo](#)

For internal use only.

[AuraDefinitionInfo](#)

For internal use only.

[AuraRequestEventLog](#)

Aura Request Event Log contains details of requests to Apex methods from Aura and Lightning web components. This object is available in API version 61.0 and later.

[AuthConfig](#)

Represents authentication options for My Domain and Experience Cloud site login pages. This object is available in API version 32.0 and later.

[AuthConfigProviders](#)

Represents an authentication provider that's configured in an organization. AuthConfigProviders is a child of the AuthConfig object. This object is available in API version 32.0 and later.

[AuthorizationForm](#)

Represents the specific version and effective dates of a form that is associated with consent, such as a privacy policy or terms and conditions. This object is available in API version 46.0 and later.

[AuthorizationFormConsent](#)

Represents the date and way in which a user consented to an authorization form. This object is available in API version 46.0 and later.

[AuthorizationFormDataUse](#)

Represents the data use consented to in an authorization form. This object is available in API version 46.0 and later.

[AuthorizationFormText](#)

Represents an authorization form's text and language settings. This object is available in API version 46.0 and later.

[AuthProvider](#)

Represents an authentication provider (auth provider). An auth provider lets users log in to your Salesforce org from an external service provider, such as Facebook, Google, or GitHub. This object is available in API version 27.0 and later.

[AuthProvParamFwdAllowlist](#)

Represents an allowlisted URL parameter that can be forwarded from authentication provider client configuration URLs to the authorization URL. Use this type to add custom functionality to authentication providers. For example, allowlist a `ui_locales` parameter and use it to send a user's language preference from Salesforce to the third-party provider's login page. This object is available in API version 62.0 and later.

Standard Objects

[AuthSession](#)

The AuthSession object represents an individual user session in your organization. This object is available in versions 29.0 and later.

[AutomatedAction](#)

Represents the configuration of an automated action, such as a workflow rule. This object is available in API version 57.0 and later.

[AutomatedActionCondition](#)

Represents the logical operator details for evaluating conditions in an automated action. This object is available in API version 57.0 and later.

[AutomatedActionOverride](#)

Represents a modified attribute of a shared automated action. For example, the modified attribute can contain customizations for your business. This object is available in API version 58.0 and later.

[AutomatedActionParameter](#)

Represents the values or field references evaluated by the automated action. This object is available in API version 57.0 and later.

[AutomatedActionReminder](#)

Represents a reminder to the end user to take an action in the future. This object is available in API version 58.0 and later.

[BackgroundOperation](#)

Represents a background operation in an asynchronous job queue. This object is available in API version 35.0 and later.

[BackgroundOperationResult](#)

Stores error messages generated when or importing data into big objects using Bulk API. This is a big object, available in API version 37.0 and later.

[BatchApexErrorEvent](#)

The documentation has moved to [BatchApexErrorEvent](#) in the *Platform Events Developer Guide*.

[BillingBatchScheduler](#)

Represents a scheduled processing job that triggers recurring invoice batch runs and payment batch runs in Subscription Management. This object is available in API version 55.0 and later.

[BillingPeriodItem](#)

Represents one payment period for a subscription. The billing period item is used to pass billing information to an invoice line item in Subscription Management. This object is available in API version 55.0 and later.

[BillingPolicy](#)

Represents a group of billing treatments, which define the rules for how to invoice a customer for an order item. This object is available in API version 55.0 and later.

[BillingSchedule](#)

Stores the order item information used in the invoicing process. This object is available in API version 55.0 and later.

[BillingScheduleGroup](#)

Represents a consolidated view of all billing schedules related to the order items generated from one asset, including new orders and amendment orders. This object is available in API version 55.0 and later.

[BillingTreatment](#)

Defines how Subscription Management bills an order item. The Exclude From Billing field controls whether the order item is invoiced. Child billing treatment items control how much of the order item's balance is invoiced for each invoice across the subscription's lifecycle. Billing treatments are assigned to order items based on the parent billing policy's Billing Treatment Selection field. This object is available in API version 55.0 and later.

Standard Objects

[BillingTreatmentItem](#)

A billing treatment item defines how the order item's total amount is distributed into billing schedules over the course of the order item's lifecycle. In the Subscription Management pilot, billing treatments must have only one billing treatment item, so that the billing treatment item covers 100% of the order item's total value. This object is available in API version 55.0 and later.

[BlockedRedirectEventLog](#)

Blocked Redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. This object is available in API version 65.0 and later.

[Bookmark](#)

Represents a link between opportunities that share common information.

[BotDefinition](#)

Represents a top level object for Einstein Bots or Agentforce Agents. This object is available in API version 60.0 and later.

[BotVersion](#)

Represents a version of a bot or agent defined by a BotDefinition record. This object is available in API version 63.0 and later.

[BrandingSet](#)

Represents the definition of a set of branding properties for an Experience Builder site, as defined in the Theme panel in Experience Builder. This object is available in API version 40.0 and later.

[BrandTemplate](#)

Letterhead for HTML EmailTemplate.

[Brief](#)

Represents a marketing brief. A brief contains information that's used for positioning and grounding a marketing campaign. Agentforce can help you create a campaign that best fits the goals and requirements in your brief. This object is available in API version 61.0 and later.

[BriefcaseAssignment](#)

Represents the assignment of a briefcase definition to selected users and user groups. This object is available in API version 50.0 and later.

[BriefcaseDefinition](#)

Represents a briefcase definition. A briefcase makes selected records available for users to view when they're offline in the Salesforce Field Service mobile app for iOS and Android. This object is available in API version 50.0 and later.

[BriefcaseRule](#)

Represents a rule that specifies records for a briefcase definition. This object is available in API version 50.0 and later.

[BriefcaseRuleFilter](#)

Represents a filter criteria for a briefcase rule. This object is available in API version 50.0 and later.

[BroadcastCommAudience](#)

Represents the audience that the broadcast communication is sent to. This object is available in API version 56.0 and later.

[BroadcastCommunication](#)

Represents a broadcast communication related to an incident. This object is available in API version 56.0 and later.

[BroadcastTopic](#)

Represents a definition of a broadcast topic. A broadcast topic is associated with a list of Experience Cloud network sites for Service Cloud and collaboration rooms for Sales Cloud. The topic is created for a specific user role. Collaboration rooms are linked to Slack channels. This object is available in API version 55.0 and later.

Standard Objects

[BroadcastTopicGroup](#)

Represents a junction object that relates a group to an alert type broadcast topic. The broadcast sends the alert to this group. This object is available in API version 57.0 and later.

[BroadcastTopicNetwork](#)

Represents a link between a broadcast topic and the Experience Cloud network site for Service Cloud. This object is available in API version 56.0 and later.

[BrowserPolicyViolation](#)

Represents a violation that occurred within the last seven days related to the Trusted URLs and Trusted URLs for External Redirects allowlists. These violations include blocked resource requests based on your content security policy (CSP) and blocked redirections. This object is available in API version 61.0 and later.

[BulkApi2EventLog](#)

Bulk API 2 event logs contain details about Bulk API 2.0 requests. This object is available in API version 61.0 and later.

[BulkApiEventLog](#)

Bulk API event logs contain details about Bulk API requests. This object is available in API version 61.0 and later.

[BulkApiRequestEventLog](#)

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes. This object is available in API version 65.0 and later.

[BusinessBrand](#)

Represents a unique brand for a business that belongs to a parent entity. This object is available in API version 53.0 and later.

[BusinessAlert](#)

Represents information about insight notifications that Einstein Relationship Insights explores, such as news mentions, job updates, and relationships. This object is available in API version 57.0 and later.

[BusinessAlertStatus](#)

Represents information about the read status of an insight alert. This object is available in API version 57.0 and later.

[BusinessHours](#)

Specifies the business hours of your support organization. Escalation rules are run only during these hours.

[Business Process](#)

Represents a business process. Business Processes track separate sales, lead, support, and solution lifecycles by displaying different picklist values according to each user's profile.

[BusinessProcessDefinition](#)

Setup object that stores information about stages in a customer lifecycle map. The stages are associated with surveys and questions created using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

[BusinessProcessFeedback](#)

Setup object that stores information about the survey and the question associated with each stage in a customer lifecycle map. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

[BusinessProcessGroup](#)

Setup object that stores information about customer lifecycle maps. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

[BuyerAccount](#)

Represents an account that is enabled as a buyer for Lightning B2B Commerce. This object is available in API version 48.0 and later.

Standard Objects

[BuyerCriteria](#)

Represents the buyer context qualifier of locale for any buyer groups of type Market. This object is available in API version 58.0 and later.

[BuyerGroup](#)

Associates group qualifiers (entitlements, price books, promotions, and shipping methods) with buyer members based on buyer account ID or on the localized language and currency of the market browsed in a webstore. This object is available in API version 57.0; amended to support Market in version 58.0 and later.

[BuyerGroupBuyerCriteria](#)

Associates a buyer group that is enabled for webstores supporting multiple languages and currencies with BuyerCriteria that define those languages and currencies. This object is available in API version 58.0 and later.

[BuyerGroupMember](#)

Represents a member of a buyer group. This object is available in API version 55.0 and later.

[BuyerGroupPricebook](#)

Represents a buyer group price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

[BuyerGroupRelatedObject](#)

Used to associate currencies and supported ship-to countries with a buyer group and its price books, promotions, and entitlements. Supports buyer experience when buyer group members shop in stores enabled for multiple locales. This object is available in API version 58.0 and later.

[CalcProcStepRelationship](#)

Defines a parent-child relationship between two Expression Set Steps in an Expression Set Version. The label for this object is Expression Set Step Relationship. This object is available in API version 53.0 and later.

[CalculatedInsightRangeBound](#)

Stores the information required to calculate a range-bound data insight. This object is available in API version 59.0 and later.

[CalculationMatrix](#)

Matches input values to a table row and returns the row's output values. The label for this object is Decision Matrix. This object is available in API version 53.0 and later.

[CalculationMatrixColumn](#)

Defines a column in a Decision Matrix. The label for this object is Decision Matrix Column. This object is available in API version 53.0 and later.

[CalculationMatrixRow](#)

Defines a row in a Decision Matrix. The label for this object is Decision Matrix Row. This object is available in API version 53.0 and later.

[CalculationMatrixVersion](#)

Defines a version of a Decision Matrix. The label for this object is Decision Matrix Version. This object is available in API version 53.0 and later.

[CalculationProcedure](#)

Performs a series of calculations using matrix lookups and user-defined variables and constants. The label for this object is Expression Set. This object is available in API version 53.0 and later.

[CalculationProcedureStep](#)

Defines a step in an Expression Set. The label for this object is Expression Set Step. This object is available in API version 53.0 and later.

Standard Objects

[CalculationProcedureVariable](#)

Defines a variable in an Expression Set. The label for this object is Expression Set Variable. This object is available in API version 53.0 and later.

[CalculationProcedureVersion](#)

Defines a version of an Expression Set. The label for this object is Expression Set Version. This object is available in API version 53.0 and later.

[Calendar](#)

Represents a calendar. This can be a default user calendar, public calendar, resource calendar, or holiday calendar. This object is available in API version 45.0 and later.

[CalendarView](#)

These calendars can be created and assigned to users other than the creator. Available calendars include object, shared, public, resource, and user list calendars. Object calendars represent a calendar based on a Salesforce object, either standard or custom. This object is available in API version 51.0 and later.

[CallCenter](#)

Represents a call center, which is a logical representation of a single computer-telephony integration (CTI) system instance in an organization.

[CallCenterRoutingMap](#)

Stores a mapping between a user or queue in a Salesforce org to a user or queue in an external system's call center. This object is available in API version 53.0 and later.

[CallCoachingMediaProvider](#)

Represents the media provider for call recordings. This object is available in API version 49.0 and later.

[CallCtrAgentFavTrfrDest](#)

Represents a transfer destination that has been marked (starred) as a favorite in the Omni-Channel softphone by a contact center agent for voice call transfers. This object is available in API version 55.0 and later.

[CallCtrAgentFavTrfrDestShare](#)

Represents a sharing entry on a favorite transfer destination in the Omni-Channel softphone for voice call transfers. This object is available in API version 55.0 and later.

[CallDisposition](#)

Represents a call result value that sales reps select when logging a call. This object is available in API version 47.0 and later.

[CallDispositionCategory](#)

Represents the call outcome of a phone call that is used in reports and branching criteria for cadences. This object is available in API version 47.0 and later.

[CallTemplate](#)

Represents a call script for users to read when making calls.

[Campaign](#)

Represents and tracks a marketing campaign, such as a direct mail promotion, webinar, or trade show.

[CampaignInfluence](#)

Represents the association between a campaign and an opportunity in Customizable Campaign Influence. This object is available in API version 37.0 and later.

[CampaignInfluenceModel](#)

This read-only object represents a campaign influence model in Customizable Campaign Influence. Use campaign influence models to group `CampaignInfluence` records created by a specific set of triggers and workflows that you define. The Primary Campaign Source influence model is the default model. This object is available in API version 37.0 and later.

Standard Objects

[CampaignMember](#)

The CampaignMember object represents the relationship between a campaign and either a lead or a contact. If the Accounts as Campaign Members setting is enabled in an org, CampaignMember can also represent the relationship between a campaign and an account.

[CampaignMemberStatus](#)

One or more member status values defined for a campaign.

[CampaignOwnerSharingRule](#)

Represents the rules for sharing a campaign with User records other than the owner or anyone above the owner in the role hierarchy.

[CampaignShare](#)

Represents a sharing entry on a Campaign.

[CampaignTag](#)

Associates a word or short phrase with a Campaign.

[CardPaymentMethod](#)

Represents a credit card or debit card payment method, which implements the PaymentMethod object. This object is available in API version 48.0 and later.

[CartCheckoutSession](#)

Represents a checkout session used in Lightning B2B Commerce checkout. This object is available in API version 48.0 and later.

[CartDeliveryGroup](#)

Represents shipping information for the delivery of items in an order against a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

[CartDeliveryGroupMethod](#)

Represents the selected delivery method for a cart delivery group used in Lightning B2B Commerce checkout. This object is available in API version 49.0 and later.

[CartDeliveryGroupMethodAdj](#)

Represents the shipping promotion discount for a shipping method. This object is available in API version 60.0 and later.

[CartItem](#)

Represents an item in a `WebCart` that's active in a store built with B2B. Cart item can be of type `Product` or `Charge`. This object is available in API version 49.0 and later.

[CartItemAttribute](#)

Represents the attributes associated with a cart item, stored as key-value pairs. These attributes are derived from the product and carried forward to the order during checkout. This object is available in API version 66.0 and later.

[CartItemPriceAdjustment](#)

Price adjustment for a cart item. This object is available in API version 52.0 and later.

[CartTax](#)

Represents taxes for a line item in a `WebCart` that's active in a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

[CartValidationOutput](#)

Associate errors to cart entities, such as cart line items, delivery groups, and the like, in a store built with B2B Commerce or D2C Commerce. An example error is "Out of stock." Available in API version 49.0 and later.

[Case](#)

Represents a case, which is a customer issue or problem.

Standard Objects

[CaseArticle](#)

Represents the association between a Case and a KnowledgeArticle. This object is available in API version 20.0 and later.

[CaseComment](#)

Represents a comment that provides additional information about the associated Case.

[CaseContactRole](#)

Represents the role that a given Contact plays on a Case.

[CaseHistory](#)

Represents historical information about changes that have been made to the associated Case.

[CaseHistory2](#)

Represents historical information about owner and status changes that have been made to the associated Case. This object is available in API version 59.0 and later.

[CaseMilestone](#)

Represents a milestone (required step in a customer support process) on a Case. This object is available in API version 18.0 and later.

[CaseOwnerSharingRule](#)

Represents the rules for sharing a case with users other than the owner.

[CaseParticipant](#)

Represents a junction between a case, and an account or a contact. This object stores the details of the participant associated with a case. This participant could be the applicant, co-applicant, a household, or even a business account. This object is available in API version 54.0 and later.

[CaseRelatedIssue](#)

This object acts as a junction between a customer issue (Case) and the Incident or Problem that represents an associated service failure. This object is available in API version 53.0 and later.

[CaseShare](#)

Represents a sharing entry on a Case.

[CaseSolution](#)

Represents the association between a Case and a Solution.

[CaseStatus](#)

Represents the status of a Case, such as New, On Hold, or In Process.

[CaseSubjectParticle](#)

Represents the Social Business Rules custom format for the **Case Subject** field on cases created from inbound social posts. This object is available in API version 41.0 and later.

[CaseTag](#)

Associates a word or short phrase with a Case

[CaseTeamMember](#)

Represents a case team member, who works with a team of other users to help resolve a case.

[CaseTeamRole](#)

Represents a case team role. Every case team member has a role on a case, such as "Customer Contact" or "Case Manager."

[CaseTeamTemplate](#)

Represents a predefined case team, which is a group of users that helps resolve a case.

[CaseTeamTemplateMember](#)

Represents a member on a predefined case team, which is a group of users that helps resolve cases.

Standard Objects

[CaseTeamTemplateRecord](#)

The CaseTeamTemplateRecord object is a linking object between the Case and CaseTeamTemplate objects. To assign a predefined case team to a case (customer inquiry), create a CaseTeamTemplateRecord record and point the `ParentId` to the case and the `TeamTemplateId` to the predefined case team.

[CategoryData](#)

Represents a logical grouping of Solution records.

[CategoryNode](#)

Represents a tree of Solution categories.

[CategoryNodeLocalization](#)

When the Translation Workbench is enabled for your organization, the CategoryNodeLocalization object provides the translation of the label of a solution category.

[ChangeRequest](#)

Represents a decision to implement a formal request for a change (RFC). This object is available in API version 53.0 and later.

[ChangeRequestRelatedIssue](#)

Represents a junction object that relates a ChangeRequest to an Incident or Problem due to a service failure. This object is available in API version 53.0 and later.

[ChangeRequestRelatedItem](#)

Represents a junction object that relates a ChangeRequest to an Asset. This object is available in API version 53.0 and later.

[ChangeSetOperationEventLog](#)

Change Set Operation events contain information from change set migrations. This object is available in API version 65.0 and later.

[ChannelObjectLinkingRule](#)

Represents a rule for linking a channel interaction with an object (such as Lead or Contact). This object is available in API version 47.0 and later.

[ChannelProgram](#)

Represents a channel program that vendors use to market and sell their products through channel partners. This object is available in API version 41.0 and later.

[ChannelProgramLevel](#)

Represents a level, based on member experience, in a channel program. This object is available in API version 41.0 and later.

[ChannelProgramMember](#)

Represents a partner who is a member of a channel program. This object is available in API version 41.0 and later.

[ChatterActivity](#)

ChatterActivity represents the number of posts and comments made by a user and the number of comments and likes on posts and comments received by the same user. This object is available in API version 23.0 and later.

[ChatterAnswersActivity](#)

Represents the reputation of a User in Chatter Answers zones. This object is available in API version 25.0 and later.

[ChatterAnswersReputationLevel](#)

Represents a reputation level within a Chatter Answers zone. This object is available in API version 26.0 and later.

[ChatterConversation](#)

Represents a private conversation in Chatter, consisting of messages that conversation members have sent or received. This object is available in API version 23.0 and later.

Standard Objects

[ChatterConversationMember](#)

Represents a member of a private conversation in Chatter. A member has either sent messages to or received messages from other conversation participants. This object is available in API version 23.0 and later.

[ChatterExtension](#)

Represents a Rich Publisher App that's integrated with the Chatter publisher. This object is available in API version 41.0 and later.

[ChatterExtensionConfig](#)

Configuration for the Chatter extension for Experience Cloud sites. This object is available in API version 41.0 and later.

[ChatterMessage](#)

Represents a message sent as part of a private conversation in Chatter. This object is available in API version 23.0 and later.

[ClientBrowser](#)

Represents a cookie added to the browser upon login, and also includes information about the browser application where the cookie was inserted. This object is available in version 28.0 and later.

[CollaborationGroup](#)

Represents a Chatter group. This object is available in API version 19.0 and later.

[CollaborationGroupMember](#)

Represents a member of a Chatter group. This object is available in API version 19.0 and later.

[CollaborationGroupMemberRequest](#)

Represents a request to join a private Chatter group. This object is available in API version 21.0 and later.

[CollaborationGroupRecord](#)

Represents the records associated with Chatter groups.

[CollaborationInvitation](#)

Represents an invitation to join Chatter, either directly or through a group. This object is available in API version 21.0 and later.

[CollaborationRoom](#)

Represents a collaboration room, which links Salesforce to a Slack channel used by applications with specific use cases, such as swarming or reporting. This object is available in API version 55.0 and later.

[CollabDocumentMetric](#)

Represents the engagement metrics for a Quip thread (document or spreadsheet) that's linked to a Salesforce record. This object is available in API version 50.0 and later.

[CollabDocumentMetricRecord](#)

Represents an association between a CollabDocumentMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip thread for which metrics were gathered using CollabDocumentMetric.

CollabDocumentMetricRecord is available in API version 50.0 and later.

[CollabTemplateMetric](#)

Represents the engagement metrics for a Quip template. This object is available in API version 50.0 and later.

[CollabTemplateMetricRecord](#)

Represents an association between a CollabTemplateMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip template for which metrics were gathered using CollabTemplateMetric.

CollabTemplateMetricRecord is available in API version 50.0 and later.

[CollabUserEngagementMetric](#)

Represents the user engagement metrics for a Quip thread in a Quip template or document. This object is available in API version 50.0 and later.

Standard Objects

[CollabUserEngmtRecordLink](#)

Represents an association between a CollabUserEngagementMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is associated with the user engagement metric. This object is available in API version 50.0 and later.

[ColorDefinition](#)

Represents the color-related metadata for a custom tab. This object is available in API version 43.0 and later.

[ContCalloutSummaryEventLog](#)

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This object is available in API version 65.0 and later.

[CombinedAttachment](#)

This read-only object contains all notes, attachments, Google Docs, documents uploaded to libraries in Salesforce CRM content, and files added to Chatter that are associated with a record.

[CommerceEntitlementBuyerGroup](#)

Represents the entitlement policy for a buyer group. This object is available in API version 49.0 and later.

[CommerceEntitlementPolicy](#)

Represents an entitlement policy, which determines what products and prices a user can see. This object is available in API version 49.0 and later.

[CommerceEntitlementPolicyShare](#)

Represents the entitlement rule for sharing products and prices with users other than the owner. This object is available in API version 49.0 and later.

[CommerceEntitlementProduct](#)

Represents the entitlement policy for a product. This object is available in API version 49.0 and later.

[CommissionSchedule](#)

Represents a commission calculation and rate definition. Calculates commission values for a commissionable event.

[CommissionScheduleAssignment](#)

Represents the commission calculation applicable to a specific product or producer for one or multiple commissionable events.

[CommSubscription](#)

Represents the subscription options for a specific communication. This object is available in API version 48.0 and later.

[CommSubscriptionChannelType](#)

Represents the engagement channel through which you can reach a customer for a communication subscription. This object is available in API version 48.0 and later.

[CommSubscriptionConsent](#)

Represents a customer's consent to a communication subscription. This object is available in API version 48.0 and later.

[CommSubscriptionTiming](#)

Represents a customer's timing preferences for receiving a communication subscription. This object is available in API version 48.0 and later.

[Community \(Zone\)](#)

Represents a zone that contains Idea or Question objects.

[ConcurApexLimitEventLog](#)

Concurrent Apex Limit event logs contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, additional long-running requests are denied. This object is available in API version 61.0 and later.

[ConnectedApplication](#)

Represents a connected app and its details; all fields are read-only.

[ConferenceNumber](#)

Holds the telephone number for an external event shown in the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

[Consumption Rate](#)

Consumption rates describe the billing rate for a range of usage within a consumption schedule. All consumption schedules require at least one consumption rate in order to rate usage on a usage product. This object is available in API version 45.0 and later.

[Consumption Schedule](#)

A consumption schedule organizes a set of consumption rates by which usage-based products are quoted and billed. This object is available in API version 45.0 and later.

[Contact](#)

Represents a contact, which is a person associated with an account.

[ContactCenterChannel](#)

Represents a junction object that relates a Bring Your Own Channel for Contact Center as a Service (CCaaS) messaging channel to a CallCenter object for Bring Your Own Channel for CCaaS. This object also represents the routing details for a voicemail configuration and routing information for callback requests. This object is available in API version 56.0 and later.

[ContactCleanInfo](#)

Stores the metadata Data.com Clean uses to determine a contact record's clean status. Helps you automate the cleaning or related processing of contact records. ContactCleanInfo includes a number of bit vector fields.

[ContactDailyMetric](#)

Represents the daily engagement metrics for a contact. This object is available in API version 52.0 and later.

[ContactMonthlyMetric](#)

Represents the monthly engagement metrics for a contact. This object is available in API version 52.0 and later.

[ContactPointAddress](#)

Represents a contact's billing or shipping address, which is associated with an individual or person account. This object is available in API version 49.0 and later.

[ContactPointConsent](#)

Represents a customer's consent to be contacted via a specific contact point, such as an email address or phone number. This object is available in API version 48.0 and later.

[ContactPointEmail](#)

Represents a contact's email, which is associated with an individual or person account. This object is available in API version 48.0 and later.

[ContactPointPhone](#)

Represents a contact's phone number, which is associated with an individual or person account. This object is available in API version 48.0 and later.

Standard Objects

[ContactPointTypeConsent](#)

Represents consent for a contact point type, such as email or phone. This object is available in API version 45.0 and later.

[ContactOwnerSharingRule](#)

Represents the rules for sharing a contact with a User other than the owner.

[ContactRequest](#)

Represents a customer's request for support to get back to them about an issue. This object is available in API version 45.0 and later.

[ContactRequestShare](#)

Represents a list of access levels to a ContactRequest with an explanation of the access level. This object is available in API version 45.0 and later.

[ContactShare](#)

Represents a list of access levels to a Contact along with an explanation of the access level. For example, if you have access to a record because you own it, the `ContactAccessLevel` is `All` and `RowCause` is `Owner`.

[ContactSuggestionInsight](#)

Represents a suggestion for a new contact record. Available in API versions 45.0 and later.

[ContactTag](#)

Associates a word or short phrase with a Contact.

[ContentAsset](#)

Represents a Salesforce file that has been converted to an asset file in a custom app in Lightning Experience. Use asset files for org setup and configuration. Asset files can be packaged and referenced by other components. This object is available in API version 38.0 and later.

[ContentBody](#)

Represents the body of a file in Salesforce CRM Content or Salesforce Files. This object is available in API version 40.0 and later.

[ContentDistribution](#)

Represents information about sharing a document externally. This object is available in API version 32.0 and later.

[ContentDistributionEventLog](#)

Content Distribution events contain information about content distributions and deliveries to users. This object is available in API version 65.0 and later.

[ContentDistributionView](#)

Represents information about views of a shared document. This read-only object is available in API version 32.0 and later.

[ContentDocument](#)

Represents a document that was uploaded to a library in Salesforce Files or Salesforce CRM content. This object is available in versions 17.0 and later for Salesforce CRM. This object is available in API version 21.0 and later for Salesforce Files.

[ContentDocumentHistory](#)

Represents the history of a document. This object is available in versions 17.0 and later.

[ContentDocumentLink](#)

Represents the link between a Salesforce CRM Content document, Salesforce file, or ContentNote and where it's shared. A file can be shared with other users, groups, records, and Salesforce CRM Content libraries. This object is available in versions 21.0 and later for Salesforce CRM Content documents and Salesforce Files.

[ContentDocumentListViewMapping](#)

Represents an association between a ListView and a Quip ContentDocument. Applies to Quip file types only. Maintains the mapping between a list view and Quip document when the list view is exported to a newly created Quip document. This object is available in API version 44.0 and later.

Standard Objects

[ContentDocumentSubscription](#)

Represents a subscription for a user following or commenting on a file in a library. This object is available in API version 42.0 and later.

[ContentDocLinkEventLog](#)

Content Document Link events contain sharing information for content documents. This object is available in API version 65.0 and later.

[ContentFolder](#)

Represents a folder in a content library for adding files. This object is available in API version 34.0 and later.

[ContentFolderItem](#)

Represents a file (ContentDocument) or folder (ContentFolder) that resides in a ContentFolder in a ContentWorkspace. This object is available in API version 35.0 and later.

[ContentFolderLink](#)

Defines the association between a library and its root folder. This object is available in API version 34.0 and later.

[ContentFolderMember](#)

Defines the association between a file and a folder. This object is available in API version 34.0 and later.

[ContentHubItem](#)

Represents a file or folder in a Files Connect external data source, such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

[ContentHubRepository](#)

Represents a Files Connect external data source such as Microsoft SharePoint or OneDrive for Business. This object is available in API version 33.0 and later.

[ContentNote](#)

Represents a note created with the enhanced note-taking tool, released in Winter '16. This object is available in API version 32.0 and later.

[ContentNotification](#)

Represents a notification for a file. This object is available in API version 42.0 and later.

[ContentTagSubscription](#)

Represents a subscription for a user following a tag on a file. This object is available in API version 42.0 and later.

[ContentTaxonomy](#)

Represents a content taxonomy, which is used to classify and organize Salesforce CMS content. To create a hierarchy of terms in a content taxonomy, use this object in addition to the ContentTaxonomyTerm, ContentTaxonomyRelatedTerm, and ContentTaxonomyTermRelatedTerm objects. This object is available in API version 63.0 and later.

[ContentTaxonomyRelatedTerm](#)

Represents the relationship between a term and the content taxonomy to which the term belongs. This object is available in API version 63.0 and later.

[ContentTaxonomyTerm](#)

Represents a term in a content taxonomy. Terms describe what content is or how it's used, and they're organized in parent-child relationships in the taxonomy hierarchy. This object is available in API version 63.0 and later.

[ContentTaxonomyTermRelatedTerm](#)

Represents the relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

[ContentTaxonomyTermRelationshipType](#)

Represents the type of relationship between two terms in a content taxonomy. This object is available in API version 63.0 and later.

Standard Objects

[ContentTransferEventLog](#)

ContentTransferEventLog stores information about content transfer events, such as downloads, uploads, and previews. This information includes events performed on files and attachments to records. This object is available in API version 62.0 and later.

[ContentUserSubscription](#)

Represents a subscription for a user following another user. This object is available in API version 42.0 and later.

[ContentVersion](#)

Represents a specific version of a document in Salesforce CRM content or Salesforce Files. This object is available in versions 17.0 and later for Salesforce CRM content documents. This object is available in versions 20.0 and later for Salesforce Files.

[ContentVersionComment](#)

Represents a comment on a version of a file. This object is available in API version 42.0 and later.

[ContentVersionHistory](#)

Represents the history of a specific version of a document. This object is available in version 17.0 and later.

[ContentVersionRating](#)

Represents a rating on a version of a file. This object is available in API version 42.0 and later.

[ContentWorkspace](#)

Represents a content library. This object is available in versions 17.0 and later.

[ContentWorkspaceDoc](#)

Represents a link between a document and a public library in Salesforce CRM Content. This object is available in versions 17.0 and later.

[ContentWorkspaceMember](#)

Represents a member of a content library. This object is available in API version 40.0 and later.

[ContentWorkspacePermission](#)

Represents a library permission. This object is available in API version 40.0 and later.

[ContentWorkspaceSubscription](#)

Represents a subscription for a user following a library. This object is available in API version 42.0 and later.

[ContextParamMap](#)

Represents optional context data for a Conversation or a ConversationParticipant. This object is available in API version 57.0 and later.

[Contract](#)

Represents a contract (a business agreement) associated with an Account.

[ContractContactRole](#)

Represents the role that a Contact plays on a Contract.

[ContractLineItem](#)

Represents a product covered by a service contract (customer support agreement). This object is available in API version 18.0 and later.

[ContractLineOutcome](#)

Represents information on a contract line outcome's captured data and other related parameters that are used when capturing data. This object is available in API version 58.0 and later.

[ContractLineOutcomeData](#)

Represents the contract line outcome's captured data. It stores the data that was captured between the contract line outcome's start date and end date. This object is available in API version 58.0 and later.

Standard Objects

[ContractStatus](#)

Represents the status of a Contract, such as Draft, InApproval, Activated, Terminated, or Expired.

[ContractTag](#)

Associates a word or short phrase with a Contract.

[ConvAnalysisSummary](#)

Represents the information stored for each run or refresh of Sales Signals. This object is available in API version 63.0 and later.

[ConvAnalysisTopic](#)

Represents a topic generated from the Sales Signals refresh or run. For example, a product experiencing issues due to high pricing could be a topic identified through the analysis of multiple calls. This object is available in API version 63.0 and later.

[ConvAnalysisTopicEntry](#)

Represents a single entry under the ConvAnalysisTopic object. An entry represents a segment of a video or voice call that is associated with a conversation analysis topic. This object is available in API version 63.0 and later.

[Conversation](#)

Represents a conversation between an end user and an agent. Available in API version 49.0 and later.

[ConversationApiLog](#)

Logs of an API operation on a specific conversation object done using the Conversation Service API. This object is available in API version 63.0 and later.

[ConversationContextEntry](#)

Represents the context of a message or an event in the chat history between an agent and a messaging user. This object is available in API version 47.0 and later.

[ConversationChannelDefinition](#)

Represents a configurable definition of a conversation channel that's implemented for Interaction Service for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS messaging channels. This object is available in API version 60.0 and later.

[ConversationEntry](#)

Represents a message or event in a voice call or messaging session. The schema on this page only applies to conversation entries for legacy chat. Refer to the ConversationEntry (Off-Core) schema in the [Messaging Object Model](#) guide to see the ConversationEntry schema for Enhanced Channels. This object is available in API version 43.0 and later.

[ConversationParticipant](#)

Represents an active participant in a conversation. A new ConversationParticipant record is created each time a participant joins a conversation. This object is available in API version 49.0 and later.

[ConvIntelligenceSignalRule](#)

Represents a conversation intelligence signal rule. The rule triggers actions based on real-time intelligence signals from your telephony system or keywords mentioned by support reps or customers. The rule contains a set of conditions (subrules) and the filter logic used to evaluate those conditions to determine whether to trigger actions. This object is available in API version 62.0 and later.

[ConvIntelligenceSignalSubRule](#)

Represents a condition (subrule) within a conversation intelligence signal rule. This object is available in API version 62.0 and later.

[ConvMessageSendRequest](#)

Represents a request to send a template-based messaging component to a series of messaging users in an enhanced messaging channel or Messaging for In-App. This object is available in API version 60.0 and later.

Standard Objects

[ConversationVendorInfo](#)

This setup object connects the partner vendor system to the Service Cloud feature. For example, for Service Cloud Voice, this object contains information about the partner telephony or Contact Center as a Service (CCaaS) partner system. For Bring Your Own Channel for Messaging this object contains information about the partner messaging system, and for Bring Your Own Channel for CCaaS, this object contains information about the CCaaS partner system. This object is available in API version 52.0 and later.

[CorsWhitelistEntry](#)

Represents an entry in the cross-origin resource sharing (CORS) allowlist. Origins included in the allowlist can request REST resources from that Salesforce org.

[Coupon](#)

A coupon associated with a promotion. This object is available in API version 54.0 and later.

[CouponCodeRedemption](#)

Tracks each coupon code redemption. This object is available in API version 58.0 and later.

[CreditMemo](#)

Represents a document that is used to reduce the amount that a buyer owes a seller under the terms of an earlier invoice. This object is available in API version 48.0 and later.

[CreditMemoAddressGroup](#)

Stores the buyer's address information, which is used to determine the amount of tax to credit to a buyer when a credit memo is issued. This object is available in API version 55.0 and later.

[CreditMemoInvApplication](#)

Represents an amount applied from a credit memo to an invoice. This object is available in API version 48.0 and later.

[CreditMemoLine](#)

Represents product, service, adjustment, or tax line items that were included in a credit memo. This object is available in API version 48.0 and later.

[Crisis](#)

Represents a major crisis event that affects an Employee in an InternalOrganizationUnit. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

[CronJobDetail](#)

Contains details about the associated scheduled job, such as the job's name and type. This object is available in API version 29.0 and later.

[CronTrigger](#)

Contains schedule information for a scheduled job. CronTrigger is similar to a cron job on UNIX systems. This object is available in API version 17.0 and later.

[CryptoProdCatgWalletGroup](#)

Specifies if CryptoWalletGroup is in the allowlist or airdrop for the ProductCategory. A custom object between ProductCategory and CryptoWalletGroup adding the CryptoWalletGroup to allowlist or airdrop. This object is available in API version 58.0 and later.

[CspTrustedSite](#)

Represents a trusted URL. For each CspTrustedSite, you can specify Content Security Policy (CSP) directives and permissions policy directives. Each CSP directive allows Lightning components, third-party APIs, and WebSocket connections to access a resource type from the trusted URL. If the Permissions-Policy HTTP header is enabled, each permissions policy directive grants the trusted URL access to a browser feature. In API version 58.0 and earlier, CspTrustedSite included only CSP directives and was referred to as CSP Trusted Sites in Salesforce Setup. Available in API version 39.0 and later.

Standard Objects

[CspViolationEventLog](#)

CSP violation events capture details about blocked resource requests from Lightning Experience pages based on your content security policy (CSP). This object is available in API version 63.0 and later.

[CurrencyType](#)

Represents the currencies used by an organization for which the multicurrency feature is enabled.

[CustExptIntTransfSetup](#)

Stores information for different data sources that are processed for customer insights. This object is available in API version 65.0 and later.

[CustomBrand](#)

Represents a custom branding and color scheme. This object is available in API version 28.0 and later.

[CustomBrandAsset](#)

Represents a branding element in a custom branding scheme. For example, a color, logo image, header image, or footer text. A CustomBrandAsset can apply to an Experience Cloud site or to an org using the Salesforce mobile app. This object is available in API version 28.0 and later.

[CustomFieldDisplayValue](#)

Stores variation details for the product attribute item view. This object is available in API version 63.0 and later.

[CustomHelpMenuItem](#)

Represents the items within a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

[CustomHelpMenuSection](#)

Represents a section of the Lightning Experience help menu that the admin added to display custom, org-specific help resources. This object is available in API version 44.0 and later.

[CustomHTTPHeader](#)

Represents a custom HTTP header that provides context information from Salesforce such as region, org details, or the role of the person viewing the external object. This object is available in API version 43.0 and later.

[CustomMsgChannel](#)

Represents a custom conversation channel and stores event-driven Messaging settings. Custom conversation channels are implemented for Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS Messaging channels. This object is available in API version 63.0 and later.

[CustomNotificationType](#)

Stores information about custom notification types. This object is available in API version 47.0 and later.

[CustomPermission](#)

Represents a permission created to control access to a custom process or app, such as sending email. This object is available in API version 31.0 and later.

[CustomPermissionDependency](#)

Represents the dependency between two custom permissions when one custom permission requires that you enable another custom permission. This object is available in API version 32.0 and later.

[Customer](#)

Represents the customer role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

[DandBCompany](#)

Represents a Dun & Bradstreet® company record, which is associated with an account added from Data.com. This object is available in API version 25.0 and later.

Standard Objects

[Dashboard](#)

Represents a dashboard, which shows data from custom reports as visual components. Access is read-only. This object is available in API version 20.0 and later.

[DashboardComponent](#)

Represents a dashboard component, which can be a chart, metric, table, or gauge on a dashboard. Access is read-only. This object is available in API version 21.0 and later.

[DashboardTag](#)

Associates a word or short phrase with a Dashboard. This object is available in API version 20.0 and later.

[DataAssessmentFieldMetric](#)

Represents summary statistics for matched, blank, and differing fields in account records of an org compared to records in Data.com. This object is available in API version 37.0 and later.

[DataAssessmentMetric](#)

Represents a summary of statistics for fields matched and unmatched in your account records with Data.com account records. This object is available in API version 37.0 and later.

[DataAssessmentValueMetric](#)

Summarizes the number of fields matched for your account records with Data.com account records. This object is available in API version 37.0 and later.

[DatabaseSaveEventLog](#)

Database Save events track when records are created, updated, or deleted. This object is available in API version 64.0 and later.

[DatacloudCompany](#)

Represents the fields for Data.com company records. This object is available in API version 30.0 or later.

[DatacloudContact](#)

The fields and properties for Data.com contact records. This object is available in API version 30.0 or later.

[DatacloudDandBCompany](#)

Represents a set of read-only fields that are used to return D&B company data from Data.com API calls. This object is available in API version 30.0 or later.

[DatacloudOwnedEntity](#)

Represents fields in the DatacloudOwnedEntity object. The DatacloudOwnedEntity object tracks user-purchased records. This object is available in API version 30.0 or later.

[DatacloudPurchaseUsage](#)

Represents an object used to identify and track Data.com record purchases. This object is available in API version 30.0 or later.

[DataDetectJobObjectSession](#)

For internal use only. This object is available in API version 63.0 and later.

[DataDetectJobSession](#)

Represents a run of a DataDetect scan policy that's triggered manually. This object is available in API version 63.0 and later.

[DataDetectJobSessSummary](#)

For internal use only. This object is available in API version 66.0 and later.

[DataDetectPolicy](#)

Represents a set of parameters that specifies the types of sensitive data for search with in a data scan. DataDetect scan policies can also apply filters to a data scan, along with specific objects and fields for scanning. This object is available in API version 60.0 and later.

Standard Objects

[DataDetectPolicyObject](#)

Represents an object of the DataDetect scan policy to be scanned. This object is available in API version 62.0 and later.

[DataDetectScanResult](#)

Represents the results of a DataDetect data policy scan. This object is available in API version 63.0 and later.

[DataDetectPolicyObjField](#)

Represents an object field of the DataDetect scan policy object to be scanned. This object is available in API version 64.0 and later.

[DataDetectPolicySnapshot](#)

For internal use only. This object is available in API version 64.0 and later.

[DataDetPlcyDataSrchExps](#)

Represents data search expressions for scanning DataDetect scan policies based on Java regex. This object is available in API version 64.0 and later.

[DataDetPlcyMdatScanCrit](#)

Represents inclusion and exclusion criteria that filter what DataDetect scan policy object fields are to be scanned based on metadata tags. This object is available in API version 64.0 and later.

[DataDetPlcySstvDataCatg](#)

Represents the sensitive data categories that the DataDetect scan policy is required to scan. This object is available in API version 64.0 and later.

[DataEncryptionKey](#)

The DataEncryptionKey object is part of the Bring Your Own Key (BYOK) feature, which allows users to upload a data encryption key (DEK) using a public key generated by the Salesforce Shield Key Management Service (KMS). Customers create their own DEKs and upload them to Salesforce. Users access this entity via the API to list DEK keys for auditing purposes. They can also programmatically use this object to create the certificate and to upload key material. This object is available in API version 63.0 and later.

[DataIntegrationRecordPurchasePermission](#)

Indicates Lightning Data purchase credits that a Salesforce admin has granted to users.

[DataKitDeployEvent](#)

Represents a data kit deployment event that notifies subscribers of the status of the data kit component deployment. This object is available in API version 61.0 or later.

[DataKitDeploymentLog](#)

Represents the log details of a data kit component deployment. This object is available in API version 61.0 or later.

[DatasetExport](#)

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExport acts as the header and includes the JSON schema.

[DatasetExportPart](#)

Represents a dataset exported from CRM Analytics. When a dataset is exported, the data is converted into a .csv file and the schema is stored in a separate JSON file. These files are stored in two objects: DatasetExport and DatasetExportPart. DatasetExportPart contains parts of the .csv file.

[DataMaskCustomValueLibrary](#)

Represents a set of user-inputted values in a custom library in Data Mask. This object is available in API version 64.0 and later.

[DataStatistics](#)

For internal use only.

Standard Objects

[DataUseLegalBasis](#)

Represents the legal basis for contacting a customer, such as billing or contract. This object is available in API version 45.0 and later.

[DataUsePurpose](#)

Represents the reason for contacting a prospect or customer, such as for billing, marketing, or surveys. This object is available in API version 45.0 and later.

[DataWeaveResource](#)

Represents the DataWeaveScriptResource class that is generated for all DataWeave scripts. This object is available in API version 58.0 and later.

[DatedConversionRate](#)

Represents the dated exchange rates used by an organization for which the multicurrency and the effective dated currency features are enabled.

[DealIndirectPartner](#)

Represents an indirect partner's involvement in a deal. This object is available in API version 63.0 and later.

[DeclinedEventRelation](#)

Represents event participants (invitees or attendees) with the status `Declined` for a given event. This object is available in API versions 29.0 and later.

[DelegatedAccount](#)

Represents the external managed account. This object is available in API version 49.0 and later.

[DeleteEvent](#)

Represents a record that has been soft deleted. Search on this object was available in API version 48.0, then removed in API version 50.0.

[DeliveryEstimationSetup](#)

Shows the configuration options for the commerce delivery service offered through a web store or sales channel. Includes settings such as delivery location group, channel, fulfillment types, and default fulfillment time. This object is available in API version 61.0 and later.

[DigitalSignature](#)

Represents a signature captured on a service report in field service.

[DigitalWallet](#)

Represents a customer's digital wallet service. Salesforce Payments can use a digital wallet as a payment source when processing payments through a payment gateway. This object is available in API version 48.0 and later.

[DirectMessage](#)

Represents a direct message conversation between multiple users in Chatter. This object is available in API version 38.0 and later.

[Division](#)

A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.

[DivisionLocalization](#)

When the Translation Workbench is enabled for your organization, the DivisionLocalization object provides the translation of the label for a division.

[DocAtchDownloadEventLog](#)

Document Attachment Downloads events contain details of document and attachment downloads. This object is available in API version 65.0 and later.

Standard Objects

[Document](#)

Represents a file that a user has uploaded. Unlike Attachment records, documents are not attached to a parent object.

[DocumentAttachmentMap](#)

Maps the relationship between an EmailTemplate and its attachment, which is stored as a Document.

[DocumentRecipient](#)

Connects a Service Report to a Digital Signature. This object is available in API version 55.0 and later.

[DocumentTag](#)

Associates a word or short phrase with a Document.

[Domain](#)

Read-only object that represents a custom Web address assigned to a site in your organization. This object is available in API version 26.0 and later.

[DomainSite](#)

Read-only junction object that joins the Site and Domain objects. This object is available in API version 26.0 and later.

[DsarPolicy](#)

Represents a Data Subject Access Request (DSAR) policy created in the Privacy Center managed package. DSAR policies anonymize or transfer personal data from your org at your customer's request. This object is available in API version 50.0 and later.

[DsarPolicyLog](#)

Represents the history of Data Subject Access Request (DSAR) policy execution requests. This log records the status and results of executed DSAR policies for a customer. This object is available in API version 50.0 and later.

[DuplicateJob](#)

Represents an instance of a job that identifies duplicates among existing records in the system.

[DuplicateJobDefinition](#)

Setup object defining a job that identifies duplicate record items globally.

[DuplicateJobMatchingRule](#)

Represents a MatchingRule to be used with a DuplicateJob sharing the corresponding DuplicateJobMatchingRuleDefinition.

[DuplicateJobMatchingRuleDefinition](#)

Setup object specifying a MatchingRule to use with DuplicateJob instances that share a DuplicateJobDefinition.

[DuplicateRecordItem](#)

Represents a record that's been identified as a duplicate. DuplicateRecordItems are included in a DuplicateRecordSet, which are processed in duplicate jobs. Use this object to create custom report types for duplicates.

[DuplicateRecordSet](#)

Represents a group of records that have been identified as duplicates. Each duplicate record set contains one or more duplicate record items. Use this object to create custom report types and view the results of duplicate jobs.

[DuplicateRule](#)

Represents a duplicate rule for detecting duplicate records.

[DynamicDataCapture](#)

DynamicDataCapture is a junction object that adds a Form tab to Work Order Overview, and to the related list of a work order, work order line item, or service appointment in the Field Service mobile app. This object is available in API version 62.0 and later.

[ElectronicMediaGroup](#)

Represents the type of media that you can associate with a product or category. This object is available in API version 49.0 and later.

Standard Objects

[ElectronicMediaUse](#)

Represents the usage of media. This object is available in API version 49.0 and later.

[EmailContent](#)

Represents a marketing email asset for use with Account Engagement. This object is available in API version 50.0 and later.

[EmailDomainFilter](#)

Represents a filter that determines whether an email relay is restricted to a specific list of domains. This object is available in API version 43.0 and later.

[EmailDomainKey](#)

Represents a domain key for an organization's domain, used to authenticate outbound email that Salesforce sends on the organization's behalf. This object is available in API version 28.0 and later.

[EmailInsight](#)

Represents an insight generated from an email interaction. EmailInsights acts as a central place to store various types of insights related to email messages. The insights stored include status, type, and time of generation. Only certain types of insights can be created based on a pre-configured list of insight types. This object is available in API version 63.0 and later.

[EmailInsightAction](#)

Represents the actions that have been taken, or could be taken, in relation to email insights. It logs different types of actions and associated metadata, helping to track and manage the activities and decisions made based on email insights. This object is available in API version 63.0 and later.

[EmailMessage](#)

Represents an email in Salesforce.

[EmailMessageMigration](#)

For internal use only.

[EmailMessageRelation](#)

Represents the relationship between an email and contacts, leads, and users. This object is available in API version 37.0 and later.

[EmailRelay](#)

Represents the configuration for sending an email relay. An email relay routes email sent from Salesforce through your company's email servers. This object is available in API version 43.0 and later.

[EmailRoutingAddress](#)

An email address used for Email-to-Case. Email routing addresses store a unique email services address provided by Salesforce and configuration options for emails received by this address.

[EmailServicesAddress](#)

An email service address.

[EmailServicesFunction](#)

An email service.

[EmailStatus](#)

Represents the status of email sent.

[EmailTemplate](#)

Represents a template for an email, mass email, list email, or Sales Engagement email. Supported in first-generation managed packages only.

[EmailTemplateMonthlyMetric](#)

Represents the monthly engagement metrics for an email template. This object is available in API version 53.0 and later.

Standard Objects

[EmbeddedServiceDetail](#)

Represents a metadata catalog object that exposes fields from the underlying Embedded Service setup objects defined in each EmbeddedServiceConfig deployment for guest users. Guest users don't have direct access to the Embedded Service setup objects. Available in API version 39.0 and later.

[EmbeddedServiceLabel](#)

Represents a customized label in Embedded Chat or embedded Appointment Management. This object is available in API version 44.0 and later.

[Employee](#)

Represents an employee within a company or organization. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

[Employee2](#)

Represents an employee within a company or an organization. This object is available in API version 62.0 and later.

[EmployeeCrisisAssessment](#)

Represents a crisis assessment of an Employee. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

[EmpUserProvisioningProcess](#)

Represents an employee-user provisioning process. This object is available in API version 52.0 and later.

[EmpUserProvisionProcessErr](#)

Represents an employee-user provisioning process error. This object is available in API version 52.0 and later.

[EnablementMeasureDefinition](#)

Represents an Enablement measure, which specifies the job-related activity that a user performs to complete a milestone or outcome in an Enablement program. A measure identifies a source object and optional related objects, with optional field filters and filter logic, for tracking the activity. This object also represents Enablement measure information in Metadata API. This object is available in API version 56.0 and later.

[EnablementProgram](#)

Represents an Enablement program, which includes exercises and measurable milestones to help users such as sales reps achieve specific outcomes related to your company's revenue goals. This object is available in API version 56.0 and later.

[EnablementProgramDefinition](#)

Represents Enablement program information in Metadata API. This object is available in API version 61.0 and later.

[EnblMeasureObjectDefinition](#)

Represents the criteria for an object that tracks the job-related activity for an Enablement measure in an Enablement program. A separate EnblMeasureObjectDefinition is used for a measure's source object and each optional related object. This object is available in API version 56.0 and later.

[EnblPgmTaskMeasureProgress](#)

Represents a user's progress through the object and field requirements that an Enablement measure defines for an outcome or milestone in an Enablement program. This object is available in API version 61.0 and later.

[EnblProgramSection](#)

Represents an optional section in an Enablement program. A section can include other program items, such as milestones and exercises. This object is available in API version 60.0 and later.

Standard Objects

[EnblProgramTaskDefinition](#)

Represents an outcome, a milestone, or an exercise in an Enablement program. A program task is also known as a program item. This object is available in API version 60.0 and later.

[EnblProgramTaskMeasure](#)

Represents the connection between an Enablement measure and a specific milestone or outcome in an Enablement program. This object is available in API version 61.0 and later.

[EnblProgramTaskProgress](#)

Represents a user's progress towards completing an outcome, a milestone, or an exercise in an Enablement program. This object is available in API version 60.0 and later.

[EnblProgramTaskSubCategory](#)

Represents a custom exercise type that an Enablement admin adds to an Enablement program in Program Builder. A custom exercise type also requires a corresponding EnblProgramTaskDefinition record for Program Builder and corresponding LearningItem and LearningItemType records for when users take the exercise in the Guidance Center. This object is available in API version 62.0 and later.

[EngagementChannelType](#)

Represents a channel through which a customer can be reached for communication. This object is available in API version 48.0 and later.

[EngagementSignal](#)

Represents data about an individual's engagement action, such as a web click, an email response, or a PDF download. This object is available in API version 62.0 and later.

[EngagementSignalCmpndMetric](#)

Represents a rate metric that measures the ratio between two engagement signal metrics, such as product orders and product views to calculate a conversion rate, or email clicks and email opens to determine a click-through rate. Use this object to create complex measurements for A/B testing and web experimentation. This object is available in API version 62.0 and later.

[EngagementSignalMetric](#)

Represents a measurable quantity that's derived from an engagement signal, such as the sum of revenue or a count of clicks. Use this object to track user engagement for A/B tests, machine learning model training, and attribution configurations. This object is available in API version 62.0 and later.

[EnhancedLetterhead](#)

Represents an enhanced letterhead that can be associated with a Lightning email template that doesn't use the Salesforce Merge Language (SML). This object is available in API version 46.0 and later.

[Entitlement](#)

Represents the customer support an account or contact is eligible to receive. This object is available in API version 18.0 and later. Entitlements may be based on an asset, product, or service contract.

[EntitlementContact](#)

Represents a Contact eligible to receive customer support via an Entitlement. This object is available in API version 18.0 and later.

[EntitlementTemplate](#)

Represents predefined terms of customer support for a product (Product2). This object is available in API version 18.0 and later.

[EntityHistory](#)

Represents historical information about an object's changed field values. This object is only available to users with the "View All Data" permission. This object is unavailable beginning with API version 8.0. Use the object-specific [History](#) objects instead.

Standard Objects

[EntityMilestone](#)

Represents a required step in a customer support process on a work order. The Salesforce user interface uses the term “object milestone.” This object is available in API version 37.0 and later.

[EntitySubscription](#)

Represents a subscription for a user following a record or another user. This object is available in API version 34.0 and later.

[EnvironmentHubMember](#)

Represents a member organization in the Environment Hub. This object is available in API version 29.0 and later.

[Event](#)

Represents an event in the calendar. In the user interface, event and task records are collectively referred to as activities.

[EventLogFile](#)

Represents event log files for event monitoring. The event monitoring product gathers information about your Salesforce org’s operational events, which you can use to analyze usage trends and user behavior. This object is available in API version 32.0 and later. The `Interval` and `Sequence` fields are available only in API version 37.0 and later.

[EventRelation](#)

Represents a person (a user, lead, or contact) or a resource (such as a conference room) invited to an event. This object lets you add or remove invitees from an event and use the API to manage invitees’ responses to invitations. If Shared Activities is enabled, `EventRelation` can also represent other objects that are related to an event. `EventRelation` does not support triggers, workflow, or data validation rules.

[EventBusSubscriber](#)

Represents a trigger, process, or flow that’s subscribed to a platform event or a change data capture event. Doesn’t include CometD or Pub/Sub API subscribers.

[EventRelayConfig](#)

Represents the configuration of an event relay, which relays platform events and change data capture events from Salesforce to Amazon EventBridge. This object is available in API version 56.0 and later.

[EventRelayFeedback](#)

Represents execution state information about an event relay from Salesforce to Amazon EventBridge for platform events and change data capture events. Query this object to get information such as the event relay status and any error message. This object is available in API version 56.0 and later.

[EventStagedInviteeEmail](#)

Represents the relationship between an event and an email address invited to the event that doesn’t match to a user, contact, or lead record. Data about the unmatched email address is represented in `StagedInviteeEmail`. This object represents event-related details, such as the invitee’s attendance response to the event. This object is available in API version 66.0 and later.

[EventTag](#)

Associates a word or short phrase with an Event.

[EventWhoRelation](#)

Represents the relationship between an event and a lead or contacts. This derived object is a filtered version of the [EventRelation](#) on page 2453 object; that is, `IsParent` is `true` and `IsWhat` is `false`. It doesn’t represent relationships to invitees or to accounts, opportunities, or other objects. This object is available in API versions 29.0 and later.

[Expense](#)

Represents an expense linked to a work order. Service resource technicians can log expenses, such as tools or travel costs. This object is available in API version 49.0 and later.

[ExpenseReport](#)

Represents a report that summarizes expenses. This object is available in API version 50.0 and later.

Standard Objects

[ExpenseReportEntry](#)

Represents an entry in an expense report. This object is available in API version 50.0 and later.

[ExpressionFilter](#)

Represents a logical expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

[ExpressionFilterCriteria](#)

Represents a condition in an expression that's used to control the execution of macro instructions. This object is available in API version 46.0 and later.

[ExpressionSetConstraintObj](#)

Represents the association between a Product object and the constraint model tags defined in a given constraint model. This object is available in API version 63.0 and later.

[ExtConvParticipantIntegDef](#)

Represents the integration configuration for external conversation participants, used for communication between Salesforce and external messaging platforms. This object is available in API version 66.0 and later.

[ExtDataShare](#)

Represents a data share, which is a collection of Data Cloud objects that can be shared with other Data Cloud orgs or third-party partners. This object is available in API version 56.0 and later.

[ExternalAccountHierarchy](#)

Represents the external account hierarchy, which works like a role-based hierarchy. Use ExternalAccountHierarchy to allow partner and customer users to share data with other external accounts in their hierarchy. This object is available in API version 49.0 and later.

[ExternalAccountHierarchyHistory](#)

Represents the history of changes to values in the fields of an external account hierarchy. This object is available in API version 50.0 and later.

[ExternalClientApplication](#)

For internal use only.

[ExternalDataSource](#)

Represents an external data source, which defines connection details for integration with data and content that are stored outside the Salesforce org. This object is available in API version 27.0 and later.

[ExternalDataUserAuth](#)

Stores authentication settings for a Salesforce user to access an external system. The external system must be defined in an external data source or a named credential that's configured to use per-user authentication. This object is available in API version 27.0 and later.

[ExternalEncryptionRootKey](#)

Represents metadata about root keys stored in third-party key stores that are used to generate and secure keys that encrypt Salesforce data. This object is available in API version 58.0 and later.

[ExternalEvent](#)

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

[ExternalEventMapping](#)

Holds native iOS or Android calendar event details for the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

Standard Objects

[ExternalSocialAccount](#)

Represents a managed social media account on a social network such as Facebook or Twitter. This object is available in API version 29.0 and later.

[ExtKnowledgeConnector](#)

Represents a connector to a third-party knowledge source for Unified Knowledge. This object is available in API version 60.0 and later.

[ExtClntAppOAuthPlcyCnfg](#)

For internal use only.

[ExtClntAppOAuthSettings](#)

For internal use only.

[ExtClntAppPlcyCnfg](#)

For internal use only.

[ExtIntrldMapping](#)

Represents a mapping between a Salesforce record and its corresponding record in an external system, such as Workday. This object is available in API version 66.0 and later.

[ExtlRecShrCnct](#)

Represents authentication data to make outbound calls to and inbound calls from an external system to publish events for Partner Connect. This object is available in API version 62.0 and later.

[ExtlRecShrCnctAccnt](#)

Represents an association between an account and an external record share connection for Partner Connect. This object is available in API version 62.0 and later.

[ExtlRecShrField](#)

Represents an imported, exported, or updated external record share field for Partner Connect. This object is available in API version 63.0 and later.

[ExtlRecShrFieldMap](#)

Represents the external record share field mapping between the sender and receiver for Partner Connect. This object is available in API version 62.0 and later.

[ExtlRecShrLead](#)

Represents the Lead record of a vendor org if you're a partner. If you're a vendor for Partner Connect, this object represents a partner org. This object is available in API version 62.0 and later.

[ExtlRecShrObject](#)

Represents a shared object for Partner Connect. This object is available in API version 62.0 and later.

[ExtlRecShrOpportunity](#)

Represents the opportunity for Partner Connect in the vendor org if you're a partner and the partner org if you're the vendor. This object is available in API version 62.0 and later.

[ExtlRecShrPcklstOptn](#)

Represents a picklist option of an external record share picklist field shared between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

[ExtlRecShrPicklistMap](#)

Represents the external record share picklist field mapping between the partner and vendor system for Partner Connect. This object is available in API version 62.0 and later.

Standard Objects

[ExtlRecShrRecordMap](#)

Represents the lead or opportunity being mapped between a partner and vendor for Partner Connect. This object is available in API version 62.0 and later.

[FeedAttachment](#)

Represents an attachment to a feed item, such as a file attachment or a link. Use FeedAttachment to add various attachments to one feed item. This object is available in API version 36.0 and later.

[FeedComment](#)

Represents a comment added to a feed by a user. This object is available in API version 18.0 and later.

[FeedItem](#)

FeedItem represents an entry in the feed, such as changes in a record feed, including text posts, link posts, and content posts. This object is available in API version 21.0 and later. This object replaces FeedPost.

[FeedLike](#)

Indicates that a user has liked a feed item. This object is available in API version 21.0 and later.

[FeedPollChoice](#)

Shows the choices for a poll posted in the feed. This object is available in API version 29.0 and later.

[FeedPollVote](#)

Shows how users voted on a poll posted in the feed. This object is available in API version 29.0 and later.

[FeedPost](#)

FeedPost represents the following types of changes in a record feed, such as AccountFeed: text posts, link posts, and content posts. This object is available in API version 18.0 through 21.0. FeedPost is no longer available in later versions. Starting with API version 21.0, use FeedItem to represent text posts, link posts, and content posts in feeds.

[FeedRevision](#)

Holds the revision history of a specific feed item or comment, including a list of attributes that changed for each revision. This object is available in API version 34.0 and later.

[feedSignal](#)

Attach feed signals, like `UpDownVote`, `UserVerified`, and `Verified`, to a feed post or comment. This object is available in API version 41.0 and later.

[FeedTrackedChange](#)

Represents an individual field change or set of field changes. A FeedTrackedChange is a child object of a record feed, such as AccountFeed. This object is available in API version 18.0 and later.

[FieldHistoryArchive](#)

Represents field history values for all objects that retain field history. `FieldHistoryArchive` is a big object, available only to users with the "Retain Field History" permission. This object is available in API version 29.0 and later.

[FieldChangeSnapshot](#)

Use this virtual object to learn which opportunities' close dates changed during the specified time period. This object is available in API version 52.0 and later.

[FieldPermissions](#)

Represents the enabled field permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

[FieldSecurityClassification](#)

Represents a field's data sensitivity value selected from the SecurityClassification picklist. This object is available in API version 46.0 and later.

Standard Objects

[FieldServiceMobileSettings](#)

Represents a configuration of settings that control the Field Service iOS and Android mobile app experience. This object is available in API version 38.0 and later.

[FieldServiceOrgSettings](#)

Represents the org settings for Field Service, such as Appointment Assistant settings. If Field Service is enabled, the org contains one read-only record of this object. This object is available in API version 51.0 and later.

[FileSearchActivity](#)

Represents search activity on a file. This object is available in API version 38.0 and later.

[FiscalYearSettings](#)

Settings to define a custom or standard fiscal year for your organization. This object has a parent-child relationship with the Period object.

[FldSvcObjChg](#)

Represents a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

[FldSvcObjChgDtl](#)

Represents the details of a change made to one of a service appointment's tracked fields. This object is available in API version 63.0 and later.

[FlexQueueItem](#)

Represents an asynchronous Apex job in the Apex flex queue. Provides information about the job type and flex queue position of the AsyncApexJob. This object is available in API version 36.0 and later.

[FlowDefinitionView](#)

Represents the description of a flow definition. This object is available in API version 46.0 and later.

[FlowInterview](#)

Represents a flow interview. A *flow interview* is a running instance of a flow. This object is available in API version 32.0 and later.

[FlowInterviewLog](#)

Represents the logs of a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

[FlowInterviewLogEntry](#)

Represents the log of a specific element that's executed by a screen flow interview. An *interview* is an instance of a running or previously run flow. This object is available in API version 49.0 and later.

[FlowInterviewLogOwnerSharingRule](#)

Represents the rules for sharing a FlowInterviewLog with users other than the owner. This object is available in API version 49.0 and later.

[FlowInterviewOwnerSharingRule](#)

Represents the rules for sharing a FlowInterview with users other than the owner. This object is available in API version 33.0 and later.

[FlowInterviewShare](#)

Represents a sharing entry on a FlowInterview. This object is available in API version 33.0 and later.

[FlowNavMetricEventLog](#)

Flow Navigation Metric event logs contain metric data for flow interviews such as total execution time, number of interviews, and number of errors. This object is available in API version 61.0 and later.

[FlowOrchestration](#)

Represents the details of an orchestration definition. This object is available in API version 62.0 and later.

Standard Objects

[FlowOrchestrationInstance](#)

Represents a run-time instance of an orchestration. This object is available in API version 53.0 and later.

[FlowOrchestrationLog](#)

Represents logging data for a FlowOrchestrationInstance. This object is available in API version 54.0 and later.

[FlowOrchestrationStageInstance](#)

Represents a run-time instance of a stage in a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

[FlowOrchestrationStepInstance](#)

Represents a run-time instance of a step in a run-time instance of a stage of a run-time instance of an orchestration. This read-only object is available in API version 53.0 and later.

[FlowOrchestrationVersion](#)

Represents the version of an orchestration. This object is available in API version 62.0 and later.

[FlowOrchestrationWorkItem](#)

Represents a work item associated with a run-time instance of an interactive step in a run-time instance of an orchestration. This object is available in API version 54.0 and later.

[FlowRecord](#)

Represents the details of a flow. This object is available in API version 58.0 and later.

[FlowRecordElement](#)

Represents a single element within a flow version. This object is available in API version 58.0 and later.

[FlowRecordElementOccurrence](#)

Represents the execution metrics for a single element within a flow version. This object is available in API version 62.0 and later.

[FlowRecordRelation](#)

Represents a relationship between a record and a flow interview. When a flow interview is paused, Salesforce uses the `$Flow.CurrentRecord` global variable in the flow to associate the interview with a record. Available in API version 42.0 and later.

[FlowRecordVersion](#)

Represents the version of a flow. This object is available in API version 58.0 and later.

[FlowRecordVersionOccurrence](#)

Represents an instance of a recurring flow that runs on a schedule. For example, a flow that runs weekly on Wednesdays creates an occurrence each time it runs. This object is available in API version 60.0 and later.

[FlowTestResult](#)

Represents the results for a flow test associated with a flow version. This object is available in API version 55.0 and later.

[FlowTestView](#)

Represents the description of a flow test associated with a flow definition. This object is available in API version 55.0 and later.

[FlowStageRelation](#)

Represents a relationship between a paused flow interview and its stages. When a flow interview is paused, Salesforce creates a FlowStageRelation record for each stage that's set to the `$Flow.CurrentStage` or `$Flow.ActiveStages` global variable. Available in API version 43.0 and later.

[FlowVariableView](#)

Represents a variable within the flow version. This object is available in API version 46.0 and later.

[FlowVersionView](#)

Represents the version of a flow definition. This object is available in API version 46.0 and later.

Standard Objects

Folder

Represents a repository for a Dashboard, Document, EmailTemplate, Macro, QuickText, or Report. Only one type of item can be contained in a folder.

FolderedContentDocument

Represents the relationship between a parent and child ContentFolderItem in a ContentWorkspace.

ForecastingAdjustment

This object represents an individual forecast manager's adjustment for a subordinate's or child territory's forecast via a ForecastingItem. Available in API versions 26.0 and later. This object is different from the ForecastingOwnerAdjustment object, which represents forecast users' adjustments of their *own* forecasts, including territory forecasts they own.

ForecastingColumnDefinition

Represents a custom calculated column or a custom reference data column in a forecast type. This object is available in API version 56.0 and later.

ForecastingColumnDefinitionLocalization

Represents the translated value of a custom calculated column or custom reference data column label when the Translation Workbench is enabled for your organization. This object is available in API version 56.0 and later.

ForecastingCustomCategory

Represents a custom forecasting category used for forecast rollups. This object is available in API version 62.0 and later.

ForecastingCustomData

Represents forecast data from external sources to display in the forecasts page. For example, risk or last year's revenue. This object is available in API version 58.0 and later.

ForecastingDisplayedFamily

Represents the table in Forecasts Settings where an admin selects the product families that users can forecast on in Lightning Experience. This object is available in API version 40.0 and later.

ForecastingFact

This object is read-only and links a ForecastingItem with its opportunities, such as opportunities that share the same owner or forecast category and have a closing date within the period of the forecasting item. Available in API versions 26 and greater.

ForecastingFilter

Represents the custom filter for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

ForecastingFilterCondition

Represents the custom filter condition logic for including or excluding data from opportunity forecasts. This object is available in API version 54.0 and later.

ForecastingGroup

Represents groups used to roll up forecast totals on the forecasts page. For example, group forecasts by industry or sales type. This object is available in API version 60.0 and later.

ForecastingGroupItem

Represents the value within the picklist that is specified as the forecasting group for a forecast type. For example, if you have a forecasting group that identifies the industry an opportunity is part of, this object represents the value in the the industry picklist that's chosen to be part of the group. This object is available in API version 60.0 and later.

Standard Objects

[ForecastingItem](#)

This object is read-only used for individual forecast amounts. Users see amounts based on their perspectives and forecast roles. The amounts users see include one of these values when forecasting in revenue: `AmountWithoutAdjustments`, `AmountWithoutManagerAdjustment`, `ForecastAmount`, `OwnerOnlyAmount`. The amounts users see include one of these values when forecasting in quantity: `QuantityWithoutAdjustments`, `QuantityWithoutManagerAdjustment`, `ForecastQuantity`, `OwnerOnlyQuantity`. Available in API version 26.0 and later.

[ForecastingOwnerAdjustment](#)

This object represents an individual forecast user's adjustment of their *own* forecast, including territory forecasts they own, via a `ForecastingItem`. Available in API versions 33.0 and later. This object is different from the `ForecastingAdjustment` object, which represents managers' adjustments of *subordinates'* and child territories' forecasts.

[ForecastingQuota](#)

This object represents an individual user's or territory's quota for a specified time period. The `Managed Quotas` user permission is required for creating, updating, or deleting quotas. (Users can only edit their subordinates' or child territories' quotas, not their own.) The `View All Forecasts` permission is required to view any user's forecast, regardless of the forecast hierarchy. Available in API versions 25.0 and later. Forecast managers can view the forecasts of subordinates and territories below them in the forecast hierarchy.

[ForecastingShare](#)

Represents forecasts shared between a forecast manager and a user. Available in API version 44.0 and later.

[ForecastingSourceDefinition](#)

Represents the object, measure, date type, and hierarchy that a forecast uses to project sales. This object is available in API version 52.0 and later.

[ForecastingSrcRecJudgment](#)

Represents forecast managers' judgment of whether they consider an opportunity-related deal to be certain to close. This object is available in API version 59.0 and later.

[ForecastingSubmission](#)

Represents a submitted forecast. This object is available in API version 62.0 and later.

[ForecastingSubmissionItem](#)

Represents the values for each forecast category in a submitted forecast. This object is available in API version 62.0 and later.

[ForecastingType](#)

Used to identify the forecast type associated with `ForecastingAdjustment`, `ForecastingOwnerAdjustment`, `ForecastingQuota`, `ForecastingFact`, and `ForecastingItem` objects. Available in API version 30.0 and greater.

[ForecastingTypeSource](#)

Maps a forecasting source definition to a forecast type. This object is available in API version 52.0 and later.

[ForecastingUserPreference](#)

Represents the forecasting selections that a user has made, such as display options, date range, forecasting type, and currency.

[FormulaFunction](#)

Represents a function used when building a formula, including examples and uses. This object is available in API version 47.0 and later.

[FormulaFunctionAllowedType](#)

Represents the functions that are supported in the given formula context. This object is available in API version 48.0 and later.

[FormulaFunctionCategory](#)

Represents the category to which a formula belongs when building a formula. This object is available in API version 47.0 and later.

Standard Objects

[FrcstCustmCatgRampRateSrc](#)

Represents the total contract value used for custom bulk adjustments. This object is available in API version 63.0 and later.

[FrcstCustmzAdjustment](#)

Represents an individual forecast manager's adjustment of a subordinate's consumption forecast. Available in API version 63.0 and later. This object is different from the `ForecastingAdjustment` object, which represents managers' adjustments of subordinates' pipeline forecasts.

[FrcstCustmzOwnerAdjustment](#)

Represents an individual forecast user's adjustment of their own consumption forecast. Available in API version 63.0 and later. This object is different from the `ForecastingOwnerAdjustment` object, which represents users' adjustments of their pipeline forecasts.

[FulfillmentOrder](#)

Represents a group of products, fees, and delivery charges on a single order that share the same fulfillment location, delivery method, and recipient. The `FulfillmentOrderLineItem`s belonging to a `FulfillmentOrder` are associated with `OrderItemSummary` objects belonging to a single `OrderSummary`. This object is available in API version 48.0 and later.

[FulfillmentOrderItemAdjustment](#)

Represents a price adjustment on a `FulfillmentOrderLineItem`. Corresponds to an `OrderItemAdjustmentLineSummary` associated with the corresponding `OrderItemSummary`. This object is available in API version 48.0 and later.

[FulfillmentOrderItemTax](#)

Represents the tax on a `FulfillmentOrderLineItem` or `FulfillmentOrderItemAdjustment`. Corresponds to an `OrderItemTaxLineItemSummary`. This object is available in API version 48.0 and later.

[FulfillmentOrderLineItem](#)

Represents a product or delivery charge belonging to a `FulfillmentOrder`. Corresponds to an `OrderItemSummary`. This object is available in API version 48.0 and later.

[FunctionConnection](#)

Represents a connection between an org and Salesforce Functions. This object is available in API version 52.0 and later.

[FunctionInvocationRequest](#)

Represents invocation information for a Salesforce Function. This object is available in API version 51.0 and later.

[FunctionReference](#)

Represents a deployed Salesforce Function associated with an org. This object is available in API version 52.0 and later.

[GenAIConversationSummary](#)

Represents a generated summary of a voice or video call. This object is available in API version 60.0 and later.

[GenAiFunctionDefinition](#)

Represents an agent action. This object is available in API version 60.0 and later.

[GenAiPlannerDefinition](#)

Represents an agent planner service that uses a large language model (LLM) and a reasoning strategy to decompose a given task into smaller subtasks, identify the most suitable actions for each subtask, and invoke them. This object is available in API version 60.0 and later.

[GenAiPlannerFunctionDef](#)

Represents a relationship between the agent planner service and agent actions. This object is available in API version 60.0 and later.

[GenAiPluginDefinition](#)

Represents an agent topic, which is a category of actions related to a particular job to be done by AI agents. This object is available in API version 62.0 and later.

Standard Objects

[GenOpPlanRequest](#)

Represents a request to generate a service plan. This object is available in API version 67.0 and later.

[GeoCountry](#)

Represents a country. This object is available in API version 56.0 and later.

[GeolocationBasedAction](#)

Represents a geolocation-based action, which is an action that's triggered when a user enters, exits, or is within the area of the associated object. Available in API version 61.0 and later.

[GeoState](#)

Represents a state. This object is available in API version 57.0 and later.

[GtwyProvPaymentMethodType](#)

The gateway provider payment method type allows integrators and payment providers to choose an active payment to receive an order's payment data rather than allowing the Salesforce Order Management platform to select a default payment method. This object is available in API version 50.0 and later.

[Goal](#)

The Goal object represents the components of a goal such as its name, description, and status.

[GoalLink](#)

Represents the relationship between two goals. This is a many-to-many relationship, meaning that each goal can link to many other goals.

[GoogleDoc](#)

Represents a link to a Google Document. This object is available in API version 14.0 and later.

[Group](#)

A set of User records.

[GroupMember](#)

Represents a User or Group that is a member of a public group.

[GroupMembershipEventLog](#)

Group Membership events capture details about changes to public group and queue membership, such as when members are added to or removed from the public group or queue. This object is available in API version 64.0 and later.

[GuestBuyerProfile](#)

Represents a store's guest buyer profile, which allows unauthenticated buyers to browse the store. This object is available in API version 51.0 and later.

[HashtagDefinition](#)

HashtagDefinition represents hashtag (#) topics in public Chatter posts and comments. Public posts and comments include those on profiles and in public groups, but not those on records or in private groups. This object is available in API version 26.0 and later.

[HealthCareDiagnosis](#)

Represents information related to industry-standard healthcare diagnosis codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

[HealthCareProcedure](#)

Represents information related to industry-standard healthcare procedure codes. Before the Spring '21 release, the Healthcare Procedure and Healthcare Diagnosis objects stored codes specifically related to procedures and diagnoses. These codes were used for prior-authorization requests and approval processes. Since the Spring'21 release, Health Cloud uses the Code Set and Code Set Bundle objects for this purpose instead.

Standard Objects

[Holiday](#)

Represents a period of time during which your customer support team is unavailable. Business hours and escalation rules associated with business hours are suspended during any holidays with which they are affiliated.

[IconDefinition](#)

Represents the icon-related metadata for a custom tab. This object is available in API version 43.0 and later.

[Idea](#)

Represents an idea on which users are allowed to comment and vote, for example, a suggestion for an enhancement to an existing product or process. This object is available in API version 12 and later.

[IdeaComment](#)

Represents a comment that a user has submitted in response to an idea.

[IdeaReputation](#)

Represents a collection of statistics and scores derived from a user's activity within an Ideas zone or internal organization. This object is available in API version 28.0 and later.

[IdeaReputationLevel](#)

Represents a reputation level within an Ideas zone or internal organization and is used by the system to calculate reputation. You can create up to 25 levels per zone or internal organization. This object is available in API version 28.0 and later.

[IdeaTheme](#)

Represents an invitation to zone members to submit ideas that are focused on a specific topic. This object is available in API version 26 and later.

[IdpEventLog](#)

Represents the Identity Provider Event Log. This log records both problems and successes with inbound SAML or OpenID Connect authentication requests from another app provider. It also records outbound SAML responses when Salesforce is acting as an identity provider. This object is available in API version 39.0 and later.

[IframeWhiteListUrl](#)

Represents a list of trusted external domains that you allow to frame your Embedded Service, Surveys, and Visualforce pages. This object is available in API version 45.0 and later.

[Image](#)

Represents the details of an image. This object is available in API version 47.0 and later.

[Incident](#)

An Incident is any unplanned business interruption that has wide-sweeping impacts and requires an urgent fix. This object contains the details of the incident, documenting the history of the incident from registration to closure. This object is available in API version 53.0 and later.

[IncidentRelatedItem](#)

Represents a junction object that relates an Incident to an Asset or Product. This object is available in API version 53.0 and later.

[Individual](#)

Represents a customer's data privacy and protection preferences. Data privacy records based on the Individual object store your customers' preferences. Data privacy records are associated with related leads, contacts, person accounts, and users. This object is available in API version 42.0 and later.

[IndividualApplicationItem](#)

Captures individual application input data that is used during run-time. This object is available in API version 58.0 and later.

[IndividualHistory](#)

Represents the history of changes to values in the fields of a data privacy record, based on the Individual object. This object is available in versions 42.0 and later.

Standard Objects

[IndividualShare](#)

Represents a list of access levels to a data privacy record along with an explanation of the access level. For example, if you have access to a record because you own it, the `IndividualAccessLevel` is `All` and `RowCause` is `Owner`. This object is available in API version 42.0 and later.

[InsufficientAccessEventLog](#)

Insufficient Access event logs contain details about errors relating to insufficient account, case, contact, and opportunity record access. This object is available in API version 61.0 and later.

[InternalOrganizationUnit](#)

Represents an organization that an Employee belongs to. This object is available in API version 48.0 and later. In API version 49.0 and later, this object supports reports, criteria-based sharing rules, and history tracking, plus you can exclude individual fields from custom page layouts.

[InventoryItemReservation](#)

Used to store inventory item reservation information for a specific product and location. This object is available in API version 60.0 and later.

[InventoryReservation](#)

Stores information about the status of cart inventory reservations in B2B and D2C Commerce. This object is available in API version 60.0 and later.

[InvocableActionEventLog](#)

Invocable Action events capture the calls to Salesforce Invocable Actions. This is particularly useful to monitor actions invoked during Agentforce flows. This object is available in API version 64.0 and later.

[Invoice](#)

Represents a financial document describing the total amount a buyer must pay for goods or services provided. This object is available in API version 48.0 and later.

[InvoiceAddressGroup](#)

Stores the buyer's address information. This object is available in API version 50.0 and later.

[InvoiceBatchRun](#)

Represents a batch processing job in Subscription Management or Billing (Revenue Cloud). During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

[InvoiceBatchRunCriteria](#)

Represents a batch processing job and its required criteria in Subscription Management. During an invoice batch run, all billing schedules that meet the specified criteria are processed, resulting in the generation of invoices. This object is available in API version 55.0 and later.

[InvoiceBatchRunRecovery](#)

Provides information about an invoice batch run recovery procedure. This object is available in API version 57.0 and later.

[InvoiceDocument](#)

Tracks and displays the status of documents generated for invoices. Invoice documents are available in the related lists of invoice entity records. This object is available in API version 61.0 and later.

[InvoiceLine](#)

Represents the amount that a buyer must pay for a product, service, or fee. Invoice lines are created based on the amount of an order line. This object is available in API version 48.0 and later.

[JobProfile](#)

Represents a job profile used for shift scheduling. This object is available in API versions 47.0 and later.

Standard Objects

[JobProfileQueueGroup](#)

JobProfileQueueGroup defines the mapping between Queue and JobProfile and configurations for capacity plans in Workforce Engagement. This object is available in API version 53.0 and later.

[Knowledge__Feed](#)

Represents the feed for a knowledge article. This object is available in API version 39.0 and later.

[Knowledge__ka](#)

Provides access to the concrete object that represents a Knowledge article, the parent object for article versions. This object is available in API version 39.0 and later.

[Knowledge__kav](#)

Provides access to the concrete object that represents a Knowledge article version. This object is available in API version 39.0 and later.

[Knowledge__DataCategorySelection](#)

Represents a data category that classifies an article. This object is available in API version 39.0 and later.

[KnowledgeableUser](#)

Represents a user identified as knowledgeable about a specific topic, and ranks them relative to other knowledgeable users. This object is available in API version 31.0 and later.

[KnowledgeArticle](#)

Provides read-only access to an article and the ability to delete the primary article. This object is available in API version 19.0 and later.

[KnowledgeArticleEventLog](#)

Knowledge Article View event logs contain user activity with your knowledge base. This object is available in API version 61.0 and later.

[KnowledgeArticleFeedback](#)

Represents information about feedback from users on Knowledge articles and details about assignment of feedback to the article owner or team to take action. This object is available in API version 64.0 and later.

[KnowledgeArticleVersion](#)

Provides a global view of standard article fields across all types of articles depending on their version. This object is available in API version 18.0 and later.

[KnowledgeArticleVersionHistory](#)

Enables read-only access to the full history of an article. This object is available in API version 25.0 and later.

[KnowledgeArticleViewStat](#)

Provides certain statistics related to the number of views for the specified article across all article types. The view count statistics are for published and archived articles only. View counts for draft articles aren't tracked. This object is read-only and available in API version 20.0 and later.

[KnowledgeArticleVoteStat](#)

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

[LandingPage](#)

Represents an Account Engagement landing page. A landing page is a web page that a visitor reaches after clicking a link or advertisement. Landing pages can be created in Account Engagement and synced to Salesforce or created on the Landing Page object in Account Engagement Lightning App. This object is available in API version 42.0 and later.

[Lead](#)

Represents a prospect or lead.

Standard Objects

[LeadCleanInfo](#)

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

[LeadDailyMetric](#)

Represents the daily engagement metrics for a lead. This object is available in API version 52.0 and later.

[LeadMonthlyMetric](#)

Represents the monthly engagement metrics for a lead. This object is available in API version 52.0 and later.

[LeadOwnerSharingRule](#)

Represents the rules for sharing a lead with users other than the owner.

[LeadShare](#)

Represents a sharing entry on a Lead.

[LeadStatus](#)

Represents the status of a Lead record, such as Open, Qualified, or Converted.

[LeadTag](#)

Associates a word or short phrase with a Lead.

[LearningContent](#)

Represents a Trailhead or enablement site (myTrailhead) module assigned to a user in Workforce Engagement or Learning Paths. This object also represents a Trailhead module or video in an Enablement program exercise. This object is available in API version 54.0 and later.

[LearningItem](#)

Represents an item that requires users to take action, including a Learning Paths entry, an Enablement program, or an exercise with linked content in an Enablement program. For Learning Paths, users are assigned a learning item to complete. For Enablement programs and exercises, users are assigned a program or can self-enroll in shared programs. This object is available in API version 58.0 and later.

[LearningItemAssignment](#)

Represents the assignment of a Learning Paths entry to users or groups or the enrollment of an Enablement program for a specific user. This object is available in API version 58.0 and later.

[LearningItemProgress](#)

Represents the progress that a user has made towards completing an assigned learning item, such as a Learning Paths entry or Enablement program. This object is available in API version 60.0 and later.

[LearningItemSubmission](#)

Represents a link to a resource, such as a video recording, that a user submits as part of a Feedback Request exercise in an Enablement program. For peer and manager feedback, this resource can be a recording of a user's sales pitch. For Einstein Coach feedback, this resource can be a video call, and Einstein generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach is available only in API version 61.0 and later.

[LearningItemType](#)

Represents a custom exercise type that an Enablement user takes in an Enablement program in the Guidance Center. A custom exercise type also requires a corresponding LearningItem record for the Guidance Center and corresponding EnblProgramTaskDefinition and EnblProgramTaskSubCategory records for when admins create a program in Program Builder. This object is available in API version 62.0 and later.

Standard Objects

[LearningPractice](#)

Represents a Feedback Request exercise in an Enablement program. Users can submit a sample of their work and request feedback from their peers and managers. Or, users can submit a video call and Einstein Coach generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach feedback is available only in API version 61.0 and later.

[LegalEntity](#)

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

[LicenseDefinitionCustomPermission \(Developer Preview\)](#)

Represents a licensed custom permission that controls access to a license's features when included in a custom permission set license definition. This object is available in API version 54.0 and later.

[LightningErrorEventLog](#)

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This object is available in API version 64.0 and later.

[LightningExperienceTheme](#)

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

[LightningLoggerEventLog](#)

Lightning Logger Event Log provides information from observed Lightning component logs. This object is available in API version 61.0 and later.

[LightningOnboardingConfig](#)

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

[LightningPageViewEventLog](#)

Lightning Page View event logs represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event log tracks the page a user visited, how long the user spent on the page, and the load time for the page. This object is available in API version 61.0 and later.

[LightningPrfmEventLog](#)

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This object is available in API version 65.0 and later.

[LightningToggleMetrics](#)

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

[LightningUsageByAppTypeMetrics](#)

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

[LightningUsageByBrowserMetrics](#)

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

[LightningUsageByPageMetrics](#)

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

[LightningUsageByFlexiPageMetrics](#)

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Standard Objects

[LightningExitByPageMetrics](#)

Represents frequency metrics about the standard pages within which users switched from Lightning Experience to Salesforce Classic. This object is available in API version 44.0 and later.

[LinkedArticle](#)

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

[LinkedArticleFeed](#)

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

[LinkedArticleHistory](#)

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

[ListEmail](#)

Represents a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients sent any given list email. ListEmail has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

[ListEmailIndividualRecipient](#)

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

[ListEmailSentResult](#)

Represents the results of a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. It contains transport headers and information specific to the associated send action. This object is available in API version 67.0 and later.

[ListEmailMonthlyMetric](#)

Represents the monthly engagement metrics for a single list email. This object is available in API version 49.0 and later.

[ListEmailRecipientSource](#)

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

[ListView](#)

Represents a list view. A list view shows a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

[ListViewChart](#)

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later and is accessible by portal users.

[ListViewChartInstance](#)

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

[LiveAgentSession](#)

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

Standard Objects

[LiveAgentSessionHistory](#)

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

[LiveAgentSessionShare](#)

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

[LiveChatBlockingRule](#)

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

[LiveChatObjectAccessConfig](#)

Represents the action you can perform on a specified object by the Chat API. This object is available in API version 53.0 and later.

[LiveChatObjectAccessDefinition](#)

Represents the parent record for one or more LiveChatObjectAccessConfig objects. This object is available in API version 53.0 and later.

[LiveChatButton](#)

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

[LiveChatButtonDeployment](#)

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

[LiveChatButtonSkill](#)

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

[LiveChatDeployment](#)

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

[LiveChatSensitiveDataRule](#)

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

[LiveChatTranscript](#)

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

[LiveChatTranscriptEvent](#)

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

[LiveChatTranscriptShare](#)

Represents a sharing entry on a LiveChatTranscript object. This object is available in API version 24.0 and later.

[LiveChatTranscriptSkill](#)

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

[LiveChatUserConfig](#)

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

[LiveChatUserConfigProfile](#)

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

[LiveChatUserConfigUser](#)

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

Standard Objects

[LiveChatVisitor](#)

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

[Location](#)

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

[LocationGroup](#)

Represents a group of Omnichannel Inventory locations, providing an aggregate view of inventory availability across those locations. Omnichannel Inventory can create an inventory reservation for an order at the location group level, then assign the reservation to one or more locations in the group as needed. This object is available in API version 51.0 and later.

[LocationGroupAssignment](#)

Represents the assignment of a location to a location group. This object is available in API version 51.0 and later.

[LocationShippingCarrierMethod](#)

The available shipping carrier services associated with a location or location group. Allows the assignment of different shipping methods to a specific location and enables flexibility and customization in the shipping process. This object is available in API version 61.0 and later.

[LocationTrustMeasure](#)

Represents the COVID safety protocols that your business follows. For example, enforcement of masks, social distancing, cleanliness, and capacity limits. This object is available in API version 50.0 and later.

[LocWaitlistMsgTemplate](#)

Represents a junction object connecting LocationWaitlist to MessagingTemplate. This object is available in API version 50.0 and later.

[LocationWaitlist](#)

Represents a queue created for a specific location. Multiple queues can be created for a single location. For example, you can have a queue for each sales agent or a standard queue and a queue for vulnerable groups. The specific party of people in a queue is represented by LocationWaitlistedParty. This object is available in API version 50.0 and later.

[LocationWaitlistedParty](#)

Represents a specific party of people waiting in a queue. This object is available in API version 50.0 and later.

[LoginAsEventLog](#)

LoginAsEventLog contains details about when a user logs in as another user in your org. This object is available in API version 61.0 and later.

[LoginEvent](#)

The documentation has moved to [LoginEvent](#) in the *Platform Events Developer Guide*.

[LoginEventLog](#)

Login event logs contain details about your Salesforce org's user login history. This object is available in API version 61.0 and later.

[LoginGeo](#)

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

[LoginHistory](#)

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

Standard Objects

[LoginIp](#)

Represents a validated IP address. This object is available in version 28.0 and later.

[LogoutEventLog](#)

Contains details of user sessions ending or being revoked. This object is available in API version 65.0 and later.

[LogoutEventStream](#)

The documentation has moved to [LogoutEventStream](#) in the *Platform Events Developer Guide*.

[LookedUpFromActivity](#)

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

[Macro](#)

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

[MacroInstruction](#)

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

[MacroUsage](#)

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

[MailmergeTemplate](#)

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

[MaintenanceAsset](#)

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

[MaintenancePlan](#)

Represents a preventive maintenance schedule for one or more assets in field service.

[MaintenanceWorkRule](#)

Represents the recurrence pattern for a maintenance record. This object is available in API version 49.0 and later.

[ManagedContent](#)

Represents managed content in a Salesforce CMS workspace for use in an Experience Cloud site or a channel. The ManagedContent object represents the complete instance of a managed content record. It provides a consistent identifier for the managed content so that variants of the content item can be created over time. This object is available in API version 56.0 and later.

[ManagedContentChannel](#)

Represents the details of a CMS channel. CMS channels correspond to managed content publishing endpoints. They deliver published content from your Salesforce CMS workspaces to an audience. This object is available in API version 55.0 and later.

[ManagedContentInfo](#)

Allows the creation of relationship to Product using ProductMedia. This object is available in API version 49.0 to 57.0. In API version 58.0 and later, use the ManagedContent object.

[ManagedContentSpace](#)

Represents the complete instance of a Salesforce CMS workspace that stores managed content. Users and groups with designated permissions can access and manage the content in a CMS workspace. This object is available in API version 56.0 and later.

[ManagedContentVariant](#)

Represents a variant of a managed content item. This object is available in API version 56.0 and later.

Standard Objects

[MarketingForm](#)

Represents an Account Engagement marketing form that has been synced to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

[MarketingLink](#)

Represents an Account Engagement marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

[MatchingRule](#)

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

[MatchingRuleItem](#)

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

[MerchAccPaymentMethodSet](#)

Defines an ordered list of payment methods that are available to a merchant's customer during checkout. You can configure multiple payment method sets, each designated for a specific locale, payment region, or sale channel. This object is available in API version 58.0 and later.

[MerchAccPaymentMethodType](#)

Refers to a payment method that is in a payment method set, which is defined by the `MerchAccPaymentMethodSet` object. This object is available in API version 58.0 and later.

[MerchantAccount](#)

A type of bank account that lets a merchant accept payments from a variety of payment methods, including credit or debit cards, or digital wallets. A Salesforce Payments merchant account is linked to an underlying payment gateway to process payments. This object is available in API version 56.0 and later.

[MerchantAccountEvent](#)

Represents a merchant account platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

[MessagingChannel](#)

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 40.0 and later.

[MessagingChannelSkill](#)

Junction object that represents an association between `MessagingChannel` and `Skill`. This object is available in API version 45.0 and later.

[MessagingChannelUsage](#)

Represents the status of an enhanced Messaging channel or of an application in a Unified Messaging channel. This object is available in API version 60.0 and later.

[MessagingConfiguration](#)

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

[MessagingDeliveryError](#)

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

[MessagingEndUser](#)

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 40.0 and later.

Standard Objects

[MessagingLink](#)

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

[MessagingSession](#)

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

[MessagingSessionMetrics](#)

Represents a metric gathered about a specific enhanced messaging session, such as average agent response time. This object is available starting in October 2024 in API version 62.0 and later.

[MessagingTemplate](#)

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

[MetadataApiOpEventLog](#)

MetadataApiOpEventLog stores details of Metadata API retrieval and deployment requests. This object is available in API version 62.0 and later.

[MetadataPackage](#)

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

[MetadataPackageVersion](#)

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

[Metric](#)

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

[MetricDataLink](#)

The link between the metric and the data source, such as a report.

[MigratedEmail](#)

For internal use only.

[MilestoneType](#)

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

[MktJourneyDcsnSetup](#)

Represents a collection of Marketing Cloud Engagement journeys that you can interact with by using Salesforce Flow in Marketing Cloud. This object is available in API version 65.0 and later.

[MLField](#)

Represents a single field in a data definition. This object is available in API version 50.0 and later.

[MLIntentUtteranceSuggestion](#)

Represents a customer input, used for training purposes in the feedback loop process of a conversation. Admins can add these inputs to the intent training model. This object is available in API version 51.0 and later.

[MLPredictionDefinition](#)

Represents a prediction definition that specifies details about the prediction. This object is available in API version 50.0 and later.

[MLModel](#)

Represents an AI model that can be used in Einstein Prediction Builder, Einstein Recommendation Builder, and other Einstein features. This object is available in API version 53.0 and later.

[MLModelFactor](#)

Represents a field value that has a positive or negative effect on the model's score. This object is available in API version 53.0 and later.

Standard Objects

[MLModelFactorComponent](#)

Represents information about the related MLModelFactor. For example, this object can represent a field value or a field range such as "Title = CEO" or "Annual Revenue >10000000". This object is available in API version 53.0 and later.

[MLModelMetric](#)

Represents a metric or statistic about the related model, such as accuracy, precision, or RSquared. Use a model's metrics to learn about its performance and to compare it with other models. This object is available in API version 53.0 and later.

[MLRecommendationDefinition](#)

For internal use only.

[MobileDeviceAppRegistration](#)

Represents the details provided in a mobile device registration event from an app that uses the Engagement Mobile SDK. This object is available in API version 65.0 and later.

[MobileSecurityAssignment](#)

Represents the assignment of mobile security policies to a profile. The policies apply to the Salesforce mobile app with Enhanced Mobile App Security enabled. This object is available in API version 54.0 and later.

[MobileSecurityPolicy](#)

Enables mobile security policies on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 50.0 and later.

[MobileSecurityUserMetric](#)

Represents the metrics for users who have Enhanced Mobile Security policies enforced. This object is available in API version 51.0 and later.

[MobileSettingsAssignment](#)

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

[MobSecurityCertPinConfig](#)

Configuration of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

[MobSecurityCertPinEvent](#)

The event of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

[MsgChannelLanguageKeyword](#)

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

[MsgChannelUsageExternalOrg](#)

Represents the Enterprise ID (EID) and Business Unit (MID) for Marketing Cloud connections in a Unified Messaging channel. This object is available in API version 60.0 and later.

[MyDomainDiscoverableLogin](#)

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

[MutingPermissionSet](#)

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup. This object is available in API version 46.0 and later.

[Name](#)

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

[NamedCredential](#)

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

[NamedCredentialEventLog](#)

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This object is available in API version 65.0 and later.

[NamespaceRegistry](#)

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

[NavigationLinkSet](#)

Represents the navigation menu in an Experience Cloud site. A navigation menu consists of items that users can click to go to other parts of the site. This object is available in API version 35.0 and later.

[NavigationMenuItem](#)

Represents a single menu item in a `NavigationLinkSet`. Use this object to create, delete, or update menu items in your Experience Cloud site's navigation menu. This object is available in API version 35.0 and later.

[NavigationMenuItemLocalization](#)

Represents the translated value of a navigation menu item in an Experience Cloud site. This object is available in API version 36.0 and later.

[Network](#)

Represents an Experience Cloud site. Salesforce Experience Cloud lets you create branded spaces for your employees, customers, and partners. You can customize and create experiences, whether they're communities, sites, or portals, to meet your business needs, then transition seamlessly between them. Experience Cloud sites let you share information, records, and files with coworkers and stakeholders all in one place. This object is available in API version 26.0 and later.

[NetworkActivityAudit](#)

Represents an audit trail of moderation actions in Experience Cloud sites. This object is available in API version 30.0 and later.

[NetworkAffinity](#)

Represents a junction object that associates a user profile with a `Network` object, that is, with an Experience Cloud site. Use `NetworkAffinity` to assign a default Experience Cloud site to a user profile. This object is available in API version 41.0 and later.

[NetworkAuthApiSettings](#)

Represents the settings that control enablement, access, and security for the Headless Registration Flow, Headless Forgot Password Flow, Headless Passwordless Login Flow, and their associated APIs. This object is available in API version 58.0 and later.

[NetworkDataCategory](#)

Represents data categories in Lightning Web Runtime (LWR) Experience Cloud Sites. This object is available in API version 59.0 and later.

[NetworkDiscoverableLogin](#)

Represents the Login Discoverable page from where customers and partners log in to an Experience Cloud site. Customers and partners are users with an External Identity license or any communities license for Experience Cloud. This object is available in API version 44.0 and later.

Standard Objects

[NetworkEmailTplAllowlist](#)

Represents an allowlist for the one-time password (OTP) email templates that are sent to end users during the Headless Registration Flow, the Headless Passwordless Login Flow, and the Headless Forgot Password Flow. This object is available in API version 60.0 and later.

[NetworkFeedResponseMetric](#)

Represents an object that stores the date and time values of question posts. It captures information for question creation, answer creation, and when an answer is marked as best answer. This object is available in API version 51.0 and later.

[NetworkMember](#)

Represents a member of an Experience Cloud site. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

[NetworkMemberGroup](#)

Represents a group of members in an Experience Cloud site. Members can be either users in your internal org or external users assigned portal profiles. An administrator adds members to an Experience Cloud site by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the site. This object is available in API version 26.0 and later.

[NetworkModeration](#)

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

[NetworkPageOverride](#)

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

[NetworkSelfRegistration](#)

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the admin must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

[NetworkUserHistoryRecent](#)

Represents an Experience Cloud site user's history of accessed records. This object is available in API version 42.0 and later.

[Note](#)

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

[NoteAndAttachment](#)

This read-only object contains all notes and attachments associated with an object.

[NoteTag](#)

Associates a word or short phrase with a Note.

[OAuthCustomScope](#)

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

[OAuthCustomScopeApp](#)

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

[OAuthToken](#)

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

Standard Objects

[OAuthTokenExchangeHandler](#)

Represents a token exchange handler. The token exchange handler also consists of an Apex class. During the OAuth 2.0 token exchange flow, the token exchange handler is used to validate tokens from an external identity provider and to map users to Salesforce. This object is available in API version 60.0 and later.

[OAuthTokenExchHandlerApp](#)

Represents the enablement settings for a specific Salesforce connected app or external client app that's enabled for the token exchange handler. A handler can be enabled for multiple apps. This object is available in API version 60.0 and later.

[ObjectDataImport](#)

Represents the data import status of one or more object records. This object is available in API version 57.0 and later.

[ObjectDataImportReference](#)

Represents the relationships to the associated reference objects showing the source from which the data is imported. This object is available in API version 57.0 and later.

[ObjectMetadataTag](#)

Represents a meta tag for a store page. Meta tags in HTML documents provide structured data used by search engines for ranking and to show content in search results. This object is available in API version 60.0 and later.

[ObjectPermissions](#)

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

[ObjectRelatedUrl](#)

Represents a URL slug for a Product or Category page on a B2B Commerce or D2C Commerce LWR site, or a custom object, account, or contact page on an enhanced LWR Experience Cloud site. This object is available in API version 57.0 and later.

[ObjectTerritory2AssignmentRule](#)

Represents a territory assignment rule that's associated with an object, such as Account. ObjectTerritory2AssignmentRuleItem can be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule is `null`. Available if Sales Territories has been enabled.

[ObjectTerritory2AssignmentRuleItem](#)

A single row of selection criteria for an ObjectTerritory2AssignmentRule object. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the BooleanFilter field on its corresponding ObjectTerritory2AssignmentRule object is a `null` value. Available if Sales Territories has been enabled.

[ObjectTerritory2Association](#)

Represents an association (by assignment) between a territory and an object record such as an account or a lead.

[ObjectUserTerritory2View](#)

Represents a user and object, such as an account or lead, assigned to a territory. This object is available in API version 58.0 and later.

[OmniSupervisorConfig](#)

Represents the Command Center for Service configuration for an assigned group of supervisors. This object is available in API version 41.0 and later.

[OmniSupervisorConfigAction](#)

Represents the actions available to the supervisors of a Command Center for Service configuration. This object is available in API version 56.0 and later.

[OmniSupervisorConfigGroup](#)

Represents the group of reps who are visible to the supervisors of a Command Center for Service configuration. The group, if visible, appears in the Agents tab of Command Center for Service. This object is available in API version 41.0 and later.

Standard Objects

[OmniSupervisorConfigProfile](#)

Represents the supervisor profiles to which a Command Center for Service configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

[OmniSupervisorConfigQueue](#)

Represents the queues that are visible to the supervisors of a Command Center for Service configuration. The queue, if visible, appears in the Queues Backlog and Assigned Work tabs of Command Center for Service. This object is available in API version 53.0 and later.

[OmniSupervisorConfigSkill](#)

Represents the skills that are visible to the supervisors of a Command Center for Service configuration. These skills, if visible, appear in the Skills Backlog tab of Command Center for Service. This object is available in API version 53.0 and later.

[OmniSupervisorConfigTab](#)

Represents the visible tabs specified in a Command Center for Service configuration. This object is available in API version 60.0 and later.

[OmniSupervisorConfigUser](#)

Represents the users to whom a Command Center for Service configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

[OpenActivity](#)

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

[OperatingHours](#)

Represents the hours in which a service territory, service resource, or account is available for work. OperatingHours is used by Field Service, Salesforce Scheduler, Salesforce Meetings, Sales Engagement, and Workforce Engagement. This object is available in API version 38.0 and later.

[OperatingHoursHistory](#)

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

[OperatingHoursHoliday](#)

Represents the day or hours for which a service territory and service resources exclusive to the service territory are unavailable in Salesforce Scheduler. This object is available in API version 54.0 and later.

[Opportunity](#)

Represents an opportunity, which is a sale or pending deal.

[OpportunityCompetitor](#)

Represents a competitor on an Opportunity.

[OpportunityContactRole](#)

Represents the role that a Contact plays on an Opportunity.

[OpportunityContactRoleSuggestionInsight](#)

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

[OpportunityFieldHistory](#)

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

[OpportunityHistory](#)

Represents the stage history of an opportunity.

Standard Objects

[OpportunityInsight](#)

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

[OpportunityLineItem](#)

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

[OpportunityLineItemSchedule](#)

Represents information about the quantity, revenue distribution, and delivery dates for a particular `OpportunityLineItem`.

[OpportunityLineItemSplit](#)

Represents information about an opportunity product split, including percentages, amounts, and owner. This object is available in API version 58.0 and later.

[OpportunityOwnerSharingRule](#)

Represents a rule for sharing an opportunity with users other than the owner.

[OpportunityPartner](#)

This object represents a partner relationship between an Account and an Opportunity. An `OpportunityPartner` record is created automatically when a `Partner` record is created for a partner relationship between an account and an opportunity.

[OpportunityRelatedDeleteLog](#)

Represents an audit log of the deletion of opportunity-related child records, such as opportunity team members, product splits, or opportunity splits. This object is available in API version 59.0 and later.

[OpportunityShare](#)

Represents a sharing entry on an Opportunity.

[OpportunitySplit](#)

`OpportunitySplit` credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

[OpportunitySplitType](#)

`OpportunitySplitType` provides unique labels and behavior for each split type. This object is available in API version 28.0 and later.

[OpportunityStage](#)

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

[OpportunityTag](#)

Associates a word or short phrase with an Opportunity.

[OpportunityTeamMember](#)

Represents a User on the opportunity team of an Opportunity.

[OpptyLineItemSplitType](#)

Represents an opportunity product split type. This object is available in API version 58.0 and later.

[Order](#)

Represents an order associated with a contract or an account.

[OrderAction](#)

Indicates the type of order, such as a new sale or a cancellation. This object is available in API version 55.0 and later.

[OrderAdjustmentGroup](#)

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

Standard Objects

[OrderAdjustmentGroupSummary](#)

Represents the current properties and state of a group of related price adjustments. Associated with a set of [OrderItemAdjustmentLineSummaries](#) that apply to [OrderItemSummaries](#) belonging to one [OrderSummary](#). Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

[OrderChangeLog](#)

Represents a log record of all change requests made to an order post activation. A log record is always one-to-one to change an order request. This object is available in API version 48.0 and later.

[OrderChgReasonCategMap](#)

The mapping between an order change reason and a service flow category. This object is available in API version 65.0 and later.

[OrderDeliveryGroup](#)

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address. This object is available in API version 48.0 and later.

[OrderDeliveryGroupSummary](#)

Represents the current properties and state of a group of [OrderItemSummaries](#), belonging to one [OrderSummary](#), to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that isn't guaranteed. Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

[OrderDeliveryMethod](#)

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

[OrderHistory](#)

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

[OrderItem](#)

Represents an order product that your organization sells.

[OrderItemAdjustmentLineItem](#)

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

[OrderItemAdjustmentLineSummary](#)

Represents the current properties and state of price adjustments on an [OrderItemSummary](#). Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

[OrderItemGroup](#)

Stores the group information for line items in an order. It also stores the aggregated line field information (subtotal). It contains a parent-child relationship to order. This object is available in API version 62.0 and later.

[OrderItemRecipient](#)

Represents a site, employee, or other entity for which services are being ordered. This includes essential details such as the recipient's name, contact information, and the specific site or location where the services will be provided. This object is available in API version 62.0 and later.

[OrderItemRelationship](#)

Describes a relationship between order products. This object is available in API version 58.0 and later.

Standard Objects

[OrderItemSummary](#)

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

[OrderItemSummaryChange](#)

Represents a change to an OrderItemSummary, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

[OrderItemSummaryRelationship](#)

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later. An exchange order is an OrderSummary object whose SourceProcess property is set to Exchange. An original order summary can have an exchange order, which in turn can have yet another exchange order, and so on. The OrderSummaryRelationship object maintains this relationship between OrderSummary objects.

[OrderItemTaxLineItem](#)

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

[OrderItemTaxLineItemSummary](#)

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

[OrderItemType](#)

Shows whether the order product is a product line or charge line. This object is available in API version 48.0 and later.

[OrderOwnerSharingRule](#)

Represents a rule which determines order sharing access for the order's owners.

[OrderPaymentSummary](#)

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

[OrderPaymentSummaryReference](#)

OrderPaymentSummaryReference is a junction object that allows an order payment summary to be shared with another order summary. This object is available in API version 60.0 and later.

[OrderShare](#)

Represents a sharing entry on an Order. This object is available in API version 48.0 and later.

[OrderStatus](#)

Represents the status of the order entity. This object is available in API version 48.0 and later.

[OrderSummary](#)

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

[OrderSummaryAdditionalInfo](#)

Stores information related to OrderSummary including context around the order, such as inventory reservation details, order origination, and other values that Einstein uses to perform order analysis. Only reservation details can be stored in this object. This object is available in API version 58.0 and later.

[OrderSummaryRelationship](#)

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later.

Standard Objects

[OrderSummaryRoutingSchedule](#)

Represents an attempt to route an order summary to one or more inventory locations for fulfillment. You can use it to schedule future attempts and to record completed attempts. This object is available in API version 51.0 and later.

[Organization](#)

Represents key configuration information for an organization.

[OrgDeleteRequest](#)

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

[OrgEmailAddressSecurity](#)

Defines the assignment of a user profile to an org-wide email address. This object is available in API version 58.0 and later.

[OrgMetric](#)

Represents a feature or metric that Salesforce Optimizer evaluates. This object is available in API version 47.0 and later.

[OrgMetricScanResult](#)

Represents data or an item associated with a feature's results in a Salesforce Optimizer evaluation. For example, for the Custom Field Limit feature, an OrgMetricScanResult object represents an object flagged for approaching the custom field limit. This object is available in API version 47.0 and later.

[OrgMetricScanSummary](#)

Represents the results summary for a specific feature in a Salesforce Optimizer evaluation. This object is available in API version 47.0 and later.

[OrgSnapshot](#)

Represents a snapshot of a scratch org. Snapshots capture the state of a scratch org so that you can use it to quickly spin up new scratch orgs using its configuration. This object is available in API version 61.0 and later.

[OrgWideEmailAddress](#)

Represents an organization-wide email address for user profiles.

[OSAsyncChgCompletedEvent](#)

An event that allows the processing of the credit memo, invoices, and other entities after a bulk action has successfully completed. The event provides all of the values that would exist on the synchronous APIs. This object is available in API version 63.0 and later.

[OutOfOffice](#)

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

[OutgoingEmail](#)

For internal use only.

[OutgoingEmailRelation](#)

For internal use only.

[OwnedContentDocument](#)

Represents a file owned by a user. This object is available in version 30.0 and later.

[OwnerChangeOptionInfo](#)

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the OwnerChangeOptionInfo object in Tooling API instead. For more information, see [OwnerChangeOptionInfo](#) in the Tooling API.

Standard Objects

[PackageInstallEventLog](#)

PackageInstallEventLog stores details about package installation in the organization. This object is available in API version 62.0 and later.

[PackageLicense](#)

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

[PackagePushError](#)

Represents an error encountered during a push request. The number of PackagePushError records created depends on the number of push jobs in the request that result in an error.

[PackagePushJob](#)

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

[PackagePushRequest](#)

Represents the push request for upgrading a package in one or many orgs from one version to another version.

[PackageSubscriber](#)

Represents an installation of a package in an org. This object contains installation information for managed or unlocked packages developed in the org you're logged in to.

[Participant](#)

Represents a participant in a ConversationParticipant. An existing or new Participant is referenced each time a new ConversationParticipant is created. This object is available in API version 57.0 and later.

[Partner](#)

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

[PartnerFundAllocation](#)

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

[PartnerFundClaim](#)

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

[PartnerFundRequest](#)

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

[PartnerMarketingBudget](#)

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

[PartnerNetworkConnection](#)

Represents a Salesforce to Salesforce connection between Salesforce organizations.

[PartnerNetworkRecordConnection](#)

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

[PartnerNetworkSyncLog](#)

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

Standard Objects

[PartnerRole](#)

Represents a role for an account Partner, such as consultant, supplier, and so on.

[PartyConsent](#)

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

[Payment](#)

Represents a single event when a shopper makes a payment. For credit cards, this event is a payment capture or payment sale, but it doesn't appear on the shopper's credit card statement. This object is available in API version 48.0 and later.

[PaymentAuthAdjustment](#)

Shows information about an adjustment made to an authorized transaction. This object is available in API version 51.0 and later.

[PaymentAuthorization](#)

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

[PaymentCredit](#)

Tracks the amount of money returned to the customer. The return can be a store credit, a gift card, or another type of credit. It's linked to the original payment record and includes the total credit amount issued. This object is available in API version 65.0 and later.

[PaymentCreditLinePayment](#)

A payment credit line payment. This object is available in API version 65.0 and later.

[PaymentCreditTransaction](#)

A payment credit transaction. This object is available in API version 65.0 and later.

[PaymentGateway](#)

Platform object that represents the connection to an external payment gateway. This object is available in API version 48.0 and later.

[PaymentGatewayLog](#)

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

[PaymentGatewayProvider](#)

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

[PaymentGroup](#)

Top-level object that groups all payment transactions that are processed for an order or invoice. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

[PaymentInitiationSource](#)

Represents the originating source of a payment. This information helps other Salesforce products integrate with Salesforce Payments. This object is available in API version 63.0 and later.

[PaymentIntent](#)

Represents data temporarily stored during a transaction's lifecycle that can identify the buyer, the merchant, and the amount the buyer is sending to the merchant. Data such as timestamp and amount returned can also be stored in PaymentIntent. This object is available in API version 58.0 and later.

[PaymentIntentEvent](#)

Represents a payment intent platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

Standard Objects

[PaymentLineInvoice](#)

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

[PaymentLink](#)

A link that a merchant can share with customers to collect payments for products and services. The payment link, which you can embed into a Salesforce app or send directly to a customer, directs the customer to a Pay Now payment page. The page can show a total amount owed or an itemized list of products, shipping and tax charges, and a total amount owed. The customer enters their contact and payment details, and submits their payment. The amounts are shown in the store's currency. This object is available in API version 58.0 and later.

[PaymentLinkEvent](#)

Represents a payment link platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

[PaymentMethod](#)

Represents the method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

[PymtSchdDistributionMethod](#)

Indicates how the total payment is divided into partial payments. This object is available in API version 56.0 and later.

[PaymentScheduleTreatmentDtl](#)

Contains configuration information for the payment schedule treatment detail. This object is available in API version 56.0 and later.

[PaymentTerm](#)

Defines your company's method and expectations for receiving payment. This object is available in API version 55.0 and later.

[PaymentTermItem](#)

Defines the attributes of a payment term that your company uses. The PaymentTermItem is used to determine the due date on invoices. This object is available in API version 55.0 and later.

