`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`
You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Knowledge must be enabled in your org. This object respects field, entity, and record-level security. You must have at least “Read” permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there’s no online version, then security is applied based on the archived version, followed by the security of the draft version.

Fields

Field Name	Details
DataType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of data that is tracked in the history table. This field is available in API version 50.0 and later.
EventType	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description The type of event that is tracked in the history table.
FieldName	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Name of the tracked field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language that the article is written in, such as <code>French</code> or <code>Chinese (Traditional)</code> . Querying or searching articles in SOSL requires that you specify the <code>Language</code> field in the <code>WHERE</code> clause. The language must be the same for all article types.
NewValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
OldValue	Type anyType Properties Nillable, Sort Description The most recent value of the field before it was changed.
ParentId	Type reference Properties Filter, Group, Sort Description The ID of the article.

Field Name	Details
ParentObjectType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of object that contains the field.
VersionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID assigned to a version of the article. This is a polymorphic relationship field.
VersionNumber	Type int Properties Filter, Group, Sort Description The number assigned to a version of an article. This field is available in API version 24.0 and later.

Usage

Use this object to query events in the history of an article. For example, you can retrieve the number of edits a particular user has made to an article, how many times the article has been published, and so on.

KnowledgeArticleViewStat

Provides certain statistics related to the number of views for the specified article across all article types. The view count statistics are for published and archived articles only. View counts for draft articles aren't tracked. This object is read-only and available in API version 20.0 and later.

Knowledge__ViewStat is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published and archived versions of an article to retrieve its views. For more information on published and archived article versions, see the `PublishStatus` field in `KnowledgeArticleVersion`.

Fields

Field Name	Details
Channel	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The channel where the article is viewed: • <code>AllChannels</code> for article views across all channels. • <code>App</code> for the internal Salesforce Knowledge application. • <code>Pkb</code> for article views in the public knowledge base. • <code>Csp</code> for Customer Portal. • <code>Prm</code> for article view in partner portal.
NormalizedScore	Type double Properties Filter, Nillable, Sort Description Article's weighted views in the selected channel. The article with most views has a score of 100. Other article views are then calculated relative to this highest view score. For example, if the best read article has 2000 views and another has 1000. The first one gets a score of 100 while the second gets 50.
ParentId	Type reference Properties Filter, Group, Sort Description ID of the viewed article. This corresponds to a <code>KnowledgeArticle</code> record.
ViewCount	Type int Properties Filter, Group, Sort

Field Name	Details
	Description The number of unique views a published or archived article has received in the selected channel. An article with a high number of views may not always have a high normalized score. The normalized score for an article is calculated based on views over time, with more recent views earning a higher score. This field is available in API version 27.0 and later.

Usage

Use this object to query or retrieve certain statistics for article views.

Alternatively, client applications can use the article type `API__Name` followed by `__ViewStat` to query or retrieve most viewed articles from a specific article type.

SOQL Samples

The following SOQL clause uses `KnowledgeArticleViewStat` to query all the article views in Salesforce Knowledge and return the related articles:

```
SELECT Id, NormalizedScore, Parent.Id
FROM KnowledgeArticleViewStat where Channel = 'App'
ORDER BY NormalizedScore
```

Use the following clause to restrict your query to `Offer` articles for the `Offer` article type:

```
SELECT Id, NormalizedScore, Parent.Id
FROM Offer__ViewStat where Channel = 'App'
ORDER BY NormalizedScore
```

[KnowledgeArticleVoteStat](#)

KnowledgeArticleVoteStat

Provides the weighted rating for the specified article on a scale of 1 to 5 across all article types. This object is read-only and available in API version 20.0 and later.

`Knowledge__VoteStat` is derived from this object.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org. Users must have access to the published version of an article to retrieve its votes. For more information on published article version, see the `PublishStatus` field in `KnowledgeArticleVersion`.

Fields

Field Name	Details
<code>Channel</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The channel where the article is rated: • <code>AllChannels</code> for article views across all channels. • <code>App</code> for the internal Salesforce Knowledge application. • <code>Pkb</code> for article views in public knowledge base. • <code>Csp</code> for Customer Portal. • <code>Prm</code> for article view in partner portal.
<code>NormalizedScore</code>	Type double Properties Filter, Nillable, Sort Description Article's weighted score on a scale of 1 to 5. A higher score means more votes. Articles without recent votes trend towards an average rating of three stars.
<code>ParentId</code>	Type reference Properties Filter, Group, Sort Description The rated article. This corresponds to a <code>KnowledgeArticle</code> record.

Usage

Use this object to query or retrieve the rating for an article.

Alternatively, client applications can use the article type `API Name` followed by `__VoteStat` to query or retrieve the rating for an article for a specific article type.

SOQL Samples

See KnowledgeArticleViewStat.

LandingPage

Represents an Account Engagement landing page. A landing page is a web page that a visitor reaches after clicking a link or advertisement. Landing pages can be created in Account Engagement and synced to Salesforce or created on the Landing Page object in Account Engagement Lightning App. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set. To create, update, or delete a builder landing page, the Use Account Engagement Content Experience permission set is required.

Fields

Field Name	Details
CampaignId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related campaign.
ContentLastSaved	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The date and time of the last time someone changed and saved the landing page Name, Campaign, Content, IsHideFromSearchEngineIndex, or Vanity URL fields. This field is available in API version 53.0 and later.
ContentLastSavedById	Type reference Properties Filter, Group, Nillable, Sort Description The user who last changed and saved the Content body. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name ContentLastSaved Relationship Type Lookup Refers To User
FallbackUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The URL used to redirect viewers after the landing page is unpublished. This field is available in API version 54.0 and later.
FooterCode	Type textarea Properties Create, Nillable, Update Description <Script>, <style>, and <link> code added before the landing page's closing body tag. This field is available in API version 54.0 and later.
FormErrorRate	Type percent Properties Filter, Group, Sort

Field Name	Details
	Description The percentage of errors made on the landing page form. Calculated as total errors divided by total views.
FormSubmissionRate	Type percent Properties Filter, Nillable, Sort Description The percentage of form submissions based on the total number of landing page views.
HeaderCode	Type textarea Properties Create, Nillable, Update Description <Script>, <style>, and <link> code added to the head tag of the landing page. This field is available in API version 54.0 and later.
IsHideFromSearchEngineIndex	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the landing page is hidden from search engine indexing. The default value is <code>false</code> . This field is available in API version 53.0 and later.
LastPublished	Type dateTime Properties Filter, Nillable, Sort Description The date and time of the last time someone published the landing page. This field is available in API version 53.0 and later.
LastPublishedById	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The user who last published the landing page. This is a relationship field. This field is available in API version 53.0 and later. Relationship Name LastPublished Relationship Type Lookup Refers To User
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Indicates when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see LastReferencedDate) and not viewed. This field is available in API version 53.0 and later.
Name	Type string Properties Filter, Group, Sort Description The name of the landing page.
PublicLink	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The URL where the landing page is available. This field is available in API version 53.0 and later.
Source	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates where the landing page was created. The default value is <code>Salesforce</code> . This field is available in API version 53.0 and later.
Status	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the state of the landing page: <code>Draft</code> , <code>Published</code> , or <code>Published (Changes Pending)</code> . The default value is <code>Draft</code> . This field is available in API version 53.0 and later.
TotalFormErrors	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times a visitor or prospect enters an invalid email address or leaves a required field blank on a landing page form.
TotalFormSubmissions	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of times a form on the landing page has been submitted.
TotalTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort

Field Name	Details
	Description The number of times prospects clicked a link on the landing page's thank you page.
TotalViews	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times visitors and prospects viewed your landing page. This total includes multiple views from the same person.
UniqueFormErrors	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of individual visitors and prospects who made an error on the form. This metric doesn't include multiple errors from the same person.
UniqueFormSubmissions	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of individual visitors who submitted a form on the landing page. This metric doesn't include multiple submissions from the same person.
UniqueTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of times a prospect clicked a link on the landing page's thank you page. This metric doesn't include multiple clicks of the same link.
UniqueViews	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort

Field Name	Details
	Description The number of individual visitors and prospects who viewed your landing page. This metric doesn't include multiple views from the same person.
VanityUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The custom path that's appended to tracker domains to create a vanity URL. This field doesn't support scheme or domain values. This field is available in API version 53.0 and later.

Associated Objects

This object has the following associated objects. Unless otherwise noted, they're available in the same API version as this object.

[LandingPageChangeEvent](#) (API version 44.0)

Change events are available for the object.

[LandingPageFeed](#)

Feed tracking is available for the object.

Lead

Represents a prospect or lead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `merge()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceAssigneeId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the sales rep designated to work the lead through their assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
ActionCadenceId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the lead's assigned cadence. This field is available in API version 48.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
ActionCadenceState	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The state of the current action cadence tracker. This field is available in API version 50.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set. Possible values are: • Complete • Error • Initializing • Paused • Processing • Running
ActiveTrackerCount	Type int Properties Filter, Group, Nillable, Sort Description The number of cadences that are actively running on this lead. This field is available in API version 57.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.

Field	Details
ActivityMetricId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric. This field is a relationship field. This field is available in API version 41.0 and later. Relationship Name ActivityMetric Refers To ActivityMetric
ActivityMetricRollupId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup. This field is a relationship field. This field is available in API version 41.0 and later. Relationship Name ActivityMetricRollup Refers To ActivityMetricRollup
Address	Type address Properties Filter, Nillable Description The compound form of the address. Read-only. For details on compound address fields, see Address Compound Fields.
AnnualRevenue	Type currency Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Annual revenue for the lead's company.
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City for the lead's address.
CleanStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the record's clean status compared with Data.com. . Several values for <code>CleanStatus</code> appear with different labels on the lead record. Values include: - Acknowledged - Reviewed - Different - Inactive - Matched - In Sync - NotFound - Not Found - Pending - Not Compared - SelectMatch - Select Match Skipped
Company	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The lead's company. If person account record types have been enabled, and if the value of <code>Company</code> is null, the lead converts to a person account.
CompanyDunsNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The Data Universal Numbering System (D-U-N-S) number, which is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. Industries and companies use D-U-N-S numbers as a global standard for business identification and tracking. Maximum size is 9 characters. This field is only available to organizations that use Data.com Prospector or Data.com Clean.
ConvertedAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Object reference ID that points to the account into which the lead converted. This is a relationship field. Relationship Name ConvertedAccount Relationship Type Lookup Refers To Account
ConvertedContactId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Object reference ID that points to the contact into which the lead converted. This is a relationship field. Relationship Name ConvertedContact Relationship Type Lookup Refers To Contact
ConvertedDate	Type date Properties Create, Filter, Group, Nillable, Sort Description Date on which this lead was converted.

Field	Details
ConvertedOpportunityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Object reference ID that points to the opportunity into which the lead has been converted. This is a relationship field. Relationship Name ConvertedOpportunity Relationship Type Lookup Refers To Opportunity
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your org. This field is available when Salesforce to Salesforce is enabled.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that this record is shared with. This field is available Salesforce to Salesforce is enabled. In API version 16.0 and later, this value is <code>null</code>. Use PartnerNetworkRecordConnection object to forward records to connections.
Country	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The lead's country.
CountryCode	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the lead's address.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
DandBCompanyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Reference ID to a Dun & Bradstreet® company record, associated with an account added from Data.com. Relationship Name DandbCompany Refers To DandbCompany
Description	Type textarea Properties Create, Nillable, Update Description The lead's description.
Division	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as North America, Healthcare, or Consulting. Available only when the Division permission is enabled.

Field	Details
Email	Type email Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The lead's email address.
EmailBouncedDate	Type dateTime Properties Filter, Nillable, Sort, Update Description If bounce management is activated and an email sent to the lead bounced, the date and time of the bounce. Email bounce functionality isn't triggered by record updates, including updates to this field.
EmailBouncedReason	Type string Properties Filter, Group, Nillable, Sort, Update Description If bounce management is activated and an email sent to the lead bounced, the reason for the bounce. Email bounce functionality isn't triggered by record updates, including updates to this field.
ExportStatus	Type picklist Properties Filter, Restricted picklist, Sort Description Derived field for the record map for Partner Connect. The export status of this opportunity to the partner's connected org. To see this field, enable Partner Connect and add the Export Vendor Records to an Authorized Partner Org user permission to the cosell export user. See Set Up Partner Connect as a Vendor in <i>Salesforce Help</i>. Available in API version 62.0 and later.
Fax	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The lead's fax number.

Field	Details
FirstCallDateTime	Type datetime Properties Filter, Nillable, Sort Description The date and time of the first call placed to the lead. This field is available in API version 48.0 when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
FirstEmailDateTime	Type datetime Properties Filter, Nillable, Sort Description The date and time of the first email sent to the lead. This field is available in API version 48.0 when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
FirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The lead's first name up to 40 characters.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
GenderIdentity	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The lead's internal experience of their gender, which may or may not correspond to their designated sex at birth.

Field	Details
HasOptedOutOfEmail	Type boolean Properties Create, Defaulted on create, Filter, Update Description Indicates whether the lead doesn't want to receive email from Salesforce (<code>true</code>) or does (<code>false</code>). Label is Email Opt Out.
HasOptedOutOfFax	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the lead doesn't want to receive faxes from Salesforce (<code>true</code>) or does (<code>false</code>). Label is FaxOpt Out.
IndividualId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the data privacy record associated with this lead. This field is available if you enabled Data Protection and Privacy in Setup. Relationship Name Individual Relationship Type Lookup Refers To Individual
Industry	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Industry in which the lead works.
IsConverted	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the lead has been converted (<code>true</code>) or not (<code>false</code>). Label is Converted.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsPriorityRecord	Type boolean Properties Defaulted on create, Group Description Shows whether the user has marked the lead as important (<code>True</code>) or not (<code>False</code>). The default value is <code>false</code>. Available in API version 59.0 and later.
IsUnreadByOwner	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If true, lead has been assigned, but not yet viewed. See Unread Leads for more information. Label is Unread By Owner.
Jigsaw	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description References the ID of a contact in Data.com. If a lead has a value in this field, it means that a contact was imported as a lead from Data.com. If the contact (converted to a lead) wasn't imported from Data.com, the field value is null. Maximum size is 20 characters. Available in API version 22.0 and later. Label is Data.com Key.  Important: The <code>Jigsaw</code> field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the <code>Jigsaw</code> field.
JigsawContactId	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The ID of the contact in reference to Jigsaw.  Important: The Jigsaw field is exposed in the API to support troubleshooting for import errors and reimporting of corrected data. Don't modify the value in the Jigsaw field.
LastActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Value is the most recent of either: • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
LastName	Type string Properties Create, Filter, Group, Sort, Update Description Required. Last name of the lead up to 80 characters.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.

Field	Details
Latitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations
LeadSource	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The origin or source of the lead.
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
MasterRecordId	Type reference Properties Filter, Group, Nillable, Sort Description If this record was deleted as the result of a merge, this field contains the ID of the record that was kept. If this record was deleted for any other reason, or hasn't been deleted, the value is <code>null</code>. When using Apex triggers to determine which record was deleted in a merge event, this field's value is the ID of the record that remains in <code>Trigger.old</code>. In <code>Trigger.new</code>, the value is <code>null</code>. This is a relationship field. Relationship Name MasterRecord Relationship Type Lookup

Field	Details
	Refers To Lead
MiddleName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The lead's middle name. Maximum size is 40 characters.
MobilePhone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The lead's mobile phone number.
Name	Type string Properties Filter, Group, Sort Description Concatenation of <code>FirstName</code> , <code>MiddleName</code> , <code>LastName</code> , and <code>Suffix</code> up to 203 characters, including whitespaces.
NumberOfEmployees	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of employees at the lead's company. Label is Employees .
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the lead's owner. This is a polymorphic relationship field. Relationship Name Owner

Field	Details
	Relationship Type Lookup
	Refers To Group, User
PartnerAccountId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description ID of the partner account for the partner user that owns this lead. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses. In API version 16.0 and later, the <code>Partner Account</code> field is set to the appropriate account for the partner user that owns the lead. If the owner of the lead isn't a partner user, this field has no value.
Phone	Type phone
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The lead's phone number.
PhotoUrl	Type url
	Properties Filter, Group, Nillable, Sort
	Description Path to be combined with the URL of a Salesforce instance (<i>Example:</i> <code>https://yourInstance.salesforce.com/</code>) to generate a URL to request the social network profile image associated with the lead. Generated URL returns an HTTP redirect (code 302) to the social network profile image for the lead.
PostalCode	Type string
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Postal code for the address of the lead. Label is Zip/Postal Code .

Field	Details
Pronouns	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The lead's personal pronouns, reflecting their gender identity. Others can use these pronouns to refer to the lead in the third person. The entry is selected from a picklist of available values, which the administrator sets. Maximum 40 characters. Possible values are: • He/Him • He/They • Not Listed • She/Her • She/They • They/Them
Rating	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Rating of the lead.
RecordTypeId	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to this object.
Salutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Salutation for the lead.
ScheduledResumeDateTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date and time when the action cadence tracker is going to resume after it's paused or on a wait step. This field is available in API version 54.0 and later when the Sales Engagement license is enabled. To see this field, the user also needs the Sales Engagement User or Sales Engagement Quick Cadence Creator user permission set.
ScoreIntelligenceId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the intelligent field record that contains lead score.
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State for the address of the lead.
StateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO state code for the lead's address.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Status code for this converted lead. Status codes are defined in <code>Status</code> and represented in the API by the <code>LeadStatus</code> object.
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street number and name for the address of the lead.

Field	Details
Suffix	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The lead's name suffix. Maximum size is 40 characters.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Title for the lead, such as CFO or CEO. The maximum size is 128 characters. When converting a lead to a person account, the conversion fails if the lead Title field contains more than 80 characters.
Website	Type url Properties Create, Filter, Group, Nillable, Sort, Update Description Website for the lead.

Note: When importing lead data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

Converted Leads

Leads have a special state to indicate that they've been converted into an account, a contact, and an opportunity. Your client application can convert leads via the `convertLead()` call. Users can also convert leads in Salesforce. After a lead has been converted, it's read only. However, you can query converted lead records. Only users with the View and Edit Converted Leads permission can update converted lead records.

Leads have several fields that indicate their converted status. These special fields are set when converting the lead in the user interface.

- `ConvertedAccountId`
- `ConvertedContactId`
- `ConvertedDate`
- `ConvertedOpportunityId`
- `IsConverted`
- `Status`

Unread Leads

Leads have a special state to indicate that they haven't been viewed or edited by the lead owner. In Salesforce, it's helpful for users to know which leads have been assigned to them but that they haven't touched yet. `IsUnreadByOwner` is `true` if the lead owner hasn't yet viewed or edited the lead, and `false` if the lead owner has viewed or edited the lead at least one time.