[PaymentSchedule](#)

The payment schedule represents a collection of payments that a customer wants to collect at different times for a certain record. A schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

[PaymentScheduleItem](#)

A payment schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

[PaymentSchedulePolicy](#)

Contains configuration information for the payment schedule policy. This object is available in API version 56.0 and later.

[PaymentScheduleTreatment](#)

Contains configuration information for the payment schedule. This object is available in API version 56.0 and later.

[PendingOrderSummary](#)

Object representing a B2C Commerce order ingested via High Scale Orders before an OrderSummary is created for it. Optimized for online transaction processing (OLTP). This object is available in API version 55.0 and later.

Standard Objects

[PendingServiceRouting](#)

Represents the routing details of a work item that's waiting to be routed or assigned. This object is available in API version 40.0 and later.

[PendingServiceRoutingInteractionInfo](#)

Represents PendingServiceRouting interaction information that's used when work is routed to an agent. For a screen pop, it specifies which records to open when work is routed to an agent from a specific channel. PendingServiceRoutingInteractionInfo is read-only. This object is available in API version 53.0 and later.

[Period](#)

Represents a fiscal period defined in FiscalYearSettings.

[PermissionSet](#)

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

[PermissionSetAssignment](#)

Represents a user's assignment to a permission set or permission set group. This object is available in API version 22.0 and later.

[PermissionSetGroup](#)

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

[PermissionSetGroupComponent](#)

A junction object that relates the PermissionSetGroup and PermissionSet objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

[PermissionSetLicense](#)

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

[PermissionSetLicenseAssign](#)

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

[PermissionSetLicenseDefinition \(Developer Preview\)](#)

Represents the definition of a custom permission set license, which entitles specified features in a package. This object is available in API version 54.0 and later.

[PermissionSetTabSetting](#)

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

[PersnlBatchDecision](#)

Represents a batch personalization that delivers personalization decisions (content or recommendations) to a customer segment. Available in API version 64.0 and later.

[PersonAccountOwnerPowerUser](#)

Represents a user who can own more than 50,000 customer or partner portal accounts. Person account owner power users can own a large number of either customer or partner users. Their role can't be changed and they must be at the root of the role hierarchy. Person account owner power user objects can't be created if deferred sharing is turned on for your org. Person account owner power user objects can be created while deferred sharing is turned off for an org. Deferred sharing can be turned back on after person account owner power user objects have been created. This object is available in API version 57.0 and later.

[PersonalOrgInfo](#)

Represents the information for a Tableau Next personal org. This object is available in API version 64.0 and later.

Standard Objects

[PersonalizationDecision](#)

Represents a set of targeting rules within a personalization point that determine an individual's eligibility to receive personalized content and the content to deliver. Available in API version 62.0 and later.

[PersonalizationObjective](#)

Represents a specific business outcome that you want to achieve when creating a recommender. Available in API version 62.0 and later.

[PersonalizationPoint](#)

Represents a specific touch point in an experience where a personalization decision can be made. It connects a data space, profile data graph, personalization type, and response template to deliver personalized content at that time in a customer journey. Available in API version 62.0 and later.

[PersonalizationSchema](#)

Represents a personalization response template that's used when you build a personalization decision. Available in API version 62.0 and later.

[PersonalizationTargetInfo](#)

Represents a target for an audience. This object is available in API version 47.0 and later.

[PermissionUpdateEventLog](#)

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups. This object is available in API version 65.0 and later.

[PersonTraining](#)

Represents an assignment of a learning module in Workforce Engagement. This object is available in API version 54.0 and later.

[PicklistValueInfo](#)

Represents the active picklist values for a given picklist field. This object is available in API version 40.0 and later.

[PickTicket](#)

A PickTicket represents quantities of one or more products to be picked for fulfillment at a location. It can include products belonging to one or more fulfillment orders. This object is available in API version 57.0 and later.

[PickTicketAssignment](#)

Represents the association of a FulfillmentOrder with a PickTicket. A PickTicket has one PickTicketAssignment for each FulfillmentOrder containing products to be picked as part of that PickTicket. This object is available in API version 57.0 and later.

[PickTicketProduct](#)

Represents a quantity of a product to be picked as part of a PickTicket. It can include quantities for multiple FulfillmentOrders. This object is available in API version 57.0 and later.

[PipelineInspectionListView](#)

Represents a pipeline view, an intelligence view, or a saved filter. A pipeline view shows a set of opportunity records, based on specific criteria. An intelligence view shows a set of account, lead, or contact records, based on specific criteria. This object is available in API version 53.0 and later.

[PipelineInspectionSumField](#)

Use this object to learn which field from the opportunity object is used to aggregate Pipeline Inspection metrics on a pipeline view. This object is available in API version 56.0 and later.

[PipelineInspMetricConfig](#)

Represents the configuration of a forecast category metric that appears in the Pipeline Inspection view. This object is available in API version 55.0 and later.

Standard Objects

[PipelineInspMetricConfigLocalization](#)

Represents the translated label of a Pipeline Inspection metric. This object is available in API version 55.0 and later.

[PlatformAction](#)

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

[PlatformEventUsageMetric](#)

Contains usage data for event publishing and delivery to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays. If Enhanced Usage Metrics isn't enabled, usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. In API 58.0 and later, you can enable Enhanced Usage Metrics to get usage data by event name and client for granular time intervals. PlatformEventUsageMetric contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

[PlatformStatusAlertEvent](#)

The documentation has moved to [PlatformStatusAlertEvent](#) in the *Platform Events Developer Guide*.

[PortalDelegablePermissionSet](#)

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

[PresenceConfigDeclineReason](#)

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

[PresenceDeclineReason](#)

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

[PresenceUserConfig](#)

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

[PresenceUserConfigProfile](#)

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

[PresenceUserConfigUser](#)

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

[PriceAdjustmentGroupShape](#)

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object is available in API version 57.0 and later.

[PriceAdjustmentItemShape](#)

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object is available in API version 57.0 and later.

[PriceAdjustmentSchedule](#)

Represents a series of discounts offered depending on your product's configuration, quantity, and when they're purchased in combination with other products. This object is available in API version 47.0 and later.

[PriceAdjustmentTier](#)

Represents a discount tier in a price adjustment schedule. This object is available in API version 47.0 and later.

[Pricebook2](#)

Represents a price book that contains the list of products that your org sells.

Standard Objects

[Pricebook2History](#)

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version 66.0 and later.

[PricebookEntry](#)

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

[PricebookEntryAdjustment](#)

Read-only junction object created when you associate a price adjustment schedule with a price book entry. This object is available in API version 47.0 and later.

[PriceProtectionExecution](#)

Represents an instance of running the price protection process, capturing execution time, status, and the effective date of price changes. This object is available in API version 63.0 and later.

[PriceProtectExecLineItem](#)

Represents a line item created as part of a Price Protection Execution. This object is available in API version 63.0 and later.

[PriceProtectionTerm](#)

Represents a configuration record that defines the rules, types, and eligible conditions for price protection. This object is available in API version 63.0 and later.

[PrivacyHold](#)

Represents a Privacy Hold that indicates that a record should be preserved from masking or deletion by Data Management policies in Privacy Center. This object is available in API version 59.0 and later.

[PrivacyHoldReason](#)

Represents the business or legal purpose for why a record has a Privacy Hold. This object is available in API version 59.0 and later.

[PrivacyJobSession](#)

Represents the status of past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

[PrivacyObjectSession](#)

Represents the status of each object being processed in past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

[PrivacyRequest](#)

See details and monitor the status of Data Subject Access Requests made in Privacy Center. This object is available in API version 54.0 and later.

[PrivacyRTBRequest](#)

Represents a Right to Be Forgotten Request made in Privacy Center. This object is available in API version 59.0 and later.

[PrivacySessionRecordFailure](#)

Represents error messages encountered during policy job executions in Privacy Center. This object is available in API version 59.0 and later.

[Problem](#)

Problems represent the root cause data of one or more incidents. This object contains all the details of a problem, documenting the history of the problem from detection to closure. This object is available in API version 53.0 and later.

[ProblemIncident](#)

Represents a junction object that relates a Problem to an Incident. This object is available in API version 53.0 and later.

[ProblemRelatedItem](#)

Represents a junction object that relates a Problem to an Asset. This object is available in API version 53.0 and later.

Standard Objects

[ProcessDefinition](#)

Represents the definition of a single approval process.

[ProcessException](#)

Represents a business exception, such as a processing failure on an order summary. A separate process is required to resolve the failure that caused the process exception before processing can continue. This object is available in API version 50.0 and later.

[ProcessFlowMigration](#)

Represents a process's migrated criteria and the resulting migrated flow. This object is available in API version 58.0 and later.

[ProcessInstance](#)

Represents an instance of a single, end-to-end approval process. Use this and the node, step, and workitem process instance objects to create approval history reports.

[ProcessInstanceHistory](#)

This read-only object shows all steps and pending approval requests associated with an approval process (ProcessInstance).

[ProcessInstanceNode](#)

Represents a step in an instance of an approval process. Compare to ProcessNode, which describes the step in a process definition. Use this object to retrieve approval history.

[ProcessInstanceStep](#)

Represents one work item in an approval process (ProcessInstance).

[ProcessInstanceWorkitem](#)

Represents a user's pending approval request.

[ProcessNode](#)

Describes a step in a process definition. Compare to ProcessInstanceNode, which describes a step in a running process. This object is available in API version 31.0 and later.

[ProducerCommission](#)

Represents a producer's commission for an insurance policy. The commission can be calculated from the commissionable transactions or can be populated from an external system. This object is available in API version 51.0 and later.

[Product2](#)

Represents a product that your company sells.

[Product2DataTranslation](#)

Represents the translated values of the data stored within a [Product2](#) record's fields. This object is available in API version 45.0 and later.

[ProductAttribute](#)

Represents the attributes that can be associated with a product. This object is available in API version 50.0 and later.

[ProductAttributeSet](#)

Represents a group of attributes that can be associated with a product. This object is available in API version 50.0 and later.

[ProductAttributeSetItem](#)

Represents a set of attributes that can be associated with a product. This object is available in API version 50.0 and later.

[ProductAttributeSetProduct](#)

Represents the product associated with a set of attributes. This object is available in API version 50.0 and later.

[ProductCatalog](#)

The container that holds a Product Category hierarchy. This object is available in API version 55.0 and later.

Standard Objects

[ProductCategory](#)

Represents the category that products are organized in. This object is available in API version 49.0 and later.

[ProductCategoryProduct](#)

Holds the relation between product and product category to assign products to a category. This object is available in API version 55.0 and later.

[ProductCategoryDataTranslation](#)

Represents the translated values for the data stored within a [ProductCategory](#) record's fields. This object is available in API version 46.0 and later.

[ProductComponentGroup](#)

Represents the logical grouping of associated products in a bundle and the products' arrangement policy (group cardinality). This object is available in API version 58.0 and later.

[ProductConsumed](#)

Represents an item from your inventory that was used to complete a work order or work order line item in field service.

[ProductDetectedPriceChange](#)

Represents a detected change in price for a product associated with a partner account. This object is available in API version 63.0 and later.

[ProductEntitlementTemplate](#)

Represents predefined terms of customer support (Entitlement) that users can add to products (Product2).

[ProductFeaturedProduct](#)

Represents the user-defined collection of featured products that are meant to cross-sell or upsell with your product. This object is available in API version 64.0 and later.

[ProductItem](#)

Represents the stock of a particular product at a particular location in field service, such as all bolts stored in your main warehouse.

[ProductItemTransaction](#)

Represents an action taken on a product item in field service. Product item transactions are auto-generated records that help you track when a product item is replenished, consumed, or adjusted.

[ProductMedia](#)

Represents the rich media, including images and attachments, that can be added to products. This object is available in API version 49.0 and later.

[ProgramProduct](#)

Represents a junction between Program and Product2. This will hold Product2 values related to a Program. This object is available in API version 58.0 and later.

[ProductQuantityRule](#)

Represents the relationship between a quantity rule and a product. This object assigns quantity rules to a product. This object is available in API version 51.0 and later.

[ProductRelatedComponent](#)

Represents a product that is included in a product bundle, a set, or a product and an add-on. This object is available in API version 57.0 and later.

[ProductRelationshipType](#)

Defines the relationship between two sales transaction items. For example, defines a relationship between a bundle and a bundle component. This object is available in API version 57.0 and later.

Standard Objects

[ProductRequest](#)

Represents an order for a part or parts in field service.

[ProductRequestLineItem](#)

Represents a request for a part in field service. Product request line items are components of product requests.

[ProductRequired](#)

Represents a product that is needed to complete a work order or work order line item in field service.

[ProductSellingModel](#)

Defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a term-defined subscription. If the product is sold on subscription, this object defines the subscription's term. A product can have multiple product selling models. This object is available in API version 55.0 and later.

[ProductSellingModelOption](#)

A junction object between Product Selling Model and Product2. This object is available in API version 55.0 and later.

[ProductServiceCampaign](#)

Represents a set of activities to be performed on a product service campaign asset, such as a product recall for safety issues or product defects. This object is available in API version 51.0 and later.

[ProductServiceCampaignItem](#)

Represents a product service campaign's asset. This object is available in API version 51.0 and later.

[ProductServiceCampaignItemStatus](#)

Represents a status for a product service campaign item in field service. This object is available in API version 51.0 and later.

[ProductServiceCampaignStatus](#)

Represents a status for a product service campaign in field service. This object is available in API version 51.0 and later.

[ProductTransfer](#)

Represents the transfer of inventory between locations in field service.

[ProductWarrantyTerm](#)

Defines the relationship between a product or product family and warranty term. This object is available in API version 50.0 and later.

[Profile](#)

Represents a profile, which defines a set of permissions to perform different operations. Operations can include creating a custom profile or querying, adding, updating, or deleting information.

[ProfileSkill](#)

Represents a profile skill, which describes a user's professional knowledge. This is a global record for the organization, and users are associated through the ProfileSkillUser object.

[ProfileSkillEndorsement](#)

Represents a detail relationship of ProfileSkillUser. An endorsement of a profile skill shows approval and support of another user's publicly declared skill.

[ProfileSkillShare](#)

Represents a sharing entry on a ProfileSkill.

[ProfileSkillUser](#)

Represents a detail relationship of User. The object connects profile skills with users.

[ProgramRebateType](#)

Represents a rebate structure associated with a Rebate Program. This object is available in API version 63.0 and later.

Standard Objects

[Promotion](#)

Represents a promotion for B2B or D2C stores. This object is available in API version 52.0 and later.

[PromotionLineItemRule](#)

Lists compound conditions about a promotion. This object is available in API version 59.0 and later.

[PromotionMarketSegment](#)

Represents a market segment within B2B Commerce that promotions can be assigned to. This object is available in API version 52.0 and later.

[PromotionQualifier](#)

Represents the product, product category, or order that you want to target with your promotion qualifier in a B2B or D2C store. This object is available in API version 52.0 and later.

[PromotionSegment](#)

Represents a promotion segment, which you can assign to different stores or buyer groups, allowing them to access the promotion. This object is available in API version 52.0 and later.

[PromotionSegmentBuyerGroup](#)

Represents a promotion segment, associated with a buyer group, and used for B2B Commerce. This object is available in API version 52.0 and later.

[PromotionSegmentSalesStore](#)

Represents a promotion segment, associated with a store, and used for B2B Commerce. This object is available in API version 52.0 and later.

[PromotionTarget](#)

Represents the product, product category, or order that you want to target with your promotion in a B2B Store or D2C store. This object is available in API version 52.0 and later.

[PromotionTier](#)

Represents a tier of a promotion that includes multiple tiers. A promotion can have up to 10 tiers. This object is available in API version 57.0 and later.

[Prompt](#)

Represents record details about an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

[PromptAction](#)

Represents how the user interacted with the in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

[PromptError](#)

Represents the error or warning associated with the PromptAction. Available in API version 52.0 and later.

[PromptActionOwnerSharingRule](#)

Represents a rule which determines `PromptAction` sharing access for the owners. Available in API version 46.0 and later.

[PromptActionShare](#)

Represents a sharing entry on a prompt action record. Available in API version 46.0 and later.

[PromptLocalization](#)

Represents the translated value of a label for record details about in-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

[PromptVersion](#)

Represents an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Standard Objects

[PromptVersionLocalization](#)

Represents the translated value of a label for-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

[Prospect](#)

Represents a prospect. A prospect is an individual who has shared contact information, but isn't yet qualified. This object is available in API version 63.0 and later.

[ProspectingAgentDataSource](#)

For internal use only.

[ProspectingAgentRcmdTarget](#)

Represents prospecting information suggested by generative AI. This object is available in API version 66.0 and later.

[ProspectingAgentSpec](#)

For internal use only.

[ProspectingAgentSpecParm](#)

For internal use only.

[ProspectingAgentUserSpec](#)

For internal use only.

[ProrationPolicy](#)

Defines how the price of a subscription is divided into time periods and how the price is calculated for each time period. This object is available in API version 55.0 and later.

[PublicComplaint](#)

Represents the complaints submitted by public users. This object is available in API version 49.0 and later.

[PurchaseQuantityRule](#)

Represents a rule that restricts the quantity of a product that can be purchased. The rule can be an increment, minimum, or maximum rule. This object is available in API version 52.0 and later.

[PushTopic](#)

Represents a query that is the basis for notifying Streaming API clients of changes to records in an org. This object is available in API version 21.0 and later.

[PushUpgradeCustomization](#)

Customized push upgrades allow a package subscriber to block push upgrades to their org. Package developers control which subscribers can opt into customized push upgrades. Each push upgrade customization maps to a specific package and to a specific subscriber org. This object is available in API version 60.0 and later.

[QueuedExecutionEventLog](#)

Queued Execution events contain details about queued executions—for example, batch Apex. This object is available in API version 65.0 and later.

[QueueRoutingConfig](#)

Represents the settings that determine how work items are routed to agents. This object is available in API version 32.0 and later.

[Question](#)

Represents a question in a zone that users can view and reply to.

[QuestionDataCategorySelection](#)

A data category selection represents a data category that classifies a question.

[QuestionReportAbuse](#)

Represents a user-reported abuse on a Question in a Chatter Answers zone. This object is available in API version 24.0 and later.

Standard Objects

[QuestionSubscription](#)

Represents a subscription for a user following a Question. This object is available in API version 24.0 and later.

[QueueSubject](#)

Represents the mapping between a queue Group and the types associated with the queue, including custom objects.

[QuickText](#)

This object stores a snippet of text that allows users to send a quick response to a customer. Use quick text to create greetings, answers to common questions, short notes, and more. This object is available in API version 24.0 and later.

[QuickTextUsage](#)

Represents the usage of quick text on a record, including which quick text was used, who used it, and how they used it. Quick text is a snippet of text that allows users to send a quick response to a customer. This object is available in API version 47.0 and later.

[Quote](#)

Represents a quote, which is a record showing proposed prices for products and services. Available in API version 18.0 and later.

[QuoteAction](#)

Indicates the type of sales transaction that's being quoted; for example, a renewal sale. This object is available in API version 59.0 and later.

[QuoteAdjustmentGroup](#)

Group containing a set of adjustments applied to a quote. This object is available in API version 58.0 and later.

[QuoteDocument](#)

Represents a quote in document format. Available in API version 18.0 and later.

[QuoteLineGroup](#)

Stores the group information for line items in a quote. It also stores the aggregated line field information (subtotal). It contains a parent-child relationship to quote. This object is available in API version 61.0 and later.

[QuoteLineItem](#)

Represents a quote line item, which is a member of the list of Product2 products associated with a quote, along with other information about those line items on that quote. Available in API version 18.0 and later.

[QuoteLineItemRecipient](#)

Represents a site, employee, or other entity for which services are being quoted. This could include details such as the recipient's name, contact information, associated site or location, and any specific requirements or preferences for the quoted services. This object is available in API version 62.0 and later.

[QuoteLinePriceAdjustment](#)

Indicates the calculated price adjustment that is applied to the quote line, for example, a calculated volume discount or the prorated value of a manual discount. Use the quote line price adjustment to inform potential customers about the type, value, and total amount of their discounts. This object is available in API version 56.0 and later.

[QuoteLineRelationship](#)

Describes the relationship between quote line items, such as items in a bundle. When you create a QuoteLineRelationship object, it's immutable: it can't be edited or removed. This object is available in API version 58.0 and later.

[QuoteItemTaxItem](#)

The tax that is applied to a quote line item. This object is available in API version 55.0 and later.

[QuoteLineWorkSource](#)

Represents an association between a quote and work sources, such as assets, quote line items, order products, or work type groups. This object is available in API version 63.0 and later.

Standard Objects

[QuoteRecipientGroup](#)

Represents a recipient group for which offers or products with the same configuration are being added. This also includes reusing these groups to add or remove recipients. This object is available in API version 64.0 and later.

[QuoteRecipientGroupMember](#)

Represents a junction between a quote line item recipient and a quote recipient group. This object is available in API version 64.0 and later.

[RecentFieldChange](#)

Use this virtual object to see how an opportunity has changed in the past seven days. Learn the previous value of a field, who made the change, and when the change was made. This object is available in API version 52.0 and later.

[RecentlyViewed](#)

Represents records or list views that the current user has recently viewed or referenced (by viewing a related record). List views are available in API version 29.0 and later.

[Recommendation](#)

Represents the recommendations surfaced as offers and actions for Einstein Next Best Action. This object is available in API version 45.0 and later.

[RecommendationResponse](#)

Represents the user responses to a presented offer or recommendation for Einstein Next Best Action. This object is available in API version 51.0 and later.

[RecordAction](#)

Represents a relationship between a record and an action, such as a flow. Create a RecordAction for every action that you want to associate with a particular record. Available in API version 42.0 and later.

[RecordActionHistory](#)

Represents the lifecycle of a RecordAction as it goes through different states. Available in API version 44.0 and later.

[RecordsetFilterCriteria](#)

Represents a set of filters that can be used to match service appointments or assets based on your criteria fields. For example, you can create recordset filter criteria so that only service appointments that satisfy the filter criteria are matched to the filtered shifts, and likewise only maintenance work rules that satisfy your criteria are matched to assets. This object is available in API version 50.0 and later. Assets and maintenance work rules are available in API version 52.0 and later.

[RecordsetFilterCriteriaRule](#)

Represents a rule using fields from the designated source object to create filters on the filtered, or target, object. RecordsetFilterCriteriaRule is associated with the RecordsetFilterCriteria object. This object is available in API version 50.0 and later.

[RecordsetFiltrCritMonitor](#)

Monitors whether the value of an asset attribute is within the threshold of a recordset filter criteria (RFC). You can monitor one or more RFCs for an Asset. This object is available in API version 57.0 and later.

[RecordType](#)

Represents a record type.

[RecordTypeLocalization](#)

Represents the translated value of a label for a record type when the Translation Workbench is enabled for your organization.

[RecordVisibility \(Pilot\)](#)

Represents the visibility attributes that determine a record's read access. This object is read only and is available in API version 46.0 and later.

Standard Objects

[RedirectWhitelistUrl](#)

Represents a trusted URL for external user redirections. Redirections to a different Salesforce org, including its publicly served pages and content, are allowed from your Salesforce org only when the URL is a [RedirectWhitelistUrl](#). For non-Salesforce URLs, a session setting controls whether redirections from pages and components built in Salesforce Classic are restricted to [RedirectWhitelistUrl](#) objects. Except for cross-org redirections, you can't restrict redirections that originate from pages and components built with Lightning Experience. This object is available in API version 48.0 and later.

[Refund](#)

Represents a refund made against a payment. This object is available in API version 48.0 and later.

[RefundLinePayment](#)

A refund line that has been applied to a payment. This object is available in API version 48.0 and later.

[RegisteredExternalService](#)

Represents a registered external service used for checkout integrations by data integrators. This object is available in API version 49.0 and later.

[RelatedListColumnDefinition](#)

Represents information about a column in a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

[RelatedListDefinition](#)

Represents information about a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

[RemoteKeyCalloutEvent](#)

The documentation has moved to [RemoteKeyCalloutEvent](#) in the *Platform Events Developer Guide*.

[Reply](#)

Represents a reply that a user has submitted to a question in an answers zone.

[ReplyEmailSettings](#)

Represents a reply mail management configuration, which is used to configure emails that are received by an email sending domain. This object is available in API version 62.0 and later.

[ReplyReportAbuse](#)

Represents a user-reported abuse on a Reply in a Chatter Answers zone. This object is available in API version 24.0 and later.

[ReplyText](#)

A text reply generated by Einstein Reply Recommendations that is based on closed chat transcripts. Admins review replies and publish them to quick text, editing them as needed. Einstein recommends relevant published replies to support agents in the Lightning Service Console, and agents can insert replies into chats or messaging sessions. This object is available in API version 49.0 and later.

[Report](#)

Represents a report, a set of data that meets certain criteria, displayed in an organized way. Access is read-only. This object is available in API version 20.0 and later.

[ReportEventLog](#)

Report event logs contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, and additional information. For example, it has user activity for reports exported as both Formatted Report and Details Only output. This object is available in API version 61.0 and later.

Standard Objects

[ReportExportEventLog](#)

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type. This object is available in API version 65.0 and later.

[ReportTag](#)

Associates a word or short phrase with a Report. This object is available in API version 20.0 and later.

[ReputationLevel](#)

Represents a reputation level defined for an Experience Cloud site. This object is available in API version 32.0 and later.

[ReputationLevelLocalization](#)

Represents the translated value of a reputation level. Reputation level localization only applies for reputation levels in Experience Cloud sites. This object is available in API version 35.0 and later.

[ReputationPointsRule](#)

Represents the reputation point rules for an Experience Cloud site. Each rule specifies an action that members can earn points from and the points associated with those actions in a particular site. This object is available in API version 32.0 and later.

[ResourceAbsence](#)

Represents a time period in which a service resource is unavailable to work in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

[ResourcePreference](#)

Represents an account's preference for a specified service resource on field service work.

[RestApiEventLog](#)

REST API event logs contain details about REST-specific requests. This object is available in API version 61.0 and later.

[RetentionStoreUsage](#)

Represents the total usage of the org's retention store measured at specific points in time. This object is available in API version 66.0 and later.

[ReturnOrder](#)

Represents the return or repair of inventory or products in Field Service, or the return of order products in Order Management. This object is available in API version 42.0 and later.

[ReturnOrderItemAdjustment](#)

Represents a price adjustment on a return order line item. This object is available in API version 50.0 and later.

[ReturnOrderItemTax](#)

Represents the tax on a return order line item or return order item adjustment. This object is available in API version 50.0 and later.

[ReturnOrderLineItem](#)

Represents a specific product that is returned or repaired as part of a return order in Field service, or a specific order item that is returned as part of a return order in Order Management. This object is available in API version 42.0 and later.

[ReturnOrderOwnerSharingRule](#)

Represents the rules for sharing a return order with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 42.0 and later.

[RevenueAsyncOperation](#)

Represents the status of an asynchronous process initiated by a REST request in Subscription Management. This object is available in API versions 57.0 to 59.0. Use AsyncOperationTracker instead of RevenueSyncOperation in API version 59.0 and later.

Standard Objects

[RevenueTransactionErrorLog](#)

Contains information about errors that occurred while processing a request. The error record persists until another error with the same category, primary record, and (optionally) related record occurs. This object is available in API version 55.0 and later.

[RpaFlowResultEvent](#)

Reserved for future use.

[RpaRobot](#)

Reserved for future use.

[RpaRobotAsgnMaintWindow](#)

Reserved for future use.

[RpaRobotAsgnSessionInf](#)

Reserved for future use.

[RpaRobotDefinition](#)

Reserved for future use.

[RpaRobotMaintWindow](#)

Reserved for future use.

[RpaRobotMaintWindowDef](#)

Reserved for future use.

[RpaRobotPool](#)

Reserved for future use.

[RpaRobotPoolAsgnRobot](#)

Reserved for future use.

[RpaRobotPoolDefinition](#)

Reserved for future use.

[RpaRobotPoolFlowAsgn](#)

Reserved for future use.

[RpaRobotSessionInfo](#)

Reserved for future use.

[RpaRobotSessionInfoDef](#)

Reserved for future use.

[RuleTerritory2Association](#)

Represents a record-assignment rule and its association to an object, such as Account. Available if Sales Territories has been enabled.

[SalesAIScoreCycle](#)

Represents the cycle type and ID used to score records. This object is available in API version 47.0 and later.

[SalesAIScoreModelFactor](#)

Represents the factors that Sales Cloud Einstein uses to build a scoring model. Scoring models are used by features, such as Opportunity Scoring, to score individual records. This object is available in API version 47.0 and later.

[SalesforceLoginAsEventLog](#)

Salesforce LoginAs Event provides details about the Salesforce User's login into Customer Org as Customer's authorized user. This object is available in API version 65.0 and later.

Standard Objects

[SalesChannel](#)

Represents the origin of an order. For example, a web storefront, physical store, marketplace, or mobile app. If you integrate Salesforce Order Management with Salesforce B2C Commerce, set up a SalesChannel corresponding to each Site in your B2C Commerce implementation. This object is available in API version 48.0 and later.

[SalesforceContract](#)

Read-only virtual object used in the Your Account App. Represents contract information related to your organization's Salesforce subscription.

[SalesforceInvoice](#)

Read-only virtual object used in the Your Account App. Represents information about your organization's invoices with Salesforce.

[SalesforcePayment](#)

Read-only virtual object used in the Your Account App. Represents information about payments related to your organization's Salesforce invoice.

[SalesforceQuote](#)

Read-only virtual object used in the Your Account App. Represents information about your organization's quotes with Salesforce.

[SalesStoreCatalog](#)

Represents the catalog associated with a store. This object is available in API version 49.0 and later.

[SalesTransactionItemShape](#)

Defines the business logic for a sales transaction shape item, for example, an item in an order. This object is available in API version 57.0 and later.

[SalesTransactionShape](#)

Defines the business logic for a sales transaction; for example, an order, a quote, or a cart. This object is available in API version 57.0 and later.

[SalesTransactionType](#)

Represents the type of sales transaction, such as an initial, renewal, or amendment sale, and its related pricing configuration.. This object is available in API version 61.0 and later.

[SalesTrxnItemRelationShape](#)

Describes the relationship between sales transaction shape items; for example, a bundle or set. This object is available in API version 57.0 and later.

[SalesTrxnItemRelationship](#)

Describes the relationship between sales transaction items; for example, a bundle or set. This object interface is available in API version 58.0 and later.

[SalesWorkQueueSettings](#)

Represents settings used to customize work queue options for third-party scoring. Third-party scoring enables custom number fields on person accounts, contacts, and leads. You must be a Sales Engagement customer to update this object. Previously, you could only use the Einstein Intelligence Score for third-party scoring. Available starting in Version 47.0.

[SandboxStatusEventLog](#)

SandboxStatusEventLog stores details about Sandbox copies. This object is available in API version 62.0 and later.

[SamlSsoConfig](#)

Represents a SAML Single Sign-On configuration. This object is available in API version 32.0 and later.

[SavedPaymentMethod](#)

Represents a payment method saved by an authenticated customer. This object is available in API version 58.0 and later.

Standard Objects

[SavedPaymentMethodEvent](#)

Represents a saved payment method platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

[SchedulingAdherenceDetail](#)

Represents the breakdown of daily shift adherence data by agent status. This object is available in API version 54.0 and later.

[SchedulingAdherenceSummary](#)

Represents daily shift adherence data for a service resource in a service territory and job profile on a specific date. This object is available in API version 54.0 and later.

[SchedulingConstraint](#)

Represents scheduling constraints on each service resource. This object is available in API version 50.0 and later.

[SchedulingObjective](#)

Represents business goals that the scheduling tools consider. This object is available in API version 53.0 and later.

[SchedulingRule](#)

Represents scheduling rules that are hard constraints in the scheduling logic engine. This object is available in API version 52.0 and later.

[SchedulingRuleParameter](#)

Represents scheduling rule parameters associated with a scheduling rule. This object is available in API version 52.0 and later.

[Scontrol](#)

A custom s-control, which is custom content that is hosted by the system but executed by the client application.

[ScontrolLocalization](#)

The translated value of the field label for an s-control.

[Scorecard](#)

Use scorecards to measure partner performance and establish benchmarks for channel programs within Experience Cloud. Display any report summary results that your channel account manager or executive team wants to see. This object is available in API version 40.0 and later.

[ScorecardAssociation](#)

Represents a connection between a specific scorecard and the associated account, channel program, or channel program level. This object is available in API version 41.0 and later.

[ScorecardMetric](#)

Stores information about a Salesforce report that is run and summarized to get a single value. The stored value is added as a metric to the related Scorecard object. This object is available in API version 40.0 and later.

[ScoreIntelligence](#)

For internal use only.

[ScratchOrgInfo](#)

Represents a scratch org and its audit log. Use this object to create a scratch org and keep a log of its creation and deletion. This object is available in API version 41.0 and later.

[SearchActivity](#)

Represents search activity on a Knowledge article. Also known as KnowledgeSearchActivity. This object is available in API version 38.0 and later.

Standard Objects

[SearchClickEventLog](#)

Search Click Event Log contains details about the user's interaction with the search results. This object is available in API version 61.0 and later.

[SearchEventLog](#)

Search Event Log provides details about the user's search query. This object is available in API version 61.0 and later.

[SearchLayout](#)

Represents a search layout defined for an object. This object is available in API version 35.0 and later.

[SearchPromotionRule](#)

Represents a promoted search term, which is one or more keywords that you associate with a Salesforce Knowledge article. When a user's search query includes these keywords, the associated article is returned first in search results. This object is available in API version 31.0 and later.

[SecurityCustomBaseline](#)

Provides the ability to read, create, and delete user-defined custom security baselines, which define an org's security standards. This object is available in API version 39.0 and later.

[SelfServiceUser](#)

Represents a Contact who has been enabled to use your organization's Self-Service portal, where he or she can obtain online support.

[Seller](#)

Represents the seller role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

[SenderEmailAddress](#)

Represents a From address in a marketing email. This object is available in API version 63.0 and later.

[ServiceAppointment](#)

Represents an appointment to complete work for a customer in Field Service, Lightning Scheduler, Intelligent Appointment Management, and Virtual Care. This object is available in API version 38.0 and later.

[ServiceAppointmentStatus](#)

Represents a possible status of a service appointment in field service.

[ServiceChannel](#)

Represents a channel of work items that are received from your organization—for example, cases, chats, or leads. This object is available in API version 32.0 and later.

[ServiceChannelFieldPriority](#)

Represents a secondary routing priority field-value mapping. This object is available in API version 47.0 and later.

[ServiceChannelStatus](#)

Represents the status that's associated with a specific service channel. This object is available in API version 32.0 and later.

[ServiceChannelStatusField](#)

Represents the values that you use to indicate completed and in-progress work item status for the status field in the Status-Based Capacity routing model. This object is available in API version 49.0 and later.

[ServiceContract](#)

Represents a customer support contract (business agreement). This object is available in API version 18.0 and later.

[ServiceContractOwnerSharingRule](#)

Represents the rules for sharing a ServiceContract (customer service agreement) with users other than the owner. This object is available in API version 18.0 and later.

Standard Objects

[ServiceCrew](#)

Represents a group of service resources who can be assigned to service appointments as a unit.

[ServiceCrewMember](#)

Represents a technician service resource that belongs to a service crew.

[ServiceCrewOwnerSharingRule](#)

Represents the rules for sharing a service crew with user records other than the owner or anyone above the owner in the role hierarchy.

[ServicePresenceStatus](#)

Represents a presence status that can be assigned to a service channel. This object is available in API version 32.0 and later.

[ServiceReport](#)

Represents a report that summarizes a work order, work order line item, or service appointment.

[ServiceReportLayout](#)

Represents a service report template in field service.

[ServiceRequest](#)

Represents a formal request from a user for something to be provided, such as access, information, hardware, or software. This object manages the lifecycle of these tasks, which are typically low-risk, and can be fulfilled through a defined, repeatable process. For example, a Service Request can be created for an employee requesting a new laptop or a student needing a transcript. This object is available in API version 66.0 and later.

[ServiceResource](#)

Represents a service technician or service crew in Field Service and Salesforce Scheduler, or an agent in Workforce Engagement. This object is available in API version 38.0 and later.

[ServiceResourceCapacity](#)

Represents the maximum number of scheduled hours or number of service appointments that a capacity-based service resource can complete within a specific time period. This object is available in API version 38.0 and later.

[ServiceResourceCapacityHistory](#)

Represents the history of changes made to tracked fields on a service resource capacity record. This object is available in API version 38.0 and later.

[ServiceResourceDataTranslation](#)

Represents the translated values of the data stored within a [ServiceResource](#) record's fields. This object is available in API version 54.0 and later.

[ServiceResourceOwnerSharingRule](#)

Represents the rules for sharing a service resource with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 38.0 and later.

[ServiceResourcePreference](#)

Represents the service resource scheduling preferences that are considered as a business objective in the scheduling logic engine. This object is available in API version 52.0 and later.

[ServiceResourceSkill](#)

Represents a skill that a service resource possesses in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

[ServiceSetupProvisioning](#)

Represents a task completed by the Service Setup Assistant. This object is available in API version 52.0 and later.

Standard Objects

[ServiceTerritory](#)

Represents a geographic or functional region in which work can be performed in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

[ServiceTerritoryDataTranslation](#)

Represents the translated values of the data stored within a [ServiceTerritory](#) record's fields. This object is available in API version 54.0 and later.

[ServiceTerritoryLocation](#)

Represents a location associated with a particular service territory in field service.

[ServiceTerritoryMember](#)

Represents a service resource who can be assigned in a service territory in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

[ServiceTerritoryWorkType](#)

Represents the relationship between a ServiceTerritory object and a WorkType object for Salesforce Scheduler appointments. This object is available in API version 45.0 and later.

[SessionPermSetActivation](#)

The SessionPermSetActivation object represents a permission set assignment activated during an individual user session. When a SessionPermSetActivation object is inserted into a permission set, an activation event fires, allowing the permission settings to apply to the user's specific session. This object is available in API versions 37.0 and later.

[SetupAssistantStep](#)

For internal use only.

[SetupAuditTrail](#)

Represents changes you or other admins made in your org's Setup area for at least the last 180 days. This object is available in API version 15.0 and later.

[SetupEntityAccess](#)

Represents the enabled setup entity access settings (such as for Apex classes) for the parent PermissionSet. This object is available in API version 25.0 and later.

[ShapeRepresentation](#)

Contains information about the shape of an org. The shape of an org includes licenses and limits information. You can easily create scratch orgs based on a source org's shape. This object is available in API version 50.0 and later.

[SharingRecordCollection](#)

Represents a collection of records. This object is available in API version 51.0 and later.

[SharingRecordCollectionItem](#)

Represents a single record in a collection of records. This object is available in API version 51.0 and later.

[SharingRecordCollectionMember](#)

Represents a user with access to a collection of records. This object is available in API version 51.0 and later.

[Shift](#)

Represents a shift for service resource scheduling. Available in API versions 46.0 and later.

[ShiftHistory](#)

Represents the history of changes made to tracked fields on a time sheet. Available in API versions 46.0 and later.

[ShiftOwnerSharingRule](#)

Represents the rules for sharing a shift with user records other than the owner or anyone above the owner in the role hierarchy. Available in API versions 46.0 and later.

Standard Objects

[ShiftPattern](#)

Represents a pattern of templates for creating shifts. This object is available in API version 51.0 and later.

[ShiftPatternEntry](#)

ShiftPatternEntry links a shift template to a shift pattern. This object is available in API version 51.0 and later.

[ShiftSegment](#)

Represents a scheduled activity within a shift. This object is available in API version 55.0 and later.

[ShiftSegmentType](#)

Represents a type of activity scheduled within a shift. This object is available in API version 55.0 and later.

[ShiftShare](#)

Represents a sharing entry on a field service shift. Available in API versions 46.0 and later.

[ShiftStatus](#)

Represents a shift, such as Tentative, Published, or Confirmed. Available in API versions 46.0 and later.

[ShiftTemplate](#)

Represents a template for creating shifts. This object is available in API version 51.0 and later.

[Shipment](#)

Represents the transport of inventory in field service or a shipment of order items in Order Management.

[ShipmentItem](#)

Represents an order item included in a shipment. This object is available in API version 51.0 and later.

[ShippingCarrier](#)

Shipping company or carrier responsible for transporting goods or packages. Examples include UPS, FedEx, and USPS. This object is available in API version 61.0 and later.

[ShippingCarrierMethod](#)

Shipping service provided by a shipping carrier. Examples include Ground, 2Day, and NextDay. Service depends on the range of transit times available for each carrier. This object is available in API version 61.0 and later.

[ShippingConfigurationSet](#)

Shipping configuration for a set of products in a store. This object is available in API version 59.0 and later.

[ShippingConfigSetProduct](#)

Represents a product associated with a shipping configuration. This object is available in API version 64.0 and later.

[ShippingRateArea](#)

A designated geographical area that's available for shipping. This object is available in API version 59.0 and later.

[ShippingRateGroup](#)

Available shipping rates based on shipping destination. This object is available in API version 59.0 and later.

[SignupRequest](#)

Represents a request for a new sign-up. SignupRequest isn't supported in sandbox instances and will result in an error. This object is available in API version 27.0 and later.

[Site](#)

Represents a public website that is integrated with an org. This object is available in API version 16.0 and later.

[SiteDetail](#)

Represents the details of a Salesforce site or Experience Cloud site. Available in API Version 38.0 and later.

Standard Objects

[SiteDomain](#)

SiteDomain is a read-only object, and a one-to-many replacement for the Site.TopLevelDomain field. This object is available in API version 21.0, and has been deprecated as of API version 26.0. In API version 26.0 and later, use the [Domain](#) and [DomainSite](#) objects instead.

[SiteEventLog](#)

SiteEventLog stores details of Site.com requests. Requests can originate from the browser (UI). This object is available in API version 62.0 and later.

[SiteHistory](#)

Represents the history of changes to the values in the fields of a site. This object is generally available in API version 18.0 and later.

[SiteframeWhitelistUrl](#)

Represents a list of external domains that you allow to frame your Salesforce site or Experience Cloud site pages. This object is available in API version 44.0 and later.

[SiteRedirectMapping](#)

Represents a site redirect from an external site to an Experience Cloud site. This object is available in API version 52.0 and later.

[Skill](#)

Represents a category or group of Chat users or service resources in Field Service or Workforce Engagement. This object is available in API version 24.0 and later.

[SkillLevelDefinition](#)

Represents a skill which can be acquired by completing enablement site (myTrailhead) modules. This object is available in API version 51.0 and later.

[SkillLevelProgress](#)

Represents training progress for a given user. This object is available in API version 51.0 and later.

[SkillProfile](#)

Represents a join between Skill and Profile. This object is available in API version 24.0 and later.

[SkillRequirement](#)

Represents a skill that is required to complete a particular task in Field Service, Omni-Channel, Salesforce Scheduler, or Workforce Engagement. Skill requirements can be added to pending service routing objects in Omni-Channel. They can be added to work types, work orders, and work order line items in Field Service and Lightning Scheduler. And they can be added to job profiles in Workforce Engagement. This object is available in API version 38.0 and later. You also can add skill requirements to work items in Omni-Channel skills-based routing using API version 42.0 and later.

[SkillUser](#)

Represents a join between Skill and User. This object is available in API version 24.0 and later.

[SlackChannelRelatedRecord](#)

Represents the related record mapping between a Slack channel and a Salesforce record that's made when you create a Salesforce channel. This object is available in API version 65.0 and later.

[SlaProcess](#)

Represents an entitlement process associated with an Entitlement. This object is available in API version 19.0 and later.

[Snippet](#)

Represents a snippet, which is a container for rich text that can be reused across Account Engagement emails and email templates. This object is available in API version 47.0 and later.

Standard Objects

[SnippetAssignment](#)

Represents a relationship between a snippet and a campaign. Assignments are required to use snippet content in Account Engagement emails and email templates. A snippet can be assigned to more than one campaign. This object is available in API version 47.0 and later.

[SoapApiEventLog](#)

SOAP API events contain details about your org's SOAP API request activity. This object is available in API version 61.0 and later.

[SocialPersona](#)

Represents a snapshot of a contact's profile on a social network such as Facebook or Twitter. This object is available in API version 22.0 and later.

[SocialPost](#)

Represents a snapshot of a post on a social network such as a Facebook or Twitter. This object is available in API version 23.0 and later.

[Solution](#)

Represents a detailed description of a customer issue and the resolution of that issue.

[SolutionStatus](#)

Represents the status of a Solution, such as Draft, Reviewed, and so on.

[SolutionTag](#)

Associates a word or short phrase with a Solution.

[SOSDeployment](#)

Represents the general settings for deploying SOS video call capability in a native mobile application. This object is available in API version 34.0 and later.

[SOSSession](#)

This object is automatically created for each SOS session and stores information about the session. This object is available in API versions 34.0 and later.

[SOSSessionActivity](#)

Captures information about specific events that occur during an SOS video call, such as when an SOS call begins or ends. This object is available in API version 34.0 and later.

[StagedEmail](#)

For internal use only.

[StagedInviteeEmail](#)

Represents an email address that is included on a calendar event but that doesn't match an existing user, contact, or lead record. This object is available in API version 66.0 and later.

[StagedUnmtchdEmailAddr](#)

Represents data about an email address identified by Einstein Activity Capture that doesn't match to an existing user, contact, or lead record. These addresses are only stored temporarily. Related to [StagedUnmtchdEmailAddrRela](#), which represents data about the email message or calendar event activity associated with an unmatched email. This object is available in API version 66.0 and later.

[StagedUnmtchdEmailAddrRela](#)

Represents data about the message or event activity associated with an email address that Einstein Activity Capture can't match with an existing user, contact, or lead record. Related to [StagedUnmtchdEmailAddr](#), which represents data about the unmatched email address. This object is available in API version 66.0 and later.

[Stamp](#)

Represents a User Specialty. This object is available in API version 39.0 and later.

Standard Objects

[StampAssignment](#)

Represents assignment of a User Specialty to a user. This object is available in API version 39.0 and later.

[StandardInvokableActionType](#)

Represents a collection of fields to set up granular user permissions for access to a standard invocable action in Flow Builder. This object is available in API version 60.0 and later.

[StandardShippingRate](#)

Standard shipping rate for a store. This object is available in API version 59.0 and later.

[StaticResource](#)

Represents a static resource that can be used in Visualforce markup.

[StoreIntegratedService](#)

Represents an association between an integration and a store. This object is available in API version 49.0 and later.

[StreamingChannel](#)

Represents a channel that is the basis for notifying listeners of generic Streaming API events. This object is available in API version 29.0 and later.

[Salesforce Surveys Object Model](#)

Learn about how Salesforce Surveys objects relate to one another in Salesforce.

[Survey](#)

Represents a survey.

[SurveyEmailBranding](#)

Represents the configuration settings for invitation emails sent to survey participants for a particular survey.

[SurveyEngagementContext](#)

Represents the context based on which a survey invitation was sent or a survey response was received. This object is available in API version 49.0 and later.

[SurveyInvitation](#)

Represents the invitation sent to a participant to complete the survey.

[SurveyPage](#)

Represents a page, such as the title page or a question page, in a survey.

[SurveyQuestion](#)

Represents a question in a survey.

[SurveyQuestionChoice](#)

Represents an answer choice that a participant can select for a survey question.

[SurveyQuestionResponse](#)

Represents a participant's answer to a specific question.

[SurveyQuestionScore](#)

Represents the aggregate of responses for the following question types: date, multiple choice, picklist, radio, ranking, rating, scoring, slider, and [Net Promoter Score® \(NPS®\)](#).

[SurveyResponse](#)

Represents information about a participant's response to a survey, such as the status of the response, the participant's location, and when the survey was completed.

[SurveySubject](#)

Represents a relationship between a survey and another object, such as an account or a case.

Standard Objects

[SurveyVersion](#)

Represents a version of a survey.

[SurveyVersionAddlInfo](#)

Represents additional information about a survey version. This information defines the default settings of a survey version. This object is available in API version 49.0 and later.

[SvcCatalogCategory](#)

Represents a group of Service Catalog items by functional area. This object is available in API version 58.0 and later.

[SvcCatalogCategoryItem](#)

Represents an association between a Service Catalog item and category. Service catalog items can be grouped into categories. This object is available in API version 58.0 and later.

[SvcCatalogFilterCriteria](#)

Represents an eligibility rule that determines if a Service Catalog user has access to a catalog item. This object is available in API version 60.0 and later.

[SvcCatalogItemDef](#)

Represents a service catalog item that can be requested by a service catalog user. This object is available in API version 53.0 and later.

[SvcCatalogRequest](#)

Represents a request made by a user using the Service Catalog. Catalog builders use this object to report on Service Catalog activity. This object is available in API version 53.0 and later.

[SvcCatalogReqRelatedItem](#)

Represents an item related to a Service Catalog Request. This object is available in API version 53.0 and later.

[Swarm](#)

Represents a team of agents, Salesforce users, or Slack users in a Slack channel or thread dedicated to solving a problem. This problem can be related to a support case, incident, sales opportunity, or change request. This object is available in API version 55.0 and later.

[SwarmMember](#)

Represents a Salesforce member, such as an agent, of a swarm. This object is available in API version 55.0 and later.

[TabDefinition](#)

Represents a custom tab. Returns only the tabs that the current user has access to. This object is available in API version 43.0 and later.

[TagDefinition](#)

Defines the attributes of child Tag objects.

[Task](#)

Represents a business activity such as making a phone call or other to-do items. In the user interface, Task and Event records are collectively referred to as activities.

[TaskPriority](#)

Represents the importance or urgency of a task, such as High, Normal, or Low.

[TaskRelation](#)

Represents the relationship between a task and a lead, contacts, and other objects related to the task. If Shared Activities is enabled, this object doesn't support triggers, workflow, or data validation rules. This object is available in API version 24.0 and later.

[TaskStatus](#)

Represents the status of a task, such as Not Started, Completed, or Closed.

Standard Objects

[TaskTag](#)

Associates a word or short phrase with a task .

[TaskWhoRelation](#)

Represents the relationship between a task and a lead or contacts. This object is available in API version 29.0 and later.

[TaxEngine](#)

A tax engine represents both an instance of a tax engine provider as well as the merchant credentials for that specific instance. When Subscription Management calculates tax on an order item, it sends a request through Subscription Management Tax Calculation API to an external tax engine. The Salesforce tax engine record contains information passed to the external tax engine, such as This object is available in API version 55.0 and later.

[TaxEngineInteractionLog](#)

A record of a communication with an external tax engine following a tax calculation request. This object is available in API version 55.0 and later.

[TaxEngineProvider](#)

Represents general information about a service that manages a tax engine, such as the ID of the tax adapter Apex class in Salesforce, and the engine's namespace prefix. Tax engine providers have a one-to-many relationship with tax engines, where the tax engine record represents a specific configuration of a tax engine that can be assigned to multiple order items. This object is available in API version 55.0 and later.

[TaxGeoConfig](#)

Represents a tax configuration associated with a GeoCountry. This object is available in API version 57.0 and later.

[TaxPolicy](#)

A tax policy contains a group of tax treatments, where each treatment represents parameters to determine how a particular product is taxed for a transaction line item. Tax policies are related to products, which pass the policy on to the resulting order items. When you activate an order, Subscription Management assigns a tax treatment to each order item based on the tax policy's DefaultTaxTreatmentId, then uses the tax treatment to calculate tax. This object is available in API version 55.0 and later.

[TaxRate](#)

Represents a tax rate for a tax code and country. This object is available in API version 56.0 and later.

[TaxTreatment](#)

A tax treatment contains details about how Salesforce and external engines calculate taxes, and the tax engine to use for tax calculation. The IsTaxable field determines whether tax is calculated for the product in the transaction. The tax code, tax engine, and product code are sent via API to the external tax calculation service. When you invoice an order item that has a tax treatment, the invoice line inherits the tax treatment from the order item's related billing schedule. The invoice line's TaxCode field is populated based on the code that the tax engine used for calculation. This object is available in API version 55.0 and later.

[TenantScrAIPrmptInjection](#)

Stores generative AI prompt injection data. This object is available in API version 65.0 and later.

[TenantSecret](#)

This object stores an encrypted organization-specific key fragment that's used with the primary secret (KDF seed) to produce org-specific data encryption keys. This object is available in API version 34.0 and later.

[TenantSecurityAIGtwyUsage](#)

Stores Einstein generative AI gateway usage data. This object is available in API version 65.0 and later.

[TenantSecurityAlertRuleSelectedTenant](#)

Stores information about a Security Center alert rule for tenants. This object is available for Security Center subscribers in API version 55.0 and later.

Standard Objects

[TenantSecurityApiAnomaly](#)

Stores detected anomalies in how users typically make API calls. For more information, see [Threat Detection](#). This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityCertificate](#)

Stores metric details related to public key certificate information. The certificate binds the public key to the identity of an entity. This object is available in API version 63.0 and later.

[TenantSecurityConnectedApp](#)

Stores the details for a connected app that was added to or removed from a Security Center tenant. This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityConfigAgent](#)

Stores metric details related to implemented Agentforce Agents. This object is available in API version 65.0 and later.

[TenantSecurityCredentialStuffing](#)

Stores when a user successfully logs in to Salesforce during an identified credential stuffing attack. For more information, see [Threat Detection](#). This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityCustomMetricSetup](#)

Represents the configuration for a custom metric within Security Center. This object is available in API version 61.0 and later.

[TenantSecurityCustomMetricDetail](#)

Stores TenantSecurityCustomMetricStat drill down details. This object is available in API version 62.0 and later.

[TenantSecurityCustomMetricStat](#)

Represents custom metric data within Security Center. This object is available in API version 61.0 and later.

[TenantSecurityEncryptedField](#)

Represents fields encrypted under your Shield Platform Encryption policy. This object is available in API version 61.0 and later.

[TenantSecurityGuestUserAnomaly](#)

Represents metric details for guest user anomaly events detected by Threat Detection. This object is available in API version 60.0 and later.

[TenantSecurityEncryptionPolicy](#)

Stores tenant encryption policy status. This object is available in API version 58.0 and later.

[TenantSecurityFeature](#)

Stores org features across all tenants in Security Center. This object is available in API version 57.0 and later.

[TenantSecurityHealthCheckBaselineTrend](#)

Stores metric details related to Health Check baseline settings. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get details about which metrics are collected and for which tenants, and changes made to the Health Check baseline. This object is available to Security Center subscribers in API version 54.0 and later.

[TenantSecurityHealthCheckDetail](#)

Stores the details of Health Check scores for a connected tenant. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get settings and risks per tenant on a selected date. This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityHealthCheckTrend](#)

Stores the history of Security Health Check scores for a connected tenant within Security Center. Health Check in Security Center displays Health Check scores and the average risk settings for all your tenants in one place. This object belongs to the parent tenant and stores Health Check data pushed from child tenants. This object is available for Security Center subscribers in API version 53.0 and later.

Standard Objects

[TenantSecurityLicense](#)

Stores license usage information within Security Center. This object is available in API version 59.0 and later.

[TenantSecurityLogin](#)

Stores the login details of a single user to a tenant, grouped by date and type. You can query this object to find out how many times the user logged in to a specific tenant using a specific login type (for example, username/password or SSO). This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityLoginIpRangeTrend](#)

Stores details of changes related to login IP ranges in Security Center. This object is available in API version 59.0 and later.

[TenantSecurityMobilePolicyTrend](#)

Stores metrics related to changes in mobile security policies across all tenants in Security Center. This object is available to Security Center subscribers in API version 54.0 and later.

[TenantSecurityMonitorMetric](#)

Stores the daily count and daily count change for a metric within Security Center. This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityNotification](#)

Stores information about notifications that were triggered in Security Center as a function of the Alerts feature. For more information, see [Create Alerts for Security Changes](#). This object is available to Security Center subscribers in API version 54.0 and later.

[TenantSecurityNotificationRule](#)

Stores an alert configured in the Security Center Alerts feature to notify recipients of changes made to security settings. For more information, see [Create Alerts for Security Changes](#). This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityMetricDetailLink](#)

Represents the link between the metric count and metric drill down. This object is available in API version 48.0 and later.

[TenantSecurityPackage](#)

Stores details about managed and unmanaged packages that are added, updated, or removed from a tenant in Security Center. Use this object to identify whether new packages are installed, upgraded, or uninstalled from your connected tenants. This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityPolicy](#)

Stores security policies created and deployed in Security Center. For more information, see [Define and Deploy Security Policies](#). This object is available to Security Center subscribers in API version 54.0 and later.

[TenantSecurityPolicyDeployment](#)

Stores the status of deployments of a Security Center policy on a tenant. For more information, see [Define and Deploy Security Policies](#). This object is available to Security Center subscribers in API version 54.0 and later.

[TenantSecurityPolicySelectedTenant](#)

Stores the list of tenants selected for a Security Center policy. For more information, see [Define and Deploy Security Policies](#). This object is available to Security Center subscribers in API version 54.0 and later.

[TenantSecurityReportAnomaly](#)

Stores anomalies in how users run or export reports, including unsaved reports, as detected by Threat Detection. For more information, see [Threat Detection](#). This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecuritySessionHijacking](#)

Stores information about session hijacking events as detected by Threat Detection within connected tenants in Security Center. For more information, see [Threat Detection](#). This object is available for Security Center subscribers in API version 53.0 and later.

Standard Objects

[TenantSecurityTenantInfo](#)

Stores information on changes related to the tenant history. This object is available in API version 56.0 and later.

[TenantSecurityTransactionPolicyTrend](#)

Stores changes to the count of Transaction Security Policies for a connected tenant within Security Center. This object is available for Security Center subscribers in API version 55.0 and later.

[TenantSecurityTrigTransactionSecurityPol](#)

Stores metric details related to Transaction Security Policy triggering events. This object is available in API version 63.0 and later.

[TenantSecurityTrustedIpRangeTrend](#)

Stores details of changes related to trusted IP ranges in Security Center. This object is available for Security Center subscribers in API version 54.0 and later.

[TenantSecurityUserActivity](#)

Stores details related to how a user interacts with a tenant. Use this object to determine whether to reevaluate a user's access to your org for security purposes. You can check whether a user has never logged in, hasn't been active for 90 days, has a frozen account, or isn't using multi-factor authentication. This object is available to Security Center subscribers in API version 53.0 and later.

[TenantSecurityUserPerm](#)

Stores information on permissions assigned to a user. Use this object to see which tenants a user is assigned to. This object is available to Security Center subscribers in API version 53.0 and later.

[TenantUsageEntitlement](#)

Represents a data structure that contains information about the features or functionalities that a Salesforce org has access to. This object is available in API version 28.0 and later.

[Territory](#)

Represents a flexible collection of accounts and users where the users have at least read access to the accounts, regardless of who owns the accounts. Available if Sales Territories has been enabled. This object is available in API versions 7.0 to 52.0. Use Territory2 instead of Territory in API version 52.0 and later.

[TerritoryMgmtObjectConfig](#)

Represents territory management settings and defaults for a particular object. This object is available in API version 56.0 and later.

[Territory2](#)

Represents a sales territory. Available if Sales Territories has been enabled.

[Territory2AlignmentLog](#)

Represents the start and end status of a territory assignment rule run job. This object is available in API version 54.0 and later.

[Territory2Model](#)

Represents a territory model. Available if Sales Territories has been enabled.

[Territory2ModelHistory](#)

Represents the history of changes to the values in the fields on a territory model. Available if Sales Territories has been enabled.

[Territory2ObjectExclusion](#)

Represents the objects that aren't included in territory assignment rule runs, even when they meet assignment rule criteria. This object is available in API version 54.0 and later.

[Territory2ObjSharingConfig](#)

Represents the sharing access level of objects assigned to a particular territory. This object is available in API version 56.0 and later.

[Territory2Type](#)

Represents a category for territories (Territory2). Every Territory2 must have a Territory2Type. Available only if Sales Territories has been enabled for your organization.

Standard Objects

[TerritoryAdminAssignment](#)

Represents designated team members who can administer specific territories and their descendants. This object is available in API version 63.0 and later.

[TestSuiteMembership](#)

Associates an Apex class with an ApexTestSuite. This object is available in API version 36.0 and later.

[ThirdPartyAccountLink](#)

Represents the list of external users who authenticated using an authentication provider. This object is available in API version 32.0 and later.

[ThreatDetectionFeedback](#)

Represents feedback provided by a user about a Threat Detection event that occurred in your org. The feedback specifies whether the event was malicious, suspicious, not a threat, or unknown. Each ThreatDetectionFeedback object is associated with one of these Threat Detection storage events: ApiAnomalyEventStore, CredentialStuffingEventStore, ReportAnomalyEventStore, or SessionHijackingEventStore. This object is available in API version 49.0 and later.

[TimeSheet](#)

Represents a schedule of a service resource's time in Field Service or Workforce Engagement. This object is available in API v47.0 and later.

[TimeSheetEntry](#)

Represents a span of time that a service resource spends on a field service task. This object is available in API version 47.0 and later.

[TimeSlot](#)

Represents a period of time on a specified day of the week during which work can be performed in Field Service, Salesforce Scheduler, or Workforce Engagement. Operating hours consist of one or more time slots. This object is available in API version 38.0 and later.

[TimeSlotHistory](#)

Represents the history of changes made to tracked fields on a time slot. This object is available in API version 38.0 and later.

[TodayGoal](#)

Sets the quarterly sales goal on the performance chart. This object is available in API version 35.0 and later.

[Topic](#)

Represents a topic on a Chatter post or record. This object is available in API version 28.0 and later.

[TopicAssignment](#)

Represents the assignment of a topic to a specific feed item, record, or file. This object is available in API version 28.0 and later.

[TopicLocalization](#)

Represents the translated version of a topic name. Topic localization applies only to navigational and featured topics in Experience Cloud sites. This object is available in API version 33.0 and later.

[TopicUserEvent](#)

Represents an action (such as comment, post, like, or share) made by a user on a topic. This object is available in API version 42.0 and later.

[TopInsight](#)

For internal use only.

[TransactionSecurityPolicy](#)

Represents a transaction security policy definition.

[TransactionSecurityEventLog](#)

Transaction Security event logs contain details about policy execution. Legacy transaction security policy details are supported in API version 38.0 and later. Enhanced transaction security policy details are supported in API version 61.0 and later.

Standard Objects

[Translation](#)

The Translation object represents the languages enabled for translation in your Salesforce org. This object is available in API version 47.0 and later.

[TravelMode](#)

Represents a travel mode used for travel time calculations. The records include information about the type of transportation (such as Car or Walking), whether a vehicle can take toll roads, and whether a vehicle is transporting hazardous materials. This object is available in API version 54.0 and later.

[TwoFactorInfo](#)

Stores a user's secret for multi-factor operations. Use this object when customizing multi-factor authentication in your organization. (Note that multi-factor authentication was formerly called two-factor authentication.) This object is available in API version 32.0 and later.

[TwoFactorMethodsInfo](#)

Stores information about which identity verification methods a user has registered. This object is available in API version 37.0 and later.

[TwoFactorTempCode](#)

Stores information about a user's temporary verification code for confirming their identity when logging in. This object is available in API version 37.0 and later.

[UiAgentInteractionEventLog](#)

This log tracks client side interactions and events with the Agentforce panel. It is limited to Salesforce Lightning Experience, Salesforce Mobile, and Conversation Preview within Agentforce Builder. This object is available in API version 65.0 and later.

[UiFormulaCriterion](#)

Represents a filter that helps define component visibility on a Lightning page. This object is available in API version 47.0 and later.

[UiFormulaRule](#)

Represents a set of one or more filters that define the conditions under which a component displays on a Lightning page. This object is available in API version 47.0 and later.

[UiTelemetryNavTmEventLog](#)

UI Telemetry Navigation Timing events capture network performance metrics related to page navigation. The event extends from the [UI Telemetry Resource Timing Event](#) on page 2412 and includes requests initiated with either the [Fetch API](#) or the [XMLHttpRequest API](#). This object is available in API version 64.0 and later.

[UiTelemetryRsrcTmEventLog](#)

UI Telemetry Resource Timing events capture network performance metrics related to loading an application's resources. The event includes requests initiated with either the [Fetch API](#) or the [XMLHttpRequest API](#). This object is available in API version 64.0 and later.

[UndecidedEventRelation](#)

Represents event participants (invitees or attendees) with the status `Not Responded` for a given event. This object is available in API versions 29.0 and later.

[UnifiedActivity](#)

Represents an activity that is automatically captured from Einstein Activity Capture (EAC) or other activity data, such as calls, manually logged tasks, and emails. This object consists of fields common to all types of activity-related objects such as Event, Task, EmailMessage, VoiceCall, VideoCall, and so on. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedActivityInsight](#)

Represents an insight related to a unified activity. This object is available for reports and dashboards in the Winter '24 release and later.

Standard Objects

[UnifiedActivityParticipant](#)

Represents a participant in an activity. For example, a participant in a voice call is someone who initiated the call or someone who received the call. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedActivityRelation](#)

Represents a relationship between an activity and a related record that's a target or topic of the activity. For example, a related record can be an opportunity, account, and so on. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedActivityInsightKeyword](#)

Represents a keyword in a communication that triggered the activity insight. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedEmail](#)

Represents an email that was captured or synced from an EmailMessage or Task record. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedEmailParticipant](#)

Represents a participant in an email. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedMeeting](#)

Represents a meeting that was captured or synced from an Event record. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedMeetingParticipant](#)

Represents a participant in a meeting. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedTask](#)

Represents a business activity such as a to-do item. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedTaskParticipant](#)

Represents a participant in a task. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedVideoCall](#)

Represents a video call that is captured or synced from the VideoCall or Task record. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedVideoCallParticipant](#)

Represents a participant in a video call. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedVoiceCall](#)

Represents a voice call that is captured or synced from a VoiceCall or Task record. This object is available for reports and dashboards in the Winter '24 release and later.

[UnifiedVoiceCallParticipant](#)

Represents a participant in a voice call. This object is available for reports and dashboards in the Winter '24 release and later.

[UnitOfMeasure](#)

Defines the units and systems of units used to express and account for quantities. This object is available in API version 61.0 and later.

[UriEventLog](#)

URI events contain details about user interaction with the web browser UI. This object is available in API version 61.0 and later.

[UsageImpactFactor](#)

Represents a collection of fields to set up the Usage Impact Factors used across jurisdictions and programs. This object is available in API version 58.0 and later.

Standard Objects

[UsageImpactGroup](#)

Represents a collection of fields to set up the Usage Impact Groups used across jurisdictions and programs. This object is available in API version 58.0 and later.

[UsageImpactGroupFactor](#)

Represents a junction between an Usage Impact Group version and Usage Impact Factor. This object is available in API version 58.0 and later.

[UsageImpactGroupPgmMeasure](#)

Represents a junction between the program, product, and Usage Impact Group version. This object is available in API version 58.0 and later.

[UsageImpactGroupVersion](#)

Represents a collection of fields to set up the versions of Usage Impact Groups. This object is available in API version 58.0 and later.

[User](#)

Represents a user in your organization.

[UserAccessChange](#)

Represents a change related to user access. This object is available in API version 57.0 and later.

[UserAccessPolicy](#)

Represents a user access policy. This object is available in API version 57.0 and later.

[UserAccountTeamMember](#)

Represents a User on the default account team of another User.

[UserAppInfo](#)

Stores the last Lightning app logged in to. If the user hasn't logged into Salesforce or if the user lost access to the last accessed app, the UserAppInfo object stores a Null value. This object is available in API version 38.0 and later.

[UserAppMenuCustomization](#)

Represents an individual user's settings for items in the app menu or App Launcher. This object is available in API version 35.0 and later.

[UserAppMenuItem](#)

Represents the organization-wide settings for items in the app menu or App Launcher that the requesting user has access to in Setup. This object is available in API version 35.0 and later.

[UserAuthCertificate](#)

Represents a user authentication certificate in your org. A user certificate is a unique PEM-encoded X.509 digital certificate to authenticate individual users to your org. This object is available in API version 45.0 and later.

[UserConfigTransferButton](#)

Represents the association between a Chat configuration and a live chat button. This association allows users associated with a specific configuration to transfer chats to a button queue.

[UserConfigTransferSkill](#)

Represents the association between a Chat configuration and a skill. This association allows users associated with a specific configuration to transfer chats to agents who have that skill.

[UserCustomBadge](#)

Represents a custom badge for a user. This object is available in API version 38.0 and later.

[UserCustomBadgeLocalization](#)

Represents the translated version of a custom badge for a user. This object is available in API version 38.0 and later.

Standard Objects

[UserDailyMetric](#)

Represents the daily engagement metrics for a user. This object is available in API version 52.0 and later.

[UserDailyMetricOwnerSharingRule](#)

Represents the rules for sharing the user daily metric with users other than the owner.

[UserDefinedLabel](#)

Represents a label created by a user to help organize, track, and find records. This object is available in API version 61.0 and later.

[UserDefinedLabelAssignment](#)

Represents a relationship between a record label and the item the user assigned it to. This object is available in API version 61.0 and later.

[UserDevice](#)

Represents information unique to a device. Available in API version 43.0 and later.

[UserDeviceApplication](#)

Represents information on applications installed on a device that is accessing Salesforce. Available in API version 43.0 and later.

[UserDeviceHistory](#)

Represents tracking information on the UserDevice sObject. This object is available in API version 50.0 and later.

[UserEmailCalendarSync](#)

Represents the user assignments of an Einstein Activity Capture configuration. This object is available in API version 49.0 and later.

[UserEmailPreferredPerson](#)

Represents a mapping for a user's preferred record for an email address when multiple records match an email field. This object is available in API version 44.0 and later.

[UserEmailPreferredPersonShare](#)

Represents a sharing entry on a UserEmailPreferredPerson object. Sharing is not customizable for UserEmailPreferredPerson records. This object is available in API version 44.0 and later.

[UserLicense](#)

Represents a user license in your organization. A user license entitles a user to specific functionality and determines the profiles and permission sets available to the user.

[UserListView](#)

Represents the customizations a user made to a list view. This object is available in API version 32.0 and later.

[UserListViewCriterion](#)

Represents the criterion for a user's customized list view. The criterion consists of the filters or sort order a user added to a list view for the Salesforce Mobile app. This object is available in API version 32.0 and later.

[UserLocationAssignment](#)

Represents the assignment between a location and a user. This object is available in API version 57.0 and later.

[UserLogin](#)

Represents the settings that affect a user's ability to log into an organization. To access this object, you need the `UserPermissions.ManageUsers` permission. This object is available in API version 29.0 and later.

[UserMembershipSharingRule](#)

Represents the rules for sharing user records from a source group to a target group. A user record contains details about a user. Users who are members of the source group can be shared with members of the target group. The source and target groups can be based on roles, portal roles, public groups, or territories. This object is available in API version 26.0 and later.

[UserMonthlyMetric](#)

Represents the monthly engagement metrics for a user. This object is available in API version 52.0 and later.

Standard Objects

[UserMonthlyMetricOwnerSharingRule](#)

Represents the rules for sharing the user monthly metric with users other than the owner.

[UserPackageLicense](#)

Represents a license for an installed managed package, assigned to a specific user. This object is available in API version 31.0 and later.

[UserPermissionAccess](#)

Represents the permissions accessibility for a current user. Available in API version 41.0 and later.

[UserPrioritizedRecord](#)

Represents records that Pipeline Inspection, Account Intelligence, Contact Intelligence, and Lead Intelligence users flag as important for tracking in pipeline and intelligence views and filters. This object is available in API version 53.0 and later.

[UserPreference](#)

Represents a functional preference for a specific user in your organization.

[UserProfile](#)

Represents a Chatter user profile.

[UserProvAccount](#)

Represents information that links a Salesforce user account with an account in a third-party (target) system, such as Google, for users of connected apps with Salesforce user provisioning enabled. This object is available in API version 33.0 and later.

[UserProvAccountStaging](#)

Temporarily stores user account information while a user completes the User Provisioning Wizard. This information that is stored in the UserProvAccount object when you click the button to collect and analyze accounts on the target system.

[UserProvMockTarget](#)

Represents an entity for testing user data before committing the data to a third-party system for user provisioning.

[UserProvisioningConfig](#)

Represents information for a flow to use during a user provisioning request process, such as the attributes for an update. This object is available in API version 34.0 and later.

[UserProvisioningLog](#)

Represents messages generated during the process of provisioning users for third-party applications. This object is available in API version 33.0 and later.

[UserProvisioningRequest](#)

Represents an individual provisioning request to create, update, or delete a single user account in a third-party service system (or another Salesforce organization). This object is available in API version 33.0 and later.

[UserRecordAccess](#)

Represents a user's access to a set of records. This object is read only and is available in API version 24.0 and later. This object doesn't consider whether a user's access is blocked by a restriction rule.

[UserRelatedRecordContent](#)

Represents the link between a managed content record, an account, event, or opportunity record, and a user record. This object is reserved for future use.

[UserRole](#)

Represents a user role in your organization.

[UserServicePresence](#)

Represents a presence user's real-time presence status. This object is available in API version 32.0 and later.

Standard Objects

[UserSetupEntityAccess](#)

Represents the enabled custom permissions of the running user. This object is available in API version 48.0 and later.

[UserShare](#)

Represents a sharing entry on a user record. This object is available in API version 26.0 and later.

[UserSharedFeature](#)

For internal use only.

[UserTeamMember](#)

Represents a single User on the default opportunity team of another User.

[UserTerritory](#)

Represents a User who has been assigned to a Territory.

[UniqueQueryEventLog](#)

Unique Query events capture specific search queries (SOQL), filter IDs, and report IDs that are processed, along with the underlying database queries (SQL). This object is available in API version 65.0 and later.

[UserTerritory2Association](#)

Represents an association (by assignment) between a territory and a user record. Available only if Sales Territories has been enabled.

[UserTerritory2AssocLog](#)

Represents a log of when a user is assigned and unassigned from a territory. This object is available in API version 57.0 and later.

[UserUIPreference](#)

Represents user preferences for Salesforce components. This object is available in API version 63.0 and later.

[UserWorkList](#)

Represents a list of work items in the My List tab for Sales Engagement users.

[UserWorkListItem](#)

Represents an individual work item in the My List tab for Sales Engagement users.

[VendorCallCenterStatusMap](#)

Stores a mapping between a call center vendor agent status and a Salesforce presence status for an associated call center. This object is available in API version 54.0 and later.

[VerificationHistory](#)

Represents the past six months of your org users' attempts to verify their identity. This object is available in API version 36.0 and later.

[VisualforceAccessMetrics](#)

Represents summary statistics for Visualforce pages.

[VisualforceRequestEventLog](#)

Visualforce Request events contain details of Visualforce requests. Requests can originate from the browser (UI). This object is available in API version 61.0 and later.

[VideoCall](#)

Represents a video call. One `VideoCall` record can be related to several `VideoCallRecording` records — for example, a video call can have several video recordings and a transcript. As well, one video call record can be associated with several video call participant records. This object is available in API version 51.0 and later.

[VideoCallInsight](#)

Represents the video call insight data associated with a video call. Each record represents the call insight of a specific recording or transcript within a call. This object is available in API version 66.0 and later.

Standard Objects

[VideoCallInsightAction](#)

Represents a suggested follow-up action derived from a video call insight. VideoCallInsightAction manages recommended steps—such as sending an email, creating a task, or scheduling a meeting—that address specific moments, including competitor mentions, pricing discussions, or objections. This object is available in API version 66.0 and later.

[VideoCallInsightReason](#)

Represents the video call insight reason that contains the insight keyword, insight moments associated with a keyword, and the number of keyword occurrences. This object is available in API version 66.0 and later.

[VideoCallParticipant](#)

Represents a participant in a video call. Participant information can come from the video call provider (for example, Zoom), or Salesforce. This object is available in API version 51.0 and later.

[VideoCallRecording](#)

Represents a recording from a video call, such as a video recording, a voice recording, or a transcript. Video call recordings aren't saved in Salesforce. This object is available in API version 51.0 and later.

[VideoCallRecordingStructure](#)

Represents the structure of a video call recording, having relation to a video call participant, speaking order, start offset, and end offset. This object is available in API version 65.0 and later.

[VoiceCall](#)

Represents a call in Service Cloud Voice, Sales Dialer, or other supported voice connectors. For Service Cloud Voice, this can be a phone or Voice over Internet Protocol (VoIP) call. This object is available in API version 40.0 and later.

[VoiceCallInsight](#)

Represents the voice call insight data associated with a voice call. Each record represents the call insight of a specific recording or transcript within a call. This object is available in API version 66.0 and later.

[VoiceCallInsightAction](#)

Represents a suggested follow-up action derived from a voice call insight. VoiceCallInsightAction manages recommended steps—such as sending an email, creating a task, or scheduling a meeting—that address specific moments, including competitor mentions, pricing discussions, or objections. This object is available in API version 66.0 and later.

[VoiceCallInsightReason](#)

Represents the voice call insight reason that contains the insight keyword, insight moments associated with a keyword, and the number of keyword occurrences. This object is available in API version 66.0 and later.

[VoiceCallMetrics](#)

Represents metrics for a VoiceCall lifecycle event, aggregated daily. This object is available in API version 56.0 and later.

[VoiceCallList](#)

Represents a prioritized list of numbers to call.

[VoiceCallListItem](#)

Represents a single phone number in a prioritized call list.

[VoiceCallQualityFeedback](#)

Represents feedback given by a Sales Dialer user about the quality of a [VoiceCall](#).

[VoiceCallRecording](#)

Represents a call recording in Service Cloud Voice and Sales Dialer. Call recordings for Service Cloud Voice with Amazon Connect and for Service Cloud Voice with Partner Telephony from Amazon Connect are stored in S3 buckets on your Amazon Web Services (AWS) account and can be accessed via AWS. Call recordings for Sales Dialer are saved as files in Salesforce.

[VoiceCoaching](#)

Represents a call that is using call monitoring.

Standard Objects

[VoiceLocalPresenceNumber](#)

Represents a phone number with the same area code as the person who's being called.

[VoiceMailContent](#)

Represents a voicemail message left by a caller to the context user.

[VoiceMailGreeting](#)

Represents a custom greeting message that plays upon reaching a user's voicemail. This object is available in API version 41.0 and later.

[VoiceMailMessage](#)

Represents a prerecorded voicemail message.

[VoiceOrgSetting](#)

Represents the org's customized voice settings. This object is available in API version 46.0 and later.

[VoiceUserLine](#)

Represents a user's forwarding phone number.

[VoiceUserPreferences](#)

Represents the number the user displays when making outbound calls. This object is available in API version 41.0 and later.

[VoiceVendorInfo](#)

Represents information about the Service Cloud Voice or Sales Dialer provider's vendor.

[VoiceVendorLine](#)

Represents a user's phone number reserved with the vendor.

[Vote](#)

Represents a vote that a user has made on a Knowledge Article, Idea, or Reply.

[WarrantyTerm](#)

Represents warranty terms defining the labor, parts, and expenses covered, along with any exchange options, provided to rectify issues with products. This object is available in API version 50.0 and later.

[WaveAutoInstallRequest](#)

Provides access to the concrete object that represents a CRM Analytics auto-install request. The auto-install request tracks the progress of CRM Analytics applications created from CRM Analytics templates by the automated process user. This object is available in API version 38.0 and later.

[WebCart](#)

Represents an online shopping cart for a store built with B2B Commerce or D2C Commerce, with total amounts for products, shipping and handling, and taxes. This object is available in API version 49.0 and later.

[WebCartAdjustmentBasis](#)

Coupons that trigger promotions for the cart. When a customer tries to add a coupon to the cart, the store looks for promotions associated with the coupon. If a promotion results in a price adjustment, a WebCartAdjustmentBasis record is created. This object is available in API version 54.0 and later.

[WebCartAdjustmentGroup](#)

Group of price adjustments for a cart. This object is available in API version 52.0 and later.

[WebCartHistory](#)

WebCartHistory represents the history of changes to the values in the fields of the `webCart` object.

[WebLink](#)

Represents a custom link to a URL or Scontrol.

Standard Objects

[WebLinkLocalization](#)

Represents the translated value of the field label for a custom link to a URL or s-control when the Translation Workbench is enabled for your organization.

[WebStore](#)

Represents a B2B or D2C store. This object is available in API version 49.0 and later.

[WebstoreBuyerGroup](#)

Associates a webstore with a buyer group. Supports dynamically changing locales when buyers shop in orgs that are enabled for multiple languages and currencies. This object is available in API version 58.0 and later.

[WebStoreCatalog](#)

Represents the collection of products associated with a store. This object is available in API version 49.0 and later.

[WebStoreInventorySource](#)

Used to configure the inventory source for a webstore. This object is available in API version 57.0 and later.

[WebStoreMessageContent](#)

Represents the association of a managed content message record in CMS to a web store, along with other attributes that specify the application and intent of the message content. This object is available in API version 61.0 and later.

[WebStoreNetwork](#)

Represents the relationship between a web store and an experience site. This object is available in API version 49.0 and later.

[WebStorePricebook](#)

Represents a store price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

[WebStoreSearchProdSettings](#)

Search settings for a WebStore product search. This object is available in API version 47.0 and later.

[WebStoreShare](#)

Represents a sharing entry on a B2B or D2C store. This object is available in API version 45.0 and later.

[Wishlist](#)

Represents a buyer-created list of [WishlistItems](#) in a store that's built with B2B Commerce on Lightning. Available in API version 49.0 and later.

[WishlistItem](#)

Represents an item on a `Wishlist` in a store built with B2B Commerce for Lightning. Available in API version 49.0 and later.

[WorkAccess](#)

Used to grant or restrict user access to give badge definitions. Each badge definition record must have one `WorkAccess` record.

[WorkAccessShare](#)

Used to control Givers of `WorkBadgeDefinition` records.

[WorkBadge](#)

Represents information about who the badge was given to and which badge was given. A `WorkBadge` record is created for each recipient of a `WorkBadgeDefinition`.

[WorkBadgeDefinition](#)

Represents the attributes of a badge including the badge name, description, and image. Each `WorkBadge` record must have a lookup to a `WorkBadgeDefinition` since badge attributes (like badge name) are derived from the `WorkBadgeDefinition` object.

[WorkCapacityAvailability](#)

Represents the available work capacity for a specific time and service territory. This object is available in API version 59.0 and later.

Standard Objects

[WorkCapacityLimit](#)

Represents the capacity limit in a specific service territory for a workstream or for the whole service territory in a given period. This object is available in API version 59.0 and later.

[WorkCapacityUsage](#)

Represents the capacity usage in a specific service territory for a workstream or for the whole service territory in a given period. This object is available in API version 59.0 and later.

[WorkCoaching](#)

Represents a single coaching relationship between two users. One of the users is defined as the coach and the other is defined as a coachee. WorkCoaching is feed-enabled so there is a private feed available to the coach and coachee.

[WorkDemographic](#)

Represents the field values used to specify slices in the workload forecasting and capacity planning. This object is available in API version 49.0 and later.

[WorkFeedback](#)

Represents the answer to a question that a person was asked via a feedback request. Also used to store offered feedback without linking it to a particular question.

[WorkFeedbackQuestion](#)

Represents a free-form text type or multiple choice question within a set of questions.

[WorkFeedbackQuestionSet](#)

Represents a set of questions being asked. The question set is used to link all the individual requests where different recipients were asked the same set of questions on the same subject.

[WorkFeedbackRequest](#)

Represents a single feedback request on a subject or topic (question) to a single recipient in the feedback application. In the case of offered feedback, WorkFeedbackRequest represents feedback that is offered about a subject. In the performance application, WorkFeedbackRequest represents a request for feedback on a set of questions from a question set, on a subject—for the recipient to complete and submit.

[WorkforceCapacity](#)

Represents the time series for actual or forecasted workforce allocation. This object is available in API version 51.0 and later.

[WorkforceCapacityUnit](#)

Represents the number of resources allocated or needed for a specific set of work items at a timestamp within a specific duration. This object is available in API version 51.0 and later.

[WorkGoal](#)

Represents the components of a goal, such as its description and associated metrics. This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals.

[WorkGoalCollaborator](#)

Represents collaborators on a WorkGoal object. This doesn't include WorkGoal followers, which is handled by Chatter Feed Follow functionality. This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals.

[WorkGoalCollaboratorHistory](#)

Represents the history of changes to the values in the fields in a WorkGoalCollaborator object. Access is read-only.

[WorkGoalHistory](#)

Represents the history of changes to the values in the fields of a WorkGoal. Access is read-only. This object has been deprecated as of API version 35.0. Use the [GoalHistory](#) object to query historical information for WDC goals.

Standard Objects

[WorkGoalLink](#)

Represents the relationship between two goals (many to many relationship). This object has been deprecated as of API version 35.0. Use the [GoalLink](#) object to query information about the relationship between two WDC goals.

[WorkGoalShare](#)

Represents a sharing entry on a WorkGoal object. This object has been deprecated as of API version 35.0. Use the GoalShare object to query information about sharing for WDC goals.

[Workload](#)

Represents the time series for work item volume and average handle time from aggregation and forecasting processes. This object is available in API version 49.0 and later.

[WorkloadUnit](#)

Represents the number of work items and average handle time in a specific time interval. This object is available in API version 49.0 and later.

[WorkOrder](#)

Represents field service work to be performed for a customer. This object is available in API version 36.0 and later.

[WorkOrderHistory](#)

Represents the history of changes made to tracked fields on a work order. This object is available in API version 36.0 and later.

[WorkOrderLineItem](#)

Represents a subtask on a work order in field service. This object is available in API version 36.0 and later.

[WorkOrderLineItemHistory](#)

Represents the history of changes made to tracked fields on a work order line item. This object is available in API version 36.0 and later.

[WorkOrderLineItemStatus](#)

Represents a possible status of a work order line item in field service.

[WorkOrderShare](#)

Represents a sharing entry on a work order. This object is available in API version 36.0 and later.

[WorkOrderStatus](#)

Represents a possible status of a work order in field service.

[WorkPerformanceCycle](#)

Represents feedback that is gathered to assess the performance of a specific set of employees.

[WorkPlan](#)

Represents a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

[WorkPlanSelectionRule](#)

Represents a rule that selects a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

[WorkPlanTemplate](#)

Represents a template for a work plan. This object is available in API version 52.0 and later.

[WorkPlanTemplateEntry](#)

Represents an object that associates a work step template with a work plan template. This object is available in API version 52.0 and later.

[WorkReward](#)

Used to store reward codes tied to a Reward Fund. Reward Funds must have at least one WorkReward record.

[WorkRewardFund](#)

Represents a Reward Fund and describes the Reward Fund attributes.

[WorkRewardFundType](#)

Represents the type of WorkRewardFund object.

[WorkStep](#)

Represents a work step in a work plan. This object is available in API version 52.0 and later.

[WorkStepStatus](#)

Represents a picklist for a status category on a work step. This object is available in API version 52.0 and later.

[WorkStepTemplate](#)

Represents a template for a work step. This object is available in API version 52.0 and later.

[WorkThanks](#)

Represents the source and message of a thanks post.

[WorkType](#)

Represents a type of work to be performed in Field Service and Lightning Scheduler. Work types are templates that can be applied to work order or work order line items. This object is available in API version 38.0 and later.

[WorkTypeGroup](#)

Represents a grouping of work types used to categorize types of appointments available in Lightning Scheduler, or to define scheduling limits in Field Service. This object is available in API version 45.0 and later.

[WorkTypeGroupMember](#)

Represents the relationship between a work type and the work type group it belongs to. This object is available in API version 45.0 and later.

AbnExperiment

Represents an A/B/n experiment that's used with Marketing Cloud Next content, Experience Cloud websites, and platform automations. This object is available in API version 63.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
DataSpaceId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the data space where an experiment's resources originate. Required.

Field	Details
	This field is a relationship field. Relationship Name DataSpace Refers To DataSpace
Description	Type string Properties Filter, Group, Nillable, Sort Description Text description of the experiment. Optional.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description System or user-generated API name for the experiment. Required.
LastAnalyzed	Type dateTime Properties Filter, Nillable, Sort Description Time and date of last analysis.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time an experiment was referenced by another resource.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time a user viewed the experiment.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort Description Text label that identifies the experiment. Required.
PersonalizationSchemaEnum	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Picklist value that indicates the type of personalization schema, which is related to where a personalization decision is created. Possible values are: • DecisionDefined • ExperienceVariation • FlowPath
PersonalizationSchemaId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the schema that's related to the experiment. This field is a relationship field. Relationship Name PersonalizationSchema Refers To PersonalizationSchema
PrimaryMetricId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to engagement signal metrics, which are used to measure an experiment. This field is a polymorphic relationship field.

Field	Details
	Relationship Name PrimaryMetric Refers To EngagementSignalCmpndMetric, EngagementSignalMetric
ProfileDataGraphId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the profile data graph that's used. This field is a relationship field. Relationship Name ProfileDataGraph Refers To DataGraph
ScheduleFrequencyInMinutes	Type int Properties Filter, Group, Nillable, Sort Description Number of minutes that defines when personalized content can be made available.
Source	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates where the experiment was created. Possible values are: • BlockBuilder—CMS content editors • ExperienceBuilder—Experience Site Builder • FlowBuilder • PersonalizationApp
SourceRecordId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description Unique identifier that refers to the specific record that contains the experiment. This field is a polymorphic relationship field. Relationship Name SourceRecord Refers To FlowRecordElement, ManagedContent
StartedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates when the experiment began or is scheduled to begin.
State	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Picklist value that indicates the current state of the experiment. Possible values are: • Archived • Created • Started • Stopped The default value is Created.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Picklist value that indicates the current status of the experiment while an action is being performed. Possible values are: • Active • CreateError • DeleteError • Deleting

Field	Details
	• <code>EditError</code> • <code>Processing</code> The default value is <code>Processing</code>.
<code>StoppedDate</code>	Type <code>dateTime</code> Properties Filter, Nillable, Sort Description Timestamp that indicates when the experiment ended or is scheduled to end.
<code>WinnerSelectionMode</code>	Type <code>picklist</code> Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Possible values are: • <code>Automatic</code> • <code>Manual</code> The default value is <code>Manual</code>.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AbnExperimentChangeEvent](#) on page 68

Change events are available for the object.

[AbnExperimentFeed](#) on page 55

Feed tracking is available for the object.

[AbnExperimentHistory](#) on page 63

History is available for tracked fields of the object.

[AbnExperimentOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AbnExperimentShare](#) on page 67

Sharing is available for the object.

AbnExperimentCohort

Represents the specified audience that's participating in an A/B/n experiment. This object is available in API version 63.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
AbnExperimentId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to a related experiment. This field is a relationship field. Relationship Name AbnExperiment Relationship Type Parent-detail Refers To AbnExperiment (the parent object)
AllocationWeight	Type int Properties Filter, Group, Nillable, Sort Description Percentage of an audience to experience the selected part of the experiment.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. Optional. Possible values are: • USD—U.S. Dollar
DataSpaceId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description Unique identifier that refers to the data space where an experiment cohort's resources originate. Required. This field is a relationship field. Relationship Name DataSpace Refers To DataSpace
Description	Type string Properties Filter, Group, Nillable, Sort Description Text description of the experiment.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description System or user-generated API name for the experiment. Required.
IsControl	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the cohort is used as the control group that performance is checked against. The default value is <code>false</code>.
IsFallThrough	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this cohort captures users who don't meet the criteria for other cohorts in the experiment. When <code>true</code>, this cohort serves as the fallback option. When <code>false</code>, users must explicitly qualify for this cohort. The default value is <code>false</code>.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort Description Text label that identifies the experiment cohort. Required.
PersonalizerId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the personalizer that's related to the experiment cohort. This field is a relationship field. Relationship Name Personalizer Refers To PersonalizationRecommender

Usage

Use this object to describe experiment cohorts or to change allocation weights.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AbnExperimentCohortChangeEvent](#) on page 68

Change events are available for the object.

[AbnExperimentCohortFeed](#) on page 55

Feed tracking is available for the object.

[AbnExperimentCohortHistory](#) on page 63

History is available for tracked fields of the object.

[AbnExperimentCohortOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AbnExperimentCohortShare](#) on page 67

Sharing is available for the object.

AcceptedEventRelation

Represents event participants (invitees or attendees) with the status `Accepted` for a given event.

This object is available in API versions 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
<code>EventId</code>	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the event. This is a relationship field. Relationship Name Event Relationship Type Lookup Refers To Event
<code>RelationId</code>	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the invitee. This is a polymorphic relationship field. Relationship Name Relation Relationship Type Lookup Refers To Calendar, Contact, Lead, User

Field Name	Details
RespondedDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates the most recent date and time when the invitee accepted an invitation to the event.
Response	Type string Properties Filter, Group, Nillable, Sort Description Indicates the content of the response field. Label is Comment.
Type	Type string Properties Filter, Group, Nillable, Sort Description Indicates whether the invitee is a user, lead or contact, or resource.

Usage

Query invitees who have accepted an invitation to an event

```
SELECT eventId, type, response FROM AcceptedEventRelation WHERE eventId='00UTD000000ZH5LA'
```

SEE ALSO:

[DeclinedEventRelation](#)

[UndecidedEventRelation](#)

Account

Represents an individual account, which is an organization or person involved with your business (such as customers, competitors, and partners).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Experience Cloud site or Customer Portal users can access their own accounts and any account shared with them.

Fields

Field Name	Details
AccountNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Account number assigned to this account (not the unique, system-generated ID assigned during creation). Maximum size is 40 characters.
AccountSource	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The source of the account record. For example, <i>Advertisement</i> or <i>Trade Show</i>. The source is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.
ActivityMetricId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric. This field is a relationship field. Relationship Name ActivityMetric Refers To ActivityMetric
ActivityMetricRollupId	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup. This field is a relationship field. Relationship Name ActivityMetricRollup Refers To ActivityMetricRollup
AnnualRevenue	Type currency Properties Create, Filter, Nillable, Sort, Update Description Estimated annual revenue of the account.
BillingAddress	Type address Properties Filter, Nillable Description The compound form of the billing address. Read-only. For details on compound address fields, see Address Compound Fields.
BillingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address of this account. Maximum size is 40 characters.
BillingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address of this account. Maximum size is 80 characters.
BillingCountryCode	Type picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the account's billing address.
BillingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the billing address. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
BillingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
BillingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
BillingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address of this account. Maximum size is 20 characters.
BillingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Details for the billing address of this account. Maximum size is 80 characters.
BillingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO state code for the account's billing address.
BillingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street address for the billing address of this account.
ChannelProgramLevelName	Type string Properties Group, Nillable Description Read only. Name of the channel program level the account has enrolled. If this account has enrolled more than one channel program level, the oldest channel program name is displayed.
ChannelProgramName	Type string Properties Group, Nillable Description Read only. Name of the channel program the account has enrolled. If this account has enrolled more than one channel program, the oldest channel program name is displayed.
CleanStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the record's clean status as compared with Data.com.. Possible values are: AcknowledgedThe label on the account record detail page is Reviewed.

Field Name	Details
	• Different • Inactive • Matched—The label on the account record detail page is In Sync. • NotFound • PendingThe label on the account record detail page is Not Compared. • SelectMatch • Skipped
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
Description	Type textarea Properties Create, Nillable, Update Description Text description of the account. Limited to 32,000 KB.
DunsNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations

Field Name	Details
	around the world as a global standard for business identification and tracking. Maximum size is 9 characters. This field is available on business accounts, not person accounts.  Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.
Fax	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Fax number for the account.
Industry	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description An industry associated with this account. For example, <i>Biotechnology</i>. Maximum size is 40 characters.
IsBuyer	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the account is enabled as a buyer for Lightning B2B Commerce. The default value is <code>false</code>. This field is available in API version 48.0 and later.  Note: This field is only available to organizations that have the B2B Commerce license enabled.
IsCustomerPortal	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the account has at least one contact enabled to use the org's Experience Cloud site or Customer Portal (<code>true</code>) or not (<code>false</code>). This field is available if Customer Portal is enabled OR digital experiences is enabled. If your org is enabled to use Content Security Policy (CSP) features, then this field is visible on the Account object even if those features are later disabled.

Field Name	Details
	If you change this field's value from <code>true</code> to <code>false</code>, you can disable up to 100 Experience Cloud site or Customer Portal users associated with the account and permanently delete all of the account's site roles and groups. You can't restore deleted site roles and groups. Exclude this field when merging accounts. This field can be updated in API version 16.0 and later.  Tip: We recommend that you update up to 50 contacts simultaneously when changing the accounts on contacts enabled for an Experience Cloud site. We also recommend that you make this update after business hours.
IsPartner	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the account has at least one contact enabled to use the org's partner portal (<code>true</code>) or not (<code>false</code>). This field is available if partner relationship management (partner portal) is enabled OR digital experiences is enabled and you have partner portal licenses. If you change this field's value from <code>true</code> to <code>false</code>, you can disable up to 15 partner portal users associated with the account and permanently delete all of the account's partner portal roles and groups. You can't restore deleted partner portal roles and groups. Disabling a partner portal user in the Salesforce user interface or the API doesn't change this field's value from <code>true</code> to <code>false</code>. Even if this field's value is <code>false</code>, you can enable a contact on an account as a partner portal user via the API. Exclude this field when merging accounts. This field can be updated in API version 16.0 and later.  Tip: We recommend that you update up to 50 contacts simultaneously when changing the accounts on contacts enabled for an Experience Cloud site. We also recommend that you make this update after business hours.
IsPersonAccount	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. Label is Is Person Account. Indicates whether this account has a record type of Person Account (<code>true</code>) or not (<code>false</code>).
IsPriorityRecord	Type boolean

Field Name	Details
	Properties Defaulted on create, Group Description Shows whether the user has marked the account as important (<i>True</i>) or not (<i>False</i>). The default value is <code>false</code>. Available in API version 60.0 and later.
Jigsaw	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description References the ID of a company in Data.com. If an account has a value in this field, it means that the account was imported from Data.com. If the field value is <code>null</code>, the account was not imported from Data.com. Maximum size is 20 characters. Available in API version 22.0 and later. Label is Data.com Key. This field is available on business accounts, not person accounts.  Important: The <code>Jigsaw</code> field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Do not modify the value in the <code>Jigsaw</code> field.
JigsawCompanyId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the company in reference to <code>Jigsaw</code>.  Important: The <code>Jigsaw</code> field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the <code>Jigsaw</code> field.
LastActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Value is one of the following, whichever is the most recent: • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
LastReferencedDate	Type datetime

Field Name	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
MasterRecordId	Type reference Properties Filter, Group, Nillable, Sort Description If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or has not been deleted, the value is <code>null</code>. This is a relationship field. Relationship Name MasterRecord Relationship Type Lookup Refers To Account
NaicsCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments into industries, according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy. Maximum size is 8 characters. This field is available on business accounts, not person accounts.

Field Name	Details
	 Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.
NaicsDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an org's line of business, based on its NAICS code. Maximum size is 120 characters. This field is available on business accounts, not person accounts.  Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Required. Label is Account Name. Name of the account. Maximum size is 255 characters. If the account has a record type of Person Account: • This value is the concatenation of the <code>FirstName</code>, <code>MiddleName</code>, <code>LastName</code>, and <code>Suffix</code> of the associated person contact. • You can't modify this value.
NumberOfEmployees	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Label is Employees. Number of employees working at the company represented by this account. Maximum size is eight digits.
OperatingHoursId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The operating hours associated with the account. Available only if Field Service is enabled. This is a relationship field. Relationship Name OperatingHours

Field Name	Details
	Relationship Type Lookup Refers To OperatingHours
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this account. Default value is the user logged in to the API to perform the create. If you have set up account teams in your org, updating this field has different consequences depending on your version of the API: - For API version 12.0 and later, sharing records are kept, as they are for all objects. - For API version before 12.0, sharing records are deleted. - For API version 16.0 and later, users must have the “Transfer Record” permission in order to update (transfer) account ownership using this field. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
Ownership	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Ownership type for the account, for example Private, Public, or Subsidiary.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the parent object, if any. This is a relationship field.

Field Name	Details
	Relationship Name Parent
	Relationship Type Lookup
	Refers To Account
PersonActionCadenceAssigneeId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 47.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. This field is a polymorphic relationship field.
	Relationship Name PersonActionCadenceAssignee
	Refers To Group, User
PersonActionCadenceId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the lead's assigned cadence. This field is available in API version 46.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. This is a relationship field.
	Relationship Name PersonActionCadence
	Refers To ActionCadence
PersonActionCadenceState	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The state of the current action cadence tracker. This field is available in API version 50.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. Possible values are: • Complete • Error • Initializing • Paused • Processing • Running
PersonIndividualId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the data privacy record associated with this person's account. This field is available if you enabled Data Protection and Privacy in Setup. Available in API version 42.0 and later.
PersonScheduledResumeDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. This field is available in API version 54.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number for this account. Maximum size is 40 characters.
PhotoUrl	Type url

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description Path to be combined with the URL of a Salesforce instance (for example, <code>https://yourInstance.salesforce.com/</code>) to generate a URL to request the social network profile image associated with the account. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the account. Blank if Social Accounts and Contacts isn't enabled for the org or if Social Accounts and Contacts is disabled for the requesting user.
Rating	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The account's prospect rating, for example Hot, Warm, or Cold.
RecordTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the record type assigned to this object.
Salutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Honorific added to the name for use in letters, etc. This field is available on person accounts.
ShippingAddress	Type address Properties Filter, Nillable Description The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
ShippingCity	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address for this account. City maximum size is 40 characters
ShippingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address for this account. Country maximum size is 80 characters.
ShippingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the account's shipping address.
ShippingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the shipping address. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
ShippingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
ShippingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
<code>ShippingPostalCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address for this account. Postal code maximum size is 20 characters.
<code>ShippingState</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address for this account. State maximum size is 80 characters.
<code>ShippingStateCode</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO state code for the account's shipping address.
<code>ShippingStreet</code>	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street address of the shipping address for this account. Maximum of 255 characters.
<code>Sic</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Standard Industrial Classification code of the company's main business categorization, for example, 57340 for Electronics. Maximum of 20 characters. This field is available on business accounts, not person accounts.

Field Name	Details
SicDesc	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of an org's line of business, based on its SIC code. Maximum length is 80 characters. This field is available on business accounts, not person accounts.
Site	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the account's location, for example <code>Headquarters</code> or <code>London</code>. Label is Account Site. Maximum of 80 characters.
TickerSymbol	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The stock market symbol for this account. Maximum of 20 characters. This field is available on business accounts, not person accounts.
Tradestyle	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A name, different from its legal name, that an org may use for conducting business. Similar to "Doing business as" or "DBA". Maximum length is 255 characters. This field is available on business accounts, not person accounts.  Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Type of account, for example, Customer, Competitor, or Partner.

Field Name	Details
Website	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description The website of this account. Maximum of 255 characters.
YearStarted	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The date when an org was legally established. Maximum length is 4 characters. This field is available on business accounts, not person accounts.  Note: This field is only available to organizations that use Data.com Prospector or Data.com Clean.

IsPersonAccount Fields

These fields are the subset of person account fields that are contained in the child person contact record of each person account. If the `IsPersonAccount` field has the value `false`, the following fields have a null value and can't be modified. If `true`, the fields can be modified.

Person account fields only show when person accounts are enabled. Person accounts are disabled by default.

Field Name	Details
FirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description First name of the person for a person account. Maximum size is 40 characters.
LastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Last name of the person for a person account. Required if the record type is a person account record type. Maximum size is 80 characters.

Field Name	Details
MiddleName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Middle name of the person for a person account. Maximum size is 40 characters.
PersonAssistantName	Type string Properties Create, Filter, Nillable, Update Description The person account's assistant name. Label is Assistant. Maximum size is 40 characters.
PersonAssistantPhone	Type phone Properties Create, Filter, Nillable, Update Description The person account's assistant phone. Label is Asst. Phone. Maximum size is 40 characters.
PersonBirthDate	Type date Properties Create, Filter, Nillable, Update Description The birthday of the contact associated with this person account. Label is Birthdate. The year portion of the <code>PersonBirthDate</code> field is ignored in filter criteria, including report filters, list view filters, and SOQL queries. For example, the following SOQL query returns person accounts with birthdays later in the year than today: <pre>SELECT FirstName, LastName, PersonBirthDate FROM Account WHERE Birthdate > TODAY</pre>
PersonContactId	Type reference Properties Filter, Nillable, Update Description The ID for the contact associated with this person account. Label is Contact ID.

Field Name	Details
PersonDepartment	Type string Properties Create, Filter, Nillable, Update Description The department. Label is Department. Maximum size is 80 characters.
PersonEmail	Type email Properties Create, Filter, Nillable, Update Description Email address for this person account. Label is Email.
PersonEmailBouncedDate	Type dateTime Properties Create, Filter, Nillable, Update Description If bounce management is activated and an email sent to the person account bounces, the date and time the bounce occurred.
PersonEmailBouncedReason	Type string Properties Create, Filter, Nillable, Update Description If bounce management is activated and an email sent to the person account bounces, the reason the bounce occurred
PersonGenderIdentity	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The person's internal experience of their gender, which may or may not correspond to the person's designated sex at birth. Label is Gender Identity.
PersonHasOptedOutOfEmail	Type boolean Properties Create, Filter, Nillable, Update

Field Name	Details
	Description Indicates whether the person account has opted out of email (<code>true</code>) or not (<code>false</code>). Label is Email Opt Out .
PersonHomePhone	Type phone Properties Create, Filter, Nillable, Update Description The home phone number for this person account. Label is Home Phone .
PersonLeadSource	Type picklist Properties Create, Filter, Nillable, Update Description The person account's lead source. Label is Lead Source .
PersonMailingAddress	Type address Properties Filter, Nillable Description The compound form of the person account mailing address. Read-only. For details on compound address fields, see Address Compound Fields .
- PersonMailingCity - PersonMailingCountry - PersonMailingPostalCode - PersonMailingState	Type string Properties Create, Filter, Nillable, Update Description Details about the mailing address for this person account. Labels are Mailing City , Mailing Country , Postal Code , and State . Maximum size for city and country is 40 characters. Maximum size for postal code and state is 20 characters.
- PersonMailingCountryCode - PersonMailingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country or state code for the mailing address of the person account.

Field Name	Details
PersonMailingGeocodeAccuracy	Type picklist Properties Retrieve, Query, Restricted picklist, Nillable Description Accuracy level of the geocode for the person's mailing address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PersonMailingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>PersonMailingLongitude</code> to specify the precise geolocation of a person account's mailing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PersonMailingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>PersonMailingLatitude</code> to specify the precise geolocation of a person account's mailing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations on page 19.
PersonMailingStreet	Type textarea Properties Create, Filter, Nillable, Update Description The mailing street address for this person account. Label is Mailing Street. Maximum size is 255 characters.
PersonMobilePhone	Type phone Properties Create, Filter, Nillable, Update Description The mobile phone number for this person account. Label is Mobile.

Field Name	Details
- PersonOtherCity - PersonOtherCountry - PersonOtherPostalCode - PersonOtherState	Type string Properties Create, Filter, Nillable, Update Description Details about the alternate address for this person account. Labels are Other City, Other Country, Other Zip/Postal Code, and Other State.
- PersonOtherCountryCode - PersonOtherStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country or state code for the alternate address of the person account.
PersonOtherLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>PersonOtherLongitude</code> to specify the precise geolocation of a person account's alternate address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PersonOtherLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>PersonOtherLatitude</code> to specify the precise geolocation of a person account's alternate address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PersonOtherPhone	Type phone Properties Create, Filter, Nillable, Update Description The alternate phone number for this person account. Label is Other Phone.

Field Name	Details
PersonOtherStreet	Type textarea Properties Create, Filter, Nillable, Update Description The person account's alternate street address. Label is Other Street.
PersonPronouns	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The individual's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the individual in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters. Label is Pronouns. Possible values are: • He/Him • He/They • Not Listed • She/Her • She/They • They/Them
PersonReportsToId	Type reference Properties Create, Filter, Group, Nillable, Sort Update Description ID of the person account or contact that this person account reports to. This field doesn't appear if <code>enableReportsToOnPersonAccount</code> in the <code>AccountSettings</code> metadata type is <code>false</code>. Available in API version 62.0 and later. This is a relationship field. Relationship Name PersonReportsTo Relationship Type Lookup Refers To Contact

Field Name	Details
PersonTitle	Type string Properties Create, Filter, Nillable, Update Description The person account's title. Label is Title. Maximum size is 80 characters. When converting a lead to a person account, the conversion fails if the lead's Title field contains more than 80 characters.
Suffix	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name suffix of the person for a person account. Maximum size is 40 characters.

Note: When importing account data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

Usage

Use this object to query and manage accounts in your org. Client applications can create, update, delete, or query Attachment records associated with an account via the API.

Client applications can also create or update account objects by converting a Lead via the `convertLead()` call.

If the values in the `IsPersonAccount` Fields are not null, you can't change `IsPersonAccount` to `false` or an error occurs.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountChangeEvent (API version 44.0)

Change events are available for the object.

AccountFeed (API version 18.0)

Feed tracking is available for the object.

AccountHistory (API version 11.0)

History is available for tracked fields of the object.

AccountOwnerSharingRule

Sharing rules are available for the object.

AccountShare

Sharing is available for the object.

SEE ALSO:

- AccountShare
- AccountTeamMember
- SOAP API Developer Guide: Person Account Record Types

AccountBrand

Represents the brand details of a Partner Account. This object is available in API version 43.0 and later.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated() query(), retrieve(), search(), undelete(), update(), upsert()

Special Access Rules

This object is available only if digital experiences is enabled in your org and it has a Partner Community or Customer Community Plus license.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the Account. This number is unique within your organization.
Address	Type address Properties Filter, Nillable Description The street address.
City	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The city.
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the company associated with the account brand.
Country	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The country where the account is physically located.
Email	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Email address associated with the account.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist Sort, Update Description Stores data for accurate geocoded location.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Most recent date referenced.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Most recent date viewed.
Latitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used along with <code>Longitude</code> to specify the precise geolocation of an address.
LogoId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the logo.
LogoUrl	Type url Properties Nillable, Description URL of the logo. This field is available in API version 44.0 and later.
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Latitude</code> to specify the precise geolocation of an address.
Name	Type string Properties Create, Filter, Nillable, Sort, Update Description Required. Name of the account.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. ID of the Owner.
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number.
PostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code where the user's IP address is physically located.
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address state.
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The address street.
Website	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description Website for the Account Brand.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

AccountBrandOwnerSharingRule

Sharing rules are available for the object.

AccountBrandShare

Sharing is available for the object.

AccountContactRelation

Represents a relationship between a contact and one or more accounts.

This object is available in API version 37.0. The AccountContactRelation object supports person accounts. That means that a person account can be either a related contact on a business account or a related account on a contact. A person account can also be related to another person account as either a related contact or related account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
AccountContactRelationshipCurrency	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
AccountId	Type reference Properties Create, Filter, Group, Sort Description ID of the account that is related to the contact. Field can't be modified when updating existing account-contact relationship records.
ContactId	Type reference Properties Create, Filter, Group, Sort

Field Name	Details
	Description ID of the contact that is related to the account. Field can't be modified when updating existing account-contact relationship records.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date a relationship between a contact and account ended. Use with the <code>StartDate</code> to keep a history of the relationship.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether relationship is active (<code>true</code>) or not (<code>false</code>).
IsDirect	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the account associated with the contact is the contact's primary account (<code>true</code>) or not (<code>false</code>).
Roles	Type multipicklist Properties Create, Filter, Nillable, Update Description The contact's participating role in the account. Values are <code>Business User</code> , <code>Decision Maker</code> , <code>Economic Buyer</code> , <code>Economic Decision Maker</code> , <code>Evaluator</code> , <code>Executive Sponsor</code> , <code>Influencer</code> , <code>Technical Buyer</code> , and <code>Other</code> .
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The date a relationship between a contact and account began. Use with the <code>EndDate</code> to keep a history of the relationship.

Usage

Use this object to associate a single contact record to multiple account records so you can easily track the relationships between the people and businesses they work with.

When you insert a non-private contact in your org that associates a contact to multiple accounts, an `AccountContactRelation` is created and its validation rules, database insertion, and triggers are executed immediately after the contact is saved to the database. When you change a contact's primary account, an `AccountContactRelation` may be created or edited, and the `AccountContactRelation` validation rules, database changes, and triggers are executed immediately after the contact is saved to the database. See [Order of Execution](#).

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AccountContactRelationChangeEvent](#) on page 68 (API version 59.0)

Change events are available for the object.

AccountCleanInfo

Stores the metadata Data.com Clean uses to determine an account record's clean status. `AccountCleanInfo` helps you automate the cleaning or related processing of account records.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Account Clean Info provides a snapshot of the data in your Salesforce account record and its matched Data.com record at the time the Salesforce record was cleaned.

Account Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentState` field. If the `IsDifferentState` field's value is `False`, that means the `State` field value is *the same* on the Salesforce account record and its matched Data.com record.

`AccountCleanInfo` bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the account record.
- `IsDifferent` indicates whether or not a field on the account record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the account record has a value that is flagged as wrong to Data.com.

- `IsReviewed` indicates whether or not a field on the account record is in a `Reviewed` state, which means that the value was reviewed but not accepted.

Their individual bits are defined here.

Supported Calls

`describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
<code>AccountId</code>	Type reference Properties Filter, Group, Sort Description The unique, system-generated ID assigned when the account record was created.
<code>AccountSite</code>	Type string Properties Filter, Group, Nillable, Sort Description Information about the account's location, such as single location, headquarters, or branch.
<code>Address</code>	Type address Properties Filter, Nillable Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
<code>AnnualRevenue</code>	Type currency Properties Filter, Nillable, Sort Description Estimated annual revenue of the account.
<code>City</code>	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description Details for the billing address of the account.
CleanedByJob	Type boolean Properties Filter Description Indicates whether the account record was cleaned by a Data.com Clean job (<code>true</code>) or not (<code>false</code>).
CleanedByUser	Type boolean Properties Filter Description Indicates whether the account record was cleaned by a Salesforce user (<code>true</code>) or not (<code>false</code>).
CompanyName	Type string Properties Filter, Group, Nillable, Sort Description The name of the company.
CompanyStatusDataDotCom	Type picklist Properties Filter, Group, Nillable, Sort Description The status of the company per Data.com. Values are: Company is In Business per Data.com or Company is Out of Business per Data.com.
Country	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Details for the billing address of the account.
DandBCompanyDunsNumber	Type string Properties Filter, Group, Nillable, Sort Description The D-U-N-S Number on the D&B Company record (if any) that is linked to the account.
DataDotComId	Type string Properties Filter, Group, Nillable, Sort Description The ID Data.com maintains for the company.
Description	Type textarea Properties Nillable Description A description of the account.
DunsNumber	Type string Properties Filter, Group, Nillable, Sort Description The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking.
DunsRightMatchConfidence	Type int Properties Filter, Group, Nillable, Sort Description The account's DUNSRight confidence code.

Field Name	Details
DunsRightMatchGrade	Type string Properties Filter, Group, Nillable, Sort Description The account's DUNSRight match grade.
Fax	Type phone Properties Filter, Group, Nillable, Sort Description The account's fax number.
Industry	Type picklist Properties Filter, Group, Nillable, Sort Description The industry the account belongs to.
IsDifferentAccountSite	Type boolean Properties Filter Description Indicates whether the account's AccountSite field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
IsDifferentAnnualRevenue	Type boolean Properties Filter Description Indicates whether the account's AnnualRevenue field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
IsDifferentCity	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the account's <code>City</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentCompanyName</code>	Type boolean Properties Filter Description Indicates whether the account's <code>AccountName</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentCountry</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Country</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentCountryCode</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Country Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentDandBCompanyDunsNumber</code>	Type boolean Properties Filter Description Indicates whether the account's <code>DandBCompanyID</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentDescription</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the account's <code>Description</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentDunsNumber</code>	Type boolean Properties Filter Description Indicates whether the account's <code>DunsNumber</code> field value is different from the D-U-N-S Number on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentFax</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Fax</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentIndustry</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Industry</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentNaicsCode</code>	Type boolean Properties Filter Description Indicates whether the account's <code>NaicsCode</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentNaicsDescription</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the account's <code>NaicsDescription</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentNumberOfEmployees</code>	Type boolean Properties Filter Description Indicates whether the account's <code>NumberOfEmployees</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentOwnership</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Ownership</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentPhone</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Phone</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentPostalCode</code>	Type boolean Properties Filter Description Indicates whether the account's <code>PostalCode</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentSic</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the account's <code>Sic</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentSicDescription</code>	Type boolean Properties Filter Description Indicates whether the account's <code>SicDescription</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentState</code>	Type boolean Properties Filter Description Indicates whether the account's <code>State</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentStateCode</code>	Type boolean Properties Filter Description Indicates whether the account's <code>State Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentStreet</code>	Type boolean Properties Filter Description Indicates whether the account's <code>State</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentTickerSymbol</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the account's <code>TickerSymbol</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentTradestyle</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Tradestyle</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentWebsite</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Website</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentYearStarted</code>	Type boolean Properties Filter Description Indicates whether the account's <code>YearStarted</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongAccountSite</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>AccountSite</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongAddress</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>Address</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongAnnualRevenue</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>AnnualRevenue</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongCompanyName</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>CompanyName</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongDescription</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Description</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongDunsNumber</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>DunsNumber</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongFax</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>Fax</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongIndustry</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Industry</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongNaicsCode</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>NaicsCode</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongNaicsDescription</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>NaicsDescription</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongNumberOfEmployees</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>NumberOfEmployees</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongOwnership</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>Ownership</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongPhone</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Phone</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongSic</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Sic</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongSicDescription</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>SicDescription</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongTickerSymbol</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>TickerSymbol</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongTradestyle</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>Tradestyle</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongWebsite</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Website</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongYearStarted</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>YearStarted</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsInactive</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the account has been reported to Data.com as <i>Inactive</i> (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedAccountSite</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>AccountSite</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedAddress</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>Address</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedAnnualRevenue</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>AnnualRevenue</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedCompanyName</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>CompanyName</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedDandBCompanyDunsNumber</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>DandBCompanyID</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedDescription</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Description</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedDunsNumber</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>DunsNumber</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedFax</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Fax</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedIndustry</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Industry</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedNaicsCode</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>NaicsCode</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedNaicsDescription</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>NaicsDescription</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedNumberOfEmployees</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>NumberOfEmployees</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedOwnership</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Ownership</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedPhone</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Phone</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedSic</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Sic</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedSicDescription</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>SicDescription</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedTickerSymbol</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the account's <code>TickerSymbol</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedTradestyle</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Tradestyle</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedWebsite</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>Website</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedYearStarted</code>	Type boolean Properties Filter, Update Description Indicates whether the account's <code>YearStarted</code> field value is in a Reviewed state (<code>true</code>) or not (<code>false</code>).
<code>LastMatchedDate</code>	Type dateTime Properties Filter, Sort Description The date the account record was last matched and linked to a Data.com record.
<code>LastStatusChangedById</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of who or what last changed the record's <code>Clean Status</code> field value: a Salesforce user or a Clean job.

Field Name	Details
LastStatusChangedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record's <code>Clean Status</code> field value was last changed.
Latitude	Type double Properties Filter, Nillable, Sort Description Used with <code>Longitude</code> to specify the precise geolocation of a billing address. Data not currently provided.
Longitude	Type double Properties Filter, Nillable, Sort Description Used with <code>Latitude</code> to specify the precise geolocation of a billing address. Data not currently provided.
NaicsCode	Type string Properties Filter, Group, Nillable, Sort Description The six-digit North American Industry Classification System (NAICS) code is the standard used by business and government to classify business establishments into industries, according to their economic activity for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy.
NaicsDescription	Type string Properties Filter, Group, Nillable, Sort Description A brief description of an organization's line of business, based on its NAICS code.
Name	Type string

Field Name	Details
	Properties Filter, Group, Sort, Update Description Field label is Account Clean Info Name. The name of the account. Maximum size is 255 characters.
NumberOfEmployees	Type int Properties Filter, Group, Nillable, Sort Description The number of employees working at the account.
Ownership	Type picklist Properties Filter, Group, Nillable, Sort Description Ownership type for the account, for example Private, Public, or Subsidiary.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number for the account.
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the account.
Sic	Type string Properties Filter, Group, Nillable, Sort Description Standard Industrial Classification code of the company's main business categorization, for example, 57340 for Electronics.

Field Name	Details
SicDescription	Type string Properties Filter, Group, Nillable, Sort Description A brief description of an organization's line of business, based on its SIC code.
State	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the account.
Street	Type textarea Properties Filter, Group, Nillable, Sort Description Details for the billing address of the account.
TickerSymbol	Type string Properties Filter, Group, Nillable, Sort Description The stock market symbol for the account.
Tradestyle	Type string Properties Filter, Group, Nillable, Sort Description A name, different from its legal name, that an organization can use for conducting business. Similar to "Doing business as" (DBA).
Website	Type url Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The website of the account.
YearStarted	Type string Properties Filter, Group, Nillable, Sort Description The year the company was established or the year when current ownership or management assumed control of the company.

Usage

Administrators can modify a limited set of AccountCleanInfo fields from the Account Clean Info page.

Developers can create triggers that read the Account Clean Info fields to help automate the cleaning or related processing of account records. For example, you might create a trigger that reads the `Clean Status` field on the Account object. If an account record's `Clean Status` field value is `Different` but the record has no `Billing Street` value, the trigger could update the record's status to `Not Compared`.

Create triggers that read AccountCleanInfo fields to help automate the cleaning or related processing of account records. For example:

- Keep account records' status `InSync` if the only difference from matched records is the `Phone` format (for example, `(415) 353-8000` on the account record versus `415 353 8000` on the matched Data.com record).

```
trigger AccountPhoneTrigger on Account (before update) {

    for (Account account: Trigger.new) {
        Account oldAccount = Trigger.oldMap.get(account.ID);
        if (account.CleanStatus == 'Different') {
            List <AccountCleanInfo> cleanInfo = [Select Id, IsDifferentPhone,
            IsReviewedPhone, Phone from AccountCleanInfo where AccountId = :account.Id];
            if (cleanInfo.size() > 0 && cleanInfo[0].IsDifferentPhone &&
            cleanInfo[0].Phone.StartsWith('+')) {
                // if Data.com phone number is marked Different but starts with '+',
            ignore this
                // and set the status to "Reviewed"
                AccountCleanInfo cleanInfoToUpdate = new AccountCleanInfo();
                cleanInfoToUpdate.Id = cleanInfo[0].Id;
                cleanInfoToUpdate.IsReviewedPhone = true;
                update cleanInfoToUpdate;
                account.CleanStatus = 'Reviewed';
            }
        }
    }
}
```

- Create a customized set of `Industry` field values for accounts. Use triggers to map values from fields on imported or cleaned records onto a standard set of values.

- Read the `CleanStatus` field value on the Account object. If that value is `Different`, but a Salesforce record has no street address value, update the record's status to `Not Compared`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AccountCleanInfoChangeEvent](#) (API version 62.0)

Change events are available for the object.

AccountContactRole

Represents the role that a Contact plays on an Account.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>AccountId</code>	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Account. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
<code>ContactId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Sort, Update Description Required. ID of the Contact associated with this account. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether the Contact plays the primary role on the Account (<code>true</code>) or not (<code>false</code>). Note that each account has only one primary contact role. Label is Primary. Default value is <code>false</code>.
Role	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the role played by the Contact on this Account, such as Decision Maker, Approver, Buyer, and so on. Must be unique—there can't be multiple records in which the <code>AccountId</code>, <code>ContactId</code>, and <code>Role</code> values are identical. Different contacts can play the same role on the same account. A contact can play different roles on the same account.

Usage

Use this object to define the role that a Contact plays on a given Account within the context of a specific Opportunity.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountContactRoleChangeEvent (API version 44.0)

Change events are available for the object.

[Contact](#)

AccountInsight

Represents an individual insight (a key business development) related to an account record.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see an insight related to a specific account, users need a Sales Cloud Einstein license and access to the account record. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field Name	Details
<code>AccountId</code>	Type reference Properties Filter, Group, Sort Description ID of the related account record.
<code>ActualHeardWithinDays</code>	Type int Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Reserved for future use.
CompetitorName	Type string Properties Filter, Group, Nillable, Sort Description This field has been deprecated as of API version 45.0.
ContactName	Type string Properties Filter, Group, Nillable, Sort Description This field is not in use as of API version 46.0.
ContactTitle	Type string Properties Filter, Group, Nillable, Sort Description This field is not in use as of API version 46.0.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The division of the related record.
ExpectedHeardWithinDays	Type int

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description Reserved for future use.
LastHeard	Type dateTime Properties Filter, Nillable, Sort Description Reserved for future use.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
NumberOfNewsArticles	Type int Properties Filter, Group, Nillable, Sort Description The number of news articles related to insights of type M&A activity detected, Company is expanding, and Leadership changes.
Rationale	Type string Properties Filter, Group, Nillable

Field Name	Details
	Description The explanation for an insight, providing more background information and details that are specific to the org.
Title	Type string Properties Filter, Group, Nillable Description The title of the insight.
TrendType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The trend type of the insight. Possible values include: - Negative - Positive - Informational
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of insight. Possible values include: - M&A activity detected - Company is expanding - Leadership changes

Usage

This object is read-only and isn't supported with workflows, triggers, or process builder.

AccountOwnerSharingRule

Represents the rules for sharing an account with a User other than the owner.

Note: To programmatically update owner sharing rules, we recommend that you use Metadata API. Contact Salesforce customer support to enable access to this object for your org.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>AccountAccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit • All (This value isn't valid for creating or updating.)
<code>CaseAccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of access granted to the target Group for all child cases. The possible values are: • None • Read • Edit
<code>ContactAccessLevel</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description A value that represents the type of access granted to the target Group, UserRole, or User for any associated contacts. The possible values are: • None • Read

Field	Details
	Edit  Note: When DefaultContactAccess is set to Controlled by Parent, you can't create or update this field.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group. An Account owned by a User in the source Group triggers the rule to give access.
OpportunityAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description A value that represents the type of access granted to the target Group for any associated Opportunity. The possible values are: • None • Read • Edit
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the User or Group being granted access.

Usage

Use this object to manage the sharing rules for accounts. General sharing and territory management-related sharing use this object. For example, the following code creates an account owner sharing rule between two public groups, which can also contain portal users.

```
AccountOwnerSharingRule rule = new AccountOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx0000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx00000000001"); // Set the group of users to share records to
rule.setAccountAccessLevel("Edit");
rule.setOpportunityAccessLevel("Read");
rule.setCaseAccessLevel("None");
connection.create(rule);
```

 **Note:** The original territory management feature is now unavailable. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

AccountPartner

This object represents a partner relationship between two Account records. An AccountPartner record is created automatically when a Partner record is created for a partner relationship between two accounts. An AccountPartner record is also created automatically between an account and an opportunity's account when a Partner record is created between an account and an opportunity.

 **Note:** This object is completely distinct from and independent of Account records that have been enabled for the partner portal.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountFromId	Type reference Properties Create, Filter, Group, Sort Description ID of the main Account in the partner relationship. This is a relationship field. Relationship Name AccountFrom Relationship Type Lookup Refers To Account

Field	Details
AccountToId	Type reference Properties Create, Filter, Group, Sort Description ID of the partner Account in the partner relationship. This is a relationship field. Relationship Name AccountTo Relationship Type Lookup Refers To Account
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the AccountPartner is the primary partner of an opportunity (<code>true</code>). When there are no corresponding Opportunity Partner records, the value is <code>false</code>.
OpportunityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the opportunity in a partner relationship. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
ReversePartnerId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the reciprocal AccountPartner record in a partner relationship.
Role	Type picklist Properties Create, Filter, Group, Nillable, Sort Description The UserRole that the partner Account has on the main Account. For example, Consultant or Distributor.

Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the `AccountFromId`), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`.
- The reverse relationship AccountPartner with "Acme Consulting" as the `AccountFromId` and "Acme, Inc." as the `AccountToId`.
- The value of the Role field in the reverse relationship AccountPartner is set to the PartnerRole record `ReverseRole` value associated with the value of the `Role` field in the forward relationship AccountPartner.

This mapping allows the API to manage the records and their relationships efficiently.

[OpportunityPartner](#)

AccountPlan

Represents customer information with measurable objectives and executable steps to proactively manage and grow customer relationships. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

This object is available if sales account plans are turned on.

Fields

Field	Details
AccountChallenges	Type textarea Properties Create, Nillable, Update Description The key obstacles to the growth of the account.
AccountCmptvWeaknesses	Type textarea Properties Create, Nillable, Update Description The shortcomings that hinder the account's ability to outperform competitors in the market.
AccountCompetitiveStrengths	Type textarea Properties Create, Nillable, Update Description The abilities of the account to outperform their competitors in the market.
AccountCompetitors	Type textarea Properties Create, Nillable, Update Description The businesses or companies that offer similar products or services and compete for the same target market as the account.
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The Account record. This field is a relationship field. Relationship Name Account

Field	Details
	Refers To Account
AccountIndustryTrends	Type textarea Properties Create, Nillable, Update Description The shifts in the pattern of the industry that are specific to the account.
AccountInternalRiskRating	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The rating that's assigned to assess the risk level of the account. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
AccountPrfmIndicators	Type textarea Properties Create, Nillable, Update Description The key performance indicators used by the account to measure the success and effectiveness of a product or service.
AccountStrategicPriorities	Type textarea Properties Create, Nillable, Update Description The key priorities of the account.
AccountVision	Type textarea Properties Create, Nillable, Update Description The long-term value statement of the account.
CallingStrategy	Type textarea

Field	Details
	Properties Create, Nillable, Update Description How frequently the relationship team meets with the account. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
CallingStrategyNotes	Type textarea Properties Create, Nillable, Update Description The outline of the format and organization of account meetings. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The end date of the account plan.
FlexCard	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Omnistudio FlexCard. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly. For example, accessed through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, and <code>LastReferenceDate</code> isn't null, the user accessed this record or list view indirectly.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the account plan.
Notes	Type textarea Properties Create, Nillable, Update Description The notes or observations for the account plan.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the account plan. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
RelationshipOpportunities	Type textarea Properties Create, Nillable, Update Description The list of sales or potential deal opportunities in the relationship with the account.
RelationshipStrengths	Type textarea Properties Create, Nillable, Update

Field	Details
	Description The strengths in the relationship with the account.
RelationshipSummary	Type textarea Properties Create, Nillable, Update Description A concise overview of the relationship dynamics with the account. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
RelationshipThreats	Type textarea Properties Create, Nillable, Update Description The possible concerns in the relationship with the account.
RelationshipWeaknesses	Type textarea Properties Create, Nillable, Update Description The shortcomings in the relationship with the account.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The start date of the account plan.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Specifies the status of the account plan. Possible values are: • Active • Inactive

Field	Details
	Not Started The default value is Not Started.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountPlanChangeEvent

Change events are available for the object.

AccountPlanHistory

History is available for tracked fields of the object.

AccountPlanOwnerSharingRule

Sharing rules are available for the object.

AccountPlanShare

Sharing is available for the object.

AccountPlanObjective

Represents strategic objectives or initiatives pursued by a relationship team with a customer to enhance customer engagement and satisfaction. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if sales account plans are turned on.

Fields

Field	Details
AccountPlanId	Type reference Properties Create, Filter, Group, Sort Description The account plan associated with the objective. This field is a relationship field.

Field	Details
	Relationship Name AccountPlan Relationship Type Master-detail Refers To AccountPlan
AccountPlanObjCategoryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The category associated with the account plan objective. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. This field is a relationship field. Relationship Name AccountPlanObjCategory Refers To AccountPlanObjectiveCategory
Description	Type textarea Properties Create, Nillable, Update Description The description of the account plan objective.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The end date of the account plan objective.
ExternalStakeholderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The customer stakeholder contact associated with the account plan objective. The relationship team collaborates with the customer stakeholder to achieve a specific objective. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license. This field is a relationship field. Relationship Name ExternalStakeholder Refers To Contact
LastInteractionSumGenDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the most recent interaction summary was generated using Einstein Generative AI. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the account plan objective.

Field	Details
ObjectiveInteractionSummary	Type textarea Properties Create, Nillable, Update Description The summary of interactions that occur with the account in relation to the account plan objective. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.
ObjectiveOwnerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The owner user associated with the objective. This field is a relationship field. Relationship Name ObjectiveOwner Refers To User
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who created the record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
Priority	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the level of importance placed on achieving the objective associated with the account plan. To access this field, you must have an FSC Sales or a Financial Services Cloud Extension license.

Field	Details
	Possible values are: • High • Low • Medium
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The start date of the account plan objective.
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the status of the account plan objective. Possible values are: • Closed • In Progress • New

Associated Objects

AccountPlanObjectiveMeasure

Represents the performance of target metrics for an objective associated with the account plan. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if sales account plans are turned on.

Fields

Field	Details
AccountPlanObjMeasCalcDefId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account plan objective calculation definition associated with the measure. This field is a relationship field. Available in API version 63.0 and later. Relationship Name AccountPlanObjMeasCalcDef Refers To AccountPlanObjMeasCalcDef
AccountPlanObjectiveId	Type reference Properties Create, Filter, Group, Sort Description The account plan objective associated with the measure. This field is a relationship field. Relationship Name AccountPlanObjective Relationship Type Master-detail Refers To AccountPlanObjective
CurrentCurrencyValue	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The current value in currency for a measure associated with the account plan objective.
CurrentNumberValue	Type double Properties Filter, Nillable, Sort Description The current numerical value for a measure associated with the account plan objective.
CurrentPercentValue	Type percent Properties Filter, Nillable, Sort Description The current value in percentage for a measure associated with the account plan objective.
CurrentValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The current value for a measure associated with the account plan objective.
CurrentValueTimestamp	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the current value was last updated. This field is available in API version 63.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the account plan objective measure.
TargetCurrencyValue	Type currency Properties Filter, Nillable, Sort Description The target value in currency for a measure associated with the account plan objective.
TargetNumberValue	Type double Properties Filter, Nillable, Sort Description The target numerical value for a measure associated with the account plan objective.
TargetPercentValue	Type percent Properties Filter, Nillable, Sort Description The target value in percentage for a measure associated with the account plan objective.
TargetValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The target value for a measure associated with the account plan objective.

Field	Details
ValueType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of value that's measured. Possible values are: • Currency • Number • Percent

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AccountPlanObjectiveMeasureChangeEvent](#) on page 68

Change events are available for the object.

[AccountPlanObjectiveMeasureHistory](#) on page 63

History is available for tracked fields of the object.

AccountPlanObjMeasCalcCond

Represents a field and value combination for filtering records to include in the calculation of a sales account plan objective measure's current value. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available if sales account plans are turned on.

Fields

Field	Details
AccountPlanObjMeasCalcDefId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description The account plan objective measure calculation definition where this criteria is used. This field is a relationship field. Relationship Name AccountPlanObjMeasCalcDef Relationship Type Master-detail Refers To AccountPlanObjMeasCalcDef
FieldName	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A field on the calculation definition's <code>TargetObject</code> that you want to filter by. Fields on the Campaign, Case, Contact, or Opportunity objects are supported.
Operation	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The logical operator for matching records with the specified field value. Possible values are: • Contains • Equals • GreaterOrEqual • GreaterThan • LessOrEqual • LessThan • NotContain • NotEqual • StartsWith
Value	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The value to match for the specified field.

Usage

Let's say that a calculation definition tracks the currency amount on Closed Won opportunities. The calculation definition's `TargetObject` is `Opportunity`, and the condition further specifies these values.

- `FieldName` is `StageName`.
- `Operation` is `Equals`.
- `Value` is `ClosedWon`.

AccountPlanObjMeasCalcDef

Represents the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available if sales account plans are turned on.

Fields

Field	Details
Description	Type textarea
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description A summary of the calculation definition that's visible to users when they select the definition for an account plan objective measure.
DeveloperName	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code, which controls the language of the calculation definition.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for this calculation definition. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of these values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This

Field	Details
	field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
RollupType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The method for calculating the account plan objective measure's current value from records that match the calculation definition and any optional conditions. Possible values are: - Count - Max - Min - Sum In Setup, this field's label is Calculation Type.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Possible values are: - Active - Draft - Inactive Only active calculation definitions are available for users to select when they specify an account plan objective measure.
TargetField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The field on <code>TargetObject</code> to use for calculating the account plan objective measure's current value. Rollup fields on the Campaign, Case, Contact, or Opportunity object are supported. In Setup, this field's label is Rollup Field.

Field	Details
TargetObject	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The object to use for calculating the account plan objective measure's current value. Possible values are: • Campaign • Case • Contact • Opportunity
ValueType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The data type for calculating the account plan objective measure's current value. Possible values are: • Currency • Number • Percent

Usage

Let's say that a calculation definition tracks the currency amount on opportunities. The calculation definition's `TargetObject` is `Opportunity`, `TargetField` is `Amount`, and `RollupType` is `Sum`.

AccountPlanObjMeasCalcDefLocalization

Represents the translated value of the definition of a target object, rollup field, and logic for calculating the current value of a sales account plan objective measure. This object is available in API version 63.0 and later when the Translation Workbench is enabled.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Lightning Experience with Sales Cloud in Enterprise, Performance, Unlimited, and Einstein 1 Sales Edition editions.
- Translation Workbench must be enabled for your org.
- Sales account plans must be turned on.
- Users with the Customize Application or Manage Translation permission can create or update AccountPlanObjMeasCalcDef translations.

Fields

Field	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language the AccountPlanObjMeasCalcDef is translated into.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of these values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The ID of the related account plan objective measure calculation definition. This field is a relationship field.
Value	Type textarea Properties Create, Filter, Sort, update Description The translated label of the account plan objective measure calculation definition.

Usage

Translate the labels of your account plan objective measure calculation definitions for supported languages .

AccountPlanObjMeasRela

Represents a junction between an account plan objective measure and the related objects. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
AccountPlanObjectiveMeasureId	Type reference Properties Create, Filter, Group, Sort Description The account plan objective measure associated with the record. This field is a relationship field. Relationship Name AccountPlanObjectiveMeasure Relationship Type Master-detail

Field	Details
	Refers To AccountPlanObjectiveMeasure (the master object)
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the account plan objective measure relation record.
ReferenceRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record of the object associated with the account plan objective measure. This field is a polymorphic relationship field. Relationship Name ReferenceRecord Refers To Case, FinancialDeal, Opportunity

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountPlanObjMeasRelaChangeEvent on page 68

Change events are available for the object.

AccountPlanObjMeasRelaHistory on page 63

History is available for tracked fields of the object.

AccountRelationship

Represents a relationship of a given type between two accounts. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In Digital Experience Settings, turn on the Enable Account Relationships org preference, which is off by default.

Fields

Field	Details
AccountFromID	Type reference Properties Create, Filter, Group, Sort, Description ID of the account that gains access to data from <code>AccountTo</code>.
AccountToId	Type reference Properties Create, Filter, Group, Sort Description ID of the account sharing data with <code>AccountFrom</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view (<code>LastReferencedDate</code>) but didn't viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the account relationship.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who created the account relationship.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description The relationship type. All account relationship sharing rules of that type are to this account relationship. Standard values are: • System Integrator • Agency • Advertiser • Reseller • Distributor • Developer • Broker • Lender • Institution • Contractor

Field	Details
	• Dealer • Consultant • Client • Vendor • Agent • Retailer • SubContractor • Supplier Picklist items can be updated with your own values.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[AccountRelationshipFeed](#)

Feed tracking is available for the object.

[AccountRelationshipHistory](#)

History is available for tracked fields of the object.

[AccountRelationshipOwnerSharingRule](#)

Sharing rules are available for the object.

[AccountRelationshipShare](#)

Sharing is available for the object.

AccountRelationshipShareRule

Represents the rule that determines which object records are shared, how they are shared, the account relationship type that shares the records, and the level of access granted to the records. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout().describeSObjects()`, `query()`, `retrieve()`, `update().upsert()`

Fields

Field	Details
<code>AccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Type of access granted by the share rule. Valid values are: • Read (Read Only) • Edit (Read/Write)
AccountToCriteriaField	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Criteria that must be met for the data to be shared. Possible values are: • Account.OwnerId • Account.ParentId • Campaign.OwnerId • Case.AccountId • Case.OwnerId • Contact.AccountId • Contact.OwnerId • Lead.ConvertedAccountId • Lead.OwnerId • Lead.PartnerAccountId • Opportunity.PartnerAccountId • Order.AccountId • Order.ActivatedById • Order.CompanyAuthorizedById • Order.OwnerId • PartnerFundAllocation.CreatedById • PartnerFundAllocation.ChannelPartnerId • PartnerFundAllocation.OwnerId • PartnerFundClaim.CreatedById • PartnerFundClaim.OwnerId • PartnerFundRequest.ChannelPartnerId • PartnerFundRequest.CreatedById • PartnerFundRequest.OwnerId • PartnerMarketingBudget.CreatedById • PartnerMarketingBudget.ChannelPartnerId • PartnerMarketingBudget.OwnerId

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A meaningful explanation of the sharing rule.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
EntityType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of data shared by this rule. Values are: • Account • Campaign • Case • Contact • Lead • Order • PartnerFundAllocation • PartnerFundClaim • PartnerFundRequest • PartnerMarketingBudget

Field	Details
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the account relationship share rule.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label assigned to the sharing rule to identify it.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
StaticFormulaCriteria	Type string Properties Create, Filter, Nillable, Sort, Update Description A way to further filter what data gets shared. This must be a deterministic formula and spanning is not allowed.

Field	Details
Type	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update
	Description Must match the type of an account relationship for data to be shared according to the <code>AccountToCriteriaField</code> and the <code>StaticFormulaCriteria</code> .

AccountShare

Represents a sharing entry on an account.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Account object can access this object. Customer Portal users can't access this object.

Fields

The properties available for some fields depend on the default org-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>AccountAccessLevel</code>	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update
	Description Level of access that the User or Group has to the Account. The possible values are: Read

Field	Details
	- Edit - All (This value isn't valid for create or update calls.) This field must be set to an access level that is at least equal to the organization's default Account access level. In addition, either this field, the <code>OpportunityAccessLevel</code> field, or the <code>CaseAccessLevel</code> field must be set higher than the organization's default access level.
AccountId	Type reference Properties Create, Filter, Group, Sort Description ID of the Account associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
CaseAccessLevel	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to cases associated with the account. The possible values are: - None - Read - Edit This field must be set to an access level that is at least equal to the organization's default <code>CaseAccessLevel</code>. This field can't be updated via the API if the <code>AccountAccessLevel</code> field is set to All. You can't update this field for the associated account owner via the API. You must update the account owner's <code>CaseAccessLevel</code> via the Salesforce user interface.
ContactAccessLevel	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Level of access that the User or Group has to contacts associated with the account. The possible values are: • None • Read • Edit This field must be set to an access level that is at least equal to the organization's default <code>ContactAccessLevel</code>. This field can't be updated via the API if the <code>ContactAccessLevel</code> field is set to "Controlled by Parent." You can't update this field for the associated account owner using the API. You must update the account owner's <code>ContactAccessLevel</code> via the Salesforce user interface.
OpportunityAccessLevel	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to opportunities associated with the Account. The possible values are: • None • Read • Edit This field must be set to an access level that is at least equal to the organization's default opportunity access level. This field can't be updated via the API if the <code>AccountAccessLevel</code> field is set to <code>All</code>. You can't use the API to update this field for the associated Account owner. You must update the Account owner's <code>OpportunityAccessLevel</code> via the Salesforce user interface.
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • <code>Manual</code>—The User or Group has access because a User with "All" access manually shared the Account with the user or group. • <code>Owner</code>—The User is the owner of the Account • <code>Team</code>—The User or Group has team access (is an <code>AccountTeamMember</code>).

Field	Details
	• Rule—The User or Group has access via an Account sharing rule. • GuestRule—The user or group has access via an Account guest user sharing rule. • ImplicitParent—The User or Group has access because they're the owner of or have sharing access to records related to the account, such as opportunities, cases, contacts, contracts, or orders. • GuestParentImplicit—The guest user has access because they have access to records related to the Account, such as opportunities, cases, contacts, contracts, or orders. • LpuParentImplicit—The User has access because they have access to records related to the Account, which are owned by high-volume Experience Cloud site users and shared via a share group. • LpuImplicit—The User has access to records owned by high-volume Experience Cloud site users via a share group. • PortalImplicit—The Account is associated with the portal user. • ARImplicit—The User, who belongs to a partner or customer account, has access to the Account via an account relationship data sharing rule. • Territory2AssociationManual—With Sales Territories in API version 44.0 and earlier, the TerritoryManual reason code was written to AccountShare records when you manually assigned an account to a territory. In API version 45.0 and later, Territory2AssociationManual replaces all instances of TerritoryManual, and the Territory2AssociationManual reason code is written to AccountShare records when you manually assign an account to a territory. • Territory—The territory has access via a territory assignment rule. • TerritoryManual—Deprecated starting in API version 45.0 and replaced by the Territory2AssociationManual value.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the Account. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit Account records owned by other users.

If you attempt to create an AccountShare record that matches an existing record, the request updates any modified fields and returns the existing record.

For example, the following code finds all accounts owned by a user and manually shares them to a portal user.

```
QueryResult result = conn.query("SELECT Id FROM Account WHERE OwnerId = '005D0000001LPFB'");
// Create a new AccountShare object
List<AccountShare> shares = new ArrayList<AccountShare>();
for (SObject rec : result.getRecords()) {
    AccountShare share = new AccountShare();
    share.setAccountId(rec.getId());
    //Set the portal user Id to share the accounts with
    share.setUserOrGroupId("003D000000QA8T1");
    share.setAccountAccessLevel("Edit");
    share.setOpportunityAccessLevel("Read");
    share.setCaseAccessLevel("Edit");
    shares.add(share);
}
conn.create(shares.toArray(new AccountShare[shares.size()]));
```

This code shares the accounts that the user owns at the time, but not those accounts that are owned later. For these types of shares, use an owner-based sharing rule, such as [AccountOwnerSharingRule](#).

If an account is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an account for one or more of the following RowCause values, the records in the AccountShare object are compressed into one record with the highest level of access.

- ImplicitParent
- Manual
- Owner

[Account](#)

[CaseShare](#)

[LeadShare](#)

[OpportunityShare](#)

AccountTag

Associates a word or short phrase with an Account.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

AccountTag stores the relationship between its parent TagDefinition and the Account being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

AccountTeamMember

Represents a User who is a member of an Account team.

See also UserAccountTeamMember, which represents a User who is on the default account team of another user.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available only for Enterprise, Unlimited, and Performance Edition users who have enabled the account team functionality.
- Customer Portal users can't access this object.

Fields

Field Name	Details
AccountAccessLevel	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Level of access that the User has to the Account. The possible values are: • Read • Edit • All This field must be set to an access level that is at least equal to the organization's default Account access level. In addition, the users's AccountAccessLevel, ContactAccessLevel, OpportunityAccessLevel, or CaseAccessLevel field must be set higher than the organization's default access level.
AccountId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Account to which this user is a team member. Must be a valid account ID.

Field Name	Details
CaseAccessLevel	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Level of access that the User has to cases associated with the account. The possible values are: • None • Read • Edit This field must be set to an access level that is at least equal to the organization's default case access level. In addition, the users's AccountAccessLevel, ContactAccessLevel, OpportunityAccessLevel, or CaseAccessLevel field must be set higher than the organization's default access level. This field is available in API version 37.0 and later.
ContactAccessLevel	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Level of access that the User has to contacts associated with the account. The possible values are: • None • Read • Edit • Controlled By Parent This field must be set to an access level that is at least equal to the organization's default contact access level. In addition, the users's AccountAccessLevel, ContactAccessLevel, OpportunityAccessLevel, or CaseAccessLevel field must be set higher than the organization's default access level. If the org-wide default for contacts is set to Controlled By Parent, users can't see or edit the Contact Access field. This field is available in API version 37.0 and later.
CurrencyIsoCode	Type picklist Properties Filter, Restricted picklist Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.

Field Name	Details
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.  Note: An AccountTeamMember record that is deleted is not moved to the Recycle Bin. A deleted AccountTeamMember record can't be undeleted unless the record was cascade-deleted when deleting a related Account. For directly deleted AccountTeamMember records, don't use the <code>isDeleted</code> field to detect deleted records in SOQL queries or <code>queryAll()</code> calls. The <code>getDeleted()</code> call also doesn't show deleted account team members unless the record was deleted from an account related list or the Developer Console.
OpportunityAccessLevel	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Level of access that the User has to opportunities associated with the account. The possible values are: • None • Read • Edit This field must be set to an access level that is at least equal to the organization's default opportunity access level. In addition, the users's <code>AccountAccessLevel</code>, <code>ContactAccessLevel</code>, <code>OpportunityAccessLevel</code>, or <code>CaseAccessLevel</code> field must be set higher than the organization's default access level. This field is available in API version 37.0 and later.
PhotoURL	Type URL Properties Filter, Nillable, Sort, Group Description Read only. Retrieves the users Chatter photo URL. This field is available in API version 37.0 and later.
TeamMemberRole	Type picklist

Field Name	Details
	Properties Create, Filter, Nillable, Update Description Role associated with this team member. One of the valid team member roles defined for your organization. Label is Team Role .
Title	Type string Properties Filter, Nillable, Sort, Group Description Read only. Retrieves the user's title. This field is available in API version 37.0 and later.
UserId	Type reference Properties Create, Filter Description Required. ID of the User who is a member of this account team. Must be a valid User ID.

Usage

Use this object to manage the team members of a particular Account and to specify team member roles for those users on that account.

If team members are added by a user with group-based access, those members are removed after an account's owner is changed. This applies even if the **Keep account team** option is selected. A Salesforce admin, the account owner, or someone higher in the role hierarchy should add team members to keep team members related to the account.

If you use [SOQL statements to query all records in an organization](#), the ALL ROWS keywords don't query deleted account team member records.

SEE ALSO:

[Account](#)

AccountTerritoryAssignmentRule

An account assignment rule that assigns accounts to territories based on account fields. Available if Sales Territories has been enabled.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Users with the View Setup and Configuration permission can access this object. Users with the Manage Territories permission can edit this object.

Fields

Field	Details
BooleanFilter	Type string Properties Create, Filter, Nillable, Update Description Advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3."
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Update Description Indicates whether the rule is active (<code>true</code>) or inactive (<code>false</code>). Via the API, active rules run automatically when new accounts are created and existing accounts are edited. The exception is when the <code>IsExcludedFromRealign</code> field on an account is <code>true</code>, which prevents account assignment rules from evaluating that account.
IsInherited	Type boolean Properties Create, Defaulted on create, Filter, Update Description Indicates whether the rule is an inherited rule (<code>true</code>) or a local rule (<code>false</code>). An inherited rule also acts upon territories below it in the territory hierarchy. A local rule is created at the immediate territory and only impacts the immediate territory.
Name	Type string Properties Create, Filter, Update Description A name for the rule. Limit is 80 characters.

Field	Details
TerritoryId	Type reference Properties Create, Filter, Update Description ID of the territory where accounts that satisfy this rule are assigned.

Usage

A territory will not have any accounts (with the exception of manually assigned accounts) unless at least one account assignment rule is active for the territory.

SEE ALSO:

[AccountTerritoryAssignmentRuleItem](#)

[Territory](#)

[UserTerritory](#)

AccountTerritoryAssignmentRuleItem

A row of selection criteria for an AccountTerritoryAssignmentRule object. Available if Sales Territories has been enabled.

AccountTerritoryAssignmentRuleItem can be created or deleted if the `BooleanFilter` field on its corresponding AccountTerritoryAssignmentRule object is a null value.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Users with the View Setup and Configuration permission can access this object. Users with the Manage Territories permission can edit this object.

Fields

Field	Details
Field	Type picklist Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The standard or custom account field to use as a criteria.
Operation	Type picklist Properties Create, Filter, Group, Sort, Update Description The criteria to apply, such as “equals” or “starts with.”
RuleID	Type reference Properties Create, Filter, Update Description ID of the associated AccountTerritoryAssignmentRule.
SortOrder	Type int Properties Create, Filter, Update Description The order in which this row is evaluated compared to other AccountTerritoryAssignmentRuleItem objects for the given AccountTerritoryAssignmentRule.
Value	Type string Properties Create, Filter, Nillable, Update Description The field value(s) to evaluate, such as 94105 if the Field is Billing Zip/Postal Code.

Usage

- Both standard and custom account fields can be used as criteria for account assignment rules.

- A territory will not have any accounts (with the exception of manually assigned accounts) unless at least one account assignment rule is active for the territory.

SEE ALSO:

- [AccountTerritoryAssignmentRule](#)
- [Territory](#)
- [UserTerritory](#)

AccountTerritorySharingRule

Represents the rules for sharing an Account within a territory.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit • All
CaseAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of access granted to the target group for all child cases of the account. The possible values are: • None

Field	Details
	• Read • Edit
ContactAccessLevel	Type picklist Properties Filter, Group, Restricted picklist, Sort Description A value that represents the type of access granted to the target group for all related contacts on the account. The possible values are: • None • Read • Edit  Note: This field is read only.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.
GroupId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description The ID representing the source group. Accounts owned by users in the source territory trigger the rule to give access.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
OpportunityAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of access granted to the target group for all opportunities associated with the account. The possible values are: • None • Read • Edit
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the user or group being given access, or, if a territory ID, the users assigned to that territory.

Usage

Use this object to manage the sharing rules for a particular object. General sharing and territory-related sharing use this object.

SEE ALSO:

[Account](#)

[AccountShare](#)

AccountUserTerritory2View

Represents the view of the Users in Assigned Territories related list in Lightning Experience for Sales Territories. Available in API version 42.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Standard and partner users can access this object.

Fields

Field Name	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier for the account associated with the Users in Assigned Territories related list.
RoleInTerritory2	Type picklist Properties Filter, Group, Nillable, Sort Description The role of each user in the Users in Assigned Territories related list.
Territory2Id	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier for each territory in the Users in Assigned Territories related list.
UserId	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Unique identifier for each user in the Users in Assigned Territories related list.

Usage

Use this object to show the users who are assigned to the territories assigned to an account.

A filter criterion with one `AccountId` is required when you execute a SOQL query on this object.

ActionCadence

Represents the definition of a cadence. This object is available in API version 45.0 and later.

Use ActionCadence and its related objects to learn about an action cadence, including:

- The current state of the action cadence.
- The steps that the action cadence contains.
- Which leads, contacts, or person accounts are assigned to the action cadence.

The ActionCadence, ActionCadenceStep, ActionCadenceRule, and ActionCadenceRuleCondition objects define an action cadence and the steps that it contains. ActionCadenceTracker and ActionCadenceStepTracker track a prospect's movement through an active action cadence.

By learning when the action cadence objects are created and deleted, you can make the most of the action cadence API.

- An ActionCadence record is created when you use the Sales Engagement app to create a cadence.
- An ActionCadenceStep record is created to represent a step. If the step is a branch step, then corresponding ActionCadenceRule and ActionCadenceRuleCondition records are also created.
- An ActionCadenceTracker record is created when you assign a prospect to an action cadence.
- An ActionCadenceStepTracker record is created each time the prospect moves to a new step.

All of these action cadence records exist until you use the Sales Engagement app to delete an action cadence. If many prospects have been assigned to the action cadence, there can be many associated ActionCadenceTracker and ActionCadenceStepTracker records. In this case, deleting the action cadence can take some time. While the action cadence is being deleted, the value for the State field is `Deleting` on the ActionCadence record.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`,

Fields

Field	Details
ActivatedDate	Type date

Field	Details
	Properties Filter, Group, Nillable, Sort Description The date that the user activated the action cadence. ActionCadence objects are created in a draft state and must be manually activated before they're used.
ActiveTargets	Type int Properties Filter, Group, Nillable, Sort Description The total number of active targets that are currently assigned with this cadence. Available in API version 58.0 and later.
Description	Type textarea Properties Create, Nillable, Update Description The description of this action cadence.
ErrorMessage	Type string Properties Filter, Group, Nillable, Sort Description If there was an error when activating the action cadence, this field contains the error message.
FolderId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the folder that contains the action cadence. Available in API version 49.0 and later. This is a polymorphic relationship field. Relationship Name Folder Relationship Type Lookup Refers To Folder, Organization, User

Field	Details
FolderName	Type string Properties Filter, Nillable, Sort Description The name of the folder that contains the action cadence. Available in API version 49.0 and later.
IsWaitAllowedBeforeDaisyChain	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the cadence is allowed to have a wait step before a daisy chain step (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
LastEditedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time this object was last edited.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date this object was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date this action cadence was last viewed in the Sales Engagement app.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this action cadence. Every action cadence in an org must have a unique name.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the action cadence (typically the user who created it).  Note: To change the owner of an action cadence, the new owner must have read access to action cadences enabled in their user profile. This field is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
State	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description This entity's state. Possible values are: • Active The user finished modifying the action cadence and has activated it. At this point, you can't make any more changes to the steps in the action cadence. • Deleting All records associated with this action cadence, including the ActionCadence record and all its related records, are being deleted. While in this state, the ActionCadence can't be attached to a prospect. • Draft ActionCadence objects are in the draft state when they're created. In this state, the ActionCadence can't be assigned to any prospect. • Error

Field	Details
	An error occurred while trying to activate the action cadence. • Inactive The user deactivated the action cadence. New targets can't be added to the action cadence. Existing targets continue in the action cadence until completion.
SuccessfulCompletions	Type int Properties Filter, Group, Nillable, Sort Description The total number of successful dispositions this cadence has upon completion. For example, customer engaged or customer connected. Available in API version 58.0 and later.
TotalSteps	Type int Properties Filter, Group, Nillable, Sort Description The number of total steps associated with this cadence. This value doesn't include special step types such as root, branch, and daisy chain. Available in API version 58.0 and later.
TotalTargets	Type int Properties Filter, Group, Nillable, Sort Description The total number of targets that have been assigned with this cadence. Available in API version 58.0 and later.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the type of ActionCadence. Available in API version 56.0 and later. Possible values are: • Standard Standard cadences can contain multiple steps and are usually built by sales managers in the Cadence Builder. • Quick

Field	Details
	Quick cadences can contain only one step, are built by reps for their personal use, and don't require the Cadence Builder.

Usage

Use ActionCadence to learn how many action cadences are currently active:

```
select COUNT() from ActionCadence where State="Active"
```

Retrieve all ActionCadence records that have "West Coast" in their name:

```
SELECT ActionCadenceId FROM ActionCadence WHERE NAME LIKE '[West Coast Cadence]%'
```

Retrieve all ActionCadence records owned by a specific user:

```
SELECT ActionCadenceId FROM ActionCadence WHERE OwnerId = '<owner id>'
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ActionCadenceChangeEvent (API version 48.0)

Change events are available for the object.

ActionCadenceOwnerSharingRule on page 65

Sharing rules are available for the object.

ActionCadenceShare on page 67

Sharing is available for the object.

SEE ALSO:

[ActionCadenceRule](#)

[ActionCadenceRuleCondition](#)

[ActionCadenceStep](#)

[ActionCadenceStepTracker](#)

ActionCadenceRule

Represents the logic that a branch step uses to determine which branch an action cadence tracker follows in an action cadence. Use ActionCadenceRule to learn about a branch step, including its logic and what the next step is. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepId	Type reference Properties Create, Filter, Group, Sort Description The ActionCadenceStep that this rule is associated with. This field is a relationship field. Relationship Name ActionCadenceStep Relationship Type Lookup Refers To ActionCadenceStep
ConditionLogic	Type string Properties Create, Filter, Group, Sort, Update Description The logical operator used to evaluate the rule conditions. Possible values are: • AND If this rule has several conditions, all of them must be <code>true</code> for this step to be <code>true</code>.
GlobalEventType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If the action cadence rule contains a global exit condition, this field contains the type of event that the rule represents. Possible values are: • EmailReply • EmailHardBounce • EmailSoftBounce • CallMeaningfulConnect • CallNotInterested • CallUnqualified

Field	Details
	• <code>CallLeftVoicemail</code> • <code>CallCallbackLater</code> This field is available in API version 49.0 and later.
<code>GraphState</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents the state of the <code>ActionCadenceRule</code> within the step graph, or sequence, of the related action cadence. Available in API version 53.0 and later. Possible values are: • <code>Included</code>—This step rule is part of the step graph. • <code>Orphaned</code>—This step rule was removed from the step graph before the action cadence was activated. Orphaned step rules are deleted upon activation. • <code>Pending</code>—This step rule has been created but hasn't been added to the step graph. Pending step rules can be added to the step graph in the future. • <code>Retired</code>—This step rule was previously part of an active action cadence step graph and was removed during an edit after activation. Retired step rules can have associated step trackers.
<code>OutcomeNextStepName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The next step in the action cadence if this rule evaluates as <code>true</code>. If this rule evaluates as <code>false</code>, the next step is <code>ActionCadenceStep.BranchDefaultStepName</code>.
<code>ParentRuleName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The value of the <code>RuleName</code> field of the previous rule in the action cadence. Must contain a valid rule name value unless this rule is the root rule. <code>null</code> if this rule is a root rule. This field is available in API version 49.0 and later.
<code>RuleName</code>	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The name given to the rule. Every rule in an action cadence must have a unique name.
RuleType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of step that this rule applies to. Possible values are: • BranchStep— The rule evaluates the condition of a branch step. A branch step is an ActionCadenceStep record with the field <code>type</code> equal to <code>Branch</code>. • RepeatedStep— The rule evaluates the repeat steps for quick cadence. Available in API version 58.0 and later. • RootStep— The rule evaluates a global exit condition. • SubRootStep— Available in API version 58.0 and later. This field is available in API version 49.0 and later.

Usage

Use ActionCadenceRule to see all the rules associated with a branch step:

```
select RuleName from ActionCadenceRule where ActionCadenceStep.ActionCadence.Name = "High Priority CFO"
```

SEE ALSO:

[ActionCadence](#)

[ActionCadenceRuleCondition](#)

[ActionCadenceStep](#)

[ActionCadenceStepTracker](#)

ActionCadenceRuleCondition

Represents the logic for a branch step. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ActionCadenceRuleId	Type reference Properties Create, Filter, Group, Sort Description The ID of the ActionCadenceRule that this condition is associated with.
Operator	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The conditional operator for this rule. Possible values are: Equal
Resource	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The field to evaluate. Possible values are: - CallDispositionCategory Use by branch steps. - EmailEngagement Used by ListenerBranch steps.
RuleConditionName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the rule condition. Every rule condition in a cadence must have a unique name.
Value	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The event that your cadence rule condition listens for to decide when the event is complete. Possible values for emails are: - EmailOpen - EmailLinkClick Possible values for calls are: - CallMeaningfulConnect - CallUnqualified - CallLeftVoicemail - CallNotInterested - CallCallBackLater

Usage

Use ActionCadenceRuleContion to see all the rule conditions associated with a branch step:

```
select RuleConditionName from ActionCadenceRuleCondition where ActionCadenceStepId= <ID of a branch step>
```

SEE ALSO:

[ActionCadence](#)
[ActionCadenceRule](#)
[ActionCadenceStep](#)
[ActionCadenceStepTracker](#)

ActionCadenceStep

Represents a step in a cadence. Use ActionCadenceStep to learn which steps belong to a cadence, and how the steps are connected to each other. This object is available in API version 48.0 and later.

An ActionCadenceStep record is created to represent a step. If the step is a branch step, then corresponding ActionCadenceRule and ActionCadenceRuleCondition records are also created.

Note: An ActionCadenceStep with IsOrphan equal to true can be part of a cadence but is never executed. To retrieve the steps that can be executed by the cadence, query for ActionCadenceStep records with IsOrphan equal to false. ActionCadenceStep records with IsOrphan equal to true are deleted.

Supported Calls

create(), delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), update(), upsert()

Fields

Field	Details
ActionCadenceId	Type reference Properties Create, Filter, Group, Sort Description The ID of the ActionCadence that this step belongs to. This field is a relationship field. Relationship Name ActionCadence Relationship Type Lookup Refers To ActionCadence
AllCallsCallBackLater	Type int Properties Filter, Group, Nillable, Sort Description The number of calls having the call outcome Call Back Later.
AllCallsLeftVoicemail	Type int Properties Filter, Group, Nillable, Sort Description The number of calls having the call outcome Left Voicemail.
AllCallsMeaningfulConnect	Type int Properties Filter, Group, Nillable, Sort Description The number of calls having the call outcome Meaningful Connect.
AllCallsNotInterested	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of calls having the call outcome Not Interested .
AllCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The number of calls where the call outcome isn't categorized.
AllCallsUnqualified	Type int Properties Filter, Group, Nillable, Sort Description The number of calls having the call outcome Unqualified .
AllEmailsBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that weren't delivered successfully. This field is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails delivered. This field is a calculated field.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails returned for a permanent reason — for example, the email address doesn't exist. This field is available in API version 50.0 and later.

Field	Details
AllEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of links inside an email that the target clicked during this step. Multiple clicks on the same link count towards this total. This field is available in API version 50.0 and later.
AllEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that the target opened while working on this step. Multiple opens of the same email count towards this total.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that were returned because the recipient set an out-of-office responder. Multiple replies count towards this total. This field is available in API version 50.0 and later.
AllEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that targets replied to as part of this step. Multiple replies to the same email count towards this total, This field is available in API version 50.0 and later.
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of sent emails.
AllEmailsSoftBouncedCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of emails that were returned for temporary reasons — for example, the email is too large. This field is available in API version 50.0 and later.
AllEmailsTrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent by this user with engagement tracking enabled.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent by this user without engagement tracking.
AllManuallyCompletedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of steps manually completed.
AllOnTimeCompletedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of steps completed on time.
AllOverdueCompletedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of overdue steps that were completed.

Field	Details
AllSkippedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of steps skipped.
AllTotalCallsCount	Type int Properties Filter, Group, Nillable, Sort Description The number of calls that the sales rep made during this step. This field is a calculated field.
BranchDefaultStepName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the default step.
ChainedCadenceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the ActionCadence for the linked action cadence. Available only if the step type is <code>DaisyChain</code> (meaning that another action cadence is connected to this action cadence). This field is a relationship field. Relationship Name ChainedCadence Relationship Type Lookup Refers To ActionCadence
GoToStepIntervalInMinutes	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Contains information about when the step should be repeated next, in minutes. Available in API version 58.0 and later.
GoToStepIterationLimit	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Contains the maximum number of repeat (goto) step iterations allowed. Available in API version 58.0 and later.
GoToStepName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If this step's original next step was removed during an edit after activation, this field specifies the updated next step.
GraphState	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents the state of the <code>ActionCadenceStep</code> within the step graph, or sequence, of the action cadence. Possible values are: • Included—This step is part of the step graph. • Orphaned—This step was removed from the step graph before the action cadence was activated. Orphaned steps are deleted upon activation. • Pending—This step has been created but hasn't been added to the step graph. Pending steps can be added to the step graph in the future. • Retired—This step was previously part of an active action cadence step graph and was removed during an edit after activation. Retired steps can have associated step trackers.
HasVariant	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description This field is valid for email and call step types. If <code>true</code>, the step has email or call template variants. The template variants are defined in ActionCadenceStepVariant records. Available in API version 53.0 and later. The default value is <code>false</code>.
IsImmediateWakeUp	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a listener branch is immediate wake up (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsOrphan	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, this step isn't executed by the action cadence and will be deleted. Steps with <code>IsOrphan</code> equal to <code>true</code> have <code>ParentStepName</code> equal to <code>null</code>.  Note: To retrieve the active steps in an action cadence, include <code>IsOrphan=false</code> in your query. The default value is <code>false</code>. This field is available in API version 49.0 and later. This field is a calculated field.
IsScheduledDueDateLocked	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether assignees can change the due date (<code>true</code>) or not (<code>false</code>). Available in API version 58.0 and later. The default value is <code>false</code>.
IsScreenFlowActive	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the flow is active and can be executed (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsStepAutomationActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If true, the flow referenced in the StepAutomationReference field is active. If false, the flow isn't active. Only active flows can be executed. The default value is <code>false</code>. This field is available in API version 56.0 and later.
IsThreaded	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description This field is valid for email steps. Email steps have ActionCadence.StepType equal to <code>SendAnEmail</code>. If <code>true</code>, the email for this email step is sent as a reply to the email conversation from the previous email step. By sending the email as a reply to a previous email, customers see a "conversation" view of the emails. Only emails from the same action cadence are grouped as conversations. This field can't be true for the first email step in an action cadence, because the first email from an action cadence must start a new conversation with the prospect. The default value is <code>false</code>. This field is available in API version 49.0 and later.
ParentStepName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The step name (<code>ActionCadenceStep.StepName</code>) of the previous step in the action cadence. Must contain a valid step name value unless this step is the root step. <code>null</code> if this step is a parent step.
RootStepId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the root step for this action cadence. Every action cadence has exactly one root step (so that the Salesforce API can find all the steps for this cadence). This field is a relationship field. Relationship Name RootStep Relationship Type Lookup Refers To ActionCadenceStep
ScheduledDaysUntilDue	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of days after which this current step is due. Available in API version 58.0 and later.
ScheduledDaysUntilStart	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of days when this step starts after the previous step completes. For delays of greater than one day from <code>ScheduledStartTimeInMinutes</code>. Available in API version 58.0 and later.
ScheduledStartDelayInMinutes	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Any hard waits in minutes is captured in this field. Waits greater than 1 day need to set <code>ScheduledDaysUntilStart</code>. Available in API version 58.0 and later.
ScheduledStartTimeInMinutes	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The specific time of day when the step starts. The time represents minutes after 00:00. Available in API version 58.0 and later.
ScreenFlowReference	Type string Properties Create, Filter, Group, Nillable, Sort Description The namespace__fullName of the screen flow. Used to describe flow objects and launch flows client side.
StepAutomationReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the flow that the step uses. Cadence steps can launch a cadence step flow as the step or as a cadence autolaunched flow when a rep completes the step. The format is namespace__fullName. This field is available in API version 56.0 and later.
StepComments	Type textarea Properties Create, Nillable, Update Description A comment that provides additional information about this step.
StepName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique identifier for this step. Generated by Salesforce.
StepTitle	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The title given to the step when it was created.

Field	Details
TemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description If a template was added to this step, this field contains the template's ID. For example, if this step is a call step it can contain a template for a call script. Or, if this step is an email step, it can contain a template for an email. This field is a polymorphic relationship field. Relationship Name Template Relationship Type Lookup Refers To CallTemplate, EmailTemplate
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of step. Possible values are: • <code>AutoSendAnEmail</code> — Salesforce automatically sends the specified email. • <code>Branch</code> — A branch step in the action cadence. • <code>CreateTask</code> — Used for custom steps. • <code>DaisyChain</code> — A daisy chain step. A daisy chain step connects this action cadence to another action cadence. It must be the last step in the path. • <code>LinkedInConnection</code> • <code>LinkedInMail</code> • <code>ListenerBranch</code> — A branch step for emails. • <code>MakeACall</code> — The sales rep must call the prospect at this step. • <code>PlatformScreenFlow</code> • <code>Root</code> — This step is the root step for the action cadence. • <code>SendAnEmail</code> — The sales rep must send the prospect an email at this step. • <code>Wait</code> — A wait step tells the sales rep not to do anything at this point in the action cadence.
TypeDetail	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description More detail about the step type. If the step is a cadence step flow, this field contains the flow name. Otherwise, this field contains the same value as the Type field. This field is available in API version 56.0 and later.
UniqueEmailsLinkClickedCount	Type reference Properties Filter, Group, Nillable, Sort Description The number of links inside an email that the target clicked during this step. Multiple clicks on the same link aren't counted. This field is available in API version 50.0 and later.
UniqueEmailsOpenedCount	Type reference Properties Filter, Group, Nillable, Sort Description The number of emails that the target opened as part of this step. Multiple openings of the same email aren't counted. This field is available in API version 50.0 and later.
UniqueEmailsRepliedCount	Type reference Properties Filter, Group, Nillable, Sort Description The number of emails that targets replied to as part of this step. Multiple replies to the same email aren't counted. This field is available in API version 50.0 and later.
WaitTimeInSeconds	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Required if the step type is <code>wait</code>. The time in seconds for this step to wait.

Usage

Use ActionCadenceStep to see what steps your action cadence has:

```
select StepTitle from ActionCadenceStep where ActionCadence.ID= <the id of an action cadence> and IsOrphan=false
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ActionCadenceStepChangeEvent (API version 48.0)

Change events are available for the object.

ActionCadenceStepTracker

Represents a step in an active cadence for a specific cadence target. This object is available in API version 48.0 and later.

An ActionCadenceStepTracker record is created when a target moves to a new step in a cadence. Use ActionCadenceStepTracker to find information such as the step's current state, the reason it completed, and its type.

Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
ActionCadenceId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the ActionCadence that is related to the ActionCadenceStep.
	This field is a relationship field.
	Relationship Name ActionCadence

Field	Details
	Relationship Type Lookup Refers To ActionCadence
ActionCadenceName	Type string Properties Filter, Group, Nillable, Sort Description The name of the related ActionCadence object.
ActionCadenceStepId	Type reference Properties Filter, Group, Nillable, Sort Description ActionCadenceStepTracker is the runtime version of an ActionCadenceStep. This field contains the ID of the related ActionCadenceStep. This field is a relationship field. Relationship Name ActionCadenceStep Relationship Type Lookup Refers To ActionCadenceStep
ActionCadenceTrackerId	Type reference Properties Filter, Group, Sort Description The ID of the related ActionCadenceTracker. This field is a relationship field. Relationship Name ActionCadenceTracker Relationship Type Lookup Refers To ActionCadenceTracker

Field	Details
ActionTakenDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the action described in this step was taken.
CompletedById	Type reference Properties Filter, Group, Nillable, Sort Description The user ID of the sales rep who completed this step. A step can be assigned to several users before it's completed. This field is available in API version 50.0 and later. This field is a relationship field. Relationship Name CompletedBy Relationship Type Lookup Refers To User
CompletionDate	Type dateTime Properties Filter, Nillable, Sort Description The date this step completed. A step is completed either when the action is taken, or the step is skipped.
CompletionReason	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The reason that this step completed: Possible values are: • <code>AutomaticallyCompleted</code> — The sales rep successfully completed this step and moved to the next one. Salesforce automatically marks this step as completed. • <code>AutomaticallyExited</code> — The step exited because a global exit condition occurred. This value is available in API version 49.0 and later. • <code>ManuallyCompleted</code> — The sales rep manually marked this step as completed.

Field	Details
	ManuallySkipped — The sales rep skipped this step.
DueDateTime	Type dateTime Properties Filter, Nillable, Sort Description Some steps have a due date to indicate when they must be completed. If this step has been assigned a due date, this field contains the date and time it is due.
ErrorCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Possible values are: - AUTO_EMAIL_DAILY_LIMIT_REACHED - AUTO_EMAIL_ORG_SETTING_OFF - AUTO_LIST_MQ_MAX_RETRIES_FAILED - BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED - EAC_GLOBAL_DATA_SOURCE_ERROR—EAC data source error - EMAIL_ORG_SETTING_OFF - EXCHANGE_MAX_MAILBOX_SIZE—Max Exchange mailbox size reached - EXCHANGE_SEND_AS_DENIED - FIX_WITH_RECONNECT—Data connection failed - GOOGLE_MAIL_SERVICE_NOT_ENABLED—Gmail service not enabled - INVALID_DRAFT—Invalid email draft - INVALID_TARGET_EMAIL - INVALID_TEMPLATE_ID - INVALID_USER_EMAIL - MAIL_PROVIDER_RATE_LIMIT_REACHED—Email provider rate limit reached - NON_EMAIL_UNKNOWN_ERROR—Unknown error - NO_ATTACHMENT_ACCESS - NO_CONTENT_VERSION_ACCESS - NO_LIST_EMAIL_PERMISSION - NO_TARGET_ACCESS - ORG_WIDE_AUTO_EMAIL_LIMIT_REACHED - ORG_WIDE_DAILY_EMAIL_LIMIT_REACHED - OTHER_REQ_FIELD_MISSING—Other required field missing

Field	Details
	• PARDOT_MERGE_FIELD_RENDERING_ERROR • POST_SEND_EXCEPTION • RETRIES_MAX_EXCEEDED—Maximum retries exceeded • RETRY_LATER • SCHEDULED_EMAIL_FAILED—Unknown error • SENDER_MAILBOX_NOT_FOUND • TARGET_DO_NOT_CONTACT_ON—Target has Do Not Contact on • TARGET_EMAIL_BOUNCED • TARGET_EMAIL_EMPTY • TEMPLATE_DELETED • TEMPLATE_EMPTY—Email subject or body missing • TEMPLATE_HAS_INVALID_MERGE_FIELD • TEMPLATE_MERGE_FIELD_RENDERING_ERROR • TEMPLATE_NOT_PUBLIC—No access to template • TEMPLATE_TOO_LARGE • UNKNOWN—Email unknown error • USER_HAS_LOST_HVS_ACCESS • USER_IS_INACTIVE
GoToStepIterationCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times the action cadence step tracker was created for the same step in a cadence. Available in API version 58.0 and later.
IsActionTaken	Type boolean Properties Defaulted on create, Filter, Group, Sort Description true if the sales rep completed an action during this step, such as making a phone call, otherwise false. The default value is false. This field is a calculated field.
ScheduledStartDateTime	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date and time when the step starts. Available in API version 58.0 and later.
SecondsOverdue	Type int Properties Filter, Group, Nillable, Sort Description If this step has a due date that has passed, this field contains the number of seconds that has elapsed since the due date. Once a sales rep takes action on the cadence step, the value of this field is the number of seconds elapsed between the due date and the time the action was taken. This field is a calculated field.
State	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The current state of this step. Possible values are: Possible values are: • Active — The current step that the sales rep is performing. There can only be one active step for a given target. • Cancelled — The sales rep canceled the step. Salesforce doesn't run any canceled steps. • Completed — This step is finished. Either the work in the step completed, or the step was skipped. • Error — An error occurred while executing this step. • InProgress — The sales rep has started the step, but it isn't yet completed. • Paused — The sales rep paused the step. • Queued — Used for automated email steps. The email step has started but the email is waiting in the queue to be sent. • Scheduled — Used for email steps. An email can be scheduled to be sent later.
StepTitle	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The name of the related step.
StepType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of step to execute. Possible values are: • AutoSendAnEmail • Branch • CreateTask • DaisyChain • LinkedInConnection • LinkedInMail • ListenerBranch • MakeACall • PlatformScreenFlow • Root • SendAnEmail • SubRoot • Wait
TargetId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the prospect that is assigned to this cadence. This field is a polymorphic relationship field. Relationship Name Target Relationship Type Lookup Refers To Contact, Lead
WasEverPaused	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort
	Description Indicates whether the sales rep had ever paused this step (<code>true</code>), or not (<code>false</code>). This field is available in API version 50.0 and later.

Usage

List all the steps that this prospect has completed in a given cadence:

```
select StepTitle from ActionCadenceStepTracker where TargetID = <target ID>
and ActionCadenceId=<action cadence id> and StepType="Completed"
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ActionCadenceStepTrackerChangeEvent (API version 48.0)

Change events are available for the object.

[ActionCadenceRule](#)

[ActionCadenceStep](#)

[ActionCadenceRuleCondition](#)

ActionCadenceStepVariant

Represents an email template or call script variant associated with an action cadence step. Email and call steps can have up to 3 variants associated so sales teams can compare the engagement results. This object is available in API version 53.0 and later.

Supported Calls

```
create(), delete(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(),
update(), upsert()
```

Special Access Rules

Sales Engagement and Allow Email Template and Call Script Variant Testing must be enabled.

Fields

Field	Details
ActionCadenceStepId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related action cadence step. This is a relationship field. Relationship Name ActionCadenceStep Relationship Type Lookup Refers To ActionCadenceStep
SplitPercentage	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of emails to send or calls to make using this email template or call script variant. The total for all variants must be 100%.
TemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the associated email template or call script. This is a polymorphic relationship field. Relationship Name Template Relationship Type Lookup Refers To CallTemplate, EmailTemplate
Type	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of the associated action cadence step. Possible values are: • AutoSendAnEmail • Branch • CreateTask • DaisyChain • LinkedInConnection • LinkedInMail • ListenerBranch • MakeACall • PlatformScreenFlow—Available in version 55.0 and later. • Root • SendAnEmail • Wait Only email and call steps can have an associated action cadence step variant.

Usage

Use ActionCadenceStepVariant to retrieve the email template or call script for an action cadence step:

```
SELECT SplitPercentage, TemplateId FROM ActionCadenceStepVariant WHERE
ActionCadenceStepId=:idValue]
```

Use ActionCadenceStepVariant to retrieve the call scripts from all call steps:

```
SELECT SplitPercentage, TemplateId, ActionCadenceStepId FROM ActionCadenceStepVariant WHERE
Type='MakeACall'
```

ActionCadenceTracker

Represents an active cadence target. This object is available in API version 45.0 and later.

An ActionCadenceTracker record is created when you add a target to a cadence. Use ActionCadenceTracker to learn about a running cadence target, including its state, current step, assigned prospect, and reason for completion.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ActionCadenceId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related ActionCadence. Relationship Name ActionCadence Relationship Type Lookup Refers To ActionCadence
CompletionDisposition	Type picklist Properties Filter, Group, Nillable, Sort Description The target's disposition when it exited the action cadence. This field contains a value if the target's <code>State</code> is <code>Complete</code>. Sales reps can set this value when removing a target from a cadence. This field is available in API version 51.0 and later. Possible values are: • <code>Bad Data</code> — some of the target's data is incorrect or invalid. • <code>Contact Later</code> — the target asked to be contacted at a later date. • <code>Customer Connected</code> — the sales rep contacted the target. • <code>Customer Engaged</code> — the target engaged with an email. • <code>Disqualified</code> — a sales rep determined that the target isn't qualified. • <code>Duplicate</code> — the target has a duplicate lead, contact, or person account record. • <code>No Response</code> — the target didn't reply to any outreach. • <code>Not Interested</code> — the target stated a lack of interest. • <code>Success</code> — the cadence outreach was successful.
CompletionReason	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The reason that the target completed the cadence. This field contains a value if the target's <code>State</code> is <code>Complete</code>. Possible values are:

Field	Details
	• <code>AutomaticallyExited</code> — the target completed because a global exit condition occurred. This value is available in API version 49.0 and later. • <code>AutomaticallyExitedDeletedStep</code> • <code>AutomaticallyExitedInvalidParentStep</code> • <code>DaisyChained</code> — the target completed because it's connected to another action cadence. • <code>LeadConverted</code> — the target completed because the lead converted. • <code>ManuallyRemoved</code> — the target completed because the sales rep removed it from the cadence. • <code>ManuallyRemovedNoAccess</code>— reserved for future use. • <code>NoMoreSteps</code> — the target completed the action cadence because all the action cadence steps were completed.
<code>CurrentStepId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the current <code>ActionCadenceStepTracker</code>. Relationship Name CurrentStep Relationship Type Lookup Refers To <code>ActionCadenceStepTracker</code>
<code>DaisyChainIteration</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of this action cadence in a sequence of linked action cadences followed by this target. This value starts at 1 with the initial action cadence. A target can follow a sequence of up to 10 linked action cadences. Available in API version 53.0 and later.
<code>ErrorMessage</code>	Type string Properties Filter, Group, Nillable, Sort Description If an error occurs while this target is being completed, this field contains the error message.

Field	Details
ExitGlobalRuleId	Type reference Properties Filter, Group, Nillable, Sort Description If a global exit condition occurs, a target completes. One example of a global exit condition is an email returned because of an invalid address. If the target completed because a global exit condition occurred, this field contains the ID of the ActionCadenceRule record that evaluated as <code>true</code>. This field is available in API version 49.0 and later. Relationship Name ExitGlobalRule Relationship Type Lookup Refers To ActionCadenceRule
IsTrackerActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the action cadence target is active (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. An action cadence target is active if the state is <code>Running</code>, <code>Paused</code>, <code>Processing</code>, or <code>Initializing</code>. Only active targets count against the org limit of 150,000 trackers. This field is available in API version 50.0 and later.
LastCompletedStepId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the last completed ActionCadenceStepTracker. Relationship Name LastCompletedStep Relationship Type Lookup Refers To ActionCadenceStepTracker

Field	Details
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the user who is assigned to complete the cadence steps for the target. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RelatedToAttributionType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Defines when the cadence is related to an opportunity or invoice. Available in API version 51.0 and later. Possible values are: • Activation—Attribute the opportunity to the cadence when the opportunity is created. • Collected—Attribute the value to the cadence after payment for the invoice is collected. • Collection Advancement—Attribute the value to the cadence when the invoice is out for collection. • Maturation—Attribute the opportunity to the cadence only when the opportunity stage advances.
RelatedToId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related opportunity if there's one. Available in API version 51.0 and later. This is a polymorphic relationship field. Relationship Name RelatedTo Relationship Type Lookup

Field	Details
	Refers To Opportunity, Invoice
ScheduledResumeDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. Available in API version 53.0 and later.
State	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The state of the current action cadence tracker. Possible values are: • Complete • Error • Initializing • Paused • Processing—Salesforce is working on changing the state of this action cadence tracker. We recommend that you filter out steps that have this state from your dashboards. • Running
TargetId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the target that is assigned to this action cadence. Relationship Name Target Relationship Type Lookup Refers To Contact, Lead

Usage

Use ActionCadenceTracker to see what targets are currently assigned to an active action cadence.

```
select TargetId from ActionCadenceTracker where ActionCadenceId=<Id of the action cadence>
and State= "Running"
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ActionCadenceTrackerChangeEvent (API version 48.0)

Change events are available for the object.

ActionCadenceTrackerOwnerSharingRule on page 65

Sharing rules are available for the object.

ActionCadenceTrackerShare on page 67

Sharing is available for the object.

ActionCdncStpMonthlyMetric

Represents the monthly engagement metrics for an action cadence step. This object is available in API version 49.0 and later.

Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
ActionCadenceStepId	Type reference Properties Filter, Group, Sort Description The ID of the related action cadence step. This is a relationship field. Relationship Name ActionCadenceStep

Field	Details
	Relationship Type This is an overview-detail relationship field, where ActionCadenceStep is the master object. Refers To ActionCadenceStep
AllCallsCallBackLater	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this step with the call result Call Back Later.
AllCallsLeftVoicemail	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this step with the call result Left Voicemail.
AllCallsMeaningfulConnect	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this step with the call result Meaningful Connect.
AllCallsNotInterested	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this step with the call result Not Interested.
AllCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this step with no call result specified.
AllCallsUnqualified	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this step with the call result Unqualified.
AllEmailsBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total of hard and soft bounced emails for this step in the month. This is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of successfully delivered emails for this step in the month. This is a calculated field.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of hard bounced emails for this step in the month.
AllEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails containing a link clicked by the recipient for this step in the month.
AllEmailsNotDeliveredCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of sent emails that were bounced for all recipients on the email. Bounced emails aren't marked as delivered. Available in API version 54.0 and later.
AllEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails opened by the recipient for this step in the month.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that triggered an out-of-office reply for this step in the month.
AllEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails replied to for this step in the month.
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent for this step in the month. This is a calculated field.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails soft bounced for this step in the month.
AllEmailsTrackedSentCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of emails sent with engagement tracking enabled for this step in the month. Available in API version 51.0 and later.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent without engagement tracking for this step in the month. Available in API version 51.0 and later.
AllTotalCallsCount	Type int Properties Filter, Group, Nillable, Sort Description The total number of calls with all call results for this step in the month. This is a calculated field.
DeliveredRecipientCount	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients that were successfully delivered an email. Available in API version 54.0 and later. This field is a calculated field.
DeliveredRecipientRate	Type percent Properties Filter, Nillable, Sort Description The percentage of unique recipients that received an email you sent. Available in API version 54.0 and later. This field is a calculated field.

Field	Details
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with hard bounce tracking. Available in API version 54.0 and later.
HasTemplateAssigned	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this step has an associated email template or call script. Available in API version 52.0 and later. The default value is 'false'.
HrdBncTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with hard bounce tracking. Available in API version 54.0 and later.
IsCompoundMetric	Type boolean Properties Defaulted on create, Filter, Group, Sort Description When true, indicates that this metric represents engagement for a combination of the action cadence step and a single email template. The value is true for all action cadence steps created in Summer '21 and later. When false, indicates that the metric represents engagement for the action cadence step and all email templates used on the step. The value is false for all action cadence steps created in Spring '21 and earlier. The default value is 'false'. Available in API version 52.0 and later.
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of emails sent with link click tracking. Available in API version 54.0 and later.
LinkClkTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with link tracking. Available in API version 54.0 and later.
Month	Type date Properties Filter, Group, Sort Description The month in which the engagement occurred.
MonthInt	Type int Properties Filter, Group, idLookup, Sort Description The month in which the engagement occurred, in <code>yyyymm</code> format.
OooTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with out-of-office tracking. Out-of-office tracking requires Inbox. Available in API version 54.0 and later.
OpenTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with open tracking. Available in API version 54.0 and later.

Field	Details
OpenTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with open tracking. Available in API version 54.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with out-of-office tracking. Available in API version 54.0 and later.
RecipientReplies	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who replied to an email. Available in API version 54.0 and later.
RecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of unique email recipients. Available in API version 54.0 and later.
RecipientsHardBounced	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients that hard-bounced an email. Hard bounces can mean that the recipient's email address doesn't exist or is misspelled. Available in API version 54.0 and later.
RecipientsOutOfOffice	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of recipients that responded with an out-of-office reply. Available in API version 54.0 and later.
RecipientsSoftBounced	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients that soft-bounced an email. A soft bounce often indicates a temporary issue with the recipient's email server, such as a full inbox. Available in API version 54.0 and later.
ReplyTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with reply tracking. Available in API version 54.0 and later.
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with reply tracking. Available in API version 54.0 and later.
SftBncTrackableRecipientSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who received an email with soft bounce tracking. Available in API version 53.0 and later.
SoftBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent with soft bounce tracking. Available in API version 54.0 and later.

Field	Details
SomeEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of sent emails that were successfully delivered to at least one of its recipients. Available in API version 54.0 and later. This field is a calculated field.
SomeEmailsDeliveredRate	Type percent Properties Filter, Nillable, Sort Description The percentage of sent and tracked emails that were successfully delivered to at least one of their recipients. Available in API version 54.0 and later. This field is a calculated field.
TemplateId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the email template or call script associated with this step. Available in API version 52.0 and later. This is a polymorphic relationship field. Relationship Name Template Relationship Type Lookup Refers To CallTemplate, EmailTemplate
TrackableRecipientSendHrdBncRt	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to unique recipients with hard bounce tracking that hard bounced. Available in API version 54.0 and later. This field is a calculated field.

Field	Details
TrackableRecipientSendOooRate	Type percent
	Properties Filter, Nillable, Sort
	Description The percentage of emails sent with out-of-office tracking that received out-of-office replies from unique recipients. Available in API version 54.0 and later.
	This field is a calculated field.
TrackableRecipientSendReplyRt	Type percent
	Properties Filter, Nillable, Sort
	Description The percentage of emails sent with reply tracking that received replies from unique recipients. Available in API version 54.0 and later.
	This field is a calculated field.
TrackableRecipientSendSftBncRt	Type percent
	Properties Filter, Nillable, Sort
	Description The percentage of emails sent to unique recipients with soft bounce tracking that soft-bounced. Available in API version 54.0 and later.
	This field is a calculated field.
TrackableSendHardBounceRate	Type percent
	Properties Filter, Nillable, Sort
	Description The percentage of emails sent with hard bounce tracking that hard bounced. Available in API version 54.0 and later.
	This field is a calculated field.
TrackableSendLinkClickRate	Type percent
	Properties Filter, Nillable, Sort

Field	Details
	Description The percentage of emails sent with link tracking that had link clicks. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with open tracking that were opened by the recipient. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendOutOfOfficeRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with out-of-office tracking that received out-of-office replies. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with reply tracking that received replies. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent with soft bounce tracking that soft bounced. Available in API version 54.0 and later. This field is a calculated field.

Field	Details
UniqueEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who clicked a link in an email for this step in the month.
UniqueEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who opened an email for this step in the month.
UniqueEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who replied to an email for this step in the month.

ActionLinkGroupTemplate

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking on an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. Every action link belongs to an action link group and action links within the group are mutually exclusive. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only users with the “Customize Application” permission can modify or delete this object.

Fields

Field Name	Details
Category	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The location of the action link group within the feed element. Values are: • Primary—The action link group is displayed in the body of the feed element. • Overflow—The action link group is displayed in the overflow menu of the feed element.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the action link group template to use in code.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ExecutionsAllowed	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The number of times an action link can be executed. Values are: • Once—An action link can be executed only once across all users. • OncePerUser—An action link can be executed only once for each user. • Unlimited—An action link can be executed an unlimited number of times by each user. If the action link's <code>actionType</code> is <code>Api</code> or <code>ApiAsync</code>, you can't use this value.
HoursUntilExpiration	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The number of hours from when the action link group is created until it's removed from associated feed elements and can no longer be executed. The maximum value is 8,760.
IsPublished	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, the action link group template is published. Action link group templates shouldn't be published until at least one ActionLinkTemplate is associated with it. Once set to <code>true</code>, this can't be set back to <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the <code>MasterLabel</code>.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The name of the action link group template.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the

Field Name	Details
	installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Define action link templates in Setup and use `ConnectApi` in Apex or Connect REST API to instantiate action links from the templates and to post feed elements with the action links.

If you delete a published action link group template, you delete all related action link information which includes deleting all action links that were instantiated using the template from feed items.

ActionLinkTemplate

Action link templates let you reuse action link definitions and package and distribute action links. An action link is a button on a feed element. Clicking an action link can take a user to another Web page, initiate a file download, or invoke an API call to an external server or Salesforce. Use action links to integrate Salesforce and third-party services into the feed. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only users with the “Customize Application” permission can modify or delete this object.

Fields

Field Name	Details
<code>ActionLinkGroupTemplateId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the ActionLinkGroupTemplate with which this action link template is associated. This is a relationship field.

Field Name	Details
	Relationship Name ActionLinkGroupTemplate Relationship Type Lookup Refers To ActionLinkGroupTemplate
ActionUrl	Type textarea Properties Create, Update Description The action link URL. For example, a <code>ui</code> action link URL is a Web page. A <code>Download</code> action link URL is a link to the file to download. <code>ui</code> and <code>Download</code> action link URLs are provided to clients. An <code>Api</code> or <code>ApiAsync</code> action link URL is a REST resource. <code>Api</code> and <code>ApiAsync</code> action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code>. Links to resources hosted on Salesforce servers can be relative, starting with a <code>/</code>. All other links must be absolute and start with <code>https://</code>. This field can contain context variables and binding variables in the form <code>{!Bindings.key}</code>, for example, <code>https://www.example.com/{!Bindings.itemId}</code>. Set the binding variable's value when you instantiate the action link group from the template.
Headers	Type textarea Properties Create, Nillable, Update Description Template for the HTTP headers sent when corresponding action links are invoked. This field can be used only for <code>Api</code> and <code>ApiAsync</code> action links. This field can contain context variables and binding variables in the form <code>{!Bindings.key}</code>.
IsConfirmationRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, a confirmation dialog appears before the action is executed.

Field Name	Details
IsGroupDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, action links derived from this template are the default or primary action in their action groups. There can be only one default action per action group.
Label	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A custom label to display on the action link button. If none of the <code>LabelKey</code> values make sense for an action link, use a custom label. Set the <code>LabelKey</code> field to <code>None</code> and enter a label name in the <code>Label</code> field. Action links have four states: new, pending, success, and failed. These strings are appended to the label for each state: • <code>Label</code> • <code>Label Pending</code> • <code>Label Success</code> • <code>Label Failed</code> For example, if the value of <code>Label</code> is "Call Home," the values of the four action link states are: Call Home, Call Home Pending, Call Home Success, and Call Home Failed. If <code>LabelKey</code> has any value other than <code>None</code>, the <code>Label</code> field is empty.
LabelKey	Type string Properties Create, Filter, Group, Sort, Update Description Key for the set of labels to display for these action link states: new, pending, success, failed. For example, the Approve set contains these labels: Approve, Pending, Approved, Failed. For a complete list of keys and labels, see Action Link Labels in the <i>Connect REST API Developer Guide</i>. If none of the label key values make sense for an action link, set this field to <code>None</code> and enter a custom label name in the <code>Label</code> field.
LinkType	Type picklist

Field Name	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of action link. One of these values: • Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server. • ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to <code>/connect/action-links/actionLinkId</code> to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete. • Download—The action link downloads a file from the action URL. • Ui—The action link takes the user to a web page at the action URL.
Method	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description HTTP method for the action URL. One of these values: • HttpDelete—Returns HTTP 204 on success. Response body or output class is empty. • HttpGet—Returns HTTP 200 on success. • HttpHead—Returns HTTP 200 on success. Response body or output class is empty. • HttpPatch—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty. • HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success. • HttpPut—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty. Ui and Download action links must use HttpGet.
Position	Type int Properties Create, Filter, Group, Sort, Update Description An integer specifying the position of the action link template relative to other action links in the group. 0 is the first position.

Field Name	Details
RequestBody	Type textarea Properties Create, Nillable, Update Description Template for the HTTP request body sent when corresponding action links are invoked. This field can be used only for <code>Api</code> and <code>ApiAsync</code> action links. This field can contain context variables and binding variables in the form <code>{!Bindings.key}</code>.
UserAlias	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If you selected <code>CustomUser</code> or <code>CustomExcludedUser</code> for <code>UserVisibility</code>, this field is the alias for the custom user. Use the alias in a template binding to specify the custom user when an action link group is created using the template.
UserVisibility	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Who can see the action link. This value is set per action link, not per action link group. One of these values: • <code>Creator</code>—Only the creator of the action link can see the action link. • <code>Everyone</code>—Everyone can see the action link. • <code>EveryoneButCreator</code>—Everyone but the creator of the action link can see the action link. • <code>Manager</code>—Only the manager of the creator of the action link can see the action link. • <code>CustomUser</code>—Only the custom user can see the action link. • <code>CustomExcludedUser</code>—Everyone but the custom user can see the action link.

Usage

Create action link templates in Setup. Use Apex classes in the `ConnectApi` namespace or Connect REST API to instantiate action links from templates and to post feed elements with the action links.

For information about action links, see [Working with Action Links](#) in the *Apex Developer Guide* or the *Connect REST API Developer Guide*.

ActionPlan

Represents the instance of an action plan, a set of tasks created from an action plan template. This object is available in API version 44.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `undelete()` `update()` `upsert()`

Fields

Field Name	Details
<code>ActionPlanState</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The status of work being done for the action plan. Possible values are: • Canceled • Complete • In Progress • Not Started The default value is <code>Not Started</code>.
<code>ActionPlanTemplateVersionId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the version of the action plan template used to create this action plan. At creation, the referenced action plan template must be in the published state.
<code>ActionPlanType</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The action plan's type.

Field Name	Details
	Possible values are: • Industries • Sales—This value is available in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set. • Service
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the action plan is locked or not.
IsUsingHolidayHours	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether task completion dates have been calculated by incrementing the task offset for each non-work day, excluding recurring holidays.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the action plan can be edited or not.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the action plan.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns this record.
StartDate	Type date Properties Create, Default on create, Filter, Group, Sort Description The start date of the action plan.
TargetId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the parent object record that relates to this action plan. For API version 63.0 and later, supported parent objects are Account, AccountPlanObjective, Applicant, ApplicationForm, ApplicationFormProduct, Asset, BusinessLicense, BusinessMilestone, Campaign, Case, ChangeRequest, Claim, Contact, Contract, FinancialGoal, Incident, InsurancePolicy, InsurancePolicyCoverage, Lead, Opportunity, PersonLifeEvent, Problem, ResidentialLoanApplication, WorkOrder, and WorkOrderLineItem. For API version 62.0 and later, supported parent objects are ApplicationFormEvaluation and VettingEvaluation. For API version 48.0 and later, supported parent objects are Account, AssetsAndLiabilities, BusinessMilestone, Campaign, Card, Case, Claim, Contact,

Field Name	Details
	Contract, Financial Account, Financial Goal, Financial Holding, InsurancePolicy, InsurancePolicyCoverage, Lead, Opportunity, PersonLifeEvent, ResidentialLoanApplication, and Visit as well as custom objects with activities enabled.
	For API version 47.0 and later, supported parent objects are Account, BusinessMilestone, Campaign, Case, Claim, Contact, Contract, InsurancePolicy, InsurancePolicyCoverage, Lead, Opportunity, PersonLifeEvent, and Visit as well as custom objects with activities enabled.
	For API version 46.0 and later, supported parent objects are Account, Campaign, Case, Contact, Contract, Lead, and Opportunity as well as custom objects with activities enabled.
	For API version 45.0 and earlier, the only supported parent object is Account.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ActionPlanChangeEvent

Change events are available for the object.

ActionPlanFeed

Feed tracking is available for the object.

ActionPlanHistory

History is available for tracked fields of the object.

ActionPlanOwnerSharingRule

Sharing rules are available for the object.

ActionPlanShare

Sharing is available for the object.

ActionPlanItem

Represents the instance of an action plan item. This object is available in API version 44.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `undelete()` `update()` `upsert()`

Fields

Field Name	Details
ActionPlanId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort Description The ID of the action plan that this item belongs to.
ActionPlanTemplateItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the action plan template item this item was created from.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan item is locked or not. The default value is <code>false</code> .
IsRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan item is required or not.
ItemEntityType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of object used with the item. This field is available in API version 61.0 and later. Possible values are: • <code>AssessmentTask</code>—Assessment Task • <code>DocumentChecklistItem</code>—Document Checklist Item • <code>Event</code>—Available only with sales action plans in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set.

Field Name	Details
	• <code>GenericVisitTask</code>—Generic Visit Task • <code>OtherComponentTask</code>—Other Component Task • <code>RecordAction</code> • <code>SignatureTask</code>—Signature Task • <code>Task</code>
ItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the record created by this action plan item. This field is a polymorphic relationship field. Relationship Name Item Refers To DocumentChecklistItem, Event, RecordAction, Task
ItemState	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The action plan item's work state. Possible values are: • Canceled • Completed • Deleted • In Progress • Pending
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this action plan item.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ActionPlanItemChangeEvent

Change events are available for the object.

ActionPlanItemFeed

Feed tracking is available for the object.

ActionPlanItemHistory

History is available for tracked fields of the object.

ActionPlanItemOwnerSharingRule

Sharing rules are available for the object.

ActionPlanItemShare

Sharing is available for the object.

ActionPlanTemplate

Represents the instance of an action plan template. This object is available in API version 44.0 and later.

Supported Calls

`create()``delete()``describeLayout()``describeObjects()``getDeleted()``getUpdated()``query()``retrieve()``search()``undelete()``update()``upsert()`

Fields

Field Name	Details
ActionPlanType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description This action plan template’s type. Possible values are: - Industries - Sales—This value is available in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set. - Service
Category	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description Specifies the category that the action plan template belongs to. Available in API version 64.0 and later. Possible values are: • Onboarding • Application
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of this action plan template.
EstimatedCompletionDays	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The estimated number of days to complete the action plan. Available in API version 64.0 and later.
FileBasedTemplatePath	Type string Properties Filter, Group, Nillable, Sort Description The path of the file based template using which the action plan template is created. Available in API version 64.0 and later.
IsAdHocItemCreationEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether users can add tasks or other items to generated action plans (<code>true</code>) or not (<code>false</code>).
IsLocked	Type boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template is locked or not. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template can be edited or not. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this action plan template.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description The ID of the user who owns this action plan template. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
SourceType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the source type to which the action plan template belongs to. Available in API version 64.0 and later. Possible values are: • CRM • MigratedFromSandbox
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of this action plan template. Possible values are: • Draft • Final-Published • Obsolete • ReadOnly
Subcategory	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The subcategory to which the action plan template belongs. Available in API version 64.0 and later. Possible values are:

Field Name	Details
	- Product Onboarding - Customer Onboarding
TargetEntityType	Type picklist Properties Create, Defaulted on create, Group, Restricted picklist, Sort Description The parent object this action plan template relates to. Possible values are organized by the API version in which they were introduced. Values are available in all versions after introduction unless noted otherwise. API Version 62.0 and later with Financial Services: - AccountPlanObjective - FinancialDeal - PartyProfile API Version 62.0 and later with Public Sector Solutions: - ApplicationFormEvaluation - VettingEvaluation API version 60.0 and later with Education Cloud - ProgramEnrollment API version 58.0 and later with Health Cloud - CareBarrier API version 58.0 and later with Nonprofit Cloud: - Benefit - Program API Version 58.0 and later with Public Sector Solution and Education Cloud: - ApplicationDecision - ApplicationReview - Benefit - Program API Version 56.0 and later with Automotive Cloud: - Account - Asset - Asset Account Participant - Asset Contact Participant - Asset Milestone - Fleet

Field Name	Details
	• Lead • Opportunity • Record Alert • Vehicle • Case • Claim • Contact
	API Version 58.0 and later with Grantmaking:
	• ApplicationDecision • ApplicationReview • Benefit • Budget • BudgetAllocation • CareBarrier • FundingAward • FundingAwardAmendment • FundingAwardRequirement • FundingDisbursement • FundingOpportunity • Program
	API Version 52.0 and later:
	• BusinessLicenseApplication • IndividualApplication • PublicComplaint • RegulatoryCodeViolation • ViolationEnforcementAction
	API Version 47.0 and later:
	• BusinessMilestone • Claim • InsurancePolicy • InsurancePolicyCoverage • PersonLifeEvent • Visit
	API Version 46.0 and later:
	• Campaign—Unsupported for Grantmaking. • Case • Contact

Field Name	Details
	- Contract - Lead - Opportunity - Custom objects with activities enabled API Version 44.0 and later: Account
UniqueName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name for this action plan template. This field is unique within your organization.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ActionPlanTemplateChangeEvent

Change events are available for the object.

ActionPlanTemplateFeed

Feed tracking is available for the object.

ActionPlanTemplateHistory

History is available for tracked fields of the object.

ActionPlanTemplateOwnerSharingRule

Sharing rules are available for the object.

ActionPlanTemplateShare

Sharing is available for the object.

ActionPlanTemplateItem

Represents the instance of an item on an action plan template version. This object is available in API version 44.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `undelete()` `update()` `upsert()`

Fields

Field Name	Details
ActionPlanTemplateVersionId	Type reference Properties Create, Filter, Group, Sort, Description The version of the action plan template this item is for.
DisplayOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The order in which this item is displayed within the action plan template version.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the task created from this template item is active. The default value is <code>false</code>.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template item is locked or not. The default value is <code>false</code>.
IsRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the task created from this template item is required. The default value is <code>false</code>.

Field Name	Details
ItemEntityType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of action plan template item entity.. Possible values are: • Document Checklist Item • Event—This value is available in API version 63.0. • RecordAction • Task
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template item can be edited or not. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, Sort, idLookup, Update

Field Name	Details
	Description The unique identifier for this action plan template item record.
UniqueName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name for this action plan template item. This field is unique within your organization.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ActionPlanTemplateItemChangeEvent

Change events are available for the object.

ActionPlanTemplateItemFeed

Feed tracking is available for the object.

ActionPlanTemplateItemHistory

History is available for tracked fields of the object.

ActionPlanTemplateItemOwnerSharingRule

Sharing rules are available for the object.

ActionPlanTemplateItemShare

Sharing is available for the object.

ActionPlanTemplateItemValue

Represents the value associated with an action plan template item. This object is available in API version 44.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `undelete()` `update()` `upsert()`

Fields

Field Name	Details
ActionPlanTemplateItemId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort Description The ID of the action plan template item that this value relates to. Relationship Name ActionPlanTemplateItem Relationship Type Master-detail Refers To ActionPlanTemplateItem (the master object)
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the task created from this template item is active. The default value is <code>false</code>.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template item value is locked or not. The default value is <code>false</code>.
ItemEntityFieldName	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The name of the field on the action plan template item that this value is for. Available fields include: • <code>AssessmentTask.AssessmentTaskDefinitionId</code>—Assessment Task Definition ID • <code>AssessmentTask.AssignedToId</code>—AssignedTo ID • <code>AssessmentTask.Description</code>—Description • <code>AssessmentTask.EndTime</code>—End Time • <code>AssessmentTask.IsRequired</code>—Required

Field Name	Details
	• <code>AssessmentTask.Name</code>—Name • <code>AssessmentTask.OwnerId</code>—Owner ID • <code>AssessmentTask.ParentId</code>—Visit ID • <code>AssessmentTask.ReferenceRecordId</code>—ReferenceRecord ID • <code>AssessmentTask.SequenceNumber</code>—Sequence • <code>AssessmentTask.StartTime</code>—Start Time • <code>AssessmentTask.Status</code>—Status • <code>AssessmentTask.TaskDefinitionId</code>—TaskDefinition ID • <code>AssessmentTask.TaskType</code>—Task Type • <code>DocumentChecklistItem.Comments</code>—Comments • <code>DocumentChecklistItem.DocumentCategoryId</code>—Document Category ID • <code>DocumentChecklistItem.DocumentTypeId</code>—Document Type ID • <code>DocumentChecklistItem.Instruction</code>—Instructions • <code>DocumentChecklistItem.IsAccepted</code>—Accepted • <code>DocumentChecklistItem.IsFrozen</code>—Frozen • <code>DocumentChecklistItem.IsRequired</code>—Required • <code>DocumentChecklistItem.Name</code>—Name • <code>DocumentChecklistItem.OwnerId</code>—Owner ID • <code>DocumentChecklistItem.ParentRecordId</code>—Parent Record ID • <code>DocumentChecklistItem.ReceivedDocumentId</code>—Received Document ID • <code>DocumentChecklistItem.Status</code>—Status • <code>DocumentChecklistItem.ValidatedById</code>—User ID • <code>DocumentChecklistItem.ValidationDateTime</code>—Validation Date Time • <code>DocumentChecklistItem.WhoId</code>—Who ID • <code>Event.ActivityDate</code>—Due Date Only • <code>Event.ActivityDateTime</code>—Due Date Time • <code>Event.Description</code>—Description • <code>Event.DurationInMinutes</code>—Duration • <code>Event.EndDateTime</code>—End Date Time • <code>Event.EventSubtype</code>—Event Subtype • <code>Event.IsAllDayEvent</code>—All-Day Event • <code>Event.IsPrivate</code>—Private • <code>Event.IsRecurrence</code>—Create Recurring Series of Events • <code>Event.IsReminderSet</code>—Reminder Set • <code>Event.Location</code>—Location

Field Name	Details
	• <code>Event.OwnerId</code>—Assigned To ID • <code>Event.Recurrence2PatternText</code>—Recurrence Pattern • <code>Event.RecurrenceDayOfMonth</code>—Recurrence Day of Month • <code>Event.RecurrenceDayOfWeekMask</code>—Recurrence Day of Week Mask • <code>Event.RecurrenceEndDateOnly</code>—Recurrence End • <code>Event.RecurrenceInstance</code>—Recurrence Instance • <code>Event.RecurrenceInterval</code>—Recurrence Interval • <code>Event.RecurrenceMonthOfYear</code>—Recurrence Month of Year • <code>Event.RecurrenceStartDateTime</code>—Recurrence Start • <code>Event.RecurrenceTimeZoneSidKey</code>—Recurrence Time Zone • <code>Event.RecurrenceType</code>—Recurrence Type • <code>Event.ReminderDateTime</code>—Reminder Date/Time • <code>Event.ShowAs</code>—Show Time As • <code>Event.StartDateTime</code>—Start Date Time • <code>Event.Subject</code>—Subject • <code>Event.Type</code>—Type • <code>Event.WhatId</code>—Related To ID • <code>Event.WhoId</code>—Name ID • <code>GenericVisitTask.DefinitionReferenceId</code>—Generic Visit Task ID • <code>GenericVisitTask.Description</code>—Description • <code>GenericVisitTask.EndDateTime</code>—End Date Time • <code>GenericVisitTask.IsRequired</code>—Required • <code>GenericVisitTask.Name</code>—Name • <code>GenericVisitTask.OwnerId</code>—Owner ID • <code>GenericVisitTask.Sequence</code>—Sequence • <code>GenericVisitTask.StartDateTime</code>—Start Date Time • <code>GenericVisitTask.Status</code>—Status • <code>GenericVisitTask.VisitId</code>—Visit ID • <code>OtherComponentTask.Description</code>—Description • <code>OtherComponentTask.FullyQualifiedName</code>—Fully Qualified Name • <code>OtherComponentTask.Name</code>—Name • <code>OtherComponentTask.OwnerId</code>—Owner ID • <code>OtherComponentTask.ParentTaskId</code>—Assessment Task ID • <code>OtherComponentTask.ParticipantRoleId</code>—Participant Role ID • <code>RecordAction.ActionDefinition</code>—Action Definition

Field Name	Details
	- RecordAction.ActionType—Action Type - RecordAction.FlowDefinition—Interaction Definition ID - RecordAction.FlowInterviewId—FlowInterview ID - RecordAction.IsMandatory—Is Mandatory - RecordAction.IsUiRemoveHidden—Hide Remove Action in UI - RecordAction.Order—Order - RecordAction.ParticipantRoleId—ParticipantRole ID - RecordAction.Pinned—Pinned - RecordAction.RecordId—Parent Record ID - RecordAction.Status—Status - SignatureTask.Description—Description - SignatureTask.Name—Name - SignatureTask.ParentTaskId—Assessment Task ID - Task.APT_Custom_Text_1_c__c—APT Custom Text - 1 - Task.ActivityDate—Due Date Only - Task.Boolean_Test__c—Boolean Test - Task.CallDisposition—Call Result - Task.CallDurationInSeconds—Call Duration - Task.CallObject—Call Object Identifier - Task.CallType—Call Type - Task.Custom_Picklist__c—Custom Picklist - Task.Description—TEstActivityDEs - Task.IsRecurrence—Create Recurring Series of Tasks - Task.IsReminderSet—Reminder Set - Task.OwnerId—Assigned To ID - Task.Priority—Priority - Task.RecurrenceDayOfMonth—Recurrence Day of Month - Task.RecurrenceDayOfWeekMask—Recurrence Day of Week Mask - Task.RecurrenceEndDateOnly—Recurrence End - Task.RecurrenceInstance—Recurrence Instance - Task.RecurrenceInterval—Recurrence Interval - Task.RecurrenceMonthOfYear—Recurrence Month of Year - Task.RecurrenceRegeneratedType—Repeat This Task - Task.RecurrenceStartDateOnly—Recurrence Start - Task.RecurrenceTimeZoneSidKey—Recurrence Time Zone - Task.RecurrenceType—Recurrence Type - Task.ReminderDateTime—Reminder Date/Time - Task.Status—Status

Field Name	Details
	• <code>Task.Subject</code>—Subject • <code>Task.TaskSubtype</code>—Task Subtype • <code>Task.Type</code>—Type • <code>Task.WhatId</code>—Related To ID • <code>Task.WhoId</code>—Name ID • <code>Task.test__c</code>—test • <code>Task.text_3__c</code>—text 3
<code>ItemEntityType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of action plan template item. Possible values are: • <code>Document Checklist Item</code> • <code>Event</code>—Available in API version 63.0 and later with the Sales Action Plans add-on license and the Sales Action Plans default permission set. • <code>RecordAction</code> • <code>Task</code>
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
<code>MayEdit</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether this action plan template item value can be edited or not. The default value is <code>false</code> .
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The unique identifier for this record.
ValueFormula	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A formula used to calculate the value for this action plan template item.
ValueLiteral	Type textarea Properties Create, Filter, Nillable, Update Description The value for this action plan template item.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ActionPlanTemplateItemValueChangeEvent](#)

Change events are available for the object.

[ActionPlanTemplateItemValueFeed](#)

Feed tracking is available for the object.

[ActionPlanTemplateItemValueHistory](#)

History is available for tracked fields of the object.

[ActionPlanTemplateItemValueOwnerSharingRule](#)

Sharing rules are available for the object.

[ActionPlanTemplateItemValueShare](#)

Sharing is available for the object.

ActionPlanTemplateVersion

Represents the version of an action plan template. This object is available in API version 44.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `undelete()` `update()` `upsert()`

Fields

Field Name	Details
ActionPlanTemplateId	Type reference Properties Create, Filter, Group, Sort, Group Description The ID of the action plan template this version represents.
ActivationDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Description The date and time at which this version became active.
InactivationDateTime	Type dateTime Properties Create, Filter, Nillable, Sort Description The date and time at which this version became inactive.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template version is locked or not. The default value is <code>false</code> .

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort, , Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this action plan template version can be edited. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update, Description The name of this version item.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The action plan template version's state. Possible values are: • Draft • Final - Published • Obsolete • ReadOnly

Field Name	Details
Version	Type int Properties Create, Defaulted on create, Filter, Group, Sort Description The index number of this action plan template version.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ActionPlanTemplateVersionChangeEvent](#)

Change events are available for the object.

[ActionPlanTemplateVersionFeed](#)

Feed tracking is available for the object.

[ActionPlanTemplateVersionHistory](#)

History is available for tracked fields of the object.

[ActionPlanTemplateVersionOwnerSharingRule](#)

Sharing rules are available for the object.

[ActionPlanTemplateVersionShare](#)

Sharing is available for the object.

ActiveFeatureLicenseMetric

Represents the number of active, assigned, and purchased feature licenses in the org. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ActiveUserCount	Type int Properties Filter, Group, Nillable, Sort Description Number of users assigned this feature license who have logged in within the last 30 days.

Field	Details
AssignedUserCount	Type int Properties Filter, Group, Nillable, Sort Description Number of users assigned this feature license.
FeatureType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Type of feature license. Possible values are: • AvantgoUser—AvantGo User • ChatterAnswersUser—Chatter Answers User • InteractionUser—Flow User • JigsawProspectingUser—Data.com User • KnowledgeUser—Knowledge User • LiveAgentUser—Chat User • MarketingUser—Marketing User • MobileUser—Apex Mobile User • OfflineUser—Offline User • SFContentUser—Salesforce CRM Content User • SiteforceContributorUser—Site.com Contributor User • SiteforcePublisherUser—Site.com Publisher User • SupportUser—Service Cloud User • WirelessUser—Wireless User • WorkDotComUserFeature—WDC User
MetricsDate	Type date Properties Filter, Group, Sort Description Date that feature license metrics were collected.
TotalLicenseCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The number of feature licenses in the organization.

ActivePermSetLicenseMetric

Represents the number of active, assigned, and purchased permission set licenses in the org. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ActiveUserCount	Type int Properties Filter, Group, Nillable, Sort Description Number of users assigned this permission set license who have logged in within the last 30 days.
AssignedUserCount	Type int Properties Filter, Group, Nillable, Sort Description Number of users assigned this permission set license.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description The unique name of this permission set license object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin

Field	Details
	with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the permission set license.
MetricsDate	Type date Properties Filter, Group, Sort Description Date that permission set license metrics were collected.
PermissionSetLicenseId	Type reference Properties Filter, Group, Sort Description The ID of the permission set license. This is a relationship field. Relationship Name PermissionSetLicense Relationship Type Lookup Refers To PermissionSetLicense
TotalLicenses	Type int Properties Filter, Group, Nillable, Sort Description The total number of this permission set licenses that are available to your org.

ActiveProfileMetric

Represents the profile associated with the active, assigned, and purchased user licenses. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ActiveUserCount	Type int Properties Filter, Group, Nillable, Sort Description Number of users assigned this profile who have logged in within the last 30 days.
AssignedUserCount	Type int Properties Filter, Group, Nillable, Sort Description Number of users assigned this profile.
MetricsDate	Type date Properties Filter, Group, Sort Description Date that profile metrics were collected.
ProfileId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the profile. This is a relationship field. Relationship Name Profile

Field	Details
	Relationship Type Lookup Refers To Profile
UserLicenseId	Type reference Properties Filter, Group, Sort Description The ID of the user license. This is a relationship field. Relationship Name UserLicense Relationship Type Lookup Refers To UserLicense

ActiveScratchOrg

Represents an active scratch org. This object is available in API version 41.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Description	Type textarea Properties Create, Nillable, Update Description A description of this scratch org.

Field Name	Details
Edition	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The org edition of this scratch org. Possible values are Group, Developer, Enterprise, and Professional. This field is read only.
ExpirationDate	Type date Properties Filter, Group, Nillable, Sort Description Date when the scratch org expires. This field is read only.
Features	Type textarea Properties Nillable Description The features enabled in this scratch org, such as MultiCurrency. See the <i>Salesforce DX Developer Guide</i> for the full list of valid features. This field is read only.
HasSampleData	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Specifies whether the scratch org contains sample data. If set to <code>true</code>, the sample data is similar to the data in a Salesforce free trial org.
LastLoginDate	Type date Properties Filter, Group, Nillable, Sort Description The date of the last user login to the scratch org. This field is read only.
LastReferencedDate	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record. This field is read only.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate isn't null, the user accessed this record or list view indirectly. This field is read only.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The auto-generated ID of this scratch org. This field is read only.
Namespace	Type string Properties Filter, Group, Nillable, Sort Description The namespace associated with this scratch org. This field is read only.
OrgName	Type string Properties Filter, Group, Nillable, Sort Description The name of the scratch org. This field is read only.
OwnerId	Type reference Properties Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns this scratch org. This field is read only.

Field Name	Details
ScratchOrg	Type string Properties Filter, Group, Sort Description The org ID of the scratch org. This field is read only.
ScratchOrgInfoId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The id of the associated <code>ScratchOrgInfo</code> object. This field is read only.
SignupEmail	Type email Properties Filter, Group, Nillable, Sort Description The email address of the Administration user. This field is read only.
SignupInstance	Type string Properties Filter, Group, Nillable, Sort Description The Salesforce instance on which this scratch org resides. This field is read only.
SignupTrialDays	Type int Properties Filter, Group, Nillable, Sort Description The number of days between the scratch org's creation and expiration. This field is read only.
SignupUsername	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The username of the Administration user of the scratch org. This field is read only.
Snapshot	Type string Properties Filter, Group, Nillable, Sort Description If this scratch org was created from a scratch org snapshot, then this field contains either the name or ID of the snapshot. Specifically, the name corresponds to the <code>Name</code> field of the snapshot's record in the <code>OrgSnapshot</code> standard object; the ID corresponds to the record ID. If this scratch org wasn't created from a snapshot, this field is empty. This field is read only. This field is available in API version 61.0 and later.

Usage

Salesforce automatically creates an instance of this object after a `ScratchOrgInfo` record moves to the Active state. The new `ActiveScratchOrg` gets many of its field values from the `ScratchOrgInfo` object with which it's associated.

When you delete an `ActiveScratchOrg` record, its associated scratch org is deleted and its associated `ScratchOrgInfo` record is moved to the Deleted state.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

ActiveScratchOrgFeed

Feed tracking is available for the object.

ActiveScratchOrgHistory

History is available for tracked fields of the object.

ActiveScratchOrgShare

Sharing is available for the object.

SEE ALSO:

[ScratchOrgInfo](#)

[NamespaceRegistry](#)

[Salesforce DX Developer Guide](#)

ActivityFieldHistory

Represents a change in a field value for a tracked object or field. This object is a big object. This object is available in API version 55.0 and later.

Supported Calls

`delete()` `describeSObjects()` `query()` `retrieve()`

Special Access Rules

To see this object, users must have ViewAllData permissions.

Fields

Field	Details
ActivityId	Type reference Properties Filter, Sort Description The ID of the task or event that changed. This field is a polymorphic relationship field. Relationship Name Activity Refers To Event, Task
ChangedById	Type reference Properties Filter, Sort Description The ID of the user who made the change. This field is a relationship field. Relationship Name ChangedBy Refers To User
ChangedDate	Type dateTime

Field	Details
	Properties Filter, Sort Description The date the field value changed.
DataType	Type picklist Properties Restricted picklist Description The type of the field with the changed value. Possible values are: • Address • AnyType • AutoNumber • Base64 • BitVector • Boolean • Content • Currency • DataCategoryGroupReference • DateOnly • DateTime • Division • Double • DynamicEnum • Email • EncryptedBase64 • EncryptedText • EntityId • EnumOrId • ExternalId • Fax • File • HtmlMultiLineText • HtmlStringPlusClob • InetAddress • Json

Field	Details
	• Location • MultiEnum • MultiLineText • Namespace • Percent • PersonName • Phone • Raw • RecordType • SfdcEncryptedText • SimpleNamespace • StringPlusClob • Switchable_PersonName • Text • TimeOnly • Url • YearQuarter
FieldName	Type string Properties Filter, Sort Description The name of the field changed.
IsDataAvailable	Type boolean Properties Defaulted on create Description Indicates whether valid data is available in the old and new value fields. This field is <code>false</code> if, for example, the fields are encrypted or the changed values are too large, such as for Description field types. The default value is <code>false</code>.
NewValueDateTime	Type dateTime Properties Nillable

Field	Details
	Description The new value for date type fields.
NewValueNumber	Type double Properties Nillable Description The new value for number type fields.
NewValueText	Type string Properties Nillable Description The new value for all other field types that are not a date or number type.
OldValueDateTime	Type dateTime Properties Nillable Description Old value for date type fields.
OldValueNumber	Type double Properties Nillable Description Old value for number type fields.
OldValueText	Type string Properties Nillable Description The old value for all other field types that are not a date or number type.
Operation	Type picklist Properties Restricted picklist

Field	Details
	Description The operation of the field value change. Possible values are: • delete • update

Indexed Fields

When you're querying ActivityFieldHistory with SOQL, you must specify indexed fields in the `WHERE` clause filter starting from the first field defined in the index. If you specify a partial list of indexed fields, don't leave any gaps between indexed fields after the first field. Here are the indexed fields for ActivityFieldHistory, listed from first to last in the index order.

1. ActivityId
2. ChangedDate
3. ChangedById
4. FieldName
5. ActivityFieldChange

For example, this SOQL query succeeds because the first three indexed fields are in the `WHERE` clause.

```
SELECT ActivityId, OldValueText, NewValueText, FieldName, ChangedDate
FROM ActivityFieldHistory
WHERE ActivityId = 'SomeId' AND ChangedDate >= :startDate AND ChangedDate <= :endDate
ORDER BY ChangedDate
```

If you remove the `ActivityId` field from the `WHERE` clause, the query fails.

```
SELECT ActivityId, OldValueText, NewValueText, FieldName, ChangedDate
FROM ActivityFieldHistory
WHERE ChangedDate >= :startDate AND ChangedDate <= :endDate
ORDER BY ChangedDate
```

SEE ALSO:

[Big Objects Implementation Guide: SOQL with Big Objects](#)

[Big Objects Implementation Guide: Big Objects](#)

ActivityHistory

This read-only object is displayed in a related list of closed activities—past events and closed tasks—related to an object. It includes activities for all contacts related to the object. ActivityHistory fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

Supported Calls

`describeSObjects()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the related account, which is determined as follows: • The account associated with the <code>whatId</code>, if it exists; or • The account associated with the <code>whoId</code>, if it exists; otherwise • <code>null</code> For information on IDs, see ID Field Type. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Indicates one of the following: • The due date of a task • The due date of an event if <code>IsAllDayEvent</code> is set to <code>true</code> This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code>.
ActivityDateTime	Type dateTime

Field	Details
	Properties Aggregate, Filter, Nillable, Sort Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time. The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.
ActivitySubtype	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable. Possible values are: • Task • Email • Call • Event • LinkedIn —Available in API version 56.0 and later. • List Email
ActivityType	Type picklist Properties Filter, Group, Nillable, Sort Description Represents one of the following values: <code>Call</code>, <code>Email</code>, <code>Meeting</code>, or <code>Other</code>. Label is <code>Type</code>. These are default values, and can be changed. <code>ActivityType</code> is the union of <code>TaskType</code> and <code>EventType</code>. If the same activity appears in both dynamic picklists, duplicate activities appear. <code>TaskType</code> and <code>EventType</code> can each have a <code>Call</code> type. Internally, they are distinct from each other.
AlternateDetailId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an EmailMessage record. This is a relationship field. Relationship Name AlternateDetail Relationship Type Lookup Refers To EmailMessage
CallDisposition	Type string Properties Filter, Group, Nillable, Sort Description Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.
CallDurationInSeconds	Type int Properties Filter, Group, Nillable, Sort Description Duration of the call in seconds.
CallObject	Type string Properties Filter, Group, Nillable, Sort Description Name of a call center. Limit is 255 characters.
CallType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of call being answered: Inbound, Internal, or Outbound.

Field	Details
CompletedDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time the task was saved with a Closed status. - For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL. - For update, if the task is saved with a new Closed status, the field is reset. If the task is saved with a new non-closed status, the field is reset to NULL. If the task is saved with the same closed status (that is, unchanged) there is no change to the field.  Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always null. You can use the PartnerNetworkRecordConnection object to forward records to connections.
Description	Type textarea Properties Nillable Description Contains a description of the event or task. Limit is 32 KB.

Field	Details
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
DurationInMinutes	Type int Properties Filter, Group, Nillable, Sort Description Indicates the duration of the event or task.
EndTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following: • If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. • If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time.
IsAllDayEvent	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity is an event spanning a full day, and the <code>ActivityDate</code> defines the date of the event. If the value of this field is set to <code>false</code>, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is <code>false</code>. Label is <code>All-Day Event</code>.

Field	Details
IsClosed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a task is closed (<code>true</code>) or not closed (<code>false</code>). The default value of this field is <code>false</code>. This field is set indirectly by setting the <code>Status</code> field on the task—each picklist value has a corresponding <code>IsClosed</code> value. Label is <code>Closed</code>.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the activity has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <code>Deleted</code>.
IsHighPriority	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates a high-priority task. This field is derived from the <code>Priority</code> field. The default value of this field is <code>false</code>.
IsOnlineMeeting	Type boolean Properties Defaulted on create, Filter Description Indicates whether the activity represents an online meeting (<code>true</code>) or not (<code>false</code>).  Note: This field is not available in API version 16.0 or later.
IsReminderSet	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>). The default value of this field is <code>false</code>.

Field	Details
IsTask	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity is a task. If the value is set to <code>false</code>, then the activity is an event. The default value of this field is <code>false</code>. Label is <code>Task</code>.
IsVisibleInSelfService	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. The default value of this field is <code>false</code>. Label is <code>Visible in Self-Service</code>.
Location	Type string Properties Filter, Group, Nillable, Sort Description If the activity is an event, then this field contains the location of the event. If the activity is a task, then the value is <code>null</code>.
OwnerId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the user or group who owns the activity. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Calendar, Group, User
PrimaryAccountId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description Contains the <code>AccountId</code> value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities.
PrimaryWhoId	Type reference Properties Filter, Group, Nillable, Sort Description Contains the <code>whoId</code> value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities.
Priority	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Indicates the priority of a task, such as high, normal, or low. The default value of this field is <code>Normal</code>.
ReminderDateTime	Type dateTime Properties Filter, Nillable, Sort Description Represents the time when the reminder is scheduled to fire, if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then the user may have deselected the reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.
StartDateTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates the start date and time of the event. Available in versions 29.0 and later. If the event's <code>IsAllDayEvent</code> flag is set to <code>true</code> (indicating an all-day event), then the time stamp in <code>StartDateTime</code> is always set to midnight in the Coordinated Universal Time (UTC) time zone.