Lead Status Picklist

Each `Status` value corresponds to either a converted or unconverted status in the lead status picklist, as defined in the user interface. To obtain the lead status values in the picklist, a client application can query `LeadStatus`.

You can't convert a lead via the API by changing `Status` to one of the converted lead status values. When you convert qualified leads into an account, contact, and opportunity, you can select one of the converted status types for the lead. Leads with a converted status type are no longer available in the Leads tab, although you can include them in reports.

Usage

If lead data is imported and you need to set the value for an audit field, such as `CreatedDate`, contact Salesforce Support. Audit fields are automatically updated during API operations unless you request to set these fields yourself.

To update a lead or to convert one with `convertLead()`, log in to your client application with the Edit permission on leads.

When you create, update, or upsert a lead, your client application can have the lead assigned to multiple user records based on assignment rules that have been configured in Salesforce.

To use this feature, your client application needs to set either of these options (but not both) in the `AssignmentRuleHeader` used in create or update:

Field	Field Type	Details
<code>assignmentRuleId</code>	reference	ID of the assignment rule to use. Can be an inactive assignment rule. If unspecified and <code>useDefaultRule</code> is <code>true</code> , then the default assignment rule is used. To find the ID for a given assignment rule, query the <code>AssignmentRule</code> object (specifying <code>RuleType="leadAssignment"</code>), iterate through the returned <code>AssignmentRule</code> records, find the one you want to use, retrieve its ID, and then specify its ID in this field in the <code>AssignmentRuleHeader</code> .
<code>useDefaultRule</code>	boolean	Specifies whether to use the default rule for rule-based assignment (<code>true</code>) or not (<code>false</code>). Default rules are assigned in the user interface.

Java Sample

The following Java sample shows how to automatically assign a newly created lead.

```
package wsc;

import com.sforce.soap.enterprise.Connector;
import com.sforce.soap.enterprise.EnterpriseConnection;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;
import com.sforce.soap.enterprise.sobject.Lead;
```

```
import com.sforce.soap.enterprise.QueryResult;
import com.sforce.soap.enterprise.SaveResult;
import com.sforce.soap.enterprise.sobject.SObject;

public class LeadAssignment {

    static final String USERNAME = "REPLACE USER NAME";
    static final String PASSWORD = "REPLACE PASSWORD";
    static EnterpriseConnection connection;

    static LeadAssignment _leadAssignment;

    // Main
    public static void main(String[] args)
    {
        // Establish connection and login
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);
        try {
            connection = Connector.newConnection(config);
            System.out.println("Logged in, endpoint: " + config.getAuthEndpoint());
        } catch (ConnectionException e1) {
            e1.printStackTrace();
        }

        // Create lead
        _leadAssignment = new LeadAssignment();
        try {
            _leadAssignment.CreateLead();
        } catch (Exception e) {
            e.printStackTrace();
        }

        // Logout
        try {
            connection.logout();
            System.out.println("Logged out");
        } catch (ConnectionException ce) {
            ce.printStackTrace();
        }
    }

    public void CreateLead() throws ConnectionException
    {
        // Create a new Lead and assign various properties
        Lead lead = new Lead();

        lead.setFirstName("Joe");
        lead.setLastName("Smith");
        lead.setCompany("ABC Corporation");
        lead.setLeadSource("API");
        // The lead assignment rule will assign any new leads that
        // have "API" as the LeadSource to a particular user
    }
}
```

```

// In this sample we will look for a particular rule and if found
// use the id for the lead assignment. If it is not found we will
// instruct the call to use the current default rule. You can't use
// both of these values together.
QueryResult qr = connection.query("SELECT Id FROM AssignmentRule WHERE Name = " +

                                "'Mass Mail Campaign' AND SubjectType = 'Lead'");
if (qr.getSize() == 0) {
    connection.setAssignmentRuleHeader(null, true);
} else {
    connection.setAssignmentRuleHeader(qr.getRecords()[0].getId(), false);
}

// Every operation that results in a new or updated lead will
// use the specified rule until the header is removed from the
// connection.
SaveResult[] sr = connection.create(new SObject[] {lead});
for (int i=0;i<sr.length;i++) {
    if (sr[i].isSuccess()) {
        System.out.println("Successfully created lead with id of: " +
                           sr[i].getId() + ".");
    } else {
        System.out.println("Error creating lead: " +
                           sr[i].getErrors()[0].getMessage());
    }
}

// This call effectively removes the header, the next lead will
// be assigned to the default lead owner.
connection.clearAssignmentRuleHeader();
}
}

```

C# Sample

The following C# sample shows how to automatically assign a newly created lead.

```

using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.ServiceModel;
using LeadSample.sforce;

namespace LeadSample
{
    class LeadAssignment
    {
        private static SoapClient client;
        private static SoapClient apiClient;
        private static SessionHeader header;
        private static LoginResult loginResult;
    }
}