Field	Details
	 Note: Don't attempt to alter the time stamp to account for any time zone differences. If the event's <code>IsAllDayEvent</code> flag is set to false, then you must translate the time portion of the time stamp in <code>StartDateTime</code> to or from a local time zone for the user or the application, as appropriate. The translation must be in the Coordinated Universal Time (UTC) time zone. If this field has a value, then <code>ActivityDate</code> and <code>ActivityDateTime</code> either must be null or must match the value of this field. If the activity is a task, <code>StartDateTime</code> is null
Status	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Indicates the current status of a task. The default value of this field is <code>Not Started</code>. Each predefined status field sets a value for <code>IsClosed</code>. To obtain picklist values, query <code>TaskStatus</code>. Possible values are: - Completed - Deferred - In Progress - Not Started - Waiting on someone else
Subject	Type combobox Properties Filter, Nillable, Sort Description Contains the subject of the task or event.
WhatId	Type reference Properties Filter, Group, Nillable, Sort Description The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>. This is a polymorphic relationship field.

Field	Details
	Relationship Name What Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
WhoId	Type reference Properties Filter, Group, Nillable, Sort Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is Name ID. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the Whold field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is Name ID.

Field	Details
	If your organization uses Shared Activities, when you query activities in API version 30.0 or later, the returned value of the <code>WhoId</code> field matches the value in the queried object, not necessarily in the activity record itself. If Shared Activities is enabled, the value of this field is not populated and the field <code>PrimaryWhoId</code> should be queried instead. This is a polymorphic relationship field. Relationship Name Who Relationship Type Lookup Refers To Contact, Lead

Usage

Query activities that are related to an object

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity history; for example:

```
SELECT
  (SELECT ActivityDate, Description
   FROM ActivityHistories)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
  (SELECT ActivityDate, Description
   FROM ActivityHistories
   ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC
   LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.

- In the inner clause of the query, you must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

SEE ALSO:

[Task](#)

ActivityMetric

Represents activities that were added to Salesforce automatically by Einstein Activity Capture and manually by users.

This object is available in API version 45.0.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Unless otherwise noted, Einstein Activity Capture and Activity Metrics must be enabled.

Fields

Field	Details
<code>BaseId</code>	Type reference Properties Create, Defaulted on create, Filter, Group, idLookup, Sort Description The ID of the record that the activities apply to.
<code>BaseType</code>	Type string Properties Filter, Group, Nillable, Sort Description The entity that corresponds to the BaseId
<code>FirstCallDateTime</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Indicates the date when the first call was made. This field is available only to Sales Engagement users. Einstein Activity Capture and Activity Metrics aren't required.
FirstEmailDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the first email was sent. This field is available only to Sales Engagement users. Einstein Activity Capture and Activity Metrics aren't required.
InactiveDays	Type int Properties Filter, Group, Nillable, Sort Description Indicates the number of days since the most recent activity was completed. This field is derived from the Last Activity Date field.
LastActivityDateLastModDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the LastActivityDateTime field was last modified.
LastActivityDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the most recent activity was completed.
LastCallDateLastModDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the LastCallDateTime field was last modified.

Field	Details
LastCallDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the most recent call was made through Sales Dialer or Inbox.
LastEmailDateLastModDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the LastEmailDateTime field was last modified.
LastEmailDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the most recent email was sent or received.
LastEmailReceivedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the most recent email was received. Available in API version 54.0 and later.
LastEmailSentDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the most recent email was sent. Available in API version 54.0 and later.
LastEventDateLastModDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description Indicates when the LastEventDateTime field was last modified.
LastEventDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the most recent event was completed.
LastTaskDateLastModDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the LastTaskDateTime field was last modified.
LastTaskDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date when the last task was completed.
NextActivityDateLastModDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the NextActivityDateTime field was last modified.
NextActivityDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date of the next scheduled task or event. Only open tasks in the future are included.

Usage

Use this object to see data about sales activities that were added to Salesforce manually and by Einstein Activity Capture. Activity Metric fields are derived from your activity data. For example, the Inactive Days field indicates the number of days since the most recent activity was completed. Create a trigger that notifies a user when there isn't any activity on an account for a certain amount of time.

ActivityUsrConnectionStatus

Represents the status of the email connections for Einstein Activity Capture users. You can also see whether users accepted the required terms of service to capture emails. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, enable Einstein Activity Capture in your org.

Fields

Field	Details
ConfigurationName	Type string Properties Filter, Group, Nillable, Sort Description The name of the Einstein Activity Capture configuration that the user is assigned to.
ConnectivityStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of the user's email connection. Possible values are: • ACTIVE • DISABLED • INITIALIZING • NEEDSATENTION • NEEDSATENTIONGLOBAL (used when an org-level connection isn't working)

Field	Details
	- NEEDSATTEENTIONHYBRID (used when both org-level and user-level connections aren't working) - PENDING - PROCESSING
ContactsSynced	Type int Properties Filter, Group, Nillable, Sort Description The number of contacts synced after midnight between Salesforce and the user's Microsoft or Google email account. This field is available in API version 59.0 and later.
EmailAddress	Type string Properties Filter, Group, Nillable, Sort Description The email address that's used to capture and sync data between Salesforce and the user's Microsoft or Google account.
EventsSynced	Type int Properties Filter, Group, Nillable, Sort Description The number of events synced after midnight between Salesforce and the user's Microsoft or Google email account. This field is available in API version 59.0 and later.
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description This field is reserved for future use.
GlobalOAuthTermsState	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Indicates the user's terms of service status. When emails are enabled for Einstein Activity Capture, each user must accept the terms of service. Possible values are: • ACCEPTED • DECLINED • PENDING This field is available only if you use an org-level OAuth 2.0 or a service account authentication method. In connection report CSV files downloaded from Einstein Activity Capture Status & Metrics, this field is labeled Global Auth User Email Consent Status.
IsTermsOfServiceAccepted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the user has accepted the Einstein Activity Capture terms of service or not. When emails are enabled for Einstein Activity Capture, each user must accept the terms of service. The default value is <code>false</code>. This field is available only if you use a user-level authentication method. In connection report CSV files downloaded from Einstein Activity Capture Status & Metrics, this field is labeled User Auth Terms of Service Accepted.
RecommendedActionDescription	Type string Properties Filter, Nillable, Sort Description Recommended action to take when the user's <code>ConnectivityStatus</code> is <code>NEEDSATENTION</code>. Available in API version 58.0 and later.
RecommendedActionTitle	Type string Properties Filter, Group, Nillable, Sort Description Reason for the user's <code>ConnectivityStatus</code> when the status is <code>NEEDSATENTION</code>. Available in API version 58.0 and later.
UserId	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description ID of the user.
UserName	Type string Properties Filter, Group, Nillable, Sort Description The username of the Einstein Activity Capture user.
UserOnboardingStatus	Type string Properties Filter, Group, Nillable, Sort Description The initial sync status when the user connects Salesforce with their external email account and syncs data for the first time. This field is available in API version 59.0 and later. Possible values are: • NOT_STARTED • IN_PROGRESS • NOT_CONFIGURED • COMPLETE • FAILED

AdditionalNumber

Represents an optional additional number for a call center. This additional number is visible in the call center's phone directory.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
CallCenterId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description System field that contains the ID of the user who created the call center associated with this additional number. If value is null, this additional number is displayed in every call center's phone directory.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the additional number, such as Conference Room B. Limit: 255 characters.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the additional number. Limit: 80 characters.
Phone	Type phone Properties Create, Filter, Nillable, Group, Sort, Update Description The phone number that corresponds to this additional number.

Usage

Create an additional number for a call center directory. Use this object if the number is not easily categorized as a User, Contact, Lead, Account, or the other object. Examples include phone queues or conference rooms.

Address

Represents a mailing, billing, or home address.

Supported Calls

```
create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(),
retrieve(), search(), undelete(), update(), upsert()
```

Special Access Rules

The following access checks must be enabled:

- Industries Insurance
- Retail Execution
- Industries Visit
- Field Service
- Order Management
 - Perms: FulfillmentOrder, OrderSummary, AdvancedOrderManagement, OrderCCS
 - Prefs: OrdersEnabled, EnhancedCommerceOrders
- Public Sector
- Employee Experience
- Contact Tracing For Employees

You can create an address only when creating a location.

Fields

Field Name	Details
Address	Type address Properties Filter, Nillable Description The full address.
AddressType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Picklist of address types. The values are: • Mailing

Field Name	Details
	- Shipping - Billing - Home
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address city.
Country	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address country.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of the address.
DrivingDirections	Type string Properties Create, Filter, Nillable, Sort, Update Description Directions to the address.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The level of accuracy of a location's geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates.

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
Latitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Longitude</code> to specify the precise geolocation of the address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.
LocationType	Type picklist Properties Create, Defaulted on create, Filter, Filter, Group, Sort, Update Description Picklist of location types. The available values are: • Warehouse (default) • Site • Van • Plant
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description Used with <code>Latitude</code> to specify the precise geolocation of the address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the address.
ParentId	Type reference Properties Create, Filter, Group, Sort Description A lookup field to the parent location. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Location
PostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address postal code.
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address state.

Field Name	Details
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The address street.
TimeZone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Picklist of available time zones.

Usage

 **Important:** “Address” in Salesforce can also refer to the Address compound field found on many standard objects. When referencing the Address object in your Apex code, always use `Schema.Address` instead of `Address` to prevent confusion with the standard Address compound field. If referencing both the address object and the Address field in the same snippet, you can differentiate between the two by using `System.Address` for the field and `Schema.Address` for the object.

Associated Object

This object has the following associated object. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

AddressHistory (API version 62.0)

History is available for tracked fields of the object.

AgentWork

Represents a work assignment that’s been routed to an agent. If the work is transferred to another agent, a new AgentWork record is created. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Fields

Field	Details
AcceptDateTime	Typedatetime Properties Filter, Nillable, Sort Description Indicates when the work item was accepted.
ActiveTime	Type int Properties Filter, Group, Nillable, Sort Description The amount of time an agent is actively working on a work item in their console. Active time is tracked only for tasks routed using the tab-based capacity model. It's tracked only when the work tab is open and in focus in the console. If the agent switches console tabs, the time spent on the other tabs isn't counted. Active time continues to count if you switch to a new browser tab or window. Active time stops when the agent closes the work item or the after conversation work time ends, whichever happens first.
AcwExtensionCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times that an agent extended the After Conversation Work (ACW) timer. This field is available in API version 55.0 and later.
AcwExtensionDuration	Type int Properties Filter, Group, Nillable, Sort Description The length of time (in seconds) that the After Conversation Work (ACW) timer was extended each time that the agent extended the timer. This field is available in API version 55.0 and later. To find the total extension duration, multiply this field by <code>AcwExtensionCount</code> or use <code>AfterConversationActualTime</code>.
AfterConversationActualTime	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of seconds an agent spent on After Conversation Work (ACW) after customer contact ended. This field is available in API version 52.0 and later.
AgentCapacityWhenDeclined	Type double Properties Filter, Nillable, Sort Description The agent's capacity when declining work, either explicitly or through push timeout.
AssignedDateTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the work item was assigned to an agent
BotId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the Enhanced Einstein Bot or AI agent that performed the work. This is a relationship field. This field is available in API version 52.0 and later. Relationship Name Bot Relationship Type Lookup Refers To BotDefinition
BotType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the type of bot. Valid values are: • Bot. Refers to an Einstein bot.

Field	Details
	ExternalCopilot. Refers to an AI agent with whom your customers can interact. The default value is Bot. This field is available in API version 63.0 and later.
CancelDateTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the work item was canceled.
CapacityModel	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the capacity model used to determine agent capacity. Valid values are <code>StatusBased</code> and <code>TabBased</code>. This field is available in API version 50.0 and later. A work item consumes agent capacity only if it was first assigned to the agent by Omni-Channel using queues or skills.
CapacityPercentage	Type percent Properties Create, Filter, Nillable, Sort Description The percentage of an agent's capacity that's consumed when this work item is in progress. Valid values are from 0 to 100. The agent can receive a new work item only if they have enough available capacity for the item. Voice calls must have a capacity percentage of <code>100</code>, so an agent on a call doesn't receive new work items until the call ends.
CapacityWeight	Type double Properties Create, Filter, Nillable, Sort Description The amount of an agent's capacity that's consumed when this work item is in progress. For example, if cases are assigned a capacity weight of <code>2</code>, an agent with a capacity of <code>6</code> can accept up to 3 cases before the agent is at capacity and can't receive new work items. Voice calls must use the entire capacity weight.

Field	Details
CloseDateTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the work item was closed.
DeclineDateTime	Type dateTime Properties Filter, Nillable, Sort Description Date and time when the agent declined this record.
DeclineReason	Type string Properties Filter, Group, Nillable, Sort Description The provided reason for why an agent declined the work request.
ExternalBotId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the third-party bot that handles the work item. This is a relationship field. This field is available in API version 64.0 and later. Relationship Name ExternalBot Relationship Type Lookup Refers To ExternalConversationBotDef
HandleTime	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The amount of time an agent had the work item open, calculated by <code>CloseDateTime</code> – <code>AcceptedDateTime</code>. Handle time stops when the agent closes the work item or the after conversation work time ends, whichever happens first.
<code>IsConference</code>	Type boolean Properties Filter, Group, Sort Description Indicates whether the agent was conferenced on the work item by another agent (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. Available in API version 44.0 and later. This field is accessible in Reports, but not via the API.
<code>IsInterruptible</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a work item consumes interruptible or primary capacity. The default value is <code>false</code>. Available in API version 57.0 and later when the Interruptible Capacity feature is enabled.
<code>IsOwnerChangeInitiated</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a work item owner change triggered the direct assignment of the work item to the agent. The default value is <code>false</code>. Status-Based Capacity Model has to be turned on to use this field. This field is available in API version 50.0 and later.
<code>IsPreferredUserRequired</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a work item stays with the preferred user even when the user isn't available. The default value is <code>false</code>. This field is available in API version 50.0 and later.
<code>IsStatusChangeInitiated</code>	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a work item status change triggered the direct assignment of the work item to the agent. The default value is false. Status-Based Capacity Model has to be turned on to use this field. This field is available in API version 50.0 and later.
IsTransfer	Type boolean Properties Filter, Group, Sort Description Indicates whether the agent received the work item through transfer from another agent (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. Available in API version 38.0 and later. This field is accessible in Reports, but not via the API.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An automatically generated ID number that identifies the record.
OriginalGroupId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the queue that the work assignment was originally routed to. This field is a relationship field. Relationship Name OriginalGroup Relationship Type Lookup Refers To Group
OriginalQueueId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the queue that the work assignment was originally routed to. Due to API changes, <code>OriginalQueueId</code> is no longer recommended. Use <code>OriginalGroupId</code> instead.
<code>OwnerId</code>	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the AgentWork. This field is a polymorphic relationship field. This field is available in API version 50.0 and later. Relationship Name Owner Relationship Type Lookup Refers To Group, User
<code>PausedCapacityPercentage</code>	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of an agent's capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later.
<code>PausedCapacityWeight</code>	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The amount of an agent's capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later.
<code>PendingServiceRoutingId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the PendingServiceRouting on page 4109 from which the AgentWork was created. This field is a relationship field. This field is available in API version 50.0 and later. Relationship Name PendingServiceRouting Relationship Type Lookup Refers To PendingServiceRouting
PreferredUserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the preferred user to handle the work. This field is a relationship field. This field is available in API v46.0 and later. Relationship Name PreferredUser Relationship Type Lookup Refers To User
PushTimeout	Type int Properties Filter, Group, Nillable, Sort Description The time limit set for an agent to respond to an item before it's pushed to another agent. The time limit is measured in seconds. This field is available in API version 36.0 and later. Effective API version 57.0, for inbound Voice calls, this field represents the time limit set for an agent to respond to a call before it's declined. The value must be between 0 and 20. The value is capped at 20, so any number greater than that is treated as 20 seconds. This applies to the following telephony models: • Service Cloud Voice with Amazon Connect • Service Cloud Voice with Partner Telephony from Amazon Connect
PushTimeoutDateTime	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date and time (in UTC) when the push timeout event occurred. This field is available in API version 36.0 and later.
RequestDateTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the work was requested.
RoutingModel	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Determines how incoming work items are routed to agents assigned to a service channel. Possible values are: • ExternalRouting • LeastActive • MostAvailable
RoutingPriority	Type int Properties Filter, Group, Nillable, Sort Description The order in which work items from the queue that are associated with the routing configuration are routed to agents.
RoutingType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of Omni-Channel routing. Possible values are: • QueueBased • SkillsBased

Field	Details
SecondaryRoutingPriority	Type int Properties Filter, Group, Nillable, Sort Description Indicates the secondary routing priority.
ServiceChannelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the service channel that's associated with the work assignment. This field is a relationship field. Relationship Name ServiceChannel Relationship Type Lookup Refers To ServiceChannel
ShouldSkipCapacityCheck	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether to skip checking an agent's available capacity (<code>true</code>) or not (<code>false</code>) when an externally routed work item is created. This field is used when agents can simultaneously handle work from both Omni-Channel queues and queues using external routing. When <code>true</code>, the receiving agent can exceed their set capacity to accept the item, but they don't receive more Omni-Channel routed work. When <code>false</code>, the receiving agent can't exceed their set capacity and must have enough open capacity to accept the item. The default value is <code>false</code>.
SpeedToAnswer	Type int Properties Filter, Group, Nillable, Sort Description The amount of time between when the work was requested and when an agent accepted it.

Field	Details
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The working status of the work item. Valid values are: • Assigned – The item is assigned to the agent but hasn't been opened. • Canceled – The item no longer needs to be routed. For example: a chat visitor cancels their Omni-Channel routed chat request before it reaches an agent. • Closed – The item is closed. • Declined – The item was assigned to the agent but the agent explicitly declined it. • DeclinedOnPushTimeout – The item was declined because push time-out is enabled and the item request timed out with the agent. • Opened – The agent opened the item. • Transferred – The item was transferred from an agent to another agent, queue, or skill. • Unavailable – The item was assigned to the agent but the agent became unavailable (went offline or lost connection).
TargetAcceptDateTime	Type dateTime Properties Filter, Nillable, Sort, Update Description The date and time by when a rep must accept a work item. Influences backlog ordering by prioritizing work items with earlier target acceptance deadlines. The field can be dynamically set using Flow for each work item during the routing process. This allows for flexible prioritization based on case urgency, customer tier, or other business rules. Available in API version 65.0 and later.
TransferRequesterId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The user ID of the rep who reassigned the work using the Reassign action. This field is populated in reassigned AgentWork records only, not the original AgentWork record. This is a relationship field. This field is available in API version 63.0 and later. Relationship Name TransferRequester Relationship Type Lookup

Field	Details
	Refers To User
UserId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user that the work item was assigned to. This field is a relationship field. Relationship Name User Relationship Type Lookup Refers To User
WorkItemId	Type reference Properties Create, Filter, Group, Sort Description The ID of the object that's routed to the agent through Omni-Channel. This field is a polymorphic relationship field. Relationship Name WorkItem Relationship Type Lookup Refers To Custom objects and these standard objects: Account, Activity, Case, Claim, ClaimCoverage, ClaimRecovery, Contact, ContactRequest, CustomEntityData, Incident, Lead, LiveChatTranscript, MessagingSession, Opportunity, Orchestration Work Items, Order, PaymentRequest, PersonTraining,Referral, SocialPost, SwarmMember, and VoiceCall. WorkOrder is available in version 58.0 and later.

Usage

AgentWork records can only be deleted if they have the status Closed, Declined, or Unavailable. They can't be deleted if their status is Assigned or Opened because they're active in Omni-Channel.

When AgentWork records are created, they have the status Assigned. After a record is created, it's automatically pushed to the assigned agent.

While the metadata for `AgentWork` indicates support for `upsert()` and `update()`, these calls aren't used with `AgentWork` because none of its fields can be updated.

Apex triggers are supported with `AgentWork`.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

AgentWorkChangeEvent (API version 63.0)

Change events are available for the object.

AgentWorkOwnerSharingRule

Sharing rules are available for the object.

AgentWorkShare

Sharing is available for the object.

SEE ALSO:

[Salesforce Help: Understand the Details of the Routing Lifecycle](#)

AgentWorkConversationalData

Stores conversation data for agent work sessions, such as agent interactions, transfer information, and operational metrics. This object is available in API version 66.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have the Agentforce Contact Center Admin (Salesforce Voice) permission set enabled in your org.

Fields

Field	Details
AgentChannelRecordingId	Type reference Properties Filter, Group, Nillable, Sort Description Identifier for the recording associated with the agent channel conversation. This field is a relationship field. Relationship Name AgentChannelRecording

Field	Details
	Refers To VoiceCallRecording
AgentConnectDateTime	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the agent connected to the conversation.
AgentCustomerMergeTime	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the service rep and customer conversations are merged after consultation.
AgentDisconnectDateTime	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the agent disconnected from the conversation.
AgentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of an agent or a rep involved in the conversation. This field is a polymorphic relationship field. Relationship Name Agent Refers To BotDefinition, ExternalConversationBotDef, User
AgentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Type of agent handling the conversation. Possible values are: • ExternalBot • Human • InternalBot
AgentWorkId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the <code>AgentWork</code> record associated with the conversational data. This field is a relationship field. Relationship Name AgentWork Refers To AgentWork
ChannelSessionRecordId	Type reference Properties Filter, Group, Nillable, Sort Description Identifier of the channel session for the conversation. This field is a relationship field. Relationship Name ChannelSessionRecord Refers To VoiceCall
LongestPauseDuration	Type int Properties Filter, Group, Nillable, Sort Description Duration of the longest pause during the conversation, measured in seconds.
Name	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the agent work conversational data record.
NextAgentWorkConvId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the next record in a sequence of conversations. This field is a relationship field. Relationship Name NextAgentWorkConv Refers To AgentWorkConversationalData
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the owner of the conversational data record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
OwnershipEndDateTime	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when ownership of the conversation ended.
OwnershipStartDateTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description Timestamp for when ownership of this conversation started.
PauseCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of times the conversation was paused.
PrevAgentWorkConvId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the previous record in a sequence of conversations. This field is a relationship field. Relationship Name PrevAgentWorkConv Refers To AgentWorkConversationalData
QualityScore	Type double Properties Filter, Nillable, Sort Description Value of the Mean Opinion Score (MOS) that measures voice call quality.
TotalPauseDuration	Type int Properties Filter, Group, Nillable, Sort Description Total duration of all pauses during the conversation, measured in seconds.
TransferType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Type of transfer for the conversation. Possible values are: • Cold • Warm

AgentWorkSkill

Represents a skill used to route a work assignment to an agent. AgentWorkSkill is used for reporting and represents the result of a routing decision. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Fields

Field	Details
AgentWorkId	Type reference Properties Filter, Group, Sort Description The AgentWork object associated with this skill.
IsAdditionalSkill	Type boolean Properties Defaulted on create, Filter, Group, Sort Description After a designated timeout period, a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent, even if the agent doesn't have all the skills. The default value is false. Available in API version 48.0 and later.

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An automatically generated ID number that identifies the record.
SkillId	Type reference Properties Filter, Group, Sort Description The skill that is required or additional.
SkillLevel	Type double Properties Filter, Sort Description The level of the required or additional skill. Skill levels can range from 1 to 10. Depending on your business needs, you might want the skill level to reflect years of experience, certification levels, or license classes.
SkillPriority	Type int Properties Aggregatable, Filter, Group, Nillable, Sort Description For additional skills, specifies the order in which skills are dropped if after the specified timeout no agent with that skill is available. Higher priority-value skills are dropped first. Lower priority-value skills, for example 0, are dropped last. Skills with the same priority value are dropped as a group. You can set skill priority using attribute setup for skills-based routing or Apex code.
WasDropped	Type boolean Properties Filter, Group, Sort Description For skills marked as additional, indicates if the skill was dropped from Omni-Channel routing because an agent with this skill was not available. The default value is false. Available in API version 48.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AgentWorkSkillChangeEvent](#) (API version 62.0)

Change events are available for the object.

AIApplication

Represents an AI application such as Einstein Prediction Builder. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the application. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish

Field	Details
	• <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish • <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label that identifies the AI application throughout the Salesforce user interface.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Specifies the namespace of the application if installed with a managed package.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Status of the AI application. Possible values are: • Disabled • Enabled • Migrated

Field	Details
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of application. Possible values are: PredictionBuilder

AIApplicationConfig

Additional prediction information related to an AI application. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the application. Possible values are:

Field	Details
	• da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label that identifies the AI application throughout the Salesforce user interface.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Specifies the namespace of the application config, if installed with a managed package.

AiGenActionItem

Represents business actions suggested by generative AI. AI-generated action items are sent to either agents for automatic execution or human users for review, depending on org preference and if there are any errors in the process. This object is available in API version 64.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Special Access Rules

Agentforce Pipeline Management must be enabled. Only the agent user can create AiGenActionItem records.

Fields

Field	Details
ActionItemOwnerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID associated with the owner of the AI-generated action item. The owner can be an agent or human user, and can change during the review and execution process. By default, the owner is an agent or queue. This field is a polymorphic relationship field. Relationship Name ActionItemOwner Refers To Group, User
ActionResult	Type textarea Properties Create, Nillable, Update Description The result generated when the agent action is executed.
AgentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The specific agent that processes the AI-generated action item.
BotDefinitionId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The bot record with a template name that matches the value in the Sales Management agent template. This field is a relationship field. Relationship Name BotDefinition Refers To BotDefinition
BotVersionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The bot version from the bot record with an ID that matches the ID of the Sales Management agent bot record. This field is a relationship field. Relationship Name BotVersion Refers To BotVersion
Description	Type string Properties Create, Filter, Nillable, Sort, Update Description The explanation of why the action item has been suggested. The description provides additional context to guide human users and agents in their decision-making.
ExpirationDate	Type dateTime Properties Create, Filter, Sort, Update Description The date that the action item expires and is deleted. AI-generated action items are no longer visible to users after 14 days and removed from records after 30 days.

Field	Details
GeneratedResponseIdRef	Type string Properties Filter, Group, Nillable, Sort Description The ID of generated result in the GenAIGeneration DMO. This field can be used by human users to provide feedback on the AI-generated action item.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of this object. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the AI-generated action item.
Subject	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The subject line that displays to users indicating what the action item is.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category that the action item falls under. This field can be used to search for specific action items, such as field updates or follow-up sales emails.

Field	Details
UnmodActionItemOutput	Type textarea Properties Nillable Description The unmodified output for the action item produced by AI, whether from a prompt template or other generation method.
WhatId	Type reference Properties Create, Filter, Group, Sort, Update Description The record that the AI-generated action item is for. This field is a polymorphic relationship field. Relationship Name What Refers To Account, Opportunity

AllInsightAction

Represents an Einstein prediction insight action. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root `AIRecordInsight` and the following child objects: `AllInsightAction`, `AllInsightFeedback`, `AllInsightReason`, and `AllInsightValue`.

`AllInsightAction` is a one-to-many child of `AIRecordInsight`. `AllInsightAction` contains information about predicted actions for this particular insight. `AllInsightAction` has one or more `AllInsightValue` children which contain predicted values for the action. For example, an `AllInsightAction` could represent a quick action, and have a child `AllInsightValue` with the recommended value used by the quick action.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Prediction insight objects are only available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

Fields

Field	Details
ActionId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID of the associated action, such as the ID of a Macro. This is a polymorphic relationship field. Relationship Name Action Relationship Type Lookup Refers To ApexClass, AuraDefinitionBundle
ActionName	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The ID of the action. For example, a value of "Case.SendEmail" indicates a send email quick action on Case.
AiRecordInsightId	Type reference Properties Filter, Group, Sort Description The unique ID of the associated AiRecordInsight. This is a relationship field. Relationship Name AiRecordInsight Relationship Type Lookup Refers To AiRecordInsight
Confidence	Type double

Field	Details
	Properties Filter, Nillable, Sort
	Description Relative confidence strength of the generated prediction insight. Higher values (near 1.0) indicate stronger confidence.
Name	Type string
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description The name of the AllInsightAction.
Type	Type picklist
	Properties Filter, Group, Restricted picklist, Sort
	Description The type of action. Possible values are: • <code>InvokableAction</code>—Invocable Action • <code>Macro</code>—Macro • <code>QuickAction</code>—Quick action. • <code>StandardAction</code>—Standard Action. An example standard action would be to update a record.

Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An `AIRecordInsight` record is created and populated with information about the prediction insight. `AllInsightAction`, `AllInsightReason`, and `AllInsightValue` records are also created and made children of the `AIRecordInsight` record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An `AIPredictionEvent` platform event is created, and any subscriber to `AIPredictionEvent` is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for `AIPredictionEvents` that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

AllInsightFeedback

Represents an Einstein prediction insight feedback. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root `AIRecordInsight` and the following child objects: `AllInsightAction`, `AllInsightFeedback`, `AllInsightReason`, and `AllInsightValue`.

`AllInsightFeedback` is a one-to-many child of `AIRecordInsight`. `AllInsightFeedback` contains information about explicit and implicit feedback collected from users for a particular insight.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Prediction insight objects are only available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

Fields

Field	Details
<code>ActualValue</code>	Type string Properties Filter, Group, Nillable, Sort Description The raw feedback value. This field is null when no recommendation is selected.
<code>AIFeedback</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The feedback user sentiment. Possible values are: • <code>Negative</code>—Negative feedback • <code>Neutral</code>—Neutral feedback • <code>Positive</code>—Positive feedback
<code>AIInsightFeedbackType</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The nature of the feedback. Possible values are:

Field	Details
	• Explicit—Explicit feedback. For example, a user applies and saves an Einstein recommendation on a case. • Implicit—Implicit feedback. For example, a user edits or updates a case field without viewing or applying field recommendations from Einstein.
AiRecordInsightId	Type reference Properties Filter, Group, Sort Description The unique ID of the associated AIRecordInsight. This is a relationship field. Relationship Name AIRecordInsight Relationship Type Lookup Refers To AIRecordInsight
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the AllInsightFeedback.
Rank	Type int Properties Filter, Group, Nillable, Sort Description The feedback score.
ValueId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID of the associated AllInsightValue. This is a polymorphic relationship field.

Field	Details
	Relationship Name Value
	Relationship Type Lookup
	Refers To AllInsightAction, AllInsightValue

Usage

Salesforce creates AllInsightFeedback records based on user responses to predictions after the prediction has been created. User feedback, such as a thumbs up/down response or accepting a recommended value, results in the creation of a feedback record in which the feedback type is explicit. An implicit feedback record is created when Einstein makes a recommendation but the field is updated in another way, for example, by a process. Once the AllInsightFeedback record has been created, it's immutable.

Custom fields can't be added to Einstein insight objects.

AllInsightReason

Represents an Einstein prediction insight reason. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AllInsightAction, AllInsightFeedback, AllInsightReason, and AllInsightValue.

AllInsightReason is a one-to-many child of AllInsightValue. AllInsightReason contains details about how Einstein predicted an insight value.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Prediction insight objects are only available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

Fields

Field	Details
AiInsightValueId	Type reference
	Properties Filter, Group, Sort
	Description The unique ID of the associated AllInsightValue.

Field	Details
	This is a relationship field. Relationship Name AllInsightValue Relationship Type Lookup Refers To AllInsightValue
Contribution	Type double Properties Filter, Nillable, Sort Description The contribution weight for this insight reason.
FeatureType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the feature, such as BOOL.
FeatureValue	Type string Properties Filter, Group, Nillable, Sort Description The value of the feature, such as TRUE or FALSE.
FieldName	Type string Properties Filter, Group, Nillable, Sort Description The name of the field the insight uses for its evaluation.
FieldValue	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The value for the field the insight uses for its evaluation.
Intensity	Type double Properties Filter, Nillable, Sort Description The intensity weight for this insight reason.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the AllInsightReason.
Operator	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The logical operator the insight uses to compare the field value with the expression value. For example, if the prediction evaluates whether the fieldValue for the field <code>bonus__c</code> is greater than \$5,000, the logical operator is <code>greater than</code> .
ReasonLabelKey (Beta)	Type string Properties Filter, Group, Nillable, Sort Description The key used to map an Einstein Key Accounts Identification (Beta) insight phrase or phrases to the correct messaging template.
RelatedInsightReasonId (Beta)	Type reference Properties Filter, Group, Nillable, Sort Description The ID used to relate multiple insights to a single model reason in the Einstein Key Accounts Identification (Beta) feature. This is a relationship field.

Field	Details
	Relationship Name RelatedInsightReason Relationship Type Lookup Refers To AllInsightReason
SortOrder (Beta)	Type int Properties Filter, Group, Nillable, Sort Description A number value used to organize the phrases in the model's insights message in the Einstein Key Accounts Identification (Beta) feature.
Variance	Type double Properties Filter, Nillable, Sort Description The variance weight for this insight reason.

Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An AIRecordInsight record is created and populated with information about the prediction insight. AllInsightAction, AllInsightReason, and AllInsightValue records are also created and made children of the AIRecordInsight record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An AIPredictionEvent platform event is created, and any subscriber to AIPredictionEvent is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for AIPredictionEvents that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

AllInsightValue

Represents an Einstein prediction insight value. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AllInsightAction, AllInsightFeedback, AllInsightReason, and AllInsightValue.

AllInsightValue is a one-to-many child of AIRecordInsight. AllInsightValue represents a predicted value of a predicted insight.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available when Einstein features such as Prediction Builder or Case Classification are enabled. To access an AllInsightValue record, you must have access to the related AIRecordInsight record. To grant a user the right to create an AllInsightValue record, you can use the AICreateInsightObjects or the CreateAllInsights permission.

Fields

Field	Details
AiInsightActionId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID of the associated AllInsightAction. This is a relationship field. Relationship Name AiInsightAction Relationship Type Lookup Refers To AllInsightAction
AiRecordInsightId	Type reference Properties Filter, Group, Sort Description The unique ID of the associated AIRecordInsight. This is a relationship field. Relationship Name AiRecordInsight Relationship Type Lookup

Field	Details
	Refers To AIRecordInsight
Confidence	Type double Properties Filter, Nillable, Sort Description Relative confidence strength of the generated prediction insight. Higher values (near 1.0) indicate stronger confidence.
Field	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The name of the target field Einstein is making predictions for, such as "AnnualRevenue".
FieldValueLowerBound	Type textarea Properties Nillable Description The lower bound value.
FieldValueUpperBound	Type textarea Properties Nillable Description The upper bound value.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the AllInsightValue.
SubjectLookupValueId	Type reference

Field**Details****Properties**

ValueType	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The data type of the prediction result insight value. Possible values are: • Boolean—Boolean • Currency—Currency • DateTime—DateTime • Enum—Enum • Lookup—Lookup • Number—Number • String—String

Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An `AIRecordInsight` record is created and populated with information about the prediction insight. `AllInsightAction`, `AllInsightReason`, and `AllInsightValue` records are also created and made children of the `AIRecordInsight` record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An `AIPredictionEvent` platform event is created, and any subscriber to `AIPredictionEvent` is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for `AIPredictionEvents` that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

AiJobRun

Represents an execution instance of an AI job. This object tracks the overall status and manages the lifecycle of the job from initiation to completion. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>EndTime</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time when the job run ends.
<code>ErrorCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If the job run fails, this field indicates the specific error that occurred.

Field	Details
ErrorMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Contains a detailed, human-readable message that explains the reason for the job run failure.
JobType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Defines the job's logic. Possible values are: • PromptTemplate
Label	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A user-defined name or label for the job run, which can be used for identification and tracking.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description A unique, system-generated identifier for the <code>AiJobRun</code> record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user group that owns the <code>AiJobRun</code> record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User

Field	Details
StartTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time when the job run's status changes to <code>InProgress</code>.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Tracks the lifecycle of the job run. Valid values are: • <code>New</code>: The job run has been created. • <code>ReadyToStart</code>: The job run is ready for the user to initiate processing. • <code>Queued</code>: The job run is queued to start. • <code>InProgress</code>: The job run is currently processing. • <code>Completed</code>: The job run completed. • <code>Failed</code>: The job run failed. • <code>Aborted</code>: The job run was aborted by the user. • <code>Archived</code>: The job run was archived by the user.
Target	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A metadata field used to specify job-specific details, such as a <code>PromptTemplateId</code>, <code>PromptTemplateName</code>, or <code>ModelId</code>. This provides further context for the job execution.

AiJobRunItem

Stores an individual item associated with a parent `AiJobRun`, including the inputs and resulting response. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AiJobRunId	Type reference Properties Create, Filter, Group, Sort, Update Description A required reference to the parent AiJobRun record that this item belongs to. This field is a relationship field. Relationship Name AiJobRun Refers To AiJobRun
ErrorCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If processing for this item fails, this field contains a numeric code indicating the error.
ErrorMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Contains a detailed, human-readable message that explains the reason for the job run item failure.
Input	Type textarea Properties Create, Update Description Contains the input data for a single item within the job run. For example, in a PromptTemplate job, this is the JSON input for the prompt template.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description A unique, system-generated identifier for the AiJobRunItem record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user or group that owns the AiJobRunItem record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
PreprocessedInput	Type textarea Properties Create, Nillable, Update Description Stores an intermediate version of the input data after the preprocessing step. For example, this field could be a hydrated JSON prompt.
Response	Type textarea Properties Create, Nillable, Update Description Contains the generated response for the job item after processing is complete.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Tracks the status of the individual job item. Valid values are: • Ready: The default value. The job run item is ready to start processing. • Completed: Processing for the job run item is complete. • Failed: Processing for the job run item failed.

AiModelLanguage

An object that stores language related information that is generated for each AI model. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

For Einstein Reply Recommendations:

Requires the Einstein Reply Recommendations org permissions, Einstein Reply Recommendations org pref, and Admin user or user with Einstein Reply Manager permissions.

Fields

Field	Details
ApplicationType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Type of application using the AI model. Possible values are: • ARTICLE_RECOMMENDATION • EAR_FOR_CONVERSATION • EAR_FOR_VOICE • FAQ • REPLY_RECOMMENDATION • USE_CASE_EXPLORER • UTTERANCE_RECOMMENDATION
ExternalAiModelId	Type reference Properties Filter, Group, Sort Description ID of the AI model used to generate predictions. This field is a relationship field.

Field	Details
	Relationship Name ExternalAiModel Relationship Type Lookup Refers To ExternalAiModel
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Languages supported by this AI model. Possible values are: • Arabic • Chinese-simplified • Chinese-traditional • Dutch • English • French • German • Italian • Japanese • Korean • Polish • Portuguese • Russian • Spanish • Thai • Turkish
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description AI model name.
ServingStatus	Type picklist

Field	Details
	Properties Filter, Group, Restricted picklist, Sort, Update Description Determines if the language is enabled or disabled for this AI model.
TranscriptCount	Type int Properties Filter, Group, Sort Description Transcript count detected for each language.

AIRecordInsight

Represents an Einstein prediction insight. This object is available in API version 47.0 and later.

An Einstein insight is created every time an Einstein feature, such as Prediction Builder, makes a prediction. An insight is represented by a root AIRecordInsight and the following child objects: AllInsightAction, AllInsightFeedback, AllInsightReason, and AllInsightValue.

AIRecordInsight contains information on the Einstein prediction, the AI prediction field where results were written, and other details such as the type of prediction.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Prediction insight objects are available in orgs that have Einstein features, such as Prediction Builder or Case Classification, enabled.

Fields

Field	Details
AiApplicationId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID of the AiApplication that generated this prediction. This is a relationship field.

Field	Details
	Relationship Name AiApplication Relationship Type Lookup Refers To AIApplication
Confidence	Type double Properties Filter, Nillable, Sort Description Relative confidence strength of the generated prediction insight, from 0.0 to 1.0. Higher values (near 1.0) indicate stronger confidence.
MLPredictionDefinitionId	Type reference Properties Filter, Group, Nillable, Sort Description This field is a relationship field. Relationship Name MLPredictionDefinition Relationship Type Lookup Refers To MLPredictionDefinition
ModelId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the model to use when generating the insight. This field is a polymorphic relationship field. Relationship Name Model Relationship Type Lookup Refers To MLModel

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the AIRecordInsight.
PredictionField	Type string Properties Filter, Group, Nillable, Sort Description The label of the field that Einstein is making predictions for, such as "Case.IsEscalated".
RunGuid	Type string Properties Filter, Group, Sort Description A unique identifier for the Einstein process that made the prediction.
RunStartTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time the Einstein prediction process was started.
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of this insight. Possible values are: • Defunct—The insight has been consumed by the Einstein feature that owns the prediction. For example, Case Classification marks an insight as defunct if a predicted recommendation was presented to a user and the user either accepted or ignored the recommendation. This behavior ensures that the same recommendation isn't presented multiple times to the user. • New—The insight hasn't been consumed by the Einstein feature.

Field	Details
TargetField	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The field to which prediction results are written. Case Classification doesn't use this field.
TargetId	Type reference Properties Filter, Group, Sort Description The unique ID of the record Einstein is making predictions for. This is a relationship field. Relationship Name Target Relationship Type Lookup Refers To Account, Accreditation, ActivationTarget, Address, AlternativePaymentMethod, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AssociatedLocation, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CampaignMember, CardPaymentMethod, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CodeSetBundle, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContactRequest, ContentVersion, Contract, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DigitalWallet, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EngagementChannelType, EnrollmentEligibilityCriteria, Event, HealthCareDiagnosis,

Field	Details
	HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Idea, Identifier, IdentityDocument, Image, Individual, IndividualApplication, Invoice, InvoiceLine, Lead, Location, LocationTrustMeasure, MemberPlan, MessagingEndUser, OperatingHours, Opportunity, OpportunityContactRole, OpportunityLineItem, Order, OrderItem, OtherComponentTask, PartyConsent, Payment, PaymentAuthAdjustment, PaymentAuthorization, PaymentGateway, PaymentGroup, PaymentLineInvoice, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Pricebook2, PricebookEntry, ProcessException, Product2, ProductConsumptionSchedule, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PurchaserPlan, PurchaserPlanAssn, QuickText, ReceivedDocument, Recommendation, Refund, RefundLinePayment, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, SharingRecordCollection, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPersona, SocialPost, Solution, Task, TimeSlot, UnitOfMeasure, UserProvisioningRequest, VideoCall, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadge, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkThanks, WorkType, WorkTypeGroup, WorkTypeGroupMember
TargetSubjectType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of the target object, such as Account or Case.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of insight. Possible values are: • Action—An insight that indicates a suggested action, such as sending an email. • Lookup—An insight that indicates a related value not directly related to the target object and field. • MultiValue—An insight with multiple values, such as a multi-class classification. • SimilarRecord—An insight that indicates similar or duplicate records. • SingleValue—A single value insight, such as a regression number or a score.
ValidUntil	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort
	Description The day and time this insight is valid until. After this day and time, the insight might no longer be valid due to new prediction results from new or changed data. If this field is null, this insight never expires.

Usage

When an Einstein feature makes a prediction and saves the results, the following events happen in a single atomic operation:

- An AIRecordInsight record is created and populated with information about the prediction insight. AllInsightAction, AllInsightReason, and AllInsightValue records are also created and made children of the AIRecordInsight record.
- If the Einstein feature uses AI prediction fields, prediction result values are written to the target AI prediction field.
- An AIPredictionEvent platform event is created, and any subscriber to AIPredictionEvent is notified.

When Einstein writes prediction results back to AI prediction fields, record save custom logic, such as Apex triggers, workflow rules, and assignment rules, aren't run. To add custom logic based on Einstein prediction results, use a platform event subscriber, such as Process Builder, to get notifications for AIPredictionEvents that contain references to Einstein insight objects.

Custom fields can't be added to Einstein insight objects.

Einstein insights contain information about target fields and predicted value. Your org may have created Einstein predictions that are associated with target fields with field-level security restrictions. To control how users access Einstein insights records, use Salesforce data access features such as user profiles and permission sets.

Considerations for Case Classification

To generate reports on the effectiveness of Einstein Case Classification predictions, use the root AIRecordInsight object and its child objects, [AllInsightFeedback](#) and [AllInsightValue](#). For example, you can determine how many cases received predictions, or how often agents accepted or rejected them.

- To determine how many cases received recommendations, the AIRecordInsight table identifies the case and contains a row for each field and each recommendation. In AIRecordInsight, the TargetId field contains the case ID. The PredictionField indicates which case field is being predicted. Each field value recommendation is contained in a separate AllInsightValue object with AIRecordInsight as the parent. For a picklist field, Einstein creates AllInsightValue objects with up to 10 field value recommendations. However, just the top three predictions appear to agents in the Einstein Field Recommendations component.
- To learn whether agents acted on any of the top three predictions, use the AllInsightFeedback object. When an agent updates fields after viewing Einstein's recommendations, or when Einstein applies a recommendation automatically, the object's AllInsightFeedbackType field contains Explicit. If the agent updates fields without viewing the predictions, such as on the case details tab, AllInsightFeedbackType is set to Implicit. When the agent applies the recommended value, the object's AiFeedback field is set to Positive; if the agent applies a different value, AiFeedback is Negative.

AIResearchPromptResult

Represents the research result generated by Agentforce or by Einstein from a standard or custom prompt template. This object is available in API version 64.0 and later.

When an Agentforce or an Einstein feature researches a record and saves the results, an AIResearchPromptResult record is created and populated with information about the researched record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Research results are only available in orgs that have Einstein features with Einstein generative AI enabled.

Fields

Field	Details
AiGenActionItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The business action suggested by generative AI. This field is a polymorphic relationship field. Relationship Name AiGenActionItem Refers To AiGenActionItem
IsToxicityDetected	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether the generated response contains toxic language (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
LatestErrorMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The error message that displays if the result can't be generated.

Field	Details
LatestGenResponseIdRef	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the most recently generated result in the GenAIGeneration object. The object is derived from the Data Cloud data model object (DMO).
LatestGenerationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that the result was most recently generated.
LatestResult	Type textarea Properties Create, Nillable, Update Description The AI-generated result.
LatestSafetyScore	Type double Properties Create, Filter, Nillable, Sort, Update Description Overall safety score for the generated research. A higher value means the generated response is more likely to be safe. Minimum value of 0.0. Maximum value of 1.0.
LatestStatus	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the generated result. Possible values are: • Generating • Success • Failed

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the generated research result. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
ReferenceRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description The record ID that the research result was generated for. This field is a polymorphic relationship field. Relationship Name ReferenceRecord Refers To Account, Lead, Opportunity
StandardPromptTemplate	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The standard prompt template used to generate the result.
Version	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The prompt template version number.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

AIResearchPromptResultFeed on page 55

Feed tracking is available for the object.

AIResearchPromptResultHistory on page 63

History is available for tracked fields of the object.

AIResearchPromptResultOwnerSharingRule on page 65

Sharing rules are available for the object.

AIResearchPromptResultShare on page 67

Sharing is available for the object.

AllowedEmailDomain

Represents an allowed email domain for users in your organization. You can define an allowlist to restrict the email domains allowed in a user’s Email field. This object is available in API version 29.0 and later.

Supported Calls

create(), delete(), describeObjects(), query(), retrieve(), update(), upsert()

Special Access Rules

You must have the “Manage Internal Users” user permission to use this object.

 **Note:** If you don’t see this object, contact your Salesforce representative to enable it.

Fields

Field	Details
Domain	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description An allowed email domain for users.

AlternativePaymentMethod

Represents a payment method that isn't cash, a debit card, or a credit card. This object defines methods that aren't defined by the [CardPaymentMethod](#) or [DigitalWallet](#) objects. Examples of alternative payment methods include CashOnDeliver, Klarna, and Direct Debit. `AlternativePaymentMethod` functions the same as any other type of payment method for processing transactions through a payment gateway. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account for the alternative payment method. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
AlternativePaymentMethodNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Salesforce ID number for the alternative payment method.
AuditEmail	Type email

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The email address of the payment owner where audit information about payments is sent.
BankAccountHolderType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Determines if the bank account is held by a business or an individual. Possible values are: • Business • Individual
BankAccountType	Type string Properties Filter, Group, Nillable, Sort Description Type of bank account such as a checking or savings account.
BillingFirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The first name of the payment method owner, based on their billing address details. This field is available in API version 58.0 and later.
BillingLastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The last name of the payment method owner, based on their billing address details. This field is available in API version 58.0 and later.
BillingName	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The first and last name of the payment method owner, based on their billing address details. This field is available in API version 58.0 and later.
Comments	Type textarea Properties Create, Nillable, Update Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Company name for this payment method. Part of the payment method's address.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the payment method holder.
ExtendedPaymentMethodType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Other alternative payment methods used for the transaction. This field is available in API version 66.0 and later.
GatewayToken	Type encryptedstring Properties Create, Nillable, Update

Field	Details
	Description Tokenized form of the alternative payment method, returned by the gateway. Stored as encrypted text.
GatewayTokenDetails	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A unique tokenized ID generated by the payment gateway when this payment method first interacts with the gateway. Used to identify the payment method during future transactions.
IpAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description IP address for the payment method owner.
IsAutoPayEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False. This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Alternative Payment Method page layout in the UI. It isn't automatically added.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user only accessed this record or list view (LastReferencedDate) but not viewed it.
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Mac Address of the payment method holder.
NickName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description User-defined nickname for this payment method.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user who owns the alternative payment method. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the payment gateway entity used to handle transactions from this payment method. This field is a relationship field.

Field	Details
	Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentMethodAddress	Type address Properties Filter, Nillable Description Full address associated with the alternative payment method. For more information about address fields, see Address Compound Fields .
PaymentMethodCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Payment method address details.
PaymentMethodCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Payment method address details.
PaymentMethodDetails	Type string Properties Create, Filter, Group, Nillable, Sort Description Optional information about the payment method type. This field is available in API version 57.0 and later.
PaymentMethodGeocode Accuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
PaymentMethodLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details about geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Longitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details about geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the address for this payment method.

Field	Details
PaymentMethodState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the address for this payment method.
PaymentMethodStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the address for this payment method.
PaymentMethodSubType	Type string Properties Create, Filter, Group, Nillable, Sort Description More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be a digital wallet. This field is available in API version 57.0 and later.
PaymentMethodType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Payment method used for the transaction, such as Visa, Mastercard, EPS, SepaDebit, and Klarna. This field is available in API version 57.0 and later.
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the payment method's owner.
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Indicates whether the payment method was created in Salesforce or externally. Required. Possible values are: • External: Select this value if you create the alternative payment method record through any method other than the Salesforce Payments Connect API. • Salesforce: Select this value if you use Salesforce Payments Connect API to create the alternative payment method record.
SavedPaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the saved payment method record. Relationship Name SavedPaymentMethod Relationship Type Lookup Refers To SavedPaymentMethod
StandardEntryClassCode	Type picklist Properties Filter, Group, Restricted picklist, Sort Description A three-letter code that indicates how a customer or a business initiated and authorized an ACH payment. Possible values are: • CCD—Corporate credit or debit entry • PPD—Pre-arranged payment and deposit entry • TEL—Telephone-initiated entry • WEB—Internet or mobile-initiated entry
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The state of the payment method. Required.

Field	Details
	Possible values are: • Active—The Payments platform can use the alternative payment method to make payments. Active alternative payment methods can't be deleted. • Canceled—The Payments platform can no longer use the payment method to make payments. A value of Canceled can't be changed back to Active or InActive • InActive—The Payment platform currently can't use the payment method to make payments. Admins can change this value to Active or Canceled when needed.

AnalyticsChangeEventLog

Analytics Change Event Logs represent route or page changes made in the CRM Analytics. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AnalyticsMode	Type string Properties Filter, Group, Nillable, Sort Description The location where the dashboard is displayed. In the Salesforce mobile app, embedded dashboards are logged as embedded first.
AnalyticsSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
AnalyticsTimestamp	Type double Properties Filter, Nillable, Sort Description The time when this log line was generated.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
IsMobile	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the dashboard is displayed in mobile (true) or not (false).
IsNew	Type boolean Properties Defaulted on create, Filter, Group, Sort Description The field indicates that this action opens a new tab (<code>true</code>) or goes back to a previously opened tab (<code>false</code>). The default value is <code>false</code> .

Field	Details
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
PageContext	Type string Properties Filter, Group, Nillable, Sort Description The name of the component hosting the main content of the page. For example: clients:cardsContainer.
PageIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the CRM Analytics dashboard page.
RecordIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The Salesforce ID of the CRM Analytics object.
ReopenCount	Type int Properties Filter, Group, Nillable, Sort Description If <code>IsNew</code> is <code>false</code>, the number of times that an existing page opens.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SavedViewIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the CRM Analytics dashboard saved view.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TabIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the particular Analytics tab in the user interface.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.

Field	Details
Type	Type string Properties Filter, Group, Nillable, Sort Description The type of Apex callout. For example: REST or AJAX.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character Identifier of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
ViewMode	Type string Properties Filter, Group, Nillable, Sort Description The view mode for the CRM Analytics asset. Possible values include <code>view</code> • <code>edit</code> • <code>present</code> • <code>JSON</code> • <code>print</code>

AnalyticsDashboard

Represents a Tableau Next dashboard. This object is available in API version 64.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
AnalyticsWorkspaceId	Type reference Properties Filter, Group, Sort Description The ID of the Tableau Next workspace the dashboard is associated with. This field is a relationship field. Relationship Name AnalyticsWorkspace Refers To AnalyticsWorkspace
Description	Type textarea Properties Nillable Description The description of the dashboard.
DeveloperName	Type string Properties Filter, Group, Sort Description The API name of the dashboard.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The supported languages for the visualization. There are over 50+ supported language and dialect values.

Field	Details
LastDraftModifiedDate	Type dateTime Properties Filter, Nillable, Sort Description The last modified date for the dashboard in draft mode.
LastPublishedDate	Type dateTime Properties Filter, Nillable, Sort Description The last published date for the dashboard.
MasterLabel	Type string Properties Filter, Group, idLookup, Sort Description The label for the dashboard.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for the dashboard.
OwnerId	Type reference Properties Filter, Group, Sort Description The user ID of the user who created the dashboard. This field is a relationship field. Relationship Name Owner Refers To User

Field	Details
Style	Type textarea Properties Nillable Description The widget style for the dashboard, represented as a JSON string. For example, <pre>{\"widgetStyle\":{\"backgroundColor\":\"#fffff\",\"borderSize\":0,\"borderColor\":\"#ccc\",\"borderWidth\":1,\"borderRadius\":0}}</pre>
TemplateAssetSourceName	Type string Properties Filter, Group, Nillable, Sort Description If the dashboard was created from a template, this is name of the asset source.
TemplateSource	Type string Properties Filter, Group, Nillable, Sort Description If the dashboard was created from a template, this is name of the template.
Version	Type double Properties Filter, Nillable, Sort Description The API version for the dashboard.

AnalyticsDownloadEventLog

AnalyticsDownloadEventLog represent downloads made from lens and dashboard in the CRM Analytics. This object is available in API version 61.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AnalyticsSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
AnalyticsTimestamp	Type dateTime Properties Filter, Nillable, Sort Description The time when this log line was generated.
AssetIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The asset ID from the user download.
AssetType	Type string Properties Filter, Group, Nillable, Sort Description The asset type from the user download.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.

Field	Details
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatasetIdentifiers	Type string Properties Filter, Group, Nillable, Sort Description A comma-separated list of used dataset IDs.
DownloadFormat	Type string Properties Filter, Group, Nillable, Sort Description The format of the data for export.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
RecordCount	Type int Properties Filter, Group, Nillable, Sort Description The number of records exported.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Globally unique identifier for a given request.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

Field	Details
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

AnalyticsInteractEventLog

Analytics Interact Event Log represents route or page changes made in the CRM Analytic UI. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AnalyticsSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
AnalyticsTimestamp	Type datetime Properties Filter, Nillable, Sort Description The time when this log line was generated.
ClickCount	Type int Properties Filter, Group, Nillable, Sort Description The number of clicks performed on a page in the CRM Analytics UI.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CpuTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
ReadTime	Type double Properties Filter, Nillable, Sort Description The amount of time a user spent on a particular tab.
RecordIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of the CRM Analytics object.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdentifier</code>. For example: 3nWgxWbDKWWDiK0FKfF5DV.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.

Field	Details
SessionCount	Type int Properties Filter, Group, Nillable, Sort Description The number of times a user returned to a particular page.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TabIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the particular Analytics tab in the UI.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
TotalTime	Type double Properties Filter, Nillable, Sort Description The total amount of time (in milliseconds) a tab is open.
Type	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The CRM Analytics object type.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: <code>/home/home.jsp</code> .
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: <code>005300000009M943</code> .
ViewMode	Type string Properties Filter, Group, Nillable, Sort Description The view mode for the CRM Analytics asset. Possible values include <code>view</code> • <code>edit</code> • <code>present</code> • <code>JSON</code> • <code>print</code>

Usage

This event type is captured when a tab is closed. It collates the interaction statistics over the life of the tab, including total open time, read time, and so on. These statistics are aggregated as you go to other tabs and then return, and logged only when the tab is closed.

AnalyticsLicensedAsset

Represents a licensed Analytics asset. In this context, Analytics is CRM Analytics, Sonic, or Mulesoft Data Path. Available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ConsumerNamespace	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The consumer namespace for the asset. The possible values are: • Industries
LicenseType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The license type for the asset. The possible values are: • Aqs (Analytics Query Service) • Cdp (Data Cloud) • DataPipelineQuery (Data Pipeline Query) • EinsteinAnalytics (CRM Analytics) • MulesoftDataPath (Mulesoft DataPath) • Sonic (Salesforce Data Pipelines) The default value is EinsteinAnalytics.

AnalyticsPerfEventLog

Analytics Perf Event Log helps track trends in your Analytics performance. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AnalyticsSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of a particular session of CRM Analytics. Use this field to determine which log lines originated from a particular session.
AnalyticsTimestamp	Type datetime Properties Filter, Nillable, Sort Description The time when this log line is generated.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
EffectivePageTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The experienced page time in milliseconds.
IsInitialLoad	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the event is for the initial load of the Dashboard (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
QueriedName	Type string Properties Filter, Group, Nillable, Sort Description The asset title or query string.
RecordIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of the CRM Analytics object.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdentifier</code> . For example: 3nWgxWbDKWWDIk0FKfF5DV.

Field	Details
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
TabIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the particular Analytics tab in the UI.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
ViewMode	Type string Properties Filter, Group, Nillable, Sort Description The view mode for the CRM Analytics asset. Possible values include <code>view</code> <code>edit</code> <code>present</code> <code>JSON</code> <code>print</code>

AnalyticsVisualization

Represents a Tableau Next viusalization. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
AnalyticsWorkspaceId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the Tableau Next workspace the visualization is associated with. This field is a relationship field. Relationship Name AnalyticsWorkspace

Field	Details
	Refers To AnalyticsWorkspace
Description	Type string Properties Create, Nillable, Update Description The description of the visualization.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The API name of the visualization.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The supported languages for the visualization. There are over 50+ supported language and dialect values.
LastDraftModifiedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The last modified date for the visualization in draft mode.
LastPublishedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The last published date for the visualization.
MasterLabel	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description The label for the visualization.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for the visualization.
OwnerId	Type reference Properties Create, Filter, Group, Sort Description The user ID of the user who created the visualization. This field is a relationship field. Relationship Name Owner Refers To User
TemplateAssetSourceName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If the visualization was created from a template, this is name of the asset source.
TemplateSource	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If the visualization was created from a template, this is name of the template.
Version	Type double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update
	Description The API version for the visualization.

AnalyticsVizField

Represents a Tableau Next viusalization field. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
AdHocCalc	Type textarea
	Properties Create, Nillable, Update
	Description An ad-hoc calculation for the visualization field.
DisplayCategory	Type picklist
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description The display category for the visualization field. Possible values are: - Continuous—continuous - Discrete—discrete
FieldKey	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The key for for the visualization field.
Function	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The function for the visualization field. Possible values are: • Avg • Count • CountD • DatePartDay • DatePartMonth • DatePartQuarter • DatePartWeek • DatePartWeekDay • DatePartYear • DateTruncDay • DateTruncMonth • DateTruncQuarter • DateTruncWeek • DateTruncYear • FiscalDatePartMonth • FiscalDatePartQuarter • FiscalDatePartWeek • FiscalDatePartYear • FiscalDateTruncMonth • FiscalDateTruncQuarter • FiscalDateTruncWeek • FiscalDateTruncYear • Max • Mdy • Median • Min

Field	Details
	• My • Stdev • Stdevp • Sum • UserAgg • Var • Varp
Label	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The label for the visualization field.
Role	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The role for the visualization field. Possible values are: • Dimension • Measure
SemanticFieldApiName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API for the field in the semantic model.
SemanticObjectApiName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name for object the field belongs to in the semantic model.
Type	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type for the visualization field. Possible values are: - Field - MeasureNames - MeasureValues
UniqueIndex	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The unique index value for the visualization field. This field is a calculated field.
VisualizationId	Type reference Properties Create, Filter, Group, Sort Description The ID of the visualization the field belongs to. This field is a relationship field. Relationship Name Visualization Relationship Type Master-detail Refers To AnalyticsVisualization (the master object)

AnalyticsVizViewDef

Represents a Tableau Next viusalization view definition. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The API name of the visualization view definition.
IsOriginal	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the view definition is original (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The supported languages for the visualization view definition. Possible values are: • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian

Field	Details
	- pt_BR—Portuguese (Brazil) - ru—Russian - sv—Swedish - th—Thai - zh_CN—Chinese (Simplified) - zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The label for the visualization view definition.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for the visualization view definition.
OwnerId	Type reference Properties Create, Filter, Group, Sort Description The user ID of the user who created the visualization view definition. This field is a relationship field. Relationship Name Owner Refers To User
Version	Type double Properties Create, Filter, Nillable, Sort, Update Description The API version for the visualization view definition.

Field	Details
VisualizationId	Type reference Properties Create, Filter, Group, Sort, Update Description This field is a relationship field. Relationship Name Visualization Refers To AnalyticsVisualization

AnalyticsWorkspace

Represents a Tableau Next workspace. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
Description	Type textarea Properties Nillable Description The description for the workspace.
DeveloperName	Type string Properties Filter, Group, Sort Description The API name for the workspace.

Field	Details
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The supported languages for the workspace. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, idLookup, Sort Description The label for the workspace.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for the workspace.

AnalyticsWorkspaceAsset

Represents a Tableau Next asset in a workspace. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
ActivePromotionRequestId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the active promotion request for the workspace asset. This field is a relationship field. Relationship Name ActivePromotionRequest Refers To DataAssetPromotionRequest
AnalyticsWorkspaceId	Type reference Properties Filter, Group, Sort Description The ID of the Tableau Next workspace the asset is associated with. This field is a relationship field. Relationship Name AnalyticsWorkspace Relationship Type Master-detail Refers To AnalyticsWorkspace (the master object)

Field	Details
AssetId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the asset. This field is a polymorphic relationship field. Relationship Name Asset Refers To AnalyticsDashboard, AnalyticsVisualization
AssetType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of asset. Possible values are: - AnalyticsDashboard—Analytics Dashboard - AnalyticsVisualization—Analytics Visualization - MktCalculatedInsightObject—Calculated Insight Object - MktDataConnection—Data Cloud Connection - MktDataLakeObject—Data Lake Object - MktDataModelObject—Data Model Object - SemanticModel—Semantic Model
AssetUsageType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of usage for the asset. Possible values are: - Created - Referenced
HistoricalPromotionStatus	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description The historical promotion status for the asset. Possible values are: • pending • promoted • unpromoted
MetadataSourceType	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description The source type of the asset metadata. Possible values are: • Promoted • Reused

Announcement

Represents a Chatter group announcement. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
ExpirationDate	Type dateTime
	Properties Create, Filter, Sort, Update
	Description Required. The date on which the announcement expires. Announcements display on the group UI until 11:59 p.m. local time on the selected date.

Field Name	Details
FeedItemId	Type reference Properties Create, Filter, Group, Sort Description Required. The ID of the FeedItem that contains the content of the announcement. Announcements are stored as text posts. This is a relationship field. Relationship Name FeedItem Relationship Type Lookup Refers To FeedItem
ParentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the parent CollaborationGroup that the announcement belongs to. An announcement can belong only to a single Chatter group. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To CollaborationGroup
SendEmails	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Set to <code>true</code> to email all group members when an announcement is posted to the group. The default is <code>false</code>. This requires the user to have the “Send announcement on email” permission. This field is available in API version 36.0 and later.

Field Name

Details

Note: This field is currently available to select customers through a pilot program. To be nominated to join this pilot program, contact Salesforce. Additional terms and conditions may apply to participate in the pilot program. Please note that pilot programs are subject to change, and as such, we cannot guarantee acceptance into this pilot program or a particular time frame in which this feature can be enabled. Any unreleased services or features referenced in this document, press releases, or public statements are not currently available and may not be delivered on time or at all. Customers who purchase our services should make their purchase decisions based upon features that are currently available.

Usage

Group owners, managers, and users with the “Modify All Data” permission can use the Announcement object to create, edit, and delete group announcements. Creating a group announcement is a three-step process.

1. Use the FeedItem object to create a text post with the announcement’s content. Use the CollaborationGroup record you want to post the announcement to as the parent of this feed item.
2. Next, use the feed item ID and an expiration date to create the announcement record.
3. Finally, update the `AnnouncementId` field in the CollaborationGroup record with the ID of the announcement you created.

To delete the group announcement, simply delete the `AnnouncementId` value in the CollaborationGroup record. To restore a group announcement, update the `AnnouncementId` field for a group with the announcement’s ID. The expiration date for the announcement should be in the future and the feed item used to create the announcement should be parented by the same group.

ApexCalloutEventLog

Apex Callout event logs contain details about callouts (external requests) during Apex code execution. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
BotIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
BotSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The bot session ID.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
IsSuccess	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the callout request was successful.
LoginKey	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
Method	Type string Properties Filter, Group, Nillable, Sort Description The HTTP method of the callout. For example: GET, POST, PUT, and so on.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestId. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RequestSize	Type double Properties Filter, Nillable, Sort Description The size of the callout request body, in bytes.
RequestTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The amount of time that the request took in milliseconds.
ResponseSize	Type double Properties Filter, Nillable, Sort Description The size of the callout response, in bytes.
RunTime	Type double Properties Filter, Nillable, Sort Description Not used for this event type. Use the <code>RequestTime</code> field instead.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
StatusCode	Type int Properties Filter, Group, Nillable, Sort Description The returned status code of the request.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.

Field	Details
Type	Type string Properties Filter, Group, Nillable, Sort Description The type of Apex callout. For example: <code>REST</code> or <code>AJAX</code> .
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: <code>/home/home.jsp</code> .
Url	Type string Properties Filter, Nillable, Sort Description The callout endpoint URL. For example, <code>www.salesforce.com</code> .
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: <code>00530000009M943</code> .

ApexClass

Represents an Apex class.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()` `update()`, `upsert()`

Fields

Field	Details
ApiVersion	Type double Properties Create, Filter, Sort, Update Description The API version for this class. Every class has an API version specified at creation.
Body	Type textarea Properties Create, Nillable, Update Description The Apex class definition. Limit: 1 million characters.
BodyCrc	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The CRC (cyclic redundancy check) of the class or trigger file.
IsValid	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether any dependent metadata has changed since the class was last compiled (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
LengthWithoutComments	Type int Properties Create, Filter, Group, Sort, Update Description Length of the class without comments.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the class. Limit: 255 characters
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The current status of the Apex class. The following string values are valid: • <code>Active</code>—The class is active. • <code>Deleted</code>—The class is marked for deletion. This is useful for managed packages, because it allows a class to be deleted when a managed package is updated. • <code>Inactive</code>—This option is unused and is only supported for ApexTrigger. For more information, see the Metadata API Developer Guide.

Usage

Although Apex classes and triggers have the Create and Update field properties, a runtime exception occurs if you try to create, update, or delete them using the API. Instead, use the Salesforce Extensions for Visual Studio Code or the Ant Migration Tool to create or update Apex classes or triggers. Apex classes and triggers can't be created, edited, or deleted in a production org. See [Deploying Apex](#).

ApexComponent

Represents a definition for a custom component that can be used in a Visualforce page alongside standard components such as `<apex:relatedList>` and `<apex:dataTable>`.

Represents a definition for a custom component that can be used in a Visualforce page alongside standard components such as `<apex:relatedList>` and `<apex:dataTable>`. For information, see the [Visualforce Developers Guide](#).

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
ApiVersion	Type double Properties Create, Filter, Sort, Update Description The API version for this custom component. Every custom component has an API version specified at creation. If the API version is less than 15.0 and <code>ApiVersion</code> is not specified, <code>ApiVersion</code> defaults to 15.0.
ControllerKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The identifier for the controller associated with this custom component: If the <code>ControllerType</code> parameter is set to <code>Standard</code> or <code>StandardSet</code>, this value is the name of the sObject that defines the controller.

Field	Details
	If the <code>ControllerType</code> parameter is set to <code>Custom</code>, this value is the name of the Apex class that defines the controller.
ControllerType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of controller associated with this Visualforce custom component. Possible values include: <code>Not Specified</code>, for custom components defined without a value for the <code>controller</code> attribute on the <code><apex:component></code> tag <code>Standard</code>, a value that can't be used with custom components or errors may occur <code>StandardSet</code>, a value that can't be used with custom components or errors may occur <code>Custom</code>, for components that have a value for the <code>controller</code> attribute on the <code><apex:component></code> tag
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the Visualforce custom component.
Markup	Type textarea Properties Create, Update Description The Visualforce markup, HTML, Javascript, and any other Web-enabled code that defines the content of the custom component.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The text used to identify the Visualforce custom component in the Setup area of Salesforce. The Label for this field is Label.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this Visualforce custom component.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Use custom components to encapsulate a common design pattern and then reuse that pattern several times in one or more Visualforce pages. All users who can view Visualforce pages can view custom components, but the “Customize Application” permission is required to create or update custom components.

ApexEmailNotification

Stores a Salesforce user ID or external email address to be notified when unhandled Apex exceptions occur. This object is available in API version 35.0 and later.

 **Note:** Each ApexEmailNotification contains either an email or a user ID, but not both.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Email	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The external email address to which the notification is sent. Mutually exclusive with the <code>UserId</code> field.
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the user to which the notification is sent. Mutually exclusive with the <code>Email</code> field. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

Usage

To notify users of your org at the email addresses they have on record, use `UserId`. To notify external users or alternate email addresses, use `Email`.

ApexExecutionEventLog

Apex Execution event logs contain details about Apex classes that are used. This object is available in API version 55.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>BotIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
<code>BotSessionIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The bot session ID.
<code>CalloutTime</code>	Type double Properties Filter, Nillable, Sort Description Time spent waiting on webservice callouts, in milliseconds.
<code>ClientIp</code>	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". If the user's session context isn't available, this field returns a blank value.
<code>CpuTime</code>	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to <code>CpuTime</code> to determine whether performance issues are occurring in the database layer or in your own code.
EntryPoint	Type string Properties Filter, Group, Nillable, Sort Description The entry point for this Apex execution. For example, <code>GeneralCloner.cloneAndInsertRecords</code> or <code>VF- /apex/CloneUser</code>.
ExecutionTime	Type double Properties Filter, Nillable, Sort Description The end-to-end Apex execution time (in milliseconds).
IsLongRunningRequest	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the request is counted against your org's concurrent long-running Apex request limit (<code>true</code>) or not (<code>false</code>). Asynchronous Apex jobs (batch, queueable, scheduled, and future), background processes, and bulk API requests are not counted against the concurrent long-running limit.
LoginKey	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.
Quiddity	Type string Properties Filter, Group, Nillable, Sort Description The type of outer execution associated with this event. For example: • A—ACS Batch Apex • C—Scheduled Apex • E—Inbound Email Service • F—Future • H—Apex REST • I—Invocable Action • K—Quick Action • L—Lightning • M—Remote Action • P—Bulk Apex jobs running in parallel • Q—Queueable • R—Synchronous uncategorized (which is where all transactions not specified elsewhere end up) • S—QueryLocator Batch Apex (Batch Apex jobs run faster when the start method returns a QueryLocator object that doesn't include related records via a subquery. See Batch Apex Best Practices in Using Batch Apex.) • T—Tests Apex • V—Visualforce • W—SOAP Webservices • X—Execute Anonymous

Field	Details
	Implementations of the Process.Plugin interface use the quiddity value <code>R</code> .
<code>RequestIdIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.
<code>RunTime</code>	Type double Properties Filter, Nillable, Sort Description The amount of time the request took, as measured by SFDC code.
<code>SessionKey</code>	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: <code>d7DEq/ANa7nNZZVD</code>.
<code>SoqlQueryCount</code>	Type double Properties Filter, Nillable, Sort Description The number of SOQL queries that were executed during the event. This value is the aggregate across all namespaces, and can exceed the per-namespace limits. For test executions, the aggregate total value across all test methods executed in the request is used. If you are using this value to track limit consumption, consider filtering out test execution quiddities (indicated by the <code>Quiddity</code> field).
<code>Timestamp</code>	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

ApexExtlCalloutEventLog

Apex Extl Callout EventLog represent external data callouts via custom adapters for Salesforce Connect. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
Action	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Action performed by the callout.
ExecutionTime	Type double Properties Filter, Nillable, Sort Description The end-to-end Apex execution time in milliseconds.
FetchTime	Type double Properties Filter, Nillable, Sort Description Duration (in milliseconds) it takes to retrieve the query results from the external system.
IsSuccess	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the query was successful (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
Message	Type string Properties Filter, Nillable, Sort Description Error or warning message associated with the failed call.
ObjectType	Type string Properties Filter, Group, Nillable, Sort Description The type of event. The value is always BulkApi2.

Field	Details
QueryFilter	Type string Properties Filter, Group, Nillable, Sort Description Field expressions to filter the rows to return. Corresponds to <code>WHERE</code> in SOQL queries.
QueryLimit	Type double Properties Filter, Nillable, Sort Description Maximum number of rows to return for a query. Corresponds to <code>LIMIT</code> in SOQL queries.
QueryOffset	Type double Properties Filter, Nillable, Sort Description Number of rows to skip when paging through a result set. Corresponds to <code>OFFSET</code> in SOQL queries.
QueryOrderBy	Type string Properties Filter, Group, Nillable, Sort Description Field or column to use for sorting query results, and whether to sort the results in ascending (default) or descending order. Corresponds to <code>ORDER BY</code> in SOQL queries.
QuerySelect	Type string Properties Filter, Group, Nillable, Sort Description Comma-delineated list of fields being queried. Corresponds to <code>SELECT</code> in SOQL queries.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RowCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of records in the result set.
RowsFetched	Type double Properties Filter, Nillable, Sort Description Number of rows fetched by the callout.
Subqueries	Type double Properties Filter, Nillable, Sort Description Number of subqueries this query has been split into.
Throughput	Type double Properties Filter, Nillable, Sort Description Number of records retrieved in one second.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.

Field	Details
TotalTime	Type double Properties Filter, Nillable, Sort Description How long it takes (in milliseconds) to prepare and execute the query and to retrieve the query results.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

ApexInlineEventLog

This object is reserved for future use. This object is available in API version 66.0 and later.

ApexLog

Represents a debug log containing information about a transaction, including information about Apex, Visualforce, and workflow and validation rules. This object is available in API version 19.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Application	Type string Properties Filter, Group, Sort Description This value depends on the client type that triggered the log. For API clients, this value is the client ID.

Field	Details
	For browser clients, this value is <code>Browser</code>.
DurationMilliseconds	Type int Properties Filter, Group, Sort Description Duration of the transaction in milliseconds.
Location	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the location of the origin of the log. Values are: <code>Monitoring</code>—Log is generated as part of debug log monitoring. These types of logs are maintained for seven days or until a user deletes them. <code>SystemLog</code>—Log is generated from the Developer Console. These types of logs are maintained for 24 hours or until the user clears them.
LogLength	Type int Properties Filter, Group, Sort Description Length of the log in bytes.
LogUserId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user whose actions triggered the debug log. This is a polymorphic relationship field. Relationship Name LogUser Relationship Type Lookup Refers To User

Field	Details
Operation	Type string Properties Filter, Group, Sort Description Name of the operation that triggered the debug log, such as <code>APEXSOAP</code>, <code>Apex Sharing Recalculation</code>, and so on.
Request	Type string Properties Filter, Group, Sort Description Request type. Values are: • <code>API</code>—Request came from the API • <code>Application</code>—Request came from the Salesforce user interface
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier of the request that triggered the debug log. Use this request identifier to correlate multiple debug logs triggered by the same request.
StartTime	Type dateTime Properties Filter, Sort Description Start time of the transaction.
Status	Type string Properties Filter, Group, Sort Description Status of the transaction. This value is either <code>Success</code>, or the text of an unhandled Apex exception.

Usage

You can read information about this object, as well as delete it, but you can't update or insert it.

SEE ALSO:

[ApexClass](#)

[ApexTrigger](#)

[Developer Guide: Apex Developer Guide](#)

ApexPage

Represents a single Visualforce page.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
<code>ApiVersion</code>	Type double Properties Create, Filter, Sort, Update Description The API version for this page. Every page has an API version specified at creation. If the API version is less than 15.0 and <code>ApiVersion</code> is not specified, <code>ApiVersion</code> defaults to 15.0.
<code>ControllerKey</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The identifier for the controller associated with this page: • If the <code>ControllerType</code> parameter is set to <code>Standard</code> or <code>StandardSet</code>, this value is the name of the sObject that defines the controller. • If the <code>ControllerType</code> parameter is set to <code>Custom</code>, this value is the name of the Apex class that defines the controller.

Field	Details
ControllerType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of controller associated with this Visualforce page. Possible values include: • Not Specified, for pages defined with neither a <code>standardController</code> nor a <code>controller</code> attribute on the <code><apex:page></code> tag • Standard, for pages defined with the <code>standardController</code> attribute on the <code><apex:page></code> tag • StandardSet, for pages defined using the <code>standardController</code> and <code>recordSetVar</code> attribute on the <code><apex:page></code> tag • Custom, for pages defined with the <code>controller</code> attribute on the <code><apex:page></code> tag
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the Visualforce page.
IsAvailableInTouch	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if Visualforce tabs associated with the Visualforce page can be used in the Salesforce mobile app (<code>true</code>) or not (<code>false</code>). (Use of this field for Salesforce Touch is deprecated.) This field is available in API version 27.0 and later. Standard object tabs that are overridden with a Visualforce page aren't supported in the Salesforce mobile app, even if you set this field for the page. The default Salesforce app page for the object is displayed instead of the Visualforce page.
IsConfirmationTokenRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether <code>GET</code> requests for the page require a CSRF confirmation token (<code>true</code>) or not (<code>false</code>). This field is available in API version 28.0 and later.

Field	Details
	If you change this field's value from <code>false</code> to <code>true</code>, links to the page require a CSRF token to be added to them, or the page will be inaccessible.
Markup	Type textarea Properties Create, Update Description The Visualforce markup, HTML, Javascript, and any other Web-enabled code that defines the content of the page.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The text used to identify the Visualforce page in the Setup area of Salesforce. The Label is Label.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this Visualforce page.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field	Details
	In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Use Visualforce pages to add custom content that extends the base Salesforce application functionality. All users in Visualforce-enabled organizations can view Visualforce pages, but the “Customize Application” permission is required to create or update them.

SEE ALSO:

[ApexComponent](#)

[StaticResource](#)

[Developer Guide: Visualforce Developer Guide](#)

ApexPageInfo

Represents metadata about a single Visualforce page. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

As of Summer '20 and later, this object can only be accessed by users who can view a particular Visualforce page, and users with the View Setup and Configuration permission.

Fields

Field	Details
<code>ApexPageId</code>	Type string Properties Filter, Group, Sort Description ID for the Visualforce page.
<code>ApiVersion</code>	Type double

Field	Details
	Properties Filter, Sort Description The API version for the page. Every page has an API version specified at creation. If the API version is less than 15.0 and <code>ApiVersion</code> is not specified, <code>ApiVersion</code> defaults to 15.0.
Description	Type textarea Properties Filter, Nillable, Sort Description Description of the Visualforce page.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description For internal use only.
IsAvailableInTouch	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if Visualforce tabs associated with the Visualforce page can be used in the Salesforce app (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
IsShowHeader	Type string Properties Filter, Group, Nillable, Sort Description The <code>showHeader</code> value for the Visualforce page. This will be “unknown” if the Visualforce page uses an expression to compute <code>showHeader</code> . The default value is <code>true</code> .
MasterLabel	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The text used to identify the Visualforce page in the Setup area of Salesforce.
Name	Type string Properties Filter, Group, Sort Description Developer name of the Visualforce page.
NamespacePrefix	Type string Properties Filter, Nillable, Sort Description The namespace prefix associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, the namespace prefix is set to the namespace prefix of the org for all objects that support it.  Note: If an object is in an installed managed package, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In non-Developer Edition orgs, <code>NamespacePrefix</code> is only set for objects that are part of an installed managed package. Objects outside of an installed managed package do not have a namespace prefix.

Usage

Use `ApexPageInfo` to query limited metadata about Visualforce pages. Some of this metadata corresponds to settings for a Visualforce page available in Visualforce Pages. To access Visualforce Pages, from *Setup*, in the *Quick Find* box, enter *Custom Code*. Then, select Visualforce Pages. Other values are only available via API. Use `ApexPageInfo` in [Visualforce pages](#) to add custom content that extends the base Salesforce application functionality.

Users can only query `ApexPageInfo` records if they can display the associated Visualforce page, or if they have the View Setup & Configuration permission. Allow users to view Visualforce pages by modifying their user profile or assigning permission sets.

ApexRestApiEventLog

Apex REST API event logs capture information about every Apex REST API request. This object is available in API version 55.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseBlocks	Type double Properties Filter, Nillable, Sort Description Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
DatabaseCpuTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DatabaseCpuTime. Compare this field to CpuTime to determine whether performance issues are occurring in the database layer or in your own code.
ExceptionMessage	Type string Properties Filter, Nillable, Sort Description The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed. For example: common.exception.ApiException: startDate cannot be more than 30 days ago.
FieldCount	Type int Properties Filter, Nillable, Sort Description The number of fields or columns, where applicable.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
MediaType	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The media type of the response.
Method	Type string Properties Filter, Group, Nillable, Sort Description The apex method name.
ObjectName	Type string Properties Filter, Group, Nillable, Sort Description API objects that are accessed. For example: Account, Opportunity, Contact, and so on.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestId. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RequestSize	Type double Properties Filter, Nillable, Sort Description The size of the callout request body, in bytes.
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example:

Field	Details
	• S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
ResponseSize	Type double Properties Filter, Nillable, Sort Description The size of the callout response, in bytes.
RowsProcessed	Type int Properties Filter, Group, Nillable, Sort Description The number of rows that were processed in the request. For example: 150.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time the request took, as measured by SFDC code.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nZZVD.

Field	Details
StatusCode	Type int Properties Filter, Group, Nillable, Sort Description The HTTP status code for the response.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • <code>csnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users.

Field	Details
	<code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. <code>PowerPartner</code>—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. <code>SelfService</code>—Users whose access is limited because they're organization customers and access the application through a self-service portal. <code>Standard</code>—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

ApexSoapApiEventLog

Apex SOAP event logs contain details about custom SOAP web service calls. This object is available in API version 55.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>ClassName</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The Apex class name. If the class is part of a managed package, this string includes the package namespace.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
ClientName	Type string Properties Filter, Group, Nillable, Sort Description The name of the client that's using Salesforce services. This field is an optional parameter that can be passed in API calls. If blank, the caller didn't specify a client in the CallOptions header.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to <code>CpuTime</code> to determine whether performance issues are occurring in the database layer or in your own code.
LimitUsagePercent	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The percentage of Apex SOAP calls that were made against the organization's limit.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
MethodName	Type string Properties Filter, Group, Nillable, Sort Description The name of the calling Apex method.
QueryString	Type string Properties Filter, Nillable, Sort Description The SOQL query, if one was performed.
RateLimitUsage	Type string Properties Filter, Group, Nillable, Sort Description The percent of the current usage of your rate limit.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestIdentifier. For example: 3nWgxWbDKWWDIk0FKfF5DV.

Field	Details
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit. HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

Field	Details
	• SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

ApexTestQueueItem

Represents a single Apex class in the Apex job queue. This object is available in API version 23.0 and later.

This object is available in API version 23.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
ApexClassId	Type reference Properties Create, Filter, Group, Sort Description The Apex class whose tests are to be executed. This is a relationship field. Relationship Name ApexClass Relationship Type Lookup Refers To ApexClass
ExtendedStatus	Type string Properties Filter, Nillable, Sort

Field Name	Description
	Description The pass rate of the test run. For example: "(4/6)". This means that four out of a total of six tests passed. If the class fails to execute, this field contains the cause of the failure.
ParentJobId	Type reference Properties Filter, Group, Nillable, Sort Description Points to the AsyncApexJob that represents the entire test run. If you insert multiple Apex test queue items in a single bulk operation, the queue items share the same parent job. This means that a test run can consist of the execution of the tests of several classes if all the test queue items are inserted in the same bulk operation.
ShouldSkipCodeCoverage	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to opt out of collecting code coverage information during Apex test runs. Available in API version 43.0 and later.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The status of the job. Valid values are: • Holding¹ • Queued • Preparing • Processing • Aborted • Completed • Failed ¹ This status applies to batch jobs in the Apex flex queue.

Field Name	Description
TestRunResultId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the associated ApexTestRunResult object.

Usage

Insert an `ApexTestQueueItem` object to place its corresponding Apex class in the Apex job queue for execution. The Apex job executes the test methods in the class.

To abort a class that is in the Apex job queue, perform an update operation on the `ApexTestQueueItem` object and set its `Status` field to *Aborted*.

If you insert multiple Apex test queue items in a single bulk operation, the queue items share the same parent job. This means that a test run can consist of the execution of the tests of several classes if all the test queue items are inserted in the same bulk operation.

ApexTestResult

Represents the result of an Apex test method execution. This object is available in API version 23.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Details
ApexClassId	Type reference Properties Create, Filter, Group, Sort, Update Description The Apex class whose test methods were executed. This is a relationship field.

Field Name	Details
	Relationship Name ApexClass
	Relationship Type Lookup
	Refers To ApexClass
ApexLogId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Points to the ApexLog for this test method execution if debug logging is enabled; otherwise, null. This is a relationship field.
	Relationship Name ApexLog
	Relationship Type Lookup
	Refers To ApexLog
ApexTestRunResultId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the ApexTestRunResult that represents the entire test run. This is a relationship field.
	Relationship Name ApexTestRunResult
	Relationship Type Lookup
	Refers To ApexTestRunResult
AsyncApexJobId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Points to the AsyncApexJob that represents the entire test run. This field points to the same object as ApexTestQueueItem.ParentJobId. This is a relationship field. Relationship Name AsyncApexJob Relationship Type Lookup Refers To AsyncApexJob
IsTestSetup	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the results are for a test setup method. The default is false.
Message	Type string Properties Create, Filter, Nillable, Sort, Update Description The exception error message if a test failure occurs; otherwise, null.
MethodName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The test method name.
Outcome	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The result of the test method execution. Can be one of these values:

Field Name	Details
	• Pass • Fail • CompileFail • Skip
QueueItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Points to the ApexTestQueueItem which is the class that this test method is part of. This is a relationship field. Relationship Name QueueItem Relationship Type Lookup Refers To ApexTestQueueItem
RunTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The time it took the test method to run, in milliseconds.
StackTrace	Type string Properties Create, Filter, Nillable, Sort, Update Description The Apex stack trace if the test failed; otherwise, null.
TestTimestamp	Type dateTime Properties Create, Filter, Sort, Update Description The start time of the test method.

Usage

You can query the fields of the `ApexTestResult` record that corresponds to a test method executed as part of an Apex class execution.

Each test method execution is represented by a single `ApexTestResult` record. For example, if an Apex test class contains six test methods, six `ApexTestResult` records are created. These records are in addition to the `ApexTestQueueItem` record that represents the Apex class.

Each `ApexTestResult` record has an associated [ApexTestResultLimits](#) on page 611 record, which captures the Apex limits used during execution of the test method.

ApexTestResultLimits

Captures the Apex test limits used for a particular test method execution. An instance of this object is associated with each `ApexTestResult` record. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Details
<code>ApexTestResultId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the associated ApexTestResult object. This is a relationship field. Relationship Name ApexTestResult Relationship Type Lookup Refers To ApexTestResult
<code>AsyncCalls</code>	Type int

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description The number of asynchronous calls made during the test run.
Callouts	Type int Properties Create, Filter, Group, Sort, Update Description The number of callouts made during the test run.
Cpu	Type int Properties Create, Filter, Group, Sort, Update Description The amount of CPU used during the test run, in milliseconds.
Dml	Type int Properties Create, Filter, Group, Sort, Update Description The number of DML statements made during the test run.
DmlRows	Type int Properties Create, Filter, Group, Sort, Update Description The number of rows accessed by DML statements during the test run.
Email	Type int Properties Create, Filter, Group, Sort, Update Description The number of email invocations made during the test run.

Field Name	Details
LimitContext	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates whether the test run was synchronous or asynchronous.
LimitExceptions	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates whether your org has any limits that differ from the default limits.
MobilePush	Type int Properties Create, Filter, Group, Sort, Update Description The number of mobile push calls made during the test run.
QueryRows	Type int Properties Create, Filter, Group, Sort, Update Description The number of rows queried during the test run.
Soql	Type int Properties Create, Filter, Group, Sort, Update Description The number of SOQL queries made during the test run.
Sosl	Type int Properties Create, Filter, Group, Sort, Update

Field Name	Details
	Description The number of SOSL queries made during the test run.

Usage

The ApexTestResultLimits object is populated for each test method execution, and it captures the limits used between the Test.startTest() and Test.stopTest() methods. If startTest() and stopTest() aren't called, limits usage isn't captured. Note the following:

- The associated test method must be run asynchronously.
- Limits for asynchronous Apex operations (batch, scheduled, future, and queueable) that are called within test methods aren't captured.
- Limits are captured only for the default namespace.

ApexTestRunResult

Contains summary information about all the test methods that were run in a particular Apex job. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Details
AsyncApexJobId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The parent Apex job ID for the result. This is a relationship field. Relationship Name AsyncApexJob Relationship Type Lookup

Field Name	Details
	Refers To AsyncApexJob
ClassesCompleted	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of classes executed during the test run.
ClassesEnqueued	Type int Properties Create, Filter, Group, Sort, Update Description The total number of classes enqueued during the test run.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time at which the test run ended.
IsAllTests	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether all Apex test classes were run.
JobName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Reserved for future use.
MethodsCompleted	Type int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of methods completed during the test run. This value is updated after each class is run.
MethodsEnqueued	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of methods enqueued for the test run. This value is initialized before the test runs.
MethodsFailed	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of methods that failed during this test run. This value is updated after each class is run.
Source	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The source of the test run, such as the Developer Console.
StartTime	Type dateTime Properties Create, Filter, Sort, Update Description The time at which the test run started.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The status of the test run. Values include: • Queued • Preparing • Processing • Aborted • Completed • Failed
TestSetupTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The time it took the setup methods to run, in milliseconds.
TestTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The time it took the test to run, in milliseconds.
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The user who ran the test run. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

ApexTestSuite

Represents a suite of Apex classes to include in a test run. A TestSuiteMembership object associates each class with the suite. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

In API version 49.0 and later, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
TestSuiteName	Type string Properties Create, Filter, Group, Sort, Unique, Update Description The name of the Apex test suite. This label appears in the user interface. This value is case-sensitive and must be unique.

Usage

Insert a TestSuiteMembership object using an API call to associate an Apex class with an ApexTestSuite object. (ApexTestSuite and TestSuiteMembership aren't editable through Apex DML.) To remove the class from the test suite, delete the TestSuiteMembership object. If you delete an Apex test class or test suite, all TestSuiteMembership objects that contain that class or suite are deleted.

The following SOQL query returns the membership object that relates this Apex class to this test suite.

```
SELECT Id FROM TestSuiteMembership WHERE ApexClassId = '01pD0000000Fhy9IAC'
      AND ApexTestSuiteId = '05FD00000004CDBMA2'
```

SEE ALSO:

[TestSuiteMembership](#)

ApexTrigger

Represents an Apex trigger.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
ApiVersion	Type double Properties Create, Filter, Sort, Update Description The API version for this trigger. Every trigger has an API version specified at creation.
Body	Type textarea Properties Create, Nillable, Update Description The Apex trigger definition. Limit: 1 million characters.
BodyCrc	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The CRC (cyclic redundancy check) of the class or trigger file.
IsValid	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether any dependent metadata has changed since the trigger was last compiled (<code>true</code>) or not (<code>false</code>).
LengthWithoutComments	Type int Properties Create, Filter, Group, Sort, Update

Field	Details
	Description Length of the trigger without comments
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the trigger. Limit: 255 characters
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The current status of the Apex trigger. The following string values are valid: • Active—The trigger is active. • Inactive—The trigger is inactive, but not deleted. • Deleted—The trigger is marked for deletion. This is useful for managed packages, because it allows a class to be deleted when a managed package is updated.

Field	Details
	 Note: <code>Inactive</code> is not valid for ApexClass. For more information, see the Metadata API Developer Guide .
TableEnumOrId	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the object associated with the trigger, such as Account or Contact.
UsageAfterDelete	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is an <code>after delete</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageAfterInsert	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is an <code>after insert</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageAfterUndelete	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is an <code>after undelete</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageAfterUpdate	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is an <code>after update</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageBeforeDelete	Type boolean Properties Create, Filter, Update

Field	Details
	Description Specifies whether the trigger is a <code>before delete</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageBeforeInsert	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is a <code>before insert</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageBeforeUpdate	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is a <code>before update</code> trigger (<code>true</code>) or not (<code>false</code>).
UsageIsBulk	Type boolean Properties Create, Filter, Update Description Specifies whether the trigger is defined as a bulk trigger (<code>true</code>) or not (<code>false</code>).  Note: This field is not used for Apex triggers saved using Salesforce API version 10.0 or higher: all triggers starting with that version are automatically considered bulk, and this field will always return <code>true</code> .

Usage

Although Apex classes and triggers have the Create and Update field properties, a runtime exception occurs if you try to create, update, or delete them using the API. Instead, use the Salesforce Extensions for Visual Studio Code or the Ant Migration Tool to create or update Apex classes or triggers. Apex classes and triggers can't be created, edited, or deleted in a production org. See [Deploying Apex](#).

SEE ALSO:

[ApexClass](#)

[Developer Guide: Apex Developer Guide](#)

ApexTriggerEventLog

Apex Trigger event logs contain details about triggers that fire in an organization. This object is available in API version 55.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>BotIdentifier</code>	Type String Description The ID of the bot.
<code>BotSessionIdentifier</code>	Type String Description The bot session ID.
<code>ClientIp</code>	Type String Properties Filter, Group, Nillable, Sort Description The IP address of the client that is using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
<code>CpuTime</code>	Type Double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
<code>DatabaseTotalTime</code>	Type Double Properties Filter, Nillable, Sort

Field	Details
	Description Time (in milliseconds) spent waiting for database processing in aggregate for all operations in the request. Compare this field to <code>CpuTime</code> to determine whether performance issues are occurring in the database layer or in your own code.
ExecutionTime	Type Double Properties Filter, Nillable, Sort Description The end-to-end Apex execution time (in milliseconds).
LoginKey	Type String Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.
ObjectName	Type String Properties Filter, Group, Nillable, Sort Description The name of the object affected by the trigger.
PlannerIdentifier	Type String Description The ID of the agent planner.
RequestIdentifier	Type String Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.

Field	Details
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RunTime	Type Double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds. Requests with a value over five seconds are considered long-running requests for the purposes of the Concurrent Long-Running Apex Limit. HTTP callout processing time isn't included when calculating the 5-second limit. We pause the timer for the callout and resume it when the callout completes.
SessionKey	Type String Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type DateTime Properties Filter, Nillable, Sort

Field	Details
	Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
TriggerIdentifier	Type String Properties Filter, Group, Nillable, Sort Description The 15-character ID of the trigger that was fired.
TriggerName	Type String Properties Filter, Group, Nillable, Sort Description For triggers coming from managed packages, <code>TriggerName</code> includes a namespace prefix separated with a <code>.</code> character. If no namespace prefix is present, the trigger is from an unmanaged trigger. For example: <code>examplePackage.managedExampleTrigger</code>—Managed trigger from the <code>examplePackage</code> namespace <code>unmanagedExampleTrigger</code>—Unmanaged trigger
TriggerType	Type String Properties Filter, Group, Nillable, Sort Description The type of this trigger. Possible values are: - AfterInsert - AfterUpdate - BeforeInsert - BeforeUpdate
Uri	Type String Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: <code>/home/home.jsp</code> .

Field	Details
UserIdentifier	Type String Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who is using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type String Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • <code>Guest</code>—Users whose access is limited so that your customers can view and interact with your site without logging in. • <code>PowerCustomerSuccess</code>—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • <code>PowerPartner</code>—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • <code>SelfService</code>—Users whose access is limited because they're organization customers and access the application through a self-service portal. • <code>Standard</code>—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

ApexTypeImplementor

Represents Apex classes that directly or indirectly implement an interface. Using a SOQL query, this object gets information about public or global classes and only global classes for installed managed packages. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ApexClassId	Type reference Properties Filter, Group, Sort Description The foreign key to the outer class that contains the Apex class implementing the interface. This is a relationship field. Relationship Name ApexClass Relationship Type Lookup Refers To ApexClass
ClassName	Type string Properties Filter, Group, Sort Description Apex class name that implements the interface. For an inner class that implements the interface, the outer class and inner name separated by a period.
ClassNamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix of the class that implements the interface.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description A unique identifier for the interface and implementor.

Field	Details
InterfaceApexClassId	Type reference Properties Filter, Group, Nillable, Sort Description The foreign key to the outer class that contains the Apex class defining the interface. Null for built-in system interfaces, such as <code>System.Batchable</code>. This is a relationship field. Relationship Name InterfaceApexClass Relationship Type Lookup Refers To ApexClass
InterfaceName	Type string Properties Filter, Group, Sort Description The interface name for which Apex class implementation is retrieved. For an inner interface, the outer Apex class name and the inner interface name separated by a period.
InterfaceNamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix of the class that defines the interface.
IsConcrete	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the implementing class is abstract (<code>false</code>) or not (<code>true</code>).

Usage

ApexTypeImplementor considers access modifiers based on the context, such as the namespace from which the ApexTypeImplementor entity is queried. These are additional usage considerations.

- In installed managed packages, you get information about all global implementors in the org, and public implementors from the managed package itself.
- ApexTypeImplementor appropriately filters classes that are annotated with `@Deprecated`. For example it respects the package version dependency settings of a class when queried from that class.
- ApexTypeImplementor returns implementors where `ApexClass.IsValid` is set to `False` (invalid classes) in addition to when it's set to `True`. Classes that don't compile or execute can be returned. An implementor class is only guaranteed to be usable if `ApexClass.IsValid` is set to `True` for the implementor.
- If a package is installed but not yet compiled because Compile on Deploy is disabled, ApexTypeImplementor returns no values until compilation is complete. In environments like sandboxes where Compile on Deploy can be disabled, you must perform a manual compilation to get complete results.
- To avoid cross-namespace collisions, always specify an `InterfaceNamespacePrefix` as a `WHERE` clause in SOQL queries for ApexTypeImplementor. Otherwise, the query includes all namespaces instead of only the current namespace. If a package contains an interface with the same name as an interface in a different namespace, a query without a specified `InterfaceNamespacePrefix` can return false implementors that can't be assigned to the interface.

For example, say a managed package contains a global interface named `RoundingStrategy` and a global class named `HalfDown` that implements `RoundingStrategy`. If a subscriber org has an interface that's also named `RoundingStrategy`, then the query `[SELECT ApexClass.Id FROM ApexTypeImplementor WHERE InterfaceName = 'RoundingStrategy']`, if performed in the subscriber org, can return the ID of `HalfDown` instead of an implementor in the subscriber org. To avoid this issue, perform a query that specifies a `InterfaceNamespacePrefix`: `[SELECT ApexClass.Id FROM ApexTypeImplementor WHERE InterfaceName = 'RoundingStrategy' AND InterfaceNamespacePrefix = 'PackageName']`.

Example

This example demonstrates how an interface allows flexibility in a configuration, record, or user-driven selection of the rounding strategy to apply. The multiple implementations of the interface can be discovered using ApexTypeImplementor and the specific implementation chosen based on user requirements.