```

```

private static readonly string Username = "REPLACE USERNAME";
private static readonly string Password = "REPLACE PASSWORD AND SECURITY TOKEN";

// Create the proxy binding and login
private LeadAssignment()
{
    client = new SoapClient();

    try
    {
        loginResult = client.login(null, Username, Password);
    }
    catch (Exception e)
    {
        Console.WriteLine("Unexpected login error: " + e.Message);
        Console.WriteLine(e.StackTrace);
        return;
    }

    // Access API endpoint and create new client
    header = new SessionHeader();
    header.sessionId = loginResult.sessionId;
    apiClient = new SoapClient("Soap", loginResult.serverUrl);
}

[STAThread]
static void Main(string[] args)
{

LeadCleanInfo

Stores the metadata Data.com Clean uses to determine a lead record's clean status. Helps you automate the cleaning or related processing of lead records.

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers' needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see [Data.com Prospector and Clean Retirement](#).

Lead Clean Info provides a snapshot of the data in your Salesforce lead record and its matched Data.com record at the time the Salesforce record was cleaned.

Lead Clean Info includes a number of bit vector fields, whose component fields each correspond to individual object fields and provide related data or status information about those fields. For example, the bit vector field `IsDifferent` has an `IsDifferentTitle` field. If the `IsDifferentTitle` field's value is `False`, that means the `Title` field value is *the same* on the Salesforce lead record and its matched Data.com record.

LeadCleanInfo bit vector fields include:

- `CleanedBy` indicates who (a user) or what (a Clean job) cleaned the lead record.
- `IsDifferent` indicates whether or not a field on the lead record has a value that differs from the corresponding field on the matched Data.com record.
- `IsFlaggedWrong` indicates whether or not a field on the lead record has a value that is flagged as wrong to Data.com.
- `IsReviewed` indicates whether or not a field on the lead record is in a `Reviewed` state, which means that the value was reviewed but not accepted..

Their individual bits are defined here

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Address	Type address Properties Filter, Nillable Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
AnnualRevenue	Type currency Properties Filter, Nillable, Sort Description Estimated annual revenue of the lead.
City	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Details for the billing address of the lead.
CleanedByJob	Type boolean Properties Filter Description Indicates whether the lead record was cleaned by a Data.com Clean job (<code>true</code>) or not (<code>false</code>).
CleanedByUser	Type boolean Properties Filter Description Indicates whether the lead record was cleaned by a Salesforce user (<code>true</code>) or not (<code>false</code>).
CompanyDunsNumber	Type string Properties Filter, Group, Nillable, Sort Description The Data Universal Numbering System (D-U-N-S) number is a unique, nine-digit number assigned to every business location in the Dun & Bradstreet database that has a unique, separate, and distinct operation. D-U-N-S numbers are used by industries and organizations around the world as a global standard for business identification and tracking.
CompanyName	Type string Properties Filter, Group, Nillable, Sort Description The name of the company.
ContactStatusDataDotCom	Type picklist Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The status of the contact associated with the lead per Data.com. Values are: Contact is Active per Data.com, Phone is Wrong per Data.com , Email is Wrong per Data.com, Phone and Email are Wrong per Data.com, Contact Not at Company per Data.com, Contact is Inactive per Data.com, Company this contact belongs to is out of business per Data.com, Company this contact belongs to never existed per Data.com or Email address is invalid per Data.com.
Country	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the lead.
DandBCompanyDunsNumber	Type string Properties Filter, Group, Nillable, Sort Description The D-U-N-S Number on the D&B Company record (if any) that is linked to the lead.
DataDotComCompanyId	Type string Properties Filter, Group, Nillable, Sort Description The ID Data.com maintains for the company associated with the lead.
DataDotComId	Type string Properties Filter, Group, Nillable, Sort Description The ID Data.com maintains for the contact associated with the lead.
Email	Type email

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The lead's email address.
FirstName	Type string Properties Filter, Group, Nillable, Sort Description The lead's first name.
Industry	Type picklist Properties Filter, Group, Nillable, Sort Description The industry the lead belongs to.
IsDifferentAnnualRevenue	Type boolean Properties Filter Description Indicates whether the lead's <code>AnnualRevenue</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
IsDifferentCity	Type boolean Properties Filter Description Indicates whether the lead's <code>City</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
IsDifferentCompanyDunsNumber	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the lead's <code>Company D-U-N-S Number</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentCompanyName</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>Company Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentCountry</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>Country</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentCountryCode</code>	Type boolean Properties Filter Description Indicates whether the account's <code>Country Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentDandBCompanyDunsNumber</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>D&B Company D-U-N-S Number</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentEmail</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the lead's <code>Email</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentFirstName</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>First Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentIndustry</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>Industry</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentLastName</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>Last Name</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentNumberOfEmployees</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>No. of Employees</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentPhone</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the lead's <code>Phone</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentPostalCode</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>Postal Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentState</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>State</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentStateCode</code>	Type boolean Properties Filter Description Indicates whether the account's <code>State Code</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentStreet</code>	Type boolean Properties Filter Description Indicates whether the lead's <code>Street</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsDifferentTitle</code>	Type boolean Properties Filter

Field Name	Details
	Description Indicates whether the lead's <code>Title</code> field value is different from the corresponding value on its matched Data.com record (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongAddress</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Address</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongAnnualRevenue</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Annual Revenue</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongCompanyDunsNumber</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Company D-U-N-S Number</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongCompanyName</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Company Name</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongEmail</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the lead's <code>Email</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongIndustry</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Industry</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongName</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Name</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongNumberOfEmployees</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>No. of Employees</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongPhone</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Phone</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsFlaggedWrongTitle</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the lead's <code>Title</code> field value is flagged as wrong to Data.com (<code>true</code>) or not (<code>false</code>).
<code>IsInactive</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the lead has been reported to Data.com as <i>Inactive</i> (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedAddress</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Address</code> field value is in a <i>Reviewed</i> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedAnnualRevenue</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Annual Revenue</code> field value is in a <i>Reviewed</i> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedCompanyDunsNumber</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Company D-U-N-S Number</code> field value is in a <i>Reviewed</i> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedCompanyName</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the lead's <code>Company Name</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedDandBCompanyDunsNumber</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>D&B Company D-U-N-S Number</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedEmail</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Email</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedIndustry</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Industry</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedName</code>	Type boolean Properties Filter, Update Description Indicates whether the lead's <code>Name</code> field value is in a <code>Reviewed</code> state (<code>true</code>) or not (<code>false</code>).
<code>IsReviewedNumberOfEmployees</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Indicates whether the lead's No. of Employees field value is in a Reviewed state (true) or not (false).
IsReviewedPhone	Type boolean Properties Filter, Update Description Indicates whether the lead's Phone field value is in a Reviewed state (true) or not (false).
IsReviewedTitle	Type boolean Properties Filter, Update Description Indicates whether the lead's Title field value is in a Reviewed state (true) or not (false).
LastMatchedDate	Type dateTime Properties Filter, Sort Description The date the lead record was last matched and linked to a Data.com record.
LastName	Type string Properties Filter, Group, Nillable, Sort Description The lead's last name.
LastStatusChangedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of who or what last changed the record's Clean Status field value: a Salesforce user or a Clean job.

Field Name	Details
LastStatusChangedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record's <code>Clean Status</code> field value was last changed.
Latitude	Type double Properties Filter, Nillable, Sort Description Used with <code>Longitude</code> to specify the precise geolocation of a billing address. Data not currently provided.
LeadId	Type reference Properties Filter, Group, Sort Description The unique, system-generated ID assigned when the lead record was created.
Longitude	Type double Properties Filter, Nillable, Sort Description Used with <code>Latitude</code> to specify the precise geolocation of a billing address. Data not currently provided.
Name	Type string Properties Filter, Group, Sort, Update Description Field label is Lead Clean Info Name. The name of the lead. Maximum size is 255 characters.
NumberOfEmployees	Type int Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The number of employees working at the lead.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number for the lead.
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the lead.
State	Type string Properties Filter, Group, Nillable, Sort Description Details for the billing address of the lead.
Street	Type textarea Properties Filter, Group, Nillable, Sort Description Details for the billing address of the lead.
Title	Type string Properties Filter, Group, Nillable, Sort Description The lead's title.

Usage

Developers can create triggers that read the Lead Clean Info fields to help automate the cleaning or related processing of lead records.

LeadDailyMetric

Represents the daily engagement metrics for a lead. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Inbox must be enabled.

Fields

Field	Details
<code>AllCallsCallBackLater</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this lead with the call result Call Back Later.
<code>AllCallsLeftVoicemail</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this lead with the call result Left Voicemail.
<code>AllCallsMeaningfulConnect</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this lead with the call result Meaningful Connect.
<code>AllCallsNotInterested</code>	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this lead with the call result Not Interested.

Field	Details
AllCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this lead with no call result specified.
AllCallsUnqualified	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the day for this lead with the call result Unqualified.
AllEmailsBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total of hard and soft bounced emails for this lead in the day. This is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of successfully delivered emails for this lead in the day. This is a calculated field.
AllEmailsDeliveredRate	Type percent Properties Filter, Nillable, Sort Description The percentage of tracked emails sent that were successfully delivered to this lead. This field is a calculated field. Available in API version 54.0 and later.
AllEmailsHardBouncedCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of hard bounced emails for this lead in the day.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that triggered an out of office reply for this lead in the day.
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead in the day. This is a calculated field.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails soft bounced for this lead in the day.
AllEmailsTrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with engagement tracking enabled in the day.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead without engagement tracking enabled in the day.

Field	Details
AllTotalCallsCount	Type int Properties Filter, Group, Nillable, Sort Description The total number of calls to this lead with all call results in the day. This is a calculated field.
DailyCutOffTimeStamp	Type dateTime Properties Filter, Sort Description The time of day when each 24-hour metrics period starts and ends.
Date	Type date Properties Filter, Group, Sort Description The date on which the engagement occurred.
DateInt	Type int Properties Filter, Group, idLookup, Sort Description The date on which the engagement occurred, in yyymmdd format.
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with hard bounce tracking. Available in API version 54.0 and later.
InboundEngagementsCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of inbound engagements for this lead in the day. This field is a calculated field. The value is the sum of UniqueEmailsOpenedCount, UniqueEmailsRepliedCount, and UniqueEmailsLinkClickedCount. Available in API version 58.0 and later.
LeadId	Type reference Properties Filter, Group, Sort Description The ID of the related lead. This is a relationship field. Relationship Name Lead Relationship Type Lookup Refers To Lead
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with link click tracking. Available in API version 54.0 and later.
OpenTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with open tracking. Available in API version 54.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of emails sent to this lead with out-of-office tracking. Available in API version 54.0 and later.
OutboundEngagementsCount	Type int Properties Filter, Group, Nillable, Sort Description The number of outbound engagements for this lead in the day. This field is a calculated field. The value is the sum of AllTotalCallsCount and AllEmailsDeliveredCount. Available in API version 58.0 and later.
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with reply tracking. Available in API version 54.0 and later.
SoftBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with soft bounce tracking. Available in API version 54.0 and later.
TrackableSendHardBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with hard bounce tracking that hard bounced. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendLinkClickRate	Type percent

Field	Details
	Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with link tracking that had link clicks. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with open tracking that were opened by the recipient. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendOutOfOfficeRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with out-of-office tracking that received out-of-office replies. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with reply tracking that received replies. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with soft bounce tracking that soft bounced. This field is a calculated field.

Field	Details
	Available in API version 54.0 and later.
UniqueEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails in which the lead clicked a link in the day.
UniqueEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails opened by the lead in the day.
UniqueEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails replied to by the lead in the day.

LeadMonthlyMetric

Represents the monthly engagement metrics for a lead. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Inbox must be enabled.

Fields

Field	Details
AllCallsCallBackLater	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this lead with the call result Call Back Later.
AllCallsLeftVoicemail	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this lead with the call result Left Voicemail.
AllCallsMeaningfulConnect	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this lead with the call result Meaningful Connect.
AllCallsNotInterested	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this lead with the call result Not Interested.
AllCallsUncategorized	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this lead with no call result specified.
AllCallsUnqualified	Type int Properties Filter, Group, Nillable, Sort Description The number of calls in the month for this lead with the call result Unqualified.
AllEmailsBouncedCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The total of hard and soft bounced emails for this lead in the month. This is a calculated field.
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of successfully delivered emails for this lead in the month. This is a calculated field.
AllEmailsDeliveredRate	Type percent Properties Filter, Nillable, Sort Description The percentage of tracked emails sent that were successfully delivered to this lead. This field is a calculated field. This is a calculated field. Available in API version 54.0 and later.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of hard bounced emails for this lead in the month.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails that triggered an out of office reply for this lead in the month.
AllEmailsSentCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead in the month. This is a calculated field.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails soft bounced for this lead in the month.
AllEmailsTrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with engagement tracking enabled in the month.
AllEmailsUntrackedSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead without engagement tracking enabled in the month.
AllTotalCallsCount	Type int Properties Filter, Group, Nillable, Sort Description The total number of calls to this lead with all call results in the month. This is a calculated field.
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with hard bounce tracking.

Field	Details
	Available in API version 54.0 and later.
LeadId	Type reference Properties Filter, Group, Sort Description The ID of the related lead. This is a relationship field. Relationship Name Lead Relationship Type Lookup Refers To Lead
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with link click tracking. Available in API version 54.0 and later.
Month	Type date Properties Filter, Group, Sort Description The month in which the engagement occurred.
MonthInt	Type int Properties Filter, Group, idLookup, Sort Description The month in which the engagement occurred, in yyyy-mm format.
OpenTrackableSends	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with open tracking. Available in API version 54.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with out-of-office tracking. Available in API version 54.0 and later.
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with reply tracking. Available in API version 54.0 and later.
SoftBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of emails sent to this lead with soft bounce tracking. Available in API version 54.0 and later.
TrackableSendHardBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with hard bounce tracking that hard bounced. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendLinkClickRate	Type percent

Field	Details
	Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with link tracking that had link clicks. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with open tracking that were opened by the recipient. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendOutOfOfficeRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with out-of-office tracking that received out-of-office replies. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with reply tracking that received replies. This field is a calculated field. Available in API version 54.0 and later.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of emails sent to this lead with soft bounce tracking that soft bounced. This field is a calculated field.

Field	Details
	Available in API version 54.0 and later.
UniqueEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails in which the lead clicked a link in the month.
UniqueEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails opened by the lead in the month.
UniqueEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of individual emails replied to by the lead in the month.

LeadOwnerSharingRule

Represents the rules for sharing a lead with users other than the owner.

 **Note:** To enable access to this object, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group. Leads owned by users in the source group trigger the rule to give access.
LeadAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit
Name	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the target user or group. The target user or group is being given access.

Usage

Use these objects to manage the sharing rules for leads. General sharing and Territory-related sharing use this object.

SEE ALSO:

[Lead](#)

[LeadShare](#)

[LeadStatus](#)

[Metadata API Developer Guide: SharingRules](#)

LeadShare

Represents a sharing entry on a Lead.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Lead object can access this object.

Fields

The properties available for some fields depend on the default org-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
LeadAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the Lead. The possible values are: • Read • Edit • All This value is not valid when creating or updating these records. This field must be set to an access level that is higher than the organization's default access level for leads.
LeadId	Type reference Properties Create, Filter, Group, Sort Description ID of the Lead associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Lead Relationship Type Lookup Refers To Lead
RowCause	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Values include: • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the Lead with them. • <code>Owner</code>—The User is the owner of the Lead. • <code>Rule</code>—The User or Group has access via a Lead sharing rule. • <code>GuestRule</code>—The User or Group has access via a Lead guest user sharing rule. • <code>ImpImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. • <code>ARImplicit</code>—The User, who belongs to a partner or customer account, has access to the Lead via an account relationship data sharing rule.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the Lead. This field can't be updated. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit leads owned by other users.

If you attempt to create a record that matches an existing record, the existing record is returned.

- [Case](#)
- [CaseShare](#)
- [OpportunityShare](#)

LeadStatus

Represents the status of a Lead record, such as Open, Qualified, or Converted.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object’s name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
IsConverted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this lead status value represents a converted lead (<code>true</code>) or not (<code>false</code>). Multiple lead status values can represent a converted lead.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether this is the default lead status value (<code>true</code>) or not (<code>false</code>) in the picklist.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Label for this lead status value. This display value is the internal label that does not get translated.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description Number used to sort this value in the lead status picklist. These numbers are not guaranteed to be sequential, as some previous lead status values might have been deleted.

Usage

This object represents a value in the lead status picklist (see [Lead](#) on page 3068). The lead status picklist provides additional information about the status of a [Lead](#) on page 3068, such as whether a given status value represents a converted [Lead](#) on page 3068. Query this object to retrieve the set of values in the lead status picklist, and then use that information while processing [Lead](#) on page 3068 objects to determine more information about a given lead. For example, the application could test whether a given lead is converted based on its Status value and the value of the `IsConverted` property in the associated LeadStatus record.

[LeadOwnerSharingRule](#)

[LeadShare](#)

LeadTag

Associates a word or short phrase with a Lead.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

LeadTag stores the relationship between its parent TagDefinition and the Lead being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

LearningContent

Represents a Trailhead or enablement site (myTrailhead) module assigned to a user in Workforce Engagement or Learning Paths. This object also represents a Trailhead module or video in an Enablement program exercise. This object is available in API version 54.0 and later.

Supported Calls

`describeObjects()`, `query()`

Special Access Rules

- The org must have a Workforce Engagement license.
- The user must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.
- For an enablement site (myTrailhead) module, the org must have a Sales Enablement license.
- For a Trailhead module or video in an Enablement program, the org must have an Enablement license.

Fields

Field	Details
ApiName	Type string Properties Filter, Group, Nillable Description The module's human-readable API name, such as <code>pure-aloe-sales-strategies</code> .
AvailablePointCount	Type int Properties Group, Nillable Description The maximum points that a user can earn on their profile by completing the module. This value is the sum of points that the content creator assigns to the module's units.
ContainsAssessmentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist

Field	Details
	Description Specifies the type of assessment that the content's units include. Possible values are: • <code>MultipleChoiceQuiz</code>—All the content's units have multiple-choice quizzes. • <code>HandsOnChallenge</code>—At least one unit has a hands-on challenge.
ContentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist Description The type of content assigned to the user. Possible values are: • <code>All</code>—The content is any supported type. • <code>Module</code>—The content is a Trailhead or enablement site (myTrailhead) module. • <code>VideoLesson</code>—The content is a video that's specified in the Enablement workspace in Digital Experiences and is used in an Enablement program.
ContentUrl	Type url Properties Group, Nillable Description The absolute URL to the content, such as https://purplemy.trailhead.com/en/content/sales-team-enablement/modules/purple-sales-strategies
Description	Type string Properties Nillable Description The module's description.
DurationCount	Type int Properties Group, Nillable Description The total time, in minutes, for a learner to complete all units in the module. This value is the sum of the estimated times that the content creator assigns to the module's units.

Field	Details
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description The GUID that Trailhead uses to reference the module.
ImageUrl	Type url Properties Group, Nillable Description The absolute URL to the module's badge art image file.
IsPublic	Type boolean Properties Defaulted on create, Filter, Group Description Indicates whether the content is public Trailhead content (<code>true</code>) or private enablement site (myTrailhead) content (<code>false</code>). The default value is <code>false</code>.
Title	Type string Properties Filter, Group, Nillable, Sort Description The module's title.

[PersonTraining](#)

LearningItem

Represents an item that requires users to take action, including a Learning Paths entry, an Enablement program, or an exercise with linked content in an Enablement program. For Learning Paths, users are assigned a learning item to complete. For Enablement programs and exercises, users are assigned a program or can self-enroll in shared programs. This object is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
CustomLearningItemId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of a learning item type record if this learning item represents a custom exercise type in an Enablement program. This field is required when the <code>Type</code> field's value is <code>CustomContent</code>. This field is a relationship field. Available in API version 62.0 and later. Relationship Name CustomLearningItemType Relationship Type Lookup Refers To LearningItemType
EnablementProgramId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of an Enablement program that contains the outcome, milestone, or exercise. This field is a relationship field.

Field	Details
	Relationship Name EnablementProgram Relationship Type Lookup Refers To EnablementProgram
LearningContentId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the record that represents a Trailhead module or video in a sales program exercise. This field is a relationship field. Relationship Name LearningContent Refers To LearningContent
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the owner of the program. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
StandardCustomContentMetadata	Type textarea Properties Nillable Description Reserved for future use.
StandardCustomLearningItemType	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description Reserved for future use.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of learning item. Possible values are: • CustomContent—Custom exercise content in an Enablement program, such as a screen flow, content from external repositories, or other custom content sources. Available in API version 62.0 and later. • EnablementProgram • LearningContent—Trailhead module • LearningLesson—Lesson exercise in an Enablement program • LearningLink—Audio Recording, Document, Scheduled Event, or Other exercise in an Enablement program • LearningPractice—Feedback Request exercise in an Enablement program • StandardCustomContent—Standard Custom exercise content in an Enablement program. Reserved for future use.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LearningItemOwnerSharingRule on page 65 (API version 60.0)

Sharing rules are available for the object.

LearningItemShare on page 67 (API version 60.0)

Sharing is available for the object.

LearningItemAssignment

Represents the assignment of a Learning Paths entry to users or groups or the enrollment of an Enablement program for a specific user. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
AssigneeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user or group assigned to the learning item. This field is a relationship field. Relationship Name Assignee Relationship Type Lookup Refers To User
AssignmentStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of assigning an Enablement program to a user. Possible values are: • Failed • InProgress • Succeeded
DueDate	Type date Properties Filter, Group, Nillable, Sort

Field	Details
	Description The date that the assignment is due for the user or group.
EnrollmentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of enrollment for a user in an Enablement program. Possible values are: - Assigned - SelfEnrolled
IsOverdue	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the assigned learning item is overdue (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> . This field is a calculated field.
LearningItemId	Type reference Properties Create, Filter, Group, Sort Description The ID of the learning item. This field is a relationship field. Relationship Name LearningItem Relationship Type Lookup Refers To LearningItem
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort Description ID of the user who assigned the learning item. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
ProgressId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of record that represents a user's progress towards completing an assigned learning item, such as a Learning Paths entry or sales program. This field is a relationship field.
	Relationship Name Progress
	Refers To LearningItemProgress
StartDate	Type date
	Properties Create, Filter, Group, Nillable, Sort
	Description The date that the learning item was assigned to the user or group.

Usage

You can assign a learning item to a user programmatically by querying the program and user, and then inserting a record into LearningItemAssignment.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[LearningItemAssignmentOwnerSharingRule](#) on page 65 (API version 60.0)

Sharing rules are available for the object.

[LearningItemAssignmentShare](#) on page 67 (API version 60.0)

Sharing is available for the object.

LearningItemProgress

Represents the progress that a user has made towards completing an assigned learning item, such as a Learning Paths entry or Enablement program. This object is available in API version 60.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- For partner users who take Partner Enablement programs, the Take Partner Enablement Programs permission is required. This permission is enabled by default as part of the Use Partner Enablement Programs permission set, which comes with the Enablement add-on license. Partner Enablement also requires a [supported Partner Relationship Management \(PRM\) add-on license](#).

Fields

Field	Details
CompletedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the user completed the learning item.
CompletedOnDay	Type int Properties Filter, Group, Nillable, Sort Description Number of days that the user took to complete the learning item.
CompletedPercent	Type percent Properties Filter, Sort Description Percentage of the learning item that's complete.

Field	Details
DaysInProgress	Type int Properties Nillable Description Number of days that have elapsed since the learning item was assigned.
LearningItemId	Type reference Properties Filter, Group, Sort Description The ID of the learning item. This field is a relationship field. Relationship Name LearningItem Relationship Type Lookup Refers To LearningItem
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the owner of the learning item. This field is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
ProgressStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the learning item assignment. Possible values are: • Behind • Completed

Field	Details
	- CompletedLate - CompletedOnTime - InProgress - NoLongerTracking - NotStarted - OnTrack - Overdue For details, see Completion Statuses in Enablement Analytics.
StartDate	Type dateTime Properties Filter, Nillable, Sort Description The date when a user starts a Trailhead exercise in a sales program.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[LearningItemProgressChangeEvent](#) on page 68

Change events are available for the object.

[LearningItemProgressOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[LearningItemProgressShare](#) on page 67

Sharing is available for the object.

LearningItemSubmission

Represents a link to a resource, such as a video recording, that a user submits as part of a Feedback Request exercise in an Enablement program. For peer and manager feedback, this resource can be a recording of a user's sales patch. For Einstein Coach feedback, this resource can be a video call, and Einstein generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach is available only in API version 61.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

A learning item submission record is created when users take an Enablement program that includes a Feedback Request exercise for peer and manager feedback.

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- To access exercises that use Einstein Coach, the Use Einstein Coach permission is required. This permission is enabled by default as part of the Access Einstein Coach permission set, which comes with the Enablement add-on license.

Fields

Field	Details
CallId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the video call that a user submits for Einstein Coach feedback. Einstein generates feedback for the user based on the call's transcription. This field is a polymorphic relationship field. Available in API version 61.0 and later. Relationship Name Call Relationship Type Lookup Refers To VideoCall