```
// Common interface that all rounding strategies will implement
public interface RoundingStrategy {
    Decimal round(Decimal toRound);
}

public abstract class RoundingStrategies {
    public class Ceiling implements RoundingStrategy {
        public Decimal round(Decimal toRound) {
            return toRound.round(System.RoundingMode.CEILING);
        }
    }

    public class HalfDown implements RoundingStrategy {
        public Decimal round(Decimal toRound) {
            return toRound.round(System.RoundingMode.HALF_DOWN);
        }
    }

    public class TwoDecimalPlaces implements RoundingStrategy {
        public Decimal round(Decimal toRound) {
            return toRound.setScale(2, System.RoundingMode.HALF_UP);
        }
    }
}
```

```
    }
  }
}

List<ApexTypeImplementor> interfaceImpls = [
    SELECT ClassName, ClassNamespacePrefix
    FROM ApexTypeImplementor
    WHERE InterfaceName = 'RoundingStrategy' and IsConcrete = true and
InterfaceNamespacePrefix = ''
    ORDER BY ClassName ASC NULLS LAST];

// For example, an admin can be presented with a list of Apex classes
// that can be applied. Simulated selection of 2 decimal places
ApexTypeImplementor selectedRoundingStrategy = interfaceImpls[2];
System.assertEquals('RoundingStrategies.TwoDecimalPlaces',
    selectedRoundingStrategy.ClassName);

// Create an instance of the class that implements the interface
RoundingStrategy rs = (RoundingStrategy)
Type.forName(selectedRoundingStrategy.ClassNamespacePrefix,
    selectedRoundingStrategy.ClassName).newInstance();

Decimal rounded = rs.round(7.1459);
System.assertEquals(7.15, rounded);
```

ApexUnexpectedExcpEventLog

Apex Unexpected Excp Event Log captures information about unexpected exceptions in Apex code execution. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

describeSObjects(), query()

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ExceptionCategory	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The category of the unexpected Apex exception. For example, the <code>LimitException</code> exception type is split into subcategories that indicate if you exceeded a limit, such as the total heap size or CPU time. Possible values: • Subcategories of <code>LimitException</code> that indicate the Apex limit you've exceeded. Examples: • <code>LimitException: CpuTime</code>: Maximum CPU time on the Salesforce servers. • <code>LimitException: HeapSize</code>: Total heap size • <code>LimitException: Queries</code>: Total number of SOQL queries issued. • <code>LimitException: QueryRows</code>: Total number of records retrieved by SOQL queries. • <code>LimitException: DmlStatements</code>: Total number of DML statements issued. • <code>LimitException: Callouts</code>: Total number of callouts (HTTP requests or web services calls) in a transaction.
<code>ExceptionMessage</code>	Type string Properties Filter, Nillable, Sort Description The exception message for a SOAP API request. An exception message gives details about errors in handling an API request, such as why an API request failed. For example: <code>common.exception.ApiException: startDate cannot be more than 30 days ago</code>.
<code>ExceptionType</code>	Type string Properties Filter, Group, Nillable, Sort Description The class type of the unexpected exception. For example: <code>System.MathException</code>
<code>RequestIdIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdIdentifier</code>. For example: <code>3nWgxWbDKWWDik0FKfF5DV</code>.
<code>StackTrace</code>	Type string Properties Filter, Nillable, Sort

Field	Details
	Description The stack trace for the exception. For example: Class.OpportunityUtility.insert: line 22, column 1 AnonymousBlock: line 1, column 1
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.

ApiTotalUsageEventLog

API Total Usage Event Log contains details about Platform SOAP API, Platform REST API, and Bulk API requests. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ApiFamily	Type string Properties Filter, Group, Nillable, Sort Description The API family. For example, REST, SOAP, or Bulk.
ApiResource	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The API method or resource. For example, <code>describeSObjects</code> for SOAP.
BotIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
BotSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The bot session ID.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP, such as a login from AppExchange, is shown as "Salesforce.com IP". For example: 96.43.144.26.
ClientName	Type string Properties Filter, Group, Nillable, Sort Description The name of the client making the API request.
ConnectedAppIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the connected app making the API request.

Field	Details
HttpMethod	Type string Properties Filter, Group, Nillable, Sort Description The HTTP method. For example, <code>GET</code>.
IsApiLimitCounted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the request counted against the API limit (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
ObjectName	Type string Properties Filter, Group, Nillable, Sort Description The name of the object accessed by the API request.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdentifier</code>. For example: <code>3nWgxWbDKWWDiK0FKfF5DV</code>.
StatusCode	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The HTTP response status code for the request.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

AppAnalyticsQueryRequest

Represents a request for AppExchange App Analytics data.

AppExchange App Analytics is available for packages that passed security review and are registered to a License Management App (LMA). Usage data is provided as package usage logs, as month-based package usage summaries, or as point-in-time subscriber snapshots. Usage logs, monthly usage summaries, and subscriber snapshots are downloadable comma-separated value (.csv) files. For information on how to optimize your use of App Analytics, see [AppExchange App Analytics Best Practices](#).

 **Note:** Usage data from [Government Cloud](#) and [Government Cloud Plus](#) orgs isn't available in App Analytics.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

See [Get Started with AppExchange App Analytics](#) in the *Second-Generation Managed Packaging Developer Guide*.

Fields

Field Name	Details
AvailableSince	Type dateTime Properties Create, Filter, Nillable, Sort Description An optional value used to limit the requested results file to data newly arrived in the data lake after the specified date and time. This field is always transferred in the Coordinated Universal Time (UTC) time zone. Use the <code>AvailableSince</code> field as part of your catch-up query strategy. <code>AvailableSince</code> must be later than <code>StartTime</code> and <code>EndTime</code>, if specified. <code>AvailableSince</code> must be earlier than now. A query must include <code>StartTime</code>, <code>AvailableSince</code>, or both. For example, to schedule a catch-up query on <code>2021-04-03T18:00:00Z</code> for this date range: • <code>StartTime=2021-03-29T00:00:00Z</code> • <code>EndTime=2021-03-30T00:00:00Z</code> Valid <code>AvailableSince</code> values range from <code>2021-03-30T00:00:00Z</code> to <code>2021-04-03T18:00:00Z</code>. For more information on <code>AvailableSince</code> and catch-up queries, read AppExchange App Analytics Best Practices.
DataType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of usage data being requested. Valid values include: • <code>PackageUsageLog</code> • <code>PackageUsageSummary</code> • <code>SubscriberSnapshot</code>  Note: In Summer '20, we changed the enum names from <code>CustomObjectUsageSummary</code> and <code>CustomObjectUsageLog</code> to <code>PackageUsageSummary</code> and <code>PackageUsageLog</code>. If you wrote integrations using <code>CustomObjectUsageSummary</code> or <code>CustomObjectUsageLog</code>, they continue to work only with v47 and earlier. After you upgrade to v48, you must update the <code>DataType</code> to <code>PackageUsageSummary</code> and <code>PackageUsageLog</code>.

Field Name	Details
DownloadExpirationTime	Type dateTime Properties Filter, Nillable, Sort Description The time when the download URL is no longer valid. The expiration time is 60 minutes after the query is completed.
DownloadSize	Type long Properties Filter, Group, Nillable, Sort Description The size of the AppExchange App Analytics results file available for download, in bytes.
DownloadUrl	Type textarea Properties Nillable Description URL that the user can download data from. Populated after the request is completed. This URL expires and is removed after the expiration time is reached.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort Description Enter end time in format yyyy-MM-ddTHH:mm:ss. Example: 2019-04-15T12:00:00 For Package Usage Summaries, we recommend that StartTime corresponds to midnight UTC at beginning of the desired month and EndTime corresponds to midnight UTC at the beginning of the following month. For example, to retrieve the Package Usage Summary for December 2024 specify: • StartTime=2024-12-01T00:00:00Z • EndTime=2025-01-01T00:00:00Z

Field Name	Details
ErrorMessage	Type string Properties Filter, Group, Nillable, Sort Description Stores error message text that results from this query.
FileCompression	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The file compression format of your requested results file. <code>FileCompression</code> and <code>FileType</code> must align. If <code>FileType</code> is <code>csv</code>, <code>FileCompression</code> defaults to <code>none</code> and can be <code>none</code> or <code>gzip</code>. If <code>FileType</code> is <code>parquet</code>, <code>FileCompression</code> is <code>snappy</code> by default and can be <code>snappy</code>, <code>gzip</code>, or <code>none</code>. Valid values include: • <code>gzip</code> • <code>snappy</code> • <code>none</code>
FileType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The data format of your requested results file. The default is <code>csv</code>. <code>FileCompression</code> and <code>FileType</code> must align. If <code>FileType</code> is <code>csv</code>, <code>FileCompression</code> defaults to <code>none</code> and can be <code>none</code> or <code>gzip</code>. If <code>FileType</code> is <code>parquet</code>, <code>FileCompression</code> is <code>snappy</code> by default and can be <code>snappy</code>, <code>gzip</code>, or <code>none</code>. Valid values include: • <code>csv</code> • <code>parquet</code>
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated name of the App Analytics query request.
OrganizationIds	Type string Properties Create, Filter, Group, Nillable, Sort Description Optional. Enter up to 16 comma-separated org IDs without spaces between IDs. Or enter up to 15 comma-separated org IDs with spaces between the IDs. To request data for all the orgs the package is installed in, leave the field blank.
PackageIds	Type string Properties Create, Filter, Group, Nillable, Sort Description Optional. Enter up to 16 comma-separated package IDs without spaces between IDs. Or enter up to 15 comma-separated package IDs with spaces between the IDs. Use the subscriber package ID that begins with 033. To retrieve a list of your second-generation managed package IDs, run <code>sf package list --verbose</code> in Salesforce CLI. To request data on all packages registered to this License Management App, leave the field blank.

Field Name	Details
QuerySubmittedTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the App Analytics query request was received for processing, in Coordinated Universal Time (UTC). <code>QuerySubmittedTime</code> is read only.
RequestState	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Status of the query request. Valid values are: • New • Pending • Complete • Expired • Failed • NoData
StartTime	Type dateTime Properties Create, Filter, Nillable, Sort Description Enter start time in format yyyy-MM-ddTHH:mm:ss. All App Analytics query requests must include <code>StartTime</code> or <code>AvailableSince</code> or both. Example: 2019-04-14T12:00:00 For Package Usage Summaries, we recommend that <code>StartTime</code> corresponds to midnight UTC at beginning of the desired month and <code>EndTime</code> corresponds to midnight UTC at the beginning of the following month. For example, to retrieve the Package Usage Summary for December 2024 specify: • <code>StartTime=2024-12-01T00:00:00Z</code> • <code>EndTime=2025-01-01T00:00:00Z</code>

Usage

To request usage data, log in to the License Management Org (LMO) that your package is registered to, and initiate the API request from the LMO. In a 24-hour period, you can download a maximum 20 GB of AppExchange App Analytics data.

See [Download Package Usage Logs, Package Usage Summaries, and Subscriber Snapshots](#) in the *Second Generation Managed Packaging Developer Guide*.

If requests to view package usage log or subscriber snapshot data are inactive for 90 days, we reserve the right to stop collecting this data. To resume data collection, log a support case in the [Salesforce Partner Community](#). For product, specify **Partner Programs & Benefits**. For topic, specify **ISV Technology Request**.

AppDefinition

Represents the metadata of an app and its navigation items. Metadata is returned only for apps that the current user can access. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
Description	Type string Properties Filter, Group, Nillable, Sort Description The optional description of the application.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description The developer name of the application.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description A unique virtual Salesforce ID for the application.

Field Name	Details
HeaderColor	Type string Properties Filter, Group, Nillable, Sort Description The header color in the application. Specify the color with a hexadecimal code, such as #0000FF for blue.
Id	Type ID Properties Defaulted on create, Filter, Group, idLookup, Sort Description A default Salesforce ID.
IsLargeFormFactorSupported	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the Large form factor is set in the CustomApplication metadata.
IsMediumFormFactorSupported	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the Medium form factor is set in the CustomApplication metadata.
IsNavAutoTempTabsDisabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the navigation automatically creates temporary tabs settings.
IsNavPersonalizationDisabled	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether navigation personalization is disabled.
IsNavTabPersistenceDisabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether workspace tabs are cleared for each new console session.
IsOmniPinnedViewEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the Omni-Channel component is enabled in sidebar view. The default is false.
IsOverrideOrgTheme	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether to override the global theme for the org. When true, the color scheme and logo that the user has set are used. When false, the global theme for the org is used, even if the user has set a color scheme and logo.
IsSmallFormFactorSupported	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the Small form factor is set in the CustomApplication metadata.
Label	Type string Properties Filter, Nillable, Sort Description The localized label value corresponding to the MasterLabel field.

Field Name	Details
LogoUrl	Type url Properties Filter, Group, Nillable, Sort Description The logo URL of the application as selected by the admin.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description The non-translated label entered when the application was created.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace of the application.
NavType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of navigation for the application. The value <code>Standard</code> is for Lightning Experience. The value <code>Console</code> is for Salesforce console. A null value is for Salesforce Classic.
UiType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the type of custom application. The value <code>Aloha</code> is for Salesforce Classic, and <code>Lightning</code> is for Lightning Experience.
UtilityBar	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The ID of the utility bar associated with this application.

AppExtension

Represents a connection between the Field Service mobile app and another app, typically for passing record data to the Salesforce mobile app or other apps. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
<code>AppExtensionLabel</code>	Type string Properties Create, Filter, Group, Sort, Update Description The label in the UI for the app extension.
<code>AppExtensionName</code>	Type string Properties Create, Filter, Group, Sort, Update Description The API name of the app extension.
<code>FieldServiceMobileSettingsId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of a set of field service mobile settings.

Field Name	Details
InstallationUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The URL that takes the user to the app install location, such as the App Store or Google Play.
LaunchValue	Type string Properties Create, Filter, Group, Sort, Update Description A value directing the Field Service app to the appropriate app extension. The Launch Value can be a static URL or a dynamic value that you can represent with certain tokens. These tokens pass field information from the record that the user is currently viewing. The basic format for these tokens is based on the field names; for example: {!\$Name}.
ScopedToObjectTypes	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the types of records from which the app extension can be activated. Scoping an app extension to an object lets users activate the app extension from records of the specified type. For example, to scope to both work orders and service appointments you would use the value <i>WorkOrder, ServiceAppointment</i>.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A picklist of types of app extensions: iOS, Android, Flow, and Lightning Apps

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AppExtensionChangeEvent

Change events are available for the object. Available in API version 55.0 and later.

ApplicationFormTemplate

Represents the fields to capture application metadata as a template which is used in application tracking and processing. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

Fields

Field	Details
ApprovalFlowName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the flow that must be launched to approve the applications associated with the application form template.
ApplicationType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of application or template. Possible values are: • Contractor • EVCharger—EV Charger • EnergyEfficiency—Energy Efficiency • NewConnection—New Connection The default value is <code>NewConnection</code>.

Field	Details
ApprovalLimitAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Amount up to which the approver has the authority to approve applications.
ApprovalFlowName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the flow that must be launched to approve the applications associated with the application form template.
ApproverId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The user who must approve the application payout. This field is a relationship field. Relationship Name Approver Relationship Type Lookup Refers To User
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the application form template.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the application form template.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ApplicationFormTemplateChangeEvent](#)

Change events are available for the object.

[ApplicationFormTemplateFeed](#)

Feed tracking is available for the object.

[ApplicationFormTemplateHistory](#)

History is available for tracked fields of the object.

[ApplicationFormTemplateOwnerSharingRule](#)

Sharing rules are available for the object.

[ApplicationFormTemplateShare](#)

Sharing is available for the object.

AppMenuItem

Represents the organization's default settings for items in the app menu or App Launcher.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
ApplicationId	Type reference Properties Filter, Group, Nillable, Sort Description The 15-character ID for the menu item.
CanvasAccessMethod	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The access method for the canvas app. Values can be: • <code>Get</code>—OAuth Webflow • <code>Post</code>—Signed Request
CanvasEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if the app menu item is a canvas app (<code>true</code>) or not (<code>false</code>). The default setting is <code>false</code>.
CanvasOptions	Type string Properties Filter, Group, Nillable, Sort Description Represents the options enabled for a canvas connected app. The options are: • <code>PersonalEnabled</code>—The app is enabled as a canvas personal app. • <code>HideHeader</code>—The publisher header, which contains the “What are you working on?” text, is hidden. • <code>HideShare</code>—The publisher Share button is hidden. This field is available in API version 34.0 and later.
CanvasReferenceId	Type string Properties Filter, Group, Nillable, Sort Description The canvas app unique identifier.
CanvasSelectedLocations	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The selected locations for the canvas app which define where the canvas app can appear in the user interface. For example: <pre>Chatter, ChatterFeed, Publisher, ServiceDesk</pre>
CanvasUrl	Type url Properties Filter, Group, Nillable, Sort Description The URL of the canvas app.
Description	Type string Properties Filter, Group, Nillable, Sort Description A description of this menu item.
IconUrl	Type url Properties Filter, Group, Nillable, Sort Description The icon for the menu item's application.
InfoUrl	Type url Properties Filter, Group, Nillable, Sort Description The URL for more information about the application.
IsAccessible	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the current user is authorized to use the app. The default setting is <code>false</code>.

Field	Details
IsRegisteredDeviceOnly	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, indicates that the app is available to registered devices only. The default setting is <code>false</code>. Available in API version 49.0 and later.
IsUsingAdminAuthorization	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the app is pre-authorized for certain users by the administrator. The default setting is <code>false</code>.
IsVisible	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, the app is visible to users of the organization. The default setting is <code>false</code>.
Label	Type string Properties Filter, Group, Nillable, Sort Description The app's name.
LogoUrl	Type url Properties Filter, Group, Nillable, Sort Description The logo for the menu item's application. The default is the initials of the <code>Label</code> value.
MobileAppBinaryId	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The URL for the Mobile App Binary file.
MobileAppInstallUrl	Type url Properties Filter, Group, Nillable, Sort Description The location mobile users are directed to install the app. Available in API version 49.0 and later.
MobileAppInstalledDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that a user installed a mobile app. Available in API version 49.0 and later.
MobileAppInstalledVersion	Type string Properties Filter, Group, Nillable, Sort Description The version of the user's installed mobile app. Available in API version 49.0 and later.
MobileAppVer	Type string Properties Filter, Group, Nillable, Sort Description The version number of the mobile app. Available in API version 49.0 and later.
MobileDeviceType	Type string Properties Filter, Group, Nillable, Sort Description The supported device form factors for the mobile app. Available in API version 49.0 and later.
MobileMinOsVer	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The minimum version required for the app. Available in API version 49.0 and later.
MobilePlatform	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The mobile platform for the app. Possible values include: • <code>android</code> - Android • <code>ios</code> - iOS Available in API version 49.0 and later.
MobileStartUrl	Type url Properties Filter, Group, Nillable, Sort Description The location mobile users are directed to after they've authenticated. This field is used with connected apps and Experience Builder sites. For sites only, this location is a fully qualified domain name. For other apps, it's a relative URL.
Name	Type string Properties Filter, Group, Nillable, Sort Description The API name of the item.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values:

Field	Details
	- In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>SortOrder</code>	Type int Properties Filter, Group, Sort Description The index value that controls where this item appears in the menu. For example, a menu item with a sort order of 5 appears between items with sort order values of 3 and 9.
<code>StartUrl</code>	Type url Properties Filter, Group, Nillable, Sort Description For a connected app, the location users are directed to after they've authenticated. Otherwise, the application's default start page.
<code>Type</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of application represented by this item. The types are: <code>ConnectedApplication</code> <code>Network</code> <code>ServiceProvider</code> <code>TabSet</code>
<code>UserSortOrder</code>	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The index value that represents where the user set this item in the menu (or App Launcher). For example, an item with a sort order value of 5 appears between items with sort order values of 3 and 9. This value is separate from SortOrder so you can create logic incorporating both values. For example, if you want the user-sorted items to appear first, followed by the organization order for the rest, use: <pre>SELECT ApplicationId,SortOrder,UserSortOrder FROM AppMenuItem order by userSortOrder NULLS LAST, sortOrder NULLS LAST</pre>

Usage

Use this read-only object to view an entry in the Lightning Platform app menu or the App Launcher. You can create a SOQL query to retrieve all items, even items the user does not see from the user interface.

There are many ways you can use AppMenuItem. Here are some examples:

- Build your own App Launcher or app menu in Salesforce. Create a custom page showing all the apps you have access to and that lets you run them using single sign-on.
- Build your own App Launcher or app menu on a tablet or mobile app. You can have your own app for launching applications on various mobile devices.
- Build an app launcher into your company's intranet. There's no need to have it run on Salesforce because Salesforce APIs let you integrate with Salesforce programmatically and build an app launcher.

Tip: To get metadata information about apps and their tabs, use the Apex `Schema.describeTabs()` method, REST API `/vXX.X/tabs/` resource, or SOAP API `describeTabs()` call.

AppointmentAssignmentPolicy

Stores information about resource assignment rules. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
FullName	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The API name of the AppointmentAssignmentPolicy object.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the appointment assignment policy. Possible values are: • Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexican) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese - Brazilian) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for the appointment assignment policy.

Field	Details
PolicyApplicableDuration	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The frequency at which the utilization of service resources is calculated. This field is available in API version 53.0 and later. Possible values are: • Parameter-Based • Monthly • Weekly The default value is Parameter-Based.
PolicyType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of appointment assignment policy. Possible values are: • loadBalancing
UtilizationFactor	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specifies the count type for the resource utilization. This field is available in API version 53.0 and later. Possible values are: • NumberOfAppointments • TotalAppointmentDuration The default value is TotalAppointmentDuration.

AppointmentScheduleAggr

Records the utilization of a service resource, by date, for the Load Balancing appointment assignment policy. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AppointmentDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date of the appointment.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name or ID of the AppointmentScheduleAggr object.
ResourceUtilizationCount	Type integer Properties Filter, Group, Nillable, Sort Description The number of appointments scheduled for a service resource. Available in API version 53.0 and later. This is a calculated field.
ServiceResourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The service resource associated with the appointment scheduling aggregate. This is a relationship field. Relationship Name ServiceResource Relationship Type Lookup

Field	Details
	Refers To ServiceResource
TotalResourceUtilization	Type double Properties Filter, Nillable, Sort Description The number of minutes for which the service resource has scheduled appointments. This is a calculated field.
UsageType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specify the usage type of the AppointmentScheduleAggr object. Possible values are: • FSL_Daily • FSL_Monthly • FSL_Weekly • LightningScheduler The default value is 'LightningScheduler'.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AppointmentScheduleAggrOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AppointmentScheduleAggrShare](#) on page 67

Sharing is available for the object.

AppointmentScheduleLog

Stores service appointments of each service Resource. This object is used to calculate the utilization of a service resource for the AppointmentScheduleAggr object. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AppointmentDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date of the appointment.
AppointmentScheduleAggrId	Type reference Properties Create, Filter, Group, Sort Description The appointment scheduling aggregate associated with the appointment scheduling log. This is a relationship field. Relationship Name AppointmentScheduleAggr Relationship Type Lookup Refers To AppointmentScheduleAggr
IsUsedForResourceUtilization	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the appointment scheduling log is used for deriving the appointment scheduling aggregate. The default value is 'false'.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description The name or ID of the AppointmentScheduleLog object.
RelatedRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The service appointment, resource absence, event, or any other related record associated with the appointment scheduling log. This is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To Event, ServiceAppointment
ResourceUtilization	Type double Properties Create, Filter, Nillable, Sort, Update Description The number of minutes the service resource already has scheduled appointments for.
ServiceResourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The service resource associated with the appointment scheduling log. This is a relationship field. Relationship Name ServiceResource Relationship Type Lookup Refers To ServiceResource
UsageType	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specify the product associated with the AppointmentScheduleLog object. Possible values are: • <code>FSL_Daily</code>—FSL - Daily • <code>FSL_Monthly</code>—FSL - Monthly • <code>FSL_Weekly</code>—FSL - Weekly • <code>LightningScheduler</code>—Lightning Scheduler The default value is 'LightningScheduler'.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AppointmentScheduleLogChangeEvent](#) on page 68

Change events are available for the object.

[AppointmentScheduleLogFeed](#) on page 55

Feed tracking is available for the object.

[AppointmentScheduleLogHistory](#) on page 63

History is available for tracked fields of the object.

[AppointmentScheduleLogOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AppointmentScheduleLogShare](#) on page 67

Sharing is available for the object.

AppointmentSchedulingPolicy

Represents a set of rules for scheduling appointments using Salesforce Scheduler. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>AppointmentAssignmentPolicyId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The name or ID of the appointment assignment policy. This is a relationship field, available in version 52.0 and later. Relationship Name AppointmentAssignmentPolicy Relationship Type Lookup Refers To AppointmentAssignmentPolicy
AppointmentStartTimeInterval	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The proposed time interval in minutes between appointment start times. For example, set the interval to 15. Appointments can then begin at the top of the hour and at 15-minute intervals thereafter (10:00 AM, 10:15 AM, 10:30 AM, and so on). Possible values are: • 5 • 10 • 15 • 20 • 30 • 45 • 60 • 90 • 120 • 150 • 180 • 240 • 300 • 360 • 420 • 480
DeveloperName	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The API name of the AppointmentSchedulingPolicy object.
ExtCalEventHandlerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of the custom Apex class that checks service resources' external calendar events and returns the time slots where service resources are already booked. Available in API version 50.0 and later. This is a relationship field. Relationship Name ExtCalEventHandler Relationship Type Lookup Refers To ApexClass
IsOrgDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this scheduling policy is the default appointment scheduling policy for Lightning Scheduler appointments in this org.
IsSvcTerrOpHoursWithShiftsUsed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this scheduling policy considers the intersection of shifts and service territory operating hours when determining the availability of service resources for appointments (true). The default value is false. Available in API version 56.0 and later.
IsSvcTerritoryMemberShiftUsed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether this scheduling policy considers shifts of service territory members when determining the availability of service resources for appointments (true). The default value is false. Available in API version 56.0 and later.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the appointment scheduling policy. Possible values are: • Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexican) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese - Brazilian) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for the appointment scheduling policy.

Field	Details
ShouldConsiderCalendarEvents	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this policy checks the Salesforce calendar for resource availability. The default value is 'false'.
ShouldEnforceExcludedResource	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this appointment scheduling policy prevents excluded service resources from being assigned to appointments.
ShouldEnforceRequiredResource	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this appointment scheduling policy allows only required service resources to be assigned to appointments.
ShouldMatchSkill	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this appointment scheduling policy allows only required service resources who have certain skills to be assigned to appointments.
ShouldMatchSkillLevel	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this appointment scheduling policy allows only required service resources who have certain skills and skill levels to be assigned to appointments.
ShouldRespectVisitingHours	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates whether this appointment scheduling policy prevents users from scheduling appointments outside of an account's visiting hours.
ShouldUsePrimaryMembers	Type boolean
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates whether this appointment scheduling policy allows only service resources who are primary members of a service territory to be assigned to appointments.
ShouldUseSecondaryMembers	Type boolean
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates whether this appointment scheduling policy allows service resources who are secondary members of a service territory to be assigned to appointments.

AppointmentTopicTimeSlot

Represents a lookup to a work type or a work type group for a time slot This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AppointmentTopicTimeSlotKey	Type string
	Properties Create, Filter, Group, idLookup, Nillable, Sort, Update

Field	Details
	Description Non-editable validating field used to ensure no two rows have the same time slot and work type or work type group values in an instance.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name or ID of the AppointmentTopicTimeSlot object.
OperatingHoursId	Type reference Properties Filter, Group, Nillable, Sort Description The operating hours that contain the time slot. This is a relationship field. Relationship Name OperatingHours Relationship Type Lookup Refers To OperatingHours
TimeSlotId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the time slot. This is a relationship field. Relationship Name TimeSlot Relationship Type Lookup Refers To TimeSlot
WorkTypeGroupId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The work type group associated with this time slot. This is a relationship field. Relationship Name WorkTypeGroup Relationship Type Lookup Refers To WorkTypeGroup
WorkTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The work type associated with this time slot. This is a relationship field. Relationship Name WorkType Relationship Type Lookup Refers To WorkType

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AppointmentTopicTimeSlotChangeEvent](#) on page 68

Change events are available for the object.

[AppointmentTopicTimeSlotFeed](#) on page 55

Feed tracking is available for the object.

[AppointmentTopicTimeSlotHistory](#) on page 63

History is available for tracked fields of the object.

[AppointmentTopicTimeSlotOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AppointmentTopicTimeSlotShare](#) on page 67

Sharing is available for the object.

Approval

Represents an approval request for a Contract.

Note: This object is read-only and is specific to approvals on the Contract object. It isn't equal to or involved in the approval processes represented by the ProcessInstance, which is more powerful.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ApproveComment	Type string Properties Filter, Nillable, Sort Description Text entered by the user when they approved or rejected this approval request. Required. Limit: 4,000 characters.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
OwnerId	Type reference Properties Filter, Group, Sort Description Required. ID of the User being asked to approve or reject the approval request. Must be a valid User ID. Required.

Field	Details
<code>ParentId</code>	Type reference Properties Filter, Group, Sort Description Required. ID of the Contract associated with this approval request. Must be a valid contract ID.
<code>RequestComment</code>	Type string Properties Filter, Nillable, Sort Description Text entered by the User who created the approval request. Optional. This field can't be updated after the Approval has been created. Limit: 4,000 characters.
<code>Status</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Required. Status of this approval request. One of the following picklist values: • <code>Pending</code>—Specified only when the Approval request is created (<code>create ()</code> call) • <code>Approved</code>—Specified only when the Approval request is approved (<code>update ()</code> call) • <code>Rejected</code>—Specified when the Approval request is rejected (<code>update ()</code> call) or when it is created (<code>create ()</code> call) and immediately rejected for archival/historical purposes.

Usage

This object allows client applications to programmatically handle approval requests for a Contract. Initially, to request a Contract approval, a client application might create a new Approval request record, specifying the `ParentId`, `OwnerId` (user approving or rejecting the request), `Status` (`Pending`), and (optionally) `RequestComment` fields. Note that when a client application creates the first approval request, if the value of the Contract `Status` field is `Draft`, then the Approval `Status` for this record is automatically changed to `In Approval Process` (see `ContractStatus` for more information).

A client application might subsequently update an existing Approval request, specifying the `Status` (`Approved` or `Rejected`) and an `ApproveComment` (required); the `RequestComment` field can't be updated. Updating an Approval record (either to approve or reject) requires the client application to be logged in with “Approve Contract” permission. To update an Approval request, its `Status` must be `Pending`—a client application can't update an Approval that has already been `Approved` or `Rejected`. To re-submit an approval request for a given Contract, a client application must create a new, separate Approval record and repeat the approval process.

Once a Contract has been approved (not rejected), the Contract `LastApprovedDate` field is automatically updated, however the Contract `Status` field isn't updated, it keeps the value `InApproval`.

An approved Contract must be activated explicitly. Client applications can activate a Contract by setting the value in its `Status` field to `Activated`, or a User can activate a Contract via the Salesforce user interface.

A Contract can have multiple approval requests in various states (Pending, Approved, and Rejected). In addition, one User can have multiple approval requests associated with the same Contract.

Client applications can't explicitly delete Approval records. Approval records are deleted automatically if the parent Contract is deleted.

[Overview of Salesforce Objects and Fields](#)

ApprovalAlertContentDef

Represents the mapping that links specific user-created email templates to different notification events such as initial assignment or reassignment within an Advanced Approvals flow. This object is available in API version 66.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in Enterprise, Professional, Unlimited, and Developer Editions where Advanced Approvals is enabled.

Fields

Field	Details
<code>ApprovalFlowApiName</code>	Type string Properties Create, Filter, Group, Sort, Update Description The API name of the approval workflow.
<code>ApprovalStepApiName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique API name of the approval step.

Field	Details
EmailTemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The email template that's associated with an approval step in the approval workflow. This field is a relationship field. Relationship Name EmailTemplate Refers To EmailTemplate
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the approval alert content definition.
NotificationReason	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The reason within an approval step's lifecycle that triggers the notification for which an email is sent. For example, when an approval work item is moved from one user to another, a reassignment notification email is sent to the user. Possible values are: - ApprovalCreationSuccess - ApprovalStepAssignment - ApprovalStepAssignmentToDelegate - ApprovalStepReassignment - ApprovalStepReassignmentToDelegate - ApprovalSubmissionApprovedOrRejectedStatusUpdate - ApprovalWorkItemStatusUpdate - AutoApprovalConfirmation

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object.

ApprovalAlertContentDefHistory on page 63

History is available for tracked fields of the object.

ApprovalSubmission

Represents the instance of an approval request that's submitted for a record of the related object. This object is available in API version 62.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available for users with a Salesforce user license of type Salesforce in Enterprise, Performance, Unlimited, and Developer Editions.

Fields

Field	Details
<code>Comments</code>	Type textarea Properties Nillable, Update Description The comments that the user adds when they submit the request for approval.
<code>DoesSendApprovalEmail</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Required. Indicates whether approval request emails are sent to approvers and delegates (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
<code>FlowOrchestrationInstanceId</code>	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the flow orchestration instance record that's associated with the approval.

Field	Details
	This field is a relationship field. Relationship Name FlowOrchestrationInstance Refers To FlowOrchestrationInstance
IsEligibleForSmartApproval	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the approval submission is eligible for smart approval (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is only available with Advanced Approvals enabled.
IsSmartApprovalRun	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this approval submission either is run in smart approval mode (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is only available with Advanced Approvals enabled.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The sequentially-generated name of the approval submission record, for example AS-000000001.
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The ID of the user or the group that owns the approval submission record. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Refers To User
RelatedRecordId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description Required. The API name of the related record that's submitted for approval.
	Relationship Name RelatedRecord
	Refers To The objects that you have access to for approvals.
RelatedRecordObjectName	Type string
	Properties Filter, Group, Nillable, Sort, Update
	Description Required. The type of record that was submitted for approval.
SmartApprvlBasisSubmissionId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description The previous approval submission used as reference for the auto-approval evaluation. This field is a relationship field. This field is only available with Advanced Approvals enabled.
	Relationship Name SmartApprvlBasisSubmission
	Refers To ApprovalSubmission
Status	Type picklist
	Properties Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Required. The status of the approval. Valid values are: • Approved • Canceled • Errored • InProgress • Recalled • Rejected • Suspended
SubmittedById	Type reference Properties Filter, Group, Nillable, Sort, Update Description Required. The ID of the user who submitted the record for approval. This field is a relationship field. Relationship Name SubmittedBy Refers To User

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ApprovalSubmissionShare on page 67

Sharing is available for the object.

ApprovalSubmissionHistory on page 63

History is available for tracked fields of the object.

ApprovalSubmissionDetail

ApprovalSubmissionDetail contains additional information about operations happening during the approval lifecycle. It will not hold any information that's already captured in the existing ApprovalSubmission and ApprovalWorkItem entities. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available in Enterprise, Performance, Unlimited, and Developer Editions for users with access to the Approval Submission object.

Fields

Field	Details
ActionChannelName	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The name of the channel where the action was performed. Valid values are: - ApprovalRecord - Email - InvocableAction - ScreenFlow - Slack - System
ActionContext	Type string Properties Filter, Group, Nillable, Sort, Update Description The context of the action taken for the item assigned for approval. For example, if the approval has been reassigned the string would be Reassigned from User Id - <original_assignee_id>.
ActionName	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The action taken for the item assigned for approval. Valid values are:

Field	Details
	• Cancel • Override • Reassign • Recall • Review
ActionPerformedById	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the user who performed the action on the item submitted for approval. This field is a relationship field. Relationship Name ActionPerformedBy Refers To User
ActionPerformerRole	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The role of the user who performed the action on the item submitted for approval. Valid values are: • Admin • Assignee • Delegate • Submitter • System
ApprovalSubmissionId	Type reference Properties Filter, Group, Sort Description The approval submission that's associated with the detail record. This field is a relationship field. Relationship Name ApprovalSubmission

Field	Details
	Relationship Type Master-detail Refers To ApprovalSubmission (the master object)
ApprovalWorkItemId	Type reference Properties Filter, Group, Nillable, Sort Description The approval assignment associated with the detail record. This field is a relationship field. Relationship Name ApprovalWorkItem Refers To ApprovalWorkItem
Comments	Type textarea Properties Nillable, Update Description The comments that the user adds when they cancel, review, reassign or recall the request.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The sequentially-generated name of the approval submission detail record, for example ASD-000000026.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ApprovalSubmissionDetailHistory](#) on page 63

History is available for tracked fields of the object.

ApprovalWorkItem

Contains run-time information about each step in an approval workflow, such as assignees and their decisions regarding the object's approval. Has a master-detail relationship with ApprovalSubmission. This object is available in API version 61.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available in Enterprise, Performance, Unlimited, and Developer Editions for users with access to the Approval Submission object.

Fields

Field	Details
ApprovalChainName	Type string Properties Filter, Group, Nillable, Sort, Update Description The name of the related approval chain. This field is populated when there are multiple approval chains that are run in parallel. This field is only available with Advanced Approvals enabled.
ApprovalConditionName	Type string Properties Filter, Group, Nillable, Sort, Update Description The name of the condition that assigns the work item to a user or group for approval.
ApprovalSubmissionId	Type reference Properties Filter, Group, Sort Description The approval submission that's associated with this item. This field is a relationship field. Relationship Name ApprovalSubmission

Field	Details
	Relationship Type Master-detail Refers To ApprovalSubmission (the master object)
AssignedToId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The user, group, or queue that was assigned the work item. This field is a polymorphic relationship field. Relationship Name AssignedTo Refers To Group (Type = Regular), Group (Type = Queue), User
Comments	Type textarea Properties Nillable, Update Description The comments that the user adds when they review or override the work item.
FlowOrchestrationWorkItemId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The identifier of the associated flow orchestration work item. This field is a relationship field. Relationship Name FlowOrchestrationWorkItem Refers To FlowOrchestrationWorkItem
IsAutoReviewed	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the work item was auto-reviewed (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is only available with Advanced Approvals enabled.
IsEligibleForAutoApproval	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether custom logic is used for auto-approval of this approval work item (<code>true</code>) or not (<code>false</code>). This field is only available with Advanced Approvals enabled.
IsEligibleForSmartApproval	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the approval work item is eligible for smart approval (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is only available with Advanced Approvals enabled.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The sequentially-generated name of the related record that's submitted for approval, for example AWI-000000001.
RelatedRecordId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The API name of the related record that's submitted for approval. Relationship Name RelatedRecord

Field	Details
	Refers To The objects that you have access to for approvals.
RelatedRecordObjectName	Type string Properties Filter, Group, Nillable, Sort, Update Description The name of the related record that's submitted for approval.
ReviewedById	Type reference Properties Filter, Group, Nillable, Sort, Update Description The identifier of the user that reviewed the work item. This field is a relationship field. Relationship Name ReviewedBy Refers To User
ReviewedDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The date and time when the work item was reviewed.
SmartApprovalBasisWorkItemId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The previous approval work item used as a reference for the auto-approval evaluation. This field is a relationship field. This field is only available with Advanced Approvals enabled. Relationship Name SmartApprovalBasisWorkItem Refers To ApprovalWorkItem

Field	Details
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The status of the approval work item. Possible values are: • Approved • Assigned • Canceled • Errored—Error • Recalled • Rejected • Withdrawn

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ApprovalWorkItemHistory](#) on page 63

History is available for tracked fields of the object.

ApprovalWorkItemCondition

Represents a condition for starting and concluding an approval step that's evaluated as part of the smart approval process. This object is available in API version 64.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available in Enterprise, Professional, Unlimited, and Developer Editions where Advanced Approvals is enabled with the Modify All Data or the Approval Admin user permission.

Fields

Field	Details
ApprovalWorkItemCriteriaId	Type reference Properties Filter, Group, Sort Description The approval work item criteria associated with the approval work item condition. The approval work item criteria defines the logic by which the approval conditions are evaluated. This field is a relationship field. Relationship Name ApprovalWorkItemCriteria Relationship Type Master-detail Refers To ApprovalWorkItemCriteria (the master object)
ConditionSequencePosition	Type int Properties Filter, Group, Nillable, Sort, Update Description The order in which the condition is evaluated relative to other conditions that are part of the requirement logic.
HasEvaluationSucceeded	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the first value (left side) evaluates against the second value (right side) successfully (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsConditionExcluded	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the condition must be excluded from evaluation (<code>true</code>) or not (<code>false</code>) in an auto-approval process.

Field	Details
	The default value is <code>false</code> .
LeftValue	Type textarea Properties Nillable, Update Description The first value of the condition that's evaluated against the second value.
LeftValueDataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The data type of the first operand (left side) in this condition. Possible values are: • Apex • Boolean • Currency • Date • DateTime—Date/Time • MultiSelectPicklist—Multi-Select Picklist • Number • Other • Picklist • Text • Time
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The sequentially-generated name of the approval work item condition record, for example AWCO-000000071.
OperatorType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The operator for the condition. Possible values are: • Contains • EndsWith • Equal • GreaterThan • GreaterThanOrEqualTo • HasError • In • IsBlank • IsChanged • IsEmpty • IsNull • LessThan • LessThanOrEqualTo • None • NotEqualTo • NotIn • StartsWith • WasSelected • WasSet • WasVisited
RightValue	Type textarea Properties Nillable, Update Description The second value (right side) of the condition that's evaluated against the first value.
RightValueDataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description The data type of the second operand for the condition. Possible values are: • Apex

Field	Details
	• Boolean • Currency • Date • DateTime—Date/Time • MultiSelectPicklist—Multi-Select Picklist • Number • Other • Picklist • Text • Time

ApprovalWorkItemCriteria

Represents the logic by which a smart approval request is evaluated. This object is available in API version 64.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available in Enterprise, Professional, Unlimited, and Developer Editions where Advanced Approvals is enabled with the Modify All Data or the Approval Admin user permission.

Fields

Field	Details
ApprovalStepApiName	Type string Properties Filter, Group, Sort, Update Description The unique API name of the approval step that uses the logic in the approval work item criteria.
ApprovalWorkItemId	Type reference Properties Filter, Group, Sort

Field	Details
	Description The parent approval work item associated with the approval work item criteria. This field is a relationship field. Relationship Name ApprovalWorkItem Relationship Type Master-detail Refers To ApprovalWorkItem (the master object)
CriteriaType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether the requirement logic is for an entry or exit condition. Possible values are: • Entry • Exit
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The sequentially-generated name of the approval work item criteria record, for example AWCR-000000071.
RequirementLogic	Type string Properties Filter, Group, Nillable, Sort, Update Description The requirement logic of all entry or exit conditions.

AppTabMember

Represents the list of tabs for each of the available apps. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
<code>AppDefinitionId</code>	Type string Properties Filter, Nillable, Sort Description The ID of the <code>AppDefinition</code> object. This is a relationship field. Relationship Name AppDefinition Relationship Type Lookup Refers To AppDefinition
<code>DurableId</code>	Type string Properties Filter, Group, Nillable, Sort Description A unique virtual Salesforce ID for the color.
<code>SortOrder</code>	Type int Properties Filter, Group, Nillable, Sort Description The number used to sort this tab in the application.
<code>TabDefinitionId</code>	Type string Properties Filter, Nillable, Sort Description The ID of the <code>TabDefinition</code> object.

Field Name	Details
	This is a relationship field. Relationship Name TabDefinition Relationship Type Lookup Refers To TabDefinition
WorkspaceDriverField	Type string Properties Filter, Group, Nillable, Sort Description Refers to the workspace mapping in the CustomApplication Metadata API object.

ApptBundleAggrDurDnscale

Sums the duration of the bundle members, reduced by a predefined percentage. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
BundleAggregationPolicyId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The ID of the parent appointment bundle aggregation policy. This is a relationship field. Relationship Name BundleAggregationPolicy Relationship Type Lookup Refers To ApptBundleAggrPolicy
FromBundleMemberNumber	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The number of the first bundle member to which the downscale is applied.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
MaxReduction	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum reduction that can be applied to a bundle member.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the appointment bundle aggregation downscale policy.
PercentageOfReduction	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The percentage of duration reduction.
ToBundleMemberNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of the last bundle member to which the downscale is applied.

ApptBundleAggrPolicy

Policy that defines how the property values of the bundle members are aggregated and assigned to the bundle. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
AggregationAction	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The aggregation action to be performed. Possible values are: All default and custom Service Appointment fields.
AggregationFieldType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The target field type in the bundle to which the aggregation is directed. Possible values are: • Boolean • Date • Numeric • Picklist • Picklist-Multi • Skills • String
AggregationOrder	Type int Properties Create, Defaulted on create, Filter, Group, idLookup, Nillable, Sort, Update Description The order the aggregation is triggered.
BundleFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of the target field in the bundle where the value is taken from the bundle member. Possible values are: All default and custom Service Appointment fields.

Field	Details
BundleMemberAddiFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of an additional source field that is connected to the initial source field in the bundle member from which the value is taken. Possible values are: All default and custom Service Appointment fields.
BundleMemberFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of the source field in the bundle member from which the value is taken. Possible values are: All default and custom Service Appointment fields.
BundlePolicyId	Type reference Properties Create, Filter, Group, Sort Description ID of the parent bundle policy. This is a relationship field. Relationship Name BundlePolicy Relationship Type Lookup Refers To ApptBundlePolicy
ConstantValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The constant value that is used in the aggregation.
DateValue	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents how the date value will be determined. Possible values are: • End of Day • Now • Null • Start of Day
DoesAllowDuplicateStrings	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to allow the same string to appear more than once when using the 'Sum based on Bundle Members' action type.
DownscaleSortDirection	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Applies only if the Set Downscaled Duration action is set. The downscaling sorting direction of the bundle member service appointments, according to their duration. Possible values are: • Ascending • Descending
FilterCriteriaId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The active recordset filter criteria used for aggregating the bundle members. This is a relationship field. Relationship Name FilterCriteria Relationship Type Lookup

Field	Details
	Refers To RecordsetFilterCriteria
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
MaxBundleDuration	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum bundle duration that can be accumulated from the bundle members (after downscaling).
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the appointment bundle aggregation policy.
ShouldUpdateOnCreationOnly	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to update the field in the bundle only when it is created.

ApptBundleConfig

Represents the general parameters that define the behavior of the bundle. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
AddToBundleStatuses	Type multipicklist Properties Create, Defaulted on create, Filter, Nillable, Update Description The statuses of service appointment that are allowed to be bundled. Possible values are: • Accepted • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Rejected • Scheduled The default value is None.
BundleStatusesToPropagate	Type multipicklist Properties Create, Defaulted on create, Filter, Nillable, Update

Field	Details
	Description The bundle statuses that when updated are inherited by the bundle members. Possible values are: - Accepted - Canceled - Cannot Complete - Completed - Dispatched - In Progress - None - Rejected - Scheduled The default value is None.
CriteriaForAutoUnbundlingId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The criteria that causes a bundle service appointment to be unbundled. This is a relationship field. Relationship Name CriteriaForAutoUnbundling Relationship Type Lookup Refers To RecordsetFilterCriteria
DoesAddTravelTime	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If the bundle members aren't in the same location, add travel time between them to the bundle's duration according to their sort order. The default value is false.
DoesDeleteEmptyBundles	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description If the bundle has no remaining bundle members, the bundle is deleted.
EmptyBundleStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The status from the Canceled category that a bundle service appointment changes to if it has no remaining bundle members, but still appears in the appointment list. Possible values are determined by the org's statuses. The default value is None.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
MemberStatusesNotToPropagate	Type multipicklist Properties Create, Defaulted on create, Filter, Nillable, Update Description The bundle member statuses that aren't overridden when the bundle's status is updated. Possible values are: - Accepted - Canceled - Cannot Complete - Completed

Field	Details
	• Dispatched • In Progress • None • Rejected • Scheduled The default value is None.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the Appointment Bundle Config.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RemoveFromBundleStatuses	Type multipicklist Properties Create, Defaulted on create, Filter, Nillable, Update Description The statuses of service appointments that are allowed to be removed from a bundle. Possible values are: • Accepted • Canceled • Cannot Complete • Completed • Dispatched

Field	Details
	• In Progress • None • Rejected • Scheduled The default value is None.
StatusOnRemovalFromBundle	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The status that a service appointment is given when it's removed from a bundle. Possible values are: • Accepted • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Rejected • Scheduled The default value is None.
StatusesNotToUpdateOnUnbundle	Type multipicklist Properties Create, Defaulted on create, Filter, Nillable, Update Description The statuses that aren't updated when a bundle is unbundled. Possible values are: • Accepted • Canceled • Cannot Complete • Completed • Dispatched • In Progress • None • Rejected

Field	Details
	Scheduled The default value is None.

ApptBundlePolicy

Policy that defines how the bundling of service appointments should be handled. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
BundleEndTimeFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If IsTimeCalcByBundleDurationField is true, this field represents the name of the field used for entering the end time of the bundle.
BundleStartTimeFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If IsTimeCalcByBundleDurationField is true, this field represents the name of the field used for entering the start time of the bundle.
CanAllowSchleDepndInBundle	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description This field is reserved for future use.
ConstantTimeValue	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description If IsTimeCalcByBundleDurationField is true, this field represents the total time of the bundle as a preset constant value.
FilterCriteriaId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The active recordset filter criteria used for the bundle members. Only service appointments that meet the criteria can be bundled. This is a relationship field. Relationship Name FilterCriteria Relationship Type Lookup Refers To RecordsetFilterCriteria
IsAutomaticBundling	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the policy is relevant for automatic bundling.
IsManualBundling	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the policy is relevant for manual bundling.

Field	Details
	The default value is 'false'.
IsTimeCalcByBundleDurationFld	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the bundle's duration is validated. If true, the bundle's start time is subtracted from the bundle's end time. If the result is a negative value, it uses ConstantTimeValue as the bundle's duration. The default value is 'false'.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
LimitAmountOfBundleMembers	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The maximum number of bundle members that can be included in a bundle.
LimitDurationOfBundle	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum duration of a bundle.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the bundle policy.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Priority	Type int Properties Create, Filter, Group, idLookup, Sort, Update Description The priority level that this bundle policy should be given when the bundle policies are analyzed using the automatic mode.

ApptBundlePolicySvcTerr

Represents a link between the BundlePolicy and the ServiceTerritory. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
BundlePolicyId	Type reference Properties Create, Filter, Group, Sort Description The ID of the parent bundle policy. This is a relationship field. Relationship Name BundlePolicy Relationship Type Lookup Refers To ApptBundlePolicy
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the appointment bundle service territory.
ServiceTerritoryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the service territory. This is a relationship field. Relationship Name ServiceTerritory Relationship Type Lookup Refers To ServiceTerritory

ApptBundlePropagatePolicy

Policy that defines which property values are inherited from the bundle to the bundle members or are assigned as constant values in the bundle members. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
AdditionalConstantValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The additional constant value that is connected to the initial constant value to be added to the bundle members.
BundleFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of the source field in the bundle from which the value is taken. Possible values are: All default and custom Service Appointment fields.
BundleMemberFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of the target field in the bundle member where the value is inherited from the bundle. Possible values are: All default and custom Service Appointment fields.
BundlePolicyId	Type reference Properties Create, Filter, Group, Sort Description ID of the parent bundle policy. This field is a relationship field. Relationship Name BundlePolicy Relationship Type Lookup Refers To ApptBundlePolicy

Field	Details
ConstantValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The constant value to be added to the bundle members.
DateValue	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents how the date value is determined. Possible values are: • End of Day • Now • Null • Start of Day
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the appointment bundle propagation policy.
ShouldAddConstantValue	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to enable adding a constant value to the bundle members.
ShouldUpdateOnAdd	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to enable updating the fields of the bundle members when they are added to the bundle.
ShouldUpdateOnRemove	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to enable updating the fields of the bundle members when they are removed from the bundle.
ShouldUpdateOnUnbundle	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to enable updating the fields of the bundle members when performing the Unbundle action.

ApptBundleRestrictPolicy

Policy that defines the restrictions that are considered while forming a bundle. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
<code>BundlePolicyId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the parent bundle policy. This is a relationship field. Relationship Name BundlePolicy Relationship Type Lookup Refers To ApptBundlePolicy
<code>DoesAllowEmpty</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Allows a bundle member service appointment with an empty Restriction Field Name to be bundled.
<code>DoesRestrictAutomaticMode</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to apply this restriction when using the automatic mode.

Field	Details
DoesRestrictManualMode	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want to apply this restriction when using the manual mode.
IsRestrictByDateOnly	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if you want the bundle to be restricted according to the calendar date only, ignoring the time of day.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the appointment bundle restriction policy.
RestrictionFieldName	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description Name of the field in the service appointment used for applying the restriction. Possible values are: All default and custom Service Appointment fields.

ApptBundleSortPolicy

Policy that defines the properties by which the bundle members are sorted within the bundle. Can also be used in the automatic mode for determining the order of the automatic selection of bundle members. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Bundling must be enabled in the Field Service Settings.
- The Field Service Admin, Field Service Bundle for Dispatcher, and Field Service Integration permission sets must be enabled.

Fields

Field	Details
BundlePolicyId	Type reference
	Properties Create, Filter, Group, Sort
	Description The ID of the parent bundle policy. This is a relationship field.
	Relationship Name BundlePolicy
	Relationship Type Lookup
	Refers To ApptBundlePolicy

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the appointment bundle sort policy.
SortDirection	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The order of the appointments in a bundle Possible values are: • Ascending • Descending
SortFieldName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of the field in the service appointment used for sorting the bundle members. Possible values are: All default and custom Service Appointment fields.

Field	Details
SortOrder	Type int Properties Create, Defaulted on create, Filter, Group, idLookup, Nillable, Sort, Update Description The order of fields used for sorting the bundle members.
SortType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The applied sort type for arranging the bundle. Sort for Automatic Bundling defines the order that automated bundling uses to examine the candidate service appointments to be bundled. Sort Within a Bundle defines the order of bundle members. It's also used when you unbundle to define the order that the service appointments are scheduled on the Gantt. Possible values are: - SortForAutomaticBundling—Sort For Automatic Bundling - SortWithinABundle—Sort Within a Bundle

AppUsageAssignment

Provides application context for a record. A record can have different allowed actions or different related objects when it's created for different applications. For example, a Revenue Lifecycle Management order has a related `RevenueLifecycleManagementAppUsageAssignment`, so Salesforce knows it can create assets for that order. Available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AppUsageType	Type string Properties Create, Filter, Group, Sort

Field	Details
	Description The application context for the record. Allowed values are determined by the available licenses. For example, the <code>RevenueLifecycleManagement</code> and <code>BuyNow</code> <code>AppUsageTypes</code> are available with the Subscription Management license.
Name	Type string Properties Filter, Group, idLookup, Sort Description Autogenerated name for the <code>AppUsageAssignment</code>.
RecordId	Type reference Properties Create, Filter, Group, Sort Description The record that the <code>AppUsageAssignment</code> provides context for. For example, the order record. This is a relationship field. Relationship Name Record Relationship Type Lookup Refers To • Order in API version 58.0 and later • Asset, Contract, Quote in API version 59.0 and later • WebCart in API version 60.0 and later • OrderSummary in API version 61.0 and later

ArchiveActivity

Represents metadata retrieved for a single Archive process initiated by an action. Retrieved metadata can include status tracking, start and end times, record counts, and monitoring and auditing outcomes. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

This object is Read-Only and can't be deleted. Storage consumed by this object doesn't count toward your org's data storage limits.

Fields

Field	Details
ArchivePolicyId	Type reference Properties Filter, Group, Sort Description ID of the associated policy that triggered the process. Links each execution back to its configuration.
AttemptedRootRecordsCount	Type int Properties Filter, Sort Description The number of root records that the action tried to process. Excludes records that were filtered out before processing began.
EndTime	Type dateTime Properties Filter, Sort Description The date and time that the process executed successfully, or was terminated due to error.
FailedCount	Type int Properties Filter, Sort Description The number of records that failed to process due to errors such as validation failures, missing references, or system exceptions.
FailureReason	Type string Properties Filter, Group, Sort

Field	Details
	Description Description of why process failed or only partially completed. Can include system error messages or policy-level failures.
Name	Type string Properties Filter, Group, Sort Description The autogenerated name of the action instance.
ProgressPercentage	Type double Properties Filter, Sort Description The percentage of records that were successfully processed.
RecordsSizeInMb	Type double Properties Filter, Sort Description Estimated total size, in megabytes (MB), of the records processed during an action, including metadata and payload.
SkippedRootRecordsCount	Type int Properties Filter, Sort Description The number of root records skipped due to validation errors, exclusion filters, or data protection thresholds.
StartTime	Type dateTime Properties Filter, Sort Description The date and time that the action started.

Field	Details
Status	Type picklist Properties Filter, Group, Sort Description Status of the current activity. Valid values are: • Aborted—Policy manually aborted during policy run. • Aborting—Aborted process has started. • Archive Timeout—Process automatically stopped because it took too long to execute a specific task, or the entire run. • Completed—Process completed successfully, and all records were processed. • Ended with Delete Failures—Process finished its run, but failed to delete one or more designated items. • Ended With Errors—Process finished successfully, but some records weren't processed. A CSV of the failed records can be downloaded from the Execution Details page. • Failed—Process failed, and no records were archived. A CSV of the failed records is available on the Activities tab. • No Records—Process ran successfully but found no records matching the policy criteria. • Pending—Process is in a queue waiting to be executed. • Process Exceeds 23h—Activity started and ran successfully until it reached a time limit. When a policy is set to run daily, this status indicates partial success before exceeding the time limit. • Process Exceeds 120h—Activity started and ran successfully until it reached a time limit. When a policy is set to run one time in a five-day period, this status indicates partial success before exceeding the time limit. • Process Exceeds 168h—Activity started and ran successfully until it reached a time limit. When a policy is set to run weekly, this status indicates partial success before exceeding the time limit. • Query Timeout—Process stopped because database query took too long to execute. • Running—Process is actively executing its tasks. • Started—Process has been initiated and is currently in progress. • Too Many Failures—Process was abandoned after too many records failed to read or delete.
SucceededCount	Type int Properties Filter, Sort Description The number of records processed successfully.

Field	Details
TotalRecordCount	Type int Properties Filter, Sort Description The total number of records initially selected for processing, including successful, failed, and skipped records.
Type	Type picklist Properties Filter, Group, Sort Description Specifies the type of archive process to be executed. This static enum categorizes the purpose or mode of the run. Valid values are: • Analyzer • Archive • Archive-fail-to-delete • Estimate • Export • Export-and-download • Export-to-external-bucket • Import-data-archive • Import-data-load • Index-request • None • Purge • Purge-by-retention • Purge-estimation • RTBF-SDK • Unarchive • Unarchive-retry • Unarchive-sdk

ArchivePolicyDefinition

Represents a data lifecycle policy that, in each row, defines the scope, frequency, and rules for automated archiving or purging of records from a root entity, such as Contact or Lead. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Create, Update, and Delete operations are restricted to the Archive Admin profile. All other profiles have Read-Only access.

Fields

Field	Details
DataProtectionThreshold	Type int Properties Create, Filter, Sort, Update Description Specifies a retention buffer, in days, during which recently updated or sensitive records must not be archived or deleted. Enforces data protection compliance.
Description	Type textarea Properties Create, Update Description The purpose or scope of the policy.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the policy is active and eligible for execution. Only active policies can be executed by scheduled or manual processes.
Name	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The unique name assigned to the policy.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Process type that the policy executes. Valid values are: • Archive • Import • Purge
Query	Type string Properties Create, Filter, Group, Sort, Update Description A complete SOQL or custom query defining the set of records to archive or purge, based on policy rules. Determines which records are eligible for processing.
QueryLimit	Type int Properties Create, Filter, Sort, Update Description The maximum number of root records this policy can process in a single run. Used to throttle execution for scalability and control.
RootEntityName	Type string Properties Create, Filter, Group, Sort, Update Description The API name of the Salesforce object targeted by the policy. Determines which object's records are queried and processed.
RunFrequency	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description Specifies how often the policy is executed—manually or on a regular interval. Enables automation for recurring data lifecycle operations. Valid values are: • None This option is specifically for manual policy runs. • Daily • Weekly • Monthly

Article Type __DataCategorySelection __DataCategorySelection

A data category selection represents a data category that classifies an article. This object is available in API version 19.0 and later.

This object can be used to associate an article with data categories from a data category group or to query the category selections for an article.

The object name is variable and has a syntax of *Article Type*__DataCategorySelection, where *Article Type* is the Object Name for the article type associated with the article. For example, Offer__DataCategorySelection represents the association between the Offer article type and its data categories. Every article is associated with an article type.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `getDeleted()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Not available in Lightning Knowledge. Users can only access, create or delete data category selection visible to their role, permission set, or profile. If a user has partial visibility on an article's categorization, only the visible categories are returned.

Fields

Field Name	Details
DataCategoryGroupName	Type DataCategoryGroupReference
	Properties Create

Field Name	Details
	Description Unique name of the data category group which has categories associated with the article.
DataCategoryName	Type DataCategoryGroupReference Properties Create Description Unique name of the data category associated with the article.
ParentId	Type reference Properties Create, Filter Description ID of the article associated with the data category selection.

Usage

Every article in Salesforce Knowledge can be categorized. A data category selection represents a category that has been selected to classify an article. You can use the *Article Type__DataCategorySelection* object to query and manage article categorization in your org. Client applications can create a categorization for an article with a Draft status. They can also delete and query article categorizations.

Note: When using *Article Type__DataCategorySelection* to classify an article, you can't select both a category (for example USA) and one of its descendants (California) or ascendant categories (North America). In this case, only the first category is selected.

Answers zones use *QuestionDataCategorySelection* to classify questions.

SOQL Sample

The following SOQL query returns the data category selections used to classify the article whose ID is `ka0D000000005ApIAI`.

```
SELECT Id,DataCategoryName, ParentId
FROM Offer__DataCategorySelection WHERE ParentId='ka0D000000005ApIAI'
```

This clause only returns category unique names. To retrieve category labels use the following clause:

```
SELECT Id,toLabel(DataCategoryName), ParentId
FROM Offer__DataCategorySelection WHERE ParentId='ka0D000000005ApIAI'
```

Tip: You can also use relationship queries to retrieve categorizations from an article type.

Asset

Represents an item of commercial value, such as a product sold by your company or a competitor, that a customer has purchased.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description (Required) ID of the Account associated with this asset. Must be a valid account ID. Required if <code>ContactId</code> isn't specified. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
Address	Type address Properties Filter, Nillable Description Represents the physical address or geolocation of the asset.
AssetLevel	Type int Properties Filter, Group, Nillable, Sort Description The asset's position in an asset hierarchy. If the asset has no parent or child assets, its level is 1. Assets that belong to a hierarchy have a level of 1 for the root asset, 2 for the child assets of the root asset, 3 for their children, and so forth. On assets created before the introduction

Field	Details
	of this field, the asset level defaults to –1. After the asset record is updated, the asset level is calculated and automatically updated.
AssetProvidedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account that provided the asset, typically a manufacturer. This field is a relationship field. Relationship Name AssetProvidedBy Relationship Type Lookup Refers To Account
AssetServicedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account in charge of servicing the asset. This field is a relationship field. Relationship Name AssetServicedBy Relationship Type Lookup Refers To Account
AssetTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset type associated with the asset. This field is a relationship field. This field is available in API version 62.0 and later for users with the Health Cloud Appointment Management permission set.

Field	Details
	Relationship Name AssetType Relationship Type Lookup Refers To AssetType
Availability	Type percent Properties Filter, Nillable, Sort Description The percentage of expected uptime where the asset was available for use.
Averagetimetorepair	Type double Properties Create, Filter, Nillable, Sort, Update Description Represents the number of hours it typically takes to repair an asset after a failure.
Averagetimebetweenfailure	Type double Properties Create, Filter, Nillable, Sort, Update Description Represents the number of hours that typically elapses before the asset is likely to fail again.
AverageUptimePerDay	Type double Properties Create, Filter, Nillable, Sort, Update Description The average number of hours per day the asset is expected to be available for use.
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city detail for the address.

Field	Details
ConsequenceOfFailure	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The business impact associated with the asset's failure. Using this field, you can address the asset's health and take action using Flows. To enable this field, use Object Manager to update the field availability. Make sure that the field is visible for field-level security and for page layout. To learn more, see What Determines Field Access. The picklist values aren't predefined in orgs created before Winter '22 that aren't Field Service enabled. This field is available in API version 53.0 and later. Possible values are: • Insignificant • Minor • Moderate • Major • Critical
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required if <code>AccountId</code> isn't specified. ID of the Contact associated with this asset. Must be a valid contact ID that has an account parent (but doesn't need to match the asset's <code>AccountId</code>). This field is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
Country	Type String Properties Create, Filter, Group, Nillable, Sort, Update Description The country detail for the address.

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the invoice. The default value is USD. This field is available in API version 55.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
CurrentAmount	Type currency Properties Filter, Nillable, Sort Description Reserved for future use. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
CurrentLifecycleEndDate	Type dateTime Properties Filter, Nillable, Sort Description Represents the end of the period shown as current. System-populated field inherited from the end date of the current asset state period. If that field is empty, as with an evergreen subscription, the Current Lifecycle End Date field is also empty. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
CurrentMrr	Type currency Properties Filter, Nillable, Sort Description The asset's monthly recurring revenue during the current asset state period. System-populated field inherited from the monthly recurring revenue on the current asset state period. If no asset state period is current, the value is 0. Label is Current Monthly Recurring Revenue. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
CurrentQuantity	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The asset's quantity during the current asset state period. System-populated field inherited from the quantity on the current asset state period. If no asset state period is current, the value is 0. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
Description	Type textarea Properties Create, Nillable, Update Description Description of the asset.
DigitalAssetStatus	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Status of digital tracking of the asset. The default picklist includes the following values: • On • Off • Warning • Error
ExternalIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the matching record in an external system. This field is available in API version 49.0 and later.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the address.

Field	Details
HasLifecycleManagement	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True if this asset is a lifecycle-managed asset, otherwise false. You can't switch an asset to a lifecycle-managed asset or the reverse. This field is system populated. The default value is <code>false</code>. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
InstallDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when the asset was installed.
IsCompetitorProduct	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this Asset represents a product sold by a competitor (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. Its UI label is Competitor Asset.
IsInternal	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the asset is produced or used internally (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. Its UI label is Internal Asset.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the asset was last modified. Its UI label is Last Modified Date.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the asset was last viewed.
Latitude	Type double Properties Create, Filter, Group, Nillable, Sort, Update Description Used with Longitude to specify the precise geolocation of the address.
LifecycleEndDate	Type dateTime Properties Filter, Nillable, Sort Description Represents the end of the asset's lifecycle. System-populated field inherited from the end date of the final asset state period. If that field is empty, as with an evergreen subscription, the lifecycle has no end date. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
LifecycleStartDate	Type dateTime Properties Filter, Nillable, Sort Description Represents the beginning of the asset's lifecycle. System-populated field inherited from the start date of the earliest asset state period. This field can't be edited. When a new asset action affects the start date of an asset state period, the period is deleted and a new one is generated. This field is available in API version 50.0 and later. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
LocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset's location. Typically, this location is the place where the asset is stored, such as a warehouse or van.

Field	Details
	If you have access to the location entity, it doesn't necessarily mean you can access the location id field. To access the location, you must have <code>userHasLocation</code> user access.
Longitude	Type double Properties Create, Filter, Group, Nillable, Sort, Update Description Used with Latitude to specify the precise geolocation of the address.
ManufactureDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the asset was manufactured. This field is available from API version 49.0 and later.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description (Required) Name of the asset. Label is Asset Name.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The asset's owner. By default, the asset owner is the user who created the asset record. Its UI label is Asset Owner. This field is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
ParentId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The asset's parent asset. Its UI label is Parent Asset. This field is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Asset
PostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code for the address.
Price	Type currency Properties Create, Filter, Nillable, Sort, Update Description Price paid for this asset.
PricingSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Pricing source to use when amending or renewing an asset. Valid values are: • LastTransaction—Last Transaction • PriceBookListPrice—Price Book or List Price Available in API version 60.0 and later.
Product2Id	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description (Optional) ID of the Product2 associated with this asset. Must be a valid Product2 ID. Its UI label is Product. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductCode	Type string Properties Filter, Group, Nillable, Sort Description The product code of the related product.
ProductDescription	Type string Properties Filter, Sort, Nillable Description The product description of the related product.
ProductFamily	Type picklist Properties Filter, Group, Sort, Nillable Description The product family of the related product.
PurchaseDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date on which this asset was purchased.

Field	Details
Quantity	Type double Properties Create, Filter, Nillable, Sort, Update Description Quantity purchased or installed. The Quantity field value isn't set by Customer Asset Lifecycle Management. Instead, you can populate the field as you need.
QuantityIncreasePricingType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specify which pricing type to use when the quantity of this asset is increased. Its UI label is Pricing Type for Quantity Increase. This field is available in API version 56.0 and later. This field is available when Revenue Cloud is enabled. Possible values are: • <code>LastNegotiatedPrice</code>—Available in API version 58.0 and later. • <code>ListPrice</code>
RecordTypeId	Type reference Properties Create, Filter, Group, Sort, Update Description The unique identifier for the asset. This field is a relationship field. Relationship Name RecordType Relationship Type Lookup Refers To RecordType
Reliability	Type percent Properties Filter, Nillable, Sort Description The percentage of expected uptime where the asset wasn't subject to unplanned downtime.

Field	Details
RenewalPricingType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The price used when renewing a subscription. Its UI label is Pricing Type for Renewal. This field is available in API version 55.0 and later. This field is available when Revenue Cloud is enabled. Possible values are: • LastNegotiatedPrice • ListPrice
RenewalTerm	Type double Properties Create, Filter, Nillable, Sort, Update Description With Renewal Term Unit, defines the default subscription term for renewal quotes. This field is available in API version 55.0 and later. This field is available when Revenue Cloud is enabled.
RenewalTermUnit	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The unit of time for a subscription term. This field is available in API version 55.0 and later. This field is available when Revenue Cloud is enabled. Possible values are: • Annual—Available in API version 58.0 and later. —UI label is Years. • Months
SalesStoreId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the RetailStore or WebStore associated with this Asset. This field is a polymorphic relationship field. To access this field, your org must have a Salesforce Order Management license or a B2B Commerce License.

Field	Details
	This field is available in API v60.0 and later. Relationship Name SalesStore Relationship Type Lookup Refers To RetailStore, WebStore
SerialNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Serial number for this asset.
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The state detail for the address.
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Customizable picklist of values. The default picklist includes the following values: • Purchased • Shipped • Installed • Registered • Obsolete
StatusReason	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The explanation of the device status. This field is available from API version 49.0 and later. Possible values are:

Field	Details
	• Not Ready • Off • Offline • Online • Paused • Standby
StockKeepingUnit	Type string Properties Filter, Group, Nillable, Sort Description The SKU assigned to the related product.
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street detail for the address.
SumDowntime	Type double Properties Filter, Nillable, Sort Description Accumulated downtime (planned and unplanned), determined as follows: • When only <code>UptimeRecordStart</code> is set, the sum of all downtime from <code>UptimeRecordStart</code> • When <code>UptimeRecordStart</code> and <code>UptimeRecordEnd</code> are set, the sum of all downtime from <code>UptimeRecordStart</code> to <code>UptimeRecordEnd</code> Otherwise, downtime isn't accumulated.
SumUnplannedDowntime	Type double Properties Filter, Nillable, Sort Description Accumulated unplanned downtime, determined as follows: • When only <code>UptimeRecordStart</code> is set, the sum of all unplanned downtime from <code>UptimeRecordStart</code>

Field	Details
	When <code>UptimeRecordStart</code> and <code>UptimeRecordEnd</code> are set, the sum of all unplanned downtime from <code>UptimeRecordStart</code> to <code>UptimeRecordEnd</code>. Otherwise, unplanned downtime isn't accumulated.
<code>TotalLifecycleAmount</code>	Type currency Properties Filter, Nillable, Sort Description The total amount of revenue for the asset, including revenue from each stage in the asset lifecycle. This field is available when CPQ Plus, Salesforce Billing, or Revenue Cloud is enabled.
<code>UptimeRecordEnd</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date until which <code>SumDowntime</code> and <code>SumUnplannedDowntime</code> are accumulated.
<code>UptimeRecordStart</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date from which <code>SumDowntime</code> and <code>SumUnplannedDowntime</code> are accumulated.
<code>UsageEndDate</code>	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when usage for this asset ends or expires.
<code>Uuid</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique ID for the asset. This field is available in API version 49.0 and later.

Usage

Use this object to track products sold to customers. With asset tracking, a client application can quickly determine which products were previously sold or are currently installed at a specific account. You can also create hierarchies of up to 10,000 assets.

For example, suppose that your company wants to renew and upsell opportunities on products sold in the past. Similarly, your company can track competitive products in a customer environment where products can be replaced or swapped out.

Asset tracking is also useful for product support, providing detailed information to assist with product-specific support issues. For example, the `PurchaseDate` or `SerialNumber` can indicate whether a given product has certain maintenance requirements, including product recalls. Similarly, the `UsageEndDate` can indicate when the asset was removed from service or when a license or warranty expires.

If an application creates an Asset record, it must specify a `Name` and either an `AccountId`, `ContactId`, or both.

With REST API, use the `getRelatedListInfo` function to get information about related lists on the asset. Note that when requesting information about *PrimaryAssets*, the response is labeled `Related Assets`, and the response for *RelatedAssets* is labeled `Primary Assets`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, those objects are available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AssetChangeEvent (API version 44.0)

Change events are available for the object.

AssetFeed

Feed tracking is available for the object.

AssetHistory

History is available for tracked fields of the object.

AssetOwnerSharingRule

Sharing rules are available for the object.

AssetShare

Sharing is available for the object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

AssetAction

Represents a change made to a lifecycle-managed asset. The fields can't be edited. This object is available in API version 50.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To use Customer Asset Lifecycle Management APIs, you must have the Access Customer Asset Lifecycle Management APIs permission and Read access to the Asset, Asset Action, Asset Action Source, and Asset State Period objects.

Fields

Field	Details
ActionDate	Type dateTime Properties Filter, Sort Description The date when an asset action change is recorded. This date can differ from the start date of the related asset state period. For example, suppose that a customer cancels a subscription in June, and the subscription expires in October. The date the customer cancels the subscription (June) is the action date of the asset action. The cancellation's effective date (October) is the start date of the asset state period.
ActualTaxChange	Type currency Properties Filter, Nillable, Sort Description The rollup of actual tax from all asset action sources. This field is populated by the system. Label is Change in Actual Tax. This field is a calculated field.
AdjustmentAmountChange	Type currency Properties Filter, Nillable, Sort Description The rollup of adjustment amount from all asset action sources. This field is populated by the system. Label is Change in Adjustment Amount. This field is a calculated field.
Amount	Type currency Properties Filter, Sort Description The delta in the total asset amount resulting from an asset action.

Field	Details
AssetActionNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The ID of the asset action. Label is Name.
AssetId	Type reference Properties Filter, Group, Sort Description The ID of the related lifecycle-managed asset. Label is Asset. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
CanRollBack	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the last asset action can be rolled back (<code>true</code>). If this property is set to <code>false</code>, the asset and the last asset action can't be rolled back. The default value is <code>false</code>. This field is available in API version 65.0 and later.
CategoryEnum	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The business category of the asset action, for use in reporting. Asset action totals are broken out by the picklist values on this required field, and those totals are in turn reflected on assets. These categories are available and aren't customizable. Label is Business Category. Possible values are: • Cancellations • Cross-Sells

Field	Details
	• Downgrades Indicates a transition to a lower-level version or tier of an asset. • Downsells Indicates a negative quantity amendment or a decreased Line Item total price with no change in quantity. • Initial Sale Indicates that the asset is initially purchased by an account. • Other • Renewals • Swaps Indicates the exchange of one asset for another. Applies to both swapped-out and swapped-in actions. • Terms And Conditions Changes • Transfers Indicates that an asset is transferred from one account to another. • Upgrades Indicates a transition to a higher-level version or tier of an asset. • Upsells Indicates a positive quantity amendment or an increased Line Item total price with no change in quantity.
EstimatedTaxChange	Type currency Properties Filter, Nillable, Sort Description The rollup of estimated tax from all asset action sources. This field is populated by the system. Label is Change in Estimated Tax. This field is a calculated field.
MrrChange	Type currency Properties Filter, Sort Description The delta in the asset's monthly recurring revenue resulting from an asset action. For example, suppose that the MRR during an asset state period is \$200 and the next asset action adds \$100. Then this field's value is \$100. Label is Change in Monthly Recurring Revenue.
ProductAmountChange	Type currency Properties Filter, Nillable, Sort Description The rollup of product amount from all asset action sources. This field is populated by the system. Label is Change in Product Amount. This field is a calculated field.

Field	Details
QuantityChange	Type double Properties Filter, Sort Description The delta in the asset quantity resulting from an asset action. For example, suppose that the asset quantity during an asset state period is 20 and the next asset action adds 10. Then this field's value is 10. Label is Change in Quantity.
RolledbackAssetAction	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The last asset action rolled back in the current rollback transaction. This field is available in API version 65.0 and later.
SubtotalChange	Type currency Properties Filter, Nillable, Sort Description The rollup of subtotal from all asset action sources. This field is populated by the system. Label is Change in Subtotal. This field is a calculated field.
Subtype	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The subtype of the action on the asset. Valid values are: • DowngradeFrom—Available in API version 66.0 and later. • DowngradeTo—Available in API version 66.0 and later. • FieldAmendment • Rollback • StartDateAdjustment • SwapIn—Available in API version 66.0 and later. • SwapOut—Available in API version 66.0 and later. • TransferFrom

Field	Details
	• <code>TransferTo</code> • <code>UpgradeFrom</code>—Available in API version 66.0 and later. • <code>UpgradeTo</code>—Available in API version 66.0 and later. This field is available in API version 65.0 and later.
<code>TotalAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of the current and previous asset action amount. This field is populated by the system. This field is a calculated field.
<code>TotalCancellationsAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Cancellations</code>. This field is populated by the system.
<code>TotalCrossSellsAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Cross-Sells</code>. This field is populated by the system.
<code>TotalDowngradesAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Downgrades</code>. This field is populated by the system and is available in API version 66.0 and later.
<code>TotalDownsellsAmount</code>	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The sum of current and previous asset action amounts categorized as <code>Downsell</code> s. This field is populated by the system.
<code>TotalInitialSaleAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Initial Sale</code> . This field is populated by the system.
<code>TotalMrr</code>	Type currency Properties Filter, Nillable, Sort Description The sum of the monthly recurring revenue for the current and previous asset action. This field is populated by the system. Label is Total Monthly Recurring Revenue .
<code>TotalOtherAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Other</code> . This field is populated by the system.
<code>TotalQuantity</code>	Type double Properties Filter, Nillable, Sort Description The sum of the changes in quantity for the current and previous asset action. This field is populated by the system.
<code>TotalRenewalsAmount</code>	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The sum of current and previous asset action amounts categorized as <code>Renewals</code> . This field is populated by the system.
<code>TotalSwapsAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Swaps</code> . This field is populated by the system and is available in API version 66.0 and later.
<code>TotalTermsAndConditionsAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Terms and Conditions Changes</code> . This field is populated by the system. Label is Total Terms and Conditions Changes Amount .
<code>TotalTransfersAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Transfers</code> . This field is populated by the system.
<code>TotalUpgradesAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of current and previous asset action amounts categorized as <code>Upgrades</code> . This field is populated by the system and is available in API version 66.0 and later.
<code>TotalUpsellsAmount</code>	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The sum of current and previous asset action amounts categorized as <code>Upsells</code> . This field is populated by the system.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The REST API used to generate the asset action. This field is populated by the system. Valid values are: • Cancel • Change • Convert • Generate

AssetActionSource

Represents an optional way to record what transactions caused changes to lifecycle-managed assets. Use it to trace financial and other information about asset actions. This object supports Salesforce order products and work order line items, and transaction IDs from other systems. The fields can't be edited. This object is available in API version 50.0 and later.

Supported Calls

`createable()`, `deletable()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undeletable()`, `updateable()`.

Special Access Rules

To use Customer Asset Lifecycle Management APIs, you must have the Access Customer Asset Lifecycle Management APIs permission and Read access to the Asset, Asset Action, Asset Action Source, and Asset State Period objects.

Fields

Field	Details
ActualTax	Type currency Properties Createable, Filter, Nillable, Sort, Updateable

Field	Details
	Description The region-specific tax amount determined at time of the order. This field is not used for price and tax calculations.
AdjustmentAmount	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description An adjustment to the product amount, such as a discount.
AssetActionId	Type reference Properties Createable, Filter, Group, Sort Description The related asset action, that is, the change caused by an asset action source transaction. This field is a relationship field. Relationship Name AssetAction Relationship Type Lookup Refers To AssetAction
AssetActionSourceNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The ID of the asset action source. Label is Name.
BillingReference	Type string Properties Filter, Group, Nillable, Sort Description The ID of the OrderItem or OrderItemDetail record that this AssetActionSource record is created for.

Field	Details
Discount	Type percent Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The discount, expressed as a percentage, that's applied to the asset. This field is available in API version 62.0 and later.
DiscountAmount	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The discount, expressed as currency, that's applied to the asset. This field is available in API version 62.0 and later.
EffectiveGrantDate	Type dateTime Properties Createable, Filter, Nillable, Sort, Updateable Description The date when the resources associated with the asset were granted. This field is available in orgs that have Revenue Cloud when Rate Management is enabled. This field is available in API version 62.0 and later.
EndDate	Type dateTime Properties Createable, Filter, Nillable, Sort, Updateable Description The end date of the service or change.
EstimatedTax	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The estimate of the region-specific tax amount made at time of the transaction.
ExternalReference	Type string

Field	Details
	Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The ID of an asset action source transaction originating in a system outside of Salesforce.
ExternalReferenceDataSource	Type string Properties Createable, Filter, Group, Nillable, Sort, Updateable Description A system outside of Salesforce that contains asset action source transactions.
LegalEntityId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The ID of the legal entity record associated with the asset action source transaction. This field is a relationship field. This field is available in API version 62.0 and later. Relationship Name LegalEntity Relationship Type Lookup Refers To LegalEntity
ListPrice	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description List price for the order product. Value is inherited from the associated PriceBookEntry upon order product creation.
NetUnitPrice	Type currency Properties Createable, Filter, Nillable, Sort, Updateable

Field	Details
	Description The final adjusted unit price, inclusive of all adjustments, but exclusive of tax. The unit price after all price adjustments are applied.
ObligatedAmount	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description When a line amount is prorated, this amount shows the service amount that's been consumed.
OriginalLineNumber	Type int Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The number of the original order item detail line. Salesforce uses this information to create a record to amend, renew, or cancel an order. This field is available in API version 64.0 and later. Relationship Name OrderItemDetail Relationship Type Lookup Refers To LineNumber
PeriodBoundary	Type picklist Properties Createable, Filter, Nillable, Sort, Updateable Description Boundary delimiters for periods. It determines when a period starts and/or ends. Valid values are: - AlignToCalendar - Anniversary - DayOfPeriod - LastDayOfPeriod
PeriodBoundaryDay	Type int

Field	Details
	Properties Createable, Filter, Nillable, Sort, Updateable Description The number specifying the day number when Period Boundary is a specific day in a week/month/year. It only applies when PeriodBoundary is set to "day of period."
PeriodBoundaryStartMonth	Type picklist Properties Createable, Filter, Nillable, Sort, Updateable Description Field is populated based on input in the StartDate, PeriodBoundary, and PeriodBoundaryDay when BillingFrequency2 is Annual or by manual user entry. Possible values are: 1-January 2-February 3-March 4-April 5-May 6-June 7-July 8-August 9-September 10-October 11-November 12-December
PricebookEntryId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description PricebookEntry is used as a lookup for price information in order to pre-populate OrderItem's ListPrice and UnitPrice.
PricingTermCount	Type double Properties Createable, Filter, Nillable, Sort, Updateable Description Number of pricing terms is this subscription product.

Field	Details
ProductAmount	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The product amount after the asset action source transaction.
ProductSellingModelId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description Specifies the product selling model type. Foreignkey to ProductSellingModel entity.
ProrationPolicyId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The ID of the ProrationPolicy used for pricing.
Quantity	Type double Properties Createable, Filter, Nillable, Sort, Updateable Description The product quantity or the change in product quantity after the asset action source transaction.
ReferenceEntityItemId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The ID of an asset action source transaction originating in Salesforce. The transaction can be an order product or a work order line item. This field is a polymorphic relationship field. Relationship Name ReferenceEntityItem Relationship Type Lookup

Field	Details
	Refers To OrderItem, WorkOrderLineItem
SegmentIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the ramp segment associated with the asset action source transaction. This field is available in API version 62.0 and later.
StartDate	Type dateTime Properties Createable, Filter, Nillable, Sort, Updateable Description The start date of the service or change.
Subtotal	Type currency Properties Filter, Nillable, Sort Description The sum of the product amount and the adjustment amount. This field is a calculated field.
TaxTreatmentId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description Lookup to Tax Treatment entity. It's used to calculate tax.
TotalLineAmount	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The price of the line before any price adjustments were applied. SalesTransactionItem: ProratedStartingTotal / StartingPriceTotal. Note: TotalPrice is computed using the UnitPrice,

Field	Details
	which includes discounts (price adjustments), while TotalLineAmount doesn't include price adjustments.
TotalPrice	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description Calculated by the pricing engine for ARC. Summation of TotalAdjustmentAmount plus TotalLineAmount for this item.
TransactionDate	Type dateTime Properties Createable, Filter, Nillable, Sort, Updateable Description The date of a source transaction, such as an order date.
UnitPrice	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The unit price of the item before any discounts or tax calculation.

AssetAttribute

Stores asset attributes to track and analyze asset conditions to improve their uptime. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `update()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Sort Description The ID of the asset. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
AttributeDefinitionId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the attribute definition for this asset attribute. This field is a relationship field. Relationship Name AttributeDefinition Relationship Type Lookup Refers To AttributeDefinition
AttributeName	Type string Properties Filter, Group, Sort Description The name given to the asset attribute in the UI by the user.
AttributePicklistValueId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the attribute picklist value if the attribute is a picklist type. This field is a relationship field. Relationship Name AttributePicklistValue Relationship Type Lookup Refers To AttributePicklistValue
AttributeValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Stores the value of an asset attribute, for example 5-TB storage .
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An auto-generated ID of the attribute record saved in an external system (for example an HBase database). This field is reserved and used for internal purpose.

Usage

Add asset descriptors to the AssetAttribute object instead of creating multiple custom attributes on an asset. This helps scale to a high asset volume in the system.

[AttributePicklist](#)
[AttributePicklistValue](#)
[RecordsetFiltrCritMonitor](#)

AssetContractRelationship

Represents a relationship between an asset and a contract. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions of Revenue Cloud.

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the asset related to the contract. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
ContractId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the contract related to the asset. This field is a relationship field. Relationship Name Contract Relationship Type Lookup Refers To Contract
EndDate	Type dateTime

Field	Details
	Properties Create, Filter, Sort, Update Description The end date and time of the relationship between contract and asset.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view. The associated UI label is Last Modified Date .
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view (LastReferencedDate) but didn't view it.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated number assigned to AssetContractRelationship. (Read Only)
StartDate	Type dateTime Properties Create, Filter, Sort, Update Description The start date and time of the relationship between contract and asset.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AssetContractRelationshipFeed](#)

Feed tracking is available for the object.

AssetContractRelationshipHistory

History is available for tracked fields of the object.

AssetDowntimePeriod

Represents a period during which an asset is not able to perform as expected. Downtime periods include planned activities, such as maintenance, and unplanned events, such as mechanical breakdown. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssetDowntimePeriodNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique number of this asset downtime period record.
AssetId	Type reference Properties Create, Filter, Group, Sort Description The ID of the asset this asset downtime period record is for.
Description	Type textarea Properties Create, Nillable, Update Description The description of this asset downtime period.
DowntimeType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The type of this asset downtime period. Possible values are: - Planned - Unplanned
EndTime	Type dateTime Properties Create, Filter, Sort, Update Description The time this asset downtime period ended.
IsExcluded	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether this asset downtime period is excluded from the calculation of accumulated downtime and accumulated unplanned downtime, and therefore not included in availability and reliability calculations.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
StartTime	Type dateTime Properties Create, Filter, Sort, Update Description The time this asset downtime period started.

AssetOwnerSharingRule

Represents the rules for sharing an Asset with users other than the owner. This object is available in API version 33.0 and later.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>AssetAccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit
<code>Description</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters.
<code>DeveloperName</code>	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a

Field	Details
	letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group. Cases owned by users in the source group trigger the rule to give access.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the target user or group. Target users or groups are given access.

Usage

Use this object to manage the sharing rules for assets. General sharing uses this object.

SEE ALSO:

[Metadata API Developer Guide: SharingRules](#)

AssetRateAdjustment

Stores the tier rate adjustments for the asset rate card entries. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available in orgs where Revenue Cloud is enabled.

Fields

Field	Details
AdjustmentType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of rate adjustment. Valid values are: • Amount—Adjusts rate by using a specific amount. • Override—Adjusts rate by using the override rate. • Percentage—Adjusts rate by using a percentage.
AdjustmentValue	Type double Properties Filter, Sort Description The value of the adjustment.
AssetRateCardEntryId	Type reference Properties Filter, Group, Sort Description The ID of the parent asset rate card entry record associated with the asset rate adjustment.

Field	Details
	This field is a relationship field. Relationship Name AssetRateCardEntry Relationship Type Master-detail Refers To AssetRateCardEntry (the master object)
LowerBound	Type double Properties Filter, Nillable, Sort Description The minimum quantity for the adjustment to be applicable.
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the asset rate adjustment.
UpperBound	Type double Properties Filter, Nillable, Sort Description The maximum quantity for the adjustment to be applicable.

AssetRateCardEntry

Stores the negotiated rate card entries that are associated with an asset in Revenue Cloud. This object is available in API version 62.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available in orgs where Revenue Cloud is enabled.

Fields

Field	Details
AssetId	Type reference Properties Filter, Group, Sort Description The ID of the asset rate card entry record. This field is a relationship field. Relationship Name Asset Relationship Type Master-detail Refers To Asset (the master object)
BindingObjectFormula	Type string Properties Filter, Group, Nillable, Sort Description The formula that returns the ID of the associated binding object, if specified. If binding object isn't added, the formula returns the asset ID of the asset related to this asset rate card entry. This field is read-only. Available in API version 65.0 and later.
BindingObjectId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the binding object associated with the asset rate card entry. Available in API version 65.0 and later. This field is a relationship field. Relationship Name BindingObject Refers To Asset

Field	Details
BindingObjectRateOrder	Type double Properties Filter, Nillable, Sort Description The order that determines the applicable binding object rate when multiple rates are defined for an Anchor binding object within a effective period. Available in API version 65.0 and later.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The ID of the binding object associated with the asset rate card entry. Possible values are: • AED - UAE Dirham • AUD - Australian Dollar • BRL - Brazilian Real • CAD - Canadian Dollar • EUR - Euro • GBP - British Pound • INR - Indian Rupee • JPY - Japanese Yen • SEK - Swedish Krona • USD - U.S. Dollar The default value is USD. Available in API version 65.0 and later.
EndDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the rate card's time period becomes inactive. The rate card becomes inactive at 11:59:00 PM on the end date.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description An auto-generated number assigned to the asset rate card entry. Read-only.
NegotiatedRate	Type double Properties Filter, Sort Description The base negotiated rate used to charge overage consumption.
RateCardEntryId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the rate card entry record containing the catalog rates that's associated with the asset rate card entry. This field is a relationship field. Relationship Name RateCardEntry Refers To RateCardEntry
RateCardId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the rate card record that's associated with the asset rate card entry. This field is a relationship field. Relationship Name RateCard Refers To RateCard
RateUnitOfMeasureId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the unit of measure record that's associated with the asset rate card entry.

Field	Details
	This field is a relationship field. Relationship Name RateUnitOfMeasure Refers To UnitOfMeasure
StartDate	Type dateTime Properties Filter, Sort Description The date when the rate card's time period becomes active. The rate card becomes active at 12:00:00 AM on the start date.
UsageResourceId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the usage resource record that's associated with the asset rate card entry. This field is a relationship field. Relationship Name UsageResource Refers To UsageResource

AssetRelationship

Represents a non-hierarchical relationship between assets due to an asset modification; for example, a replacement, upgrade, or other circumstance. In Revenue Lifecycle Management, this object represents an asset or assets grouped in a bundle or set. This object is available in API version 41.0 and later.

Asset relationships appear in the Primary Assets and Related Assets related lists on asset records in the UI.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Some fields are available only in Revenue Cloud. Field availability is noted in the field detail column.

Fields

Field Name	Details
AssetId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of the new asset, which is the asset that is taking the place of the existing asset. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
AssetRelationshipNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number identifying the asset relationship.
AssetRole	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Describes the position of the main asset relative to the other assets in the relationship. This field is available in API version 58.0 and later. This field is available in orgs with Revenue Cloud. Possible values are: • Add-on—The main asset is an add-on. • Bundle—The main asset is the bundle parent. • Set—The asset is the main asset in the set.
CurrencyIsoCode	Type picklist

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the asset. The default value is USD.
FromDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the new asset was installed.
GroupingKey	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Read-only field used to indicate the bundle that an asset belongs to. For example, if two assets have the same GroupingKey value, then it means that the assets are bundled together. This field is available in API v.60.0 and later. This field is available in orgs with Revenue Cloud.
ProductRelationshipTypeId	Type reference Properties Filter, Group, Nillable, Sort Description The unique identifier of the record that describes the relationship between the main and associated assets. This field is available in API version 58.0 and later. This field is available in orgs with Revenue Cloud. This field is a relationship field. Relationship Name ProductRelationshipType Relationship Type Lookup Refers To ProductRelationshipType

Field Name	Details
ProductRelatedComponent	Type reference Properties Filter, Group, Nillable, Sort Description The product related component that's associated with the asset relationship. This field is a relationship field. This field is available in API 60.0 and later in Revenue Cloud. Relationship Name ProductRelatedComponent Relationship Type Lookup Refers To ProductRelatedComponent
RelatedAssetId	Type reference Properties Create, Filter, Group, Sort, Update Description The existing asset that is being modified. This field is a relationship field. Relationship Name RelatedAsset Relationship Type Lookup Refers To Asset
RelatedAssetPricing	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies whether the price of the related asset is included in the bundle price. Valid values are: • IncludedInBundlePrice • NotIncludedInBundlePrice This field is available in API version 59.0 and later in Revenue Cloud.

Field Name	Details
RelatedAssetQtyScaleMethod	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies how the quantity of the related asset changes relative to the quantity of the parent asset. Valid values are: • Constant • Proportional This field is available in API version 59.0 and later in Revenue Cloud.
RelatedAssetRole	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Describes the position of the associated asset relative to other assets in the relationship. This field is available in API version 58.0 and later. This field is available in orgs with Revenue Cloud. Valid values are: • Add-on—The main asset is an add-on. • Bundle—The main asset is the bundle parent. • Set—The asset is the main asset in the set. • Simple—The asset is purchased individually and isn't associated with variations. • Variation Parent—The main asset is the variation parent.
RelationshipType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type of relationship between the existing asset and the new asset. This field comes with three values—Replacement, Upgrade, and Crossgrade—, but you can create more values in Setup. Possible values are: • Crossgrade—The new asset is a crossgrade of an existing asset. For example, changing a subscription to a plan with the same service, but that runs for a longer amount of time.

Field Name	Details
	Replacement—The new asset is replacing an existing asset. For example, a customer’s faulty widget that was under warranty is being replaced with a new one. Upgrade—The new asset is an upgrade of an existing asset. For example, upgrading a customer’s existing subscription plan to a new plan with more services. The default value is Replacement.
ToDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the modified asset is uninstalled.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

AssetRelationshipChangeEvent (API version 62.0)

Change events are available for the object.

AssetRelationshipFeed

Feed tracking is available for the object.

AssetRelationshipHistory

History is available for tracked fields of the object.

AssetRelationshipOwnerSharingRule (API version 58.0)

Sharing rules are available for the object.

AssetRelationshipShare (API version 58.0)

Sharing is available for the object.

AssetShare

Represents a sharing entry on an Asset. This object is available in API version 33.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose **RowCause** field is set to **Manual**. Sharing entries for standard objects with different **RowCause** values are created as a result of your Salesforce org’s sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren’t stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it’s possible that we’ll stop storing certain share records to improve performance. As a best practice, don’t create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>AssetAccessLevel</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Level of access that the User or Group has to the Asset. The possible values are: • Read • Edit • All This value is not valid for creating or deleting records. This field must be set to an access level that is higher than the organization's default access level for cases.
<code>AssetId</code>	Type reference Properties Filter, Group, Sort Description ID of the Asset associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
<code>IsDeleted</code>	Type boolean

Field	Details
	Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
RowCause	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the Asset with them. • <code>Owner</code>—The User is the owner of the Asset. • <code>Rule</code>—The User or Group has access via an Asset sharing rule. • <code>GuestRule</code>—The User or Group has access via an Asset guest user sharing rule. • <code>LpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group.
UserOrGroupId	Type reference Properties Filter, Group, Sort Description ID of the User or Group that has been given access to the Asset. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object allows you to determine which users and groups can view and edit Asset records owned by other users.

If you attempt to create a new record that matches an existing record, request updates any modified fields and returns the existing record.

AssetStatePeriod

Represents a time span when an asset has the same quantity, amount, and monthly recurring revenue (MRR). An asset has as many asset state periods as there are changes to it (asset actions) during its lifecycle. The dashboard and related pages show the current asset state period. The fields can't be edited. This object is available in API version 50.0 and later.

Supported Calls

`createable()`, `deletable()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `updateable()`.

Special Access Rules

To use Customer Asset Lifecycle Management APIs, you must have the Access Customer Asset Lifecycle Management APIs permission and Read access to the Asset, Asset Action, Asset Action Source, and Asset State Period objects.

Fields

Field	Details
Amount	Type currency Properties Createable, Filter, Sort, Updateable Description An asset's total amount during an asset state period. Revenue Cloud doesn't set or use this field's value currently.
AssetId	Type reference Properties Createable, Filter, Group, Sort Description The asset related to an asset state period. Label is Asset. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset

Field	Details
AssetStatePeriodNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The ID of the asset state period. Label is Name.
BillingFrequency	Type picklist Properties Createable, Filter, Group, Nillable, Restricted picklist, Sort, Updateable Description The time period that indicates how often the line item is billed. Possible values are: • Annual • Monthly • Quarterly • Semi-Annual Available in API version 65.0 and later.
BindingInstanceTargetId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The ID of a custom product target for a usage-based quote line item, order item, or asset allocation. This field is a polymorphic relationship field. Relationship Name BindingInstanceTarget Refers To Account, Asset, BindingObjectCustomExt, Contract
Discount	Type percent Properties Createable, Filter, Nillable, Sort, Updateable Description Editable number from 0 to 100. Available in API version 65.0 and later.

Field	Details
DiscountAmount	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The fixed amount discount to apply to the line item. Available in API version 65.0 and later.
EndDate	Type dateTime Properties Createable, Filter, Nillable, Sort, Updateable Description The end date and time of an asset state period. On an asset that is an evergreen subscription, the last asset state period has no end date.
LegalEntityId	Type reference Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The ID of the related legal entity. This field is a relationship field. Relationship Name LegalEntity Refers To LegalEntity
Mrr	Type currency Properties Createable, Filter, Sort, Updateable Description An asset's monthly recurring revenue during an asset state period.
PriceRevisionPolicy	Type reference Properties Createable, Filter, Group, Sort, Updateable Description Specifies the price uplift policy associated with this asset state period. This field is a relationship field.

Field	Details
	This field is available in API version 65.0 and later. Relationship Name Price Revision Policy Relationship Type Lookup Refers To PriceRevisionPolicy
Quantity	Type double Properties Createable, Filter, Sort, Updateable Description The total quantity of an asset during an asset state period.
RampIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ramp record used to group order item segments for this asset state period. This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled. This field is available in API version 62.0 and later.
SegmentIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The order item segment for this asset state period. This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled. This field is available in API version 62.0 and later.
SegmentName	Type string Properties Createable, Filter, Group, Nillable, Sort, Updateable Description The name of the order item segment for this asset state period. This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled.

Field	Details
	This field is available in API version 62.0 and later.
SegmentType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Updateable Description The period for the order item segment for this asset state period. Valid values are: • Custom • Free Trial • Yearly The default value is Yearly. This field is available in orgs that have Revenue Cloud when the Ramp Deals setting is enabled. This field is available in API version 62.0 and later.
StartDate	Type dateTime Properties Createable, Filter, Sort, Updateable Description The start date and time of an asset state period.
UnitPrice	Type currency Properties Createable, Filter, Nillable, Sort, Updateable Description The price per unit for the line item. Available in API version 65.0 and later. Revenue Cloud won't populate this field in API version 66.0 and later.
UnitPriceUplift	Type percent Properties Createable, Filter, Nillable, Sort, Updateable Description Indicates the percentage increase of a line item's unit price. Available in API version 65.0 and later.

AssetStatePeriodAttribute

Represents a virtual object that holds the key-value pair of the asset attribute in a specified asset state period. This object is a child object of AssetStatePeriod. This object is available in API version 60.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available in Enterprise, Unlimited, and Developer Editions of Revenue Cloud with the [Access Lifecycle-Managed Assets user permission](#). This object is editable only through API and not the UI.

Fields

Field	Details
AssetStatePeriodId	Type reference Properties Filter, Group, Sort Description The asset state period that's associated with the asset attribute. This field is a relationship field. Relationship Name AssetStatePeriod Relationship Type Master-detail Refers To AssetStatePeriod (the master object)
AttributeDefinitionId	Type reference Properties Filter, Group, Sort Description The attribute definition that's associated with the asset state period attribute. This field is a relationship field. Relationship Name AttributeDefinition

Field	Details
	Relationship Type Lookup
	Refers To AttributeDefinition
AttributeName	Type string
	Properties Filter, Group, idLookup, Nillable, Sort
	Description The name of the asset attribute.
AttributePicklistValueId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The value specified in the picklist type field that corresponds to the attribute in the AttributePicklistValue object. This field is a relationship field.
	Relationship Name AttributePicklistValue
	Relationship Type Lookup
	Refers To AttributePicklistValue
AttributeValue	Type string
	Properties Filter, Group, Nillable, Sort
	Description The value of the asset state period attribute. For example, a shirt can have the value of <code>blue</code> , which indicates the shirt's color, or it can have the value of <code>small</code> , which indicates the shirt's size. You can use this field to filter records only if the <code>DataType</code> value in the related <code>AttributeDefinitionId</code> record is <code>Text</code> . If the <code>DataType</code> value is <code>Picklist</code> , use the value in the <code>AttributePicklistValueId</code> field for filtering. You can't use this field to filter records if the <code>DataType</code> value is <code>Checkbox</code> , <code>Currency</code> , <code>Date</code> , <code>Datetime</code> , <code>Multipicklist</code> , <code>Number</code> , or <code>Percent</code> .

Usage

This object doesn't support custom fields, validation rules, or triggers. In SOQL queries, you can filter records by using `Id` and `AttributeDefinition`. You can't use `AttributeValue` in the `WHERE` clause.

AssetTag

Associates a word or short phrase with an Asset.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
<code>ItemId</code>	Type reference Properties Create, Filter Description ID of the tagged item.
<code>Name</code>	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new <code>TagDefinition</code> is created and becomes the parent of this <code>Tag</code> object. Otherwise, a <code>TagDefinition</code> with the same name becomes the parent of this <code>Tag</code> object. Parent relationships are created automatically.
<code>TagDefinitionId</code>	Type reference Properties Filter Description ID of the parent <code>TagDefinition</code> object that owns the tag.
<code>Type</code>	Type picklist Properties Create, Filter, Restricted picklist

Field Name	Details
	Description Defines the visibility of a tag. Valid values: • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

AssetTag stores the relationship between its parent TagDefinition and the Asset being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

AssetTokenEvent

The documentation has moved to [AssetTokenEvent](#) in the *Platform Events Developer Guide*.

AssetWarranty

Defines the warranty terms applicable to an asset along with any exclusions and extensions. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AssetId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the asset this warranty term applies to.

Field	Details
AssetWarrantyNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The identifier of the asset warranty record.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which this warranty term expires.
ExchangeType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of exchange offered by this warranty term.
Exclusions	Type textarea Properties Create, Nillable, Update Description Description of any exclusions.
ExpensesCovered	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of expenses covered.
ExpensesCoveredEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which cover for expenses ends.

Field	Details
IsTransferable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Defines whether the warranty term can be transferred to a new owner.
LaborCovered	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of labor covered.
LaborCoveredEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which cover for labor ends.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the asset warranty term was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the asset warranty term was last viewed.
PartsCovered	Type percent Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The percentage of parts covered.
PartsCoveredEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which cover for parts ends.
Pricebook2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the price book item associated with this asset warranty term.
StartDate	Type date Properties Create, Filter, Group, Sort, Update Description The date on which cover under this warranty term starts.
WarrantyTermId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the warranty term this asset warranty term extends.
WarrantyType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of the warranty.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AssetWarrantyChangeEvent](#)

Change events are available for the object.

AssignedResource

Represents a service resource who is assigned to a service appointment in Field Service and Lightning Scheduler. Assigned resources appear in the Assigned Resources related list on service appointments. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>ActualTravelTime</code>	Type double Properties Create, Filter, Nillable, Sort, Update Description The number of minutes that the service resource needs to travel to the assigned service appointment. You can enter a value with up to two decimal places.
<code>ApptAssistantInfoUrl</code>	Type textarea Properties Create, Nillable, Update Description The URL that contains the status of the mobile worker approaching the service appointment, the Community URL, and the expiry of the URL. Available in version 51.0 and later.
<code>AssignedResourceNumber</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number identifying the resource assignment.

Field Name	Details
EstimatedTravelTime	Type double Properties Create, Filter, Nillable, Sort, Update Description The estimated number of minutes needed for the service resource to travel to the service appointment they're assigned to. You can enter a value with up to two decimal places.
LocationStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the mobile worker approaching the service appointment. When the location status changes to one of these values, a status update containing <code>ApptAssistantInfoUrl</code> is sent to the customer. Available in version 51.0 and later. Possible values are: • EnRoute • LastMile
IsPrimaryResource	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the service resource is a primary resource or not. The default value is false. Available in API version 47.0 and later.
ServiceAppointmentId	Type reference Properties Create, Filter, Group, Sort Description The service appointment that the resource is assigned to. This is a relationship field. Relationship Name ServiceAppointment Relationship Type Lookup

Field Name	Details
	Refers To ServiceAppointment
ServiceCrewId	Type reference Properties Create, Update, Filter, Group, Sort, Nillable Description The service crew that the resource is assigned to.  Note: Since service resources can represent crews or individuals, appointments are typically assigned to crews in the following way: 1. Create a service resource of the Crew type that represent the crew. 2. Create an assigned resource on the service appointment and select the crew resource in the <code>ServiceResourceId</code> field. As an alternative, you can assign appointments to crew members separately. This lets you track each member's travel time and see a list of the crew members in the Assigned Resources related list. To take this approach, create an assigned resource for each crew member. List the crew member in the <code>ServiceResourceId</code> field and the crew they belong to in the <code>ServiceCrewId</code> field.
ServiceResourceId	Type reference Properties Create, Update, Filter, Group, Sort Description The resource who is assigned to the service appointment. This is a relationship field. Relationship Name ServiceResource Relationship Type Lookup Refers To ServiceResource
Transaction	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The last transaction ID of the scheduling and optimization request that updated this object. The transaction ID is automatically generated and populated by the Enhanced Scheduling and Optimization engine. Available in API version 63.0 and later.

Usage

You can assign multiple service resources to a service appointment. Service resources who are assigned to service appointments cannot be deactivated until they are removed from the appointments.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AssignedResourceChangeEvent (API version 48.0)

Change events are available for the object.

AssignedResourceHistory on page 63 (API version 61.0)

History is available for tracked fields of the object.

AssignedResourceFeed

Feed tracking is available for the object.

AssignmentRule

Represents an assignment rule associated with a Case or Lead.

Supported Calls

`describeObjects()`, `query()`, `retrieve()`, `search()`

Special Access Rules

- This object is read only. Assignment rules are created, configured, and deleted in the user interface.
- Customer Portal users can't access this object.

Fields

Field	Details
Active	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this assignment rule is active (<code>true</code>) or not (<code>false</code>).
Name	Type string Properties Filter, Group, Nillable, Sort Description Name of this assignment rule.
SubjectType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type of assignment rule—Case or Lead.

Usage

Before creating or updating a new Case or Lead, a client application can query (by name) the AssignmentRule to obtain the ID of the assignment rule to use, and then assign that ID to the `assignmentRuleId` field of the AssignmentRuleHeader. The AssignmentRuleHeader can be set using either SOAP API or REST API.

Assignment rules can also be specified when creating or upserting Case or Lead objects via the Bulk API or the Bulk 2.0 API.

[Overview of Salesforce Objects and Fields](#)

AssociatedLocation

Represents a link between an account and a location in Field Service. You can associate multiple accounts with one location. For example, a shopping center location may have multiple customer accounts.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ActiveFrom	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date and time the associated location is active.
ActiveTo	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date and time the associated location stops being active.
AssociatedLocationNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-generated number identifying the associated location.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the associated location was last modified.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the associated location was last viewed.

Field Name	Details
LocationId	Type reference Properties Create, Filter, Group, Sort, Update Description The location associated with the address. This is a relationship field. Relationship Name Location Relationship Type Lookup Refers To Location
ParentRecordId	Type reference Properties Create, Filter, Group, Sort Description The account associated with the location. This is a relationship field. Relationship Name ParentRecord Relationship Type Lookup Refers To Account
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Picklist of address types. The values are: • Bill To • Ship To

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

AssociatedLocationChangeEvent (API version 62.0)

Change events are available for the object.

AssociatedLocationHistory

History is available for tracked fields of the object.

AsyncApexJob

Represents an individual Apex sharing recalculation job, a batch Apex job, a method with the `future` annotation, or a job that implements `Queueable` or `Schedulable`. Use this object to query Apex batch jobs in your organization.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

If Apex isn't running in system mode, users must have the View Setup and Configuration permission to access this object and to enqueue asynchronous Apex jobs.

Fields

Field Name	Details
ApexClassId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Apex class executing the job. Label is <code>Class ID</code>. This is a relationship field. Relationship Name ApexClass Relationship Type Lookup Refers To ApexClass
CompletedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the job was completed.

Field Name	Details
CronTriggerId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the CronTrigger for the AsyncApexJob. This field only applies to ScheduledApex job type. This field is available in API version 53.0 and later. For scheduled jobs created before version 53.0, this field is populated on subsequent execution. This is a relationship field. Relationship Name CronTrigger Relationship Type Lookup Refers To CronTrigger
ExtendedStatus	Type string Properties Filter, Group, Nillable, Sort Description If one or more errors occurred during the batch processing, this field contains a short description of the first error. A more detailed description of that error, along with any subsequent errors, is emailed to the last user who modified the batch class. This field is available in API version 19.0 and later.
JobItemsProcessed	Type int Properties Filter, Group, Sort Description Number of job items processed. Label is <code>Batches Processed</code>.
JobType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of job being processed. Valid values are: - ApexToken - BatchApex

Field Name	Details
	• BatchApexWorker • Future • Queueable • ScheduledApex • SharingRecalculation • TestRequest • TestWorker
LastProcessed	Type string Properties Filter, Group, Nillable, Sort Description Last ID that was processed and committed.
LastProcessedOffset	Type int Properties Filter, Group, Nillable, Sort Description Offset of the last ID that was processed and committed.
MethodName	Type string Properties Filter, Group, Nillable, Sort Description The name of the Apex method being executed. Label is <code>Apex Method</code>.
NumberOfErrors	Type int Properties Filter, Group, Nillable, Sort Description Total number of batches with a failure. A batch is considered transactional, so any unhandled exceptions constitute an entire failure of the batch. Label is <code>Failures</code>.
ParentJobId	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description For batch Apex jobs that run using chunking implementation, multiple child jobs of type <code>BatchApexWorker</code> are created. Each of these child job records contains the job Id of the parent Apex job that started their execution. For batch Apex jobs that run using a non-chunking implementation, child jobs aren't created.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the job. Valid values are: • Aborted • Completed • Failed • Holding¹ • Preparing • Processing • Queued ¹ This status applies to batch jobs in the Apex flex queue.
TotalJobItems	Type int Properties Filter, Group, Nillable, Sort Description Total number of batches processed. Each batch contains a set of records. Label is <code>Total Batches</code> .

Usage

Use this object to query Apex batch jobs in your organization.

AsyncOperationLog

Represents an async operations log containing progress and status information about external synchronizations to the Omnichannel Inventory service. This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
AsyncOperationNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated number assigned to the operation.
Description	Type string Properties Filter, Group, Nillable, Sort Description Description of the operation.
Error	Type string Properties Filter, Group, Nillable, Sort Description The error message for the operation. Applies only if the operation has an error.
ExternalReference	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The unique external reference ID per type.
FinishedAt	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date and time the operation finished.
LastStatusUpdateAt	Type dateTime Properties Filter, Nillable, Sort Description The date and time the status of the operation was last updated.
RelatedRecordId	Type reference Properties Filter, Group, Nillable, Sort Description The related record ID for the async request. This field is available in API version 60.0 and later. This field is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To Asset, OrderItemSummary
Request	Type textarea Properties Nillable Description The request sent to the external service.
Response	Type textarea Properties Nillable Description The full response from the external service.

Field	Details
StartedAt	Type dateTime Properties Filter, Nillable, Sort Description The date and time the operation started.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the operation. Possible values are: - Completed - Error - In Progress - New
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of operation that is being tracked. Possible values are: - CancelAsset—This value is available in API version 60.0 and later. - CreateAsset—This value is available in API version 60.0 and later. - CancelOrderItemSummaries - ImportInventory - LocationManagement - OrderSummaryAdjustmentAggregate

AsyncOperationTracker

Represents the status of an asynchronous request initiated from the Quote, Order, and CreditMemo objects. This object is available in API version 61.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
AsyncOperationNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description A string that identifies the operation tracked in AsyncOperationTracker.
CorrelationIdentifier	Type string Properties Filter, Group, Nillable, Sort Description A string that identifies an operation across services.
ExpiresAt	Type dateTime Properties Filter, Nillable, Sort Description The timestamp indicating when this record will be deleted.
FailedJobItems	Type int Properties Filter, Group, Nillable, Sort Description The number of items within the job that have failed.
FinishedAt	Type dateTime Properties Filter, Nillable, Sort Description The timestamp indicating when the asynchronous process completed.

Field	Details
JobType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of job. Possible values are: • <code>ASMAAdServerCheckAvailability</code>. This field is available in API version 66.0 and later. • <code>ASMAAdServerIntegration</code>. This field is available in API version 66.0 and later. • <code>ASMAAddRelatedEntityToAQL</code>. This field is available in API version 66.0 and later. • <code>ASMAApplyMediaPlanTemplateJob</code>. This field is available in API version 66.0 and later. • <code>ASMAApplyTargetingTemplateJob</code>. This field is available in API version 66.0 and later. • <code>ASMCalcLinearMediaSpotPrc</code>. This field is available in API version 66.0 and later. • <code>ASMCreateAmendQuoteJob</code>. This field is available in API version 66.0 and later. • <code>ASMFileProcessorJob</code>. This field is available in API version 66.0 and later. • <code>ASMMediaPlanAsTemplate</code>. This field is available in API version 66.0 and later. • <code>ASMMediaPlanClone</code>. This field is available in API version 66.0 and later. • <code>ASMMediaPlanCopyJob</code>. This field is available in API version 66.0 and later. • <code>AssetizationAsyncJob</code> • <code>AutomatedNegativeInvoiceLineConversion</code> • <code>AutomaticRefunds</code> • <code>CommerceVariationsUpsert</code> • <code>ContextPersistence</code> • <code>CreateCPQContractsJob</code> • <code>CreditMemoDraftToPosted</code>. This field is available in API version 66.0 and later. • <code>CreditMemoRecovery</code>. This field is available in API version 66.0 and later. • <code>DeltaCatalogSyndicationAsyncJob</code> • <code>energyAgreementSetup</code>. This field is available in API version 66.0 and later. • <code>FullCatalogSyndicationAsyncJob</code> • <code>InvoiceBatchRunEmailJob</code>. This field is available in API version 66.0 and later. • <code>InvoiceDocgenJob</code> • <code>InvoiceDocgenPostProcessJob</code> • <code>InvoiceDocgenRetryJob</code> • <code>InvoiceDraftToPosted</code>

Field	Details
	• InvoiceEstimatedTaxCallout. This field is available in API version 66.0 and later. • LoadSalesRecipientData. This field is available in API version 66.0 and later. • MultisiteAutoQuote. This field is available in API version 66.0 and later. • PearAmendQtyAssets—Initiate Amend Quantity • PearCancelAssets—Initiate Cancellation • PearRenewAssets—Initiate Renewal • PlaceOrder • PlaceOrderPersistSync • PlaceOrderPriceAsync • PlaceOrderTaxAsync • PlaceQuote • PlaceQuotePersistAndPriceSync • PlaceQuotePersistSync • PlaceQuotePriceAsync • PlaceQuoteTaxAsync • PreprocessOrder. This field is available in API version 66.0 and later. • PriceRuleDeployment • PriceSheetDeployJob • PSTBaseJob—Top-Level. This field is available in API version 66.0 and later. • PSTConfig—Configuration. This field is available in API version 66.0 and later. • PSTPersist—Save. This field is available in API version 66.0 and later. • PSTPrice. This field is available in API version 66.0 and later. • QuoteToOrderJob • RuleLibraryDeployment • SmsDltTemplateIngestion. This field is available in API version 66.0 and later. • StandaloneBillingSchedulesCreation. This field is available in API version 66.0 and later. • StatementOfAccountGeneration. This field is available in API version 66.0 and later. • StoreRetrieveSyncJob. This field is available in API version 66.0 and later. • TestSerialMessageStepJob. This field is available in API version 66.0 and later. • TransactionLineBom—Create Material Lines • VoidCreditMemo. This field is available in API version 66.0 and later.
LastReferencedDate	Type dateTime
	Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user only accessed this record or list view (LastReferencedDate) but not viewed it.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the user or group that owns the job. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
ParentOperationId	Type reference Properties Filter, Group, Nillable, Sort Description This field is a relationship field. Relationship Name ParentOperation Refers To AsyncOperationTracker
ReferenceEntityId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description Contains the ID of a record associated with the asynchronous request. For example, if the asynchronous request is associated with a credit memo, this field contains the ID of the credit memo. This field is a polymorphic relationship field. Relationship Name ReferenceEntity Refers To CreditMemo, InvoiceBatchRun, Order, Product2, Quote
Request	Type textarea Properties Nillable Description The payload required to process the async request that's populated by internal Salesforce services that use the async framework. This field is available in API version 66.0 and later.
Response	Type textarea Properties Nillable Description Stores the response for each step in the async flow, used in the next steps of the flow until its completion. This field is available in API version 66.0 and later.
SequenceNumber	Type int Properties Filter, Group, Nillable, Sort Description The sequence number associated with each step of a multiple step job, to define the execution order for the async job flow. This field is available in API version 66.0 and later.
StartedAt	Type dateTime Properties Filter, Nillable, Sort Description The timestamp indicating when Salesforce started the asynchronous process.

Field	Details
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the asynchronous request. Possible values are: - Completed - CompletedWithFailures - Failure - InProgress - Submitted
StepName	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Possible values are: - ASMAAdServerCheckAvailability. This field is available in API version 66.0 and later. - ASMAAdServerIntegration. This field is available in API version 66.0 and later. - ASMAAddRelatedEntityToAQL. This field is available in API version 66.0 and later. - ASMAApplyMediaPlanTemplateJob. This field is available in API version 66.0 and later. - ASMAApplyTargetingTemplateJob. This field is available in API version 66.0 and later. - ASMCalcLinearMediaSpotPrc. This field is available in API version 66.0 and later. - ASMCreateAmendQuoteJob. This field is available in API version 66.0 and later. - ASMFileProcessorJob - ASMMediaPlanAsTemplate. This field is available in API version 66.0 and later. - ASMMediaPlanClone. This field is available in API version 66.0 and later. - ASMMediaPlanCopyJob. This field is available in API version 66.0 and later. - AssetizationAsyncJob - AutomatedNegativeInvoiceLineConversion - AutomaticRefunds - CommerceVariationsUpsert - ContextPersistence

Field	Details
	• <code>CreateCPQContractsJob</code> • <code>CreditMemoDraftToPosted</code>. This field is available in API version 66.0 and later. • <code>CreditMemoRecovery</code>. This field is available in API version 66.0 and later. • <code>DeltaCatalogSyndicationAsyncJob</code> • <code>energyAgreementSetup</code>. This field is available in API version 66.0 and later. • <code>FullCatalogSyndicationAsyncJob</code> • <code>InvoiceBatchRunEmailJob</code>. This field is available in API version 66.0 and later. • <code>InvoiceDocgenJob</code> • <code>InvoiceDocgenPostProcessJob</code> • <code>InvoiceDocgenRetryJob</code> • <code>InvoiceDraftToPosted</code> • <code>InvoiceEstimatedTaxCallout</code>. This field is available in API version 66.0 and later. • <code>PSTPersist—Save</code>. This field is available in API version 66.0 and later. • <code>PSTPrice</code>. This field is available in API version 66.0 and later. • <code>PSTPriceAndPersist</code>. This field is available in API version 66.0 and later.

Field	Details
	• <code>PSTQuoteTaxAsync</code>. This field is available in API version 66.0 and later. • <code>QuoteToOrderJob</code> • <code>RuleLibraryDeployment</code> • <code>SmsDltTemplateIngestion</code>. This field is available in API version 66.0 and later. • <code>StandaloneBillingSchedulesCreation</code>. This field is available in API version 66.0 and later. • <code>StatementOfAccountGeneration</code>. This field is available in API version 66.0 and later. • <code>StoreRetrieveSyncJob</code>. This field is available in API version 66.0 and later. • <code>TestSerialMessageStepJob</code>. This field is available in API version 66.0 and later. • <code>TransactionLineBom—Create Material Lines</code> • <code>VoidCreditMemo</code>
<code>SubmittedAt</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp indicating when the asynchronous process was submitted by the REST request.
<code>SuccessfulJobItems</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of successful items in this job.
<code>TotalJobItems</code>	Type int Properties Filter, Group, Nillable, Sort Description Total number of items in this job.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AsyncOperationTrackerOwnerSharingRule](#)

Sharing rules are available for the object.

AsyncOperationTrackerShare

Sharing is available for the object.

AsyncOpSyndicationFeedFile

Represents the sync status of file-related information shared with external channels such as Facebook and Instagram. This object is available in API version 64.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AsyncOpSyndicationFeedFileNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID assigned to each syndication feed file record, and used for tracking and reference purposes.
AsyncOperationTrackerId	Type reference Properties Filter, Group, Nillable, Sort Description ID assigned to the Async Operation Tracker record, which monitors and manages the lifecycle of the syndication process. This field is a relationship field. Relationship Name AsyncOperationTracker Refers To AsyncOperationTracker
FeedContentBody	Type base64

Field	Details
	Properties Nillable Description The content of the feed file that is syndicated to the external platform.
FeedContentContentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the format of the feed file to ensure proper processing. For example, CSV, JSON, or XML files.
FeedContentLength	Type int Properties Filter, Group, Nillable, Sort Description The size of the feed file in bytes, which is used for validation and processing requirements.
FeedContentName	Type string Properties Filter, Group, Nillable, Sort Description The name of the feed file, which includes identifiers like timestamp or sequence number.
FeedScope	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Defines the scope or category of the feed. For example, if the feed applies to main, country-specific, or language-specific catalog segments. Possible values are: • CountryFeed • LanguageFeed • MainFeed
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description For internal use only.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description For internal use only.
PlatformConnections	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The external channel or destination for syndication. Possible values are: • Meta
SyncMode	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Specifies the type of sync being performed. Possible values are: • FullSync

AttachedContentDocument

This read-only object contains all `ContentDocument` objects associated with an object.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
ContentDocumentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the attached ContentDocument. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the document in bytes for notes smaller than 2 GB. In API version 66.0 and later, we recommend that you use the ContentSizeLong field even for notes smaller than 2 GB.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the note in bytes up to 10 GB. This field is available in API version 66.0 and later.
ContentUrl	Type url Properties Filter, Group, Nillable, Sort Description URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the FileType.

Field Name	Details
	This field is available in API version 31.0 and later.
ExternalDataSourceName	Type string Properties Filter, Group, Nillable, Sort Description Name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 32.0 and later.
ExternalDataSourceType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 35.0 and later.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the attached ContentDocument. This field is available in API version 31.0 and later.
FileType	Type string Properties Filter, Group, Nillable, Sort Description Type of document, determined by the file extension.
LinkedEntityId	Type reference Properties Filter, Group, Sort

Field Name**Details****Description**

ID of the record the `ContentDocument` is attached to.

This is a relationship field.

Field Name	Details
	ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
SharingOption	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Controls whether or not sharing is frozen for a file. Only administrators and file owners with Collaborator access to the file can modify this field. Default is <code>Allowed</code>, which means that new shares are allowed. When set to <code>Restricted</code>, new shares are prevented without affecting existing shares. This field is available in API versions 35.0 and later.
Title	Type string Properties Filter, Group, idLookup, Sort Description Title of the attached <code>ContentDocument</code>.

Usage

Use this object to list all `ContentDocument` objects attached to an object via a feed post.

To retrieve `ContentDocument` objects, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

AttachedContentNote

This read-only object contains all `ContentNote` objects associated with an object. This object is available in API version 35.0 and later.

Supported Calls

`describeSObjects()`

Special Access Rules

- Notes must be enabled.

- Chatter must be enabled.

Fields

Field Name	Details
ContentDocumentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the attached ContentNote
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description Size of the note in bytes for notes smaller than 2 GB. In API version 66.0 and later, we recommend that you use the ContentSizeLong field even for notes smaller than 2 GB.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the note in bytes up to 10 GB. This field is available in API version 66.0 and later.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the attached ContentNote.
FileType	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Type of file for the note. All notes have a file type of <code>SNOTE</code> .
<code>LinkedEntityId</code>	Type reference Properties Filter, Group, Sort Description ID of the record the <code>ContentNote</code> is attached to.
<code>TextPreview</code>	Type string Properties Filter, Group, Nillable, Sort Description A preview of the note, up to 255 characters.
<code>Title</code>	Type string Properties Filter, Group, Sort Description Title of the note.

Usage

Use this object to list all `ContentNote` objects attached to an object.

To retrieve `ContentNote` objects, issue a `describe` call on an object, which returns a `describe` result for each note created or attached. You can't directly query this object.

Attachment

Represents a file that a User has uploaded and attached to a parent object.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Body	Type base64 Properties Create, Update Description Required. Encoded file data.
BodyLength	Type int Properties Filter, Group, Nillable, Sort Description Size of the file (in bytes).
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
ContentType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The content type of the attachment. If the Don't allow HTML uploads as attachments or document records security setting is enabled for your organization, you cannot upload files with

Field	Details
	the following file extensions: <code>.htm</code>, <code>.html</code>, <code>.htt</code>, <code>.htx</code>, <code>.mhtm</code>, <code>.mhtml</code>, <code>.shtm</code>, <code>.shtml</code>, <code>.acgi</code>, <code>.svg</code>. When you insert a document or attachment through the API, make sure that this field is set to the appropriate MIME type.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the attachment. Maximum size is 500 characters. This field is available in API version 18.0 and later.
IsEncrypted	This information is about Shield Platform Encryption and not Classic Encryption. Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the attachment is encrypted using Shield Platform Encryption (<code>true</code>) or not (<code>false</code>). This field is available in API version 34.0 and later.
IsPartnerShared	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this record is shared with a connection using Salesforce to Salesforce. Label is <code>Is Shared With Partner</code>.
IsPrivate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this record is viewable only by the owner and administrators (<code>true</code>) or viewable by all otherwise-allowed users (<code>false</code>). During a create or update call, it is possible to mark an Attachment record as private even if you are not the owner. This can result in a situation in which you can no longer access the record that you just inserted or updated. Label is Private. Attachments on tasks or events can't be marked private.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the attached file. Maximum size is 255 characters. Label is File Name.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User who owns the attachment. This field isn't required for API version 9.0 or later. The owner of an attachment on a task or event must be the same as the owner of the task or event. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Calendar, User
ParentId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the parent object of the attachment. The following objects are supported as parents of attachments: • Account • Asset • Campaign • Case • Contact • Contract • Custom objects • EmailMessage • EmailTemplate • Event

Field	Details
	- Lead - Opportunity - Product2 - Solution - Task This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, Case, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EmailMessage, EmailTemplate, EngagementChannelType, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Solution, Task, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem

Note: If you are importing Attachment data and want to set the value for an audit field, such as `CreatedDate`, contact Salesforce. For example, for compliance reasons, you may prefer to set the `CreatedDate` to the date the record was originally created in your system, rather than the date it was imported into Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

The API sends and receives the binary file attachment data encoded as a `base64Binary` data type. Before creating a record, client applications must encode the binary attachment data as `base64`. Upon receiving a response, client applications must decode the `base64` data to binary (this conversion is usually handled for you by the SOAP client).

The create call restricts these files to a maximum size of 25 MB. For a file attached to a Solution, the limit is 1.5 MB. The maximum email attachment size is 3 MB.

The API supports attachments on email in create, delete, or update calls. The query call does not return attachments parented by email, unless the user performing the query has the “Modify All Data” permission.

 Note:

- Attachment records are not searched during text searches.
- When issued by an administrator, the query results include Attachment records from the Recycle Bin.
- When issued by a non-administrator, the `queryAll()` call results do not include Attachment records from the Recycle Bin.

Access to fields depends on the method being used:

- All of the fields are accessible using the `describeObjects()` and `query()` calls. With the `create()` call, you can insert the `Name`, `ParentId`, `Body`, `IsPrivate`, and `OwnerId` fields.
- To modify existing records, the `update()` call gives you access to change the `Name`, `Body`, `IsPrivate`, and `OwnerId` fields.
- You can access all of the fields using a `query()` call. However, you can't receive the `Body` field for multiple records in a single `query()` call. If your query returns the `Body` field, your client application must ensure that only one row with one Attachment is returned; otherwise, an error occurs. A more effective approach is to return IDs (but not Attachment records in the `Body` field) from a `query()` call and then pass them into `retrieve()` calls that return the `Body` field.
- For information about accessing the attachments of archived activities, see Archived Activities.

SEE ALSO:

[Note](#)

AttachmentEventLog

Attachment event logs contain information about attachments. This object is available in API version 65.0 and later.

Supported Calls

`describeObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>AttachmentIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the attachment.
ContentType	Type string Properties Filter, Group, Nillable, Sort Description The content type of the attachment.
IsPrivateOn	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the attachment is flagged as private or not. The default value is <code>false</code> .
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The operation type of the attachment.
ParentIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the parent object of the attachment. For example, <code>a07EE00001LgsUH</code>
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
Timestamp	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

AttribModel

Represents an attribution model used with Personalization, Attribution, and Campaign Influence, including model weights and touch type. This object is available in API version 62.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
AttribModelStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates a model's current status. The default value is <code>Draft</code> , and accepted values are • <code>Active</code> • <code>Draft</code> • <code>Inactive</code>
AttributionModelType	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the type of attribution model, which determines which touchpoints to evaluate. The default value is <code>LastTouch</code>, and accepted values are • <code>First touch</code> • <code>LastTouch</code>
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. The default value is <code>USD</code>. This is an optional field.
DataSpaceId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the data space where a model's resources originate. This is a required field. Relationship Name DataSpace Refers To DataSpace
Description	Type String Properties Filter, Group, Nillable, Sort Description Text description of the attribution model. Optional.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Auto-generated or user-generated API name for the attribution model. This is a required field.
Error Code	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the issue that's causing an error. The default value is <code>None</code> , and accepted values are • <code>ConfigurationMissingError</code> indicates that a required configuration setting is missing. • <code>DpcJobError</code> indicates a problem during processing. • <code>InternalError</code> indicates an internal error during processing. • <code>ModelValidationError</code> indicates that the model is invalid. • <code>None</code>
GlobalAttributionWindowDays	Type int Properties Filter, Group, Nillable, Sort Description Defines a timeframe for tracking attribution-related engagement. This is a required field.
IdentityResolutionMode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Defines which identity resolution method to use when tracking engagement activities. Default value is <code>Individual</code> , and acceptable values are • <code>Individual</code> • <code>Unified</code>
IsZeroDayLoadRequired	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Defines whether to sync data before the attribution window begins. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the model was referenced by another resource.
LastRefresh	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates the last time engagement data was refreshed and evaluated by the model.
LastSuccessfulRefresh	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates the last time the model was successfully refreshed.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time a user viewed the model.
LatestRefreshedStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Picklist value that indicates the status of last refresh process. The default value is <code>None</code> , and accepted values are • Canceled • Complete

Field	Details
	• Failure • None • Processing
ModelContext	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the app or feature in which the attribution model is used. The default value is <code>Personalization</code>, and accepted values are • <code>Attribution</code>: indicates the use with Attribution in Salesforce Personalization. • <code>CampaignInfluence</code>: indicates the use with Campaign Influence in Unified Marketing Analytics. • <code>Personalization</code>: indicates the use with Personalization in Salesforce Personalization.
ModelRevision	Type int Properties Filter, Group, Nillable, Sort Description A version number that indicates the latest save of the model.
Name	Type string Properties Filter, Group, idLookup, Sort Description Text label that identifies the attribution model. This is a required field.
Partner	Type string Properties Filter, Group, Nillable, Sort Description Indicates who's using the model. This field is required if the value of <code>ModelContext</code> is <code>Attribution</code>.
ProfileDataGraphId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the profile data graph that's used with the model. Relationship Name ProfileDataGraph Refers To DataGraph
ScheduledFrequencyMins	Type int Properties Filter, Group, Nillable, Sort Description The scheduled frequency (in minutes) at which the attribution model is processed.
SyncStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Indicates the current status of the attribution model while an action is being performed. The default value is <code>Processing</code>, and acceptable values are: • <code>Active</code> • <code>CreateError</code> • <code>DeleteError</code> • <code>Deleting</code> • <code>EditError</code> • <code>Processing</code>
Tags	Type string Properties Filter, Nillable, Sort Description User-generated strings that can be used to organize attribution models.

Usage

Use this object to get information about attribution models that are in use with personalization and influence features. For example, you can:

- Retrieve status and error details.
- Identify model settings such as type (first-touch, last-touch).
- Find out when the model was last used, refreshed, or synced.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AttribModelChangeEvent

Change events are available for the object.

AttribModelFeed

Feed tracking is available for the object.

AttribModelHistory

History is available for tracked fields of the object.

AttribModelOwnerSharingRule

Sharing rules are available for the object.

AttribModelShare

Sharing is available for the object.

AttribModelStage

Represents a funnel stage that's used in a predefined or custom attribution configuration. Available in API version 62.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
AttribModelId	Type reference
	Properties Filter, Group, Sort
	Description Unique identifier that refers to the attribution configuration that uses this stage. This is a required field.

Field	Details
	Relationship Name AttribModel Relationship Type Master-detail Refers To AttribModel (the master object)
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. The default value is <code>USD</code>. This is an optional field.
EngagementSignalEnum	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Picklist value that indicates the engagement signal that's selected for an attribution stage. This value represents a step in a customer journey. The accepted values are the engagement signals that are configured in the selected data space.
IsContentMatchRequired	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether to link item attribution from one funnel stage to the next. The default value is <code>false</code>, meaning not required. If you set this value to <code>true</code>, only engagement with the same item from the previous stage is linkable.
Name	Type string Properties Filter, Group, idLookup, Sort Description Text label that identifies the attribution model stage. This is a required field.

Field	Details
Sequence	Type int Properties Filter, Group, Sort Description Indicates the position of a stage in its journey sequence, reflecting funnel engagement from start to finish. The funnel requires a minimum of two stages, with a maximum of four stages. Accepted values are 1, 2, 3, or 4.
StageUnionGroupName	Type string Properties Filter, Group, Nillable, Sort Description Name of a certain group of stages. It can be used to reference individual, consecutive stages as a combined group with a common name.

Usage

Use this object to create attribution funnel stages. The funnel mirrors key touchpoints of an individual's personalization journey, which you define by selecting an engagement signal and any relevant metrics. The order that you create stages in describes funnel engagement from start to finish.

For example, view a product, click the product, add it to cart, and submit the order. The funnel requires a minimum of two stages, with a maximum of four stages in a journey.

Associated Objects

This object has the these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AttribModelStageChangeEvent](#)

Change events are available for the object.

[AttribModelStageFeed](#)

Feed tracking is available for the object.

[AttribModelStageHistory](#)

History is available for tracked fields of the object.

[AttribModelStageOwnerSharingRule](#)

Sharing rules are available for the object.

[AttribModelStageShare](#)

Sharing is available for the object.

AttribModelStageMetric

Represents the engagement signal metrics that you select when you configure a funnel stage for an attribution configuration. Available in API version 63.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
Alias	Type string Properties Filter, Group, Sort Description Indicates the name of the output data metric. This name appears as the column name for the metric on the attribution output table.
AttribModelStageId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the attribution configuration stage that uses this metric. Relationship Name AttribModelStage Relationship Type Primary-detail Refers To AttribModelStage (the primary object)
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. The default value is <code>USD</code>. This is an optional field.

Field	Details
EngagementSignalMetricId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the engagement signal that defines this stage. Relationship Name EngagementSignalMetric Refers To EngagementSignalMetric
Name	Type string Properties Filter, Group, idLookup, Sort Description The text label that identifies the attribution model stage metric.

Usage

An engagement signal metric is an aggregation of an engagement signal data field. These metrics are reported in the attribution model dashboard. For example, sum of clicks on a link, number of products added to a cart, email sends, or distinct article downloads.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Sharing rules are available for the object.

[AttribModelStageMetricShare](#)

Sharing is available for the object.

AttributeDefinition

Represents a product, asset, or object attribute, for example, a hardware specification or software detail. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
<code>DataType</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The data type of the attribute definition. Possible values are: • Checkbox • Date • Datetime • Number • Picklist • Text
<code>DefaultValue</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The default value for this attribute.
<code>Description</code>	Type textarea Properties Create, Nillable, Update

Field	Details
	Description Description of this attribute.
DeveloperName	Type string Properties Create, Filter, Group, Sort Description The unique name of the attribute definition record. This name must begin with a letter and use only alphanumeric characters and underscores. It can't include spaces, end with an underscore, or have two consecutive underscores. The developer name is used for internal purpose and must be unique for all records (including deleted records). If the system doesn't find the name unique, it automatically overrides the user input and creates a unique name. For external use, the developer name need not be fixed.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the attribute definition is active. Active attributes definitions can be selected for assets. The default value is <code>false</code> .
IsRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the attribute definition is required for an asset. The default value is <code>false</code> .
Label	Type string Properties Create, Filter, Group, Sort, Update Description The label for the attribute. Displays a friendly name for the attribute, for example, threshold monitor lightning component and recordset filter criteria rule .

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the attribute definition was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the attribute definition was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the attribute.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the attribute definition. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PicklistId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the attribute picklist with the valid values for this attribute.

Field	Details
	This field is a relationship field. Relationship Name Picklist Relationship Type Lookup Refers To AttributePicklist
SourceSystemIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The identifier of the attribute definition in an external system.
UnitOfMeasureId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the measurement unit for this attribute. This field is a relationship field. Relationship Name UnitOfMeasure Relationship Type Lookup Refers To UnitOfMeasure

Usage

Add asset descriptors to the Asset object instead of creating multiple custom attributes on an asset. This helps scale to a high volume of various assets in the system. When you create the AttributeDefinition, you can provide a unique API name. If the API name is not unique, the system appends a number to the end of the API name. The value of this number depends on how many times the same name has been used.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AttributeDefinitionHistory on page 63

History is available for tracked fields of the object.

AttributeDefinitionOwnerSharingRule on page 65

Sharing rules are available for the object.

AttributeDefinitionShare on page 67

Sharing is available for the object.

AttributePicklist

Represents a custom picklist for an asset attribute. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
DataType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The data type of this picklist. Possible values are: • Boolean • Currency • Date • Datetime • Number

Field	Details
	- Percent - Text The default value is <code>Boolean</code>.
Description	Type textarea Properties Create, Nillable, Update Description A description of the picklist. Maximum size is 32000 alphanumeric characters. Can include the following special characters: @! - < > * ? + = % # () / \ & ' £ € \$ ".
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the attribute picklist was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the attribute picklist was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the picklist. Names must be unique.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the attribute picklist record. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
Status	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description The status of the attribute picklist. Possible values are: • Active • Draft • Inactive The default value is <code>Draft</code> .
UnitOfMeasureId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the unit of measure associated with the product. This field is a relationship field. This field is available when Revenue Cloud is enabled. This field is available in API version 63.0 and later.
	Relationship Name UnitOfMeasure
	Refers To UnitOfMeasure

Usage

The AttributePicklist object is the parent object and the AttributePicklistValue object contains the picklist values. Let's say you need an asset attribute to track the T-shirt size, which can be small, medium, or large. Create an AttributePicklist parent record as a Text type for the T-shirt size attribute. Then create AttributePicklistValue records, one for each picklist value small, medium, and large, and associate them with the parent record.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AttributePicklistHistory on page 63

History is available for tracked fields of the object.

AttributePicklistOwnerSharingRule on page 65

Sharing rules are available for the object.

AttributePicklistShare on page 67

Sharing is available for the object.

AttributePicklistValue

Represents the values of an asset attribute picklist. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Abbreviation	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A short name of the picklist value that's displayed at run time. Use up to 255 alphanumeric characters. Can include the following special characters: @ ! - < > * ? + = % # () / \ & ' £ € \$ " .

Field	Details
Code	Type string Properties Create, Filter, Group, Sort, Update Description A picklist value code unique to the picklist. Maximum size is 80 alphanumeric characters. Can include the following special characters: @ ! - < > * ? + = % # () / \ & ' £ € \$ ".
DisplayValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The displayed picklist value if it's different from the Name field. For example, the Name '5' could have a DisplayValue 'Five'.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the picklist value is the default for the associated picklist. Only one value can be the default for a picklist. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the attribute picklist value was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the attribute picklist value was last viewed.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the attribute picklist value.
PicklistId	Type reference Properties Create, Filter, Group, Sort Description The ID of the picklist that the value is associated with. This field is a relationship field. Relationship Name Picklist Relationship Type Lookup Refers To AttributePicklist
Sequence	Type double Properties Create, Filter, Nillable, Sort, Update Description The order in which the picklist value appears in the picklist.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the attribute picklist value. Possible values are: • Active • Draft • Inactive The default value is Draft.
Value	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update
	Description The text value for a picklist item if the picklist data type is text. This value must be unique within a picklist. Maximum size is 255 alphanumeric characters. Can include the following special characters: @ ! - < > * ? + = % # () / \ & ' £ € \$ ".

Usage

The AttributePicklistValue object is the child object and the AttributePicklist object contains the picklist. Let's say you need an asset attribute to track the T-shirt size, which can be small, medium, or large. Create an AttributePicklist parent record as a Text type for the T-shirt size attribute. Then create AttributePicklistValue records, one for each picklist value small, medium, and large, and associate them with the parent record..

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AttributePicklistValueHistory on page 63

History is available for tracked fields of the object.

AsyncReportRunEventLog

Async Report Run Event Log is used for reporting scheduled requests. This category includes dashboard refreshes, asynchronous reports, schedule reports, and analytics snapshots. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AverageRowSize	Type double Properties Filter, Nillable, Sort Description The average row size (in bytes) of all rows in the Asynchronous Report Run event.
BucketCount	Type int Properties Filter, Group, Nillable, Sort Description The number of buckets used in the report.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
ColumnCount	Type int Properties Filter, Group, Nillable, Sort Description The number of columns in the report.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DashboardIdentifier	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The ID of the dashboard that was run.
DatabaseBlocks	Type double Properties Filter, Nillable, Sort Description How much activity is occurring in the database.
DatabaseCpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time (in milliseconds) to complete the request.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description Total time spent in OracleJdbc calls, counting the Jdbc driver, Network, and Oracle time for execs, fetches, and get-connection.
DisplayType	Type string Properties Filter, Group, Nillable, Sort Description Possible values are: • D—Dashboard • S—Show Details • H—Hide Details
ExceptionFilterCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of exception filters used in the report.
IsPreview	Type boolean Properties Defaulted on create, Filter, Group, Sort Description This field is reserved for future use. The default value is <code>false</code> .
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
ObjectName	Type string Properties Filter, Group, Nillable, Sort Description The name of the object affected by the trigger.
Origin	Type string Properties Filter, Group, Nillable, Sort Description Where the report is being executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard.
RenderingType	Type string Properties Filter, Group, Nillable, Sort Description Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank.

Field	Details
ReportIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The report's ID.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdentifier</code>. For example: 3nWgxWbDKWWDiK0FKf5DV.
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RowCount	Type int Properties Filter, Group, Nillable, Sort Description The number of rows that were processed in the Asynchronous Report Run event.
RunTime	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
SortOrder	Type string Properties Filter, Group, Nillable, Sort Description The sort column and order that was used in the report.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Audience

Represents an audience that is defined by criteria and can be assigned and used for targeting in an Experience Cloud site. This object is available in API version 44.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
AudienceName	Type string Properties Filter, Group, Sort, Update Description Name of the audience.
ContainerId	Type reference Properties Filter, Group, Sort Description ID of the site or org that contains the audience. ContainerId is nillable in API versions 47.0 and earlier.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Description of the audience.
DeveloperName	Type string Properties Filter, Group, Sort, Update Description The unique name of the audience in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated, but you can supply your own value if you create the record using the API.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
FormulaFilterType	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description Formula filter for the criteria used to define the audience. Valid values are: • <code>AllCriteriaMatch</code>—Matching all the conditions (AND). • <code>AnyCriterionMatches</code>—Matching at least one condition (OR). • <code>CustomLogicMatches</code>—Matching condition logic (AND and OR) and numbered criteria groups. This value is available in API version 45.0 and later.
Language	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description Language of the audience. Valid values are: • Chinese (Simplified): <code>zh_CN</code> • Chinese (Traditional): <code>zh_TW</code> • Danish: <code>da</code> • Dutch: <code>nl_NL</code> • English: <code>en_US</code> • Finnish: <code>fi</code> • French: <code>fr</code> • German: <code>de</code> • Italian: <code>it</code> • Japanese: <code>ja</code> • Korean: <code>ko</code> • Norwegian: <code>no</code> • Portuguese (Brazil): <code>pt_BR</code> • Russian: <code>ru</code> • Spanish: <code>es</code> • Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: <code>sv</code> • Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
MasterLabel	Type string Properties Filter, Group, Sort, Update

Field	Details
	Description Master label for the audience. This internal name doesn't get translated.

AuraDefinition

Represents an Aura component definition, such as component markup, a client-side controller, or an event. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
<code>AuraDefinitionBundleId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the bundle containing the definition. A bundle contains a Lightning definition and all its related resources. This is a relationship field. Relationship Name AuraDefinitionBundle Relationship Type Lookup Refers To AuraDefinitionBundle
<code>DefType</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description The definition type. Valid values are: • APPLICATION — Lightning Aura Components app • CONTROLLER — client-side controller • COMPONENT — component markup • EVENT — event definition • HELPER — client-side helper • INTERFACE — interface definition • RENDERER — client-side renderer • STYLE — style (CSS) resource • PROVIDER — reserved for future use • MODEL — deprecated, do not use • TESTSUITE — reserved for future use • DOCUMENTATION — documentation markup • TOKENS — tokens collection • DESIGN — design definition • SVG — SVG graphic resource • MODULE — reserved for future use
Format	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The format of the definition. Valid values are: • XML for component markup • JS for JavaScript code • CSS for styles • TEMPLATE_CSS reserved for future use • SVG for an SVG graphic
Source	Type textarea Properties Create, Update Description The contents of the definition. This is all the markup or code for the definition.

Usage

For more information, see the [Lightning Aura Components Developer Guide](#).

AuraDefinitionBundle

Represents a Lightning Aura component definition bundle, such as a component or application bundle. A bundle contains a Lightning Aura component definition and all its related resources. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApiVersion	Type double Properties Create, Filter, Sort, Update Description The API version for this bundle. Every bundle has an API version specified at creation.
Description	Type textarea Properties Create, Filter, Group, Sort, Update Description The text description of the bundle. Maximum size of 255 characters.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the record in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated but you can supply your own value if you create the record using the API.

Field Name	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View <code>DeveloperName</code> OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the <code>MasterLabel</code>.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Master label for the Lightning bundle. This internal label doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

For more information, see the [Lightning Aura Components Developer Guide](#).

AuraDefinitionBundleInfo

For internal use only.

AuraDefinitionInfo

For internal use only.

AuraRequestEventLog

Aura Request Event Log contains details of requests to Apex methods from Aura and Lightning web components. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ActionMessage	Type string Properties Filter, Group, Nillable, Sort Description The action (Apex method) names and times for all the actions in the request in the format. Forexample: <code>action1Name=action1Time;action2Name=action2Time...</code>
ClientIp	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DatabaseCpuTime. Compare this field to CpuTime to determine whether performance issues are occurring in the database layer or in your own code.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestIdentifier. For example: 3nWgxWbDKWWDiK0FKfF5DV.
RequestMethod	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The HTTP method of the request, such as <code>GET</code> or <code>POST</code>.
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example: • <code>S</code>—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • <code>F</code>—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • <code>U</code>—Undefined • <code>A</code>—Authorization Error • <code>R</code>—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • <code>N</code>—Not Found. 404 error. This field can have a blank value.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: <code>d7DEq/ANa7nNZZVD</code>.
Timestamp	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserAgent	Type string Properties Filter, Group, Nillable, Sort Description The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • <code>CsnOnly</code>—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • <code>CspLitePortal</code>—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • <code>CustomerSuccess</code>—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal.

Field	Details
	• Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

AuthConfig

Represents authentication options for My Domain and Experience Cloud site login pages. This object is available in API version 32.0 and later.

The fields for this object control the options that display on the login page of an org. By default, you have a My Domain and corresponding login page. If you use Digital Experiences, you can also set up a login page for each of your Experience Cloud sites.

- Logging in with a username and password
- Using SAML for single sign-on
- Authentication provider logins from a third-party service, such as Facebook or Twitter

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You must have "View Setup and Configuration" permission to view the settings.

Fields

Field Name	Details
<code>AuthOptionsAuthProvider</code>	Type boolean Properties Filter

Field Name	Details
	Description If <code>true</code>, at least one Auth. Provider is selected to show up on the login page, and this object has child <code>AuthConfigProvider</code> objects for each provider.
<code>AuthOptionsCertificate</code>	Type boolean Properties Filter Description If <code>true</code>, certificate-based login displays on the My Domain login page.
<code>AuthOptionsSaml</code>	Type boolean Properties Filter Description If <code>true</code>, at least one SAML configuration is selected to show up on the login page. If the organization has only one SAML configuration, this value indicates whether that configuration is selected to show up on the login page. If the organization has multiple SAML configurations, see the child <code>AuthConfigProvider</code> objects for each configuration.
<code>AuthOptionsUsernamePassword</code>	Type boolean Properties Filter Description If <code>true</code>, the login option for a username and password appears on the login page.
<code>DeveloperName</code>	Type string Properties Filter, Group, Sort Description The name of the domain created using My Domain or, for an Experience Cloud site, a concatenated string of <code>site name_site prefix</code>.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.

Field Name	Details
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether this configuration is in use.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language for the organization.
MasterLabel	Type string Properties Filter, Group, Sort Description The text that's used to identify the Visualforce page in Setup.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Field Name	Details
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The organization type for this object. • Org (includes custom domains) • Community • Site • Portal
Url	Type string Properties Filter, Group, idLookup, Sort Description The login URL of the organization for this AuthConfig object. Each URL has only one associated AuthConfig object.

AuthConfigProviders

Represents an authentication provider that's configured in an organization. AuthConfigProviders is a child of the AuthConfig object. This object is available in API version 32.0 and later.

This object links the authentication configuration for an organization to the Auth Provider through the `AuthOptionsAuthProvider` field of the [AuthConfig](#) object. The login page of a My Domain or Experience Cloud site can allow multiple SAML configurations and multiple authentication providers. These configurations can be set to show up as buttons on the login page. Each configuration has an AuthConfigProvider object. For more information about how to display these configurations on the login page, see these resources in Salesforce Help.

- My Domain: [Add Identity Providers to the My Domain Login Page](#)
- Experience Cloud: [Configure Your Login Page](#)

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Special Access Rules

You must have "View Setup and Configuration" permission to view the settings.

Fields

Field Name	Details
AuthConfigId	Type reference Properties Create, Filter, Group, Sort Description The ID for this configuration. This is a relationship field. Relationship Name AuthConfig Relationship Type Lookup Refers To AuthConfig
AuthProviderId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Auth. Provider or SAML configuration. This is a polymorphic relationship field. Relationship Name AuthProvider Relationship Type Lookup Refers To AuthProvider, SamlSsoConfig

AuthorizationForm

Represents the specific version and effective dates of a form that is associated with consent, such as a privacy policy or terms and conditions. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
DefaultAuthFormTextId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The ID of the default authorization form text to use if text isn't available for a specific language. This is a relationship field. Relationship Name DefaultAuthFormText Relationship Type Lookup Refers To AuthorizationFormText
EffectiveFromDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the authorization form takes effect.
EffectiveToDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the authorization form is no longer in effect.
IsSignatureRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the authorization form requires a signature.

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The name of the authorization form.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RevisionNumber	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The revision number of the authorization form. For example, "rev1.21."

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[AuthorizationFormChangeEvent](#) (API version 61.0)

Change events are available for the object.

[AuthorizationFormHistory](#)

History is available for tracked fields of the object.

[AuthorizationFormOwnerSharingRule](#)

Sharing rules are available for the object.

[AuthorizationFormShare](#)

Sharing is available for the object.

AuthorizationFormConsent

Represents the date and way in which a user consented to an authorization form. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
<code>AuthorizationFormTextId</code>	Type reference
	Properties Create, Filter, Group, Sort, Update
	Description Required. The authorization form text that the Individual consented to.

Field Name	Details
	This is a relationship field. Relationship Name AuthorizationFormText Relationship Type Lookup Refers To AuthorizationFormText
ConsentCapturedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Required. The date and time that consent was given.
ConsentCapturedSource	Type string Properties Create, Filter, Group, Nillable Sort, Update Description Required. The source through which consent was captured. For example, user@example.com, www.example.com.
ConsentCapturedSourceType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. The source type through which consent was captured. For example, phone, email, or website.
ConsentGiverId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. The ID of the person consenting to the authorization form. This is a polymorphic relationship field. Relationship Name ConsentGiver

Field Name	Details
	Relationship Type Lookup Refers To Account, CareProgramEnrollee, Contact, Individual, User
DocumentVersionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the document version for which consent is given. This is a relationship field. Relationship Name DocumentVersion Relationship Type Lookup Refers To ContentVersion
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field Name	Details
	Description Required. The name of the authorization form consent.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RelatedRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of a record showing consent of an authorization form. This is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To Account, Visit
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the authorization form. Possible values are: • Rejected • Seen

Field Name	Details
	Signed
PartyId	Type reference Properties Create, Filter, Group, Sort Description This field was removed in API version 47.0. Use <code>ConsentGiverId</code> instead.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AuthorizationFormConsentChangeEvent](#) (API version 47.0)

Change events are available for the object.

[AuthorizationFormConsentHistory](#)

History is available for tracked fields of the object.

[AuthorizationFormConsentOwnerSharingRule](#)

Sharing rules are available for the object.

[AuthorizationFormConsentShare](#)

Sharing is available for the object.

AuthorizationFormDataUse

Represents the data use consented to in an authorization form. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
AuthorizationFormId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description Required. The ID of the associated authorization form record. This is a relationship field. Relationship Name AuthorizationForm Relationship Type Lookup Refers To AuthorizationForm
DataUsePurposeId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. Identifies the data use purpose record associated with the authorization form. This is a relationship field. Relationship Name DataUsePurpose Relationship Type Lookup Refers To DataUsePurpose
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The name of the authorization form data use.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[AuthorizationFormDataUseChangeEvent](#) (API version 62.0)

Change events are available for the object.

[AuthorizationFormDataUseHistory](#)

History is available for tracked fields of the object.

[AuthorizationFormDataUseOwnerSharingRule](#)

Sharing rules are available for the object.

[AuthorizationFormDataUseShare](#)

Sharing is available for the object.

AuthorizationFormText

Represents an authorization form's text and language settings. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Data Protection and Privacy is enabled.

Fields

Field Name	Details
AuthorizationFormId	Type reference Properties Create, Filter, Group, Sort Description Required. The ID of the associated authorization form record. This is a relationship field. Relationship Name AuthorizationForm Relationship Type Lookup Refers To AuthorizationForm
ContentDocumentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the ContentDocument that provides the authorization form's text. This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup

Field Name	Details
	Refers To ContentDocument
DetailAuthorizationFormText	Type textarea Properties Create, Nillable, Update Description A detailed version of the authorization form.
FullAuthorizationFormUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The URL where the full text of the authorization form is located.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Locale	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code that control the language of the authorization form text. <code>Locale</code> and <code>LocaleSelection</code> have the same function.

Field Name	Details
	 Note: <code>Locale</code> can contain custom values not included in the picklist if added before version 47.0.
<code>LocaleSelection</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code that control the language of the authorization form text. <code>Locale</code> and <code>LocaleSelection</code> have the same function.
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The name of the authorization form text.
<code>SummaryAuthFormText</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A shortened version of the authorization form that is displayed to the user.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[AuthorizationFormTextChangeEvent](#) (API version 61.0)

Change events are available for the object.

[AuthorizationFormTextHistory](#)

History is available for tracked fields of the object.

AuthProvider

Represents an authentication provider (auth provider). An auth provider lets users log in to your Salesforce org from an external service provider, such as Facebook, Google, or GitHub. This object is available in API version 27.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only users with Customize Application and Manage AuthProviders permissions can access this object.

Fields

Field Name	Details
AppleTeam	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required when using Apple as a third-party authentication provider. A 10-character team ID, obtained from an Apple developer account. Available in API version 48.0 and later.
AuthorizeUrl	Type url Properties Create, Filter, Nillable, Sort, Update Description Required when creating an OpenID Connect authentication provider. The OAuth authorization endpoint URL. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value.
ConsumerKey	Type string Properties Create, Filter, Nillable, Sort, Update Description The app's key that is registered at the third-party (external) authentication provider. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value.
ConsumerSecret	Type string Properties Create, Nillable

Field Name	Details
	Description The consumer secret of the authentication provider that is registered at the third-party SSO provider. It's used by the consumer for identification to Salesforce. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value. You can create your own consumer secret on <code>create()</code>. However, after you set it, you can't change the value.
CustomMetadataTypeRecord	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required when creating a custom authentication provider plug-in. The API name of the custom authentication provider. Available in API version 36.0 and later.
DefaultScopes	Type string Properties Create, Filter, Nillable, Sort, Update Description For OpenID Connect authentication providers, the scopes to send with the authorization request, if not specified when a flow starts. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Required. Used when referring to the authentication provider from a program.
EcKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required when using Apple as a third-party authentication provider. Available in API version 48.0 and later.

Field Name	Details
ErrorUrl	Type string Properties Create, Filter, Nillable, Sort, Update Description A custom error URL for the authentication provider to use to report errors.
ExecutionUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required to specify a registration handler. The username of the Salesforce admin or system user who runs the Apex handler or flow. The execution user provides the context in which the registration handler runs. For example, if the handler creates a contact, the creation can be easily traced back to the registration process. In production, use a system user. The user must have the Manage Users permission. Available in API version 27.0 and later.
FlowDefaultAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description For authentication providers that use a flow registration handler, the default account that new external users are assigned to. If you include this field, Salesforce automatically uses it for the <code>defaultAccountId</code> variable in the Authentication Provider User Registration standard flow. A default account is required to use a flow registration handler for external users. You can specify a default account here or in the flow itself. If you use both, the default account that's configured in the flow takes precedent. Available in API version 64.0 and later.
FlowDefaultProfileId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description For authentication providers that use a flow registration handler, the default profile that new users are assigned to. If you include this field, Salesforce automatically uses it for the <code>defaultProfileId</code> variable in the Authentication Provider User Registration standard flow.

Field Name	Details
	A default profile is required to use a flow registration handler. You can specify a default profile here or in the flow itself. If you use both, the default profile that's configured in the flow takes precedent. Available in API version 64.0 and later.
FriendlyName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. A user-friendly name for the authentication provider.
IconUrl	Type url Properties Create, Filter, Nillable, Sort, Update Description The path to an icon to use as a button on the login page. Users click the button to log in with the associated authentication provider, such as Twitter or Facebook. Available in API version 32.0 and later.
IdTokenIssuer	Type string Properties Create, Filter, Nillable, Sort, Update Description The source of the authentication token in <code>https:</code> URI format. This field is available when configuring an OpenID Connect or Microsoft authentication provider. If provided, Salesforce validates the returned <code>id_token</code> value. OpenID Connect requires returning an <code>id_token</code> value with the <code>access_token</code> value. Available in API version 30.0 and later.
LinkKickoffUrl	Type url Properties Nillable Description The URL for linking existing Salesforce users to a third-party account. This field is read-only. Available in API version 43.0 and later.
LogoutUrl	Type url

Field Name	Details
	Properties Create, Filter, Nillable, Sort, Update Description The destination for users after they log out if they authenticated using single sign-on. The URL must be fully qualified with an http or https prefix, such as <code>https://acme.my.salesforce.com</code>. Available in API version 33.0 and later.
OAuthKickoffUrl	Type url Properties Nillable Description The URL for obtaining OAuth access tokens for a third party. This field is read-only. Available in API version 43.0 and later.
OptionsIncludeOrgIdInId	Type boolean Properties Create, Filter, Update Description Used to differentiate between users with the same user ID from two sources (such as two sandboxes). If enabled (<code>true</code>), Salesforce stores the org ID of the third-party identity in addition to the user ID. After you enable this setting, you can't disable it. Applies only to a Salesforce-managed auth provider. Available in API version 32.0 and later.
OptionsIsPkceEnabled	Type boolean Properties Create, Filter, Update Description If set to <code>true</code>, the authentication provider uses the OAuth 2.0 Proof Key for Code Exchange (PKCE) extension, which improves the security of the provider's authorization flow. This field applies only to these <code>providerType</code> values: • Custom • Facebook • Google • Microsoft • OpenIdConnect • Salesforce.

Field Name	Details
	This field is available in API version 59.0 and later.
OptionsRequireMfa	Type boolean Properties Filter Description Requires multi-factor authentication (MFA) for single sign-on with this auth provider based on the MFA status of each user. For this setting to trigger MFA, you must apply MFA directly to users via one of two methods. 1) Assign the user permission Multi-Factor Authentication for User Interface Logins. 2) Enable the org setting Require multi-factor authentication (MFA) for all direct UI logins to your Salesforce org.
OptionsSendAccessTokenInHeader	Type boolean Properties Create, Filter, Update Description If enabled (<code>true</code>), the access token is sent to the <code>UserInfoUrl</code> in a header instead of a query string. Available in API version 30.0 and later.
OptionsSendClientCredentialsInHeader	Type boolean Properties Create, Filter, Update Description Required when creating an OpenID Connect authentication provider. If enabled (<code>true</code>), the client credentials are sent in a header to the <code>tokenUrl</code> instead of a query string. The credentials are in the standard OpenID Connect Basic Credentials header format, which is <code>Basic <token></code>, where <code><token></code> is the base64-encoded string <code>"clientkey:clientsecret"</code>. Available in API version 30.0 and later.
OptionsSendSecretInApis	Type boolean Properties Create, Filter, Update Description Determines whether the encrypted consumer secret appears in API responses. If enabled (default), the secret appears in the response. If disabled (<code>false</code>),

Field Name	Details
	responses don't include the consumer secret. For security, you can disable the setting. However, keep in mind that: • By disabling this setting, the consumer secret is excluded from API responses in all API versions. • Change sets and other metadata deployments break because both the consumer key and secret are expected. To fix this problem, insert the consumer key manually during deployment. Available in API version 47.0 and later.
PluginId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description An existing Apex class that extends the <code>Auth.AuthProviderPluginClass</code> abstract class. Available in API version 39.0 and later.
ProviderType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. The third-party authentication provider to use. Valid values include: • <code>Apple</code>. Available in API version 48.0 and later. • <code>Bitbucket</code>—Provides authentication for a <code>Bitbucket</code> provider. Enables you to connect to Bitbucket from a Lightning Platform application. When logged in to Bitbucket, the app can make calls to Bitbucket APIs. The <code>Bitbucket</code> provider isn't available as an SSO provider, so users can't log in to a Salesforce org using their Bitbucket login credentials. Available in API version 61.0 and higher. • <code>Custom</code>—A provider configured with a custom authentication provider plug-in. Available in API version 36.0 and later. • <code>Facebook</code>. • <code>GitHub</code>—Provides authentication for a <code>GitHub</code> provider. Used to log in users of your Lightning Platform app to GitHub using OAuth. When logged in to GitHub, your app can make calls to GitHub APIs. The <code>GitHub</code> provider isn't available as an SSO provider, so users can't log in to your Salesforce org using their GitHub login credentials. Available in API version 35.0 and later. • <code>Google</code>. • <code>Janrain</code>. • <code>LinkedIn</code>. Available in API version 32.0 and later.

Field Name	Details
	• Microsoft. Provides authentication for all services that can be accessed via Microsoft Azure Active Directory. Available in API version 55.0 and later. • MicrosoftACS—Microsoft Access Control Service provides authentication for a Microsoft Office 365 service, like SharePoint Online. The MicrosoftACS provider doesn't support SSO. Available in API version 31.0 and later. • OpenIdConnect. Available in API version 29.0 and later. • Salesforce. • Slack. Available in API version 54.0 and later. • Twitter. Available in API version 32.0 and later.
RegistrationHandlerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description An existing Apex class that implements the <code>Auth.RegistrationHandler</code> interface.
SsoKickoffUrl	Type url Properties Nillable Description The URL for performing SSO into Salesforce from a third party by using its third-party credentials. This field is read-only. Available in API version 43.0 and later.
TokenUrl	Type url Properties Create, Filter, Nillable, Sort, Update Description The OAuth token endpoint URL of an OpenID Connect authentication provider. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers for sandbox use cases only, leave the field blank to let Salesforce supply and manage the value.
UserInfoUrl	Type url Properties Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The OpenID Connect endpoint URL of the OpenID Connect authentication provider. Available in API version 29.0 and later. In API version 33.0 and later, for Salesforce-managed auth providers, leave the field blank to let Salesforce supply and manage the value.

AuthProvParamFwdAllowlist

Represents an allowlisted URL parameter that can be forwarded from authentication provider client configuration URLs to the authorization URL. Use this type to add custom functionality to authentication providers. For example, allowlist a `ui_locales` parameter and use it to send a user's language preference from Salesforce to the third-party provider's login page. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AuthProviderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the authentication provider associated with the allowlist. This field is a relationship field. Relationship Name AuthProvider Refers To AuthProvider
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A description for the allowlisted URL parameter.

Field	Details
Param	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the parameter, such as <code>ui_locales</code> or <code>login_hint</code> .

AuthSession

The AuthSession object represents an individual user session in your organization. This object is available in versions 29.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
CreatedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description The date and time this session was created. This field is a standard system field.
Id	Type id Properties Defaulted on create, Filter, Group, ID Lookup, Sort Description The current session's ID.
IsAssociatedWithJwtAccessToken	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code> , the session is associated with a JSON Web Token (JWT)-based access token. This field is available in API version 64.0 and later.

Field Name	Details
IsCurrent	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the session is a member of the user's current session family. This field is available in API version 37.0 and later.
LastModifiedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description The date and time this session was last updated. A session expires when the current date and time equals <code>LastModifiedDate + NumSecondsValid</code>. This field is a standard system field.
LoginGeoId	Type reference Properties Filter, Group, Nillable, Sort Description The 18-character ID for the record of the geographic location of the user for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) can vary. This field is available in API version 34.0 and later. This is a relationship field. Relationship Name LoginGeo Relationship Type Lookup Refers To LoginGeo
LoginHistoryId	Type reference Properties Filter, Group, Nillable, Sort Description The 18-character ID for a successful login event. When a session is reused, Salesforce updates the <code>LoginHistoryId</code> with the value from the most recent login. This field is available in API version 33.0 and later.

Field Name	Details
	This is a relationship field. Relationship Name LoginHistory Relationship Type Lookup Refers To LoginHistory
LoginType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of login used to access the session. Possible values are: • AJAX Toolkit • Apex Office Toolkit • AppExchange • Application • AppStore • Certificate-based login • Chatter Communities External User • Chatter Communities External User Third Party SSO • Community • Customer Service Portal Third-Party SSO • Customer Service Portal • DataJunction • DB Replication • Employee Login to Community • Excel Integration • Help and Training • HOTP YubiKey • Lightning Login • Networks Portal API Only • Offline Client • Order Center • Other Apex API • Outlook Integration • Partner Portal Third-Party SSO • Partner Portal

Field Name	Details
	• Partner Product • Passwordless Login • Remote Access 2.0 • Remote Access Client • Sales Anywhere • Salesforce Outlook Integration • Salesforce.com Website • SAML Chatter Communities External User SSO • SAML Customer Service Portal SSO • SAML Idp Initiated SSO • SAML Partner Portal SSO • SAML Sfdc Initiated SSO • SAML Site SSO • Self-Service • Signup • Sync • SysAdmin Switch • Third Party SSO • Unknown • Validate
LogoutUrl	Type string Properties Filter, Nillable, Sort Description The page or view to display after users log out of an Experience Cloud site, or an org if they authenticated using SAML. This field is available in API version 32.0 and later.
NumSecondsValid	Type int Properties Filter, Group, Sort Description The number of seconds before the session expires, starting from the last update time.
ParentId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The 18-character ID for the parent session, if one exists (for example, if the current session is for a canvas app). If the current session doesn't have a parent, this value is the current session's own ID.
SessionSecurityLevel	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Standard or High, depending upon the authentication method used.
SessionType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of session. Common ones are UI, Content, API, and Visualforce. For more information, see User Session Types in the <i>Object Reference Guide</i>.
SourceIp	Type string Properties Filter, Group, Sort Description IP address of the end user's device from which the session started. This address can be an IPv4 or IPv6 address. The SourceIp field doesn't support the <code>LIKE</code> comparison operator.
UserType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The kind of user for this session. Types include Standard, Partner, Customer Portal Manager, High Volume Portal, and CSN Only.
UserId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort
	Description The user's Salesforce user ID. This is a relationship field.
	Relationship Name Users
	Relationship Type Lookup
	Refers To User

Usage

The AuthSession object exposes session data and enables read and delete operations on that data. For example, use this object to see who is signed in to your org. Or you can use this object to create a tool to delete a session, ending that user's session. For a user, only their own sessions are available, while administrators can see all sessions.

You can't change user sessions with this object. You can only read and delete them.

AutomatedAction

Represents the configuration of an automated action, such as a workflow rule. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ApiVersion	Type int
	Properties Filter, Group, Sort
	Description Required. API version to use for executing the automated action.

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description Description of the automated action.
ErrorDetail	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The source of the error encountered when executing the automated action. Possible values are: - invalidCondition - invalidConditionReference - invalidConditionValue - invalidInvocableAction - invalidInvocableActionParam - invalidReferenceEntity - unknownError
ErrorMessage	Type textarea Properties Create, Nillable, Update Description A description of the error encountered when executing the automated action.
EvalType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description When the automated action runs. Possible values are: - OnCreate - OnCreateAndUpdate

Field	Details
ExecutionType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Whether the action runs automatically or generates a reminder. Possible values are: • Automatic • Reminder
ExtraFilterExpression	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Additional condition logic for cross-object filters.
ExtraFilterType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Additional criteria for cross-object filters. Possible values are: • Advanced • And • Or
FilterExpression	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If <code>FilterType</code> is <code>Advanced</code>, this field contains the condition logic.
FilterType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Criteria for filters. Possible values are: - Advanced - And - Or
InvocationName	Type string Properties Create, Filter, Group, Sort, Update Description Invocable action to execute.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action record is locked or not. The default value is <code>false</code>.
LastEditedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The timestamp when the automated action had a change that impacted rule evaluation.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record was likely referenced (<code>LastReferencedDate</code>) and not viewed.
<code>MayEdit</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action record can be edited or not. The default value is <code>false</code>.
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the automated action.
<code>ReferenceEntity</code>	Type string Properties Create, Filter, Group, Sort, Update Description Entity on which the automated action operates.
<code>RuleType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of workflow rule. Possible values are: • <code>ManagerAssigned</code> • <code>ManagerSubscribed</code> • <code>Personal</code>
<code>State</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The status of the alert. Possible values are: • Active • Error • Inactive
SubscriptionState	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description For users who don't have an override, the default value of the subscription. Possible values are: • Active • Inactive
Summary	Type string Properties Filter, Nillable, Sort Description A human-readable explanation of the automated action, its conditions, and its parameters.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AutomatedActionOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AutomatedActionShare](#) on page 67

Sharing is available for the object.

AutomatedActionCondition

Represents the logical operator details for evaluating conditions in an automated action. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AutomatedActionId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the automated action. This field is a relationship field. Relationship Name AutomatedAction Relationship Type Lookup Refers To AutomatedAction
<code>ConditionNumber</code>	Type int Properties Create, Filter, Group, Sort, Update Description Reference number of the condition containing advanced filter logic.
<code>IsLocked</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action condition record is locked or not. The default value is <code>false</code>.
<code>MayEdit</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the automated action condition record can be edited or not. The default value is <code>false</code>.
Operator	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The logical operator for this condition. Possible values are: • Contains • EndsWith • Equal • GreaterThan • GreaterThanOrEqual • IsChanged • IsNull • LessThan • LessThanOrEqual • NotEqual • StartsWith
ReferenceField	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The field to use for this condition.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of condition. Possible values are: • ExtraFilterCondition • PrimaryFilterCondition

Field	Details
Value	Type textarea Properties Create, Nillable, Update Description The value to compare to the <code>ReferenceField</code>.

AutomatedActionOverride

Represents a modified attribute of a shared automated action. For example, the modified attribute can contain customizations for your business. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
FieldName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the field to override.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action override record is locked or not. The default value is <code>false</code>.
IsRelatedRecordOverridable	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the parent automated action record can be overridden. The default value is <code>false</code>.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action override record can be edited or not. The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the automated action.
RelatedRecordApiName	Type string Properties Filter, Group, Nillable, Sort Description The object name of the <code>RelatedRecordId</code>. This field is a calculated field.
RelatedRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the automated action. This field is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To AutomatedAction, FtestUser

Field	Details
Value	Type textarea Properties Create, Update Description The overridden value used for <code>FieldName</code>.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AutomatedActionOverrideOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AutomatedActionOverrideShare](#) on page 67

Sharing is available for the object.

AutomatedActionParameter

Represents the values or field references evaluated by the automated action. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AutomatedActionId	Type reference Properties Create, Filter, Group, Sort Description ID of the automated action. This field is a relationship field. Relationship Name AutomatedAction Relationship Type Lookup

Field	Details
	Refers To AutomatedAction
DataType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The data type of the value or field reference value. Possible values are: • Boolean • Double • Int • None • String • ValueList
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action parameter record is locked or not. The default value is <code>false</code> .
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action parameter record can be edited or not. The default value is <code>false</code> .
ParameterName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the invocable action parameter the value maps to.

Field	Details
ReferenceField	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The reference to the field that's resolved at runtime. For example, LeadID. If <code>value</code> has a value, this field is null.
Value	Type textarea Properties Create, Nillable, Update Description The value to be passed to the invocable action parameter at runtime. If <code>ReferenceField</code> has a value, this field is null.

AutomatedActionReminder

Represents a reminder to the end user to take an action in the future. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionTakenDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Timestamp of when the user took the action suggested by the reminder.
AutomatedActionId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description ID of the automated action. This field is a relationship field. Relationship Name AutomatedAction Relationship Type Lookup Refers To AutomatedAction
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action reminder record is locked or not. The default value is <code>false</code>.
IsValidForUser	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action is active and accessible to the user who owns the record (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the automated action reminder record can be edited or not. The default value is <code>false</code>.
ReferenceRecordId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The record that triggered the reminder. For example, when a rule is set to Case, the value of this field is <code>CaseId</code>. This field is a polymorphic relationship field. Relationship Name ReferenceRecord Relationship Type Lookup Refers To Account, Case, Contact, Invoice, Lead, Opportunity
StartDateTime	Type dateTime Properties Create, Filter, Sort, Update Description The date and time this reminder is scheduled to be displayed to the user.
State	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the reminder. Possible values are: - Active - Completed - Disabled - Dismissed - Expired
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of automated action reminder. Possible values are: Reminder

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AutomatedActionReminderOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[AutomatedActionReminderShare](#) on page 67

Sharing is available for the object.

BackgroundOperation

Represents a background operation in an asynchronous job queue. This object is available in API version 35.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `retrieve()`

Special Access Rules

- BackgroundOperation doesn't support search.

Fields

Field Name	Details
Error	Type string Properties Filter, Group, Nillable, Sort Description The error message for the operation. Applies only if the operation has an error status.
ExecutionGroup	Type string Properties Filter, Group, Nillable, Sort Description Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Identifies the execution group.
ExpiresAt	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description After this time, the operation is removed from the asynchronous job queue. Applies only if the operation has a status of complete, canceled, error, or merged.
FinishedAt	Type dateTime Properties Filter, Nillable, Sort Description When the operation reached the status of completed or error.
GroupLeaderId	Type reference Properties Filter, Group, Nillable, Sort Description Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Identifies the operation that's selected as the leader of the execution group. This field is a relationship field. Relationship Name GroupLeader Relationship Type Lookup Refers To BackgroundOperation
Name	Type string Properties Filter, Group, idLookup, Sort Description Identifies the background operation.
NumFollowers	Type int Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Number of other operations that are in the execution group.
ParentKey	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Tag that identifies related sets of operations, if any.
ProcessAfter	Type dateTime Properties Filter, Nillable, Sort Description The operation is scheduled to be processed after this time.
RetryBackoff	Type int Properties Filter, Group, Nillable, Sort Description Applies only if the operation has an error status. The first retry is attempted immediately. Each subsequent retry is increasingly delayed according to an exponential expression that's multiplied by the <code>RetryBackoff</code>, in milliseconds. Specifically, the delay time is $(2^n - 1) \times R$, where n is the <code>RetryCount</code>, and R is the <code>RetryBackoff</code>. The default value for <code>RetryBackoff</code> depends on the type of operation. For example, the <code>RetryBackoff</code> default for write operations on external objects is 1,000 milliseconds. For write operations, retries are attempted immediately, after 3 seconds, after 7 seconds, after 15 seconds, and so on.
RetryCount	Type int Properties Filter, Group, Nillable, Sort Description Number of attempted retries. Applies only if the operation has an error status.

Field Name	Details
RetryLimit	Type int Properties Filter, Group, Nillable, Sort Description Maximum number of retries to attempt. Applies only if the operation has an error status.
SequenceGroup	Type string Properties Filter, Group, Nillable, Sort Description Identifies the sequence group. Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Within an execution group, operations can be placed into a sequence group to be executed in a specific order.
SequenceNumber	Type int Properties Filter, Group, Nillable, Sort Description Order position within the sequence group. Applies only if the operation is merged with other operations into an execution group to be processed in bulk. Within an execution group, operations can be placed into a sequence group to be run in a specific order.
StartedAt	Type dateTime Properties Filter, Nillable, Sort Description When the operation started running.
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the background operation. The options are:

Field Name	Details
	• New • Scheduled • Canceled • Merged • Waiting • Running • Error • Complete
SubmittedAt	Type dateTime Properties Filter, Nillable, Sort Description When the operation was added to the job queue.
Timeout	Type int Properties Filter, Group, Nillable, Sort Description Maximum time in milliseconds to wait for results after the operation started running.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type of the background operation. The options are: • ApiCatalogPoller • BlockchainEventPoller • CdpMetadataDeploy • ExternalChangeDataCapture • ExternalConnectivityPoller • ExternalObject • ExternalObjectSync • ExternalServiceCallback • MetadataChangesetOperation • MfgBulkUpdate

Field Name	Details
	• PrivateConnectMigration • SingularityAutoSync • SingularityMDSSync • SingularitySchemaEvolutionTrigger • SiteTaskCreate • SiteTaskPublish • Sweeper • WebCart • XClean
WorkerUri	Type string Properties Filter, Group, idLookup, Nillable, Sort Description URI of the worker that performed the operation. Example for a Salesforce Connect OData operation: <pre>services/data/v35.0/xds/upsert</pre>

Usage

Use the BackgroundOperation object to:

- Monitor the job status of asynchronous operations.
- View errors that are related to the asynchronous operations.
- Extract statistics for the asynchronous job queue.

BackgroundOperationResult

Stores error messages generated when or importing data into big objects using Bulk API. This is a big object, available in API version 37.0 and later.

Each instance of `BackgroundOperationResult` represents one error. The `Message` field stores the text of the error message. The `ParentID` field stores the:

- Batch ID for the data import, in case of Bulk API

Bulk API validates data at the time of import, and generates an error message for the first occurrence of invalid data in any row of the data file. The validation performed depends on the type of data being imported.

- **Text**—The length of the input string must be less than or equal to the length of the corresponding text field in the target object.
- **Number**—The input data must be a number, whose scale and precision are compatible with the corresponding number field in the target object.

- **ID**—The input data must be a valid 15- or 18-character ID.
- **DateTime**—The input data must be a valid dateTime value, in the approved format.
- **Lookup**—The lookup value must be a valid 15- or 18-character ID.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
CreatedById	Type ID Properties Nillable Description The user ID of the user initiating the Bulk API request.
CreatedDate	Type dateTime Properties Defaulted on create Description The date and time at which the Bulk API request was made.
Data	Type string Properties Nillable Description The data that generated the error message. The total length is limited to 2,000 characters, and each column can occupy a maximum of 50 characters. Any data exceeding those limits is truncated.
Id	Type ID Properties Defaulted on create, idLookup Description The ID of the error message.
Message	Type string

Field Name	Details
	Properties Nillable Description The text of the error message.
MessageType	Type picklist Properties Nillable, Restricted picklist Description The type of error message. The possible values are: ERROR, WARNING, or INFO.
ParentId	Type reference Properties Filter, Sort Description The batch ID in Bulk API.

Usage

You can check for errors by querying the `BackgroundOperationResult` object. For example, this query returns details of all errors in a data file imported using Bulk API, whose batch ID is `751xx0000000060AAQ`.