LearningItemId	Type reference Properties Filter, Group, Sort Description The ID of the LearningItem record for the Feedback Request exercise, where the <code>Type</code> of the learning item is <code>LearningPractice</code>. This field is a relationship field. Relationship Name LearningItem Relationship Type Lookup

Field	Details
	Refers To LearningItem
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the owner of the learning item submission. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Url	Type url Properties Filter, Nillable, Sort Description URL of the content that a user submits for peer and manager feedback. For example, a link to a video recording of a sales rep's practice pitch.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[LearningItemSubmissionOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[LearningItemSubmissionShare](#) on page 67

Sharing is available for the object.

LearningItemType

Represents a custom exercise type that an Enablement user takes in an Enablement program in the Guidance Center. A custom exercise type also requires a corresponding LearningItem record for the Guidance Center and corresponding EnblProgramTaskDefinition and EnblProgramTaskSubCategory records for when admins create a program in Program Builder. This object is available in API version 62.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.

 **Important:** Custom exercises aren't compatible with Partner Enablement programs.

Fields

Field	Details
<code>ApexEvaluationHandlerId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Apex class that specifies how progress and completion of the custom exercise is assessed when users take the program in the Guidance Center. This field is a relationship field. Relationship Name ApexEvaluationHandler Refers To ApexClass
<code>ApexSerializerDeserializerId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Apex class that specifies how data related to the custom exercise type is retrieved and deployed with change sets or managed packages. This field is a relationship field. Relationship Name ApexSerializerDeserializer Refers To ApexClass

Field	Details
CustomField	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The programmatic name of a custom lookup field on the LearningItem object that references the custom object used with this custom exercise. Add values to this picklist when you implement a custom exercise type. For example, if a custom exercise type shows a screen flow, maybe the custom object's name is <code>ScreenFlow_Object__c</code> and the custom field on <code>LearningItem</code> is named <code>ScreenFlow_Field__c</code>. For details, see Implement Custom Exercise Types for Enablement Programs in the <i>Sales Programs and Partner Tracks with Enablement Developer Guide</i>. This field is unique within your organization.
CustomObject	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The programmatic name of the custom object used with this custom exercise. Add values to this picklist when you implement a custom exercise type. For example, if a custom exercise type shows a Quip document, maybe the custom object's name is <code>ScreenFlow_Object__c</code>. For details, see Implement Custom Exercise Types for Enablement Programs in the <i>Sales Programs and Partner Tracks with Enablement Developer Guide</i>. This field is unique within your organization.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores

Field	Details
	In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
Icon	Type textarea Properties Create, Update Description The icon to use for the custom exercise type in the Guidance Center. Use the format iconType:iconName, where the values correspond to icon categories and names from the Salesforce Lightning Design System. • iconType is the type of icon, such as <code>standard</code> or <code>doctype</code>. • iconName is the icon name, such as <code>flow</code> or <code>slide</code>. For example, to use the Standard type Flow icon, this value is <code>standard:flow</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Reserved for future use. Don't edit this field.
LightningComponentName	Type string Properties Filter, Nillable, Sort Description The name, including the namespace, of the Lightning Web Component (LWC) used to show the custom exercise's content when a user opens the exercise in the Guidance Center. For example, if the LWC for a screen flow custom exercise is named <code>screenFlowViewer</code>, this value is <code>c:screenFlowViewer</code>. This field can only be accessed from Metadata API and its value is derived from the <code>lightningComponentDefinition</code> field on the LearningItemType metadata type.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for this LearningItemType value. This display value is the internal label that doesn't get translated.

Field	Details
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

LearningPractice

Represents a Feedback Request exercise in an Enablement program. Users can submit a sample of their work and request feedback from their peers and managers. Or, users can submit a video call and Einstein Coach generates feedback from the call's transcription. This object is available in API version 59.0 and later, but Einstein Coach feedback is available only in API version 61.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- For Enablement admins to create, update, and delete Enablement programs, the Design and Deliver Enablement Programs permission is required. This permission is enabled by default as part of the Manage Enablement Essentials permission set, which comes with the Enablement add-on license.
- For users who take Enablement programs, the Take Enablement Programs permission is required. This permission is enabled by default as part of the Use Enablement Programs permission set, which comes with the Enablement add-on license.
- To access exercises that use Einstein Coach, the Use Einstein Coach permission is required. This permission is enabled by default as part of the Access Einstein Coach permission set, which comes with the Enablement add-on license.

Fields

Field	Details
Description	Type string Properties Filter, Sort Description Instructions to the user to provide context for completing the Feedback Request exercise. For example, Record yourself giving a sales pitch and request feedback from your peers.
InviteeQuantity	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of peers or managers that the user is required to invite for giving feedback when Type is PeerFeedback. Each peer or manager receives an invitation to the assessment survey associated with the Feedback Request exercise. When Type is AIFeedback, this value is always 1.
LearningItemId	Type reference Properties Filter, Group, Sort Description The ID of the LearningItem record for the Feedback Request exercise. The value must be unique. This field is a relationship field. Relationship Name LearningItem Relationship Type Lookup Refers To LearningItem
Name	Type string Properties Filter, Group, idLookup, Sort Description The title of the Feedback Request exercise. For example, Practice Your Sales Pitch.

Field	Details
PromptTemplate	Type string Properties Filter, Group, Nillable, Sort Description The prompt template to use with this exercise when <code>Type</code> is <code>AIFeedback</code>. Available in API version 61.0 and later.
SurveyId	Type reference Properties Filter, Group, Sort Description The ID of the assessment survey that's sent to peers and managers when <code>Type</code> is <code>PeerFeedback</code>. This field is a relationship field. Relationship Name Survey Relationship Type Lookup Refers To Survey
Type	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The type of feedback used with this exercise. Possible values are: • <code>AIFeedback</code>—Users submit a video call, and Einstein Coach generates feedback from the call's transcription. With this type, <code>PromptTemplate</code> is required. Available in API version 61.0 and later. • <code>PeerFeedback</code>—Users submit a URL to a sample of their work, and select peers and managers to review their work. Selected peers and managers complete an assessment survey. With this type, <code>SurveyId</code> is required. Available in API version 61.0 and later. • <code>Survey</code>—Users complete a survey as part of their enrolled employee enablement program. Available in API version 64.0 and later.

LegalEntity

Represents the way an organization is structured. An organization can be a single legal entity or it can comprise more than one legal entity. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with the Salesforce Billing managed package and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
CompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the company that this legal entity represents.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the legal entity.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type datetime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
LegalEntityAddress	Type address Properties Filter, Nillable Description The address of the company that this legal entity represents. This field is a compound field of type Address and combines these fields: LegalEntityCity, LegalEntityCountry, LegalEntityGeocodeAccuracy, LegalEntityLatitude, LegalEntityLongitude, LegalEntityPostalCode, LegalEntityState, and LegalEntityStreet. For more information, see Address Compound Fields.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the legal entity.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the record owner.
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the legal entity. Possible values are: • Active • Inactive

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[LegalEntityFeed](#)

Feed tracking is available for the object.

[LegalEntityHistory](#)

History is available for tracked fields of the object.

[LegalEntityOwnerSharingRule](#)

Sharing rules are available for the object.

[LegalEntityShare](#)

Sharing is available for the object.

LicenseDefinitionCustomPermission (Developer Preview)

Represents a licensed custom permission that controls access to a license's features when included in a custom permission set license definition. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access `LicenseDefinitionCustomPermission`, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the [Partner Licensing Platform Developer Preview](#) Partner Community group.

 **Note:** The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Fields

Field	Details
<code>LicenseDefinitionId</code>	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the custom permission set license definition that contains the licensed custom permission. This is a relationship field.

Field	Details
	Relationship Name LicenseDefinition
	Relationship Type Lookup
	Refers To PermissionSetLicenseDefinition
LicensedCustomPermissionId	Type reference
	Properties Create, Filter, Group, Sort, Update
	Description ID of the licensed custom permission that you're including in the permission set license definition. On the CustomPermission object, the <code>isLicensed</code> field must equal true. This is a relationship field.
	Relationship Name LicensedCustomPermission
	Relationship Type Lookup
	Refers To CustomPermission

Usage

For more information, see the [Partner Licensing Platform Developer Guide \(Developer Preview\)](#).

LightningErrorEventLog

Lightning Error events represent errors that occurred during user interactions with Lightning Experience and the Salesforce mobile app. This object is available in API version 64.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AppName	Type string Properties Filter, Group, Nillable, Sort Description The name of the application that the user accessed.
BrowserName	Type string Properties Filter, Group, Nillable, Sort Description The name of the browser that the user accessed. Example Chrome, Safari
BrowserVersion	Type string Properties Filter, Group, Nillable, Sort Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
ClientGeolocation	Type string Properties Filter, Group, Nillable, Sort Description The geolocation of the client in the form of <code><Country>/<State Province></code>. Example United States/California
ClientIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The API client ID.

Field	Details
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".
ComponentName	Type string Properties Filter, Group, Nillable, Sort Description The internal name of the standard component that generated the error. The Salesforce developer assigned the name when the standard component was created.
ConnectionType	Type string Properties Filter, Group, Nillable, Sort Description The type of connection.
DeviceIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier used to identify a device when tracking events. <code>DEVICE_ID</code> is a generated value that's created when the mobile app is initially run after installation.
DeviceModel	Type string Properties Filter, Group, Nillable, Sort Description The name of the device model. Example iPad, iPhone
DevicePlatform	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The type of application experience in <code>name:experience:form</code> format.
DeviceSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier of the user's session based on page load time. If the user reloads a page, it starts a new session.
ErrorMessage	Type string Properties Filter, Group, Nillable, Sort Description The error message generated.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
MobileSdkAppType	Type string Properties Filter, Group, Nillable, Sort Description The mobile application type.
MobileSdkVersion	Type string Properties Filter, Group, Nillable, Sort Description Mobile SDK version number.

Field	Details
OperatingSystemName	Type string Properties Filter, Group, Nillable, Sort Description The operating system name. Example Android, iOS, OSX, Windows
OperatingSystemVersion	Type string Properties Filter, Group, Nillable, Sort Description The operating system version.
PageAppName	Type string Properties Filter, Group, Nillable, Sort Description The internal name of the application that the user accessed from the App Launcher.
PageContext	Type string Properties Filter, Group, Nillable, Sort Description Context of the page where the event occurred.
PageObjectIdentifier	Type string Properties Filter, Group, Nillable, Sort Description Unique entity ID of event.
PageObjectType	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The entity type of event
PageStartTime	Type dateTime Properties Filter, Nillable, Sort Description Time when page was initially loaded
PageUrl	Type string Properties Filter, Group, Nillable, Sort Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components.
PreviousPageUrl	Type string Properties Filter, Group, Nillable, Sort Description The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code> .
SdkAppVersion	Type string Properties Filter, Group, Nillable, Sort Description The mobile SDK application version number.

Field	Details
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When a user logs out and logs in again, a new session is started.
StackTrace	Type string Properties Filter, Group, Nillable, Sort Description The stack trace contains the location in the code where the error occurred along with the calling frames that led to the error.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Example 20130715233322.670
UiEventIdentifier	Type string Properties Filter, Group, Nillable, Sort Description ID of the Lightning event type.
UiEventSequenceNumber	Type double Properties Filter, Nillable, Sort Description The sequence number of current event since start of session.
UiEventSource	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Examples Here are some examples of error flags returned in this field. • AuraError • Error • InvalidStateError • RangeError • ReferenceError • SecurityError • SyntaxError • TypeError • unknown
UiEventTimestamp	Type dateTime Properties Filter, Nillable, Sort Description The time at which this event occurred, measured in milliseconds.
UiEventType	Type string Properties Filter, Group, Nillable, Sort Description The type of error event.
UserAgent	Type string Properties Filter, Group, Nillable, Sort Description The numeric code for the type of client used to make the request (for example, browser, application, or API) as a string.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user accessing Salesforce services through the UI or API.

Field	Details
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license of the user accessing Salesforce services through the UI or API.

LightningExperienceTheme

Represents information for a theme in Lightning Experience. This object is available in API Version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DefaultBrandingSetId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the default branding set. This is a relationship field. Relationship Name DefaultBrandingSet Relationship Type Lookup Refers To BrandingSet
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The description of the theme. Limit: 1,000 characters.

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the theme in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the theme name in the user interface. Limit: 70 characters.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Language of the label. Possible values are: • da (Danish) • de (German) • en_US (English) • es (Spanish) • es_MX (Spanish - Mexico) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese (Brazil)) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)

Field	Details
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. The name of the theme. Specify up to 70 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ShouldOverrideLoadingImage	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a custom image overrides the Salesforce loading image (true) or not (false).

LightningLoggerEventLog

Lightning Logger Event Log provides information from observed Lightning component logs. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AppName	Type string Properties Filter, Group, Nillable, Sort Description The name of the application the user accessed.
BrowserName	Type string Properties Filter, Group, Nillable, Sort Description The name of the browser the user accessed.
BrowserVersion	Type string Properties Filter, Group, Nillable, Sort Description The user's browser version in major.minor format. Some browsers don't provide a minor version.
ClientGeolocation	Type string Properties Filter, Group, Nillable, Sort Description The geolocation of the client in the form of <Country>/<State Province>.
ClientIdentifier	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The API client ID.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
ConnectionType	Type string Properties Filter, Group, Nillable, Sort Description The type of connection.Possible values are: • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DeviceModel	Type string Properties Filter, Group, Nillable, Sort Description The name of the device model. For example: iPad, iPhone.
DevicePlatform	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The type of application experience in name:experience:form format. Possible values are: Name • APP_BUILDER • CUSTOM • S1 • SFX Experience • BROWSER • HYBRID Form • DESKTOP • PHONE • TABLET
DeviceSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier of the user's session is based on page load time. When the user reloads a page, a new session starts. For example: 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
Message	Type string Properties Filter, Nillable, Sort

Field	Details
	Description The message is passed to the <code>lightning/logger log()</code> method. The message can be a JSON object or a string.
MobileSdkAppType	Type string Properties Filter, Group, Nillable, Sort Description The mobile SDK application type. Possible Values: • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
MobileSdkVersion	Type string Properties Filter, Group, Nillable, Sort Description The mobile SDK application version number. For example, 5.0.
OperatingSystemName	Type string Properties Filter, Group, Nillable, Sort Description The operating system name, derived from the <code>User Agent</code>. For example: • Android • iOS • OSX • Windows
OperatingSystemVersion	Type string Properties Filter, Group, Nillable, Sort Description The operating system version, derived from the <code>User Agent</code>.

Field	Details
PageContext	Type string Properties Filter, Group, Nillable, Sort Description The name of the component hosting the main content of the page. For example: clients:cardsContainer.
PageObjectIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique entity identifier of the event. For example: 0013000000I3zJAAAZ.
PageObjectType	Type string Properties Filter, Group, Nillable, Sort Description The object type of the event. For example: task, contacts.
PageUrl	Type string Properties Filter, Group, Nillable, Sort Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with <code>PageUrl</code>. For example: /sObject/0064100000JXITSAA5/view.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdIdentifier</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
SdkAppVersion	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The app version used in this request.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
UiRootActivityIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID for the root activity, if any, when this message was logged.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Type of user employing Salesforce services, whether through the UI or API.

LightningOnboardingConfig

Represents the feedback provided when users switch from Lightning Experience to Salesforce Classic. Admins can customize the question, how frequently the form appears, and where the feedback is stored in Chatter from the Adoption Assistance page in Lightning Experience Setup. Available in API version 47.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

See [Switch to Salesforce Classic Feedback Form](#) in Salesforce Help for more details.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CollaborationGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Chatter Group where the user feedback is posted. This is a relationship field. Relationship Name CollaborationGroup Relationship Type Lookup Refers To CollaborationGroup
CustomQuestion	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Text of the custom question added by the admin. Maximum of 1,000 characters.

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
FeedbackFormDaysFrequency	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of days between showing the feedback form when a user switches. A value of 0 indicates that the form is shown for every switch. Maximum of 30.
IsCustom	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if a feedback form includes a custom question <code>yes</code> or not <code>no</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the language used in the org where the feedback form was created.
MasterLabel	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The label for the prompt. Maximum of 80 characters.
PromptDelayTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the amount of time in seconds to delay between instances of all prompts, both org- and Salesforce-created. Minimum of 0 hours and 0 minutes. Maximum of 99 hours and 59 minutes.
SendFeedbackToSalesforce	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the user feedback can be shared with Salesforce. If <code>yes</code> , share the feedback with Salesforce. If <code>no</code> , the feedback is only shared in the Chatter Group chosen when customizing the form. The default value is <code>false</code> .

LightningPageViewEventLog

Lightning Page View event logs represent information about the page on which the event occurred in Lightning Experience and the Salesforce mobile app. A Lightning Page View event log tracks the page a user visited, how long the user spent on the page, and the load time for the page. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AppName	Type string Properties Filter, Group, Nillable, Sort Description The name of the application that the user accessed.
BrowserName	Type string Properties Filter, Group, Nillable, Sort Description The name of the browser that the user accessed. For example: Chrome, IE, Safari, Gecko.
BrowserVersion	Type string Properties Filter, Group, Nillable, Sort Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
ClientGeolocation	Type string Properties Filter, Group, Nillable, Sort Description The geolocation of the client in the form of <code><Country>/<State Province></code>. For example: <code>United States/California</code>.
ClientIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The API client ID.
ClientIp	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description IP address of the client employing salesforce.com services.
ConnectionType	Type string Properties Filter, Group, Nillable, Sort Description The type of connection. Possible values are: • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DeviceIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier used to identify a device when tracking events. <code>DeviceIdentifier</code> is a generated value that's created when the mobile app is initially run after installation.
DeviceModel	Type string Properties Filter, Group, Nillable, Sort Description The name of the device model. For example: <code>iPad</code>, <code>iPhone</code>.

Field	Details
DevicePlatform	Type string Properties Filter, Group, Nillable, Sort Description The type of application experience in <code>name:experience:form</code> format. Possible values are: Name • APP_BUILDER • CUSTOM • S1 • SFX Experience • BROWSER • HYBRID Form • DESKTOP • PHONE • TABLET
DeviceSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. For example: 321a1ddfaf924803a075f1e69fc87bc06f53ccd0.
DoesEffectivePageTimeDeviate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description When a deviation is detected, <code>DoesEffectivePageTimeDeviate</code> records <code>true</code>. The default value is <code>false</code>.
Duration	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The duration in milliseconds since the page start time. This field is being deprecated. Use <code>EffectivePageTime</code> instead.
<code>EffectivePageTime</code>	Type double Properties Filter, Nillable, Sort Description Indicates how many milliseconds it took for the page to load before a user could interact with the page's functionality. Multiple factors can affect effective page time, such as network speed, hardware performance, or page complexity. If an effective page time greater than 60 seconds is detected, the value of this field is set to <code>null</code> or 0.
<code>EffectivePageTimeErrorType</code>	Type string Properties Filter, Group, Nillable, Sort Description Indicates the origin of an error. This field is populated when <code>EFFECTIVE_PAGE_TIME_DEVIATION_REASON</code> contains the <code>PAGE_HAS_ERROR</code> value.
<code>EffectivePageTimeReason</code>	Type string Properties Filter, Group, Nillable, Sort Description The reason for deviation in page loading time. Examples of possible values include: • <code>PageInDom</code>- The page was loaded from a cache • <code>PageHasError</code>- An undefined page loading error occurred.
<code>GrandparentUiElement</code>	Type string Properties Filter, Group, Nillable, Sort Description The grandparent scope of the page element where the event occurred.

Field	Details
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCSym5eyvtEK2I.
MobileSdkAppType	Type string Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
MobileSdkVersion	Type String Description The mobile SDK application version number. Example 5.0
OperatingSystemName	Type string Properties Filter, Group, Nillable, Sort Description The operating system name, derived from UserAgent. For example: Android, iOS, OSX, Windows.
OperatingSystemVersion	Type string Properties Filter, Group, Nillable, Sort Description The operating system version, derived from UserAgent.

Field	Details
PageAppName	Type string Properties Filter, Group, Nillable, Sort Description The internal name of the application that the user accessed from the App Launcher. For example: <code>LightningSales</code>.
PageContext	Type string Properties Filter, Group, Nillable, Sort Description The name of the component hosting the main content of the page. For example: <code>clients:cardsContainer</code>.
PageObjectIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique entity identifier of the event. For example: <code>0013000000I3zJAAAZ</code>.
PageObjectType	Type string Properties Filter, Group, Nillable, Sort Description The object type of the event. For example: <code>task</code>, <code>contacts</code>.
PageStartTime	Type dateTime Properties Filter, Nillable, Sort Description The time when the page was initially loaded, measured in milliseconds. For example: <code>1471564788642</code>.
PageUrl	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components. Multiple record IDs can be associated with <code>PageUrl</code>. For example: <code>/sObject/0064100000JXITSAA5/view</code>.
ParentUiElement	Type string Properties Filter, Group, Nillable, Sort Description The parent scope of the page element where the event occurred.
PreviousPageAppName	Type string Properties Filter, Group, Nillable, Sort Description The internal name of the previous application that the user accessed from the App Launcher. For example: <code>LightningSales</code>.
PreviousPageContext	Type string Properties Filter, Group, Nillable, Sort Description The context of the previous page where the event occurred. For example: <code>clients:cardsContainer</code>.
PreviousPageObjectIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique previous page object identifier of the event.
PreviousPageObjectType	Type string Properties Filter, Group, Nillable, Sort Description The previous page object type of the event. For example: <code>task</code>, <code>contacts</code>.

Field	Details
PreviousPageUrl	Type string Properties Filter, Group, Nillable, Sort Description The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened. For example: /sObject/006410000.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdIdentifier</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
SdkAppVersion	Type string Properties Filter, Group, Nillable, Sort Description The SDK application version number. For example: 5.0.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all events in Lightning Experience within a session. When the user logs out and logs in again, a new session is started. For example: cdd09305cb6babf34059e27f70e47f1b11dec868.
TargetUiElement	Type string Properties Filter, Group, Nillable, Sort Description The target page element where the event occurred. For example: label bBody truncate, tabitem-link.

Field	Details
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
UiEventSequenceNumber	Type double Properties Filter, Nillable, Sort Description An auto-incremented sequence number of the current event since the session started.
UiEventTimestamp	Type dateTime Properties Filter, Nillable, Sort Description An auto-incremented sequence number of the current event since the session started.
UserAgent	Type string Properties Filter, Group, Nillable, Sort Description The numeric code for the type of client used to make the request (for example, the browser, application, or API) as a string.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user accessing Salesforce services through the UI or API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The category of user license of the user accessing Salesforce services through the UI or API. Possible values are: • A: Automated Process • b: High Volume Portal • C: Customer Portal User • D: External Who • E: Self Service • G: Guest • L: Package License Manager • N: Salesforce to Salesforce • n: CSN Only • O: Power Custom • o: Custom • P: Partner • p: Customer Portal Manager • S: Standard • X: Salesforce Administrator

LightningPrfmEventLog

Lightning Performance events track trends in Lightning Experience and Salesforce mobile app performance. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AppName	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The name of the application that the user accessed.
BrowserName	Type string Properties Filter, Group, Nillable, Sort Description The name of the browser that the user accessed. Example Chrome, Safari
BrowserVersion	Type string Properties Filter, Group, Nillable, Sort Description The version of the browser that the user accessed in <code>major.minor version</code> format. Some browsers don't provide a minor version.
ClientGeolocation	Type string Properties Filter, Group, Nillable, Sort Description The geolocation of the client in the form of <code><Country>/<State Province></code>. Example United States/California
ClientIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The API client ID.
ClientIp	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
ConnectionType	Type string Properties Filter, Group, Nillable, Sort Description The type of connection. Possible Values • CDMA1x • CDMA • EDGE • EVDO0 • EVDOA • EVDOB • GPRS • HRPD • HSDPA • HSUPA • LTE • WIFI
DeviceIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier used to identify a device when tracking events. <code>DEVICE_ID</code> is a generated value that's created when the mobile app is initially run after installation.
DeviceModel	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The name of the device model. Example iPad, iPhone
DevicePlatform	Type string Properties Filter, Group, Nillable, Sort Description The type of application experience in <code>name:experience:form</code> format. Possible Values • <code>name: APP_BUILDER, CUSTOM, S1, SFX</code> • <code>experience: BROWSER, HYBRID</code> • <code>form: DESKTOP, PHONE, TABLET</code>
DeviceSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier of the user's session based on page load time. When the user reloads a page, a new session is started. Example 321a1ddfaf924803a075f1e69fc87bc06f53ccd0
Duration	Type double Properties Filter, Nillable, Sort Description The duration in milliseconds since the page start time.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a user's login session. It starts with a login event and ends with either a logout event or the user session expiring.

Field	Details
	Example GeJCsym5eyvtEK2I
MobileSdkAppType	Type string Properties Filter, Group, Nillable, Sort Description The mobile SDK application type. Possible Values • HYBRID • HYBRIDLOCAL • HYBRIDREMOTE • NATIVE • REACTNATIVE
MobileSdkVersion	Type string Properties Filter, Group, Nillable, Sort Description The mobile SDK application version number.
OperatingSystemName	Type string Properties Filter, Group, Nillable, Sort Description The operating system name, derived from USER_AGENT.
OperatingSystemVersion	Type string Properties Filter, Group, Nillable, Sort Description The operating system version, derived from USER_AGENT.
PageStartTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The time when the page was initially loaded, measured in milliseconds.
PageUrl	Type string Properties Filter, Group, Nillable, Sort Description Relative URL of the top-level Lightning Experience or Salesforce mobile app page that the user opened. The page can contain one or more Lightning components.
PreviousPageUrl	Type string Properties Filter, Group, Nillable, Sort Description The relative URL of the previous Lightning Experience or Salesforce mobile app page that the user opened.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
SdkAppVersion	Type string Properties Filter, Group, Nillable, Sort Description Mobile SDK application version.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The hash of the session ID to allow tracking of all events in a session.

Field	Details
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
UiEventIdentifier	Type string Properties Filter, Group, Nillable, Sort Description Id of the Lightning event type.
UiEventSource	Type string Properties Filter, Group, Nillable, Sort Description The source of the performance event.
UiEventTimestamp	Type dateTime Properties Filter, Nillable, Sort Description Timestamp of when event occurred.
UiEventType	Type string Properties Filter, Group, Nillable, Sort Description The type of performance event.
UserAgent	Type string Properties Filter, Group, Nillable, Sort Description The client user agent string.

Field	Details
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license of the user accessing Salesforce services through the UI or API.

LightningToggleMetrics

Represents users who switched from Lightning Experience back to Salesforce Classic. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
Action	Type string Properties Filter, Group, Nillable, Sort Description User switched from Lightning Experience to Salesforce Classic or from Salesforce Classic to Lightning Experience.

Field Name	Details
MetricsDate	Type date Properties Filter, Group, Sort Description Date user switched.
RecordCount	Type int Properties Filter, Group, Nillable, Sort Description Number of user switches.
UserId	Type reference Properties Filter, Group, Sort Description UserId of user who switched. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

LightningUsageByAppTypeMetrics

Represents number of users on Lightning Experience and Salesforce Mobile. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
AppExperience	Type string Properties Filter, Group, Nillable, Sort Description User's app (Lightning Experience or Salesforce Mobile).
MetricsDate	Type date Properties Filter, Group, Sort Description Date user accessed Lightning Experience or Salesforce Mobile.
UserId	Type reference Properties Filter, Group, Sort Description UserId for user accessing Lightning Experience or Salesforce Mobile. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

LightningUsageByBrowserMetrics

Represents Lightning Experience usage grouped by user's browser. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
Browser	Type string Properties Filter, Group, Nillable, Sort Description Browser used to access Lightning Experience.
MetricsDate	Type date Properties Filter, Group, Sort Description Date user accessed Lightning Experience.
PageName	Type string Properties Filter, Group, Sort Description Page user viewed in Lightning Experience.
TotalCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of pages accessed in Lightning Experience.

LightningUsageByPageMetrics

Represents standard pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
MetricsDate	Type date Properties Filter, Group, Sort Description Date user viewed page in Lightning Experience.
PageName	Type string Properties Filter, Group, Nillable, Sort Description Name of page user viewed.
TotalCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of pages viewed.
UserId	Type reference Properties Filter, Group, Sort Description UserId of user who viewed page. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

See Also

For more information about `LightningUsageByPageMetrics` syntax and considerations, see [REST API Developer Guide: Lightning Usage by Page](#).

LightningUsageByFlexiPageMetrics

Represents custom pages users viewed most frequently in Lightning Experience. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
FlexiPageNameOrId	Type string Properties Filter, Group, Nillable, Sort Description Name or Id of custom page user viewed in Lightning Experience.
FlexiPageType	Type string Properties Filter, Group, Sort Description Custom page type.
MetricsDate	Type date Properties Filter, Group, Sort Description Date user viewed page in Lightning Experience.
TotalCount	Type int

Field Name	Details
	Properties Filter, Group, Nillable, Sort
	Description Total number of custom pages viewed.

LightningExitByPageMetrics

Represents frequency metrics about the standard pages within which users switched from Lightning Experience to Salesforce Classic. This object is available in API version 44.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Not available in sandbox orgs.

Fields

Field Name	Details
MetricsDate	Type date
	Properties Filter, Group, Sort
	Description The date that the data was recorded.
PageName	Type string
	Properties Filter, Group, Nillable, Sort
	Description The name of the page from which the user switched from Lightning Experience to Salesforce Classic.
RecordCount	Type int
	Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The number of records per user and page.
UserId	Type reference Properties Filter, Group, Sort Description UserId of the user who views page. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

LinkedArticle

Represents a knowledge article that is attached to a work order, work order line item, or work type. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Knowledge must be enabled in your org. Field Service must be enabled. Only users that have access to the Knowledge article and the parent record linked to it can access this object.

In Knowledge in Salesforce Classic, only Field Service objects such as Work Order, Work Type, and Work Order Line Item are supported for linked articles. In Lightning Knowledge, other social objects such as Chat, Messaging, Voice Call, and Social Post are supported for linked articles.

To call `update()` to attach or detach articles, enable the Read user permission on the Knowledge object and the Edit user permission on the object whose article you update. Available in API version 58.0 and later.

Fields

Field Name	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
KnowledgeArticleId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the Knowledge article attached to the record. The label in the user interface is Knowledge Article ID.
KnowledgeArticleVersionId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The version of the Knowledge article attached to the record. This field lists the title of the attached version and links to the version. The label in the user interface is Article Version. When you attach an article to a work order, that version of the article stays associated with the work order, even if later versions are published. If needed, you can detach and reattach an article to a work order to link the latest version.
LinkedEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the record that the Knowledge article is attached to. The label in the user interface is Linked Record ID.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field Name	Details
	Description The title of the article. The label in the user interface is Article Title.
RecordTypeId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the article's record type, if used. This field is only available for Lightning Knowledge.
Type	Type string
	Properties Filter, Group, Nillable, Sort
	Description (Read only) The type of record that the Knowledge article is attached to. For example, work order. The label in the user interface is Linked Object Type.

Usage

Admins can customize linked articles' page layouts, fields, validation rules, and more from the Linked Articles page in Setup.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[LinkedArticleChangeEvent](#) (API version 62.0)

Change events are available for the object.

[LinkedArticleFeed](#)

Feed tracking is available for the object.

[LinkedArticleHistory](#)

History is available for tracked fields of the object.

LinkedArticleFeed

Represents the comment feed on a linked article. This object is available in API version 39.0 and later.

For additional information about feeds, see [FeedItem](#) on page 2549.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Knowledge must be enabled in your org.

Fields

Field	Details
<code>BestCommentId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the comment marked as best answer on a question post.
<code>Body</code>	Type textarea Properties Nillable, Sort Description The body of the feed item. Required when <code>Type</code> is <code>TextPost</code> or <code>AdvancedTextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>. Although a value for <code>Body</code> is not required for the <code>ContentPost</code> type, an attachment is required. If an attachment isn't present, the type changes to <code>TextPost</code> or <code>AdvancedTextPost</code>, depending on the API version. <code>TextPost</code> and <code>AdvancedTextPost</code> do require a value for <code>Body</code>.  Tip: See the IsRichText field for a list of HTML tags supported in the body of rich text posts.
<code>CommentCount</code>	Type int Properties Filter, Group, Sort Description The number of comments associated with this feed item.
<code>InsertedById</code>	Type reference Properties Group, Nillable, Sort Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.

Field	Details
IsRichText	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the feed item <code>Body</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the post is rendered as plain text. Rich text supports the following HTML tags: • <code><p></code>  Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbsp; </p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code> • <code><i></code> • <code><u></code> • <code><s></code> • <code></code> • <code></code> • <code></code> • <code></code> The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code>  Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.
LikeCount	Type int Properties Filter, Group, Sort Description The number of likes associated with this feed item.
LinkUrl	Type url Properties Nillable, Sort

Field	Details
	Description The URL of a <code>LinkPost</code> .
<code>ParentId</code>	Type reference Properties Filter, Group, Sort Description ID of the object type to which the feed item is related. For example, set this field to a <code>UserId</code> to post to someone's profile feed, or an <code>AccountId</code> to post to a specific account.
<code>RelatedRecordId</code>	Type reference Properties Group, Nillable, Sort Description ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code> . For WDC thanks posts, it's the ID of the <code>WorkThanks</code> object associated with a <code>RypplePost</code> . This field is typically null for all posts except <code>ContentPost</code> and <code>RypplePost</code> . For example, set this field to an existing <code>ContentVersion</code> ID and post it to a feed with <code>Type</code> set to <code>ContentPost</code> .
<code>Title</code>	Type string Properties Group, Nillable, Sort Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code> , the <code>LinkUrl</code> is the URL and this field is the link name. The <code>Title</code> field can be updated on posts of <code>Type</code> <code>QuestionPost</code> .
<code>Type</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of feed item. Except for <code>ContentPost</code> , <code>LinkPost</code> , and <code>TextPost</code> , don't create feed items of other types directly from the API. • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a <code>Task</code> or Event associated with a case record (excluding email and call logging).

Field	Details
	For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence. • AdvancedTextPost—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • AnnouncementPost—Not used. • ApprovalPost—generated when a user submits an approval. • BasicTemplateFeedItem—Not used. • CanvasPost—a post made by a canvas app posted on a feed. • CollaborationGroupCreated—generated when a user creates a public group. • CollaborationGroupUnarchived—Not used. • ContentPost—a post with an attached file. • CreatedRecordEvent—generated when a user creates a record from the publisher. • DashboardComponentAlert—generated when a dashboard metric or gauge exceeds a user-defined threshold. • DashboardComponentSnapshot—created when a user posts a dashboard snapshot on a feed. • LinkPost—a post with an attached URL. • PollPost—a poll posted on a feed. • ProfileSkillPost—generated when a skill is added to a user's Chatter profile. • QuestionPost—generated when a user posts a question. • ReplyPost—generated when Chatter Answers posts a reply. • RypplePost—generated when a user creates a Thanks badge in WDC. • TextPost—a direct text entry on a feed. • TrackedChange—a change or group of changes to a tracked field. • UserStatus—automatically generated when a user adds a post. Deprecated. The following values appear in the <code>Type</code> picklist for all feed objects but apply only to CaseFeed: • AttachArticleEvent—generated event when a user attaches an article to a case. • CallLogPost—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • CaseCommentPost—generated event when a user adds a case comment for a case object. • ChangeStatusPost—generated event when a user changes the status of a case. • ChatTranscriptPost—generated event when Chat transcript is saved to a case. • EmailMessageEvent—generated event when an email related to a case object is sent or received. • FacebookPost—generated when a Facebook post is created from a case. Deprecated. • MilestoneEvent—generated when a case milestone is completed or reaches violation status.

Field	Details
	• <code>SocialPost</code>—generated when a social post is created from a case.  Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.

LinkedArticleHistory

Represents the history of changes made to tracked fields on a linked article. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Knowledge must be enabled in your org.

Fields

Field Name	Details
<code>DataType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<code>Field</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the field that was changed.
<code>LinkedArticleId</code>	Type reference Properties Filter, Group, Sort

Field Name	Details
	Description The ID of the tracked linked article. The history is displayed on the detail page for this record.
NewValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
OldValue	Type anyType Properties Nillable, Sort Description The value of the field before it was changed.

ListEmail

Represents a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. When the list email is sent, the recipients are generated by combining recipients in ListEmailIndividualRecipients and ListEmailRecipientSource. Duplicate and other invalid recipients are removed. The result is the recipients sent any given list email. ListEmail has a one-to-many relationship with ListEmailRecipientSource and ListEmailIndividualRecipient. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the action cadence step that generated a list email record. Used for automated emails in Sales Engagement.

Field	Details
	Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled. This field is available in API version 54.0 and later. Relationship Name ActionCadenceStep Relationship Type Lookup Refers To ActionCadenceStep
CampaignId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related campaign. This field is available in API version 42.0 and later. This is a relationship field. Relationship Name Campaign Relationship Type Lookup Refers To Campaign
ClickThroughRate	Type percent Properties Filter, Nillable, Sort Description The percentage of visitors who click links contained in emails delivered (sent minus bounces) to them. Multiple clicks for a same link are counted. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
ClickToOpenRatio	Type percent Properties Filter, Nillable, Sort

Field	Details
	Description The number of unique clicks divided by unique HTML opens. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
DeliveryRate	Type percent Properties Filter, Nillable, Sort Description The percentage of the emails that were delivered compared to the number that bounced (soft and hard). Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
EmailContentId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the email content record associated with the list email. This field is available in API version 50.0 or later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
FromAddress	Type textarea Properties Create, Filter, Update Description Read-only except when the list email is in a draft state. Validated against user's addresses.
FromName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Read-only except when the list email is in a draft state. Validated against user's addresses. This field is null for emails sent from Account Engagement.

Field	Details
HasAttachment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Defaulted on create and update. Value is <code>true</code> if the list email has an attachment. This field is null for emails sent from Account Engagement.
HtmlBody	Type textarea Properties Create, Nillable, Update Description The body of the list email. This field is null for emails sent from Account Engagement. List emails can contain up to 32,000 characters for the body. These limits include visible characters and other characters in the email, including markup.
IsTracked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if email tracking was on when the list email was sent. This field is blank for emails sent from Account Engagement and synced to Salesforce. This field is null for emails sent from Account Engagement.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when the current user last viewed a record that is related to this list email. This field is null for emails sent from Account Engagement.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed. This field is null for emails sent from Account Engagement.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Read-only except when the list email is in a draft state.
OpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of unique HTML opens compared to the total number of emails delivered (sent minus bounces). This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
OptOutRate	Type percent Properties Filter, Nillable, Sort Description The percentage of users that have opted out compared to the total number of emails sent. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description References Group and User. This field is null for emails sent from Account Engagement. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
ProgramName	Type string Properties Filter, Group, Nillable Description The name of an Engagement Studio program where an automated email originates. Reserved for future use. This field is available in API version 46.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
ScheduledDate	Type dateTime Properties CreateFilter, Nillable, Sort, Update Description Read-only. If null and <code>Status</code> is set to <code>Scheduled`</code> defaults to created time.
SentVia	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the email was sent from Salesforce or Account Engagement. The allowed values are <code>Salesforce</code> or <code>Pardot</code> or <code>MessagingService</code>. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
SpamComplaintRate	Type percent Properties Filter, Nillable, Sort Description The percentage of spam complaints compared to the total number of emails sent. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Read-only except when the list email is in a draft state. Changing the status to Scheduled causes the list email to be sent. Valid values: • Draft • Scheduled • Sent • Limit Error • Canceled • Running
Subject	Type textarea Properties Create, Filter, Nillable, Update Description Read-only except when the list email is in a draft state. This field is null for emails sent from Account Engagement. List emails can contain up to 3,000 characters for the subject. These limits include visible characters and other characters in the email, including markup.
TextBody	Type textarea Properties Create, Nillable, Update Description Read-only except when the list email is in a draft state. This field is null for emails sent from Account Engagement.
TotalDelivered	Type int Properties Filter, Group, Nillable, Sort Description The total number of emails minus hard and soft bounces. Note: this data includes emails that were delivered to the recipient's spam folder. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Field	Details
TotalHardBounced	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of emails that permanently bounced back to the sender because the address is invalid. A hard bounce can occur because the domain name doesn't exist or because the recipient is unknown. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
TotalOpens	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times a prospect's email client loaded the images in the HTML version of the email. We also record an open if the prospect clicks a link within the HTML or text email without downloading images. A click indicates that they viewed the message. Some email clients (Outlook, Apple Mail, Thunderbird) don't display images by default. Account Engagement counts an open each time the images load. This field is available in API version 41.0 and later. To access this field, users need the Sales Engagement User permission set or your org must use Account Engagement and users need the CRM User or Sales User permission set.
TotalOutOfOffice	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of replies received with an out-of-office message. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set.
TotalReplies	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of replies received.

Field	Details
	This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set.
TotalSent	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Read-only. The total number of list emails sent, including bounced, opted-out, and invalid To: addresses.
TotalSoftBounced	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times a recipient's mail server acknowledged the email, but returned it to the sender. Sometimes it is because the recipient's mailbox is full or the mail server is temporarily unavailable. A soft bounce message can sometimes be deliverable at another time. After 5 soft bounces, Account Engagement opts the prospect out of emails. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
TotalSpamComplaints	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of prospects that reported the email as spam. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
TotalTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of times prospects clicked a link in the email. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Field	Details
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist Description The type of email sent: list email or automated email. Reserved for future use. This field is available in API version 46.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueClickThroughRate	Type percent Properties Filter, Nillable, Sort Description The percentage of visitors who clicked a link contained in an email. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueOpens	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of prospects who loaded the images in the HTML version of the email. The Unique Opens category counts each recipient one time only, even if the prospect loaded images several times. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.
UniqueOptOuts	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description Unique opt-outs represent the total number of prospects that have clicked the link to unsubscribe or opted out of all emails in the Email Preference Center. These prospects are removed from future email sends. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Field	Details
UniqueReplies	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of unique replies. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the Salesforce Engage permission set.
UniqueTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of times a prospect clicked a link in the email. This metric doesn't include multiple clicks of the same link. This field is available in API version 41.0 and later. To access this field, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[AccountChangeEvent](#) (API version 44.0)

Change events are available for the object.

[ListEmailOwnerSharingRule](#)

Sharing rules are available for the object.

[ListEmailShare](#)

Sharing is available for the object.

ListEmailIndividualRecipient

For a list email in Salesforce, represents a recipient. Each record represents a link from a list email to exactly one recipient for that list email. Recipients can be contacts, leads, or campaign members. Has a one-to-many relationship with ListEmail. This object is available in API version 44.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepTrackerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Understand which action cadence step tracker the list email individual recipient is related to. Used for automated emails in Sales Engagement. Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled. This field is available in API version 54.0 and later. Relationship Name ActionCadenceStepTracker Relationship Type Lookup Refers To ActionCadenceStepTracker
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Possible values are: • EUR (Euro) • INR (Indian Rupee) • USD (US Dollars)
ListEmailId	Type reference Properties Create, Filter, Group, Sort Description The related list email record. Required on record creation; read-only otherwise.

Field	Details
	This is a relationship field. Relationship Name ListEmail Relationship Type Lookup Refers To ListEmail
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated name of the list email recipient source.
RecipientId	Type reference Properties Create, Filter, Group, Sort, Update Description the contact, lead, person account, or campaign member ID of the individual list email recipient. This is a relationship field. Relationship Name Recipient Relationship Type Lookup Refers To CampaignMember, Contact, Lead

Usage

ListEmailSentResult

Represents the results of a list email sent from Salesforce, or sent from Account Engagement and synced to Salesforce. It contains transport headers and information specific to the associated send action. This object is available in API version 67.0 and later.

 **Example:**

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActionCadenceStepTrackerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the action cadence step tracker related to the individual recipient of the list email. Used for automated emails in Sales Engagement. Users must have the Sales Engagement Cadence Creator or Sales Engagement User permission enabled. Relationship Name ActionCadenceStepTracker Refers To ActionCadenceStepTracker
ActivityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The task representation of the sent email. Relationship Name Activity Refers To Task
EmailAddress	Type textarea Properties Create, Nillable, Update Description The email address of the recipient.
FirstClickedDate	Type dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The timestamp for when the email link was first clicked.
FirstOpenedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The timestamp for when the email was first opened.
HasReply	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email has a reply (<code>true</code>) or not (<code>false</code>) The default value is <code>false</code> .
Headers	Type textarea Properties Create, Nillable, Update Description The internet message headers of the email used for debugging and email threading purposes.
isClicked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the individual copy of the list email is clicked <code>true</code> or <code>false</code> . The default value is <code>false</code> .
IsLinkTracked	Type boolean Properties Create, Defaulted on Create, Filter, Group, Sort, Update Description Indicates whether there are any URLs in the email that can be tracked (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .

Field	Details
IsOpenTracked	Type boolean Properties Create, Defaulted on Create, Filter, Group, Sort, Update Description Indicates whether the email is trackable (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsOpened	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the email has been opened (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
LastClickedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The timestamp when the email was last clicked.
LastOpenedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The timestamp when the email was last opened.
ListEmailId	Type reference Properties Create, Filter, Group, Sort Description The ID of the list email that's associated with the email. Relationship Name ListEmail Relationship Type Master-detail Refers To ListEmail (the master object)

Field	Details
MessageIdentifier	Type string Properties Create, Filter, idLookup, Nillable, Sort, Update Description The internet ID of an email.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the list email sent result.
Reason	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the reason why a list email failed to send. Possible values are: • Bounced • NoEmail - No Email Address • OptedOut - Opted Out • OutOfOffice - Out of Office • Restricted • SoftBounced - Soft Bounced
RecipientId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the individual list email recipient. This field is a polymorphic relationship field. Relationship Name Recipient Refers To Contact, Lead
Result	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted Picklist, Sort, Update
	Description Indicates the result of the sent list email. Possible values are: - Failed - NotSent - Sent
ThreadIdIdentifier	Type string
	Properties Create, Filter, idLookup, Nillable, Sort, Update
	Description The thread ID of the email.

ListEmailMonthlyMetric

Represents the monthly engagement metrics for a single list email. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Sales Engagement must be enabled.

Fields

Field	Details
AllEmailsBouncedCount	Type int
	Properties Filter, Group, Nillable, Sort
	Description The total hard and soft bounces that were triggered for this list email in the month. This field is a calculated field.

Field	Details
AllEmailsDeliveredCount	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who successfully received this list email in the month. This field is a calculated field.
AllEmailsHardBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total hard bounces that were triggered for this list email in the month.
AllEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of link clicks by the recipients of this list email in the month.
AllEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who opened this list email in the month.
AllEmailsOutOfOfficeCount	Type int Properties Filter, Group, Nillable, Sort Description The number of out-of-office replies that were triggered for this list email in the month.
AllEmailsRepliedCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of replies to this list email in the month.
AllEmailsSentCount	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients to whom this list email was sent in the month.
AllEmailsSoftBouncedCount	Type int Properties Filter, Group, Nillable, Sort Description The total soft bounces that were triggered for this list email in the month.
HardBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who were sent this list email with hard bounce tracking in the month. Available in API version 53.0 and later.
LinkClickTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who were sent this list email with link click tracking in the month. Available in API version 53.0 and later.
ListEmailId	Type reference Properties Filter, Group, Sort Description The ID of the related list email. This field is a relationship field.

Field	Details
	Relationship Name ListEmail Relationship Type Lookup Refers To ListEmail
Month	Type date Properties Filter, Group, Sort Description The month in which the engagement occurred.
MonthInt	Type int Properties Filter, Group, idLookup, Sort Description The month in which the engagement occurred, in yyyy-mm format.
OpenTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who were sent this list email with open tracking in the month. Available in API version 53.0 and later.
OutOfOfficeTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who were sent this list email with out-of-office tracking in the month. Available in API version 53.0 and later.
ReplyTrackableSends	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of recipients who were sent this list email with reply tracking in the month. Available in API version 53.0 and later.
SoftBounceTrackableSends	Type int Properties Filter, Group, Nillable, Sort Description The number of recipients who were sent this list email with soft bounce tracking in the month. Available in API version 53.0 and later.
TrackableSendHardBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of recipients for whom this list email, sent with hard bounce tracking, resulted in a hard bounce in the month. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendLinkClickRate	Type percent Properties Filter, Nillable, Sort Description The percentage of recipients who clicked on a link in this list email that was sent with link click tracking in the month. Available in API version 53.0 and later. This field is a calculated field.
TrackableSendOpenRate	Type percent Properties Filter, Nillable, Sort Description The percentage of recipients who opened this list email that was sent with open tracking in the month. Available in API version 53.0 and later. This field is a calculated field.
TrackableSendOutOfOfficeRate	Type percent

Field	Details
	Properties Filter, Nillable, Sort Description The percentage of recipients for whom the list email, sent with out-of-office tracking, resulted in an out-of-office reply in the month. Available in API version 54.0 and later. This field is a calculated field.
TrackableSendReplyRate	Type percent Properties Filter, Nillable, Sort Description The percentage of recipients for whom this list email, sent with reply tracking, resulted in a reply in the month. Available in API version 53.0 and later. This field is a calculated field.
TrackableSendSoftBounceRate	Type percent Properties Filter, Nillable, Sort Description The percentage of recipients for whom this list email, sent with soft bounce tracking, resulted in a soft bounce in the month. Available in API version 54.0 and later. This field is a calculated field.
UniqueEmailsLinkClickedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who clicked a link in this list email in the month.
UniqueEmailsOpenedCount	Type int Properties Filter, Group, Nillable, Sort Description The number of unique recipients who opened this list email in the month.
UniqueEmailsRepliedCount	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The number of unique recipients who replied to this list email in the month.

ListEmailRecipientSource

For a list email in Salesforce, represents the dynamically defined sources of recipient email addresses. Each record represents a link to a single list view or campaign that is examined when the list email is sent. Has a one-to-many relationship with ListEmail. This object is available in API version 41.0 and later.

The visibility and accessibility of this object is inherited from the related list email.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ListEmailId	Type reference Properties Create, Filter, Group, Sort Description The related list email record. Required on record creation; read-only otherwise. This is a relationship field. Relationship Name ListEmail Relationship Type Lookup Refers To ListEmail
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description The auto-generated name of the list email recipient source.
SourceListId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. The id of a list view to send the list email to. Read-only except when list email is in draft state. This is a polymorphic relationship field. Relationship Name SourceList Relationship Type Lookup Refers To Campaign, ListView, Topic
SourceType	Type reference Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Required. Read-only except when list email is in draft state. Valid values: • Include

ListView

Represents a list view. A list view shows a set of records for an object, based on specific criteria. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Fields

Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The fully qualified developer name of the list view.
IsSqlCompatible	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the list view can be used with SOQL..
LastModifiedById	Type User Properties Filter, Sort Description The ID of the user who last modified the list view.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the list view was last referenced, with a precision of one second.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the list view was last viewed, with a precision of one second.
Name	Type string Properties Filter, Group, idLookup, Sort

Name	Details
NamespacePrefix	Description The name of the list view.
	Type string
	Properties Filter, Group, Nillable, Sort
	Description The namespace of the list view.
	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
SObjectType	Description The API name of the sObject for the list view.

Usage

Use this object to retrieve the metadata for a pipeline inspection view.

ListViewChart

Represents a graphical chart that's displayed on Salesforce for Android, iOS, and mobile web list views. The chart aggregates data that is filtered based on the list view that's currently displayed. This object is available in API version 33.0 and later and is accessible by portal users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Description
AggregateField	Type picklist
	Properties Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update

Name	Description
	Description The field that's used for calculating data on each group. <code>AggregateField</code> can't be the same as <code>GroupingField</code> .
AggregateType	Type picklist Properties Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update Description The type of calculations to run on each group. The supported <code>AggregateType</code> values are Count, Sum, and Avg.
ChartType	Type picklist Properties Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort, Update Description The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.
DeveloperName	Type string Properties Create, Filter, Group, Query, Retrieve, Sort, Update Description The fully qualified developer name of the chart.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
GroupingField	Type picklist Properties Create, Filter, Group, Nillable, Query, Restricted picklist, Retrieve, Sort, Update Description The field that's used to divide the data into collections. The field must be supported by SOQL GROUP BY functionality. <code>GroupingField</code> can't be the same as <code>AggregateField</code> .
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Name	Description
	Description The language of the MasterLabel.
MasterLabel	Type string Properties Create, Filter, Group, Query, Retrieve, Sort, Update Description The label for the chart.
OwnerId	Type reference Properties Create, Filter, Group, Query, Retrieve, Sort, Update Description The ID of the user who owns the chart. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
SubjectType	Type picklist Properties Create, Filter, Group, Query, Restricted picklist, Retrieve, Sort Description The API name of the sObject for the chart.

ListViewChartInstance

Retrieves metadata for all standard and custom charts for a given entity in context of a given list view. This object is available in API versions 34.0 and later.

Supported Calls

`describeSObjects(), query()`

Fields

Field Name	Details
AggregateField	Type string Properties Filter, Group, Sort Description The field that's used for calculating data on each group. AggregateField can't be the same as GroupingField.
AggregateType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of calculations to run on each group. The supported AggregateType values are Count, Sum, and Avg.
ChartType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of chart to create. The supported chart types are horizontal bar chart, vertical bar chart, and donut chart.
DataQuery	Type textarea Properties Filter, Nillable, Sort Description The SOQL query that can be executed to fetch the data for drawing a chart.
DataQueryWithoutUserFilters	Type textarea Properties Filter, Nillable, Sort Description The SOQL query that can be executed to fetch the data for drawing a chart, without user filters. Available in API v43.0 and later.

Field Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description API name of the chart. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description Reserved for future use.
GroupingField	Type string Properties Filter, Group, Sort Description The field that's used to divide the data into collections. The field has to be supported by SOQL GROUP BY functionality. GroupingField can't be the same as AggregateField.
IsDeletable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if the chart can be deleted.
IsEditable	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field Name	Details
	Description Indicates if the chart can be edited. Standard charts are not editable.
IsLastViewed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates if a chart is the last viewed by a user.
Label	Type string Properties Filter, Group, Sort Description The display name of the chart.
ListViewChartId	Type reference Properties Filter, Group, Sort Description ID of the chart created by a user. For standard charts, this is null. This is a relationship field. Relationship Name ListViewChart Relationship Type Lookup Refers To ListViewChart
ListViewContextId	Type reference Properties Filter, Group, Sort Description ID of the list view in context of which the chart is generated. Required to query <code>ListViewChartInstance</code> . This is a relationship field. Relationship Name ListViewContext

Field Name	Details
	Relationship Type Lookup
	Refers To ListView
SourceEntity	Type string
	Properties Filter, Group, Sort
	Description API name of the entity to which the chart is related. Required to query ListViewChartInstance.

Usage

Example 1. Retrieve all custom and standard charts for Account entity for All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
and ListViewContextId='00BR0000000U8Hr'
```