```
SELECT CreatedById, CreatedDate, Id, Message, MessageType, ParentId FROM
BackgroundOperationResult WHERE ParentId = "751xx0000000060AAQ"
```

Note: You can only view errors resulting from Bulk API requests that you initiated, unless you have the global permission to view all data.

BatchApexErrorEvent

The documentation has moved to [BatchApexErrorEvent](#) in the *Platform Events Developer Guide*.

BillingBatchScheduler

Represents a scheduled processing job that triggers recurring invoice batch runs and payment batch runs in Subscription Management. This object is available in API version 55.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
BillingSchedulerName	Type string Properties Filter, Group, idLookup, Sort Description Name of the scheduler.
Comments	Type textarea Properties Filter, Nillable, Sort Description Optional field for comments about the scheduler.
CronExpression	Type string Properties Filter, Group, Sort Description Determines how often the scheduler recurs.
EndDate	Type date Properties Filter, Group, Nillable, Sort Description The date when the scheduler stops triggering batch processing jobs.
FrequencyCadence	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description Indicates how often the scheduler triggers the invoice batch run or the payment batch run. Possible values are: • Daily—The scheduled job recurs every day. • Monthly—The scheduled job recurs every month. • Once—The scheduled job occurs one time and doesn't recur. • Weekly—The scheduled job recurs every week.
FrequencyOptions	Type textarea Properties Nillable Description Derived field that stores the scheduler configuration.
JobType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates the type of batch processing job that the scheduler triggers. Possible values are: • Invoice—The scheduler starts a batch invoice run. • Payment—The scheduler starts a batch payment run.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.

Field	Details
NextRunTime	Type dateTime Properties Filter, Nillable, Sort Description The date and timestamp of the next scheduled batch invoice run or batch payment run are shown in the user's time zone.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the user who created the scheduler. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RecurringSubType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the frequency at which the batch processing job recurs when the <code>FrequencyCadence</code> is set to <i>Monthly</i>. Possible values are: • <i>Every</i>—The processing job recurs at every instance of the frequency of the value. For example, if the <code>RecurringSubType</code> is <i>Every</i> and the <code>FrequencyCadence</code> is <i>Weekly</i>, then the batch processing job recurs every week. • <i>SpecificDate</i>—The scheduler triggers the batch processing job on the selected date. For example, if the selected date is <i>5</i>, and the <code>FrequencyCadence</code> is <i>Monthly</i>, then the job recurs on the fifth day of each month.
RecurringType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Specifies the frequency at which the batch processing job is repeated when the <code>FrequencyCadence</code> is set to <i>Weekly</i>. Possible values are: • <code>Every</code>
<code>RecursOn</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the interval at which the scheduler triggers a batch processing job. If the <code>FrequencyCadence</code> is <i>Monthly</i>, you must select either the specific date or the interval when the schedule triggers the job. Possible values are: • <code>First</code> • <code>Fourth</code> • <code>Last</code> • <code>Second</code> • <code>Third</code> Example: To tell the scheduler to trigger the job on the first Monday of the month, set the following fields: • <code>FrequencyCadence=Monthly</code> • <code>RecursOn=First</code> • <code>RecursOnDay= Monday</code>
<code>RecursOnDate</code>	Type string Properties Filter, Group, Nillable, Sort Description Specifies the date on which the scheduler triggers a batch processing job. Example: To tell the scheduler to trigger the job on the fifth day of the month, set the following fields: • <code>FrequencyCadence=Monthly</code> • <code>RecursOnDate=5</code> Example: To tell the scheduler to trigger the job on the second to last day of the month, set the following fields: • <code>FrequencyCadence=Monthly</code>

Field	Details
	• <code>RecursonDate=SecondToLast</code> If you select <i>Last</i>, <i>SecondToLast</i>, or <i>ThirdToLast</i>, the date of the batch processing job varies depending on the number of days in the month. For example, suppose <i>SecondToLast</i> is selected. If the month has 30 days, such as June, then the batch processing job occurs on the 28th day. If the month has 31 days, such as July, then the batch processing job occurs on the 29th day.
RecursonDay	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the day on which the scheduler triggers a batch processing job. If the <code>FrequencyCadence</code> field is set to <i>Weekly</i>, then you must select the day when the scheduler runs. The scheduler recurs every week on the selected day; for example, weekly on Monday. Possible values are: • Sunday • Monday • Tuesday • Wednesday • Thursday • Friday • Saturday
RunCriteriaId	Type reference Properties Filter, Group, Sort Description The ID of the filter criteria that's defined for the invoice batch run or the payment batch run. This field is a polymorphic relationship field. Relationship Name RunCriteria Relationship Type Lookup Refers To InvoiceBatchRunCriteria, PaymentBatchRunCriteria

Field	Details
StartDate	Type date Properties Filter, Group, Sort Description The date when the scheduler triggers its first batch processing job.
StartTime	Type time Properties Filter, Sort Description The time when the scheduler triggers the batch processing job.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the scheduler. Only Active schedulers can trigger batch processing jobs. Possible values are: • Active • Canceled • Draft • Inactive
TimeZone	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The time zone is either the value selected when the run was configured, or it's the user's time zone. The time zone is shown in Greenwich Mean Time (GMT).

BillingPeriodItem

Represents one payment period for a subscription. The billing period item is used to pass billing information to an invoice line item in Subscription Management. This object is available in API version 55.0 and later.

When a billing schedule is invoiced, Subscription Management creates a billing period item to store the billing and payment information that's passed to an invoice line. Subscription Management next creates an invoice line for billing period items that match the invoice's

target date. One billing period item is created for each billing period in the billing schedule. For example, a one-year subscription that's billed quarterly creates a billing schedule with four billing period items.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Amount	Type currency Properties Filter, Sort Description Price for the billing period item. Used to calculate the invoice line's Amount field.
BillingPeriodEndDate	Type date Properties Filter, Group, Nillable, Sort Description Used to calculate the invoice line's end date.
BillingPeriodItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-defined number that refers to the billing period item.
BillingPeriodStartDate	Type date Properties Filter, Group, Nillable, Sort Description Used to calculate the invoice line's start date.

Field	Details
BillingScheduleId	Type reference Properties Filter, Group, Sort Description Parent billing schedule of the billing period item. This field is a relationship field. Relationship Name BillingSchedule Relationship Type Lookup Refers To BillingSchedule
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Contains the ISO code for any currency allowed by the org. Available only for orgs with the multicurrency feature enabled.
InvoiceBatchRunId	Type reference Properties Filter, Group, Nillable, Sort Description Parent invoice batch run of the billing period item. This field is a relationship field. Relationship Name InvoiceBatchRun Relationship Type Lookup Refers To InvoiceBatchRun
InvoiceLineId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description This field looks up to the invoice line that's generated from the billing period item. This field is populated only when a billing period item is generated via an invoice batch run. Otherwise, this field is empty. This field is a relationship field. Relationship Name InvoiceLine Relationship Type Lookup Refers To InvoiceLine
InvoiceStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Status of the invoice that contains the invoice line created from the billing period item. Valid values are: • Canceled—The invoice for this billing period item was canceled. • Draft—The invoice has been created but hasn't been posted. Available in API version 60.0 and later. • DraftInProgress—The invoice hasn't been created yet. When the invoice is created, the <code>InvoiceStatus</code> field value is changed to <code>Draft</code>. If the invoice generation process fails, the <code>InvoiceStatus</code> field value shows <code>DraftInProgress</code>. Available in API version 60.0 and later. • Error—The invoice for this billing period item was generated in error. • Pending—The invoice for this billing period item is being generated. • Posted—An invoice line based on this billing period has been created and added successfully to the invoice. • PostingInProgress—An invoice line based on this billing period has been created and is in the process of being added to the invoice. Available in API version 60.0 and later. • Voided—An invoice line based on this billing period was voided. • VoidInProgress—An invoice line based on this billing period is in the process of being voided.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description Status of the billing period item. Draft billing period items aren't evaluated for invoice line creation. Valid values are: • Canceled • Draft • Reviewed

BillingPolicy

Represents a group of billing treatments, which define the rules for how to invoice a customer for an order item. This object is available in API version 55.0 and later.

Billing policies are related to products, which pass the policy on to the resulting order items. When an order is activated, Subscription Management assigns a billing treatment to each order item based on the values in the `BillingTreatmentSelection` field. Then Subscription Management uses the billing treatment to create billing schedules.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
<code>BillingTreatmentSelection</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines how Subscription Management assigns billing treatments to order items and to assets related to the billing policy. Possible values are:

Field	Details
	Default—The value specified in the DefaultBillingTreatmentId field is automatically applied to order items and assets. Manual—Users must specify the billing treatment that's applied to the order items and assets.
DefaultBillingTreatmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description When BillingTreatmentSelection has a value of Default, Subscription Management uses the selected billing treatment for all order items and assets related to the billing policy. This field is a relationship field. Relationship Name DefaultBillingTreatment Relationship Type Lookup Refers To BillingTreatment
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Optional user-defined description that describes the billing policy.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Optional user-defined name for the billing policy.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The billing policy's status. Possible values are: • Active—Indicates that the billing policy is available for use on products. • Draft—Indicates that the billing policy isn't available for use on products. Use this status when creating billing policies that aren't ready to be activated. • Inactive—Indicates that the billing policy isn't available for use on products.

BillingSchedule

Stores the order item information used in the invoicing process. This object is available in API version 55.0 and later.

When you activate an order, Subscription Management creates one billing schedule for each order item in an order. For example, if an order contains 15 order items, Subscription Management creates 15 billing schedules, one billing schedule for each item. The invoice scheduler uses the information in the billing schedule to determine when it's time to invoice an order item.

Billing schedules for all order items that are generated from one asset are summarized in a billing schedule group.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
BillDayOfMonth	Type int Properties Filter, Group, Nillable, Sort Description An integer from 1 to 31 that indicates the day of the month.
BilledAmount	Type currency Properties Filter, Nillable, Sort Description The total amount (excluding tax) that has been invoiced from the billing schedule. This field is a calculated field.
BillingAccountId	Type reference Properties Filter, Group, Sort Description This field is a relationship field. Relationship Name BillingAccount Refers To Account
BillingPeriodAmount	Type currency Properties Filter, Nillable, Sort Description The amount to be invoiced each billing period. For example, if the billing period is monthly, this field shows the monthly amount that appears on the invoice line.

Field	Details
BillingScheduleEndDate	Type date Properties Filter, Group, Nillable, Sort Description The last date that the billing schedule is available for invoicing. Inherited from the EndDate field on the order item.
BillingScheduleGroupId	Type reference Properties Filter, Group, Sort Description ID of the billing schedule group that contains the billing schedule. Billing schedules are grouped when they have the same source order item. The source order item is the original order item that a customer bought. Afterwards, if the customer amends, cancels, or renews the order item, a new billing schedule is created with the BillingScheduleGroupId for the original order item. This field is a relationship field. Relationship Name BillingScheduleGroup Relationship Type Lookup Refers To BillingScheduleGroup
BillingScheduleNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Autogenerated reference number for the billing schedule.
BillingScheduleStartDate	Type date Properties Filter, Group, Nillable, Sort Description The date that the billing schedule is available for invoicing. Inherited from the ServiceDate on the order item.

Field	Details
BilledThroughPeriod	Type date Properties Filter, Group, Nillable, Sort Description The last billing period that includes this date.
BillingTreatmentItemId	Type reference Properties Filter, Group, Sort Description The billing treatment item used to configure invoiceable amounts on the billing schedule. This field is a relationship field. Relationship Name BillingTreatmentItem Relationship Type Lookup Refers To BillingTreatmentItem
CancellationDate	Type date Properties Filter, Group, Nillable, Sort Description The date on which the subscriber can no longer access the service. For example, if a service ends on August 31, then the cancellation date is September 1, because that's the date when the subscriber can no longer use the service. Subscription Management doesn't invoice billing schedules past their cancellation date.
Category	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The business action represented by the billing schedule. Possible values are: - AmendQuantity—A billing schedule for an order that changes the quantity. This object is available in API version 56.0 and later. - Cancellation—A billing schedule for an order that was canceled

Field	Details
	• Original—A billing schedule for the initial order • Renewal—A billing schedule for an order that was renewed
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the invoice. The default value is USD.
InvoiceBatchRunId	Type reference Properties Filter, Group, Nillable, Sort Description The invoice batch run that evaluated this billing schedule and its billing period items to produce an invoice. This field is a relationship field. Relationship Name InvoiceBatchRun Relationship Type Lookup Refers To InvoiceBatchRun
InvoiceRunBatch	Type picklist Properties Filter, Group, Nillable, Sort Description The batch value used by the invoice run that evaluated this billing schedule. During an invoice run, billing schedules with the same batch value (including null) are grouped to the same invoice run. For example, create one batch of invoices for Premium Customers and another batch for Regular Customers. Possible values are: • Premium Customers • Regular Customers

Field	Details
NextBillingDate	Type date Properties Filter, Group, Nillable, Sort Description The date that the next billing period starts for the invoice. Used to calculate which invoice lines are included on an invoice. When an invoice scheduler or API evaluates an order for invoicing, billing schedules with a next billing date on or before the invoice's target date are included on the invoice.
NextChargeFromDate	Type date Properties Filter, Group, Nillable, Sort Description The date that the billing schedule is invoiced in the upcoming billing period. For example, if you invoiced a customer for a billing period of 01/01/22 through 01/31/22, the billing schedule's <code>NextChargeFromDate</code> is 02/01/22.
OriginalBillingScheduleId	Type reference Properties Filter, Group, Nillable, Sort Description If this billing schedule is an amended or canceled billing schedule, then this field shows the original billing schedule. Otherwise, this field is null. This field is a relationship field. Relationship Name OriginalBillingSchedule Relationship Type Lookup Refers To BillingSchedule
PendingAmount	Type currency Properties Filter, Nillable, Sort Description The amount from the current billing term that hasn't been billed yet. For example, the unbilled amount for a month, quarter, or year, depending on this billing schedule's billing term.

Field	Details
Quantity	Type double Properties Filter, Nillable, Sort Description The quantity of the order item that created the billing schedule.
ReferenceEntityId	Type reference Properties Filter, Group, Nillable, Sort Description The parent order of the order item that created the billing schedule. This field is a polymorphic relationship field. Relationship Name ReferenceEntity Relationship Type Lookup Refers To Order
ReferenceEntityItemId	Type reference Properties Filter, Group, Nillable, Sort Description The order item or asset that created the billing schedule. This field is a polymorphic relationship field. Relationship Name ReferenceEntityItem Relationship Type Lookup Refers To OrderItem, OrderItemAdjustmentLineTime, or OrderItemSummary
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The state of the order item that the billing schedule represents.

Field	Details
	Possible values are: • <code>CompletelyBilled</code> • <code>Error</code> • <code>Processing</code> • <code>ReadyForInvoicing</code>
<code>TaxTreatmentId</code>	Type reference Properties Filter, Group, Sort Description Shows the treatment used to calculate tax for the billing schedule. Defined based on the order item's tax policy. This field is a relationship field. Relationship Name TaxTreatment Relationship Type Lookup Refers To TaxTreatment
<code>TotalAmount</code>	Type currency Properties Filter, Nillable, Sort Description The total amount of the order item represented by the billing schedule.
<code>UnitPrice</code>	Type currency Properties Filter, Nillable, Sort Description The price for an individual unit of the billing schedule's parent order item, including charges, adjustments, and discounts. Inherited from the order item's <code>UnitPrice</code> field.

BillingScheduleGroup

Represents a consolidated view of all billing schedules related to the order items generated from one asset, including new orders and amendment orders. This object is available in API version 55.0 and later.

When an order is created, a billing schedule is generated for each order item. The billing schedule group summarizes fields from each billing schedule. For example, it summarizes financial fields such as Total Billed Amount and Total Pending Amount and billing fields such as Billing Day of Month and Billing Term.

The billing schedule group includes schedules generated from a new order item and schedules generated from amendment order items. The billing schedule group shows users the summarized financial data that includes any changes, such as new orders or amendments, made to the asset.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Special Access Rules

This object is available with Subscription Management, Commerce Subscriptions, and Billing (Revenue Cloud). If your org has both Subscription Management and Commerce Subscriptions, then Subscription Management takes precedence.

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
<code>BillDayOfMonth</code>	Type int Properties Filter, Group, Nillable, Sort Description The Billing Day of Month for the billing schedules that comprise the billing schedule group. Subscription Management uses the order item's billing day of month to calculate the order item's next billing date, which the billing schedule then inherits. For example, an order item can be billed on the first day of the month.
<code>BillToContactId</code>	Type reference Properties Filter, Group, Nillable, Sort, Update Description The contact related to the billing schedule group. This field can't be modified when related billing schedules are in processing. This field is a relationship field. Relationship Name BillToContact

Field	Details
	Relationship Type Lookup Refers To Contact
BillingAccountId	Type reference Properties Filter, Group, Sort Description The Salesforce account for the billing schedule group. This field is a relationship field. Relationship Name BillingAccount Relationship Type Lookup Refers To Account
BillingAddress	Type address Properties Filter, Nillable Description The compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.
BillingCity	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of this billing schedule group. Maximum size is 40 characters.
BillingCountry	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of this billing schedule group. Maximum size is 80 characters.

Field	Details
BillingGeocodeAccuracy	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Accuracy level of the geocode for the billing address. See Compound Field Considerations and Limitations for details on geolocation compound fields.
BillingLatitude	Type double Properties Filter, Nillable, Sort Description Used with BillingLongitude to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
BillingLongitude	Type double Properties Filter, Nillable, Sort Description Used with BillingLatitude to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
BillingMethod	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Shows the type of billing used for the source item. Possible values are: • Evergreen • OrderAmount
BillingPostalCode	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Details for the billing address of this billing schedule group. Maximum size is 20 characters.
BillingScheduleGroupNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated reference number for the billing schedule group.
BillingStartMonth	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Read-only field used with annual billing. The field shows the numbers from 1 to 12, which indicate the month when billing begins for an annual subscription. For example, if billing starts in January, the value is 1; if billing starts in June, the value is 6. This field is available in API version 58.0 and later.
BillingState	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of this billing schedule group. Maximum size is 80 characters.
BillingStreet	Type textarea Properties Filter, Group, Nillable, Sort Description Street address for the billing address of this billing schedule group.
BillingTerm	Type int Properties Filter, Group, Nillable, Sort Description Used with <code>BillingTermUnit</code> to define a billing cycle. For example, bill every 20 days or every two months. In this example, the <code>BillingTerm</code> is <code>20</code> and the <code>BillingTermUnit</code> is <code>days</code>

Field	Details
BillingTermUnit	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The frequency with which the billing schedule is invoiced. Possible values are: • Day • Month • OneTime • Quarter • Semi-Annual • Year Used with <code>BillingTermUnit</code> to define a billing cycle.
BillingType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Inherited from the shared value of each billing schedule in the billing schedule group. Defines when Subscription Management bills a product or service relative to when it's provided to the customer. Advance billing invoices a product or service before you provide it, while arrears billing invoices a product or service after you provide it. Subscription Management evaluates the billing type when it calculates an order's next billing date. Possible values are: • Advance – If the billing schedule is billed in advance, Subscription Management evaluates the order's billing day of month to choose the nearest date on or before the order product's start date. For example, if a monthly order product's start date is January 1, and the order's billing day of month is 15, the next billing date is December 15. • Arrears – If the billing schedule is billed in arrears, Subscription Management evaluates the order's billing day of month to choose the nearest date after the order product's start date. For example, if a monthly order product's start date is January 1 and the order's billing day of month is 15, the order product's next billing date is January 15.
CancellationDate	Type date Properties Filter, Group, Nillable, Sort

Field	Details
	Description The date that a cancellation was made against the billing schedule. Subscription Management doesn't invoice billing schedules past their cancellation date.
Controller	Type picklist Properties Filter, Group, Restricted picklist, Sort Description During the invoicing process, this field determines which date is used when the billing schedule group and billing schedule have a related field with conflicting values. For example, when <code>Controller</code> has a value of <code>BillingScheduleGroup</code>, if the billing schedule's billing day of month is 5 while the billing schedule group's billing day of month is 10, the invoice is sent on the 10th day of the month. Possible values are: • <code>BillingScheduleGroup</code>—The date on the billing schedule group controls.
CurrentBillingPeriodAmount	Type currency Properties Filter, Nillable, Sort Description This field was removed in Subscription Management API version 55.0.
CurrentQuantity	Type double Properties Filter, Nillable, Sort Description This field was removed in Subscription Management API version 55.0.
EffectiveNextBillingDate	Type date Properties Filter, Group, Nillable, Sort Description The earliest <code>NextBillingDate</code> from all billing schedules in the billing schedule group. This field is a reference field that isn't used for any features or calculations. This field is a calculated field.

Field	Details
EndDate	Type date Properties Filter, Group, Nillable, Sort Description The latest end date from all billing schedules in the billing schedule group.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
OwnerId	Type reference Properties Filter, Group, Sort, Update Description The Salesforce user who owns the billing schedule group. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentTermId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort, Update Description The ID of the payment term used in this billing schedule group. This field can't be modified when related billing schedules are in processing. This field is a relationship field. Relationship Name PaymentTerm Relationship Type Lookup Refers To PaymentTerm
PeriodBoundary	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Inherited from the order item's parent quote line item or sales transaction item. The period boundary helps determine the start and end date of the billing periods. Possible values are: • AlignToCalendar—the period starts on the first day of the term unit; for example, the first day of the month. • Anniversary—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. • DayOfPeriod—the period starts on the day indicated by <code>PeriodBoundaryDay</code>. • EndOfPeriod—the period starts on the last day of the pricing term unit.
Product2Id	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the product for the order item represented by each billing schedule in the billing schedule group. This field is a relationship field. Relationship Name Product2

Field	Details
	Relationship Type Lookup Refers To Product2
ProductName	Type string Properties Filter, Group, Nillable, Sort Description The name of the product for the order item represented by each billing schedule in the billing schedule group.
ProrationPolicyId	Type reference Properties Filter, Group, Nillable, Sort Description Refers to the proration policy that applies to this billing schedule group. The proration policy defines how time periods are calculated for subscription orders. For example, whether partial periods are allowed. Inherited from the shared proration policy for each billing schedule in the billing schedule group. This field is a relationship field. Relationship Name ProrationPolicy Relationship Type Lookup Refers To ProrationPolicy
ReferenceEntityId	Type reference Properties Filter, Group, Nillable, Sort Description The asset used to create the billing schedules in the billing schedule group. This field is a relationship field. Relationship Name ReferenceEntity

Field	Details
	Relationship Type Lookup Refers To Asset
ShippingAddress	Type address Properties Filter, Nillable Description The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
ShippingCity	Type string Properties Filter, Group, Nillable, Sort Description Details for the shipping address for this billing schedule group. City maximum size is 40 characters
ShippingCountry	Type string Properties Filter, Group, Nillable, Sort Description Details for the shipping address for this billing schedule group. Country maximum size is 80 characters.
ShippingGeocodeAccuracy	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Accuracy level of the geocode for the shipping address. See Compound Field Considerations and Limitations for details on geolocation compound fields.
ShippingLatitude	Type double Properties Filter, Nillable, Sort

Field	Details
	Description Used with ShippingLongitude to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
ShippingLongitude	Type double Properties Filter, Nillable, Sort Description Used with ShippingLatitude to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
ShippingPostalCode	Type string Properties Filter, Group, Nillable, Sort Description Details for the shipping address for this billing schedule group. Postal code maximum size is 20 characters.
ShippingState	Type string Properties Filter, Group, Nillable, Sort Description Details for the shipping address for this billing schedule group. State maximum size is 80 characters.
ShippingStreet	Type textarea Properties Filter, Group, Nillable, Sort Description The street address of the shipping address for this billing schedule group. Maximum of 255 characters.
StartDate	Type date Properties Filter, Group, Nillable, Sort

Field	Details
	Description The earliest start date from all billing schedules in the billing schedule group.
TotalBilledAmount	Type currency Properties Filter, Nillable, Sort Description The amount that has been invoiced for all billing schedules within the billing schedule group. This field is a calculated field.
TotalPendingAmount	Type currency Properties Filter, Nillable, Sort Description The amount that hasn't yet been invoiced for all billing schedules within the billing schedule group. This field is a calculated field.

BillingTreatment

Defines how Subscription Management bills an order item. The Exclude From Billing field controls whether the order item is invoiced. Child billing treatment items control how much of the order item's balance is invoiced for each invoice across the subscription's lifecycle. Billing treatments are assigned to order items based on the parent billing policy's Billing Treatment Selection field. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
BillingPolicyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the billing policy for the billing treatment. This field is a relationship field. Relationship Name BillingPolicy Relationship Type Lookup Refers To BillingPolicy
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Optional user-defined description of the billing treatment.
ExcludeFromBilling	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Excludes any order items assigned to the treatment from creating billing schedules. Possible values are: • No • Yes
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
LegalEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the legal entity used to assign the treatment to order items when the parent billing policy's <code>BillingTreatmentSelection</code> is <code>LegalEntity</code>. This field is a relationship field. Relationship Name LegalEntity Relationship Type Lookup Refers To LegalEntity
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Optional user-defined name for the billing treatment.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Draft or inactive billing treatments can't be assigned to order items. Possible values are: • Active • Draft • Inactive

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BillingTreatmentHistory (API version 55.0)

History is available for tracked fields of the object.

BillingTreatmentItem

A billing treatment item defines how the order item's total amount is distributed into billing schedules over the course of the order item's lifecycle. In the Subscription Management pilot, billing treatments must have only one billing treatment item, so that the billing treatment item covers 100% of the order item's total value. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
BillingTreatmentId	Type reference Properties Create, Filter, Group, Sort Description The parent billing treatment for the billing treatment item. This field is a relationship field. Relationship Name BillingTreatment Relationship Type Lookup Refers To BillingTreatment
BillingType	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines when Subscription Management invoices a product or service relative to when it's provided to the customer. Advance billing invoices a product or service before it's provided, while arrears billing invoices a product or service after it has provided Subscription Management evaluates billing type when calculating an order product's next billing date. Possible values are: • Advance – If the order item is billed in advance, Subscription Management evaluates the order's billing day of month to choose the nearest date on or before the order product's start date. For example, if a monthly order product's start date is January 1, and the order's billing day of month is 15, the next billing date is December 15. • Arrears – If the order item is billed in arrears, Subscription Management evaluates the order's billing day of month to choose the nearest date after the order product's start date. For example, if a monthly order product's start date is January 1 and the order's billing day of month is 15, the order product's next billing date is January 15.  Important: Arrears billing isn't available in Subscription Management API Version 54.0.
Controller	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description During the invoicing process, this field determines which value Subscription Management uses when the billing schedule group and billing schedule have a shared field with different values. For example, when <code>Controller</code> has a value of <code>BillingScheduleGroup</code>, if the billing schedule's billing day of month is 5 while the billing schedule group's billing day of month is 10, Subscription Management uses the value of 10. In the Subscription Management API version 54.0, only <code>BillingScheduleGroup</code> is supported. Possible values are: • <code>BillingScheduleGroup</code>—
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three-letter ISO 4217 currency code associated with the billing treatment item.

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Optional user-defined description for the billing treatment item.
FlatAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The amount in terms of units of currency (such as \$10 or \$21.52) to invoice from the order item. Used only when Type has a value of FlatAmount.
Handling0Amount	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Shows how Subscription Management invoices billing period items that have an amount of \$0. Possible values are: • CreateInvoice—Create a \$0 invoice line. • Null—No invoice line is created.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Default name of this record.
Percentage	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage (such as 10% or 12.5%) to invoice from the order item. Used only when <code>Type</code> has a value of <code>Percentage</code>.
ProcessingOrder	Type int Properties Create, Filter, Group, Sort, Update Description Defines the order in which Subscription Management creates billing schedules based on each billing treatment item. Lower numbers are evaluated first. For example, if your billing treatment has a billing treatment item that invoices at 25 <code>Percentage</code> and a <code>ProcessingOrder</code> of 1, and another item that invoices at 75 <code>Percentage</code> and a <code>ProcessingOrder</code> of 2, your first billing schedule will be for 25 percent of the order item's total amount, and your second billing schedule will be for 75% of the order item's total amount.
Sequencing	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Allows users to define the number used to start invoice numbers on invoices generated from this billing treatment item. Subscription Management API Version 54.0 supports only manual sequencing. Possible values are:

Field	Details
	Manual—Invoices created from this billing treatment item begin with an invoice number of 1.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Draft billing treatment items aren't evaluated for creating billing schedules. Possible values are: - Active - Draft
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines whether billing schedules created from this billing treatment item are based on a flat amount or a percentage of the order item's total amount. Possible values are: - FlatAmount—The billing schedule is for a flat currency amount of the order item's total amount (for example, \$50 or \$200.50.) - Percentage—The billing schedule is for a percentage of the order item's total amount (for example, 12.5% or 54%).

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BillingTreatmentItemHistory (API version 55.0)

History is available for tracked fields of the object.

BlockedRedirectEventLog

Blocked Redirect events capture information about blocked redirections from Salesforce to untrusted and malformed URLs. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
BlockedUri	Type string Properties Filter, Group, Nillable, Sort Description The full string of the target for the redirection.
BlockedUriDomain	Type string Properties Filter, Group, Nillable, Sort Description If BLOCKED_URI is a URL, the domain for that URL. To allow future redirections to the BLOCKED_URI, BLOCKED_URI_DOMAIN is the value to add to RedirectWhitelistUrl.
IsMalformedUrl	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this redirection was blocked because the target URL failed a syntax check or not. The default value is <code>false</code>.
Origin	Type string Properties Filter, Group, Nillable, Sort Description The origin that caused the request to the BLOCKED_URI. For example, if a form on an Experience Cloud Visualforce site page redirects a user to an untrusted URL via the saveURL parameter, ORIGIN contains the base URL of that site.
Referrer	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The absolute or partial address from which the request to the BLOCKED_URI came. The <code>Referrer-Policy</code> HTTP Header of the request determines how much of the URL is shared.
RemoteAddress	Type string Properties Filter, Group, Nillable, Sort Description Remote IP address of the client making the request.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, <code>2020-01-20T19:12:26.965Z</code> . Milliseconds are the most granular setting.

Bookmark

Represents a link between opportunities that share common information.

This object is available to organizations with the Similar Opportunities feature enabled.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ID	Type ID Properties Defaulted on create, Filter Description ID of the bookmark. Label is Bookmark ID.
FromId	Type ID Properties Filter Description The originating opportunity. Label is Bookmarked From ID
ToId	Type ID Properties Filter Description The opportunity to which the originating opportunity is linked. Label is Bookmarked To ID.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.

Usage

The Bookmark object works with the Opportunity object only.

Use this read-only object to query the bookmarks between opportunities in your organization. In the online application, users can search for opportunities that share attributes with their opportunity. The user can then bookmark the appropriate opportunities for future reference.

BotDefinition

Represents a top level object for Einstein Bots or Agentforce Agents. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, Agents must be enabled in your org.

Fields

Field	Details
AgentTemplate	Type string Properties Filter, Group, Nillable, Sort Description If this BotDefinition represents an agent, this field represents the name of the agent template or legacy agent template used to create it.
AgentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The agent type. For example, Agentforce Service Agent (ASA) or Agentforce Employee Agent (AEA).
BotUserId	Type reference Properties Filter, Group, Nillable, Sort Description The user ID associated with the bot definition. Relationship Name BotUser Refers To User

Field	Details
Description	Type textarea Properties Filter, Nillable, Sort Description A description for the bot or agent.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name for this object.
MasterLabel	Type string Properties Filter, Group, Sort Description The master label of the bot.
Type	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description This field represents the configuration type of the bot. The default value is <code>Bot</code>. Possible values are: • <code>Bot</code>—Default Einstein Bot configuration. • <code>ExternalCopilot</code>— An external-facing agent. For example, Agentforce Service Agent. • <code>InternalCopilot</code>— An internal-facing agent. For example, Agentforce (Default).

BotVersion

Represents a version of a bot or agent defined by a BotDefinition record. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
BotDefinitionId	Type reference Properties Create, Filter, Group, Sort Description Required. This field relates a bot version to its parent BotDefinition record. This field is a relationship field. Relationship Name BotDefinition Refers To BotDefinition
CopilotPrimaryLanguage	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The primary language that the bot or agent communicates in.
CopilotSecondaryLanguages	Type string Properties Create, Filter, Nillable, Sort, Update Description A comma-separated list of additional languages that the bot or agent supports.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name for this object.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Required. Indicates whether the bot version is active or inactive. Only one version for a related BotDefinition can be active at once. Possible values are: • Active • Inactive The default value is Inactive.
ToneType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Defines the tone of the bot. Possible values are: • Casual— • Formal— • Neutral— The default value is Casual.
VersionNumber	Type int Properties Create, Filter, Group, Sort, Update Description The number for this version of the bot or agent.

BrandingSet

Represents the definition of a set of branding properties for an Experience Builder site, as defined in the Theme panel in Experience Builder. This object is available in API version 40.0 and later.

Supported Calls

create(), delete(), describeSObjects(), query(), retrieve(), update(), upsert()

Special Access Rules

The BrandingSet type is available when at least one of the following is enabled in your org: Digital Experiences, Surveys, or Lightning Experience. All users, including unauthenticated guest users, can access this type.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the set of branding properties.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Required. API name of the BrandingSet object.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language used in the branding set.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. The user-facing label of the set of branding properties.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix with a 15 character limit. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package.

Field	Details
	In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <code>NamespacePrefix</code> is null if the publisher is Salesforce.

BrandTemplate

Letterhead for HTML EmailTemplate.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
Description	Type string Properties Create, Filter, Nillable, Sort, Update Description Description of the letterhead. Limited to 1000 characters.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Letterhead Unique Name.

Field	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the letterhead is available for use (<code>true</code>) or not (<code>false</code>). Label is Active.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Label of the template as it appears in the user interface. Limited to 255 characters. Label is Brand Template Name.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Value	Type textarea Properties Create, Update

Field	Details
	Description The contents of the letterhead, in HTML, including any logos.

Usage

Use this object to brand EmailTemplate records with your letterhead. You can also set a brand template to active or inactive. For example, if you have five different marketing brands, you can maintain each different brand in one template, and assign to the appropriate EmailTemplate.

SEE ALSO:

[EmailTemplate](#)

Brief

Represents a marketing brief. A brief contains information that's used for positioning and grounding a marketing campaign. Agentforce can help you create a campaign that best fits the goals and requirements in your brief. This object is available in API version 61.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AdditionalNotes	Type textarea Properties Create, Nillable, Update Description Context related to the campaign that isn't represented in the other fields.
AgentGuardrails	Type textarea Properties Create, Nillable, Update Description Guardrails that the agent must follow when creating a campaign. Use these guardrails to prevent damage to your brand and to ensure safety and compliance.

Field	Details
BrandId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The unique ID of your brand. This field is a relationship field. Relationship Name Brand Refers To ManagedContent
Description	Type textarea Properties Create, Nillable, Update Description A description of the brief.
IsConversational	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the campaign contains conversational elements. The default value is <code>false</code>.
KeyMessage	Type textarea Properties Create, Nillable, Update Description The main theme or message that you want to deliver to your customers through the campaign that's associated with the brief.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the brief was last referenced by a campaign.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the brief was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the brief.
PlanName	Type textarea Properties Create, Nillable, Update Description An agent-generated name for the campaign. When you save a campaign preview, the resulting campaign has this name.
PrimaryCtas	Type textarea Properties Create, Nillable, Update Description The main calls-to-action (CTAs) for the brief. The agent uses this information to understand the actions that it can use to meet the goals of the campaign.
PrimaryGoal	Type textarea Properties Create, Nillable, Update Description The goal of the campaign that's associated with the brief. The agent uses this field to understand the main objective of the campaign.
PrimaryKpi	Type textarea Properties Create, Nillable, Update

Field	Details
	Description The main key performance indicator (KPI) for measuring progress toward the goal. The agent uses this field to prioritize actions that contribute to the goal of the campaign.
Priority	Type textarea Properties Create, Nillable, Update Description The priority of the brief. The agent uses this field to prioritize actions that contribute to the goal of the campaign.
TargetAudience	Type textarea Properties Create, Nillable, Update Description A description of the characteristics of the audience that you want to reach through the campaign that's associated with this brief.

BriefcaseAssignment

Represents the assignment of a briefcase definition to selected users and user groups. This object is available in API version 50.0 and later.

Use this object to assign selected records for users and groups to view offline. Briefcase objects are available in orgs that have Briefcase Builder and Field Service enabled.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
BriefcaseId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the briefcase definition. Label is Briefcase Definition ID .

Field	Details
UserOrGroupId	Type reference
	Properties Create, Filter, Group, Sort
	Description Required. ID of the user or group requiring access to the briefcase. Label is User or Group ID .

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[BriefcaseAssignmentChangeEvent](#) (API version 55.0)

Change events are available for the object.

BriefcaseDefinition

Represents a briefcase definition. A briefcase makes selected records available for users to view when they're offline in the Salesforce Field Service mobile app for iOS and Android. This object is available in API version 50.0 and later.

Special Access Rules

This object is read-only.

Briefcase objects are available in orgs that have Briefcase Builder and Field Service enabled.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Packaging Considerations

An org can have up to 5 briefcases. Installed briefcases are counted against this limit. You can't install a package that includes a briefcase if your org already has 5 briefcases. When a managed package includes a briefcase, the only changes allowed for the briefcase are activating or deactivating and assigning users or groups to the briefcase.

Fields

Field	Details
Description	Type textarea

Field	Details
	Properties Filter, Nillable, Sort Description Description of the briefcase definition. Limited to 1024 characters.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Limited to 80 characters. Label is Name.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the briefcase is available for use (<code>true</code>) or not (<code>false</code>). Label is Active.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language for the briefcase. This field defaults to the user's language unless the org is multi-language enabled. Specifies the language of the labels returned. Possible values are: - Chinese (Simplified): <code>zh_CN</code> - Chinese (Traditional): <code>zh_TW</code> - Danish: <code>da</code> - Dutch: <code>n1_NL</code> - English: <code>en_US</code> - Finnish: <code>fi</code> - French: <code>fr</code>

Field	Details
	• German: <code>de</code> • Italian: <code>it</code> • Japanese: <code>ja</code> • Korean: <code>ko</code> • Norwegian: <code>no</code> • Portuguese (Brazil): <code>pt_BR</code> • Russian: <code>ru</code> • Spanish: <code>es</code> • Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: <code>sv</code> • Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
MasterLabel	Type string Properties Filter, Group, Sort Description The master label for the briefcase. This internal label doesn't get translated. Limited to 80 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Usage

Use this object to query a briefcase or a list of briefcases with selected records and user assignments. For example:

```
SELECT Id, Description FROM BriefcaseDefinition
WHERE Id in (SELECT BriefcaseId FROM BriefcaseRule
WHERE TargetEntity='Account')
AND Id in (SELECT BriefcaseId FROM BriefcaseAssignment where
UserOrGroupId='00GR0000000VtwUMAS')
```

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

BriefcaseDefinitionChangeEvent (API version 55.0)

Change events are available for the object.

BriefcaseRule

Represents a rule that specifies records for a briefcase definition. This object is available in API version 50.0 and later.

Special Access Rules

This object is read-only.

Supported Calls

describeSObjects(), query(), retrieve()

Fields

Field	Details
BriefcaseId	Type reference Properties Filter, Group, Sort Description Required. ID of the briefcase definition. Label is Briefcase Definition ID. This field is a relationship field. Relationship Name Briefcase Relationship Type Lookup

Field	Details
	Refers To BriefcaseDefinition
FilterLogic	Type string Properties Filter, Group, Nillable, Sort Description The filter logic for record selection, for example, 1 AND 2 where 1 and 2 correspond to filter 1 and filter 2. Filter logic operators include AND and OR. Limited to 255 characters. Label is Filter Logic .
IsAscendingOrder	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Required. Indicates whether the records should be sorted in ascending order. Label is Ascending .
OptionsIsRelatedFilesRule	Type boolean Properties Filter Description Indicates whether the briefcase rule is part of a hierarchical set of rules that configure the offline priming of file attachments. Available only for the Offline App (Salesforce Mobile App Plus).
OrderBy	Type picklist Properties Nillable, Restricted picklist Description The field to order the records by, which determines how the records can be sorted. For example, AccountName or CreatedBy. Label is Order By .
ParentRuleId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the parent rule of this briefcase rule. This field is a relationship field. Relationship Name ParentRule Relationship Type Lookup Refers To BriefcaseRule
QueryScope	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Required. A group of records to restrict the scope of this rule. Possible values are: - assignedToMe - everything - mine The default value is <code>everything</code> (All Records). The value <code>assignedToMe</code> is available only for the <code>ServiceAppointment</code> object.
RecordLimit	Type int Properties Filter, Group, Nillable, Sort Description The record limit for the object. The recommended number for record limit is up to 500 records per object for optimal performance. The maximum number is 2000. Label is Limit.
RelationshipField	Type picklist Properties Nillable, Restricted picklist Description The Salesforce object field that relates the briefcase rule to another briefcase rule. For example, an Account rule can be related to a Contact rule using the Account ID object field. In this example, the value for the briefcase rule's <code>RelationshipField</code> is <code>AccountID</code>.
RelationshipType	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description The relationship of the briefcase rule to another briefcase rule. Possible values are: • ParentToChild • ChildToParent
TargetEntity	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The standard object, custom object, or custom metadata type that the briefcase rule selects records from. The UI label is Target Object.

BriefcaseRuleFilter

Represents a filter criteria for a briefcase rule. This object is available in API version 50.0 and later.

Special Access Rules

This object is read-only.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
BriefcaseRuleId	Type reference Properties Filter, Group, Sort Description Required. ID of the briefcase rule.
FilterOperator	Type picklist

Field	Details
	Properties Filter, Group, Restricted picklist, Sort Description Required. The comparison operator for this rule filter. Possible values are: • d—Ends with • e—Equals • g—Greater than • h—Greater than or equal • i—Like • l—Less than • m—Less than or equal • s—Starts with
FilterSeqNumber	Type int Properties Filter, Group, Sort Description Required. The filter number. When you apply multiple filters, the filters are numbered sequentially, 1, 2, 3, and so on.
FilterValue	Type string Properties Filter, Group, Nillable, Sort Description The value for the field and criteria. For example, <code>true</code> or <code>false</code> for a boolean field whose criteria or filter operator is Equals. Capitalization matters with date filter operators. Be sure to specify date literals in uppercase. Some valid date literals include TODAY, YESTERDAY and TOMORROW.
TargetEntityField	Type picklist Properties Restricted picklist Description Required. The field to filter by. Compound fields and encrypted fields aren't supported. Label is Field.

BroadcastCommAudience

Represents the audience that the broadcast communication is sent to. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object with Service Cloud, enable Incident Management in Setup and set up Broadcast Communications.

Fields

Field	Details
AudienceId	Type reference Properties Create, Filter, Group, Sort Description ID of the broadcast communication audience. - If <code>BroadcastType</code> is <code>Alert</code>, this value is the ID of the Group record where the message is sent to. - If <code>BroadcastType</code> is <code>Email</code>, this value is the ID of the ListEmail record where the email is sent to. - If <code>BroadcastType</code> is <code>ExperienceSiteBanner</code>, this value is the ID of the Network record where the banner is displayed at. - If <code>BroadcastType</code> is <code>Slack</code>, this value is the ID of the CollaborationRoom record where the message is sent to. This field is a polymorphic relationship field. Relationship Name Audience Relationship Type Lookup Refers To CollaborationRoom, Group, ListEmail, Network
BroadcastCommAudienceNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Auto-generated number for the BroadcastCommAudience record.
BroadcastCommunicationId	Type reference Properties Create, Filter, Group, Sort Description ID of the broadcast communication record. This field is a relationship field. Relationship Name BroadcastCommunication Relationship Type Lookup Refers To BroadcastCommunication
BroadcastFailureReason	Type string Properties Filter, Group, Nillable, Sort Description The reason the broadcast communication failed to send.
BroadcastType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Medium used to distribute the message. Possible values are: - Alert - Email - ExperienceSiteBanner - Slack
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.
MessageTimeStamp	Type string Properties Create, Filter, Group, Nillable, Sort Description If BroadcastType is Slack, this value is the timestamp when the broadcast Slack message was sent.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
SiteBannerText	Type textarea Properties Create, Nillable Description If BroadcastType is ExperienceSiteBanner, this field contains the banner text displayed on the associated site.

Field	Details
SiteBannerVisibility	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description If <code>BroadcastType</code> is <code>ExperienceSiteBanner</code>, this field contains information about who can view the banner. Possible values are: • <code>AuthenticatedUsers</code> • <code>GuestUsers</code>
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the broadcast communication. Possible values are: • <code>Active</code>—The site banner is visible on the site. Only applies if <code>BroadcastType</code> is <code>ExperienceSiteBanner</code>. • <code>Deleted</code>—The message is successfully deleted and isn't visible anymore. Only applies if <code>BroadcastType</code> is <code>Slack</code>. • <code>DeleteFailed</code>—The message failed to delete but is still visible. Only applies if <code>BroadcastType</code> is <code>Slack</code>. • <code>Failed</code>—The message failed to send. Applies to any <code>BroadcastType</code>. • <code>Inactive</code>—The site banner isn't visible on the site. Only applies if <code>BroadcastType</code> is <code>ExperienceSiteBanner</code>. • <code>Sent</code>—The message is sent successfully. Only applies if the <code>BroadcastType</code> is <code>Email</code> or <code>Slack</code>. • <code>Updated</code>—The message is successfully edited. Only applies if the <code>BroadcastType</code> is <code>Slack</code>. • <code>UpdateFailed</code>—The message failed to edit and the update isn't visible. Only applies if the <code>BroadcastType</code> is <code>Slack</code>.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[BroadcastCommAudienceChangeEvent](#) on page 68

Change events are available for the object.

BroadcastCommAudienceFeed on page 55

Feed tracking is available for the object.

BroadcastCommAudienceHistory on page 63

History is available for tracked fields of the object.

BroadcastCommAudienceOwnerSharingRule on page 65

Sharing rules are available for the object.

BroadcastCommAudienceShare on page 67

Sharing is available for the object.

BroadcastCommunication

Represents a broadcast communication related to an incident. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Special Access Rules

To access this object with Service Cloud, enable Incident Management in setup and set up Broadcast Communications.

Fields

Field	Details
Body	Type textarea Properties Create, Nillable Description • If <code>BroadcastType</code> is <code>Alert</code>, this field contains the alert message. • If <code>BroadcastType</code> is <code>Email</code>, this field contains the email body text. • If <code>BroadcastType</code> is <code>ExperienceSiteBanner</code>, this field is empty. • If <code>BroadcastType</code> is <code>Slack</code>, this field contains the Slack message.
BroadcastCommunicationNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-generated number for every BroadcastCommunication record.

Field	Details
BroadcastType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Medium used to distribute the message. Possible values are: • Alert • Email • ExperienceSiteBanner • Slack
CustomNotificationTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the custom notification template used to frame the Slack message. Only applies if BroadcastType is Slack. Available in API version 58.0 and later. This field is a relationship field. Relationship Name CustomNotificationType Relationship Type Lookup Refers To CustomNotificationType
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, and <code>LastReferenceDate</code> is not null, the user accessed this record or list view indirectly.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort Description ID of the owner of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RelatedRecordId	Type reference Properties Create, Filter, Group, Sort Description ID of the incident associated with the broadcast communication. This field is a relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To Incident
Subject	Type textarea Properties Create, Nillable Description - If <code>BroadcastType</code> is <code>Alert</code>, this field is the alert message in the format "Incident Alert <Incident subject> <Incident Number>." - If <code>BroadcastType</code> is <code>Email</code>, this field is the subject of the email sent.

Field	Details
	- If <code>BroadcastType</code> is <code>ExperienceSiteBanner</code>, this field is empty. - If <code>BroadcastType</code> is <code>Slack</code>, this field is in the format "Incident Alert <Incident Subject>."

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BroadcastCommunicationChangeEvent on page 68

Change events are available for the object.

BroadcastCommunicationFeed on page 55

Feed tracking is available for the object.

BroadcastCommunicationHistory on page 63

History is available for tracked fields of the object.

BroadcastCommunicationOwnerSharingRule on page 65

Sharing rules are available for the object.

BroadcastCommunicationShare on page 67

Sharing is available for the object.

BroadcastTopic

Represents a definition of a broadcast topic. A broadcast topic is associated with a list of Experience Cloud network sites for Service Cloud and collaboration rooms for Sales Cloud. The topic is created for a specific user role. Collaboration rooms are linked to Slack channels. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object with Sales Cloud, enable Slack Terms of Service and Sales Cloud for Slack App.

To access this object with Service Cloud, enable Incident Management in Setup and Broadcast Site Banner in the Incident Management setup.

Fields

Field	Details
BroadcastReason	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Reason for the broadcast topic. This field differentiates between Service Cloud and Sales Cloud use cases. Possible values are: • <code>FeedChannels</code>—Used in Sales Cloud and associates the topic with collaboration rooms. • <code>IncidentCommunication</code>—Used in Service Cloud for Customer Service Incident Management and associates the topic with networks. The default value is <code>FeedChannels</code>.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the broadcast topic.
IsFeatured	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the broadcast topic is featured (<code>true</code>) or not (<code>false</code>). This field is applicable only when <code>BroadcastReason</code> is <code>FeedChannels</code>. A featured topic displays the associated collaboration rooms to new users. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the broadcast topic.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Owner of the broadcast topic. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
TopicType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Category for the broadcast topic. Possible values are: DealsWon—Feed of won deals to see your team's successes. This value appears when the Sales Cloud special access rules are enabled.

Field	Details
	• <code>DealsToWatch</code>—Feed of deals that have an amount above a specified value and are likely to close. This value appears when the Sales Cloud special access rules are enabled. • <code>Incident Communication</code>—This value appears when the Service Cloud special access rules are enabled.

BroadcastTopicGroup

Represents a junction object that relates a group to an alert type broadcast topic. The broadcast sends the alert to this group. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Enable Customer Service Incident Management and Broadcast Alert. To create a `BroadcastTopicGroup` record, set the `BroadcastReason` field of the associated `BroadcastTopic` to `Incident Communication`.

Fields

Field	Details
<code>BroadcastTopicId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the broadcast topic. This field is a relationship field. Relationship Name BroadcastTopic Relationship Type Lookup Refers To BroadcastTopic
<code>GroupId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description ID of the group where the alert of the associated BroadcastTopic record with an <code>AlertBroadcastType</code> is sent to. This field is a relationship field. Relationship Name Group Relationship Type Lookup Refers To Group
Name	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description Name of the broadcast topic group. This field is optional.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[BroadcastTopicGroupChangeEvent](#) on page 68

Change events are available for the object.

Available in API version 58.0

BroadcastTopicNetwork

Represents a link between a broadcast topic and the Experience Cloud network site for Service Cloud. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object with Service Cloud, enable Incident Management in Setup and Broadcast Site Banner in the Incident Management setup.

Fields

Field	Details
BroadcastTopicId	Type reference Properties Create, Filter, Group, Sort Description The BroadcastTopic ID that's linked to the Network. This field is a relationship field. Relationship Name BroadcastTopic Relationship Type Lookup Refers To BroadcastTopic
Name	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The name of the broadcast topic that's assigned to the network.
NetworkId	Type reference Properties Create, Filter, Group, Sort Description The Network ID that's linked to the BroadcastTopic.. This field is a relationship field. Relationship Name Network Relationship Type Lookup Refers To Network

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BroadcastTopicNetworkChangeEvent on page 68

Change events are available for the object.

BrowserPolicyViolation

Represents a violation that occurred within the last seven days related to the Trusted URLs and Trusted URLs for External Redirects allowlists. These violations include blocked resource requests based on your content security policy (CSP) and blocked redirections. This object is available in API version 61.0 and later.

We recommend that you manage this object through the Trusted URL and Browser Policy Violations list in Setup. See [Manage Trusted URL and Browser Policy Violations](#) in Salesforce Help.

 **Note:** To help preserve performance, Salesforce uses throttling, a technique that limits the number of generated violations when the volume is exceptionally high. Therefore, if your org generates a high volume of violations over a short period of time, some of those violations can fail to generate a BrowserPolicyViolation.

To see detailed information about the captured CSP violations for your org, use the [CSP Violation Event Type](#).

To understand when Salesforce captures blocked redirections, see [External Redirection Restrictions in Salesforce](#) in Salesforce Help. For detailed information about each blocked redirection, use the [Blocked Redirect Event Type](#).

When you delete a BrowserPolicyViolation, only the logged event is removed. If your allowlists still block those requests, a new BrowserPolicyViolation is generated the next time a matching request occurs.

To help you manage the list, a daily process deletes violations that haven't occurred within the last seven days. To track browser policy violations over time, schedule daily queries of the Blocked Redirect and CSP Violations event types.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with the Customize Application and Modify All Data permissions can access this object.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort Description The developer name of the violation.

Field	Details
	Only users with View DeveloperName or View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description The language for the blocked request.
MasterLabel	Type string Properties Create, Filter, Group, Sort Description Master label for this violation.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Namespace prefix for this violation.
UntrustedUrl	Type string Properties Create, Filter, Group, Nillable, Sort Description The URL associated with the blocked request, without the path. For example, if a blocked requested resource is an image with the URL <code>https://www.example.com/images/image1.png</code>, the UntrustedUrl is <code>https://www.example.com</code>.
ViolationContext	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description If the ViolationType is <code>img-src</code> (image), <code>font-src</code> (fonts), or <code>frame-src</code> (iframe content), the content security policy (CSP) context for the request. The CSP context controls which pages can load content from a CspTrustedSite.

Field	Details
	Possible values are: • <code>Lightning</code>—The blocked request is related to a Lightning Experience page. • <code>Not Applicable</code>—<code>ViolationContext</code> isn't applicable to this violation. For example, violations with a <code>ViolationType</code> of <code>Redirection</code>.
<code>ViolationImpact</code>	Type String Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The impact of this violation. Possible values are: • <code>Blocked</code>—The policy was enforced and prevented the resource from loading. The impact of blocked redirections and malformed URLs is always <code>Blocked</code>. • <code>Reported</code>—This violation is blocked only after stricter CSP settings are configured. For example, some resource requests associated with the <code>frame-src</code>, <code>font-src</code>, and <code>img-src</code> <code>ViolationType</code> are blocked only when the Adopt updated CSP directives setting is enabled in Session Settings.
<code>ViolationType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The violation type. Possible values are: • <code>img-src</code>—At least one request to load an image file from the URL was blocked because the <code>UntrustedUrl</code> isn't a CspTrustedSite object with this CSP directive. • <code>font-src</code>—At least one request to load a font from the URL was blocked because the <code>UntrustedUrl</code> isn't a CspTrustedSite object with this CSP directive. • <code>frame-src</code>—At least one request to load content in an iframe that originated from the URL was blocked because the <code>UntrustedUrl</code> isn't a CspTrustedSite object with this CSP directive. • <code>MalformedUrl</code>—At least one redirection to this URL failed because the <code>UntrustedUrl</code> is malformed. • <code>Redirect</code>—At least one redirection to this URL was blocked because the <code>UntrustedUrl</code> isn't a RedirectWhitelistUrl object.

BulkApi2EventLog

Bulk API 2 event logs contain details about Bulk API 2.0 requests. This object is available in API version 61.0 and later.

 **Note:** This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>ClientIp</code>	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
<code>CpuTime</code>	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
<code>FailedRecordCount</code>	Type int Properties Filter, Nillable, Sort Description The total number of records that failed. For example: 150.
<code>ErrorMessage</code>	Type string Properties Filter, Nillable, Sort Description The error message returned on failure.

Field	Details
JobIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the Bulk API 2.0 job.
JobStatus	Type string Properties Filter, Group, Nillable, Sort Description The job's current status.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ObjectType	Type string Properties Filter, Group, Nillable, Sort Description The type of event. The value is always BulkApi2.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The type of Bulk API 2.0 operation that was performed.
ProcessedRecordCount	Type double Properties Filter, Nillable, Sort

Field	Details
	Description Number of records processed for this event. For example: 980. The number of records processed is reported differently for ingest and query jobs. For <i>ingest</i> jobs: - Events with a status of <code>InProgress</code> report (if applicable) the number of records processed. For <i>query</i> jobs: - Events with a status of <code>JobComplete</code> or <code>InProgress</code> report (if applicable) the number of records processed.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
ResultSize	Type double Properties Filter, Nillable, Sort Description Number of megabytes returned in query. Empty for ingest jobs. For example: 670. ResultSizeMb currently does not emit events, but is shown here as a placeholder for future enhancement.
RunTime	Type double Properties Filter, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
SessionKey	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

BulkApiEventLog

Bulk API event logs contain details about Bulk API requests. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
BatchIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the Bulk API batch.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
FailureCount	Type double Properties Filter, Nillable, Sort Description The number of failures that were returned with the request.
IsSuccess	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the callout request was successful.
JobIdentifier	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The 15-character ID of the Bulk API job.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
Message	Type string Properties Filter, Nillable, Sort Description Any success or error message that's associated with the request.
ObjectType	Type string Properties Filter, Group, Nillable, Sort Description The type of entity that the Bulk API used.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The type of Bulk API operation that was performed.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestId. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

BulkApiRequestEventLog

The Bulk API request event captures when Bulk API requests are received to create a job, update a job, create a batch, update a batch, and when a job completes. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>ApiVersion</code>	Type int Properties Filter, Group, Nillable, Sort Description The API version.
<code>BatchIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the Bulk API batch.
<code>ClientId</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".
ClientName	Type string Properties Filter, Group, Nillable, Sort Description The name of the client making the request.
ConcurrencyMode	Type string Properties Filter, Group, Nillable, Sort Description The concurrency mode selected by the user.
ConnectedAppIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the connected app making a request.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
ErrorMessage	Type string Properties Filter, Group, Nillable, Sort Description The type of entity that the Bulk API used.
IsSuccess	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Whether the batch was successful.
JobIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the Bulk API job
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The hash of the login id to allow click tracking across multiple transactions from login to action.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The type of Bulk API operation.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
RequestPath	Type string Properties Filter, Group, Nillable, Sort Description The path of the request.

Field	Details
RunTime	Type double Properties Filter, Nillable, Sort Description Amount of time the request took, as measured by SFDC code.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The hash of the sid to allow click tracking across multiple transactions after login to action.
StatusCode	Type int Properties Filter, Group, Nillable, Sort Description The HTTP Status code indicating whether the batch was successful.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description Timestamp at which the log event was generated.
Uri	Type string Properties Filter, Group, Nillable, Sort Description URI of the page receiving the request.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description
	Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

BusinessBrand

Represents a unique brand for a business that belongs to a parent entity. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this business brand.

Field	Details
OrgId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Salesforce ID of the business brand.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account owner associated with this business brand. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the parent entity that this business brand is a child of. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To BusinessBrand

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BusinessBrandChangeEvent on page 68 (API version 62.0)

Change events are available for the object.

BusinessAlert

Represents information about insight notifications that Einstein Relationship Insights explores, such as news mentions, job updates, and relationships. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The BusinessAlert object is available only if the ERI Growth User or ERI Starter User license is enabled.

Fields

Field	Details
AlertData	Type textarea Properties Create, Nillable, Update Description Data associated with each alert.
AlertRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description The record that's referenced by the insight alert. This field is a polymorphic relationship field. Relationship Name AlertRecord Relationship Type Lookup Refers To Account, Asset, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, BusinessBrand, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, Contact, ContactPointAddress, ContactPointConsent,

Field	Details
	ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, ContentVersion, Customer, DataUseLegalBasis, DataUsePurpose, EmailMessage, EngagementChannelType, Idea, Image, Individual, Lead, Location, Opportunity, PartyConsent, Pricebook2, Product2, ProfileSkill, QuickText, Recommendation, Scorecard, ScorecardMetric, Seller, SocialPersona, SocialPost, Solution, VideoCall, WorkBadgeDefinition In addition to the listed standard object fields, this field can refer to custom objects as well,
AlertType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specifies the type of insight alert. Possible values are: • JOB_CHANGE • NEWS • RELATIONSHIP The default value is NEWS.
CurrentDesignation	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The current designation that's related to the job alert.
CurrentEmployer	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the current employer that's related to the job alert.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed a record related to this alert record.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this alert.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the alert record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns the record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PreviousDesignation	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The previous designation that's related to the job alert.
PreviousEmployer	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the previous employer that's related to the job alert.

BusinessAlertStatus

Represents information about the read status of an insight alert. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The BusinessAlertStatus object is available only if the ERI Growth User or ERI Starter User license is enabled.

Fields

Field	Details
BusinessAlertId	Type reference Properties Create, Filter, Group, Sort Description The insight alert related to the status. This field is a relationship field. Relationship Name BusinessAlert Relationship Type Lookup Refers To BusinessAlert
IsAlertRead	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the insight alert is read by the user (true) or not (false). The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Specifies the activation status of the insight alert.
UserId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the user who is associated with the alert. This field is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

BusinessHours

Specifies the business hours of your support organization. Escalation rules are run only during these hours.

Limit a list view to a maximum of 10,000 business hours.

If business hours are associated with any Holiday records, then business hours and escalation rules associated with business hours are suspended during the dates and times specified as holidays.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

All users, even those without the “View Setup and Configuration” user permission, can view business hours via the API.

Fields

Field	Details
BusinessHoursId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description ID of the BusinessHours associated with the SlaProcess.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the business hours is active (<code>true</code>) or not active (<code>false</code>).
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the business hours.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the business hours are set as the default business hours (<code>true</code>) or not (<code>false</code>).
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the business hours were last viewed.
FridayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.

Field	Details
FridayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.
MondayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.
MondayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.
SaturdayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.
SaturdayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.
SundayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.

Field	Details
SundayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.
ThursdayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.
ThursdayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.
TimeZoneSidKey	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The time zone of the business hours.
TuesdayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.
TuesdayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.

Field	Details
WednesdayEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business closes.
WednesdayStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description Time that business opens.

Usage

Use this object to specify the business hours at which your support team operates. Escalation rules only run during the business hours with which they are associated. To set business hours to 24-hours a day, set the times from midnight to midnight (00:00:00 ~ 00:00:00) on each day.

By default, business hours are set from 12:00 AM to 12:00 AM in the default time zone specified in your organization's profile.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

Business Process

Represents a business process. Business Processes track separate sales, lead, support, and solution lifecycles by displaying different picklist values according to each user's profile.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of this business process. Limit: 255 characters.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this business process can be presented to users in the Salesforce user interface (<code>true</code>) or not (<code>false</code>) when creating a new record type or changing the business process of an existing record type.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this business process. Limit: 80 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field	Details
	In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>TableEnumOrId</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Required. One of the following values: Case, Opportunity, or Solution. Label is Entity Enumeration Or ID.

Usage

Use the `BusinessProcess` object to offer different subsets of picklist values to different users for the `LeadStatus`, `CaseStatus`, and `OpportunityStage` fields. Similar to a `RecordType`, a `BusinessProcess` identifies the type of a row in a Case, Lead, or Opportunity and implies a subset of picklist values for these three fields. The values for the remaining picklist fields are driven by `RecordType`.

[Overview of Salesforce Objects and Fields](#)

BusinessProcessDefinition

Setup object that stores information about stages in a customer lifecycle map. The stages are associated with surveys and questions created using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>BusinessProcessGroupId</code>	Type reference Properties Filter, Group, Sort Description Unique identifier of the customer lifecycle map associated with the stage.

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description Developer name of the stage.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the MasterLabel. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label of the stage.

Field	Details
ProcessDescription	Type textarea Properties Nillable Description Description of the stage.
SequenceNumber	Type int Properties Filter, Group, Sort Description The position of the stage in the associated customer lifecycle map.

BusinessProcessFeedback

Setup object that stores information about the survey and the question associated with each stage in a customer lifecycle map. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ActionName	Type string Properties Filter, Group, Sort Description Name of the survey used to gather feedback.
ActionParam	Type string Properties Filter, Group, Sort

Field	Details
	Description Name of the question used to gather feedback.
ActionType	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Method of collecting feedback. Possible value is: - PHONE_CALL - SURVEY
BusinessProcessDefinitionId	Type reference Properties Filter, Group, Sort Description Unique identifier of the stage associated with the survey and question.

BusinessProcessGroup

Setup object that stores information about customer lifecycle maps. Customer lifecycle maps are used to track the scores provided by customers across their lifecycle using Salesforce Surveys. This object is reserved for internal use, and is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CustomerSatisfactionMetric	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description Represents the question type that measures the customers' Net Promote Score or satisfaction score across their lifecycle. Possible values are: • NPS • Rating
Description	Type textarea Properties Nullable Description Description of the customer lifecycle map.
DeveloperName	Type string Properties Filter, Group, Sort Description Developer name the customer lifecycle map.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the MasterLabel. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean

Field	Details
	- nl_NL—Dutch - no—Norwegian - pt_BR—Portuguese (Brazil) - ru—Russian - sv—Swedish - th—Thai - zh_CN—Chinese (Simplified) - zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label of the customer lifecycle map.

BuyerAccount

Represents an account that is enabled as a buyer for Lightning B2B Commerce. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The BuyerAccount object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
AvailableCredit	Type currency Properties Filter, Nillable, Sort Description The amount of credit available to a buyer account. This is a calculated field.

Field	Details
BuyerId	Type reference Properties Create, Filter, Group, Sort Description The ID of the buyer account. This is a relationship field. Relationship Name Buyer Relationship Type Lookup Refers To Account  Note: This field is unique within your organization.
BuyerStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Status of the buyer account. Possible values are: • Active • Inactive • On Hold • Pending The default value is 'Pending'.
CommerceType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type of commerce that the buyer account is conducting, using the Commerce app. Possible values are: • Buyer • Reseller • Seller The default value is 'Buyer'.

Field	Details
CreditLimit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The limit of credit available to the buyer account.
CreditStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type or status of the buyer account's credit ranking. Possible values are: • Bad Credit • Delinquent • Good Credit • On Hold The default value is 'Good Credit'.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO currency code associated with the buyer account record. Possible values are: • USD—U.S. Dollar The default value is 'USD'.
CurrentBalance	Type currency Properties Create, Filter, Nillable, Sort, Update Description The balance carried by the buyer account.
IsActive	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the buyer account is active (<code>true</code>) or not (<code>false</code>). The default value is 'false'.
MaximumOrderLimit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The maximum number of orders that can be placed by the buyer account.
MinimumOrderLimit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The minimum number of orders that can be placed by the buyer account.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the buyer account.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the buyer account owner. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User

Field	Details
PayerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the buyer account payer. This is a relationship field. Relationship Name Payer Relationship Type Lookup Refers To Account
SendToId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of account that an order is sent to. This is a relationship field. Relationship Name SendTo Relationship Type Lookup Refers To Account

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[BuyerAccountFeed](#) on page 55

Feed tracking is available for the object.

[BuyerAccountHistory](#) on page 63

History is available for tracked fields of the object.

[BuyerAccountShare](#) on page 67

Sharing is available for the object.

BuyerCriteria

Represents the buyer context qualifier of locale for any buyer groups of type Market This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CriteriaKey	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. The label displayed to list supported markets with associated languages and currencies. Possible values are: • <code>Locale</code> • <code>DataCloudSegment</code>
CriteriaKeyType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. Defines the type of key. Possible values are: • <code>SessionAttributes</code> Session Attributes • <code>DataCloudObjects</code>
CriteriaValue	Type string Properties Create, Filter, Group, Sort, Update, Nillable Description Required. The value of a <code>Locale</code>. For example, <code>fr-FR</code>.

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Optional. Three letter ISO currency codes associated with the buyer account record or a locale. Auto populated if MultiCurrency is enabled in org.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The supported criteria in this record.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the buyer group the criteria apply to.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description ID of the member group or Admin/Merchandiser . This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Usage

BuyerCriteria is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.
- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BuyerCriteriaFeed on page 55

Feed tracking is available for the object.

BuyerCriteriaHistory on page 63

History is available for tracked fields of the object.

BuyerCriteriaOwnerSharingRule on page 65

Sharing rules are available for the object.

BuyerCriteriaShare on page 67

Sharing is available for the object.

BuyerGroup

Associates group qualifiers (entitlements, price books, promotions, and shipping methods) with buyer members based on buyer account ID or on the localized language and currency of the market browsed in a webstore. This object is available in API version 57.0; amended to support Market in version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Buyer group details.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and <code>LastReferenceDate</code> is not null, the user accessed this record or list view indirectly.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the buyer group.

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the creator of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RecordTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the record type of the version This field is a relationship field. Relationship Name RecordType Relationship Type Lookup Refers To RecordType
Role	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines a fixed or dynamic relationship to the language and currency that products, promotions, and entitlements are displayed in. Possible values are: - AccountBased - Market - DataCloudSegments

Field	Details
	The default value is <code>AccountBased</code> . When set to <code>Market</code> , and when the org has multiple locales, the currency and language for qualifiers (price books, promotions, entitlements) dynamically change as the buyer views different locale-based markets.

Usage

BuyerGroup is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.
- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BuyerGroupChangeEvent on page 68

Change events are available for the object.

BuyerGroupFeed on page 55

Feed tracking is available for the object.

BuyerGroupHistory on page 63

History is available for tracked fields of the object.

BuyerGroupOwnerSharingRule on page 65

Sharing rules are available for the object.

BuyerGroupShare on page 67

Sharing is available for the object.

BuyerGroupBuyerCriteria

Associates a buyer group that is enabled for webstores supporting multiple languages and currencies with BuyerCriteria that define those languages and currencies. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BuyerCriteriaId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the buyer criteria this record is associated with. This field is a relationship field. Relationship Name BuyerCriteria Relationship Type Lookup Refers To BuyerCriteria
BuyerGroupId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the buyer group this record is associated with. This field is a relationship field. Relationship Name BuyerGroup Relationship Type Lookup Refers To BuyerGroup
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Optional. Three letter ISO currency codes associated with the buyer account record or a locale. Auto populated if MultiCurrency is enabled in org.
Name	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description Name of this record.

Usage

BuyerGroupBuyerCriteria is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.
- BuyerCriteria - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- BuyerGroupBuyerCriteria - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- BuyerGroupRelatedObject - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

BuyerGroupMember

Represents a member of a buyer group. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The BuyerGroupMember object is available only if the Commerce Buyer and Entitlements Integrator permission is granted.

Fields

Field	Details
BuyerGroupId	Type reference
	Properties Create, Filter, Group, Sort

Field	Details
	Description The ID of the buyer group to which the member belongs. BuyerGroupId is a relationship field. Relationship Name BuyerGroup Relationship Type Lookup Refers To BuyerGroup
BuyerId	Type reference Properties Create, Filter, Group, Sort Description The ID of the account or guest buyer profile. BuyerId is a polymorphic relationship field. Relationship Name Buyer Relationship Type Lookup Refers To Account, GuestBuyerProfile
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the buyer group member.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, idLookup, Sort Description The ID of the member group or user. OwnerId is a polymorphic relationship field. Relationship Name Owner

Field	Details
	Relationship Type Lookup
	Refers To Group, User

BuyerGroupPricebook

Represents a buyer group price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The BuyerGroupPricebook object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
BuyerGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID of the buyer group that the price book record is assigned to.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the BuyerGroupPricebook is active (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the Buyer Group Price Book record.
Pricebook2Id	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the price book assigned to the buyer group.
Priority	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The sequential priority used to determine the price of a product. This field is only available for web stores that use the Priority pricing strategy.

Usage

Use the BuyerGroupPricebook object to assign a price book to a set of buyer users. Assigning a price book to a buyer group allows buyers within that buyer group to retrieve product prices from the price book. When a buyer has multiple price book assignments, including multiple prices for the same product, the store Pricing Strategy determines the price.

BuyerGroupRelatedObject

Used to associate currencies and supported ship-to countries with a buyer group and its price books, promotions, and entitlements. Supports buyer experience when buyer group members shop in stores enabled for multiple locales. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

BuyerGroupRelatedObject is available only if the org is Market Enabled (`Commerce.orgHasCommerceMarketEnabled`).

Fields

Field	Details
BuyerGroupId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the buyer group this record is associated with. This field is a relationship field. Relationship Name BuyerGroup Relationship Type Lookup Refers To BuyerGroup
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and <code>LastReferenceDate</code> is not null, the user accessed this record or list view indirectly..
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of this record.
ObjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. The names displayed in the picklist showing the ObjectValues - currency and ship-to countries. Possible values are: • <code>DefaultCurrency</code> - Default Currency • <code>SupportedShipToCountries</code> - Supported Ship-to Countries
ObjectValues	Type textarea Properties Create, Nillable, Update Description Optional. Values for ObjectType. The actual currency and supported ship-to countries. Possible values are: • Three-letter ISO currency code associated with the buyer account or a supported locale. • ISO country code for supported ship-to countries.

Usage

BuyerGroupRelatedObject is related to objects that enable a localized buyer experience. Together, these objects provide buyers with dynamic access to the qualifiers (entitlements, price books, and promotions) associated with their buyer group when they browse and shop in webstores with localized languages and currencies. The related objects are as follows:

- BuyerGroup - stores keys that link member entitlements, price books, promotions, and shipping methods to either a single currency and language or to multiple currencies and languages.

- **BuyerCriteria** - represents locales (languages and currencies) that are enabled for BuyerGroup members when they shop in webstores with localized currencies and languages.
- **BuyerGroupBuyerCriteria** - associates a buyer group that is enabled for webstores with multiple languages and currencies with BuyerCriteria that define those languages and currencies.
- **BuyerGroupRelatedObject** - allows BuyerGroup qualifiers (entitlements, price books, and promotions) to be available in multiple languages and currencies without duplicating the qualifiers for each language and currency.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

BuyerGroupRelatedObjectChangeEvent on page 68

Change events are available for the object.

BuyerGroupRelatedObjectFeed on page 55

Feed tracking is available for the object.

BuyerGroupRelatedObjectHistory on page 63

History is available for tracked fields of the object.

CalcProcStepRelationship

Defines a parent-child relationship between two Expression Set Steps in an Expression Set Version. The label for this object is Expression Set Step Relationship. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Parent-child step relationships collectively determine the step order.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

Fields

Field	Details
CalcProcStepId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the child Expression Set Step. This is a relationship field. Relationship Name CalcProcStep Relationship Type Lookup Refers To CalculationProcedureStep
CalcProcVersionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related Expression Set Version. This is a relationship field. Relationship Name CalcProcVersion Relationship Type Lookup Refers To CalculationProcedureVersion
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The Expression Set Step Relationship name.
ParentCalcProcStepId	Type reference Properties Create, Filter, Group, Sort Description The ID of the parent Expression Set Step. This is a relationship field. Relationship Name ParentCalcProcStep

Field	Details
	Relationship Type Lookup Refers To CalculationProcedureStep
RelationshipType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of relationship between the parent and child steps. Possible values are: • Bypass—The parent is a condition step. If the condition is false, the child is the next step. • ParentChild—The child is the next step after the parent.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CalcProcStepRelationshipFeed](#) on page 55

Feed tracking is available for the object.

[CalcProcStepRelationshipHistory](#) on page 63

History is available for tracked fields of the object.

CalculatedInsightRangeBound

Stores the information required to calculate a range-bound data insight. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if a B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
InsightName	Type string Properties Create, Filter, Group, Sort Description Name of the calculated insight.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
LowerBoundRange	Type double Properties Create, Filter, Sort, Update Description The lower limit of the calculated insight.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The autogenerated name of the insight.
Operator	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Operation used to calculate the insight based on the upper bound range and lower bound range. Possible values are: - EQUAL_TO - GREATER_THAN - GREATER_THAN_EQUAL_TO - LESS_THAN - LESS_THAN_EQUAL_TO
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the contact who owns the insight. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
SalesStoreId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the webstore associated with the insight benchmarks. This field is a relationship field. Relationship Name SalesStore Relationship Type Lookup Refers To WebStore

Field	Details
UpperBoundRange	Type double Properties Create, Filter, Nillable, Sort, Update Description The upper limit of the calculated insight.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CalculatedInsightRangeBoundOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[CalculatedInsightRangeBoundShare](#) on page 67

Sharing is available for the object.

CalculationMatrix

Matches input values to a table row and returns the row's output values. The label for this object is Decision Matrix. This object is available in API version 53.0 and later.

Decision Matrices are useful for implementing complex rules in a systematic, readable way. There are two types: Standard and Grouped. A Grouped Decision Matrix groups rows in different versions by one or two keys such as geographic region or product code.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

Fields

Field	Details
DecisionMatrixDefinitionId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description The decision matrix definition record associated with this calculation matrix. This field is a polymorphic relationship field. Relationship Name DecisionMatrixDefinition Relationship Type Lookup Refers To DecisionMatrixDefinition, DecisionTable
DecisionMatrixType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of lookup table. Possible values are: • DecisionMatrix • DecisionTable The default value is DecisionMatrix.
Description	Type textarea Properties Create, Nillable, Update Description A text description of the Decision Matrix.
GroupKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A key for grouping matrix rows in different versions, such as geographic region or product code.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user only accessed this record or list view (LastReferencedDate) but didn't view it.
MigrationStatus	Type textarea Properties Nillable Description The status of migrating the data from the Calculation Matrix object to the Decision Matrix Definition object.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The Decision Matrix name.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this matrix. Default value is the user logged in to the API to perform the create action. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
SubGroupKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A subkey for grouping matrix rows in different versions, such as geographic region or product code. For example, if the <code>GroupKey</code> is <code>Country</code>, the <code>SubGroupKey</code> can be <code>State</code> or <code>Province</code>.
Type	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The Decision Matrix type. A Standard Decision Matrix has no special features. A Grouped Decision Matrix groups rows by one or two keys (<code>GroupKey</code> and <code>SubGroupKey</code>) such as geographic region or product code. Possible values are: • Grouped • Standard
UniqueName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique identifier of the record, which is sourced from the value in the <code>Name</code> field of <code>CalculationMatrix</code> (decision matrix). For example, if the name of the calculation matrix is <code>sample matrix</code>, its <code>UniqueName</code> would be <code>sample_matrix</code>.
UsageType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description A decision matrix's usage type. Available in API version 59.0 and later. Possible value is: • Bre-Default

Field	Details
	When Business Rules Engine is enabled on your Salesforce org, the default value is Bre. Other usage types may be available to you depending on your industry solution and permission sets.

Usage

Expression Sets, OmniScripts, and Integration Procedures can call Decision Matrices.

CalculationMatrixColumn

Defines a column in a Decision Matrix. The label for this object is Decision Matrix Column. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

Fields

Field	Details
ApiName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of the column.
CalculationMatrixId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Decision Matrix to which this column belongs. This is a relationship field.

Field	Details
	Relationship Name CalculationMatrix Relationship Type Lookup Refers To CalculationMatrix
ColumnType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Specifies whether the column matches matrix input or is returned as output. Possible values are: • Input • Output
DataType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of data in the column. Possible values are: • Boolean • Currency • Number • NumberRange • Percent • Text • TextRange
DisplaySequence	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The position of this column in the column order.

Field	Details
IsWildcardColumn	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies that this column can contain a wildcard value such as <code>ALL</code>. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The column name.
RangeValues	Type textarea Properties Create, Nillable, Update Description A list of values that define range boundaries.
WildcardColumnValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The value that indicates a wildcard, for example <code>ALL</code>. Applicable if <code>IsWildcardColumn</code> is <code>true</code>.

CalculationMatrixRow

Defines a row in a Decision Matrix. The label for this object is Decision Matrix Row. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

Fields

Field	Details
CalculationMatrixVersionId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the Decision Matrix Version to which this row belongs. This is a relationship field. Relationship Name CalculationMatrixVersion Relationship Type Lookup Refers To CalculationMatrixVersion
EndDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The last date on which this row version is active. Applicable if <code>IsVersionEnabled</code> is <code>true</code>.
InputData	Type textarea Properties Create, Nillable, Update Description The input columns and associated values for this row of the matrix.
IsVersionEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Specifies whether the associated matrix version is active. Derived from the associated Decision Matrix Version (CalculationMatrixVersion object). The default value is <code>false</code> .
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The row name.
OutputData	Type textarea Properties Create, Nillable, Update Description The output columns and associated values for this row of the matrix.
StartDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The first date on which this row version is active. Applicable if <code>IsVersionEnabled</code> is <code>true</code> .

CalculationMatrixVersion

Defines a version of a Decision Matrix. The label for this object is Decision Matrix Version. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Decision Matrices requires Omnistudio licenses.

Fields

Field	Details
ApiName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of the decision matrix version. This field is available in API version 56.0 and later.
CalculationMatrixId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Decision Matrix to which this version belongs. This is a relationship field. Relationship Name CalculationMatrix Relationship Type Lookup Refers To CalculationMatrix
DecisionMatrixDefinitionVerId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The decision matrix definition version associated with this calculation matrix version. This field is a relationship field. Relationship Name DecisionMatrixDefinitionVer Relationship Type Lookup Refers To DecisionMatrixDefinitionVersion
DscnModelNoteExportStatus	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort Description Indicates the export status of a decision matrix version in the Decision Model and Notation (DMN) format. Possible values are: • Initiated • InProgress • Complete • Failed
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The last date on which this matrix version is active.
GroupKey	Type string Properties Filter, Group, Nillable, Sort Description A key for grouping matrix rows in different versions, such as geographic region or product code. Derived from the associated Decision Matrix (CalculationMatrix object).
GroupKeyValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The value of the GroupKey for this version. For example, if the GroupKey is Country, the GroupKeyValue can be United States.
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether this version is active. The default value is <code>false</code>.

Field	Details
LoadProcessStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of a data upload from a <code>.csv</code> file. Possible values are: - Completed - CompletedWithErrors - Failed - InProgress - Pending
MatrixType	Type string Properties Filter, Group, Nillable, Sort Description The matrix type, either <code>Standard</code> or <code>Grouped</code>. A Grouped Decision Matrix groups rows in different Decision Matrix Versions by one or two keys such as geographic region or product code. Derived from the associated Decision Matrix (CalculationMatrix object).
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The matrix version name.
Rank	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description When the invocation time of a matrix call is between the <code>StartDateTime</code> and <code>EndDateTime</code> of more than one enabled matrix version, the version with the highest <code>Rank</code> is chosen.
StartDateTime	Type dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The first date on which this matrix version is active.
SubGroupKey	Type string Properties Filter, Group, Nillable, Sort Description A subkey for grouping matrix rows in different versions, such as geographic region or product code. For example, if the <code>GroupKey</code> is <code>Country</code> , the <code>SubGroupKey</code> can be <code>State</code> or <code>Province</code> . Derived from the associated Decision Matrix (<code>CalculationMatrix</code> object).
SubGroupKeyValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The value of the <code>SubGroupKey</code> for this version. For example, if the <code>SubGroupKey</code> is <code>State</code> or <code>Province</code> , the <code>SubGroupKeyValue</code> can be <code>California</code> .
VersionNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The version number.

CalculationProcedure

Performs a series of calculations using matrix lookups and user-defined variables and constants. The label for this object is Expression Set. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Expression Sets accept input variables and return output variables, both in JSON format. Expression Sets are especially useful for determining prices, rates, and quotes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A text description of the Expression Set.
InputVariablesMetadata	Type textarea Properties Create, Nillable, Update Description Metadata for the Expression Set's input variables.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user only accessed this record or list view (<code>LastReferencedDate</code>) but didn't view it.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The Expression Set name.
OutputVariablesMetadata	Type textarea Properties Create, Nillable, Update Description Metadata for the Expression Set's output variables.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this Expression Set. Default value is the user logged in to the API to perform the create action. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Usage

OmniScripts and Integration Procedures can call Expression Sets. Expression Sets can call Decision Matrices.

CalculationProcedureStep

Defines a step in an Expression Set. The label for this object is Expression Set Step. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

Fields

Field	Details
CalculationMatrixId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Decision Matrix this step calls. Applicable only if the <code>StepType</code> is <code>MatrixLookup</code> or <code>GroupMatrixLookup</code>. This is a relationship field. Relationship Name CalculationMatrix Relationship Type Lookup Refers To CalculationMatrix
CalculationMatrixType	Type string Properties Filter, Group, Nillable, Sort Description The type of the Decision Matrix this step calls. Applicable only if this step calls a Decision Matrix. If the <code>StepType</code> is <code>MatrixLookup</code>, the value of this field is <code>Standard</code>. If the <code>StepType</code> is <code>GroupMatrixLookup</code>, the value of this field is <code>Grouped</code>.
CalculationProcedure	Type string Properties Filter, Group, Nillable, Sort Description The ID of the Expression Set to which this step belongs.

Field	Details
CalculationProcedureVersionId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Expression Set Version to which this step belongs. This is a relationship field. Relationship Name CalculationProcedureVersion Relationship Type Lookup Refers To CalculationProcedureVersion
ConditionsConvertedText	Type textarea Properties Create, Nillable, Update Description The condition expression converted to postfix notation. Applicable only if the <code>StepType</code> is <code>Condition</code>.
ConditionsExpressionText	Type textarea Properties Create, Nillable, Update Description The condition expression as the user entered it. Applicable only if the <code>StepType</code> is <code>Condition</code>.
ConditionsUiFormattedText	Type textarea Properties Create, Nillable, Update Description The condition expression converted to JSON format for UI display. Applicable only if the <code>StepType</code> is <code>Condition</code>.
Description	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description A text description of the Expression Set Step.
FormulaConvertedText	Type textarea Properties Create, Nillable, Update Description The formula expression converted to postfix notation. Applicable only if the <code>StepType</code> is <code>Calculation</code>.
FormulaExpressionText	Type textarea Properties Create, Nillable, Update Description The formula expression as the user entered it. Applicable only if the <code>StepType</code> is <code>Calculation</code>.
FormulaUiFormattedText	Type textarea Properties Create, Nillable, Update Description The formula expression converted to JSON format for UI display. Applicable only if the <code>StepType</code> is <code>Calculation</code>.
InputVariablesFormatText	Type textarea Properties Create, Nillable, Update Description A list of the input matrix columns or procedure variables applicable to the step.
IsConditionalStep	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies that this step is conditional.

Field	Details
	The default value is <code>false</code> .
IsResultIncluded	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies that the result of this step is included in the Expression Set output. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The step name.
OutputVariablesFormatText	Type textarea Properties Create, Nillable, Update Description A list of the output matrix columns or procedure variables applicable to the step. Applicable only if the <code>StepType</code> is <code>MatrixLookup</code>, <code>GroupMatrixLookup</code>, or <code>ReferenceProcedure</code>.
OutputVariablesMappingText	Type textarea Properties Create, Nillable, Update Description Maps Decision Matrix output variables to Expression Set variables. Applicable only if the <code>StepType</code> is <code>MatrixLookup</code> or <code>GroupMatrixLookup</code>.
ReferenceProcedureId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the child Expression Set this step calls. Applicable only if the <code>StepType</code> is <code>ReferenceProcedure</code>. This is a relationship field.

Field	Details
	Relationship Name ReferenceProcedure Relationship Type Lookup Refers To CalculationProcedure
ReturnMessageValueSet	Type textarea Properties Create, Nillable, Update Description A set of messages to return based on the result of a step with a <code>StepType</code> of <code>Condition</code> .
Stage	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The stage of Expression Set invocation. The <code>Aggregation</code> stage applies only to steps with a <code>StepType</code> of <code>Aggregation</code> . Possible values are: • <code>Aggregation</code> • <code>Calculation</code>
StageStepSequence	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Sequence order of the step within the Expression Set. Used only for Expression Sets migrated from a Salesforce Industries package. New Expression Sets use Expression Set Step Relationship objects to order their steps.
StepType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of action this step performs. Possible values are:

Field	Details
	• Aggregation—Returns an average, maximum, minimum, or sum of a list of values. • Calculation—Performs a mathematical operation, which can include variables and constants. • Condition—Defines a condition that determines whether other steps are invoked. • GroupMatrixLookup—Calls a Grouped Decision Matrix. • MatrixLookup—Calls a Standard Decision Matrix. • ReferenceProcedure—Calls a child Expression Set.

CalculationProcedureVariable

Defines a variable in an Expression Set. The label for this object is Expression Set Variable. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

Fields

Field	Details
ApiName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The API name of this variable.
CalculationMatrixName	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The name of the Decision Matrix to which this variable belongs. Applicable only if this variable references a Decision Matrix column.
CalculationProcedureVersionId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Expression Set Version to which this variable belongs. This is a relationship field. Relationship Name CalculationProcedureVersion Relationship Type Lookup Refers To CalculationProcedureVersion
DataType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The data type of this variable. Possible values are: • Boolean • Currency • Date • Number • Percent • Text
DefaultValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The default value of this variable.

Field	Details
DisplayName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The user-readable name of this variable.
IsEditable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, specifies that a variable is NOT auto-imported from a step that calls a Decision Matrix or a child Expression Set. The default value is <code>false</code>.
IsUserDefined	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether a variable is defined by the user. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this variable.
Precision	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of decimal places. Applicable if the <code>DataType</code> is Currency, Number, or Percent.
UiDisplayOrder	Type int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The display order of the variable in the UI.

CalculationProcedureVersion

Defines a version of an Expression Set. The label for this object is Expression Set Version. This object is available in API version 53.0 and later.

Note: This object has been deprecated as of API version 55.0. In API version 55.0 and later, use the new Expression Set objects in Business Rules Engine instead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Access to Expression Sets requires OmniStudio licenses.

Fields

Field	Details
CalculationProcedureId	Type reference
	Properties Create, Filter, Group, Sort
	Description The ID of the Expression Set to which this version belongs. This is a relationship field.
	Relationship Name CalculationProcedure
	Relationship Type Lookup
	Refers To CalculationProcedure

Field	Details
Constants	Type textarea Properties Create, Nillable, Update Description A serialized JSON object containing information about each constant. This information includes the name, data type, alias, and precision.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A text description of the Expression Set Version.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The last date on which this Expression Set Version is active.
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether this Expression Set Version is active. The default value is <code>false</code>.
IsLoopingEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether looping is enabled in this Expression Set Version. The default value is <code>false</code>.
LastSimulatedVariablesInput	Type textarea

Field	Details
	Properties Create, Nillable, Update Description The input variables and results of the most recent simulation.
LoopEnd	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the end variable for looping.
LoopIncrement	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the interval variable for looping.
LoopStart	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the start variable for looping.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The version name.
Rank	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description When more than one enabled version matches an Expression Set call, and the <code>StartDateTime</code> to <code>EndTimeTime</code> spans overlap, the version with the highest <code>Rank</code> is chosen.

Field	Details
StartDateTime	Type dateTime Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The first date on which this Expression Set Version is active.
VersionNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The version number.

Calendar

Represents a calendar. This can be a default user calendar, public calendar, resource calendar, or holiday calendar. This object is available in API version 45.0 and later.

Newly created users are assigned a default calendar automatically. Similarly, holiday calendars are created automatically for each organization.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Special Access Rules

Users with "View Setup and Configuration" user permissions can create, edit, and delete public and resource calendars in the user interface. All users, even those without the "View Setup and Configuration" user permission, can view calendars via the API.

Fields

All fields are readable only.

Field	Details
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description This field indicates whether a user can save events to the calendar.
Name	Type string Properties Filter, Group, idLookup, Sort Description A user provided name that identifies the calendar. It is text-indexed for searchability. Note that this is not an enumerated field; it can be any string to a maximum length of 80 characters.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of the calendar. Possible values are: • <code>Holiday</code> (Holiday Calendar) • <code>Public</code> (Public Calendar) • <code>Resource</code> (Resource Calendar) • <code>User</code> (User Calendar)
UserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user that owns that calendar record. If Type=User, there's a UserID associated (foreign key reference to the user). Otherwise, the user field is null.

CalendarView

These calendars can be created and assigned to users other than the creator. Available calendars include object, shared, public, resource, and user list calendars. Object calendars represent a calendar based on a Salesforce object, either standard or custom. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

All fields and entities referenced by field values must be accessible by the CalendarView creator even if the creator isn't the CalendarView owner.

Fields

Field	Details
Color	Type string Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Represents the color used in the background for records displayed in a user's calendar view within the user interface.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
DateHandlingType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Determined by the data type of the <code>StartField</code>. Valid values include: • Date • Datetime
DisplayField	Type string Properties Create, Filter, Group, Sort, Update Description Represents the <code>SubjectType</code> field used as the subject for records displayed in a user's calendar view within the user interface.
EndField	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description An optional field that represents the sObjectType field used as the end time for records displayed in a user's calendar view within the user interface. Must be a date or dateTime field that matches the type in <code>StartField</code>.
FillPattern	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the pattern displayed as the background for records displayed in a user's calendar view within the user interface. Valid values include: • <code>verticalStripes</code> • <code>ascDiagonalStripes</code> • <code>descDiagonalStripes</code>
IsDisplayed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Defines whether users can see a calendar's records in their calendar view in the user interface. When <code>true</code>, records are visible in the user's calendar view. When <code>false</code>, records are hidden from the user's calendar view. The default is <code>true</code>. <code>IsDisplayed</code> can be <code>true</code> for up to 50 calendars.
ListViewFilterId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the ListView used to filter records represented by the CalendarView. ListView must have the same sObjectType. If no <code>ListViewFilterId</code> is defined, the calendar displays only records with the same owner as the CalendarView. This is a relationship field. Relationship Name ListViewFilter Relationship Type Lookup

Field	Details
	Refers To ListView
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description A user-provided name that identifies the calendar. This isn't an enumerated field; it can be any string to a maximum length of 80 characters.
OwnerId	Type reference Properties Create, Filter, Group, Sort Description Represents the owner of the CalendarView. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PublisherId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Represents the user, user list, public, or resource calendar from where event data is populated. This is a polymorphic relationship field. Relationship Name Publisher Relationship Type Lookup Refers To Calendar, ListView, User
SubjectType	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort
	Description The type of standard or custom Salesforce object that is used to create records for the CalendarView. Use the API name of the desired <code>ObjectType</code> .
StartField	Type string
	Properties Create, Filter, Group, Sort, Update
	Description Represents the <code>ObjectType</code> field used as the start time for records displayed in a user's calendar view within the user interface. Must be a date or dateTime field type.

Usage

To distribute a CalendarView to multiple users, IDs can be pulled from a group, user list, or profile. For this example, a CalendarView based on opportunity close dates is being distributed to a sales team in a public group, Sales Group:

```
Group userGroup = [SELECT Id FROM Group WHERE Name = 'Sales Group' LIMIT 1];
List<Id> groupId = new List<Id>();
groupId.add(userGroup.id);
List<GroupMember> groupMembers = [SELECT UserOrGroupId FROM GroupMember
    WHERE GroupId IN: groupId];

List<CalendarView> calendarViews = new List<CalendarView>();
for (GroupMember groupMember : groupMembers) {
    CalendarView calendarView = new CalendarView(name = 'Opportunity Close Dates',
        ObjectType = 'Opportunity', StartField = 'CloseDate', DisplayField =
        'Name', OwnerId = groupMember.UserOrGroupId);
    calendarViews.add(calendarView);
}
insert calendarViews;
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

CalendarViewChangeEvent (API version 62.0)

Change events are available for the object.

CallCenter

Represents a call center, which is a logical representation of a single computer-telephony integration (CTI) system instance in an organization.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AdapterUrl	Type string Properties Create, Filter, Group, Nillable, Sort Description An optional field that specifies the location of where the CTI adapter is hosted. For example, <code>http://localhost:11000</code>. This field is available in API version 23.0 or later.
CustomSettings	Type string Properties Create, Filter, Nillable, Sort Description Specifies settings in the call center definition file, such as whether the call center uses the Open CTI, and SoftPhone properties, such as height in pixels. This field is available for Open CTI and in API version 25.0 or later.
Id	Type ID Properties Defaulted on create, Filter Description System field that uniquely identifies this call center. Label is Call Center ID. This ID is created automatically when the call center is created.

Field	Details
InternalName	Type string Properties Create, Filter, Group, Sort Description The internal name of the call center. Limit is 80 characters.
Name	Type string Properties Create, Filter, Group, idLookup, Sort Description The name of the call center. Limit is 80 characters.
Version	Type double Properties Create, Filter, Nillable, Sort Description The version of the CTI Toolkit used to create the call center (for versions 2.0 and later). This field is available in API version 18.0 and later.

Usage

Create a call center or query an existing call center.

CallCenterRoutingMap

Stores a mapping between a user or queue in a Salesforce org to a user or queue in an external system's call center. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Access to standard objects requires Salesforce admin privileges or the Customize Application permission.

Access to call center routing map records requires Contact Center Admin, Contact Center Admin (Partner Telephony), Contact Center Supervisor, or Manage Call Centers permission.

Fields

Field	Details
CallCenterId	Type reference Properties Create, Filter, Group, Sort, Update Description Reference to a call center. This is a relationship field. Relationship Name CallCenter Relationship Type Lookup Refers To CallCenter
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The developer name is a combination of the Salesforce user ID or queue name, and the call center ID, with an underscore between these two values. • [SALESFORCE_USER_ID]_[CALL_CENTER_ID] • [SALESFORCE_QUEUE_NAME]_[CALL_CENTER_ID]
ExternalId	Type string Properties Create, Filter, Group, Sort, Update Description Unique identifier for the external system's user or queue.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The language of the MasterLabel.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label of the CallCenterRoutingMap.
QuickConnect	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Amazon Connect QuickConnectId ARN used to determine agent availability for Omni-Channel call transfers. Available in API version 56.0 and later. This is a polymorphic relationship field.
ReferenceRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description Lookup field to a Salesforce user or queue. This is a polymorphic relationship field. Relationship Name ReferenceRecord Relationship Type Lookup Refers To Group, User

CallCoachingMediaProvider

Represents the media provider for call recordings. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the connection with the provider is active or not.
ProviderDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the media provider.
ProviderName	Type string Properties Create, Filter, Group, idLookup, Sort Description The name of the media provider.

CallCtrAgentFavTrfrDest

Represents a transfer destination that has been marked (starred) as a favorite in the Omni-Channel softphone by a contact center agent for voice call transfers. This object is available in API version 55.0 and later.

To see a list of transfer destinations that have been marked as favorites in the Omni-Channel softphone, add a participant to the call, click the Phone tab, and select **Favorite** from the Filter dropdown menu. Examples of transfer destination types include agents, contacts, directories, flows, and queues.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AgentId	Type reference Properties Create, Filter, Group, Sort, Update Description The unique ID of the contact center agent who marked the transfer destination as a favorite. This field is a relationship field. Relationship Name Agent Relationship Type Lookup Refers To User
CallCenterId	Type reference Properties Create, Filter, Group, Sort, Update Description The unique ID of the contact center from where the agent starred the transfer destination as a favorite. This field is a relationship field. Relationship Name CallCenter Relationship Type Lookup Refers To CallCenter
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the transfer destination record that's marked as a favorite.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description The unique ID of the user who owns this object. This field is a polymorphic relationship field.
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
TransferDestination	Type string
	Properties Create, Filter, Group, Sort, Update
	Description The unique ID of the transfer destination that's marked as a favorite. This is an external ID.

CallCtrAgentFavTrfrDestShare

Represents a sharing entry on a favorite transfer destination in the Omni-Channel softphone for voice call transfers. This object is available in API version 55.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccessLevel	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The level of access the User or Group has to the transfer destination that's marked as a favorite. Possible values are: • All — Owner • Edit — Read/Write • Read — Read Only
ParentId	Type reference Properties Create, Filter, Group, Sort Description The unique ID of the parent object. This field is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To CallCtrAgentFavTrfrDest
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is Manual. If no value is specified, the field defaults to Manual. All other RowCause values are read-only. After the sharing entry is created, this field can't be edited. Possible values are: • CompliantDataSharing — Compliant Data Sharing • GuestParentImplicit — Associated guest user sharing • GuestPersonImplicit — Associated Guest User Sharing • GuestRule — Guest User Sharing Rule • ImplicitChild — Account Sharing • ImplicitParent — Associated record owner or sharing • ImplicitPerson — Person Contact • LearningAssignment — Learning Assignment Share

Field	Details
	• <code>LearningAssignmentImplicit</code> — Learning Assignment Implicit Share • <code>LearningItemAssignment</code> — Learning Item Assignment Share • <code>Manual</code> — Manual Sharing • <code>MfgTargetShare</code> — Manufacturing Target Sharing Rule • <code>Owner</code> • <code>Rule</code> — Sharing Rule • <code>SharingRecordCollection</code> — Record Collection • <code>SurveyShare</code> — Survey Sharing Rule • <code>Team</code> — Sales Team • <code>Territory</code> — Territory Assignment Rule • <code>Territory2AssociationManual</code> — Territory Manual • <code>Territory2Forecast</code> — Territory assignment for forecasting and reporting • <code>TerritoryManual</code> — Territory Manual • <code>TerritoryRule</code> — Territory Sharing Rule
<code>UserOrGroupId</code>	Type reference Properties Create, Filter, Group, Sort Description The unique ID of the User or Group that has been given access to the favorite transfer destination. This field is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

CallDisposition

Represents a call result value that sales reps select when logging a call. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field	Details
Disposition	Type string Properties Filter, Group, idLookup, Sort Description The result of a phone call, such as whether a call was connected or the rep left a voicemail.
DispositionCategoryId	Type reference Properties Filter, Group, Sort Description The related call outcome that is used in reports and branching criteria for cadences.

CallDispositionCategory

Represents the call outcome of a phone call that is used in reports and branching criteria for cadences. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field	Details
Category	Type string Properties Filter, Group, idLookup, Sort

Field	Details
	Description The name of the call outcome.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the call category. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai

Field	Details
	- zh_CN—Chinese (Simplified) - zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description The static name of the call outcome.

CallTemplate

Represents a call script for users to read when making calls.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Description	Type string Properties Filter, Group, Nillable, Sort Description The description of the call script.
HtmlBody	Type textarea Properties Nillable Description The body content of the call script.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The time stamp that indicates when the current user last viewed a record that is related to this CallTemplate.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The time stamp that indicates when the current user last viewed this CallTemplate. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the call script.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the user who owns the call script.
TemplateType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of call template. Possible values are: • Text
TotalCalls	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The total number of calls that use the CallTemplate.
TotalCallsCallBackLater	Type int Properties Filter, Group, Nillable, Sort Description The total Call Back Later call results that use the CallTemplate.
TotalCallsLeftVoicemail	Type int Properties Filter, Group, Nillable, Sort Description The total Left Voicemail call results that use the CallTemplate.
TotalCallsMeaningfulConnect	Type int Properties Filter, Group, Nillable, Sort Description The total Meaningful Connect call results that use the CallTemplate.
TotalCallsNotInterested	Type int Properties Filter, Group, Nillable, Sort Description The total Not Interested call results that use the CallTemplate.
TotalCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The total uncategorized call results that use the CallTemplate.
TotalCallsUnqualified	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The total Unqualified call results that use the CallTemplate.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CallTemplateChangeEvent](#) (API version 48.0)

Change events are available for the object.

Campaign

Represents and tracks a marketing campaign, such as a direct mail promotion, webinar, or trade show.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>ActualCost</code>	Type currency Properties Filter, Nillable, Sort Description The amount of money spent to run the campaign. Label is Actual Cost in Campaign.
<code>AmountAllOpportunities</code>	Type currency Properties Filter, Sort Description Amount of money in all opportunities associated with the campaign, including closed/won opportunities. Label is Value Opportunities in Campaign.

Field	Details
AmountWonOpportunities	Type currency Properties Filter, Sort Description Amount of money in closed or won opportunities associated with the campaign. Label is Value Won Opportunities in Campaign.
BriefId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the brief that's associated with the campaign. A brief contains additional context about the goals and audience for the campaign. The label is Brief. Relationship Name Brief Relationship Type Lookup Refers To Record
BudgetedCost	Type currency Properties Filter, Nillable, Sort Description Amount of money budgeted for the campaign. Label is Budgeted Cost in Campaign.
CampaignImageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the campaign image. Available in API version 42.0 and later. Only available to orgs with Partner Community licenses and Digital Experience enabled or orgs that have installed the Direct Marketing Managed package.
CampaignMemberRecordTypeId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The record type ID for CampaignMember records associated with the campaign. This is a relationship field. Relationship Name CampaignMemberRecordType Relationship Type Lookup Refers To RecordType
CampaignStage	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description This field is available with Marketing Cloud Growth and Advanced editions. The lifecycle stage of the campaign based on the status of all of its related flows. Possible values are: • In Planning • In Progress • Completed • Error • Canceled • Paused
CreatedByID	Type reference Properties Filter, Group, Sort Description ID of the user who created the campaign. This is a relationship field. Relationship Name Creator Relationship Type Lookup Refers To User
CurrencyIsoCode	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	Type textarea
	Properties Nillable
	Description Description of the campaign. Limit: 32 KB. Only the first 255 characters display in reports.
EndDate	Type date
	Properties Filter, Group, Nillable, Sort
	Description Ending date for the campaign. Responses received after this date are still counted.
ExpectedResponse	Type percent
	Properties Filter, Nillable, Sort
	Description Percentage of responses you expect to receive for the campaign.
ExpectedRevenue	Type currency
	Properties Filter, Nillable, Sort
	Description Amount of money you expect to generate from the campaign.
HierarchyActualCost	Type currency
	Properties Filter, Nillable, Sort
	Description Calculated field for the total amount of money spent to run the campaigns in a campaign hierarchy. Label is Total Actual Cost in Hierarchy.

Field	Details
HierarchyAmountAllOpportunities	Type currency Properties Filter, Sort Description Amount of money in all opportunities associated with the campaign in a campaign hierarchy, including closed/won opportunities. Label is Value Opportunities in Hierarchy.
HierarchyAmountWonOpportunities	Type currency Properties Filter, Sort Description The amount of money in closed or won opportunities associated with the campaign in a campaign hierarchy. Label is Value Won Opportunities in Hierarchy.
HierarchyBudgetedCost	Type currency Properties Filter, Nillable, Sort Description Calculated field for the total amount of money budgeted for the campaigns in a campaign hierarchy. Label is Total Budgeted Cost in Hierarchy.
HierarchyExpectedRevenue	Type currency Properties Filter, Nillable, Sort Description Calculated field for the total amount of money you expect to generate from the campaign in a campaign hierarchy. Label is Total Expected Revenue in Hierarchy.
HierarchyNumberOfContacts	Type int Properties Filter Description Calculated field for the number of contacts associated with the campaign hierarchy. Label is Total Contacts in Hierarchy.
HierarchyNumberOfConvertedLeads	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Calculated field for the number of converted leads from the campaign in a campaign hierarchy. Label is Converted Leads in Hierarchy.
HierarchyNumberOfLeads	Type currency Properties Filter, Nillable, Sort Description Calculated field for the number of leads from the campaign in a campaign hierarchy. Label is Leads in Hierarchy.
HierarchyNumberOfOpportunities	Type currency Properties Filter, Nillable, Sort Description Calculated field for the number of opportunities related to the campaign in a campaign hierarchy. Label is Opportunities in Hierarchy.
HierarchyNumberOfResponses	Type currency Properties Filter, Nillable, Sort Description Number of contacts and unconverted leads with a Member Status equivalent to “Responded” for the campaign in a campaign hierarchy. Label is Responses in Hierarchy.
HierarchyNumberWonOpportunities	Type int Properties Filter, Group, Sort Description The number of closed or won opportunities associated with the campaign. Label is Won Opportunities in Hierarchy.
HierarchyNumberSent	Type double Properties Filter, Nillable, Sort

Field	Details
	Description Calculated field for the total number of individuals targeted by the campaign in a campaign hierarchy. For example, the number of email messages sent. The label is Num Sent in Hierarchy.
HierarchyTotalEmailsDelivered	Type int Properties Filter Description Calculated field for emails delivered related to the campaign in a campaign hierarchy. Label is Total Emails Delivered in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyTotalFormSubmissions	Type int Properties Filter Description Calculated field for form submissions related to the campaign in a campaign hierarchy. Label is Total Form Submissions in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyTotalFormViews	Type int Properties Filter Description Calculated field for form views related to the campaign in a campaign hierarchy. Label is Total Form Views in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyTotalLandingPageFormSubmissions	Type int Properties Filter Description Calculated field for form submissions from a landing page related to the campaign in a campaign hierarchy. Label is Total Landing Page Form Submissions in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyTotalLandingPageViews	Type int

Field	Details
	Properties Filter Description Calculated field for landing page views related to the campaign in a campaign hierarchy. Label is Total Landing Page Views in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyUniqueEmailOpens	Type int Properties Filter Description Calculated field for email opens related to the campaign in a campaign hierarchy. Excludes repeat opens. Label is Unique Email Opens in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyUniqueEmailTrackedLinkClicks	Type int Properties Filter Description Calculated field for unique email link clicks related to the campaign in a campaign hierarchy. Excludes repeat clicks. Label is Unique Email Clicks in Hierarchy. This field is available with Marketing Cloud Account Engagement.
HierarchyUniqueMarketingLinkClicks	Type int Properties Filter Description Calculated field for unique marketing link clicks related to the campaign in a campaign hierarchy. Excludes repeat clicks. Label is Unique Marketing Link Clicks in Hierarchy. This field is available with Marketing Cloud Account Engagement.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this campaign is active (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. The label is Active.

Field	Details
LastActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Value is one of the following, whichever is the most recent: • The due date of the most recent event logged against the record. • The due date of the most recently closed task associated with the record.
LastModifiedById	Type reference Properties Filter, Group, Sort Description ID of the user who last updated the campaign. This is a relationship field. Relationship Name Last Modified Relationship Type Lookup Refers To User
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort, Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort, Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort Description Required. Name of the campaign. Limit: is 80 characters.
NumberOfContacts	Type int Properties Filter, Group, Sort Description Number of contacts associated with the campaign. Label is Total Contacts.
NumberOfConvertedLeads	Type int Properties Filter, Group, Sort Description Number of leads that were converted to an account and contact due to the marketing efforts in the campaign. Label is Converted Leads.
NumberOfLeads	Type int Properties Filter, Group, Sort Description The number of leads associated with the campaign. Label is Leads in Campaign.
NumberOfOpportunities	Type int Properties Filter, Group, Sort Description The number of opportunities associated with the campaign. Label is Opportunities in Campaign.
NumberOfResponses	Type int Properties Filter, Group, Sort

Field	Details
	Description The number of contacts and unconverted leads with a Member Status equivalent to “Responded” for the campaign. Label is Responses in Campaign.
NumberOfWonOpportunities	Type int Properties Filter, Group, Sort Description The number of closed or won opportunities associated with the campaign. Label is Won Opportunities in Campaign.
NumberSent	Type double Properties Filter, Nillable, Sort Description The number of individuals targeted by the campaign. For example, the number of emails sent. Label is Num Sent.
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the user who owns this campaign. Default value is the user logging in to the API to perform the create. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
ParentCampaign	Type reference Properties Create, Filter, Nillable, Update Description The campaign above the selected campaign in the campaign hierarchy.

Field	Details
ParentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the parent Campaign record, if any. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Campaign
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object.
StartDate	Type date Properties Filter, Group, Nillable, Sort Description Starting date for the campaign.
Status	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Status of the campaign, for example, Planned, In Progress. Limit: 40 characters.
TenantId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the associated Marketing Cloud Account Engagement business unit. Read-only. Available with Marketing Cloud Account Engagement in API version 51.0 and later. This is a relationship field. Relationship Name Business Unit Relationship Type Lookup Refers To PardotTenant
TotalAmountAllOpportunities	Type currency Properties Filter Description Calculated field for total amount of all opportunities associated with the campaign hierarchy, including closed/won opportunities. Label is Total Value Opportunities in Hierarchy.
TotalAmountAllWonOpportunities	Type currency Properties Filter Description Calculated field for amount of all closed/won opportunities associated with the campaign hierarchy. Label is Total Value Won Opportunities in Hierarchy.
TotalEmailsDelivered	Type int Properties Filter Description Calculated field for emails delivered related to the campaign. Label is Total Emails Delivered in Campaign. This field is available with Marketing Cloud Account Engagement.
TotalFormSubmissions	Type int Properties Filter Description Calculated field for form submissions related to the campaign. Label is Total Form Submissions in Campaign. This field is available with Marketing Cloud Account Engagement.

Field	Details
TotalFormViews	Type int Properties Filter Description Calculated field for form views related to the campaign. Label is Total Form Views in Campaign. This field is available with Marketing Cloud Account Engagement.
TotalLandingPageFormSubmissions	Type int Properties Filter Description Calculated field for form submissions from a landing page related to the campaign. Label is Total Landing Page Form Submissions in Campaign. This field is available with Marketing Cloud Account Engagement.
TotalLandingPageViews	Type int Properties Filter Description Calculated field for landing page views related to the campaign. Label is Total Landing Page Views in Campaign. This field is available with Marketing Cloud Account Engagement.
TotalNumberOfLeads	Type int Properties Filter Description Calculated field for total number of leads associated with the campaign hierarchy. This number also includes converted leads. Label is Total Leads in Hierarchy.
TotalNumberOfOpportunities	Type int Properties Filter Description Calculated field for the total number of opportunities associated with the campaign hierarchy. Label is Total Opportunities in Hierarchy.

Field	Details
TotalNumberOfResponses	Type int Properties Filter Description Calculated field for number of contacts and unconverted leads that have a <code>Member Status</code> equivalent to "Responded" for the campaign hierarchy. Label is Total Responses in Hierarchy.
TotalNumberOfWonOpportunities	Type int Properties Filter Description Calculated field for the total number of won opportunities associated with the campaign hierarchy. Label is Total Won Opportunities in Hierarchy.
Type	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Type of campaign, for example, Direct Mail or Referral Program. Limit: 40 characters.
UniqueEmailOpens	Type int Properties Filter Description Calculated field for email opens related to the campaign. Excludes repeat opens. Label is Unique Email Opens in Campaign. This field is available with Marketing Cloud Account Engagement.
UniqueEmailTrackedLinkClicks	Type int Properties Filter Description Calculated field for unique email link clicks related to the campaign. Excludes repeat clicks. Label is Unique Email Clicks in Campaign. This field is available with Marketing Cloud Account Engagement.

Field	Details
UniqueMarketingLinkClicks	Type int Properties Filter Description Calculated field for unique marketing link clicks related to the campaign. Excludes repeat clicks. Label is Unique Marketing Link Clicks in Campaign. This field is available with Marketing Cloud Account Engagement.

Usage

Client applications can create, update, delete, and query Attachment records associated with a campaign via the API.

The Campaign object is defined only for those organizations that have the marketing feature enabled and valid marketing licenses. In addition, it is accessible only to those users that are enabled as marketing users. If the organization does not have the marketing feature or valid marketing licenses, this object does not appear in the `describeGlobal()` call, and you can't use `describeObjects()` or `query()` with the Campaign object.

Note: The main constituent of a campaign is a CampaignMember. You will commonly need to update campaigns with CampaignMember.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

CampaignChangeEvent (API version 44.0)

Change events are available for the object.

CampaignFeed (API version 18.0)

Feed tracking is available for the object.

CampaignHistory (API version 40.0)

History is available for tracked fields of the object.

CampaignOwnerSharingRule

Sharing rules are available for the object.

CampaignShare

Sharing is available for the object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

CampaignInfluence

Represents the association between a campaign and an opportunity in Customizable Campaign Influence. This object is available in API version 37.0 and later.

Note: This information applies only to Customizable Campaign Influence and not to [Campaign Influence 1.0](#).

To ingest this object in Data Cloud, set up the Data Cloud Salesforce Connector permission set. See [Enable Object and Field Permissions for CRM Connections](#).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Customizable Campaign Influence must be enabled. Customer Portal users can't access this object.

Fields

Field Name	Details
CampaignId	Type reference Properties Create, Filter, Group, Sort Description The ID of the campaign that's related to the opportunity.
CampaignMemberId	Type reference Properties Create, Filter, Group, Sort Description The ID of the campaign member related to the opportunity. Not available in the UI.
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the contact on the associated opportunity.
Influence	Type percent Properties Create, Defaulted on create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The percentage of the Amount field for the related opportunity that's attributed to the campaign.
ModelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the campaign influence model that's related to the record.
OpportunityContactRoleId	Type reference Properties Create, Filter, Group, Sort Description The opportunity contact role ID of the related opportunity. Not available in the UI.
OpportunityId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related opportunity.
RevenueShare	Type currency Properties Filter, Nillable, Sort Description The amount of revenue from the related opportunity attributed to the campaign.

Usage

Use this object to create campaign influence records for your custom campaign influence models. Don't create campaign influence records for the Primary Campaign Source model. Records added to the Primary Campaign Source model via the API are deleted when the model is recalculated.

CampaignInfluenceModel

This read-only object represents a campaign influence model in Customizable Campaign Influence. Use campaign influence models to group `CampaignInfluence` records created by a specific set of triggers and workflows that you define. The Primary Campaign Source influence model is the default model. This object is available in API version 37.0 and later.

 **Note:** This information applies only to [Customizable Campaign Influence](#) and not to [Campaign Influence 1.0](#).

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, Customizable Campaign Influence must be enabled. Customer Portal users can't access this object.

Fields

Field Name	Details
<code>DeveloperName</code>	Type string Properties Filter, Group, Sort Description The API name of the influence model. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
<code>IsActive</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the model is active. Active models can generate campaign influence records. Deactivating a model deletes its campaign influence records. Custom models are always active and this field is ignored.

Field Name	Details
IsDefaultModel	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the model is the default model (<code>true</code>) or not (<code>false</code>). CampaignInfluence records associated with the default model appear in 3 locations. - The Campaign Influence related list on opportunities - The Influenced Opportunities related list on campaigns - The Campaign Statistics section on campaigns The value of <code>IsDefaultModel</code> can only be true for 1 model at a time.
IsModelLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the model is locked (<code>true</code>) or not (<code>false</code>). Records for locked models can only be added, updated, or deleted via the API.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the influence model.
MasterLabel	Type string Properties Filter, Group, Sort Description The label for the influence model.
ModelDescription	Type string Properties Filter, Group, Nillable, Sort Description The description of the influence model.

Field Name	Details
ModelType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the model is the Primary Campaign Source influence model, or a custom model. These values are the allowed. • 1: Primary Campaign Source Model • 2: Custom Model • 3: First Touch Model • 4: Last Touch Model • 5: Even Distribution Model • 6: Data-Driven Model
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
RecordPreference	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The value of this field determines when to create campaign influence records. • AllRecords: Creates records regardless of the revenue attribution percentage.

Field Name	Details
	RecordsWithAttribution: Creates records only when the revenue attribution is greater than 0%.

CampaignMember

The CampaignMember object represents the relationship between a campaign and either a lead or a contact. If the Accounts as Campaign Members setting is enabled in an org, CampaignMember can also represent the relationship between a campaign and an account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Sort Description ID of the account related to the campaign. This field is available only if the Accounts as Campaign Members setting is enabled in the org. This field is a relationship field. Relationship Name Related Record ID Relationship Type Lookup Refers To Account
CampaignId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description Required. The ID of the campaign related to the lead or contact. This field is a relationship field. Relationship Name Campaign Relationship Type Lookup Refers To Campaign
City	Type string Properties Filter, Group, Nillable, Sort Description The city for the address of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the city for the account.
CompanyOrAccount	Type string Properties Filter, Group, Nillable, Sort Description The company or account of the lead or contact.
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required. The ID of a contact that's related to the campaign. This field is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
CurrencyIsoCode	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. This field contains the ISO code for any currency allowed by the organization.
Country	Type string Properties Filter, Group, Nillable, Sort Description The country for the address of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the country for the account.
Description	Type textarea Properties Nillable Description The description of the associated lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the description of the account.
DoNotCall	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the lead or contact doesn't want to be called. In orgs with the Accounts as Campaign Members setting enabled, this field can indicate the account doesn't want to be called.
Email	Type email Properties Filter, Group, Nillable, Sort Description Email address for the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the email address for the account.
Fax	Type phone

Field	Details
	Properties Filter, Group, Nillable, Sort Description Fax number for the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the fax number for the account.
FirstName	Type string Properties Filter, Group, Nillable, Sort Description The first name of the lead or contact.
FirstRespondedDate	Type date Properties Filter, Group, Nillable, Sort Description This field indicates the date that the campaign member received a status of Responded.
HasOptedOutOfEmail	Type boolean Properties Defaulted on create, Filter, Group, Sort Description This field indicates the email opt-out preference for the lead or contact. A value of <code>false</code> indicates that the lead or contact is opted in to emails. A value of <code>true</code> indicates that they're opted out. In orgs with the Accounts as Campaign Members setting enabled, this field can be the opt-out preference for the account email address.
HasOptedOutOfFax	Type boolean Properties Defaulted on create, Filter, Group, Sort Description This field indicates the fax opt-out preferences for the lead or contact. A value of <code>false</code> indicates that the lead or contact is opted in to receiving faxes. A value of <code>true</code> indicates that they're opted out. In orgs with the Accounts as Campaign Members setting enabled, this field can indicate the account has opted out of faxes.
HasResponded	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description This field indicates whether the campaign member has responded to the campaign (<code>true</code>) or not (<code>false</code>). Label is Responded.
LastName	Type string Properties Filter, Group, Nillable, Sort Description The last name of the lead or contact. The limit is 80 characters.
LeadId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required. The ID of a lead that's related to the campaign. This field is a relationship field. Relationship Name Lead Relationship Type Lookup Refers To Lead
LeadOrContactId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of a lead or contact that's related to the campaign. In orgs with the Accounts as Campaign Members setting enabled, this field also accepts an account ID.
LeadOrContactOwnerId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the owner of the associated lead or contact owner. In orgs with the Accounts as Campaign Members setting enabled, this field can be the owner of the account. This field is a polymorphic relationship field. Relationship Name LeadOrContactOwner Relationship Type Lookup Refers To Group, User
LeadSource	Type picklist Properties Filter, Group, Nillable, Sort Description The source where the lead was obtained.
MobilePhone	Type phone Properties Filter, Group, Nillable, Sort Description The mobile phone number of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the mobile phone number for the account.
Name	Type string Properties Filter, Group, Nillable, Sort Description The first and last name of the lead or contact that's related to the campaign member.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the phone number for the account.

Field	Details
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description The postal code for the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the postal code for the account.
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object. To change the record type, modify the CampaignMemberRecordTypeId field on the associated Campaign.
Salutation	Type picklist Properties Filter, Group, Nillable, Sort Description Salutation for the lead or contact.
State	Type string Properties Filter, Group, Nillable, Sort Description The state for the address of the lead or contact. The limit is 80 characters. In orgs with the Accounts as Campaign Members setting enabled, this field can be the state of the account address.
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Controls the HasResponded flag on this object. You can't directly set the HasResponded flag, as it's read-only. You can set it indirectly by setting this field in a create or update call. Each predefined value implies a HasResponded flag value. Each time you update this field, you implicitly update the HasResponded flag. In the Salesforce user interface, Marketing users can define valid status values for the Status picklist. They

Field	Details
	can choose one status as the default status. For each <code>Status</code> field value, they can also select which values to count as “Responded,” meaning that the <code>HasResponded</code> flag is set to <code>true</code> for those values. The limit is 40 characters. When you create or update campaign members, use the text value for <code>Status</code> instead of the ID from the <code>CampaignMemberStatus</code> object.
Street	Type string Properties Filter, Group, Nillable, Sort Description The street for the address of the lead or contact. In orgs with the Accounts as Campaign Members setting enabled, this field can be the street of the account address.
Title	Type string Properties Filter, Group, Nillable, Sort Description Title for the lead or contact.
Type	Type string Properties Filter, Group, Nillable, Sort Description Indicates if the campaign member is a lead or a contact. In orgs with the Accounts as Campaign Members setting enabled, this field can indicate an account.

Note: If you’re importing CampaignMember data into Salesforce and want to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

Each record has a unique ID, and must contain either a `ContactId` or a `LeadId`, but can't contain both. Any attempt to create a single record with both results in a successful insert but only the `ContactId` is inserted. However, you can create two separate records on a Campaign—one for the Lead and one for the Contact.

In orgs with the Accounts as Campaign Members setting enabled, the unique ID can be an `AccountId`.

Standard fields from a lead or contact are associated with the CampaignMember object, but you can't query them directly. To include a `Phone` in your query, for example, query the field from the Lead object.

```
SELECT Id, (SELECT Phone FROM Lead)
FROM CampaignMember
```

This object is defined only for orgs that have the marketing feature and valid marketing licenses. If your org doesn't have the marketing feature or valid marketing licenses, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeSObjects()` or `query()` with this object.

Note: If you want to track lead-based campaign members you convert to contacts, provide both a `ContactId` and a `LeadId`. Otherwise, only use one ID type.

To issue `create()` requests to the API, your account only requires read access to campaigns.

If the record doesn't exist for the specified `ContactId` or `LeadId`, then a new record is created. If the record exists, an error is returned and no update is made. To update an existing record, specify the ID of the CampaignMember record to update.

To delete a record, specify the ID of the CampaignMember record.

When creating or updating records, the `Status` field value specified in the call is verified as a valid status for the given Campaign:

- If the specified `Status` value is a valid status, the value is updated, and the `HasResponded` field is updated to either `true` or `false`, depending on the `Status` value association with `HasResponded`.
- If the specified `Status` value isn't a valid status, the API assigns the default status to the `Status` field and updates the `HasResponded` field with the associated value. However, if the given Campaign doesn't have a default status, the API assigns the value specified in the call to the `Status` field, and the `HasResponded` field is set to `false`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

CampaignMemberChangeEvent (API version 46.0)

Change events are available for the object.

SEE ALSO:

[Campaign](#)

[CampaignMemberStatus](#)

CampaignMemberStatus

One or more member status values defined for a campaign.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

You can't delete a CampaignMemberStatus if that status is designated as the default status or if the status is currently used in a Campaign.

Fields

Field	Details
CampaignId	Type reference Properties Filter, Group, Sort Description ID of the campaign associated with this member status.
HasResponded	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this status is equivalent to "Responded" (<code>true</code>) or not (<code>false</code>). Beginning with API version 39.0, at least one CampaignMemberStatus on each campaign must have a hasResponded value of <code>true</code>.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this status is the default status (<code>true</code>) or not (<code>false</code>). Beginning with API version 39.0, there must be a default CampaignMemberStatus defined for every campaign.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
Label	Type string Properties Filter, Sort Description Label for the status in the picklist. Limited to 765 characters.

Field	Details
SortOrder	Type int Properties Filter, Group, Sort, Update Description Unique number order where this campaign member status appears in the picklist.

Usage

Use this object to create picklist items for the member status in a campaign.

This object is defined only for those organizations that have the marketing feature and valid marketing licenses. In addition, the object is accessible only to those users that are enabled as marketing users. If the organization does not have the marketing feature or valid marketing licenses, this object does not appear in a `describeGlobal()` call, and you can't use `describeObjects()` or `query()` with the CampaignMember object.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

CampaignMemberStatusChangeEvent (API version 46.0)

Change events are available for the object.

SEE ALSO:

[Campaign](#)

[CampaignMember](#)

CampaignOwnerSharingRule

Represents the rules for sharing a campaign with User records other than the owner or anyone above the owner in the role hierarchy.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CampaignAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of access granted to the target Group, or UserRole. The possible values are: • Read • Edit • All
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The ID representing the source group. A Campaign owned by a User in the source Group triggers the rule to give access.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the User or Group being granted access.

Usage

Use this object to manage the sharing rules for campaigns.

SEE ALSO:

[Metadata API Developer Guide: SharingRules](#)

CampaignShare

Represents a sharing entry on a Campaign.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

 **Note:** While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Campaign object can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
CampaignId	Type reference Properties Create, Filter, Group, Sort Description ID of the Campaign associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Campaign Relationship Type Lookup Refers To Campaign
CampaignAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the Campaign. The possible values are: • Read • Edit • All (This value is not valid for creating or updating records.) This field must be set to an access level that is higher than the organization's default access level for Campaign.
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values: <code>Rule</code>—The User or Group has access via a Campaign sharing rule. <code>GuestRule</code>—The User or Group has access via a Campaign guest user sharing rule. <code>Manual</code>—The User or Group has access because a User with "All" access manually shared the Campaign with them. <code>Owner</code>—The User is the owner of the Campaign. <code>IpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. <code>ARImplicit</code>—The User, who belongs to a partner or customer account, has access to the Campaign via an account relationship data sharing rule.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the Campaign. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit Campaign records owned by other users.

CampaignTag

Associates a word or short phrase with a Campaign.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

CampaignTag stores the relationship between its parent TagDefinition and the Campaign being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

CardPaymentMethod

Represents a credit card or debit card payment method, which implements the PaymentMethod object. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Customer account for the payment method. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
AuditEmail	Type email Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Email address of the card owner where audit information about payments gets sent. This field is available in API v49.0 and later. It doesn't appear in the UI by default for orgs that upgraded from v48.0. Users must add it to the CardPaymentMethod page layout on their own.
AutoCardType	Type string Properties Create, Filter, Group, Nillable, Sort Description Card network type, derived from the card number.
CardBin	Type int Properties Create, Filter, Group, Nillable, Sort Description First six digits of the card number.
CardCategory	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Defines whether the card is a credit card or debit card. Possible values are: • CreditCard • DebitCard
CardHolderFirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description First name of the cardholder.
CardHolderLastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Last name of the cardholder.
CardHolderName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Full name of the cardholder.
CardLastFour	Type int Properties Create, Filter, Group, Nillable, Sort Description Last four digits of the credit card or debit card.
CardPaymentMethodNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-defined unique ID for the card payment method.
CardType	Type picklist Properties Create, Filter, Group, Nillable, Sort Description Identifies the credit card type. Possible values are: - American Express - Diners Club - JCB - Maestro - Master Card - Visa
CardTypeCategory	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description Further identifies the credit card. Used for internal reference. Possible values are: - AmericanExpress - DinersClub - Discover - Jcb - Maestro - MasterCard - UnionPay - Visa
Comments	Type textarea Properties Create, Nillable, Update Description Payment admin can add comments to provide additional details about a record. Maximum of 1000 characters.
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Company of the cardholder.
DisplayCardNumber	Type string Properties Filter, Group, Nillable, Sort Description Masked digits for the full credit card number except the last four digits.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Email address of the payer.
ExpiryMonth	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The card's expiration month.
ExpiryYear	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The card's expiration year.
GatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that the payment gateway logs a card activity.
GatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The result of the card payment method's interaction with the payment gateway during a transaction request.
GatewayResultCodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Additional information about the gateway result code. Descriptions vary between payment gateway providers.
GatewayToken	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Unencrypted unique token ID generated by the payment gateway to represent the card payment method during transactions. <code>GatewayToken</code> is for use with APIs earlier than version 52.0. For version 53.0 and latter, use the <code>GatewayTokenEncrypted</code> field. To secure the token, use the <code>GatewayTokenEncrypted</code> field. An error message appears if you try to record a <code>GatewayToken</code> for a card payment method that already has a <code>GatewayToken</code> or <code>GatewayTokenEncrypted</code> value.
<code>GatewayTokenDetails</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Additional information about the gateway token.
<code>GatewayTokenEncrypted</code>	Type encryptedstring Properties Create, Nillable, Update Description Encrypted unique token ID generated by the payment gateway to represent the card payment method during transactions. Encrypted using Salesforce Classic Encryption. Available in API version 52.0 and later.
<code>InputCardNumber</code>	Type string Properties Create, Filter, Group, Nillable, Sort Description Used by a payer to enter a credit card number when storing an external-type card payment method. After entry, the credit card number isn't saved, so the <code>InputCardNumber</code> value always appears blank. The credit card number appears as a masked value in <code>DisplayCardNumber</code>, which shows only the last four digits.
<code>IpAddress</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description IP address of the card payment method holder.

Field	Details
	This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own.
IsAutoPayEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the payment method can be used for recurring payments (<code>True</code>) or not (<code>False</code>). The default value is <code>False</code>. This field is available in API version 55.0 and later. For orgs that upgraded from version 54.0, you must add this field to the Card Payment Method page layout in the UI. It isn't automatically added.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record or list view related to this record, but didn't access it directly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible the user referenced this record but didn't view it directly.
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description MAC address of the card payment method holder. This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own.

Field	Details
NickName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Payer-defined nickname for the card payment method.
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The payment gateway used to create a gateway token. For transactions with a saved payment method in Salesforce, this field stores the payment gateway ID used in the transaction. This field is a relationship field. Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentMethodAddress	Type address Properties Filter, Nillable Description Full address associated with the card payment method.
PaymentMethodCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City of the address for the payment method.
PaymentMethodCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Country of the address for the payment method.
PaymentMethodDetails	Type string Properties Create, Filter, Group, Nillable, Sort Description Optional information about the payment method type. This field is available in API version 57.0 and later.
PaymentMethodGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field . Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
PaymentMethodLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations .

Field	Details
PaymentMethodLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Latitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal Code of the address for the payment method.
PaymentMethodState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State of the address for the payment method.
PaymentMethodStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street of the address for the payment method.
PaymentMethodSubType	Type string Properties Create, Filter, Group, Nillable, Sort Description A payment method that exists as a subtype of a payment method type. For example, Visa, Mastercard, and American Express exist as subtypes of payment method types such as Apple Pay and Google Pay. This field is available in API version 57.0 and later.
PaymentMethodType	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Payment method used for the transaction. This field is available in API version 57.0 and later. Possible values are: • AfterpayClearpay • AmericanExpress • ApplePay • BanContact • DinersClub • Discover • EPS • GooglePay • Jcb • Klarna • Maestro • MasterCard • Other • PayPal • SepaDebit • UnionPay • Venmo • Visa • iDeal
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the payer. This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own.
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Defines whether the card payment method is used for transactions made by Salesforce Payments or by an external third-party payment provider. Possible values are: • <code>External</code>—Transactions happened outside of the Salesforce payments platform. • <code>Salesforce</code>—Salesforce made and recorded an external call to the payment platform. This field is available in API version 49.0 and later. It doesn't appear in the UI by default for Salesforce orgs that upgraded from version 48.0. Users must add it to the CardPaymentMethod page layout on their own. You must enter a value for this field.
SavedPaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the saved payment method record. This field is available in API version 60.0 and later. Relationship Name SavedPaymentMethod Relationship Type Lookup Refers To SavedPaymentMethod
SfResultCode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The results of the card payment method's interaction with the payment gateway. Possible values are: • <code>Decline</code> • <code>Indeterminate</code> • <code>PermanentFail</code> • <code>RequiresReview</code> • <code>Success</code> • <code>SystemError</code> • <code>ValidationError</code>

Field	Details
StartMonth	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The month is activated.
StartYear	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The year the card is activated.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the payment method. Possible values are: • Active • Canceled • InActive

Usage

The following fields drop zeroes that appear at the beginning of the field value, and introduce commas for values with four or more digits:

- CardLastFour
- CardBin
- ExpiryYear

For example, a CardLastFour entered value of 0004112233445566 would appear as 4,112,233,445,566 on the record.

As a workaround, create a String-type custom formula field with the same label as the field that you want to replace, then hide the original field. Here are some examples for replacing CardLastFour, CardBin, and ExpiryYear.

CardLastFour

```
IF(ISBLANK(CardLastFour), NULL, RIGHT("0000" & TEXT(CardLastFour) , 4))
```

CardBin

```
IF(ISBLANK(CardBin), NULL, RIGHT("000000" & TEXT(CardBin) , 6))
```

ExpiryYear

```
IF (ISBLANK (ExpiryYear), NULL, TEXT (ExpiryYear))
```

CartCheckoutSession

Represents a checkout session used in Lightning B2B Commerce checkout. This object is available in API version 48.0 and later.

A checkout session is tied to a single web cart, but there can be multiple checkout sessions for a single cart.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
BackgroundOperationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the in progress background operation.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency used for the checkout session. Default value is <code>USD</code> . Possible values are: • <code>USD</code>—U.S. Dollar
IsArchived	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether checkout processing is archived (<code>true</code>) or not (<code>false</code>). After a session is archived, it can't be unarchived. Default value is <code>false</code>.
IsError	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the session is in error state (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code>.
IsProcessing	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether checkout processing is in progress (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the checkout session.
NextState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The next state of the checkout session.
OrderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of a created order after the checkout session has gone from cart to order.

Field	Details
OrderReferenceNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique reference number the shopper can use to refer to the order. In API version 63.0 and later, LWR stores don't populate this field upon checkout. Instead, the <code>InitialOrderReferenceNumber</code> field on the WebCart object is populated.
State	Type string Properties Create, Filter, Group, Sort, Update Description The current state of the checkout session.
WebCartId	Type reference Properties Create, Filter, Group, Sort Description The ID of the cart that is used to create the checkout session.

CartDeliveryGroup

Represents shipping information for the delivery of items in an order against a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The CartDeliveryGroup object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
CartId	Type reference Properties Create, Filter, Group, Sort Description The ID the WebCart on page 5837 that's associated with this delivery group. This field is a relationship field. Relationship Name Cart Relationship Type Lookup Refers To WebCart
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Company name associated with a delivery. This field is available in API version 59.0 and later.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are: • USD—U.S. Dollar
DeliverToAddress	Type address Properties Filter, Nillable Description The address to which a buyer order is delivered.
DeliverToCity	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The city to which a buyer order is delivered.
DeliverToCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The country to which a buyer order is delivered.
DeliverToFirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The first name of the person set to receive an order. This field is available in API version 57.0 and later.
DeliverToGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The geocode location to which a buyer order is delivered. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
DeliverToLastName	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The last name of the person to whom a buyer order is delivered. This field is available in API version 57.0 and later.
DeliverToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The latitude of a buyer delivery location.
DeliverToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The longitude of a buyer delivery location.
DeliverToName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the person to deliver a buyer order to. This field is set based on the <code>Name</code> field of the <code>ContactPointAddress</code> associated with this delivery group. <code>ContactPointAddress.Name</code> is generated by the system using the first and last names entered by a buyer during checkout.
DeliverToPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code to which to deliver a buyer order.
DeliverToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The state to which to deliver a buyer order.
DeliverToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street to which to deliver a buyer order.
DeliveryMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID for the delivery method to use to deliver a buyer order. Populated if the selected <code>CartDeliveryGroupMethod</code> only has the <code>ShippingFee</code> populated, but it has reference to an existing <code>DeliveryMethodId</code> which contains the fields <code>Carrier</code> , <code>ClassOfService</code> , and <code>ReferenceNumber</code> . If not, the <code>SelectedDeliveryMethod</code> field is used. This field is a relationship field. This field is deprecated in API version 64.0 and will be removed in API version 66.0. Instead, use the <code>DeliveryMethodId</code> field on the <code>CartDeliveryGroupMethod</code> object. Relationship Name DeliveryMethod Relationship Type Lookup Refers To OrderDeliveryMethod
DesiredDeliveryDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that a buyer requests to have an order delivered.
GiftMessage	Type textarea Properties Create, Nillable, Update

Field	Details
	Description Personalized gift message for the order. This field is available in API version 64.0 and later.
GiftToName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the recipient for a gift order. This field is available in API version 64.0 and later.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description Sum of all cart items' TotalAmount, or CartDeliveryGroup TotalAmount plus CartDeliveryGroup TotalTaxAmount.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the delivery group is the default. This field is available in API version 59.0 and later. The default value is <code>false</code> . B2B and D2C stores create a default delivery group, along with a WebCart, when a customer adds an item to cart and doesn't have an existing cart. The default cart delivery group is needed to complete the checkout flow, and can't be replaced by a non-default cart delivery group. If you customize the standard checkout flow, make sure that you don't delete the default cart delivery group.
IsGift	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the delivery group is a gift. This field is available in API version 64.0 and later. The default value is <code>false</code> .
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this <code>CartDeliveryGroup</code> record. Name can be up to 255 characters. In API version 62.0 and later, if <code>IsDefault</code> is <code>true</code>, the Name is <code>Shipment1</code>, a localized string. In prior API versions, the Name for a default delivery group was <code>Cart Delivery Group</code>. Due to this change, any queries intended to identify default delivery groups should use the <code>IsDefault</code> rather than Name field.
<code>SelectedDeliveryMethodId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the selected cart delivery group method. Populated if the selected <code>CartDeliveryGroupMethod</code> has the fields <code>Carrier</code>, <code>ClassOfService</code>, <code>ReferenceNumber</code>, and <code>ShippingFee</code>, but the <code>DeliveryMethodId</code> is null. If not, the <code>DeliveryMethodId</code> field is used. This field is available in API version 59.0 or later. This field is a relationship field. Relationship Name SelectedDeliveryMethod Relationship Type Lookup Refers To <code>CartDeliveryGroupMethod</code>
<code>ShipToPhoneNumber</code>	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number associated with a delivery. This field is available in API version 59.0 and later.
<code>ShippingInstructions</code>	Type textarea Properties Create, Nillable, Update Description Instructions for delivering an order.

Field	Details
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The total amount of all promotional adjustments on the cart delivery group. This field is available in API version 54.0 and later. For product bundles, this includes the aggregate adjustments of all child components.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description The total tax amount for all promotional adjustments on the cart delivery group. This field is available in API version 54.0 and later. For product bundles, this includes the aggregate of the tax amounts for all child components' adjustments.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all cart items <code>TotalPrice</code>, or <code>TotalProductAmount</code> plus <code>TotalChargeAmount</code>. For product bundles, this includes the aggregate of all child component prices.
TotalCartItemCount	Type int Properties Filter, Group, Nillable, Sort Description The number of cart items, including their quantities, of the type <code>PRODUCT</code> in the delivery group. For product bundles, this count includes only the parent component. If the total quantity of cart items of type <code>PRODUCT</code> in the delivery group exceeds the system-defined maximum (<code>INT_MAX</code>), this field is set to <code>INT_MAX</code>.
TotalChargeAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description The sum of all the cart items <code>TotalPrice</code> for all cart items of type <code>CHARGE</code>. Cart items can be of type <code>Product</code> or <code>Charge</code>. For product bundles, if a child component includes a cart item of type <code>CHARGE</code>, its amount is aggregated with the parent's cart item's total charge amount.
<code>TotalChargeTaxAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of all the cart items <code>TotalTaxAmount</code> for all cart items of type <code>CHARGE</code>. Cart items can be of type <code>Product</code> or <code>Charge</code>. For product bundles, this includes the aggregate of all tax amounts associated with bundle-level charges, including the taxes of individual child products.
<code>TotalProductAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of all the cart items <code>TotalPrice</code> for all cart items of type <code>PRODUCT</code>. Cart items can be of type <code>Product</code> or <code>Charge</code>. For product bundles, this includes the aggregate of all child component prices.
<code>TotalProductTaxAmount</code>	Type currency Properties Filter, Nillable, Sort Description The sum of all the cart items <code>TotalTaxAmount</code> for all cart items of type <code>PRODUCT</code>. Cart items can be of type <code>Product</code> or <code>Charge</code>. For product bundles, this includes the aggregate of all child component taxes based on their individual prices.
<code>TotalTaxAmount</code>	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The sum of all cart items <code>TotalTaxAmount</code> , or the combined value of <code>TotalProductTaxAmount</code> plus <code>TotalChargeTaxAmount</code> . For product bundles, this includes the aggregate of all child component taxes based on their individual prices.

Associated Objects

[CartDeliveryGroupChangeEvent](#) (API version 58.0)

Change events are available for the object.

CartDeliveryGroupMethod

Represents the selected delivery method for a cart delivery group used in Lightning B2B Commerce checkout. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `CartDeliveryGroupMethod` object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
<code>AdjustedShippingFee</code>	Type currency Properties Filter, Nillable, Sort Description Shipping fee, including <code>TotalAdjustmentAmount</code> , for the delivery method.
<code>Carrier</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The carrier that the buyer chose for their delivery method. Values are defined based on the user's shipping service. This field is available in API version 59.0 or later.
CartCheckoutSessionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The unique ID used to identify your cart checkout session.
CartDeliveryGroupId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the cart delivery group associated with the checkout session.
ClassOfService	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The carrier class of service that the buyer chose for their delivery method. Values are defined based on the user's shipping service. This field is available in API version 59.0 or later.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency used for your shipping fee. Default value is <code>USD</code>. Possible values are: • <code>USD</code>—U.S. Dollar
DeliveryMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the selected order delivery method.

Field	Details
ExternalProvider	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the external shipping method provider. Optional field.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Assign new delivery groups to active delivery methods. The default value is <code>False</code>. This field is available in API version 59.0 or later.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the delivery method.
ProcessTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Merchant-specified process time for the delivery method. Process time includes the time between when an order is placed and when the shipment is given to the shipping carrier.
ProcessTimeUnit	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Unit of time used to define <code>ProcessTime</code>. Possible values are: • Days • Hours • Weeks

Field	Details
ProductId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method. If your store uses Salesforce Native Shipping, the ProductId is selected from a non-variation product with Shipping in its name. The term Shipping in a product name isn't localized. If no matching product is found, a random non-variation product is used. This field is available in API version 59.0 or later.
ReferenceNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Reference number for an external delivery method. This field is available in API version 59.0 or later.
ShippingFee	Type currency Properties Create, Filter, Sort, Update Description Shipping fee associated with the delivery method. Required field.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The adjustment amount of a promotion applicable to the delivery method.
TransitTimeMax	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Maximum estimate of transit time for the delivery method. Transit time includes the time between when a shipping carrier receives a shipment and when the shipment arrives at the delivery address.
TransitTimeMin	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Minimum estimate of transit time for the delivery method. Transit time includes the time between when a shipping carrier receives a shipment and when the shipment arrives at the delivery address.
TransitTimeUnit	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Unit of time used to define <code>TransitTimeMax</code> and <code>TransitTimeMin</code>. Possible values are: • Days • Hours • Weeks
WebCartId	Type reference Properties Create, Filter, Group, Sort Description The ID of the WebCart associated with the cart delivery group method. Required field.

Usage

Use the `CartDeliveryGroupMethod` object to give commerce buyers the ability to choose a delivery method for a cart delivery group. Shipping integrations populate the delivery options that are available for a cart delivery group.

CartDeliveryGroupMethodAdj

Represents the shipping promotion discount for a shipping method. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `CartDeliveryGroupMethodAdj` object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
<code>AdjustmentAmount</code>	Type currency Properties Create, Filter, Sort, Update Description Amount subtracted from the price by the shipping promotion discount.
<code>AdjustmentBasisReferenceId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the adjustment basis reference. This is the coupon that causes the adjustment. This field is a relationship field. This field is available in API version 62.0 and later. Relationship Name AdjustmentBasisReference Refers To Coupon
<code>AdjustmentType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Type of shipping promotion discount. Possible values are: • <code>AdjustmentAmount</code> • <code>AdjustmentPercentage</code> • <code>OverrideAmount</code>

Field	Details
AdjustmentValue	Type double Properties Create, Filter, Sort, Update Description Number representing the value of the price adjustment. For example, if the AdjustmentType is AdjustmentPercentage, a -10 AdjustmentValue means 10 percent off. If the AdjustmentType is AdjustmentAmount, a -10 AdjustmentValue means 10 dollars off.
CartDeliveryGroupMethodId	Type reference Properties Create, Filter, Group, Sort Description ID of the cart delivery group method. This field is a relationship field. Relationship Name CartDeliveryGroupMethod Relationship Type Lookup Refers To CartDeliveryGroupMethod
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Currency ISO code of the cart. Possible values are: • USD—U.S. Dollar The default value is USD.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the cart delivery group method adjustment.

Field	Details
PriceAdjustmentCauseId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the price adjustment cause. This field is a relationship field. Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To Promotion
Priority	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description If there are multiple promotional adjustments, the order in which the shipping promotion is applied.

CartItem

Represents an item in a `WebCart` that's active in a store built with B2B. Cart item can be of type `Product` or `Charge`. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `CartItem` object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustmentAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Non-itemized adjustments for this cart item.
AdjustmentTaxAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The tax that's calculated on the AdjustmentAmount.
AssociatedItemPricing	Type picklist Properties Create, Filter, Nillable, Sort, Update Description Specifies how a child cart item is priced relative to its parent cart item within a product bundle. This field is null for standalone products that aren't part of a bundle. Available in API version 65.0 and later. Possible values are: - IncludedInBundlePrice—Indicates that the parent product's price includes the aggregated prices of its child components. - NotIncludedInBundlePrice—Indicates that the parent product's price doesn't include the aggregated prices of its child components.
BillingFrequency	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies how often a subscription is billed. Available in API version 59.0 and later. Possible values are: - Annual - MilestonePlan - Monthly - Quarterly

Field	Details
	Semi-Annual
CartDeliveryGroupId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the <code>CartDeliveryGroup</code> that's associated with a cart item. This field is a relationship field. Relationship Name <code>CartDeliveryGroup</code> Relationship Type Lookup Refers To <code>CartDeliveryGroup</code>
CartId	Type reference Properties Create, Filter, Group, Sort Description The ID of the <code>WebCart</code> that's associated with a cart item. This field is a relationship field. Relationship Name <code>Cart</code> Relationship Type Lookup Refers To <code>WebCart</code>
ChildProductCount	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The total number of child products associated with this cart item. If a child product is a bundle, its own <code>ChildProductCount</code> is included in this total. For simple products that don't have any child products, the <code>ChildProductCount</code> value is zero.
ConfigureDuringSale	Type picklist

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description Specify whether a product bundle is configurable. Available in API version 65.0 and later. Possible values are: - Allowed - NotAllowed
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are: - AED—UAE Dirham - AUD—Australian Dollar - BRL—Brazilian Real - CAD—Canadian Dollar - EUR—Euro - GBP—British Pound - INR—Indian Rupee - JPY—Japanese Yen - SEK—Swedish Krona - USD—U.S. Dollar
DistributedAdjustment Amount	Type currency Properties Defaulted on create, Filter, Nillable, Sort Description A calculated field that determines the amount of a cart-wide promotional adjustment when distributed across all items in the cart. This field is for display purposes only and is valid only during checkout. This field is available in API version 52.0 and later. You receive \$10 off, and there are 5 items in the cart. The distributed adjustment is (-\$2).
DistributedAdjustment TaxAmount	Type currency Properties Defaulted on create, Filter, Nillable, Sort

Field	Details
	Description A calculated field that determines the amount of a cart-wide tax adjustment due to promotions when distributed across all items in the cart. This field is available in API version 52.0 and later. EXAMPLE: Your discount causes a cart-wide tax reduction of (-\$10), and there are 5 items in the cart. The distributed tax adjustment is (-\$2).
FirstPymtPriceAferAdjustments	Type currency Properties Create, Filter, Nillable, Sort, Update Description The first term price for term-based subscription products, after price adjustments are applied. The total amount for a non-subscription product or a non-term based subscription product, after price adjustments are applied. This is available in API version 60.0 and later.
FirstPymtTax	Type currency Properties Create, Filter, Nillable, Sort, Update Description The tax for the first term price for term-based subscription products. The tax amount for a non-subscription product or a non-term subscription product. This field is available in API version 60.0 and later.
GrossAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The gross amount of the price adjustment on the cart item (tax inclusive). This is available in API version 55.0 and later.
GrossUnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The gross amount of the unit price for a cart item (tax inclusive). This is available in API version 55.0 and later.
IsShippingChargeNotApplicable	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether shipping charges are applicable (<code>true</code>) or not (<code>false</code>) to the cart item. The default value is <code>false</code>. This field is available in API version 64.0 and later.
ItemizedAdjustmentAmount	Type currency Properties Defaulted on create, Filter, Nillable, Sort Description A calculated field that determines the total amount of promotional adjustments that are specific to an item. This field is available in API version 52.0 and later. EXAMPLE: One cart item has one discount code for \$10 off. Your itemized adjustment amount is (-\$10) for that item.
ItemizedAdjustmentTaxAmount	Type currency Properties Defaulted on create, Filter, Nillable, Sort Description A calculated field that determines the total amount of promotion-related tax adjustments that are specific to an item. This field is available in API version 52.0 and later. EXAMPLE: One cart item has one discount code for \$10 off. This reduces the tax on that item by (-\$2). Your itemized adjustment tax amount is (-\$2) for that item.
ListPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The original price of the cart item. Typically shown with a line through it. List price is shown only when it's higher than the negotiated price. If the list price is the same or lower, it isn't shown to the buyer. This field is available in API version 52.0 and later.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this <code>CartItem</code> record. <code>Name</code> can be up to 255 characters.

Field	Details
NetAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The net amount of the price adjustment made on the cart item (tax exclusive). This is available in API version 55.0 and later.
NetUnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The net amount of the unit price for the cart item (tax exclusive). This is available in API version 55.0 and later.
NetUnitPriceAfterAdjustments	Type currency Properties Create, Filter, Nillable, Sort, Update Description The net unit price for a cart item, after all tier and promotional price adjustments are applied. This field is available in API version 60.0 and later.
ParentCartItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the cart item's parent <code>CartItem</code>. The value is empty if the item is a top-level cart item. This field is a relationship field. Relationship Name CartItem Relationship Type Lookup Refers To CartItem
PerUnitWeight	Type double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description Weight per unit of this cart item, in the unit specified by <code>weightUnit</code>. This field is available in API version 62.0 and later.
PeriodBoundary	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The. Default value is . Possible values are: • <code>AlignToCalendar</code> • <code>Anniversary</code> • <code>DayOfPeriod</code> • <code>LastDayOfPeriod</code>
PeriodBoundaryDay	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The .
PeriodBoundaryStartMonth	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The. Default value is . Possible values are: • 1—January • 10—October • 11—November • 12—December • 2—February • 3—March • 4—April • 5—May • 6—June • 7—July

Field	Details
	8—August 9—September
PriceBookEntryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the price book entry for the product. This field is available in API version 60.0 and later. This field is a relationship field. Relationship Name PricebookEntry Relationship Type Lookup Refers To PricebookEntry
PricingTermCount	Type double Properties Create, Filter, Nillable, Sort, Update Description A calculated field that indicates the number of pricing terms in the subscription. This field is available in API version 59.0 and later.
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of a product type cart item. Cart items can be of type <code>PRODUCT</code> or <code>CHARGE</code>. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2

Field	Details
ProductClass	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The product class of the cart item. Default value is Simple. Possible values are: • Bundle • Set • Simple • Variation • VariationParent
ProductRelatedComponentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the cart item's ProductRelatedComponent. The ProductRelatedComponent represents a product that is included in a product bundle, a set, or a product and an add-on. The ProductRelatedComponent is empty if the item is a top-level cart item. This field is a relationship field. Relationship Name ProductRelatedComponent Relationship Type Lookup Refers To ProductRelatedComponent
ProductSellingModelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the model used to sell a product. This field is available in API version 59.0 or later. This field is a relationship field. Relationship Name ProductSellingModel Relationship Type Lookup

Field	Details
	Refers To ProductSellingModel
ProductValidationKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The product validation key of the cart item.
ProductRelationshipTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the product relationship type that defines the relationship between a product bundle and its child product. Available in API version 65.0 and later. This field is a relationship field. Relationship Name ProductRelationshipType Relationship Type Lookup Refers To https://developer.salesforce.com/docs/api-references/for-api-data/productrelationshiptype ProductRelationshipType
ProrationPolicyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the proration policy, which defines how prices are calculated for each time period within a subscription term. This field is available in API version 60.0 and later. This field is a relationship field. Relationship Name ProrationPolicy Relationship Type Lookup Refers To Proration Policy

Field	Details
Quantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The number of a given cart item in a cart.
QuantityScaleMethod	Type picklist Properties Create, Filter, Nillable, Sort, Update Description Determines how a child product's quantity scales when added to a cart or configured within a product bundle. Available in API version 65.0 and later. Possible values are: • <code>Constant</code>—Represents a value that remains fixed relative to the parent bundle. • <code>Proportional</code>—Represents a value that varies in proportion to the parent bundle's price or quantity.
SalesPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The discounted price of a cart item.
SellingModelType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the product selling model associated with a term-based subscription product. This field is available in API version 60.0 and later. Possible values are: • <code>Evergreen</code> • <code>OneTime</code> • <code>TermDefined</code> The default value is <code>OneTime</code>.
Sku	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The Shelf-Keeping Unit ID of a cart item.
StockCheckMethod	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines how inventory is assessed for a cart item that's part of a bundle or set. Possible values are: • <code>ChildProducts</code>—Inventory is assessed based on the child product or products. • <code>ParentProduct</code>—Inventory is assessed based on the parent product.
SubType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the subtype of the product. Possible values are: • <code>Bonus</code>—Bonus product. • <code>GiftWrap</code>—Gift wrapped product. This field is available in API version 64.0 and later.
SubscriptionTerm	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of terms (years or months, for example) in the subscription. This field is available in API version 59.0 and later.
TaxTreatmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related tax treatment for the cart item. This field is available in API version 63.0 and later. This field is available with Subscription Management. This field is a relationship field.

Field	Details
	Relationship Name TaxTreatment Relationship Type Lookup Refers To TaxTreatment
TotalAdjustmentAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The total amount of all promotional adjustments on the item, both distributed and itemized. This field is available in API version 52.0 and later.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The total cost of this cart item, including taxes and adjustments.
TotalFirstPymtAdjAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The total adjustment amount for the first payment of a term-based susbcription product. The TotalAdjustmentAmount for non-subscription products and non-term based subscription products. This field is available in API version 63.0 and later.
TotalFirstPymtListPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The first-payment amount for a term-based subscription product, based on the product's ListPrice. This is the same value as TotalListPrice for non-subscription products or non-term based subscription products. This price is only for comparison, and not the price at which the buyer purchases a product. This field is available in API version 63.0 and later.

Field	Details
TotalFirstPymtPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The first term price for term-based subscription products. The price of a line item for non-subscription products and non-term based subscription products. This price includes price adjustments and excludes taxes. This field is available in API version 63.0 and later.
TotalLineAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Total amount for this cart item, based on sales price and quantity.
TotalLineFirstPymtAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The first term price for term-based subscription products, calculated based on the sales price and quantity, before any price adjustments are made. This is the same value as TotalLineAmount for non-subscription products and non-term based subscription products. This field is available in API version 63.0 and later.
TotalLineFirstPymtTaxAmount	Type currency Properties Defaulted on create, Filter, Nillable, Sort Description The tax on the first payment amount, after price adjustments, for term-based subscription products. The tax on the price of the product for non-subscription products and non-term based subscription products. Taxes are also calculated on the delivery charge items. This field is a calculated field. This field is available in API version 63.0 and later.
TotalLineGrossAmount	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The total gross amount of the line item (tax inclusive). This is available in API version 55.0 and later.
TotalLineNetAmount	Type currency Properties Filter, Nillable, Sort Description The total net amount of the line item (tax exclusive). This is available in API version 55.0 and later.
TotalLineTaxAmount	Type currency Properties Defaulted on create, Filter, Nillable, Sort Description Total tax amount for TotalLineAmount.
TotalListPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description Total amount for this cart item, based on ListPrice. We provide this value for comparison. It's not the price that the buyer is paying.
TotalPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description Total amount for this cart item, including adjustments but excluding taxes.  Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions , this field is required.
TotalPriceAfterAllAdjustments	Type currency Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Total price after all price adjustments are applied. This field is available in API version 52.0 and later.  Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions, this field is required.
TotalPriceTaxAmount	Type currency Properties Filter, Nillable, Sort Description Total tax amount for a cart item before promotional adjustments, including quantity-based adjustments. This field is available in API version 56.0 and later.
TotalPromoAdjustmentAmount	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Total itemized and distributed adjustment amount in cart (only for promotions). This field is available in API version 52.0 and later.
TotalPromoAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Total itemized and distributed adjustment tax amount in cart (only for promotions). This field is available in API version 52.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Total tax amount for this cart item. This value includes taxes for both TotalLineAmount and AdjustmentAmount.
TotalWeight	Type double Properties Filter, Nillable, Sort

Field	Details
	Description Total weight of this cart item, in the unit specified by <code>WeightUnit</code> . This field is available in API version 62.0 and later.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The <code>CartItem</code> type. Possible values are: • <code>Product</code> • <code>Charge</code>
UnitAdjustedPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description Price per quantity unit after a tier discount or surcharge is applied. This field is available in API version 50.0 and later.
UnitAdjustedPrice WithItemAdj	Type currency Properties Create, Filter, Nillable, Sort, Update Description Unit price, including both tier and item level discounts, for the item.
UnitAdjustmentAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Tier discount or surcharge to apply to a quantity unit. This amount is added to the <code>SalesPrice</code> to get the <code>UnitAdjustedPrice</code> . This field is available in API version 50.0 and later.
UnitItemAdjustment Amount	Type currency Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Item level adjustments made to the unit price for the item.
UnitPriceAfterAdjustments	Type currency Properties Create, Filter, Nillable, Sort, Update Description The unit price for a cart item, after tier and promotional price adjustments are applied. This field is available in API version 60.0 and later.
WeightUnit	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Unit of measurement for the weight of the cart item. This field is available in API version 62.0 and later. Possible values are: • Grams • Kilograms • Ounces • Pounds

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

[CartItemChangeEvent](#) (API version 58.0)

Change events are available for the object.

CartItemAttribute

Represents the attributes associated with a cart item, stored as key-value pairs. These attributes are derived from the product and carried forward to the order during checkout. This object is available in API version 66.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The CartItemAttribute object is available only if the B2B Commerce license, the Salesforce CPQ feature, and Commerce Dynamic Bundles are enabled in your Salesforce org.

Fields

Field	Details
AttributeDefinitionId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the attribute definition associated with the cart item attribute. This field is a relationship field. Relationship Name AttributeDefinition Relationship Type Lookup Refers To AttributeDefinition
AttributeName	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The name of the cart item attribute.
AttributePicklistValueId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the picklist value associated with the cart item attribute. This field is a relationship field. Relationship Name AttributePicklistValue Relationship Type Lookup Refers To AttributePicklistValue
AttributeValue	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The value of the cart item attribute, such as Blue or Large.
CartItemId	Type reference Properties Create, Filter, Group, Sort Description The ID of the cart item to which this attribute is assigned. This field is a relationship field. Relationship Name CartItem Relationship Type Master-detail Refers To CartItem (the master object)
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description An auto-generated ID for the attribute record that's stored in an external system, such as the HBase database.
IsPriceImpacting	Type boolean

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates whether the attribute affects cart pricing (<code>true</code>) or not (<code>false</code>). This field determines whether the Commerce Pricing API calls must be triggered to update the price.
UnitOfMeasure	Type reference Properties Create, Filter, Group, Sort Description The ID of the unit of measure associated with the cart item attribute. This field is available only if the AttributeUomPilot Org perm is enabled. Contact Salesforce support for assistance. This field is a relationship field. Relationship Name UnitOfMeasure Relationship Type Lookup Refers To UnitOfMeasure

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

CartItemPriceAdjustment

Price adjustment for a cart item. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The CartItemPriceAdjustment object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AdjustmentAmountScope	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Scope of the adjustment amount for a promotion. Possible values are: • Total—The amount off the total price. This field is available in API version 54.0 and later.
AdjustmentBasisReferenceId	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Coupon code of the coupon associated with a promotion. This field is available in API version 54.0 and later. This is a relationship field. Relationship Name AdjustmentBasisReference Relationship Type Lookup Refers To Coupon
AdjustmentSource	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Price adjustment type. Possible values are: - Discretionary - Promotion - System
AdjustmentTargetType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Target for the price adjustment (the cart itself or individual items). Possible values are: - Cart - Item
AdjustmentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates if the price adjustment is applied as percentage or an absolute amount. Possible values are: - AdjustmentAmount - AdjustmentPercentage
AdjustmentValue	Type double Properties Create, Filter, Sort, Update Description Numeric value of the adjustment (for example, 10 if the price adjustment is either 10% off or \$10 off).
CartId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the WebCart that's associated with a cart item. This field is available in API version 55.0 and later. This is a relationship field. Relationship Name Cart Relationship Type Lookup Refers To WebCart
CartItemId	Type reference Properties Create, Filter, Group, Sort Description ID of the parent cart item to which this adjustment belongs. This is a relationship field. Relationship Name CartItem Relationship Type Lookup Refers To CartItem
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are: • EUR—Euro • USD—U.S. Dollar
Description	Type textarea Properties Create, Nillable, Update

Field	Details
	Description Description of the price adjustment.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the price adjustment.
PriceAdjustmentCauseId	Type reference Properties Create, Filter, Group, Sort, Nillable, Update Description ID of entity that caused this adjustment (for example, a promotion ID). If unspecified, then <i>Description</i> populates the display name. This is a relationship field. Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To Promotion
Priority	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description If there are multiple price adjustments, sequence in which the price adjustments are applied.
TotalAmount	Type currency Properties Create, Filter, Sort, Update Description Total price after applying price adjustments.
TotalGrossAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description The total gross amount (tax inclusive) after applying price adjustments. This field is available in API version 55.0 and later.
TotalNetAmount	Type currency Properties Filter, Nillable, Sort Description The total net amount (tax exclusive) after applying price adjustments. This field is available in API version 55.0 and later.
TotalTax	Type currency Properties Filter, Nillable, Sort Description Tax on the total adjusted price.
WebCartAdjustmentGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the cart's adjustment group. This is a relationship field. Relationship Name WebCartAdjustmentGroup Relationship Type Lookup Refers To WebCartAdjustmentGroup

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

[CartItemPriceAdjustmentChangeEvent](#) (API version 58.0)

Change events are available for the object.

CartTax

Represents taxes for a line item in a `WebCart` that's active in a store built with B2B Commerce or D2C Commerce. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `CartTax` object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
<code>AdjustmentTargetType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Target for the price adjustment (the cart itself or individual items). This field is available in API version 52.0 and later. Possible values are: • <code>Cart</code> • <code>Item</code>
<code>Amount</code>	Type currency Properties Create, Filter, Sort, Update Description Calculated tax amount.
<code>CartId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the <code>WebCart</code> being taxed.

Field	Details
CartItemId	Type reference Properties Create, Filter, Group, Sort Description The ID of a cart item being taxed.
CartItemPriceAdjustmentId	Type reference Properties Create, Filter, Group, Sort Description The ID of a price adjustment for a cart item being taxed. (This field is available in API version 52.0 and later.) Refers To CartItemPriceAdjustment
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Valid values include: • USD—U.S. Dollar
Description	Type textarea Properties Create, Nillable, Update Description A description of the tax. Enter up to 2000 characters.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this CartTax record. Name can be up to 255 characters.

Field	Details
TaxCalculationDate	Type date Properties Create, Filter, Group, Sort, Update Description The date this tax was calculated.
TaxRate	Type percent Properties Create, Filter, Nillable, Sort, Update Description The applied tax rate for this line of tax.
TaxType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of tax for this line of tax. Possible values are: • Actual • Estimated

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

CartTaxChangeEvent (API version 58.0)

Change events are available for the object.

CartValidationOutput

Associate errors to cart entities, such as cart line items, delivery groups, and the like, in a store built with B2B Commerce or D2C Commerce. An example error is "Out of stock." Available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The CartValidationOutput object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
BackgroundOperationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the background operation that ran the validation.
CartId	Type reference Properties Create, Filter, Group, Sort Description ID of the related <code>WebCart</code> .
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. Default value is <code>USD</code> . Possible values are: • <code>EUR</code>—Euro • <code>USD</code>—U.S. Dollar
IsDismissed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the validation process is finished. Default value is <code>false</code> .

Field	Details
Level	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Describes the type of output resulting from the validation process. Possible values are: • 0 (Info) • 1 (Error) • 2 (Warning)
Message	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Defines the message to show in the log when validation is complete. Message can be up to 255 characters.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this CartValidationOutput record. Name can be up to 255 characters.
RelatedEntityId	Type reference Properties Create, Filter, Group, Sort, Update Description Foreign key to WebCart, CartItem, and CartDeliveryGroup.
RelatedEntityPrefix	Type string Properties Filter, Group, Nillable, Sort Description Three-character prefix for the related entity.
Type	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description The CartValidationOutput type. Possible values are: • CartSave — Available in API version 64.0 and later. • Entitlement • Inventory • Other • Pricing • Promotions • Shipping • ShippingPromotions • SystemError • Taxes

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

CartValidationOutputChangeEvent (API version 58.0)

Change events are available for the object.

SEE ALSO:

Case

Represents a case, which is a customer issue or problem.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the account associated with this case. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
AssetWarrantyID	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Asset associated with the warranty. Must be a valid asset warranty ID.
BusinessHoursId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the business hours associated with this case.
Comments	Type textarea Properties Create, Delete, Layout, Nillable, Query, Retrieve, Search, Sort, Undelete, Update Description Used to insert a new CaseComment. Email textarea has a length of 4000 chars.
CaseNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Assigned automatically when each case is inserted. It can't be set directly, and it can't be modified after the case is created.
ClosedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the case was closed.
CommunityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the zone associated with this case. This field is available in API version 24.0 and later.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
ContactEmail	Type email Properties Filter, Group, Nillable, Sort

Field	Details
	Description Email address for the contact. The Case.ContactEmail field displays the Email field on the contact on page 1381 that is referenced by Case.ContactId. Label is <code>Contact Email</code>. This field is available in API version 38.0 and later.
ContactFax	Type phone Properties Filter, Group, Nillable, Sort Description Fax number for the contact. Label is <code>Contact Fax</code>. This field is available in API version 38.0 and later.
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the associated contact. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
ContactMobile	Type phone Properties Filter, Group, Nillable, Sort Description Mobile telephone number for the contact. Label is <code>Contact Mobile</code>. This field is available in API version 38.0 and later.
ContactPhone	Type phone Properties Filter, Group, Nillable, Sort Description Telephone number for the contact. Label is <code>Contact Phone</code>. This field is available in API version 38.0 and later.

Field	Details
CreatorFullPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorName	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
Description	Type textarea Properties Create, Nillable, Update Description A text description of the case. Limit: 32 KB.
FeedItemId	Type reference Properties Create, Group, Nillable, Sort Description ID of the question in Chatter associated with the case. This field is available in API version 33.0 and later, and is only accessible in organizations where Question-to-Case is enabled.

Field	Details
HasCommentsUnreadByOwner	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a case contains comments that the case owner hasn't read (<code>true</code>) or not (<code>false</code>).
HasSelfServiceComments	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a case has comments added by a Self-Service user (<code>true</code>) or not (<code>false</code>). Only visible when Customer Portal is enabled.
IsClosed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the case is closed (<code>true</code>) or open (<code>false</code>). This field is controlled by the <code>Status</code> field; it can't be set directly. Label is <code>Closed</code>.
IsClosedOnCreate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the case was closed at the same time that it was created (<code>true</code>) or not (<code>false</code>). This flag is read-only and is automatically set when a record is created. It can't be set to <code>true</code> unless the <code>IsClosed</code> flag is also <code>true</code>.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <code>Deleted</code>.

Field	Details
IsEscalated	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the case has been escalated (<code>true</code>) or not. A case's escalated state does not affect how you can use a case, or whether you can query, delete, or update it. You can set this flag via the API. Label is <code>Escalated</code>.
IsSelfServiceClosed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the case is closed for Self-Service users (<code>true</code>) or not (<code>false</code>).
IsStopped	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether an entitlement process on a case is stopped (<code>true</code>) or not (<code>false</code>).
IsVisibleInSelfService	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the case can be viewed in the Customer Service Portal, Partner Service Portal, and Self-Service Portal (<code>true</code>) or not (<code>false</code>). This field is applied for case visibility in the Partner Relationship Management, Customer Service Portal, and the earlier version of Self Service Portal. The field does not alter sharing and will not prevent usage of a direct URL to a case if a portal user has read or write access.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the case. The Language field is available when you enable Einstein Case Classification in Enterprise, Performance, and Unlimited edition orgs with Service Cloud. By default, only Einstein classification apps use this field.

Field	Details
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
MasterRecordId	Type reference Properties Filter, Group, Nillable, Sort Description If this object was deleted as the result of a merge, this field contains the ID of the record that was kept. If this object was deleted for any other reason, or has not been deleted, the value is <code>null</code>. This is a relationship field. Relationship Name MasterRecord Relationship Type Lookup Refers To Case
Origin	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The source of the case, such as Email, Phone, or Web. Label is Case Origin.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the contact who owns the case. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the parent case in the hierarchy. The label is <code>Parent Case</code>. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Case
Priority	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The importance or urgency of the case, such as <code>High</code>, <code>Medium</code>, or <code>Low</code>.
QuestionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The question in the answers zone that is associated with the case. This field does not appear if you don't have an answers zone enabled.

Field	Details
Reason	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The reason why the case was created, such as Instructions not clear, or User didn't attend training.
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object.
ServiceContractId	Type reference Properties Create, Filter, Nillable, Update Description Required. ID of the ServiceContract associated with the entitlement. Must be a valid ID.
SlaStartDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Shows the time that the case entered an entitlement process. If you have the Edit permission on cases, you can update or reset the time. This field is available in API version 18.0 and later.
SourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the social post source.
Status	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The status of the case, such as New, Closed, or Escalated. This field directly controls the <code>IsClosed</code> flag. Each predefined <code>Status</code> value implies an <code>IsClosed</code> flag value. For more information, see <code>CaseStatus</code>.
StopStartDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time an entitlement process was stopped on the case. This field is available in API version 18.0 and later.
Subject	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The subject of the case. Limit: 255 characters.
SuppliedCompany	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The company name that was entered when the case was created. Label is <code>Company</code>.
SuppliedEmail	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The email address that was entered when the case was created. Label is <code>Email</code>. If your organization has an active auto-response rule, <code>SuppliedEmail</code> is required when creating a case via the API. Auto-response rules use the email in the contact specified by <code>ContactId</code>. If no email address is in the contact record, the email specified here is used.
SuppliedName	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The name that was entered when the case was created. Label is <code>Name</code> .
SuppliedPhone	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The phone number that was entered when the case was created. Label is <code>Phone</code> .
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of case, such as <code>Feature Request</code> or <code>Question</code> .

Note: If you are importing Case data and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

Use the Case object to manage cases for your organization. Client applications can query, update, and delete Attachment records associated with a case via the API.

Assignment Rules

When you query or update a case, your client application can have the case automatically assigned to one or more User records based on assignment rules that have been configured in the user interface. To use this feature, your client application must set either of the following options (but not both) in the `AssignmentRuleHeader` used in the create or update:

Field	Field Type	Details
<code>assignmentRuleId</code>	reference	ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and <code>useDefaultRule</code> is <code>true</code> , then the default assignment rule is used. To find the ID for a given assignment rule, query the <code>AssignmentRule</code> object (specifying <code>RuleType="caseAssignment"</code>), iterate through the returned <code>AssignmentRule</code> objects, find the one you want to use, retrieve its ID, and then specify its ID in this field in the <code>AssignmentRuleHeader</code> .

Field	Field Type	Details
<code>useDefaultRule</code>	boolean	Specifies whether to use the default rule for rule-based assignment (<code>true</code>) or not (<code>false</code>). The default rule is assigned by users in the Salesforce user interface.

For a code example that shows setting the `AssignmentRuleHeader` for a Lead (which is similar to setting the `AssignmentRuleHeader` for a Case), see [Lead](#).

Separating Accounts from Contacts in Cases

In releases before 8.0, the `AccountId` could not be specified, it was derived from the contact's account. This behavior will continue to be supported in future releases, but you can also now specify an `AccountId`. If you do not specify the `AccountId` during the creation of a case, the value will default to the contact's `AccountId`.

Note: When a record is updated, if the `ContactId` has not changed, then the `AccountId` is not regenerated. This prevents the API from overwriting a value previously changed in the Salesforce user interface. However, if an API call changes the `ContactId` and the `AccountId` field is empty, then the `AccountId` is generated using the contact's account.

Using `_case` with Java

Depending on the development tool you use, you might need to write your application using `_case` instead of `Case`, because `case` is a reserved word in Java.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

CaseChangeEvent (API version 44.0)

Change events are available for the object.

CaseFeed (API version 18.0)

Feed tracking is available for the object.

CaseHistory

History is available for tracked fields of the object.

CaseOwnerSharingRule

Sharing rules are available for the object.

CaseShare

Sharing is available for the object.

SEE ALSO:

[Account](#)

[CaseMilestone](#)

CaseArticle

Represents the association between a Case and a KnowledgeArticle. This object is available in API version 20.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Special Access Rules

Access to this object is controlled by the parent Case and KnowledgeArticle. However, when querying, access is only controlled by the parent Case.

Customer Portal users can't access this object.

Fields

Field	Details
ArticleLanguage	Type picklist Properties Filter, Restricted picklist Description The language of the article associated with the case.
ArticleVersionNumber	Type int Properties Create, Group, Nillable Description The number assigned to a version of an article. This field is available in API version 24.0 and later.
CaseId	Type reference Properties Create, Filter, Group, Sort Description ID of the Case associated with the KnowledgeArticle.
IsSharedByEmail	Type int

Field	Details
	Properties Create, Group, Nillable
	Description Indicates that the article has been shared with the customer through an email.
KnowledgeArticleId	Type reference
	Properties Create, Filter, Group, Sort
	Description ID of the KnowledgeArticle associated with the Case.

Usage

This object represents the association of a knowledge article with a Case. An article is associated with a case when it's relevant to a specific issue, when it helps an agent solve the case, or when the agent sends the article to a customer.

You can use this object to include case-article associations in Apex and Visualforce.

You can't update this object via the API. If you attempt to create a record that matches an existing record, the create request simply returns the existing record.

SEE ALSO:

[Case](#)

[KnowledgeArticle](#)

CaseComment

Represents a comment that provides additional information about the associated Case.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommentBody	Type textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description Text of the CaseComment. The maximum size of the comment body is 4,000 bytes. Label is Body.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
CreatorFullPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorName	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.

Field	Details
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsNotificationSelected	Type boolean Properties Create, Defaulted on create, Update Description Indicates whether an email notification is sent to the case contact when a CaseComment is created or updated. When this field is queried, it always returns null. This field is available only when the <code>Enable Case Comment Notification to Contacts</code> setting is enabled on the Support Settings page in Setup. To send email notifications for CaseComment, you must use the <code>EmailHeader triggerUserEmail</code>. Available in API version 43.0 and later.
IsPublished	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the CaseComment is visible to customers in the Self-Service portal (<code>true</code>) or not (<code>false</code>). Label is Published. This is the only CaseComment field that can be updated via the API.
ParentId	Type reference Properties Create, Filter, Group, Sort,

Field	Details
	Description Required. ID of the parent Case of the CaseComment. This is a relationship field.
	Relationship Name Parent
	Relationship Type Lookup
	Refers To Case

 **Note:** If you're importing CaseComment data and must set the value for an audit field, such as `CreatedDate`, contact Salesforce. Record id's can't delete CaseComments entities when calling the `Database.delete()` Apex method or its analogous SOAP API. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

Usage

In the Salesforce user interface, comments are entered by a User working on a Case. All users have access to create and view CaseComment in the Salesforce user interface and when using the API. In the API, CaseComment records can't be modified after insertion unless the user has the "Modify All Records" object-level permission for Cases or the "Modify All Data" permission. If not, users can only update the `IsPublished` field, and can't delete CaseComment.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

CaseContactRole

Represents the role that a given Contact plays on a Case.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>CasesId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description ID of the cases associated with this contact. This is a relationship field. Relationship Name Cases Relationship Type Lookup Refers To Case
ContactId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the contact. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
Role	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the role played by the contact on this case, such as Technical Contact, Business Contact, Decision Maker, and so on. Must be unique—there can't be multiple records in

Field	Details
	which the <code>CaseId</code> , <code>ContactId</code> , and <code>Role</code> values are identical. Different contacts can play the same role on the same case. A contact can play different roles on the same case.

Usage

Use this object to define the role that a given Case plays on a given Contact. For example, you can use this object to be able to see all contacts who are associated to a case, or, given a contact, be able to query all cases that they are associated with, even if they are not the primary contact on the case.