Example 2. Retrieve metadata for a specific custom chart by ID for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
and ListViewContextId='00BR0000000U8Hr' and ListViewChartId='0DdR00000004CBxKAM'
```

Example 3. Retrieve metadata for a specific standard chart by its developer name for Account entity and All Accounts list view

```
SELECT AggregateField, AggregateType, ChartType, DataQuery, DeveloperName, ExternalId,
GroupingField, Id, IsDeletable, IsEditable, IsLastViewed, Label, ListViewChartId,
ListViewContextId, SourceEntity FROM ListViewChartInstance WHERE SourceEntity='Account'
and ListViewContextId='00BR0000000U8Hr' and DeveloperName='AccountsByIndustry'
```

LiveAgentSession

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Fields

Field Name	Details
AgentId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the agent associated with the session.
ChatReqAssigned	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of chat requests that were assigned to an agent during a session.
ChatReqDeclined	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of chat requests that were declined by an agent during a session.
ChatReqEngaged	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of chats in which an agent was engaged during a session.
ChatReqTimedOut	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of chat requests that timed out in an agent's queue during a session.

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the session record was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the session record was last viewed.
LoginTime	Type dateTime Properties Create, Filter, Sort, Update Description The date and time an agent logged in during the session.
LogoutTime	Type dateTime Properties Create, Filter, Sort, Update Description The date and time an agent logged out during a session.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookupSort Description The name of the session.
NumFlagLoweredAgent	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of assistance flags lowered by the agent.

Field Name	Details
NumFlagLoweredSupervisor	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of assistance flags lowered by the supervisor.
NumFlagRaised	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of assistance flags raised by the agent.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the session record.
TimeAtCapacity	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The amount of time an agent spent with the maximum number of chats in his or her queue.
TimeIdle	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The amount of time an agent spent idle during the session.
TimeInAwayStatus	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The amount of time an agent spent with a status of “Away” during a session.
TimeInChats	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The amount of time an agent spent engaged in chats during a session.
TimeInOnlineStatus	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The amount of time an agent spent with a status of “Online” during a session.

Usage

Use this object to query and manage chat session records.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[LiveAgentSessionHistory](#)

History is available for tracked fields of the object.

[LiveAgentSessionOwnerSharingRule](#)

Sharing rules are available for the object.

[LiveAgentSessionShare](#)

Sharing is available for the object.

LiveAgentSessionHistory

This object is automatically created for each Chat session and stores information about changes made to the session. This object is available in API versions 28.0 and later.

Note: Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
<code>DataType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<code>Field</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the field that was changed in a session record.
<code>LiveAgentSessionId</code>	Type reference Properties Filter, Group, Sort Description ID of the session record that was changed.
<code>NewValue</code>	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
<code>OldValue</code>	Type anyType Properties Nillable, Sort Description The original value of the field that was changed.

Usage

Use this object to identify changes to chat session records.

LiveAgentSessionShare

This object is automatically created for each Chat session and stores information about the session. This object is available in API versions 28.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org’s sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren’t stored at all.

-  **Note:** While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it’s possible that we’ll stop storing certain share records to improve performance. As a best practice, don’t create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.
-  **Note:** Standard fields for the LiveAgentSession object can only be modified if your administrator has given you editing permissions for these records.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the LiveAgentSession. The possible values are: - Read - Edit - All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) This value must be set to an access level that is higher than the organization’s default access level for chat transcripts.
ParentId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort Description ID of the parent object, if any.
RowCause	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code> . If no value is specified, the field defaults to <code>Manual</code> . All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Values can include: • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the <code>LiveAgentSession</code> with them. • <code>Owner</code>—The User is the owner of the <code>LiveAgentSession</code> or is in a role above the <code>LiveAgentSession</code> owner in the role hierarchy.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the user or group that has been given access to the <code>LiveAgentSession</code> .

Usage

This object lets you determine which users and groups can view and edit `LiveAgentSession` records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

LiveChatBlockingRule

Represents a rule for blocking chat visitors' IP addresses from starting new chats with agents. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To create a new rule, you must be logged in with the “Customize Application” permission or as a system administrator.

Fields

Field Name	Details
Description	Type string Properties Create, Nillable Description The description of the blocking rule—for example, the reason why the given IP address or range of addresses is being banned from starting new chats.
DeveloperName	Type string Properties Create, Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
FromIpAddress	Type string Properties Create, Filter, Group, Sort Description The IP address of the user that you want to block, or the beginning of the range of IP addresses you want to block. If you want to block a range of IP addresses, indicate the end of the range in the <code>ToIpAddress</code> field. If you don’t indicate

Field Name	Details
	an IP address in the <code>ToIpAddress</code> field, the only IP address that will be blocked is the IP address in the <code>FromIpAddress</code> field.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The language of the blocking rule.
MasterLabel	Type string Properties Create, Filter, Group, Sort Description Label for the blocking rule.
ToIpAddress	Type string Properties Create, Filter, Group, Nillable, Sort Description (Optional) The end of the range of IP addresses that you want to block. The range begins with and includes the IP address in the <code>FromIpAddress</code> field, and it ends with and includes the IP address in the <code>ToIpAddress</code> field.

Usage

Use this object to query and manage rules for blocking customers from starting new chats with agents.

LiveChatObjectAccessConfig

Represents the action you can perform on a specified object by the Chat API. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

Fields

Field	Details
AccessType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The API action you can perform on the object specified in <code>SubjectType</code>. Possible values are: • Create • Find
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the associated LiveChatObjectAccessDefinition record. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To LiveChatObjectAccessDefinition
SubjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The object that the action specified by <code>AccessType</code> applies to. Possible values are all standard and custom objects. Custom objects are available as picklist values in API version 55.0 and later.

SEE ALSO:

[LiveChatObjectAccessDefinition](#)

LiveChatObjectAccessDefinition

Represents the parent record for one or more LiveChatObjectAccessConfig objects. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Chat. To see the list of objects you can find or create in the UI using this API, enable the "Turns on findOrCreate in chat API" permission. You can find this permission in the Chat Settings page of the Setup UI.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code, which controls the language for labels displayed in an application. Possible values are: • da—Danish

Field	Details
	• de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label for this object's record. This display value is the internal label that doesn't get translated.

LiveChatButton

Represents a button that allows visitors to request chats with Chat users. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
Animation	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of animation used when an automated chat invitation appears on-screen. For automated chat invitations only. Available in API version 29.0 and later. Possible values are: • Appear • Custom • Fade • Slide
AutoGreeting	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The text that is automatically sent from an agent to a visitor when a chat session starts.  Note: A greeting message in the <code>AutoGreeting</code> field of the <code>LiveChatButton</code> object overrides individual users' greeting messages in the <code>AutoGreeting</code> field in the <code>LiveChatUserConfig</code> object.
ChasitorIdleTimeout	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The amount of time a customer has to respond to an agent message before the chat times out.
ChasitorIdleTimeoutWarning	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The amount of time a customer has to respond to an agent message before a warning appears and a timer begins a countdown. This value must be shorter

Field Name	Details
	than the <code>ChasitorIdleTimeout</code> value. We recommend at least 30 seconds shorter.
<code>ChatPageId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the custom VisualForce page that contains the custom chat window code. This field is a relationship field. Relationship Name ChatPage Relationship Type Lookup Refers To ApexPage
<code>CustomAgentName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The custom name of the agent associated with the button. Available in API version 29.0 and later.  Note: A custom agent name in the <code>CustomAgentName</code> field of the <code>LiveChatButton</code> object overrides individual users' custom agent name in the <code>CustomAgentName</code> field in the <code>LiveChatUserConfig</code> object.
<code>DeveloperName</code>	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Field Name	Details
	 Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.
HasQueue	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether or not to allow queuing incoming chat requests until an agent is available. The default value is <code>false</code>.
InviteEndPosition	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The position on screen where an automated chat invitation's animation ends.  Note: You don't need to select an end position for your automated chat invitation if you use a custom animation. For automated chat invitations only. Available in API version 29.0 and later. Possible values are: • Bottom • BottomLeft • BottomRight • Center • Left • Right • Top • TopLeft • TopRight
InviteImageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The record ID of the static image resource displayed on your automated chat invitation. For automated chat invitations only. Available in API version 29.0 and later. This field is a relationship field. Relationship Name InvetlImage Relationship Type Lookup Refers To StaticResource
InviteStartPosition	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort , Update Description The position on screen where an automated chat invitation's animation begins.  Note: You don't need to select a start position for your automated chat invitation if you use a custom animation. For automated chat invitations only. Available in API version 29.0 and later. Possible values are: • Bottom • BottomLeft • BottomLeftBottom • BottomLeftLeft • BottomRight • BottomRightBottom • BottomRightRight • Left • Top • Right • TopLeft • TopLeftLeft • TopLeftTop • TopRight—Top Right • TopRightRight • TopRightTop

Field Name	Details
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description For automated chat invitations, specifies whether an automated chat invitation is active or not. The default value is <code>false</code>.
IsRoutingFlowEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether routing flow is enabled or not. The default value is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the chat. Possible values are: • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish

Field Name	Details
	• <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
<code>MasterLabel</code>	Type string Properties Create, Filter, Group, Sort, Update Description Label for the chat button.
<code>NumberOfReroutingAttempts</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the number of times a chat request can be rerouted to available agents if all agents reject the chat request.
<code>OfflineImageId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the static image resource that is displayed when the button is offline (inactive). This field is a relationship field. Relationship Name OfflineImage Relationship Type Lookup Refers To StaticResource
<code>OnlineImageId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the static image resource that is displayed when the button is online (active).

Field Name	Details
	This field is a relationship field. Relationship Name OnlineImage Relationship Type Lookup Refers To StaticResource
OptionsHasChasitorIdleTimeout	Type boolean Properties Create, Filter, Update Description Specifies whether Customer Time-Out is enabled.
OptionsHasInviteAfterAccept	Type boolean Properties Create, Filter, Update Description Specifies whether an automated chat invitation can be sent to a customer after that customer has accepted a prior automated chat invitation (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.
OptionsHasInviteAfterReject	Type boolean Properties Create, Filter, Update Description Specifies whether an automated chat invitation can be sent to a customer after that customer has rejected a prior automated chat invitation (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.
OptionsHasRerouteDeclinedRequest	Type boolean Properties Create, Filter, Update Description Specifies whether a chat request that has been rejected by all available agents should be rerouted to available agents again (<code>true</code>) or not (<code>false</code>).

Field Name	Details
OptionsIsAutoAccept	Type boolean Properties Create, Filter, Update Description Specifies whether a chat request should be automatically accepted by the agent it's assigned to (<code>true</code>) or not (<code>false</code>). For chat buttons and automated chat invitations with <code>RoutingType</code> set to <code>Most Available</code> or <code>Least Active</code>. Available in API version 30.0 and later.
OptionsIsInviteAutoRemove	Type boolean Properties Create, Filter, Update Description Specifies whether an automated chat invitation should be automatically removed from the screen after a certain amount of time (<code>true</code>) or not (<code>false</code>). For automated chat invitations only. Available in API version 29.0 and later.
OverallQueueLength	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum number of chat requests allowed to queue.
PerAgentQueueLength	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum number of chat requests allowed to queue for each agent with the required skill.
PostchatPageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the custom VisualForce page displayed when the chat ends. This field is a relationship field.

Field Name	Details
	Relationship Name PostchatPage Relationship Type Lookup Refers To ApexPage
PostchatUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The URL the user is directed to after the chat ends.
PrechatFormPageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the custom VisualForce page displayed before the chat begins. This field is a relationship field. Relationship Name PrechatFormPage Relationship Type Lookup Refers To ApexPage
PrechatFormUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The URL the user is directed to before the chat begins.
PushTimeout	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The number of seconds an agent has to answer a chat request before it's routed to the next available agent.
QueueId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the queue used for this chat button. This field is a relationship field. Relationship Name Queue Relationship Type Lookup Refers To Group
RoutingConfigurationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the routing configuration used for this chat button. This field is a relationship field. Relationship Name RoutingConfiguration Relationship Type Lookup Refers To QueueRoutingConfig
RoutingType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description How chat requests are routed to agents. The values are: • Choice—Incoming chat requests are added to the queue in Live Agent in the Salesforce console and are available to any agent with the required skill.

Field Name	Details
	Least Active—Incoming chats are routed to the agent with the required skill who has the fewest active chats. Most Available—Incoming chats are routed to the agent with the required skill and the greatest difference between chat capacity and active chat sessions. For example, if Agent A and Agent B each have a chat capacity of five, and Agent A has three active chat sessions while Agent B has one, incoming chats will be routed to Agent B. Omni—Incoming chats are routed using Omni-Channel queues.
SiteId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the site used for loading static resources and custom VisualForce pages. This field is a relationship field. Relationship Name Site Relationship Type Lookup Refers To Site
SkillId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The record ID of the skill used to route incoming chat requests. To associate multiple skills with a chat button, reference one skill in the <code>SkillId</code> field and use <code>LiveChatButtonSkill</code> junction objects for the remaining skills. This field is a relationship field. Relationship Name Skill Relationship Type Lookup Refers To Skill
TimeToRemoveInvite	Type int

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The number of seconds an automated invitation stays on-screen before it is automatically removed. For automated chat invitations only. Available in API version 29.0 and later.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of element to display to customers. Possible values are: • <code>Invite</code>—Automated invitation • <code>Standard</code>—Chat button
WindowLanguage	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language used for standard chat windows. Custom chat windows use the language of the user's browser. Possible values are: • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish

Field Name	Details
	• <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)

Usage

Use this object to query and manage chat buttons and automated chat invitations.

LiveChatButtonDeployment

Associates an automated chat invitation with a specific deployment. This object is available in API versions 28.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
<code>ButtonId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the automated invitation associated with the deployment.
<code>DeploymentId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the deployment that will feature the automated invitation.

Usage

Use this object to associate automated chat invitations with specific deployments.

LiveChatButtonSkill

Represents all the skills available to a LiveChatButton except the one currently assigned. To retrieve the skill currently assigned, query LiveChatButton. This object is available in API version 25.0 and later.

Supported Calls

`create()`, `delete()`, `update()`, `query()`

Fields

Field Name	Details
ButtonID	Type reference Properties Create, Filter, Group, Sort Description The record ID of the button.
SkillID	Type reference Properties Create, Filter, Group, Nillable, Sort Description The record ID of the skill.

Usage

Use this object to assign a specific skill to a specific button for multi-skill routing. For example:

```
String myButtonId = "button_Id";
String myButtonDevName = "button_DeveloperName";
List<String> skillIds = new List<String>();

//Get one skill ID from button
for(LiveChatButton lcb : [SELECT SkillId FROM LiveChatButton WHERE DeveloperName =:
myButtonDevName]) {
    skillIds.add(lcb.SkillId);
}
//Get remaining skills from LiveChatButtonSkill join object
for(LiveChatButtonSkill lcbs : [SELECT SkillID FROM LiveChatButtonSkill WHERE ButtonId =:
myButtonId]) {
    skillIds.add(lcbs.SkillId);
}
```

```
//Retrieve all skills into a single list  
List<Skill> skills = [SELECT Id, DeveloperName FROM Skill WHERE Id IN :SkillIds];
```

LiveChatDeployment

Represents the general settings for deploying Live Agent on a website. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
BrandingId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The record ID of the static image resource that's displayed in the chat window.
ConnectionTimeoutDuration	Type int Properties Create, Filter, Group, Nillable, Sort Description Indicates the amount of time before the chat times out, in seconds.
ConnectionWarningDuration	Type int Properties Create, Filter, Group, Nillable, Sort Description Indicates the amount of time before a time-out warning is displayed to the agent, in seconds.
DeveloperName	Type string Properties Create, Filter, Group, Sort

Field Name	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View <code>DeveloperName</code> OR View Setup and Configuration permission can view, group, sort, and filter this field.
Domains	Type textarea Properties Create, Filter (unavailable in API version 25.0 and later), Nillable, Sort (unavailable in API version 25.0 and later) Description A comma-separated list of domains the deployment is allowlisted for. Leave this blank to allow the deployment to be used on any domain.
HasTranscriptSave	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Determines whether visitors can download and save transcripts from the chat window.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The language of the deployment.
MasterLabel	Type string

Field Name	Details
	Properties Create, Filter, Group, Sort Description The name of the deployment
MobileBrandingId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The record ID of the static image resource displayed in the mobile version of the chat window.
OptionsHasPrechatApi	Type boolean Properties Create, Filter Description Determines whether developers can access the Pre-Chat API.
SiteId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The record ID of the site used for loading static resources.
WindowTitle	Type string Properties Create, Filter, Group, Sort Description The text displayed in the title bar of the browser window used to launch the chat window.

Usage

Use this object to query and manage live chat deployments.

LiveChatSensitiveDataRule

Represents a rule for masking or deleting data of a specified pattern. Written as a regular expression (regex). This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
ActionType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The action to take on the text (remove or replace) when the sensitive data rule is triggered.
Description	Type textarea Properties Create, Nillable, Update Description The description of the sensitive data rule—for example, "Block social security numbers."
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the

Field Name	Details
	object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
EnforceOn	Type int Properties Create, Filter, Group, Sort, Update Description Determines the roles on which the rule is enforced. The value is determined using bitwise OR operation. There are seven possible values: 1. Rule enforced on Agent 2. Rule enforced on Visitor 3. Rule enforced on Agent and Visitor 4. Rule enforced on Supervisor 5. Rule enforced on Agent and Supervisor 6. Rule enforced on Visitor and Supervisor 7. Rule enforced on Agent, Visitor, and Supervisor
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Specifies whether a sensitive data rule is active (<code>true</code>) or not (<code>false</code>). Default value (if none is provided) is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the sensitive data rule.
MasterLabel	Type string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description Label for the sensitive data rule.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Pattern	Type textarea Properties Create, Update Description The pattern of text blocked by the rule. Written as a JavaScript regular expression (regex).
Priority	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the priority level of a Chat.
Replacement	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The string of characters that replaces the blocked text (if <code>ActionType Replace</code> is selected).

Usage

Use this object to mask or delete data of specified patterns, such as credit card, social security, phone and account numbers, or even profanity.

LiveChatTranscript

This object is automatically created for each Live Agent chat session and stores information about the session. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Abandoned	Type int
	Properties Filter, Group, Nillable, Sort
	Description The amount of time in seconds an incoming chat request remained unanswered by an agent before the chat was disconnected by the customer.
AccountId	Type ID
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description ID of the account associated with the chat transcript.

Field Name	Details
AverageResponseTimeOperator	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The agent's average response time (in seconds) to chat messages from the visitor.
AverageResponseTimeVisitor	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The visitor's average response time (in seconds) to chat messages from the agent.
Body	Type textarea Properties Create, Nillable, Update Description The contents of the chat.
Browser	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The browser the visitor used for the chat.
BrowserLanguage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The language of the visitor's browser.
CaseID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the case associated with the chat transcript.

Field Name	Details
ChatDuration	Type int Properties Filter, Group, Nillable, Sort Description The total duration of the chat in seconds.
ChatKey	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort Description The session ID of the chat before it is persisted. <code>ChatKey</code> can be used with advanced integrations in the Salesforce console. This field is available in API version 25.0 and later.
ContactID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the contact associated with the chat transcript.
EndedBy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The way the chat was ended: by the operator, the visitor, or the system.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time the chat ended.
IpAddress	Type string Properties Create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The auto-populated visitor's IP address. Do not edit. Create a custom field if you need an IP address field for your use case.
IsChatbotSession	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Whether the visitor is chatting with a chatbot (<code>true</code>) or not (<code>false</code>).
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
LeadID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the lead associated with the chat transcript.
LiveChatButtonID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the LiveChatButton the chat session originated from.

Field Name	Details
LiveChatDeploymentID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the LiveChatDeployment the chat session originated from.
LiveChatVisitorID	Type reference Properties Create, Filter, Group, Sort Description The ID of the visitor associated with the chat transcript.
Location	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The auto-populated best-guess approximation of the visitor's location. Do not edit.
MaxResponseTimeOperator	Type int Properties Filter, Group, Nillable, Sort Description The maximum time in seconds it took an agent to respond to a chat visitor's message.
MaxResponseTimeVisitor	Type int Properties Filter, Group, Nillable, Sort Description The maximum time in seconds it took a customer to respond to an agent's message.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field Name	Details
	Description The name of the transcript.
OperatorMessageCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of messages sent by one or more agents during the chat.
OwnerID	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the operator who participated in the chat last; for missed chats, this is a system user.
Platform	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The visitor's operating system platform.
ReferrerUri	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The auto-populated URI where the chat request originated. Do not edit.
RequestTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time the visitor requested the chat.
ScreenResolution	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The visitor's screen resolution.
SkillId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The auto-populated record ID of the primary Skill associated with the LiveChatButton the chat session originated from. Do not edit. To associate multiple skills with a LiveChatTranscript, use LiveChatTranscriptSkill junction objects.
StartTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time the chat started.
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The final status of the chat: completed, missed, or blocked.
SupervisorTranscriptBody	Type textarea Properties Create, Nillable, Update Description The text body of the supervisor's chat transcript.
UserAgent	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The visitor's user agent string.

Field Name	Details
VisitorMessageCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of messages sent by the visitor during the chat.
VisitorNetwork	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The network or service provider the chat visitor used for the chat.
WaitTime	Type int Properties Filter, Group, Nillable, Sort Description The total amount of time in seconds a chat request was waiting to be accepted by an agent.

Usage

Use this object to query and manage live chat transcripts.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LiveChatTranscriptChangeEvent (API version 44.0)

Change events are available for the object.

LiveChatTranscriptFeed (API version 47.0)

Feed tracking is available for the object.

LiveChatTranscriptHistory

History is available for tracked fields of the object.

LiveChatTranscriptOwnerSharingRule (API version 29.0)

Sharing rules are available for the object.

LiveChatTranscriptShare

Sharing is available for the object.

LiveChatTranscriptEvent

Captures specific events that occur over the lifetime of a chat. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AgentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the agent associated with the event.
Detail	Type string Properties Create, Filter, Group, Nillable, Sort Description Details associated with the event.
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.

Field Name	Details
LiveChatTranscriptId	Type reference Properties Create, Filter, Group, Sort Description The ID of the live chat transcript associated with the event.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the event.
Time	Type dateTime Properties Create, Filter, Sort Description The time at which the event happened.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The kind of event that occurred. - Accept—Accepted - AgentBlocked—Blocked by Agent - AlertCriticalWaitChat—Critical Wait Alert Time Reached - CancelBlocked—Cancel (Blocked) - CancelNoAgent—Cancel (No Agent) - CancelNoQueue—Cancel (No Queue) - CancelVisitor—Canceled by Visitor - ChasitorIdleTimeout—Visitor Idle Time-Out - ChasitorIdleTimeoutWarningCleared—Visitor Idle Time-Out Warning Cleared - ChasitorIdleTimeoutWarningTriggered—Visitor Idle Time-Out Warning Appeared - ChatRequest—Chat Requested

Field Name	Details
	• <code>ChatResumedAfterTransfer</code>—Chat resumed • <code>ChatbotEndChat</code>—Chatbot end chat • <code>ChatbotEndedChatByAction</code>—Conversation ended by automated action • <code>ChatbotEstablished</code>—Accepted by Chatbot • <code>ChatbotNotEstablished</code>—Chatbot Request Failed • <code>ChoiceRoute</code>—Routed (Choice) • <code>ClearCriticalWaitChat</code>—Critical Wait Alert Cleared • <code>ConferenceRequest</code>—Chat Conference Requested • <code>ConferenceRequestCanceled</code>—Chat Conference Canceled • <code>ConferenceRequestDeclined</code>—Chat Conference Declined • <code>ConnectionTimeout</code>—Visitor connection timed out. Available in API version 38.0 and later. • <code>ConnectionWarning</code>—Warning that visitor hasn't been connected for some time and that the connection times out soon. Available in API version 38.0 and later. • <code>DeclineManual</code>—Decline (Manual) • <code>DeclineTimeout</code>—Decline (Timeout) • <code>EndAgent</code>—Ended by Agent • <code>EndVisitor</code>—Ended by Visitor • <code>Enqueue</code>—Queued • <code>FileCanceledAgent</code>—File Transfer Canceled by Agent • <code>FileCanceledChasitor</code>—File Transfer Canceled by Visitor • <code>FileTransferFailure</code>—File Transfer Failure • <code>FileTransferRequested</code>—File Transfer Requested by Agent • <code>FileTransferSuccess</code>—File Transfer Success • <code>FileTransferToChasitor</code>—File Transfer Initiated by Agent • <code>FlagLoweredAgent</code>—Flag Lowered by Agent • <code>FlagLoweredSupervisor</code>—Flag Lowered by Supervisor • <code>FlagRaised</code>—Flag Raised • <code>LeaveAgent</code>—Agent Left • <code>LeaveVisitor</code>—Visitor Left • <code>OperatorJoinedConference</code>—Agent Joined Conference • <code>OperatorLeftConference</code>—Agent Left Conference • <code>Other</code> • <code>PushAssignment</code>—Routed (Push) • <code>SensitiveDataAgent</code>—Sensitive data blocked (Agent) • <code>SensitiveDataSupervisor</code>—Sensitive data blocked (Supervisor) • <code>SensitiveDataVisitor</code>—Sensitive data blocked (Visitor)

Field Name	Details
	• <code>Transfer</code>—Transfer Accepted • <code>TransferCancelled</code>—Transfer Request Canceled • <code>TransferDeclined</code>—Transfer Request Declined • <code>TransferRequest</code>—Transfer Requested • <code>TransferToBotFailed</code>—Transfer to bot failed • <code>TransferToButtonFailed</code>—Transfer to button failed • <code>TransferToQueueFailed</code>—Transfer to queue failed • <code>TransferredToBot</code>—Transferred to bot • <code>TransferredToButton</code>—Transferred to button • <code>TransferredToQueue</code>—Transferred to queue • <code>TransferredToSbrSkill</code>—Transferred to skill • <code>TransferredToSbrSkillFailed</code>—Transfer to skill failed • <code>Unassigned</code>

Usage

Use this object to query and manage live chat transcript events.

Note: `LiveChatTranscriptEvent` records are inserted after the chat is closed and the `LiveTranscript` record updated). However, the trigger on the `LiveChatTranscriptEvent` sObject fires separately on each `LiveChatTranscriptEvent` record within the same transaction.

All the `LiveChatTranscriptEvent` records are inserted in a single transaction but one by one. For example, the trigger is executed for each individual record.