CaseHistory

Represents historical information about changes that have been made to the associated Case.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

This object is always read-only.

Fields

Field	Details
<code>CaseId</code>	Type reference Properties Filter, Group, Sort Description ID of the Case associated with this record. This is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case

Field	Details
DataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
Field	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Name of the case field that was modified, or a special value to indicate some other modification to the case. The possible values, in addition to the case field names, are: • ownerAssignment—The owner of the case was changed. • ownerAccepted—A user took ownership of a case from a queue. • ownerEscalated—The owner of the case was changed due to case escalation. • external—A user made the case visible to customers in the Customer Self-Service Portal.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
NewValue	Type anyType Properties Nillable, Sort Description New value of the modified case field. Maximum of 255 characters.
OldValue	Type anyType Properties Nillable, Sort Description Previous value of the modified case field. Maximum of 255 characters.

Usage

Case history entries are indirectly created each time a case is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

CaseHistory2

Represents historical information about owner and status changes that have been made to the associated Case. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is always read-only.

Fields

Field	Details
CaseId	Type reference Properties Filter, Group, Sort Description The ID of the Case associated with this record. This is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case

Field	Details
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the contact who owns the case. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PreviousUpdate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the case was last updated.
Status	Type string Properties Filter, Group, Nillable, Sort Description The status of the case, such as <code>New</code>, <code>Closed</code>, or <code>Escalated</code>.

Usage

CaseHistory2 entries are intended for case history reports.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CaseHistory2ChangeEvent](#) on [page 68](#)

Change events are available for the object in API version 60.0 or later.

CaseMilestone

Represents a milestone (required step in a customer support process) on a Case. This object is available in API version 18.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
BusinessHoursId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the BusinessHours associated with the CaseMilestone.
CaseId	Type reference Properties Filter Description ID of the case.
CompletionDate	Type dateTime Properties Filter, Nillable, Update Description The date and time the milestone was completed.
ElapsedTimeInDays	Type double

Field	Details
	Properties Filter, Nillable Description The time required to complete a milestone in days.
ElapsedTimeInHrs	Type double Properties Filter, Nillable Description The time required to complete a milestone in hours.
ElapsedTimeInMins	Type int Properties Filter, Nillable Description The time required to complete a milestone in minutes.
IsCompleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the milestone is completed (<code>true</code>) or not (<code>false</code>).
IsViolated	Type boolean Properties Defaulted on create, Filter Description Indicates whether the milestone is violated (<code>true</code>) or not (<code>false</code>).
MilestoneTypeId	Type reference Properties Filter, Nillable Description The ID of the milestone on the case.
StartDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Update Description The date and time the milestone started on the case.
TargetDate	Type dateTime Properties Filter Description The date and time the milestone must be completed.
TargetResponseInDays	Type double Properties Filter, Nillable, Sort Description The time to complete the milestone in days.
TargetResponseInHrs	Type double Properties Filter, Nillable, Sort Description The time to complete the milestone in hours.
TargetResponseInMins	Type int Properties Filter, Group, Nillable, Sort Description The time to complete the milestone in minutes.
TimeRemainingInDays	Type double Properties Group, Nillable, Sort Description Time remaining to reach the milestone target, measured in days.
TimeRemainingInHrs	Type text

Field	Details
	Properties Nillable Description Time remaining to reach the milestone target, measured in hours.
TimeRemainingInMins	Type text Properties Group, Nillable, Sort Description Time remaining to reach the milestone target. The format is minutes and seconds.
TimeSinceTargetInDays	Type double Properties Nillable, Sort Description The time elapsed since the milestone target, measured in days.
TimeSinceTargetInHrs	Type string Properties Group, Nillable, Sort Description The time elapsed since the milestone target, measured in hours.
TimeSinceTargetInMins	Type string Properties Group, Nillable, Sort Description The time elapsed since the milestone target. The format is minutes and seconds.

Usage

This object lets you view a milestone on a case. It also lets you view if the milestone was completed and when it must be completed.

SEE ALSO:

[Case](#)

[MilestoneType](#)

[SlaProcess](#)

CaseOwnerSharingRule

Represents the rules for sharing a case with users other than the owner.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
CaseAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group. Cases owned by users in the source group trigger the rule to give access.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the target user or group. Target users or groups are given access.

Usage

Use this object to manage the sharing rules for cases. General sharing and territory management-related sharing use this object.

CaseParticipant

Represents a junction between a case, and an account or a contact. This object stores the details of the participant associated with a case. This participant could be the applicant, co-applicant, a household, or even a business account. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Fields and values added in API version 58.0 are available if the add-on license for Financial Services Cloud is enabled.

Fields

Field	Details
AuthorizationProof	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description How the participant communicated their consent. This field is available in API version 58.0 and later. Possible values are: - Email Consent - Joint Ownership - Power of Attorney - Verbal Consent
CaseId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The case associated with the case participant record. This field is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, possibly the user only accessed this record or list view (<code>LastReferencedDate</code>) but didn't view it.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the case participant record.
ParticipantId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The participant associated with the case participant record. This field is a polymorphic relationship field. Relationship Name Participant Relationship Type Lookup Refers To Account, Contact
PreferredCallTimeFrom	Type time Properties Create, Filter, Nillable, Sort, Update Description The start of the preferred time window for contacting the participant. This field is available in API version 58.0 and later.
PreferredCallTimeTo	Type time Properties Create, Filter, Nillable, Sort, Update Description The end of the preferred time window for contacting the participant. This field is available in API version 58.0 and later.
PreferredCommunicationMode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description How the participant prefers to receive messages. This field is available in API version 58.0 and later. Possible values are: • Email • Phone • SMS
Role	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The role of the case participant. Possible values are: • Applicant • Complainant Representative (Available in API version 58.0 and later.) • Inspection Officer • Lawyer • Observer • Perpetrator • Primary Caretaker • Victim The default value is Applicant.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the case participant. Possible values are: • Active • Inactive • In Review (Available in API version 58.0 and later.) • Pending (Available in API version 58.0 and later.) • Submitted (Available in API version 58.0 and later.)

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CaseParticipantFeed](#) on page 55

Feed tracking is available for the object.

[CaseParticipantHistory](#) on page 63

History is available for tracked fields of the object.

CaseRelatedIssue

This object acts as a junction between a customer issue (Case) and the Incident or Problem that represents an associated service failure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CaseId	Type reference Properties Create, Filter, Group, Sort Description A relationship field that represents the case you're linking a Problem or Incident to. Relationship Name Case Relationship Type Lookup Refers To Case
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description A brief description of the related case.
RelatedEntityType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Shows what type of object the related entity is. Possible values are: - Incident - Problem

Field	Details
RelatedIssueId	Type reference Properties Create, Filter, Group, Sort Description A polymorphic relationship field that represents a related Problem or Incident. Relationship Name RelatedIssue Relationship Type Lookup Refers To Incident, Problem
RelationshipType	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Shows how two records relate to each other. Possible values are: • Root Cause • Similar The default value is 'Root Cause'.
UniqueKeyIndex	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description This field is unique within your organization.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CaseRelatedIssueChangeEvent](#) on page 68 (API version 59.0)

Change events are available for the object.

[CaseRelatedIssueFeed](#) on page 55

Feed tracking is available for the object.

CaseRelatedIssueHistory on page 63

History is available for tracked fields of the object.

CaseShare

Represents a sharing entry on a Case.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Case object can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>CaseAccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the Case. The possible values are: • <code>Read</code> • <code>Edit</code> • <code>All</code> This value isn't valid for creating or deleting records. This field must be set to an access level that is higher than the organization's default access level for cases.
<code>CaseId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description ID of the Case associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the Case with them. • <code>Owner</code>—The User is the owner of the Case. • <code>ImplicitChild</code>—The User or Group has access to the Case on the Account associated with this Case. After faster account sharing recalculation is enabled for your org, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically. • <code>RelatedPortalUser</code>—The portal user is the contact on the Case. • <code>Rule</code>—The User or Group has access via a Case sharing rule. • <code>GuestRule</code>—The User or Group has access via a Case guest user sharing rule. • <code>Team</code>—The User or Group has team access.

Field	Details
	• <code>LpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. • <code>ARImplicit</code>—The User, who belongs to a partner or customer account, has access to the Case via an account relationship data sharing rule.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the Case. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object allows you to determine which users and groups can view and edit Case records owned by other users. If you attempt to create a record that matches an existing record, request updates any modified fields and returns the existing record.

 **Note:** After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child case records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child case records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.

For more information, see the [Faster Account Sharing Recalculation](#) knowledge article.

SEE ALSO:

- [AccountShare](#)
- [LeadShare](#)
- [OpportunityShare](#)

CaseSolution

Represents the association between a Case and a Solution.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
CaseId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Case associated with the Solution. This is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
SolutionId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Solution associated with the case. This is a relationship field. Relationship Name Solution Relationship Type Lookup Refers To Solution

Usage

You can't update this object via the API. If you attempt to create a record that matches an existing record, the request simply returns the existing record.

SEE ALSO:

- [CaseShare](#)
- [SolutionStatus](#)

CaseStatus

Represents the status of a Case, such as New, On Hold, or In Process.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
IsClosed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this case status value represents a closed Case (<code>true</code>) or not (<code>false</code>). Multiple case status values can represent a closed Case.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether this is the default case status value (<code>true</code>) or not (<code>false</code>) in the picklist.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Label for this case status value. This display value is the internal label that does not get translated.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description Number used to sort this value in the case status picklist. These numbers are not guaranteed to be sequential, as some previous case status values might have been deleted.

Usage

This object represents a value in the case status picklist. The case status picklist provides additional information about the status of a Case, such as whether a given `Status` value represents an open or closed case. Query the `CaseStatus` object to retrieve the set of values in the case status picklist, and then use that information while processing Case records to determine more information about a given case. For example, the application could test whether a given case is open or closed based on its `Status` value and the value of the `IsClosed` property in the associated `CaseStatus` object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

CaseSubjectParticle

Represents the Social Business Rules custom format for the **Case Subject** field on cases created from inbound social posts. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name for the CaseSubjectParticle object. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. This field is automatically generated, but you can supply your own value if you create the record using the API.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Index	Type int Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The order in which the custom Case Subject is generated, meaning if the social network is 0 and the social message is 1, then the subject generates as <code>Twitter Tweet</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the case subject field. Possible values are: - ar—Arabic - da—Danish - de—German - en_US—English - es—Spanish - es_MX—Spanish (Mexico)

Field	Details
	• <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>iw</code>—Hebrew • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish • <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for the case subject field.
TextField	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies inbound social content added to Case Subject in case records.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. Specifies the custom Case Subject format from which inbound social content appears in case records. Possible values are: • <code>ColonSeparator</code> • <code>Content—Message</code> • <code>HyphenSeparator</code>

Field	Details
	• MessageType • PipeSeparator • ProvidedString • RealName • Sentiment • SocialHandle • SocialNetwork • Source

Usage

In the Salesforce UI, case subjects are brief descriptions of cases. They are what agents see on cases first. Social Business Rules specify the brief descriptions of cases created from social posts. Using CaseSubjectParticle objects you can build your own case subject format, where each object represents a social post's component. For example, combining CaseSubjectParticle objects with components for types MessageType, RealName, and SocialNetwork results in "Tweet Customer123 Twitter".

CaseTag

Associates a word or short phrase with a Case

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter

Field Name	Details
	Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

CaseTag stores the relationship between its parent TagDefinition and the Case being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

CaseTeamMember

Represents a case team member, who works with a team of other users to help resolve a case.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

When accessing from Apex code, use the `WITH USER_MODE` clause to enable field-level and object-level security permissions checking for `SOQL SELECT` queries, including subqueries and cross-object relationships. See [Enforce User Mode for Database Operations](#).

Fields

Field	Details
MemberId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user or contact who is a member on a case team. This is a polymorphic relationship field. Relationship Name Member Relationship Type Lookup Refers To Contact, User
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the case with which the case team member is associated. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Case
TeamRoleId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the case team role with which the case team member is associated. This is a relationship field. Relationship Name TeamRole Relationship Type Lookup Refers To CaseTeamRole
TeamTemplateId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the predefined team with which the case team member is associated. This is a relationship field. Relationship Name TeamTemplate Relationship Type Lookup Refers To CaseTeamTemplate
TeamTemplateMemberId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the team member included in a predefined case team. This is a relationship field. Relationship Name TeamTemplateMember Relationship Type Lookup Refers To CaseTeamTemplateMember

CaseTeamRole

Represents a case team role. Every case team member has a role on a case, such as “Customer Contact” or “Case Manager.”

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

Fields

Field	Details
<code>AccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of access granted to the target Group for cases. The possible values are: • None • Read • Edit
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the case team role.
<code>PreferencesVisibleInCSP</code>	Type boolean Properties Create, Filter, Update Description Indicates whether or not the case team role is visible to Customer Portal users.

CaseTeamTemplate

Represents a predefined case team, which is a group of users that helps resolve a case.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A text description of the predefined case team.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the predefined case team.

CaseTeamTemplateMember

Represents a member on a predefined case team, which is a group of users that helps resolve cases.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

Fields

Field	Details
MemberId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user or contact who is a team member on a predefined case team.
TeamRoleId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the predefined case team member's case team role.
TeamTemplateId	Type reference Properties Create, Filter, Group, Sort Description The ID of the predefined case team's template.

CaseTeamTemplateRecord

The CaseTeamTemplateRecord object is a linking object between the Case and CaseTeamTemplate objects. To assign a predefined case team to a case (customer inquiry), create a CaseTeamTemplateRecord record and point the `ParentId` to the case and the `TeamTemplateId` to the predefined case team.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with read access to the Case object can access this object.

Fields

Field	Details
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the case with which the case team template record is associated. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Case
TeamTemplateId	Type reference Properties Create, Filter, Group, Sort Description The ID of the predefined case team with which the case team template record is associated. This is a relationship field. Relationship Name TeamTemplate Relationship Type Lookup Refers To CaseTeamTemplate

CategoryData

Represents a logical grouping of Solution records.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
CategoryId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the CategoryNode associated with the solution.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted .
RelatedSubjectId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the solution related to the category.

Usage

This object allows you to assign one or more categories to a Solution. It is an intermediate data table with two foreign keys that defines the relationship between a CategoryNode and a Solution record.

CategoryData has two foreign keys:

- The first foreign key, `CategoryId`, refers to the ID of a CategoryNode.
- The other foreign key, `RelatedSubjectId`, refers to a Solution ID.

This is a many-to-many relationship, so there can be multiple rows returned with a `CategoryId`. A Solution can be associated with multiple categories.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

CategoryNode

Represents a tree of Solution categories.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Customer Portal users can't access this object.
- Attempting to delete a CategoryNode that has children (referred by CategoryNode.Parent), or is referred to elsewhere, causes a failure.

Fields

Field	Details
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for the category node.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the parent of this node, if any.
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the sort order of child CategoryNode objects.
SortStyle	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description Indicates whether the sort order is alphabetical or custom.

Usage

A CategoryNode defines a category of solutions. In the user interface, you can edit category definitions from Setup by entering *Solution Categories* in the **Quick Find** box, then selecting **Solution Categories**.

SEE ALSO:

[CategoryData](#)

[Solution](#)

CategoryNodeLocalization

When the Translation Workbench is enabled for your organization, the CategoryNodeLocalization object provides the translation of the label of a solution category.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

Fields

Field	Details
CategoryNodeId	Type reference
	Properties Create, Filter, Nillable
	Description The ID of the solution CategoryNode that is being translated.

Field	Details
LanguageLocaleKey	Type picklist Properties Create, Filter, Nillable, Restricted picklist Description This field is available in API version 16.0 and earlier. It is the same as the <code>Language</code> field.
Language	Type picklist Properties Create, Filter, Nillable, Restricted picklist Description This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application. This picklist contains the following fully-supported languages: - Chinese (Simplified): <code>zh_CN</code> - Chinese (Traditional): <code>zh_TW</code> - Danish: <code>da</code> - Dutch: <code>nl_NL</code> - English: <code>en_US</code> - Finnish: <code>fi</code> - French: <code>fr</code> - German: <code>de</code> - Italian: <code>it</code> - Japanese: <code>ja</code> - Korean: <code>ko</code> - Norwegian: <code>no</code> - Portuguese (Brazil): <code>pt_BR</code> - Russian: <code>ru</code> - Spanish: <code>es</code> - Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. - Swedish: <code>sv</code> - Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English. The following end-user only languages are available. - Arabic: <code>ar</code> - Bulgarian: <code>bg</code>

Field	Details
	• Croatian: <code>hr</code> • Czech: <code>cs</code> • English (UK): <code>en_GB</code> • Greek: <code>el</code> • Hebrew: <code>iw</code> • Hungarian: <code>hu</code> • Indonesian: <code>in</code> • Polish: <code>pl</code> • Portuguese (European): <code>pt_PT</code> • Romanian: <code>ro</code> • Slovak: <code>sk</code> • Slovenian: <code>sl</code> • Turkish: <code>tr</code> • Ukrainian: <code>uk</code> • Vietnamese: <code>vi</code> The following platform languages are available for organizations that use Salesforce exclusively as a platform. • Albanian: <code>sq</code> • Afrikaans: <code>af</code> • Amharic: <code>am</code> • Arabic (Algeria): <code>ar_DZ</code> • Arabic (Bahrain): <code>ar_BH</code> • Arabic (Egypt): <code>ar_EG</code> • Arabic (Iraq): <code>ar_IQ</code> • Arabic (Jordan): <code>ar_JO</code> • Arabic (Kuwait): <code>ar_KW</code> • Arabic (Lebanon): <code>ar_LB</code> • Arabic (Libya): <code>ar_LY</code> • Arabic (Morocco): <code>ar_MA</code> • Arabic (Oman): <code>ar_OM</code> • Arabic (Qatar): <code>ar_QA</code> • Arabic (Saudi Arabia): <code>ar_SA</code> • Arabic (Sudan): <code>ar_SD</code> • Arabic (Syria): <code>ar_SY</code> • Arabic (Tunisia): <code>ar_TN</code> • Arabic (United Arab Emirates): <code>ar_AE</code> • Arabic (Yemen): <code>ar_YE</code> • Armenian: <code>hy</code>

NamespacePrefix	Type string Properties Filter, Nillable Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values.

Field	Details
	- In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Value	Type string Properties Create, Filter, Nillable, Update Description The actual translated label for the solution category. Label is Translation.

Usage

Use this object to translate the labels of your solution categories into a supported language. Users with the Translation Workbench enabled can view category node translations, but either the "Customize Application," "Manage Translation," or "Manage Categories" permission is required to create or update category node translations.

ChangeRequest

Represents a decision to implement a formal request for a change (RFC). This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>BusinessJustification</code>	Type textarea

Field	Details
	Properties Create, Nillable, Update Description A description of the business reason to implement the change. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
BusinessReason	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The core reason for creating the change request. Possible values are: • t2
Category	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of change request. Administrators set field values.
ChangeRequestNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique, system-generated change request number.
ChangeType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of change request. Administrators set field values. Possible values are: • Emergency • Major • Normal • Standard

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description A description of the change request. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
EstimatedEndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the change request is estimated to be implemented.
EstimatedStartTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The estimated date and time (in UTC) when the change request is implemented.
FinalReviewDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the change request was reviewed.
FinalReviewNotes	Type textarea Properties Create, Nillable, Update Description Notes left by the change request reviewer. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
Impact	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Shows the impact of a requested change. Possible values are: • High • Low • Medium The default value is 'High'.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description A polymorphic relationship field that represents the user or group assigned as the change reviewer. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Priority	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The impact and urgency of a requested change. Possible values are: • Critical • High • Low • Moderate The default value is 'Critical'.
RemediationPlan	Type textarea Properties Create, Nillable, Update Description A description of the steps required to resolve the incident. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
ReviewerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the user who reviewed the change request. This is a relationship field. Relationship Name Reviewer Relationship Type Lookup Refers To User
RiskImpactAnalysis	Type textarea Properties Create, Nillable, Update Description An assessment of the risk involved with the implementation of the change request. Administrators set field values, and each value can have up to 20 characters.

Field	Details
RiskLevel	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The risk level associated with adopting the requested change. Possible values are: • High • Low • Medium The default value is 'High'.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Represents any custom or granular stages a customer may want to track. This will be a dependent picklist. Possible values are: • Approved • Canceled • Closed • Implementing • New • Open • Planning • Rejected • Reviewed • Scheduled The default value is 'New'.
StatusCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The status of the change. Possible values are:

Field	Details
	• Approved • Canceled • Closed • Implementing • New • Open • Planning • Rejected • Reviewed • Scheduled The default value is 'New'.
Subject	Type string Properties Create, Filter, Group, Sort, Update Description A brief description of the requested change.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ChangeRequestChangeEvent on page 68 (API version 59.0)
Change events are available for the object.

ChangeRequestFeed on page 55
Feed tracking is available for the object.

ChangeRequestHistory on page 63
History is available for tracked fields of the object.

ChangeRequestOwnerSharingRule on page 65
Sharing rules are available for the object.

ChangeRequestShare on page 67
Sharing is available for the object.

ChangeRequestRelatedIssue

Represents a junction object that relates a ChangeRequest to an Incident or Problem due to a service failure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ChangeRequestId	Type reference Properties Create, Filter, Group, Sort Description The ChangeRequest ID that's linked to the Problem or Incident. Relationship Name ChangeRequest Relationship Type Lookup Refers To ChangeRequest
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description A description of the change request as it relates to the problem or incident.
RelatedEntityType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the related object type. Possible values are: • Incident • Problem
RelatedIssueId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description A polymorphic relationship field that represents the related Problem or Incident. Relationship Name RelatedIssue Relationship Type Lookup Refers To Incident, Problem
RelationshipType	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Shows how the ChangeRequest and Incident or Problem records relate to each other. Possible values are: • Caused By • Fixed By The default value is 'Caused By'.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ChangeRequestRelatedIssueChangeEvent](#) on page 68

Change events are available for the object.

[ChangeRequestRelatedIssueFeed](#) on page 55

Feed tracking is available for the object.

[ChangeRequestRelatedIssueHistory](#) on page 63

History is available for tracked fields of the object.

ChangeRequestRelatedItem

Represents a junction object that relates a ChangeRequest to an Asset. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Sort Description The Asset ID that's linked to the ChangeRequest. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
ChangeRequestId	Type reference Properties Create, Filter, Group, Sort Description The ChangeRequest ID that's linked to the Asset. This field is a relationship field. Relationship Name ChangeRequest Relationship Type Lookup Refers To ChangeRequest
Comment	Type textarea Properties Create, Nillable, Update Description A description of the change request as it relates to the item.
ImpactLevel	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The related item's impact on the change request. Possible values are: • High • Low • Medium The default value is High.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated ID of the item that's related to the change request.
RelationshipType	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Shows how the ChangeRequest and Asset records relate to each other. Possible values are: • Broke Item • Fixed Item The default value is Broke Item.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ChangeRequestRelatedItemChangeEvent](#) on page 68

Change events are available for the object.

[ChangeRequestRelatedItemFeed](#) on page 55

Feed tracking is available for the object.

[ChangeRequestRelatedItemHistory](#) on page 63

History is available for tracked fields of the object.

ChangeSetOperationEventLog

Change Set Operation events contain information from change set migrations. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ChangeSetName	Type string Properties Filter, Group, Nillable, Sort Description The name of the change set.
ClientId	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
LoginKey	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The operation that's being performed.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
TargetOrganizationIdentifier	Type string Properties Filter, Group, Nillable, Sort Description ID of the organization that's receiving the change set.

Field	Details
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description Timestamp at which the log event was generated.
Uri	Type string Properties Filter, Group, Nillable, Sort Description URI of the page receiving the request.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.

ChannelObjectLinkingRule

Represents a rule for linking a channel interaction with an object (such as Lead or Contact). This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ActionForNoRecordFound	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Action to take when no matching records are found. Possible values are: • <code>CreateNewRecordAndLink</code>—Create Record and Link (Recommended) • <code>PromptAgent</code>—Prompt Agent
ActionForSingleRecordFound	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Action to take when one matching record is found. Possible values are: • <code>AutoLink</code>—Auto-Link Record (Recommended) • <code>PromptAgent</code>—Prompt Agent
ChannelType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of channel used for this rule. Possible values are: • <code>FacebookMessenger</code> • <code>Phone</code> • <code>Text</code> • <code>WeChat</code> • <code>WhatsApp</code>
Description	Type textarea Properties Create, Nillable, Update Description The description for this linking rule.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
<code>IsLinkedRecordOpenedAsSubTab</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to open the linked record as a subtab when the link is established.
<code>IsRuleActive</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the rule is active.
<code>Language</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language for this linking rule. Possible values are: • <code>ar</code>—Arabic • <code>bg</code>—Bulgarian • <code>cs</code>—Czech • <code>da</code>—Danish • <code>de</code>—German • <code>el</code>—Greek • <code>en_GB</code>—English (UK)

Field	Details
	• en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • hr—Croatian • hu—Hungarian • in—Indonesian • it—Italian • iw—Hebrew • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pl—Polish • pt_BR—Portuguese (Brazil) • pt_PT—Portuguese (European) • ro—Romanian • ru—Russian • sk—Slovak • sl—Slovene • sv—Swedish • th—Thai • tr—Turkish • uk—Ukrainian • vi—Vietnamese • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The unique label name for this rule.
ObjectToLink	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort Description The type of object to link to the channel interaction. Possible values are: • Contact
RuleName	Type string Properties Create, Filter, Group, Sort, Update Description Name of the rule as it appears in the UI. Maximum length is 80 characters.

ChannelProgram

Represents a channel program that vendors use to market and sell their products through channel partners. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Category of the channel program. Categories group channel programs by type. For example, a reseller category would include all the different regional reseller channel programs.
Description	Type textarea

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the channel program.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the channel program is active. New channel programs are inactive by default.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Name of the channel program.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description ID of the owner of the channel program.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ChannelProgramFeed](#)

Feed tracking is available for the object.

[ChannelProgramHistory](#)

History is available for tracked fields of the object.

[ChannelProgramOwnerSharingRule](#)

Sharing rules are available for the object.

[ChannelProgramShare](#)

Sharing is available for the object.

ChannelProgramLevel

Represents a level, based on member experience, in a channel program. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the channel program level.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the channel program level.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. ID of the user who is the owner of the record.
ProgramId	Type reference Properties Create, Filter, Group, Sort Description ID of the channel program.
Rank	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description An integer associated with the level. For example, 1 represents the lowest level, 2 the next level up, etc.

Field Name	Details
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ChannelProgramLevelFeed](#)

Feed tracking is available for the object.

[ChannelProgramLevelHistory](#)

History is available for tracked fields of the object.

[ChannelProgramLevelOwnerSharingRule](#)

Sharing rules are available for the object.

[ChannelProgramLevelShare](#) (API version 43.0)

Sharing is available for the object.

ChannelProgramMember

Represents a partner who is a member of a channel program. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Most recent date referenced. This field is available in API version 45.0 and later.

Field Name	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Most recent date viewed. This field is available in API version 45.0 and later.
LevelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the channel program level.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the channel program member.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. ID of the user who is the owner of the record.
PartnerId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the partner.
ProgramId	Type reference Properties Create, Filter, Group, Sort Description ID of the channel program.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ChannelProgramMemberFeed (API version 46.0)

Feed tracking is available for the object.

ChannelProgramMemberHistory (API version 46.0)

History is available for tracked fields of the object.

ChannelProgramMemberOwnerSharingRule

Sharing rules are available for the object.

ChannelProgramMemberShare (API version 43.0)

Sharing is available for the object.

ChatterActivity

ChatterActivity represents the number of posts and comments made by a user and the number of comments and likes on posts and comments received by the same user. This object is available in API version 23.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
CommentCount	Type int Properties Filter, Group, Sort Description The number of FeedComments made by the ParentId.
CommentReceivedCount	Type int Properties Filter, Group, Sort Description The number of FeedComments received by the ParentId.
InfluenceRawRank	Type int Properties Filter, Group, Sort

Field Name	Details
	Description Number indicating the ParentId's Chatter influence rank, which is calculated based on the ParentId's ChatterActivity statistics, relative to the other users in the organization. This field is available in API version 26.0 and later.
LikeReceivedCount	Type int Properties Filter, Group, Sort Description The number of FeedLikes received by the ParentId.
NetworkId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Experience Cloud site to which the ChatterActivity belongs. This field is available only if digital experiences is enabled in your org. This field is available in API version 26.0 and later.
ParentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the object type to which the ChatterActivity is related. In API version 66.0, the ParentId must be a UserId or SelfServiceUser ID.
PostCount	Type int Properties Filter, Group, Sort Description The number of FeedItems made by the ParentId.

Usage

- Use this object to reference the Chatter activity statistics, which include the number of posts and comments made by a user and the number of comments and likes on posts and comments received by the same user.

- You can directly query for ChatterActivity.

```
SELECT Id, PostCount, LikeReceivedCount
FROM ChatterActivity
WHERE ParentId = UserId
```

 **Note:** To query ChatterActivity, you must provide the `ParentId`. In API version 66.0, the `ParentId` must be a `UserId` or `SelfServiceUser` ID.

- A ChatterActivity record is created for users the first time they post or comment. Users who have never posted or commented don't have ChatterActivity records. If users make only one post and then delete it, they do have ChatterActivity records. In both cases, the user interface displays zeros for their Chatter activity.
- Use the `InfluenceRawRank` field to reference a user's Chatter influence rank. This field is available in API version 26.0 and later.

SEE ALSO:

- [FeedItem](#)
- [FeedComment](#)
- [FeedLike](#)

ChatterAnswersActivity

Represents the reputation of a User in Chatter Answers zones.This object is available in API version 25.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
BestAnswerReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of best answers the User has received from other users.
BestAnswerSelectedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of best answers the User has selected.

Field Name	Details
QuestionsCount	Type int Properties Filter, Group, Nillable, Sort Description The number of Question records posted by the User.
QuestionSubscrCount	Type int Properties Filter, Group, Nillable, Sort Description The number of Question records the User has selected to follow.
QuestionSubscrReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of users following Question records posted by the User.
QuestionUpVotesCount	Type int Properties Filter, Group, Nillable, Sort Description The number of up votes the User has marked on Question records posted by other users.
QuestionUpVotesReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of up votes the User has received from other users on the Question records he or she has posted.
RepliesCount	Type int

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The number of Reply records posted by the User.
ReplyDownVotesCount	Type int Properties Filter, Group, Nillable, Sort Description The number of down votes the User has marked on Reply records posted by other users.
ReplyDownVotesReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of down votes the User has received from other users on the Reply records he or she has posted.
ReplyUpVotesCount	Type int Properties Filter, Group, Nillable, Sort Description The number of up votes the User has marked on the Reply records posted by other users.
ReplyUpVotesReceivedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of up votes the User has received from other users on the Reply records he or she has posted.
ReportAbuseOnQuestionsCount	Type int

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The number of abuses that the User has reported on Question records posted by other users.
ReportAbuseOnRepliesCount	Type int Properties Filter, Group, Nillable, Sort Description The number of abuses that the User has reported on Reply records posted by other users.
ReportAbuseReceivedOnQnCount	Type int Properties Filter, Group, Nillable, Sort Description The number of abuses reported by other users on the Question records posted by the User.
ReportAbuseReceivedOnReCount	Type int Properties Filter, Group, Nillable, Sort Description the number of abuses reported by other users on the Reply records posted by the User.
UserId	Type reference Properties Filter, Group, Nillable, Sort Description The User ID associated with this reputation.
CommunityId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort
	Description The ID for the zone associated with this reputation.

Usage

Use this object to view metrics on User activity in Chatter Answers. For example, you can use the ChatterAnswersActivity object to view the number of Question records a user is following in Chatter Answers zones.

SEE ALSO:

[Question](#)

[Reply](#)

[User](#)

ChatterAnswersReputationLevel

Represents a reputation level within a Chatter Answers zone. This object is available in API version 26.0 and later.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
CommunityID	Type reference Properties Create, Filter, Group, Sort Description ID of the zone for which you're creating the reputation level.
Name	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description Name of the reputation level.
Value	Type int Properties Create, Filter, Group, Sort, Update Description Minimum number of points for this level.

Usage

Use to create or edit reputation levels for the zone.

ChatterConversation

Represents a private conversation in Chatter, consisting of messages that conversation members have sent or received. This object is available in API version 23.0 and later.

Supported Calls

`describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
Id	Type ID Properties Defaulted on create, Filter, Group, Sort Description ID of the conversation.

Usage

Use this object to identify private conversations in Chatter. Users can access this object if they have the Manage Chatter Messages and Direct Messages permission. This object is read-only via the API and is provided only to allow administrators to view users' Chatter messages; for example, for compliance purposes.

SEE ALSO:

- [ChatterConversationMember](#)
- [ChatterMessage](#)

ChatterConversationMember

Represents a member of a private conversation in Chatter. A member has either sent messages to or received messages from other conversation participants. This object is available in API version 23.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ConversationId	Type reference Properties Filter, Group, Sort Description ID of the associated ChatterConversation.
MemberId	Type reference Properties Filter, Group, Sort Description ID of the conversation member.

Usage

Use this object to view members of private conversations in Chatter. Users can access this object if they have the Manage Chatter Messages and Direct Messages permission. This object is read-only via the API and is provided only to allow administrators to view users' Chatter messages; for example, for compliance purposes.

SEE ALSO:

- [ChatterConversation](#)
- [ChatterMessage](#)

ChatterExtension

Represents a Rich Publisher App that's integrated with the Chatter publisher. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CompositionComponentEnumOrId	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ID of the composition component for the Rich Publisher App. This field requires a value.
Description	Type string Properties Create, Filter, Group, Sort, Update Description The description of your custom Rich Publisher App. This field requires a value.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The name of the developer who is responsible for the app.

Field	Details
	 Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ExtensionName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of your extension. This field requires a value.
HeaderText	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The text to show in the header of your app composer. Header text is required for Lightning type extensions.
HoverText	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The text to show when a user mouses over your extension's icon. Mouse-over text is required for Lightning type extensions.
IconId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The icon to show in the Chatter publisher. Use an existing file asset ID from your org. This field requires a value. This is a relationship field. Relationship Name Icon Relationship Type Lookup Refers To ContentAsset

Field	Details
IsProtected	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description An auto-generated value. It currently has no impact.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language used for this instance of the <code>ChatterExtension</code>. This field requires a value.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label for the <code>ChatterExtension</code> object. This field requires a value.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The prefix to use for the extension's namespace.
RenderComponentEnumOrId	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The rendering component of the Rich Publisher App that you provide. It's comprised of the <code>lightning:availableForChatterExtensionRenderer</code> interface. This field requires a value.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Describes the type of the extension. Currently, the only value supported is <i>Lightning</i> . Included to allow for other possible types in the future.

ChatterExtensionConfig

Configuration for the Chatter extension for Experience Cloud sites. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CanCreate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the <code>ChatterExtension</code> can create an instance that appears by rendering.
CanRead	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the <code>ChatterExtension</code> can be viewed.
ChatterExtensionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the <code>ChatterExtension</code> . This is a relationship field. Relationship Name ChatterExtension

Field	Details
	Relationship Type Lookup Refers To ChatterExtension
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Experience Cloud site where the ChatterExtension is deployed.
Position	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The position of the ChatterExtension icon in the Chatter publisher.

ChatterMessage

Represents a message sent as part of a private conversation in Chatter. This object is available in API version 23.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Body	Type textarea Properties Update Description Text of the message.
ConversationId	Type reference

Field Name	Details
	Properties Filter, Group, Sort
	Description ID of the conversation that the message is associated with.
SenderId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description ID of the sender.
SenderNetworkId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description ID of the Experience Cloud site from which the message was sent. This field is available only if digital experiences is enabled in your org. This field is available in API version 32.0 and later.
SentDate	Type dateTime
	Properties Filter, Sort
	Description Date the message was sent.

Usage

Use this object to view and delete messages sent or received via private conversations in Chatter. Users can access this object if they have the Manage Chatter Messages and Direct Messages permission. Users with the Moderate Experiences Chatter Messages permission can access this object in Experience Cloud sites they're a member of, only if the message has been flagged as inappropriate. This object is provided to allow administrators to view and delete users' Chatter messages, for example, for compliance purposes.

Messages are hard deleted. That is, they're removed completely without a trip to the Recycle Bin.

Deleting a message that resulted from sharing a file with someone doesn't also delete the file.

[ChatterConversation](#)

[ChatterConversationMember](#)

ClientBrowser

Represents a cookie added to the browser upon login, and also includes information about the browser application where the cookie was inserted. This object is available in version 28.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

Fields

Field	Details
FullUserAgent	Type string Properties Filter, Nillable, Sort Description Detailed information about the client (browser). For example, <code>Mozilla/5.0 (Windows; U; Windows NT 5.1; en-US; rv:1.9.0.1) Gecko/2008070208 Firefox/3.0.1</code>
LastUpdate	Type dateTime Properties Filter, Nillable, Sort Description Represents the last time the cookie was changed.
ProxyInfo	Type string Properties Filter, Nillable, Sort Description The browser's current proxy information.
UsersId	Type reference Properties Filter, Group, Sort Description The ID of the user associated with this item. This is a relationship field.

Field	Details
	Relationship Name Users
	Relationship Type Lookup
	Refers To User

Usage

At every login, the device the login request is from is checked against the known devices using ClientBrowser. A match means a cookie was found on the browser that matches an entry in the ClientBrowser table, so the device is known. No match means that no matching cookie was found, so the device is unknown, and the user is asked to confirm their identity.

CollaborationGroup

Represents a Chatter group. This object is available in API version 19.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

The visibility of information in groups depends on the type of group and the user's permissions.

- **Members:** Any user with the Create and Own New Chatter Groups permission can create public, private, and unlisted groups, including in any Experience Cloud sites they belong to.
- **Owners and managers:** Users can modify group details for any group they own or manage. Owners can also delete groups they own.
- **Nonmembers:** These user permissions allow group access regardless of group membership.
 - View All Data—Allows users to view all public and private groups across their org and its Experience Cloud sites. Users with this permission can't view unlisted group information, unless they have the Modify Unlisted Groups permission as well.
 - Modify All Data—Allows users to view, modify, and delete all public and private groups across their org and its Experience Cloud sites. Users with this permission can't view or modify unlisted group information, unless they have the Manage Unlisted Groups permission as well.
 - Create and Set Up Experiences—Allows users to view, modify, and delete all public and private groups in Experience Cloud sites.
 - Manage Unlisted Groups—Allows users to search for, access, and modify any unlisted group in an org and its Experience Cloud sites.
 - Data Export—Allows users to export any data from Salesforce, including private and unlisted group data from an org and its Experience Cloud sites.

- **Apex and Visualforce:** Apex code runs in system mode, which means that the permissions of the current user aren't taken into account.
 - Visualforce pages that display groups might expose unlisted or private group data to users who aren't members.
 - Because system mode disregards the user's permissions, all users who are accessing a Visualforce page that's showing a group can act as an owner of that group.
 - AppExchange apps that are written in Apex and that access all groups will expose unlisted groups to users who aren't members.

To limit and manage access to the unlisted and private groups in your org:

- Explicitly filter out unlisted and private group information from SOQL queries in all Apex code.
- Use permission sets, profile-level permissions, and sharing checks in your code to further limit group access.
- Use Apex triggers on the CollaborationGroup object to monitor and manage the creation of groups. In Setup, enter *Group Triggers* in the **Quick Find** box, then select **Group Triggers** to add triggers.

Fields

Field	Details
AnnouncementId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Contains the ID of the Announcement last associated with the group. This field is available in API version 30.0 and later. This is a relationship field. Relationship Name Announcement Relationship Type Lookup Refers To Announcement
BannerPhotoUrl	Type url Properties Filter, Nillable, Sort Description The URL for the group's banner photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo. This field is available in API version 36.0 and later.

Field	Details
CanHaveGuests	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If set to <code>true</code>, indicates that a group allows customers. Chatter customers are people outside your company's email domains. Customers can see only the groups they're invited to. They can interact only with members of those groups. Customers can't see any Salesforce information. This field is available starting in API version 23.0, but groups that allow customers are accessible from earlier API versions. However, when accessed from earlier API versions, groups that allow customers aren't distinguishable from private groups. We strongly recommend that you upgrade to the latest API version. If you must use an earlier version, name groups that allow customers to indicate that they include customers.
CollaborationType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of Chatter group. Available values are: • Public—Anyone can see and post updates. Anyone can join a public group. • Private—Only members can see the group feed and post updates. Non-members can only see the group name and a few other details in list views, search, and on the group page. The group's owner or managers must add members who request to join the group. • Unlisted—Only members and users with the Manage Unlisted Groups permission can see the group and post updates. Other users can't access the group or see it in lists, search, and feeds.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the group.
FullPhotoUrl	Type url Properties Filter, Nillable, Sort

Field	Details
	Description The URL for the group's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo. This field is available in API version 20.0 and later.
GroupEmail	Type email Properties Nillable, Sort Description The email address for posting to the group. For private groups, only visible to members and users with Modify All Data or View All Data permissions. This field is available in API version 29.0 and later.
HasPrivateFieldsAccess	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If set to <code>true</code>, indicates that a user can see the <code>InformationBody</code> and <code>InformationTitle</code> fields in a private group. This field is set to <code>true</code> for members of a private group and users with Modify All Data or View All Data permissions.
InformationBody	Type textarea Properties Create, Nillable, Update Description The text of the Information section. For private groups, only visible to members and users with Modify All Data or View All Data permissions.
InformationTitle	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The title of the Information section. For private groups, only visible to members and users with Modify All Data or View All Data permissions.

Field	Details
IsArchived	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the group is archived (<code>true</code>) or not (<code>false</code>). This field is available in API version 28.0 and later.
IsAutoArchiveDisabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether automatic archiving is disabled for the group (<code>true</code>) or not (<code>false</code>). This field is available in API version 29.0 and later.
IsBroadcast	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the group is a broadcast group (<code>true</code>) or not (<code>false</code>). This field is available in API version 36.0 and later.
LastFeedModifiedDate	Type dateTime Properties Filter, Sort Description The date of the last post or comment on the group.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type datetime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
MediumPhotoUrl	Type url Properties Filter, Nillable, Sort Description The URL for the larger, cropped photo size.
MemberCount	Type int Properties Filter, Group, Nillable, Sort Description The number of members in the group.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the group. Group names must be unique across public and private groups. Unlisted groups don't require unique names.
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Experience Cloud site that this group is part of. This field is available only if digital experiences is enabled in your org. You can only add a <code>NetworkId</code> when creating a group. You can't change or add a <code>NetworkId</code> for an existing group. This field is available in API version 26.0 and later.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description ID of the owner of the group. Only the current group owner or people with the Modify All Data permission can update the <code>OwnerId</code>. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
SmallImageUrl	Type url Properties Filter, Nillable, Sort Description The URL for a thumbnail of the group's profile photo. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo has been uploaded, the URL returned for an older photo is not guaranteed to return a photo. Query this field for the URL of the most recent photo. This field is available in API version 20.0 and later.

Usage

Use this object to create, edit, or delete groups in an org or Experience Cloud site. Deleting a group permanently deletes all posts and comments to the group. It also deletes all files and links posted to the group and removes the files from other locations where they were shared.

As a Chatter group member, you can post to the group using the CollaborationGroupFeed object. As a Chatter group owner or manager, you can add or remove group members using the CollaborationGroupMember object, post announcements to the group using the Announcement object, and accept or decline requests to join private groups using the CollaborationGroupMemberRequest object. Additionally, the group owner, manager, or your Salesforce system administrator can invite people to join the group using the [CollaborationInvitation](#) object.

The Salesforce system administrator doesn't need to be a member of the group in order to send invitations using the API.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

CollaborationGroupFeed

Feed tracking is available for the object.

SEE ALSO:

[CollaborationGroupMember](#)

[CollaborationGroupMemberRequest](#)

CollaborationGroupMember

Represents a member of a Chatter group. This object is available in API version 19.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CollaborationGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the associated CollaborationGroup. This is a relationship field. Relationship Name CollaborationGroup Relationship Type Lookup Refers To CollaborationGroup
CollaborationRole	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The role of a group member. Group owners and managers can change roles for members of their groups. The valid values are:

Field	Details
	• Standard—Indicates that a user is a group member. Members can post and comment in the group. • Admin—Indicates that a user is a group manager. Managers can post and comment, change member roles, edit group settings, add and remove members, delete posts and comments, and edit the group information field.  Note: To change the group owner, use the <code>OwnerId</code> field on the <code>CollaborationGroup</code> object.
<code>LastFeedAccessDate</code>	Type dateTime Properties Filter, Nillable, Sort Description Date and time when a group member last accessed the group’s feed. The value is only updated when a member explicitly consumes the group’s feed, not when the member sees group posts in other feeds, like the profile feed.
<code>MemberId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the group member. This is a relationship field. Relationship Name Member Relationship Type Lookup Refers To User
<code>NotificationFrequency</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. The frequency at which Salesforce sends Chatter group email digests to this member. Can only be set by the member or users with the “Modify All Data” permission. The valid values are: • <code>D</code>—Daily • <code>W</code>—Weekly

Field	Details
	- N—Never - P—On every post The default value is specified by the member in their Chatter email settings. In communities, the <code>Email on every post</code> option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to <code>Daily digests</code>.

Usage

Use this object to view, create, and delete Chatter group members. You must be a group owner or manager to create members for private Chatter groups.

SEE ALSO:

- [CollaborationGroup](#)
- [CollaborationGroupMemberRequest](#)

CollaborationGroupMemberRequest

Represents a request to join a private Chatter group. This object is available in API version 21.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CollaborationGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the private Chatter group. This is a relationship field. Relationship Name CollaborationGroup Relationship Type Lookup

Field	Details
	Refers To CollaborationGroup
RequesterId	Type reference Properties Create, Filter, Group, Sort Description ID of the user requesting to join the group; must be the ID of the context user. This is a relationship field. Relationship Name Requester Relationship Type Lookup Refers To User
ResponseMessage	Type string Properties Filter, Group, Nillable, Sort, Update Description Optional message to be included in the notification email when <code>Status</code> is <code>Declined</code> .
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The status of the request. Available values are: - Accepted - Declined - Pending

Usage

This object represents a request to join a private Chatter group, and can be used to accept or decline requests to join private groups you own or manage. On create, an email is sent to the owner and managers of the private group to be accepted or declined. When the `Status` is `Accepted` or `Declined`, an email is sent to notify the requester. When the `Status` is `Declined`, a `ResponseMessage` is optionally included to provide additional details.

Note the following when working with requests:

- Users with the “Modify All Data” or “View All Data” permission can view records for all groups, regardless of membership.
- A user can be a member of 300 groups. Requests to join groups count against this limit.
- `Status` can't be specified on create.
- You can only update a request when the `Status` is `Pending`.
- You can't delete or update a request with a `Status` of `Accepted` or `Declined`.

SEE ALSO:

[CollaborationGroup](#)

[CollaborationGroupMember](#)

CollaborationGroupRecord

Represents the records associated with Chatter groups.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>CollaborationGroupId</code>	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Chatter group. This is a relationship field. Relationship Name CollaborationGroup Relationship Type Lookup Refers To CollaborationGroup
<code>NetworkId</code>	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description Optional. The ID of the Experience Cloud site that the group belongs to. Available from API version 34.0.
RecordId	Type reference Properties Create, Filter, Group, Sort Description Required. The ID of the record associated with the Chatter group. This is a polymorphic relationship field. Relationship Name Record Relationship Type Lookup Refers To Account, Campaign, Case, Contact, Contract, Lead, Opportunity

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CollaborationGroupRecordChangeEvent](#) (API version 62.0)

Change events are available for the object.

CollaborationInvitation

Represents an invitation to join Chatter, either directly or through a group. This object is available in API version 21.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Invitations are available if "Allow Invitations" is enabled for your organization.

Invitations are limited to your allowed domain(s) unless the invite is sent from a private group that allows customers. Allowed domains are set by the administrator.

Invitations to customers are available if "Allow Customer Invitations" is enabled for your organization. Users must have the "Invite Customers to Chatter" permission to send invitations to people outside their Chatter domain.

Fields

Field	Details
InvitedUserEmail	Type string Properties Create, Filter, Group, Sort Description The email address for the user invited to join Chatter. Label is <code>Invited Email</code>.
InvitedUserEmailNormalized	Type email Properties Filter, Group, Sort Description A normalized version of the <code>InvitedUserEmail</code> entered. Label is <code>Invited Email (Normalized)</code>.
InviterId	Type reference Properties Filter, Group, Sort Description The person that initiated the invitation.
OptionalMessage	Type string Properties Create, Filter, Group, Nillable, Sort Description An optional message from the person sending the invitation to the person receiving it.
ParentId	Type reference Properties Filter, Group, Nillable, Sort Description Used when the email address on the invitation is different than the one entered when the invitee accepts the invitation.
SharedEntityId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort
	Description ID of the user or group associated with this invitation. • If the invitation is to join Chatter, the <code>SharedEntityId</code> is the ID of the User that created the invitation. The invitee will auto-follow the inviter. • If the invitation is to join a group within Chatter, the <code>SharedEntityId</code> is the ID of the Chatter CollaborationGroup. • To invite a customer, set <code>SharedEntityId</code> to the ID of the private CollaborationGroup with Allow Customers turned on.
Status	Type picklist
	Properties Filter, Group, Restricted picklist, Sort
	Description The status of the invitation. Possible values are: • Sent • Accepted • Canceled

Usage

Use this object to create or delete (cancel) invitations to join Chatter. You can either invite a user to join Chatter directly or as part of a CollaborationGroup.

 **Note:** To invite someone to join a CollaborationGroup, you must be either the owner or a manager of the group or a Salesforce system administrator.

The Salesforce system administrator doesn't need to be a member of the group in order to send invitations using the API.

When the person accepts your CollaborationGroup invitation, they join the CollaborationGroup and Chatter as well.

 **Note:** You can't send invitations to users of the organization the invite was sent from.

Invited users can view profiles, post on their feed, and join groups, but they can't see your Salesforce data or records.

If your organization allows groups with customers, owners and managers of private groups with the "Allow Customers" setting, as well as system administrators, can use this object to invite customers.

Java Samples

The following example shows how to send an invitation to join Chatter:

```
public void invitePeople(String inviterUserId, String invitedEmail) throws Exception {
    CollaborationInvitation invitation = new CollaborationInvitation();
```

```

invitation.setSharedEntityId(inviterUserId);//pass the userId of the inviter
invitation.setInvitedUserEmail(invitedEmail);//email of the invited user
insert(invitation);
}

```

The following example shows how to send an invitation to a customer user from a group that allows customers:

```

public void inviteToGroup(String groupName, String invitedEmail) throws Exception {
    QueryResult qr = query("select id from collaborationgroup where name = '" +
        groupName); //pass the group name
    String groupId = qr.getRecords()[0].getId();
    CollaborationInvitation invitation = new CollaborationInvitation();
    invitation.setSharedEntityId(groupId);//pass the groupId
    invitation.setInvitedUserEmail(invitedEmail);//email of the invited user
    insert(invitation);
}

```

Apex Samples

```

String emailAddress = 'bob@external.com';
CollaborationGroup chatterGroup = [SELECT Id
    FROM CollaborationGroup
    WHERE Name='All acme.com'
    LIMIT 1];
CollaborationInvitation inv = New CollaborationInvitation();
inv.SharedEntityId = chatterGroup.id;
inv.InvitedUserEmail = emailAddress;

try {
    Insert inv;
} catch(DMLException e) {
    System.debug('There was an error with the invite: '+e);
}

```

CollaborationRoom

Represents a collaboration room, which links Salesforce to a Slack channel used by applications with specific use cases, such as swarming or reporting. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable the Slack Terms of Service and one of:

- Sales Cloud for Slack App
- Service Cloud for Slack App

- CRM Analytics for Slack App
- Industries Cloud for Slack App
- Health Cloud for Slack App

Fields

Field	Details
IsArchived	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the collaboration room is archived (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsAutoJoin	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether new users automatically join the collaboration room. Used for Sales Cloud for Slack App. The default value is <code>false</code>.
IsExternal	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether external users are members of the Slack channel (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of collaboration room.
PlatformKey	Type string Properties Create, Filter, Group, Nillable, Sort Description ID of the Slack channel.
TeamKey	Type string Properties Create, Filter, Group, Nillable, Sort Description ID of the Slack workspace.

CollabDocumentMetric

Represents the engagement metrics for a Quip thread (document or spreadsheet) that's linked to a Salesforce record. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Document	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The Quip thread ID.
Site	Type string Properties Filter, Group, Nillable, Sort Description The ID of the Quip site in which the thread is located.
SourceTemplate	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The ID of the template (if any) on which a Quip thread is based.
DocumentTitle	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The title of the thread.
MetricDate	Type dateTime Properties Filter, Nillable, Sort Description The date that the metric was gathered in your local time zone.
MetricDateOnly	Type date Properties Filter, Nillable, Sort

Field	Details
	Description The date that the metric was gathered in UTC. Available in API version 55.0 and later.
LastUpdatedDate	Type dateTime Properties Filter, Nillable, Sort Description The date that the thread was created, last edited, or last shared in your local time zone.
LastUpdatedDateOnly	Type date Properties Filter, Nillable, Sort Description The date that the thread was created, last edited, or last shared in UTC. Available in API version 55.0 and later.
ViewerCount	Type int Properties Filter, Nillable, Sort Description The number of thread views by user for the specified MetricDate.
UpdateCount	Type int Properties Filter, Group, Nillable, Sort Description The number of edits made on the thread on a given day.
EditorCount	Type int Properties Filter, Group, Nillable, Sort Description For the specified MetricDate, the number of users who edited the Quip thread.
CommenterCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description For the specified MetricDate, the number of users who commented on the Quip thread.

CollabDocumentMetricRecord

Represents an association between a CollabDocumentMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip thread for which metrics were gathered using CollabDocumentMetric. CollabDocumentMetricRecord is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ParentRecord	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the Salesforce record.
QuipDocumentMetric	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the CollabDocumentMetric record.
MetricDate	Type dateTime
	Properties Filter, Nillable, Sort
	Description The date that the metric was gathered in your local time zone.

Field	Details
MetricDateOnly	Type date Properties Filter, Nillable, Sort Description The date that the metric was gathered in UTC. Available in API version 55.0 and later.
EntityType	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The object type of the Salesforce record, such as Account or Contact.

CollabTemplateMetric

Represents the engagement metrics for a Quip template. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Template	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The ID of the template.
TemplateTitle	Type string Properties Filter, Group, Nillable, Sort Description The title of the template.

Field	Details
Site	Type string Properties Filter, Group, Nillable, Sort Description The ID of the Quip site on which the template is available.
MetricDate	Type dateTime Properties Filter, Nillable, Sort Description The date that the metric was gathered in your local time zone.
MetricDateOnly	Type date Properties Filter, Nillable, Sort Description The date that the metric was gathered in UTC. Available in API version 55.0 and later.
LastUpdatedDate	Type dateTime Properties Filter, Nillable, Sort Description The date that the thread was created, last edited, or last shared in your local time zone.
LastUpdatedDateOnly	Type date Properties Filter, Nillable, Sort Description The date that the thread was created, last edited, or last shared in UTC. Available in API version 55.0 and later.
TotalDocumentCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of documents created based on the template.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CollabTemplateMetricChangeEvent](#) (API version 62.0)

Change events are available for the object.

CollabTemplateMetricRecord

Represents an association between a CollabTemplateMetric and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is linked to a Quip template for which metrics were gathered using CollabTemplateMetric. CollabTemplateMetricRecord is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ParentRecord	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Salesforce record.
QuipDocumentMetric	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the CollabTemplateMetric record.
MetricDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date that the metric was gathered in your local time zone.
MetricDateOnly	Type date Properties Filter, Nillable, Sort Description The date that the metric was gathered in UTC. Available in API version 55.0 and later.
EntityType	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The object type of the Salesforce record, such as Account or Contact.

CollabUserEngagementMetric

Represents the user engagement metrics for a Quip thread in a Quip template or document. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
CommentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of comments by the user for the specified <code>MetricDate</code> .

Field	Details
EditCount	Type int Properties Filter, Group, Nillable, Sort Description The number of edits by the user for the specified MetricDate.
MetricDate	Type dateTime Properties Filter, Nillable, Sort Description The date that the metric was gathered in your local time zone.
MetricDateOnly	Type date Properties Filter, Nillable, Sort Description The date that the metric was gathered in UTC. Available in API version 55.0 and later.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique name of the CollabUserEngagementMetric object.
QuipThread	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The Quip thread ID.
QuipThreadTitle	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The title of the Quip document, sheet, slide, and so forth.

Field	Details
QuipThreadType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of Quip thread. The possible values are: • CHAT • DOCUMENT • SHEET • SLIDE • TEMPLATE
QuipUser	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The ID of the Quip user.
SalesforceUserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Salesforce user.
Site	Type string Properties Filter, Group, Nillable, Sort Description The ID of the Quip site.
SourceTemplate	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The ID of the source template.

Field	Details
ViewCount	Type int Properties Filter, Group, Nillable, Sort Description The number of views by the user for the specified <code>MetricDate</code> .

CollabUserEngmtRecordLink

Represents an association between a `CollabUserEngagementMetric` and a Salesforce record. It tracks which Salesforce record, such as an Account or Contact, is associated with the user engagement metric. This object is available in API version 50.0 and later.

Note: The `CollabUserEngmtRecordLink` object is now deprecated. You can still access user engagement metrics for metric dates before August 12, 2021. To obtain user engagement metric for dates starting from August 12, 2021, follow the instructions in the [Quip Engagement Metrics documentation](#).

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
MetricDate	Type dateTime Properties Filter, Nillable, Sort Description The date of the gathered metric.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique name of the <code>CollabUserEngmtRecordLink</code> object.
ObjectType	Type string

Field	Details
	Properties Filter, Group, idLookup, Nillable, Sort Description The object type of the Salesforce record, such as Account or Contact.
ParentRecordId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Salesforce record.
UserEngagementMetricId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the CollabUserEngagementMetric record.

ColorDefinition

Represents the color-related metadata for a custom tab. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
Color	Type string Properties Filter, Group, Nillable, Sort Description The color described in web color RGB format—for example, “00FF00”.
Context	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The color context, which determines whether the color is the main color (or primary) for the tab.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description A unique virtual Salesforce ID for the color.
TabDefinitionId	Type string Properties Filter, Nillable, Sort Description The TabDefinition ID. This is a relationship field. Relationship Name TabDefinition Relationship Type Lookup Refers To TabDefinition
Theme	Type string Properties Filter, Group, Nillable, Sort Description The icon's theme.

ContCalloutSummaryEventLog

Continuation Callout Summary events contain information about all of the asynchronous callouts performed during a transaction, their response status codes, execution times, and URL endpoint destinations. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ContinuationIdentifier	Type string Properties Filter, Group, Nillable, Sort Description A unique ID identifying a sequence of events within a request.
Duration	Type double Properties Filter, Nillable, Sort Description Total duration of continuation, in milliseconds.
IsSuccess	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the continuation was successful or not.
OriginRequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the request that initiated a callout.
RequestFormSize	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Continuation request form size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
ResponseSize	Type string Properties Filter, Group, Nillable, Sort Description The size of the callout response, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
StatusCode	Type int Properties Filter, Group, Nillable, Sort Description The HTTP status or internal code returned by the remote endpoint. A status code of 200 indicates that the request was successful. Other status code values indicate the type of problem that was encountered. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 20130715233322.670.
Url	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The callout endpoint URL. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 005300000009M943.
VisualforceControllerSize	Type string Properties Filter, Group, Nillable, Sort Description Continuation Visualforce controller size, in bytes. Depending on how many HTTP requests were used in a continuation, this field can contain up to three space-separated values.

CombinedAttachment

This read-only object contains all notes, attachments, Google Docs, documents uploaded to libraries in Salesforce CRM content, and files added to Chatter that are associated with a record.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the document in bytes for documents smaller than 2 GB.

Field Name	Details
	In API version 66.0 and later, we recommend that you use the <code>ContentSizeLong</code> field even for documents smaller than 2 GB.
<code>ContentSizeLong</code>	Type long Properties Filter, Group, Nillable, Sort Description The size of the document in bytes up to 10 GB. This field is available in API version 66.0 and later.
<code>ContentUrl</code>	Type url Properties Filter, Group, Nillable, Sort Description URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the <code>FileType</code>. This field is available in API version 31.0 and later.
<code>ExternalDataSourceName</code>	Type string Properties Filter, Group, Nillable, Sort Description The name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 32.0 and later.
<code>ExternalDataSourceType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 35.0 and later.
<code>FileExtension</code>	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description File extension of the document. This field is available in API version 31.0 and later.
FileType	Type string Properties Filter, Group, Nillable, Sort Description Type of document, which is determined by the file extension.
ParentId	Type reference Properties Filter, Group, Sort Description The ID of the parent object. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Accreditation, ActivationTarget, ActivationTrgtIntOrgAccess, ApiAnomalyEventStore, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CollaborationGroup, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent,

Field Name	Details
	CommSubscriptionTiming, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContentWorkspace, Contract, ConversationEntry, CoverageBenefit, CoverageBenefitItem, CredentialStuffingEventStore, CreditMemo, CreditMemoLine, Dashboard, DashboardComponent, DataStream, DelegatedAccount, DocumentChecklistItem, EmailMessage, EmailTemplate, EngagementChannelType, EnhancedLetterhead, EnrollmentEligibilityCriteria, Event, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, IdentityDocument, Image, IndividualApplication, Invoice, InvoiceLine, Lead, ListEmail, Location, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingSession, MktCalculatedInsight, OperatingHours, Opportunity, Order, OrderItem, Organization, OtherComponentTask, PartyConsent, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, ProviderSearchSyncLog, PurchaserPlan, PurchaserPlanAssn, ReceivedDocument, Report, ReportAnomalyEventStore, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SessionHijackingEventStore, Shift, Shipment, ShipmentItem, Site, SkillRequirement, SocialPost, Solution, Task, ThreatDetectionFeedback, User, Visit, VisitedParty, Visitor, VoiceCall, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember
RecordType	Type string Properties Filter, Group, Nillable, Sort Description The parent object type.
SharingOption	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Controls whether sharing is frozen for a file. Only Salesforce admins and file owners with Collaborator access to the file can modify this field. The default is Allowed, which means that new shares are allowed. When set to Restricted, new shares are prevented without affecting existing shares. This field is available in API versions 35.0 and later.

Field Name	Details
Title	Type string Properties Filter, Group, Nillable, Sort Description Title of the attached file.

Usage

Use this object to list all notes, attachments, documents uploaded to libraries in Salesforce CRM content, and files added to Chatter for a record, such as a related list on a detail page.

To determine if an object supports the CombinedAttachment object, call `describeObject()` on the object. For example, `describeObject('Account')` returns all the child relationships of the Account object, including CombinedAttachment. You can then query the CombinedAttachment child relationship.

```
SELECT Name, (SELECT Title FROM CombinedAttachments)
FROM Account
```

You can't directly query CombinedAttachment.

CommerceEntitlementBuyerGroup

Represents the entitlement policy for a buyer group. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

The CommerceEntitlementBuyerGroup object is available when you meet these requirements. The B2B Commerce license is enabled. The Commerce Buyer and Entitlements Integrator permission is granted.

Fields

Field	Details
BuyerGroupId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The unique ID for the buyer group.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description The standard code for the currency. Possible values are: • GBP—British Pound • USD—U.S. Dollar
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the entitlement buyer group.
PolicyId	Type reference Properties Create, Filter, Group, Sort Description The unique ID for the entitlement policy.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CommerceEntitlementBuyerGroupChangeEvent](#) on page 68

Change events are available for the object.

CommerceEntitlementPolicy

Represents an entitlement policy, which determines what products and prices a user can see. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The CommerceEntitlementPolicy object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CanViewPrice	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether a user can view the price of a product (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code>.
CanViewProduct	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether a user can view the product (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code>.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The standard code for the currency. Possible values are: • GBP—British Pound • USD—U.S. Dollar
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The entitlement policy description.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines if the entitlement policy is active (<code>true</code>) or inactive (<code>false</code>). Default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it can mean that the record was only referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the entitlement policy.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique ID for the entitlement policy owner.

Associated Objects

This object has the following associated objects. Except where noted, these objects are available in the same API version as CommerceEntitlementPolicy.

CommerceEntitlementPolicyChangeEvent on page 68

Change events are available for the object.

CommerceEntitlementPolicyOwnerFeed on page 55

Feed tracking is available for the object.

CommerceEntitlementPolicyHistory on page 63

History is available for tracked fields of the object.

CommerceEntitlementPolicyOwnerSharingRule

Sharing rules are available for this object.

CommerceEntitlementPolicyShare

Represents the entitlement rule for sharing products and prices with users other than the owner. This object is available in API version 49.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The CommerceEntitlementPolicyShare object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Possible values are: • All—Owner

Field	Details
	- Edit—Read/Write - Read—Read Only
ParentId	Type reference Properties Create, Filter, Group, Sort Description The unique ID of the parent entitlement policy.
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Possible values are: <code>CompliantCollaboration</code>—Compliant Data Sharing <code>GuestParentImplicit</code>—Associated guest user sharing <code>GuestPersonImplicit</code>—Associated Guest User Sharing <code>GuestRule</code>—Guest User Sharing Rule <code>ImplicitChild</code>—Account Sharing <code>ImplicitParent</code>—Associated record owner or sharing <code>ImplicitPerson</code>—Person Contact <code>Manual</code>—Manual Sharing <code>Owner</code> <code>Rule</code>—Sharing Rule <code>SurveyShare</code>—Survey Sharing Rule <code>Team</code>—Sales Team <code>Territory</code>—Territory Assignment Rule <code>Territory2AssociationManual</code>—Territory Manual <code>Territory2Forecast</code>—Territory assignment for forecasting and reporting <code>TerritoryManual</code>—Territory Manual <code>TerritoryRule</code>—Territory Sharing Rule
UserOrGroupId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort
	Description The unique ID of the associated user or buyer group.

CommerceEntitlementProduct

Represents the entitlement policy for a product. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

The CommerceEntitlementProduct object is available when you meet these requirements. The B2B Commerce license is enabled. The Commerce Buyer and Entitlements Integrator permission is granted.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description The standard code for the currency. Possible values are: • GBP—British Pound • USD—U.S. Dollar
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The product entitlement policy name.

Field	Details
PolicyId	Type reference Properties Create, Filter, Group, Sort Description The unique ID for the product entitlement policy.
ProductId	Type reference Properties Create, Filter, Group, Sort Description The unique ID for the product referenced in the entitlement policy.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CommerceEntitlementProductChangeEvent](#) on page 68

Change events are available for the object.

CommissionSchedule

Represents a commission calculation and rate definition. Calculates commission values for a commissionable event.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ApplicableObject	Type multipicklist Properties Create, Filter, Nillable, Restricted picklist, Update Description The object for which this Commission Schedule calculates commissions.

Field	Details
	Possible values are: - Contract - InsurancePolicy - Producer - Quote
CalcProcessInputMapping	Type textarea Properties Create, Nillable, Update Description The input mappings from the object fields to the variables used in the commission calculation.
CalcProcessOutput	Type textarea Properties Create, Nillable, Update Description The formula applied to this Commission Schedule's process output that calculates the final commission amount.
CalcProcessOutputConvNotation	Type textarea Properties Create, Nillable, Update Description An optimized version of the CalcProcessOutput formula that calculates the commission. Not user-editable.
CalculationProcessName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the Integration Procedure, Calculation Matrix, or Calculation Procedure this Commission Schedule uses for calculations.
CalculationType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The type of calculation or process used when this Commission Schedule is used. Possible values are: • Amount • CalculationMatrix • CalculationProcedure • IntegrationProcedure • Rate
CommissionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The commission amount for the Commission Schedule when the process type is Amount.
CommissionRate	Type percent Properties Create, Filter, Nillable, Sort, Update Description The commission percentage for the Commission Schedule when the process type is Rate.
CommissionStructureType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether the commission calculation is Flat or Tiered when the process type is Matrix. Possible values are: • Flat • Tiered The default value is Flat.
EffectiveEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The effective end date of the Commission Schedule.
EffectiveStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The effective start date of the Commission Schedule.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the Commission Schedule is active. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the Commission Schedule.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description The ID of the record owner. This is a polymorphic relationship field.
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
TierDefinition	Type textarea
	Properties Create, Nillable, Update
	Description Internal-only. Applies when the CalculationType is CalculationMatrix.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CommissionScheduleChangeEvent](#) on page 68

Change events are available for the object in API version 62.0 and later.

[CommissionScheduleFeed](#)

Feed tracking is available for the object.

[CommissionScheduleHistory](#)

History is available for tracked fields of the object.

[CommissionScheduleOwnerSharingRule](#)

Sharing rules are available for the object.

[CommissionScheduleShare](#)

Sharing is available for the object.

CommissionScheduleAssignment

Represents the commission calculation applicable to a specific product or producer for one or multiple commissionable events.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommissionableEventType	Type multipicklist Properties Create, Filter, Nillable, Restricted picklist, Update Description The event that results in the commission calculation. Possible values are: - Contracting - Endorsement - Issue Policy - Policy Issuance
CommissionScheduleId	Type reference Properties Create, Filter, Group, Sort Description The ID of the associated Commission Schedule, which is the commission calculation tied to the product or producer. This is a relationship field. Relationship Name CommissionSchedule Relationship Type Lookup Refers To CommissionSchedule
EffectiveEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The last date when the Commission Schedule is in effect for the product or producer.

Field	Details
EffectiveStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The first date when the Commission Schedule is in effect for the product or producer.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
MaxCommissionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The maximum commission calculated for the product or producer for a commissionable event. Constrains the output from the Commission Schedule.
MaxCommissionRate	Type percent Properties Create, Filter, Nillable, Sort, Update Description The maximum commission rate that a producer receives for a commissionable event.
MinCommissionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The minimum commission calculated for the product or producer for a commissionable event. Constrains the output from the Commission Schedule.
MinCommissionRate	Type percent Properties Create, Filter, Nillable, Sort, Update Description The minimum commission rate that a producer receives for a commissionable event.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the Commission Schedule Assignment.
ProducerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The producer, broker, brokerage, or other user who receives the commission. This is a relationship field. Relationship Name Producer Relationship Type Lookup Refers To Producer
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The product for which commissions are calculated. This is a relationship field. Relationship Name Product2

Field	Details
	Relationship Type Lookup
	Refers To Product2

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[CommissionScheduleAssignmentChangeEvent](#) on page 68

Change events are available for the object in API version 62.0 and later.

[CommissionScheduleAssignmentFeed](#)

Feed tracking is available for the object.

[CommissionScheduleAssignmentHistory](#)

History is available for tracked fields of the object.

[CommissionScheduleAssignmentOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[CommissionScheduleAssignmentShare](#) on page 67

Sharing is available for the object.

CommSubscription

Represents the subscription options for a specific communication. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DataUsePurposeId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description ID of the data use purpose record associated with the communication subscription.

Field	Details
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if this communication subscription is the default (<code>true</code>) or not (<code>false</code>). This field has a default value of <code>false</code>. Only one communication subscription record can be the default.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the communication subscription record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account owner associated with this customer. This is a polymorphic relationship field. Relationship Name Owner

Field	Details
	Relationship Type Lookup
	Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

CommSubscriptionChangeEvent (API version 61.0)

Change events are available for the object.

CommSubscriptionFeed

Feed tracking is available for the object.

CommSubscriptionHistory

History is available for tracked fields of the object.

CommSubscriptionOwnerSharingRule

Sharing rules are available for the object.

CommSubscriptionShare

Sharing is available for the object.

CommSubscriptionChannelType

Represents the engagement channel through which you can reach a customer for a communication subscription. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommunicationSubscriptionId	Type reference
	Properties Create, Filter, Group, Sort, Update
	Description ID of the associated communication subscription record. This is a relationship field.

Field	Details
	Relationship Name CommunicationSubscription Relationship Type Lookup Refers To CommSubscription
EngagementChannelTypeId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the associated engagement channel type record. This is a relationship field. Relationship Name EngagementChannelType Relationship Type Lookup Refers To EngagementChannelType
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
MessagingChannelUsageId	Type reference Properties Filter, Group, Sort

Field	Details
	Description The ID of the associated Messaging channel usage record, which is in turn associated with a messaging channel. This is a relationship field. Relationship Name MessagingChannelUsage Relationship Type Lookup Refers To MessagingChannelUsage
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the communication subscription channel type record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID account owner associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[CommSubscriptionChannelTypeChangeEvent](#) (API version 61.0)

Change events are available for the object.

[CommSubscriptionChannelTypeFeed](#)

Feed tracking is available for the object.

CommSubscriptionChannelTypeHistory

History is available for tracked fields of the object.

CommSubscriptionChannelTypeOwnerSharingRule

Sharing rules are available for the object.

CommSubscriptionChannelTypeShare

Sharing is available for the object.

CommSubscriptionConsent

Represents a customer's consent to a communication subscription. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

With certain page layout and field-level security settings, some fields aren't visible or editable.

Field	Details
BusinessBrandId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Business Brand that the individual has given consent to for a communication subscription. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name BusinessBrand Relationship Type Lookup Refers To BusinessBrand
CommSubscriptionChannelTypeId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the associated communication subscription channel type record. This is a relationship field.

Field	Details
	Relationship Name CommSubscriptionChannelType Relationship Type Lookup Refers To CommSubscriptionChannelType
ConsentCapturedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Required. Date when the customer's consent was captured.
ConsentCapturedSource	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Source through which consent was captured. For example, user@example.com or www.example.com.
ConsentGiverId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the person who gave consent to the communication subscription on behalf of the contact point.  Note: If the contact point gave consent, don't use ConsentGiverId. This is a polymorphic relationship field. Relationship Name ConsentGiver Relationship Type Lookup Refers To Account, Contact, Individual, User
ContactPointId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort, Update Description ID of the contact point, such as an Individual or person account, associated with the communication subscription consent. This is a polymorphic relationship field. Relationship Name ContactPoint Relationship Type Lookup Refers To ContactPointAddress, ContactPointEmail, ContactPointPhone
DataUsePurposeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the record for data use purpose that you want to associate this consent with. This field is available in API version 57.0 and later. This is a relationship field. Relationship Name DataUsePurpose Relationship Type Lookup Refers To DataUsePurpose
EffectiveFromDate	Type date Properties Create, Filter, Group, Sort, Update Description Required. Date when consent starts.
EffectiveToDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when consent ends. This field is restricted by field-level security.

Field	Details
EngagementChannelTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the contact method you want to apply consent to. This field is available in API version 57.0 and later. This is a relationship field. Relationship Name EngagementChannelType Relationship Type Lookup Refers To EngagementChannelType
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of the communication subscription consent record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the account owner associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PartyId	Type reference Properties Filter, Group, Nillable, Sort Description Represents the record based on the Individual object that you want to associate consent with. This field is available in API version 57.0 and later. This is a relationship field. Relationship Name Party Relationship Type Lookup Refers To Individual
PartyRoleId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Party Role for the individual you want to associate consent with. This is a polymorphic relationship field. This field is available in API version 53.0 and later. Relationship Name PartyRole Relationship Type Lookup Refers To Customer, Seller
PrivacyConsentStatus	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Identifies whether the individual or person account associated with this record agrees to this form of contact. Possible values are: - NotSeen - OptIn - OptInPending—Available in API version 58.0 and later. - OptOut - OptOutPending—Available in API version 58.0 and later. - Seen The default value is <code>NotSeen</code>. This field is available in API version 57.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

CommSubscriptionConsentChangeEvent (API version 49.0)

Change events are available for the object.

CommSubscriptionConsentFeed

Feed tracking is available for the object.

CommSubscriptionConsentHistory

History is available for tracked fields of the object.

CommSubscriptionConsentOwnerSharingRule

Sharing rules are available for the object.

CommSubscriptionConsentShare

Sharing is available for the object.

CommSubscriptionTiming

Represents a customer's timing preferences for receiving a communication subscription. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommSubscriptionConsentId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the associated communication subscription consent record. This is a relationship field. Relationship Name CommSubscriptionConsent Relationship Type Lookup Refers To CommSubscriptionConsent
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Required. Name of the communication subscription timing record.
Offset	Type double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The amount of time before or after an event or the specific day of the week to communicate with the contact point. Set the unit of time in the <code>Unit</code> field. For example, if you set <code>Unit</code> as <i>Week</i> and <code>Offset</code> as <i>-4</i>, communicate with the contact point four weeks before the event. If you set <code>Offset</code> as <i>4</i>, communicate with the contact point four weeks after the event.
PreferredTimeEnd	Type time Properties Create, Filter, Nillable, Sort, Update Description End of the preferred time span in which to reach the customer.
PreferredTimeStart	Type time Properties Create, Filter, Nillable, Sort, Update Description Start of the preferred time span in which to reach the customer.
PreferredTimeZone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Time zone of the preferred time span.
Unit	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The unit of time that works with the <code>Offset</code> field to determine the communication timing. Possible values are: • Day • DayOfWeek • Hour • Month

Field	Details
	• Week

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[CommSubscriptionTimingChangeEvent](#) (API version 62.0)

Change events are available for the object.

[CommSubscriptionTimingFeed](#)

Feed tracking is available for the object.

[CommSubscriptionTimingHistory](#)

History is available for tracked fields of the object.

Community (Zone)

Represents a zone that contains Idea or Question objects.

Note: Starting with the Summer '13 release, Chatter Answers and Ideas communities were renamed to zones. In API version 28, the API object label has changed to `Zone`, but the API type is still `Community`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>CanCreateCase</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether users can ask private questions in the zone using Chatter Answers.
<code>DataCategoryName</code>	Type string Properties Filter, Nillable, Group, Sort Description The data category associated with the zone.

Field	Details
Description	Type textarea Properties Filter, Nillable, Sort Description Text description of the zone.
HasChatterService	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether Chatter Answers is available in the zone.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the zone is active or inactive. An idea or question can only be posted to an active zone.
IsPublished	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the zone is available in portals.
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the zone.
NetworkId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the Experience Cloud site that this zone is associated with. This field is available only if digital experiences is enabled in your org. This field is available in API version 66.0 and later.

Usage

Use this object to create a zone in Ideas, Chatter Answers, or Answers. Zones help organize ideas and questions into logical groups and are shared by the Ideas, Answers, and Chatter Answers.

ConcurApexLimitEventLog

Concurrent Apex Limit event logs contain information about long-running concurrent Apex requests in your org that Salesforce terminated after reaching your org's concurrency limit. Requests with an established Apex context that execute for 5 seconds are counted towards your org's limit of concurrent long-running requests. (Asynchronous requests don't count towards the limit.) When the long-running requests exceed the org default limit, additional long-running requests are denied. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>RequestCount</code>	Type int Properties Filter, Nillable, Sort Description Count of requests with an established Apex context executing for longer than 5 seconds in your org.
<code>RequestIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestId</code>. For example: <code>3nWgxWbDKWWDIk0FKfF5DV</code>.
<code>RequestLimit</code>	Type double Properties Filter, Nillable, Sort Description Maximum count of requests with an established Apex context that can execute for longer than 5 seconds. When <code>RequestCount</code> reaches this limit, then additional long-running Apex requests are terminated. (Asynchronous requests don't count towards the limit.) See <i>Apex Developer Guide: Lightning Platform Apex Limits</i>. For example: 10.
<code>RequestUri</code>	Type string Properties Filter, Group, Nillable, Sort Description The URI of the long-running Apex request that Salesforce terminated. For example: <code>/apex/ApexClassName</code>.
<code>Timestamp</code>	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, <code>2020-01-20T19:12:26.965Z</code>. Milliseconds are the most granular setting.
<code>UserIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: <code>00530000009M943</code>.

ConnectedApplication

Represents a connected app and its details; all fields are read-only.

Connected apps link client applications, third-party services, other Salesforce organizations, apps, and resources to your organization. The connected app configuration specifies authorization and security settings for these resources. This object exposes the settings for a specified connected app.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
MobileSessionTimeout	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Length of time after which the system logs out inactive mobile users.
MobileStartUrl	Type url Properties Filter, Nillable, Sort Description Users are directed to this URL after they've authenticated when the app is accessed from a mobile device.
Name	Type string Properties Filter, Group, idLookup, Sort Description The unique name for this object.
NamedUserUvidTimeout	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The timeout value for a JSON Web Token (JWT)-based access token that's issued to a named user. This field defines the timeout only if the app is configured to have an app-specific timeout. If the app uses the user's session timeout, the timeout value is defined based on the user's profile or the org session settings. For more information about defining JWT-based access token timeout, see Configure a Connected App to Issue JWT-Based Access Tokens. These values are available in API version 59.0 and later. • 1—1 Minute • 5—5 Minutes • 10—10 Minutes • 15—15 Minutes • 30—30 Minutes These values are available in API version 65.0 and later. • 60—1 Hour • 90—90 Minutes • 120—2 Hours • 240—4 Hours • 480—8 Hours • 720—12 Hours This field is available in API version 59.0 and later.
OptionsAllowAdminApprovedUsersOnly	Type boolean Properties Filter Description Indicates whether access is limited to users granted approval to use the connected app by an administrator. Manage profiles for the app by editing each profile's Access list.
OptionsCodeCredentialGuestEnabled	Reserved for future use.
OptionsFullContentPushNotifications	For internal use only.
OptionsHasSessionLevelPolicy	Type boolean Properties Filter Description Specifies whether the connected app requires a High Assurance level session.

Field Name	Details
OptionsIsInternal	For internal use only.
OptionsRefreshTokenValidityMetric	Type boolean Properties Filter Description Specifies whether the refresh token validity is based on duration or inactivity. If <code>true</code>, the token validity is measured based on the last use of the token; otherwise, it's based on the token duration.
OptionsTokenExchangeManageBitEnabled	Type boolean Properties Filter Description If <code>true</code>, the OAuth 2.0 token exchange flow is enabled.
PinLength	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description For mobile apps, this field is the PIN length requirement for users of the connected app. Valid values are 4, 5, 6, 7, or 8.
RefreshTokenValidityPeriod	Type int Properties Filter, Group, Nillable, Sort Description The duration of an authorization token until it expires in hours, months, or days as set in the connected app management page.
StartUrl	Type url Properties Filter, Nillable, Sort Description If the app isn't accessed from a mobile device, users are directed to this URL after they've authenticated.

Field Name	Details
UvidTimeout	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The timeout value for a JWT-based access token that's issued to an unknown user as a result of the guest user variation of the Authorization Code and Credentials Flow. JWT-based access tokens issued during this flow variation always contain a UVID. This field defines the timeout only if the app is configured to have an app-specific timeout. If the app uses the user's session timeout, the timeout value is defined based on the user's profile or the org session settings. For more information about defining JWT-based access token timeout, see Configure a Connected App to Issue JWT-Based Access Tokens. These values are available in API version 59.0 and later. • 1—1 Minute • 5—5 Minutes • 10—10 Minutes • 15—15 Minutes • 30—30 Minutes These values are available in API version 65.0 and later. • 60—1 Hour • 90—90 Minutes • 120—2 Hours • 240—4 Hours • 480—8 Hours • 720—12 Hours This field is available in API version 59.0 and later.

ConferenceNumber

Holds the telephone number for an external event shown in the Salesforce Today feature in the Salesforce mobile app. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Salesforce Today app is available in Salesforce for Android and Salesforce for iOS. It's not available in the Salesforce desktop site. Access to Today is available only if you grant Calendar permission to the Salesforce mobile app.

Fields

Field	Details
AccessCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the access code to enter in order to validate identity and join the call.
ExternalEventId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the external event associated with the conference number. This field is a relationship field. Relationship Name ExternalEvent Refers To ExternalEvent
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Returns <code>true</code> if the conference number is locked, or <code>false</code> if it's not. The default value is <code>false</code>.
Label	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the conference number.

Field	Details
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Indicates whether the conference number can be edited (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the conference call's organizer.
Number	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The phone number used to connect to the conference call.
Vendor	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The vendor or company associated with the conference number.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ConferenceNumberChangeEvent](#)

Consumption Rate

Consumption rates describe the billing rate for a range of usage within a consumption schedule. All consumption schedules require at least one consumption rate in order to rate usage on a usage product. This object is available in API version 45.0 and later.

The consumption rate sets a quantity-based boundary for usage and defines how much your product costs when its usage falls within that boundary. Consumption rates price usage at a per-unit fee or a flat fee across the entire range of usage.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ConsumptionScheduleId	Type reference Properties Create, Filter, Group, Sort Description The consumption schedule that contains the consumption rate. This is a relationship field. Relationship Name ConsumptionSchedule Relationship Type Lookup Refers To ConsumptionSchedule
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Possible values are: • AUD—Australian Dollar • CAD—Canadian Dollar • GBP—British Pound • JPY—Japanese Yen • USD—U.S. Dollar
Description	Type textarea Properties Create, Nillable, Update Description Description of the consumption rate.

Field	Details
LowerBound	Type int Properties Create, Filter, Group, Sort, Update Description The lowest quantity of usage for the consumption rate.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Required. Default name of this record. Label is Product Name.
Price	Type currency Properties Create, Filter, Sort, Update Description The price for usage that falls within the consumption rate's bounds.
PricingMethod	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description How Salesforce applies the consumption rate's price to the total quantity of usage within a usage summary. Possible values are: • FlatFee—Salesforce applies the rate's price to the entire quantity of usage. • PerUnit—Salesforce applies the rate's price to each individual quantity of usage within the usage summary.
ProcessingOrder	Type int Properties Create, Filter, Group, Sort, Update Description The order for processing the usage rate across multiple rates. Consumption rates are evaluated beginning with the lowest processing order.

Field	Details
UpperBound	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The highest quantity of usage for the consumption rate.

Consumption Schedule

A consumption schedule organizes a set of consumption rates by which usage-based products are quoted and billed. This object is available in API version 45.0 and later.

Salesforce uses consumption schedules to group consumption rates. Your consumption schedule defines the unit of measurement and rating method for the schedule's rates. It also defines the billing frequency that Salesforce Billing uses to invoice a usage product.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BillingTerm	Type int Properties Create, Filter, Group, Sort, Update Description The number used with the billing term unit to determine billing frequency.
BillingTermUnit	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The unit used with the billing term to determine billing frequency Possible values are: • Month— • Quarter— • Year—

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Possible values are: • AUD—Australian Dollar • CAD—Canadian Dollar • GBP—British Pound • JPY—Japanese Yen • USD—U.S. Dollar
Description	Type textarea Properties Create, Nillable, Update Description Description of the consumption schedule.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Label is Active.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
MatchingAttribute	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Salesforce Billing matches usage with a consumption schedule if the records share Matching Attribute value.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Default name of this record. Label is Product Name.
NumberOfRates	Type int Properties Filter, Group, Nillable, Sort Description The number of consumption rates in this consumption schedule.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user who owns a consumption schedule record. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
RatingMethod	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A specific use case to rate usage against the schedule. This field is the controlling picklist for the Type field. Possible values are: • Tier
SBQQ__Category__c	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description This field is available only with Salesforce CPQ. You can define custom categories to organize consumption schedules in separate tabs on sales rep UI. If you do this, make sure to create a field set for each category. Possible values are: • Rates
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines how rate tiers are calculated. Possible values are: • Range—The schedule prices only using the tier that applies to the usage quantity. • Slab—Usage within a given bound receives pricing equal to its tier's value.
UnitOfMeasure	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description A unit of measure defines how you quantify instances of usage for your usage products. For example, if your usage product is a cloud storage subscription, you could provide a value of GB for your unit of measure.

Field	Details
<code>blng__BillingRule__c</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This field is available only with Salesforce Billing. Salesforce Billing invoices usage summaries based off their related consumption schedule's billing rule.
<code>blng__RevenueRecognitionRule__c</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This field is available only with Salesforce Billing. Salesforce Billing recognizes usage summary revenue based off the summary's related revenue recognition rule.
<code>blng__TaxRule__c</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This field is available only with Salesforce Billing. Salesforce Billing taxes usage summary invoice lines based off the summary's related tax rule.

Contact

Represents a contact, which is a person associated with an account.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can access only portal-enabled contacts.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the account that's the parent of this contact. We recommend that you update up to 50 contacts simultaneously when changing the accounts on contacts enabled for a Customer Portal or partner portal. We also recommend that you make this update after business hours. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActionCadenceAssigneeId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
ActionCadenceId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the lead's assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.

Field	Details
ActionCadenceState	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The state of the current action cadence tracker. This field is available in API version 50.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. Possible values are: • Complete • Error • Initializing • Paused • Processing • Running
ActiveTrackerCount	Type int Properties Filter, Group, Nillable, Sort Description The number of cadences that are actively running on this contact. This field is available in API version 57.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
ActivityMetricId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric. This field is a relationship field. This field is available in API version 41.0 and later. Relationship Name ActivityMetric Refers To ActivityMetric

Field	Details
ActivityMetricRollupId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup. This field is a relationship field. This field is available in API version 41.0 and later. Relationship Name ActivityMetricRollup Refers To ActivityMetricRollup
AssistantName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The assistant's name.
AssistantPhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The assistant's phone number. Label is Asst. Phone.
Birthdate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The contact's birthdate. Filter criteria for report filters, list view filters, and SOQL queries ignore the year portion of the Birthdate field. For example, this SOQL query returns contacts with birthdays later in the year than today: <pre>SELECT Name, Birthdate FROM Contact WHERE Birthdate > TODAY</pre>

Field	Details
BuyerAttributes	Type multipicklist Properties Create, Filter, Nillable, Restricted picklist, Update Description If Automatic Contact Enhancements or Buyer Relationship Map is enabled, this field contains the role of the contact in the opportunity or account. Possible values are: • <code>BusinessUser</code>—For example, an end user. Key value. • <code>Buyer</code>—Key value • <code>Champion</code>—Key value • <code>DecisionMaker</code>—Shown in green on a contact in the buyer relationship map UI. Key value. • <code>Detractor</code>—Shown in red on a contact in the buyer relationship map UI. Key value. • <code>Evaluator</code> • <code>ExecutiveSponsor</code>—Key value • <code>TechnicalExpert</code> Key values represent key contacts on an opportunity or account. If a buyer relationship map doesn't have contacts with key values, then Salesforce prompts you to add them. Having all key values represented on the map provides a full view of the deal or account, increasing sales success.  Warning: To ensure that the buyer relationship map feature works as expected, don't modify field values. For example, if you change <code>Detractor</code> to <code>Detract</code>, the value isn't shown in red in a buyer relationship map. This field is available with all profiles except custom and minimum-access. To provide access, use field-level security in Object Manager.
CanAllowPortalSelfReg	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this contact can self-register for your Customer Portal (<code>true</code>) or not (<code>false</code>).
CleanStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates the record's clean status as compared with Data.com. Values include: Matched, Different, Acknowledged, NotFound, Inactive, Pending, SelectMatch, or Skipped. Several values for CleanStatus appear with different labels on the contact record. • Matched appears as In Sync • Acknowledged appears as Reviewed • Pending appears as Not Compared
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
ContactSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If Automatic Contact Creation is enabled, this field indicates whether the contact was created automatically. A possible value is: • Auto Create
Department	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The contact's department.

Field	Details
DepartmentGroup	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If Automatic Contact Enhancements or Buyer Relationship Map is enabled, this field contains the business unit, function, or department that the contact belongs to in the organization. Possible values are: • <code>chiefExecutive</code>—Key value • <code>customerSuccess</code>—For example, wealth management, consumer banking, subject matter experts, or healthcare research experts. • <code>finance</code>—Includes pricing and procurement. Key value. • <code>humanResources</code> • <code>legal</code>—Key value • <code>marketing</code> • <code>other</code> • <code>sales</code> • <code>support</code>—For example, tech support or customer support. • <code>tech</code>—For example, IT or engineering. Key value. Key values represent key contacts on an opportunity or account. If a buyer relationship map doesn't have contacts with key values, then Salesforce prompts you to add them. Having all key values represented on the map provides a full view of the deal or account, increasing sales success. This field is available with all profiles except custom and minimum-access. To provide access, use field-level security in Object Manager.
Description	Type textarea Properties Create, Nillable, Update Description A description of the contact. Label is Contact Description up to 32 KB.
DoNotCall	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the contact doesn't want to receive calls.
Email	Type email

Field	Details
	Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The contact's email address.
EmailBouncedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description If bounce management is activated and an email sent to the contact results in a hard bounce, the date and time of the bounce.  Note: Email bounce functionality isn't triggered by record updates, including updates to this field.
EmailBouncedReason	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If bounce management is activated and an email sent to the contact results in a hard bounce, the reason for the bounce.  Note: Email bounce functionality isn't triggered by record updates, including updates to this field.
Fax	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The contact's fax number. Label is Business Fax.
FirstCallDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time of the first call placed to the contact. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.

Field	Details
FirstEmailDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time of the first email sent to the contact. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
FirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The contact's first name up to 40 characters.
GenderIdentity	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The contact's internal experience of their gender, which may or may not correspond to their designated sex at birth.
HasOptedOutOfEmail	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the contact doesn't want to receive email from Salesforce (<code>true</code>) or does (<code>false</code>). Label is Email Opt Out.
HasOptedOutOfFax	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the contact prohibits receiving faxes.
HomePhone	Type phone

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The contact's home phone number. Label is Home Phone.
IndividualId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the data privacy record associated with this contact. This field is available if Data Protection and Privacy is enabled. This is a relationship field. Relationship Name Individual Relationship Type Lookup Refers To Individual
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsEmailBounced	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If bounce management is activated and an email is sent to a contact, indicates whether the email results in a soft or hard bounce (<code>true</code>) or not (<code>false</code>).
IsPersonAccount	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Read only. Indicates whether this account has a record type of Person Account (<code>true</code>) or not (<code>false</code>). Label is Is Person Account.
IsPriorityRecord	Type boolean Properties Defaulted on create, Group Description Shows whether the user has marked the contact as important (<code>True</code>) or not (<code>False</code>). The default value is <code>false</code>. Available in API version 59.0 and later.
Jigsaw	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description References the company's ID in Data.com. If an account has a value in this field, it means that the account was imported from Data.com. If the field value is <code>null</code>, the account wasn't imported from Data.com. Maximum size is 20 characters. Available in API version 22.0 and later. Label is Data.com Key.  Important: The <code>Jigsaw</code> field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Do not modify this value.
JigsawContactId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the contact in reference to <code>Jigsaw</code>.  Important: The <code>Jigsaw</code> field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the <code>Jigsaw</code> field.
LastActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Value is the most recent of either: • Due date of the most recent event logged against the record.

Field	Details
	Due date of the most recently closed task associated with the record.
LastName	Type string Properties Create, Filter, Group, Sort, Update Description Required. Last name of the contact up to 80 characters.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
LeadSource	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The source of the lead that was converted to this contact.
MailingAddress	Type address Properties Filter, Nillable Description The compound form of the mailing address. Read-only. For details on compound address fields, see Address Compound Fields.

Field	Details
MailingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Mailing address details.
MailingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Mailing address details.
MailingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO codes for the mailing address's state and country.
MailingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update, Query, Restricted picklist, Nillable Description Accuracy level of the geocode for the mailing address. For details on geolocation compound field, see Compound Field Considerations and Limitations.
MailingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>MailingLongitude</code> to specify the precise geolocation of a mailing address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
MailingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Used with <code>MailingLatitude</code> to specify the precise geolocation of a mailing address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
<code>MailingPostalCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Mailing address details.
<code>MailingState</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Mailing address details.
<code>MailingStateCode</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO codes for the mailing address's state and country.
<code>MailingStreet</code>	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street address for mailing address.
<code>MasterRecordId</code>	Type reference Properties Filter, Group, Nillable, Sort Description If this record was deleted as the result of a merge, this field contains the ID of the record that remains. If this record was deleted for any other reason, or hasn't been deleted, the value is <code>null</code>. This is a relationship field.

Field	Details
	Relationship Name MasterRecord Relationship Type Lookup Refers To Contact
MiddleName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The contact's middle name. Maximum size is 40 characters.
MobilePhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Contact's mobile phone number. Label is Mobile Phone .
Name	Type string Properties Filter, Group, Sort Description Concatenation of <code>FirstName</code> , <code>MiddleName</code> , <code>LastName</code> , and <code>Suffix</code> up to 203 characters, including whitespaces.
OtherAddress	Type address Properties Filter, Nillable Description The compound form of the other address. Read-only. For details on compound address fields, see Address Compound Fields .
OtherCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Alternate address details.
OtherCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Alternate address details.
OtherCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO codes for the alternate address's state and country.
OtherGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the other address. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
OtherLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with OtherLongitude to specify the precise geolocation of an alternate address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
OtherLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with OtherLatitude to specify the precise geolocation of an alternate address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations .

Field	Details
OtherPhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone for alternate address.
OtherPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Alternate address details.
OtherState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Alternate address details.
OtherStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO codes for the alternate address's state and country.
OtherStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street for alternate address.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this contact.

Field	Details
	This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number for the contact. Label is Business Phone.
PhotoUrl	Type url Properties Filter, Group, Nillable, Sort Description Path to be combined with the URL of a Salesforce instance (<i>Example:</i> <code>https://yourInstance.salesforce.com/</code>) to generate a URL to request the social network profile image associated with the contact. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the contact. Empty if Social Accounts and Contacts isn't enabled or if Social Accounts and Contacts is disabled for the requesting user.
Pronouns	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The contact's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the contact in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters. Possible values are: • He/Him • He/They • Not Listed • She/Her • She/They

Field	Details
	• They/Them
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object.
ReportsToId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the contact that this contact reports to. This is a relationship field. Relationship Name ReportsTo Relationship Type Lookup Refers To Contact
Salutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Honorific abbreviation, word, or phrase to be used in front of name in greetings, such as Dr. or Mrs.
ScheduledResumeDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. This field is available in API version 54.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.

Field	Details
Suffix	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name suffix of the contact. Maximum size is 40 characters.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Title of the contact, such as CEO or Vice President.
TitleType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If Automatic Contact Enhancements or Buyer Relationship Map is enabled, this field contains the hierarchical position that the contact holds in the organization. In the UI, this field is shown as Seniority Level. Possible values are: • <code>ceo</code>—Key value • <code>directorOrManager</code>—Key value • <code>executive</code>—Key value • <code>individualContributor</code> • <code>vp</code>—VP or Head of Department. Key value. Key values represent key contacts on an opportunity or account. If a buyer relationship map doesn't show contacts with key values, then Salesforce prompts you to add them. Having all key values represented on the map provides a complete picture of the deal or account, increasing sales success. This field is available with all profiles except custom and minimum-access. To provide access, use field-level security in Object Manager.

Note: When importing contact data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

Usage

Use this object to manage individual people who are associated with an account. You can create, query, delete, or update any attachment associated with a contact.

Create or update contacts by converting a lead with the `convertLead()` call.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

AccountChangeEvent (API version 44.0)

Change events are available for the object.

ContactFeed (API version 18.0)

Feed tracking is available for the object.

ContactHistory (API version 11.0)

History is available for tracked fields of the object.

ContactOwnerSharingRule

Sharing rules are available for the object.

ContactShare

Sharing is available for the object.

ContactCenterChannel

Represents a junction object that relates a Bring Your Own Channel for Contact Center as a Service (CCaaS) messaging channel to a CallCenter object for Bring Your Own Channel for CCaaS. This object also represents the routing details for a voicemail configuration and routing information for callback requests. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Service Cloud Voice with Amazon Connect, Service Cloud Voice with Partner Telephony, Service Cloud Voice with Partner Telephony from Amazon Connect, or Bring Your Own Channel for Contact Center as a Service (CCaaS) must be enabled. To access this object, you must be a SysAdmin user or have ViewSetup user permissions.

Fields

Field	Details
ChannelId	Type reference
	Properties Create, Filter, Group, Sort, Update

Field	Details
	Description For Bring Your Own Channel for CCaaS, this field represents the unique ID of the Bring Your Own Channel messaging channel (MessagingChannel) that's associated with the contact center (CallCenterId). Available in API version 60.0 and later. This field is a relationship field. Relationship Name Channel Refers To MessagingChannel
ContactCenterId	Type reference Properties Create, Filter, Group, Sort Description This field is a relationship field. For Bring Your Own Channel for CCaaS, this field represents the unique ID of the contact center (CallCenterId) that's associated with the Bring Your Own Channel messaging channel (MessagingChannel). Available in API version 60.0 and later. This field is a relationship field. Relationship Name ContactCenter Relationship Type Master-detail Refers To CallCenter (the master object)
OmniCallbackFallbackQueueId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description If callbacks are configured for the contact center and the contact center uses Omni-Channel Unified Routing, this field represents the unique ID of the fallback queue to use if contact request routing through an Omni-Channel flow fails. Don't change the value in this field. Instead, configure contact request routing in Lightning Experience. Available in API version 65.0 and later. This field is a relationship field. Relationship Name OmniCallbackFallbackQueue Refers To Group

Field	Details
OmniCallbackHandler	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If callbacks are configured for the contact center and the contact center uses Omni-Channel Unified Routing, this field represents the unique ID of the flow or queue used to route contact requests. Don't change the value in this field. Instead, configure contact request routing in Lightning Experience. Available in API version 65.0 and later.
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Available in API version 63.0 only. For internal use.
VoicemailFallbackQueueId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description If voicemail routing is configured for the contact center, this field represents the unique ID of the fallback queue to use if voicemail routing fails. Don't change the value in this field. Instead, configure voicemail routing in Lightning Experience. This field is a relationship field. Relationship Name VoicemailFallbackQueue Refers To Group
VoicemailHandler	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If voicemail routing is configured for the contact center, this field represents the unique ID of the flow used to route voicemails. Don't change the value in this field. Instead, configure voicemail routing in Lightning Experience.

ContactCleanInfo

Stores the metadata Data.com Clean uses to determine a contact record's clean status. Helps you automate the cleaning or related processing of contact records. ContactCleanInfo includes a number of bit vector fields.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Contact Clean Info provides a snapshot of the data in your Salesforce contact record and its matched Data.com record at the time the Salesforce record was cleaned.

Contact Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentEmail` field. If the `IsDifferentEmail` field's value is `False`, that means the `Email` field value is *the same* on the Salesforce contact record and its matched Data.com record.

ContactCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the contact record.
- `IsDifferent` indicates whether or not a field on the contact record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the contact record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the contact record is in a `Reviewed` state, which means that the value was reviewed but not accepted.

Fields

Field Name	Details
Address	Type address Properties Filter, Nillable Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
City	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the contact.

Field Name	Details
CleanedByJob	Type boolean Properties Filter Description Indicates whether the contact record was cleaned by a Data.com Clean job (<code>true</code>) or not (<code>false</code>).
CleanedByUser	Type boolean Properties Filter Description Indicates whether the contact record was cleaned by a Salesforce user (<code>true</code>) or not (<code>false</code>).
ContactId	Type reference Properties Filter, Group, Sort Description The unique, system-generated ID assigned when the contact record was created.
ContactStatusDataDotCom	Type picklist Properties Filter, Group, Nillable, Sort Description The status of the contact per Data.com. Values are: Contact is Active per Data.com, Phone is Wrong per Data.com , Email is Wrong per Data.com, Phone and Email are Wrong per Data.com, Contact Not at Company per Data.com, Contact is Inactive per Data.com, Company this contact belongs to is out of business per Data.com, Company this contact belongs to never existed per Data.com or Email address is invalid per Data.com.
Country	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Details for the billing address of the contact.
DataDotComID	Type string Properties Filter, Group, Nillable, Sort Description The ID Data.com maintains for the contact.
Email	Type email Properties Filter, Group, Nillable, Sort Description The email address for the contact.
FirstName	Type string Properties Filter, Group, Nillable, Sort Description The contact's first name.
IsDifferentCity	Type boolean Properties Filter Description Indicates whether the contact's <code>City</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
IsDifferentCountry	Type boolean Properties Filter Description Indicates whether the contact's <code>Country</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
IsDifferentCountryCode	Type boolean

Field Name	Details
	Properties Filter Description Indicates whether the contact's <code>Country Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentEmail</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>Email</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentFirstName</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>First Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentLastName</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>Last Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentPhone</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>Phone</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentPostalCode</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the contact's <code>Postal Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentState</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>State</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentStateCode</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>State Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentStreet</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>Street</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentTitle</code>	Type boolean Properties Filter Description Indicates whether the contact's <code>Title</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongAddress</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the contact's <code>Address</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongEmail</code>	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Email</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongName</code>	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Name</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongPhone</code>	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Phone</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongTitle</code>	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Title</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsInactive</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates whether the contact has been reported to Data.com as <i>Inactive</i> (<code>true</code>) or not (<code>false</code>).
IsReviewedAddress	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Address</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
IsReviewedEmail	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Email</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
IsReviewedName	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Name</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
IsReviewedPhone	Type boolean Properties Filter, Update Description Indicates whether the contact's <code>Phone</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
IsReviewedTitle	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the contact's <code>Title</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>LastMatchedDate</code>	Type dateTime Properties Filter, Sort Description The date the contact record was last matched and linked to a Data.com record.
<code>LastName</code>	Type string Properties Filter, Group, Nillable, Sort Description The contact's last name.
<code>LastStatusChangedById</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of who or what last changed the record's <code>Clean Status</code> field value: a Salesforce user or a Clean job.
<code>LastStatusChangedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record's <code>Clean Status</code> field value was last changed.
<code>Latitude</code>	Type double Properties Filter, Nillable, Sort Description Used with <code>Longitude</code> to specify the precise geolocation of a billing address. Data not currently provided.

Field Name	Details
Longitude	Type double Properties Filter, Nillable, Sort Description Used with <code>Latitude</code> to specify the precise geolocation of a billing address. Data not currently provided.
Name	Type string Properties Filter, Group, Sort, Update Description Field label is Contact Clean Info Name. The name of the contact. Maximum size is 255 characters.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number for the contact.
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the contact.
State	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the contact.
Street	Type textarea Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Details for the billing address of the contact.
Title	Type string Properties Filter, Group, Nillable, Sort Description The contact's title.

Usage

Developers can create triggers that read the Contact Clean Info fields to help automate the cleaning or related processing of contact records.

Create a customized set of `Title` field values. Use triggers to map values from fields on imported or cleaned records onto a standard set of values.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ContactCleanInfoChangeEvent](#) (API version 62.0)

Change events are available for the object.

ContactDailyMetric

Represents the daily engagement metrics for a contact. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Inbox must be enabled.

Fields

Field	Details
AllCallsCallBackLater	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this contact with the call result Call Back Later.
AllCallsLeftVoicemail	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this contact with the call result Left Voicemail.
AllCallsMeaningfulConnect	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this contact with the call result Meaningful Connect.
AllCallsNotInterested	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this contact with the call result Not Interested.
AllCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this contact with no call result specified.
AllCallsUnqualified	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of calls in the day for this contact with the call result Unqualified.
AllEmailsBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total of hard and soft bounced emails for this contact in the day. This is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of successfully delivered emails for this contact in the day. This is a calculated field.
AllEmailsDeliveredRate	Type percent Properties Filter, Nillable, Sort Description The percentage of tracked emails sent that were successfully delivered to this contact. This field is a calculated field. Available in API version 54.0 and later.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of hard bounced emails for this contact in the day.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that triggered an out of office reply for this contact in the day.

Field	Details
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact in the day. This is a calculated field.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails soft bounced for this contact in the day.
AllEmailsTrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with engagement tracking enabled in the day.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact without engagement tracking enabled in the day.
AllTotalCallsCount	Type int Properties Filter, Group, Nillable, Sort Description The total number of calls to this contact with all call results in the day. This is a calculated field.
ContactId	Type reference Properties Filter, Group, Sort

Field	Details
	Description The ID of the related contact. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
DailyCutoffTimeStamp	Type dateTime Properties Filter, Sort Description The time of day when each 24-hour metrics period starts and ends.
Date	Type date Properties Filter, Group, Sort Description The date on which the engagement occurred.
DateInt	Type int Properties Filter, Group, idLookup, Sort Description The date on which the engagement occurred, in yyymmdd format.
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with hard bounce tracking. Available in API version 54.0 and later.
InboundEngagementsCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of inbound engagements for this contact in the day. This field is a calculated field. The value is the sum of <code>UniqueEmailsOpenedCount</code>, <code>UniqueEmailsRepliedCount</code>, and <code>UniqueEmailsLinkClickedCount</code>. Available in API version 58.0 and later.
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with link click tracking. Available in API version 54.0 and later.
OpenTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with open tracking. Available in API version 54.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with out-of-office tracking. Available in API version 54.0 and later.
OutboundEngagementsCount	Type int Properties Filter, Group, Nillable, Sort Description The number of outbound engagements for this contact in the day. This field is a calculated field. The value is the sum of <code>AllTotalCallsCount</code> and <code>AllEmailsDeliveredCount</code>. Available in API version 58.0 and later.

Field	Details
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with reply tracking. Available in API version 54.0 and later.
SoftBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with soft bounce tracking. Available in API version 54.0 and later.
TrackableSendHardBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with hard bounce tracking that hard bounced. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendLinkClickRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with link tracking that had link clicks. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with open tracking that were opened by the recipient. This field is a calculated field.

Field	Details
	Available in API version 54.0 and later.
TrackableSendOutOfOfficeRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with out-of-office tracking that received out-of-office replies. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with reply tracking that received replies. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with soft bounce tracking that soft bounced. This field is a calculated field. Available in API version 54.0 and later.
UniqueEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails in which the contact clicked a link in the day.
UniqueEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of individual emails opened by the contact in the day.
UniqueEmailsRepliedCount	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of individual emails replied to by the contact in the day.

ContactMonthlyMetric

Represents the monthly engagement metrics for a contact. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Inbox must be enabled.

Fields

Field	Details
AllCallsCallBackLater	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of calls in the month for this contact with the call result Call Back Later.
AllCallsLeftVoicemail	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of calls in the month for this contact with the call result Left Voicemail.

Field	Details
AllCallsMeaningfulConnect	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this contact with the call result Meaningful Connect.
AllCallsNotInterested	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this contact with the call result Not Interested.
AllCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this contact with no call result specified.
AllCallsUnqualified	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this contact with the call result Unqualified.
AllEmailsBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total of hard and soft bounced emails for this contact in the month. This is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of successfully delivered emails for this contact in the month. This is a calculated field.
AllEmailsDeliveredRate	Type percent Properties Filter, Nillable, Sort Description The percentage of tracked emails sent that were successfully delivered to this contact. Available in API version 54.0 and later. This field is a calculated field.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of hard bounced emails for this contact in the month.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that triggered an out of office reply for this contact in the month.
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact in the month. This is a calculated field.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails soft bounced for this contact in the month.

Field	Details
AllEmailsTrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with engagement tracking enabled in the month.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact without engagement tracking enabled in the month.
AllTotalCallsCount	Type int Properties Filter, Group, Nillable, Sort Description The total number of calls to this contact with all call results in the month. This is a calculated field.
ContactId	Type reference Properties Filter, Group, Sort Description The ID of the related contact. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of emails sent to this contact with hard bounce tracking. Available in API version 54.0 and later.
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with link click tracking. Available in API version 54.0 and later.
Month	Type date Properties Filter, Group, Sort Description The month in which the engagement occurred.
MonthInt	Type int Properties Filter, Group, idLookup, Sort Description The month in which the engagement occurred, in yyyyymm format.
OpenTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with open tracking. Available in API version 54.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with out-of-office tracking. Available in API version 54.0 and later.

Field	Details
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with reply tracking. Available in API version 54.0 and later.
SoftBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this contact with soft bounce tracking. Available in API version 54.0 and later.
TrackableSendHardBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with hard bounce tracking that hard bounced. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendLinkClickRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with link tracking that had link clicks. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with open tracking that were opened by the recipient. Available in API version 54.0 and later.

Field	Details
	This field is a calculated field.
TrackableSendOutOfOfficeRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with out-of-office tracking that received out-of-office replies. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with reply tracking that received replies. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this contact with soft bounce tracking that soft bounced. Available in API version 54.0 and later. This field is a calculated field.
UniqueEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails in which the contact clicked a link in the month.
UniqueEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of individual emails opened by the contact in the month.
UniqueEmailsRepliedCount	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of individual emails replied to by the contact in the month.

ContactPointAddress

Represents a contact's billing or shipping address, which is associated with an individual or person account. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActiveFromDate	Type date
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The date when the contact's address became active.
ActiveToDate	Type date
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The date when the contact's address is no longer active.
Address	Type address

Field	Details
	Properties Filter, Nillable Description The full address.
AddressFirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description First name associated with the address. The field is available only if the B2B Commerce license is enabled. This field is available in API version 57.0 and later.
AddressLastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Last name associated with the address. The field is available only if the B2B Commerce license is enabled. This field is available in API version 57.0 and later.
AddressMiddleName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Middle name associated with the address. The field is available only if the B2B Commerce license is enabled. This field is available in API version 57.0 and later.
AddressType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the type of address. Possible values are: • Billing

Field	Details
	Shipping
BestTimeToContactEndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The latest time to contact the individual.
BestTimeToContactStartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The earliest time to contact the individual.
BestTimeToContactTimezone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The time zone applied to the best time to contact the individual.
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address city.
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Company name associated with the address. The field is available only if the B2B Commerce license is enabled. This field is available in API version 57.0 and later.
ContactPointPhoneId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the primary phone number associated with this address. This is a relationship field. Relationship Name ContactPointPhone Relationship Type Lookup Refers To ContactPointPhone
Country	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address country.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The level of accuracy of a location's geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip

Field	Details
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's address is the preferred method of communication (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a contact's address is their primary address (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.

The default value is <code>false</code>. This field is available in API version 57.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last referenced a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Latitude	Type double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Longitude</code> to specify the precise geolocation of the address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Latitude</code> to specify the precise geolocation of the address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The name of the contact point address record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account's owner associated with this contact. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the contact's parent record. Only an individual or account can be a contact's parent. Because this is a master-detail relationship, users must have Edit access to the parent record to create or modify a Contact Point Address. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Master-detail Refers To Account, Individual
PhoneNumber	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number associated with the address. The field is available only if the B2B Commerce license is enabled. This field is available in API version 57.0 and later.
PostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address postal code.
PreferenceRank	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Preference rank when there are multiple contact point addresses.
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The address state.

Field	Details
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The address street.
UsageType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specify the usage type of this address. For instance, whether it's a work address or a home address. Possible values are: • Home • Inactive • Temporary • Work

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ContactPointAddressChangeEvent

Change events are available for the object.

ContactPointAddressHistory

History is available for tracked fields of the object.

ContactPointAddressShare

Sharing is available for the object.

ContactPointConsent

Represents a customer's consent to be contacted via a specific contact point, such as an email address or phone number. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

With certain page layout and field-level security settings, some fields aren't visible or editable.

Field	Details
BusinessBrandId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Business Brand that the individual has given consent to for a contact point. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name BusinessBrand Relationship Type Lookup Refers To BusinessBrand
CaptureContactPointType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Indicates how you captured consent. Possible values are: • Email • MailingAddress • Phone • Social • Web
CaptureDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Required. Date when consent was captured.
CaptureSource	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Indicates how you captured consent. For example, a website or online form.
ContactPointId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the contact point record through which the customer is consenting to be contacted. This is a polymorphic relationship field. Relationship Name ContactPoint Relationship Type Lookup Refers To ContactPointAddress, ContactPointEmail, ContactPointPhone
DataUsePurposeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the data use purpose record that you want to associate this consent with. This is a relationship field. Relationship Name DataUsePurpose Relationship Type Lookup Refers To DataUsePurpose
DoubleConsentCaptureDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date when double opt-in was captured.

Field	Details
EffectiveFrom	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date when consents starts.
EffectiveTo	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date when consent ends.
EngagementChannelTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the engagement channel record through which the customer is consenting to be contacted.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update