```
trigger LCTE on LiveChatTranscriptEvent (before insert) {
    // Trigger.New will have only 1 record at a time and trigger will execute for
    individual record
    for(LiveChatTranscriptEvent l : Trigger.New)
        system.debug(l.Type + '>>' + l.Detail);
}
```

To avoid hitting any governors and limits, design your functionality considering this behavior. You can execute the logic by filtering the records based on the `Type` field of `LiveChatTranscriptEvent`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LiveChatTranscriptChangeEvent (API version 62.0)

Change events are available for the object.

LiveChatTranscriptShare

Represents a sharing entry on a `LiveChatTranscript` object. This object is available in API version 24.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
<code>AccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the LiveChatTranscript. The possible values are: - Read - Edit - All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) This value must be set to an access level that is higher than the organization's default access level for live chat transcripts.
<code>ParentId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the parent object, if any
<code>RowCause</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code> . If no value is specified, the field defaults to <code>Manual</code> . All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Values can include: <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the LiveChatTranscript with them. <code>Owner</code>—The User is the owner of the LiveChatTranscript or is in a role above the LiveChatTranscript owner in the role hierarchy.
UserOrGroupID	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the LiveChatTranscript.

Usage

This object lets you determine which users and groups can view and edit LiveChatTranscript records owned by other users.

If you attempt to create a new record that matches an existing record, the `create()` call updates any modified fields and returns the existing record.

LiveChatTranscriptSkill

Represents a join between LiveChatTranscript and Skill. This object is available in API version 25.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field Name	Details
	Description The name of the transcript.
SkillId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The record ID of the skill.
TranscriptId	Type reference Properties Create, Filter, Group, Sort Description The record ID of the transcript.

Usage

Use this object to assign a specific skill to a specific transcript for multi-skill routing.

LiveChatUserConfig

Represents a setting that controls the console settings for Chat users. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
AutoGreeting	Type textarea Properties Create, Nillable

Field Name	Details
	Description The text that is automatically sent from an agent to a visitor when a chat session starts.
Capacity	Type int Properties Create, Filter, Group, Nillable, Sort Description Limits the amount of active chat sessions an agent can engage in.
CriticalWaitTime	Type int Properties Create, Filter, Group, Nillable, Sort Description The amount of time before a chat flashes to alert an agent to answer it.
CustomAgentName	Type string Properties Create, Filter, Group, Nillable, Sort Description The custom name of the agent associated with the Live Agent configuration.
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.

Field Name	Details
	 Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
HasLogoutSound	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Determines whether a sound plays when an agent logs out of the console.
HasNotifications	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Determines whether desktop notifications are enabled for the configuration. Available in API version 25.0 and later.
HasRequestSound	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Determines whether a sound plays when a chat request comes in.
HasSneakPeek	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Determines whether an agent sees a real-time preview of the messages typed by a visitor.
HasTransferConferenceGreeting	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether to enable sending an autogreeting when you transfer to another agent or invite an agent to a conference chat. The default value is <code>false</code>. Available in API version 53.0 and later.

Field Name	Details
IsAutoAwayOnDecline	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Determines whether agents' status is automatically changed to Away when they decline a chat request. Available in API version 26.0 and later.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The language of the configuration.
MasterLabel	Type string Properties Create, Filter, Group, Sort Description The name of the configuration.
OptionsHasAgentFileTransfer	Type boolean Properties Create, Filter Description Determines whether agents can initiate a file transfer from a chat customer. Available in API version 31.0 and later.
OptionsHasAgentSneakPeek	Type boolean Properties Create, Filter Description Determines whether Sneak Peek is enabled for agents. Available in API version 29.0 and later.
OptionsHasAssistanceFlag	Type boolean Properties Create, Filter

Field Name	Details
	Description Determines whether assistance flags are enabled for agents. Available in API version 29.0 and later.
OptionsHasChatConferencing	Type boolean Properties Create, Filter Description Determines whether agents can invite other agents into a customer chat. Available in API version 34.0 and later.
OptionsHasChatMonitoring	Type boolean Properties Create, Filter Description Determines whether supervisors can view agents' ongoing chats. Available in API version 29.0 and later.
OptionsHasChatTransferToAgent	Type boolean Properties Create, Filter Description Specifies whether an agent can transfer a chat directly to another agent. Available in API version 36.0 and later.
OptionsHasChatTransferToButton	Type boolean Properties Create, Filter Description Specifies whether an agent can transfer a chat to an agent assigned to a particular chat button. Available in API version 36.0 and later.
OptionsHasChatTransferToSkill	Type boolean Properties Create, Filter

Field Name	Details
	Description Specifies whether an agent can transfer a chat to agents assigned to a particular skill. Available in API version 36.0 and later.
OptionsHasTransferConferenceGreeting	Type boolean Properties Create, Filter, Update Description Specifies whether an agent can transfer a chat to an autogreeting or conference greeting. Available in API version 53.0 and later.
OptionsHasVisitorBlocking	Type boolean Properties Create, Filter Description Determines whether an agent can block IP addresses of troublesome visitors. Available in API version 34.0 and later.
OptionsHasWhisperMessage	Type boolean Properties Create, Filter Description Determines whether supervisors can send private messages to agents within an agent's chat with a customer. Available in API version 29.0 and later.
OptionsIsAutoAwayOnPushTimeout	Type boolean Properties Create, Filter Description Determines whether an agent's status automatically changes to Away if the agent doesn't respond to a chat request within the specified push time-out limit. Available in API version 34.0 and later.
SupervisorDefaultAgentStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description The default agent status by which to filter agents in the Agent Status list in the supervisor panel.
SupervisorDefaultButtonId	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The default button ID by which to filter agents in the Agent Status list in the supervisor panel.
SupervisorDefaultSkillId	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The default skill ID by which to filter agents in the Agent Status list in the supervisor panel.

Usage

Use this object to query and manage agent configurations in Chat.

LiveChatUserConfigProfile

Represents a join between LiveChatUserConfig and Profile. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
LiveChatUserConfigId	Type reference Properties Create, Filter, Group, Sort Description The record ID of the agent configuration
ProfileId	Type reference Properties Create, Filter, Group, Sort Description The record ID of the profile

Usage

Use this object to assign specific agent configurations to specific user profiles.

LiveChatUserConfigUser

Represents a join between Live Chat User Config and User. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
LiveChatUserConfigId	Type reference Properties Create, Filter, Group, Sort

Field Name	Details
	Description The record ID of the agent configuration
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The record ID of the user

Usage

Use this object to assign specific agent configurations to specific users.

LiveChatVisitor

Represents a website visitor who has started or tried to start a chat session. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update

Field Name	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The name of the visitor
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The session key used to uniquely identify the visitor.

Usage

Use this object to query and manage live chat visitors.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LiveChatVisitorChangeEvent (API version 62.0)

Change events are available for the object.

Location

Represents a warehouse, service vehicle, work site, or other element of the region where your team performs field service work. In API version 49.0 and later, you can associate activities with specific locations. Activities, such as the tasks and events related to a location, appear in the activities timeline when you view the location detail page. Also in API version 49.0 and later, Work.com users can view Employees as a related list on Location records. In API version 51.0 and later, this object is available for Omnichannel Inventory and represents physical locations where inventory is available for fulfilling orders.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Commerce Store
- Contact Tracing for Employees
- Employee Experience
- Field Service
- Fulfillment Orders
- Health Cloud
- Industries Insurance
- Industries Visit
- Locations
- Omnichannel Inventory
- Public Sector
- Retail Execution
- Work.com

Fields

Field Name	Details
AssignedFoCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of fulfillment orders assigned to the location. Confirming held fulfillment order capacity increments this value. To reset the location's capacity, set this value to 0. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
CloseDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date the location closed or went out of service.
ConstructionEndDate	Type date

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Date construction ended at the location.
ConstructionStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date construction began at the location.
DefaultPickupTime	Type time Properties Create, Filter, Group, Nillable, Sort, Update Description Default pickup time at the location. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 61.0 and later.
DefaultProcessingTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Default processing time at the location. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 61.0 and later.
DefaultProcessingTimeUnit	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Default processing time unit at the location. Possible values are: - Hours - Days - Weeks

Field Name	Details
	This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 61.0 and later.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of the location.
DrivingDirections	Type string Properties Create, Filter, Nillable, Sort, Update Description Directions to the location.
EarliestPickupTimeOffset	Type integer Properties Create, Filter, Nillable, Sort, Update Description The earliest pickup time for BOPIS. This value is measured in minutes after the start of business hours.
ExternalReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Identifier of a location.
FoCapacity	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum number of fulfillment orders that can be assigned to the location per time period. If this value is null, then this location's capacity isn't limited. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security.

Field Name	Details
	This field is available in API version 55.0 and later.
FulfillingBusinessHours	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Fulfilling business hours at the location. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 61.0 and later.
FoCapacity	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum number of fulfillment orders that can be assigned to the location per time period. If this value is null, then this location's capacity isn't limited. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
IsEligibleForPickup	Type boolean Properties Create, Filter, Nillable, Sort, Update Description Indicates whether the location supports BOPIS
IsInventoryLocation	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the location stores parts.  Note: This field must be selected if you want to associate the location with product items.
IsMobile	Type boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates whether the location moves. For example, a truck or tool box.
LastReferencedDate	Type datetime
	Properties Filter, Nillable, Sort
	Description The date when the location was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	Type datetime
	Properties Filter, Nillable, Sort
	Description The date the location was last viewed.
LatestPickupTimeOffset	Type integer
	Properties Create, Filter, Nillable, Sort, Update
	Description The latest pickup time for BOPIS. This value is measured in minutes before the end of business hours.
Latitude	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description The latitude of the location.
Location	Type location
	Properties Nillable
	Description The geographic location.

Field Name	Details
LocationLevel	Type int Properties Filter, Group, Nillable, Sort Description The location's position in a location hierarchy. If the location has no parent or child locations, its level is 1. Locations that belong to a hierarchy have a level of 1 for the root location, 2 for the child locations of the root location, 3 for their children, and so forth.
LocationType	Type picklist Properties Create, Filter, Group, Sort, Update Description Picklist of location types. It has no default values, so you must populate it before creating any location records.
LogoId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A ContentAsset representing a logo for the location. This field is available in API version 50.0 and later. This is a relationship field. Relationship Name Logo Relationship Type Lookup Refers To ContentAsset
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The longitude of the location.

Field Name	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the location. For example, Service Van #4.
OpenDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date the location opened or came into service.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The location's owner or driver. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location's parent location. For example, if vans are stored at a warehouse when not in service, the warehouse is the parent location. This is a relationship field. Relationship Name ParentLocation Relationship Type Lookup

Field Name	Details
	Refers To Location
PickupProcessingTime	Type integer Properties Create, Filter, Nillable, Sort, Update Description The processing time required for BOPIS orders at this location.
PossessionDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the location was purchased.
Priority	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The priority of the location when routing orders. No default values are included. Add values to the picklist and reference them in your custom routing logic. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
RemodelEndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when remodel construction ended at the location.
RemodelStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when remodel construction started at the location.

Field Name	Details
RootLocationId	Type reference Properties Filter, Group, Nillable, Sort Description (Read Only) The top-level location in the location's hierarchy. This is a relationship field. Relationship Name RootLocation Relationship Type Lookup Refers To Location
ShouldSyncWithOci	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the location should sync its data with Omnichannel Inventory. The default value is <code>false</code>. This field is available in API version 51.0 and later.
ShouldTrackFoCapacity	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the location should track its fulfillment order capacity. The default value is <code>false</code>. This field is available when Order Management is installed and configured. By default, it's hidden by field-level security. This field is available in API version 55.0 and later.
TimeZone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Picklist of available time zones.

Field Name	Details
VisitorAddressId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup to an account's or client's address. This is a relationship field. Relationship Name VisitorAddress Relationship Type Lookup Refers To Address

Usage

Before creating any location records, add at least one value to the Location Type picklist. LocationType is a required field.

To track your inventory in Salesforce, create product items, which represent the stock of a particular product at a particular location. For example, create a product item that represents the 500 bolts you have in stock at your Warehouse A location. Each product item must be associated with a location.

To get a more granular picture of your field service operation, associate locations with service territories. For example, if a warehouse is located in a particular service territory, add it as a service territory location.

 **Important:** "Location" in Salesforce can also refer to the geolocation compound field found on many standard objects. When referencing the Location object in your Apex code, always use `Schema.Location` instead of `Location` to prevent confusion with the standard Location compound field. If referencing both the Location object and the Location field in the same snippet, you can differentiate between the two by using `System.Location` for the field and `Schema.Location` for the object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LocationChangeEvent (API version 48.0)

Change events are available for the object.

LocationFeed

Feed tracking is available for the object.

LocationHistory

History is available for tracked fields of the object.

LocationOwnerSharingRule

Sharing rules are available for the object.

LocationShare

Sharing is available for the object.

SEE ALSO:

- LocationGroup
- LocationGroupAssignment
- B2B Commerce and D2C Commerce Developer Guide: Inventory Data Model

LocationGroup

Represents a group of Omnichannel Inventory locations, providing an aggregate view of inventory availability across those locations. Omnichannel Inventory can create an inventory reservation for an order at the location group level, then assign the reservation to one or more locations in the group as needed. This object is available in API version 51.0 and later.

You can define location groups according to the logic of your business needs. For example, a location group can represent the warehouses in a geographic region, or it can include the fulfillment centers associated with a particular online storefront.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description Description of the location group.
ExternalReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Used when OCI is integrated with B2C Commerce to associate the location group with an inventory list in B2C Commerce. This value must match the inventory list ID in B2C Commerce.

Field	Details
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the location group is in use. If set to <i>false</i>, then inventory functions ignore this location group and its data isn't synchronized with OCI. The default value is <i>true</i>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
LocationGroupName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the location group.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this location group. Default value is the API user that created the record.
ShouldSyncWithOci	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Specifies whether to synchronize inventory data for this location group with Omnichannel Inventory. The default value is <code>true</code> .

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

LocationGroupChangeEvent (API version 62.0)

Change events are available for the object.

LocationGroupFeed

Feed tracking is available for the object.

LocationGroupHistory

History is available for tracked fields of the object.

LocationGroupOwnerSharingRule

Sharing rules are available for the object.

LocationGroupShare

Sharing is available for the object.

SEE ALSO:

[Location](#)

[LocationGroupAssignment](#)

[B2B Commerce and D2C Commerce Developer Guide: Inventory Data Model](#)

LocationGroupAssignment

Represents the assignment of a location to a location group. This object is available in API version 51.0 and later.

You can assign a location to multiple location groups, which associates it with one location group assignment for each location group that it's assigned to. Each location group assignment represents the relationship between one location and one location group, so a location or location group can be associated with multiple location group assignments.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Omnichannel Inventory orgs.

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
LocationExternalReference	Type string Properties Filter, Group, Nillable, Sort Description The external reference of the associated location.
LocationGroupAssignment	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the location group assignment.
LocationGroupExternalReference	Type string Properties Filter, Group, Nillable, Sort Description The external reference of the associated location group.
LocationGroupId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description (Master-Detail) The associated location group.
LocationGroupName	Type string Properties Filter, Group, Nillable, Sort Description The location group name of the associated location group.
LocationId	Type reference Properties Create, Filter, Group, Sort Description (Master-Detail) The associated location.
LocationName	Type string Properties Filter, Group, Nillable, Sort Description The name of the associated location.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

LocationGroupAssignmentChangeEvent (API version 62.0)

Change events are available for the object.

SEE ALSO:

- Location
- LocationGroup

LocationShippingCarrierMethod

The available shipping carrier services associated with a location or location group. Allows the assignment of different shipping methods to a specific location and enables flexibility and customization in the shipping process. This object is available in API version 61.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The LocationShippingCarrierMethod object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the record was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the record was last viewed.
LocationSourceId	Type reference Properties Create, Filter, Group, Sort, Update Description The location source ID. This is a polymorphic relationship field. Relationship Name LocationSource Refers To Location, LocationGroup
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Name of the shipping carrier service associated with the location or location group.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who currently owns this LocationShippingCarrierMethod object. Default value is the user logged in to the API to perform the create. This is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
PickupTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The time when the shipping carrier picks up the order from the associated location or location group. This field is available in API version 66.0 and later.
ShippingCarrierMethodId	Type reference Properties Create, Filter, Group, Sort, Update Description Shipping carrier method ID. This is a relationship field. Relationship Name ShippingCarrierMethod Refers To Location, ShippingCarrierMethod

LocationTrustMeasure

Represents the COVID safety protocols that your business follows. For example, enforcement of masks, social distancing, cleanliness, and capacity limits. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Sort, Update Description A brief description of the safety protocol. For example, "Employees and customers are required to wear a mask in the store."
ImageUrl	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A public image URL to display for the LocationTrustMeasure object.
IsVisibleInPublic	Type boolean Properties Create, defaulted on create, Filter, Group, Sort, Update Description If true, displays the LocationTrustMeasure object on your site. If false, hides the LocationTrustMeasure object on your site.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date on which the record was last viewed.
LocationExternalReference	Type string Properties Filter, Group, Nillable, Sort Description An ID assigned to the LocationTrustMeasure objects for a particular location.
LocationId	Type reference Properties Create, Filter, Group, Sort, Update Description The unique ID for the location associated with the LocationTrustMeasure.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-assigned name for the LocationTrustMeasure.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner for this record.
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The order in which to display LocationTrustMeasure objects on your site.
Title	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The name of the safety protocol. For example, Enforcement of Masks.

LocWaitlistMsgTemplate

Represents a junction object connecting LocationWaitlist to MessagingTemplate. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record was last viewed.
LocationWaitlistId	Type reference Properties Create, Filter, Group, Sort, Update Description Reference to the LocationWaitlist record.
MessagingTemplateId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort, Update Description Reference to the MessagingTemplate record.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of this record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner for this record.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the queue. Possible values are: - approaching—In Progress - confirmation—Confirmed - inactive—Inactive - ready—Ready - removed—Removed

LocationWaitlist

Represents a queue created for a specific location. Multiple queues can be created for a single location. For example, you can have a queue for each sales agent or a standard queue and a queue for vulnerable groups. The specific party of people in a queue is represented by LocationWaitlistedParty. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BusinessHoursId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A reference to the BusinessHours record that contains the hours the business is open.
ClosedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time a queue is closed.
CumulativeGuestCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of guests allowed.
CumulativeGuestGroupCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of groups allowed.
CurrentGuestCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The current number of guests.

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of this record.
GuestCapacity	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total capacity of guests.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record was last viewed.
MaxPartySize	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum size of a group.
MessagingChannelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The messaging channel ID.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the group.
OpenDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time a queue is open.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner for this record.
PartyReminderDelayMinutes	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of minutes between when a party is notified and when they receive a reminder.
PlaceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location ID for this record.
ResourceCapacity	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The capacity for this resource.
ResourceOccupancyCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The occupancy count for this resource.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the queue. Possible values are: - closed - open - paused

LocationWaitlistedParty

Represents a specific party of people waiting in a queue. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A brief description of this queue.

Field	Details
EntryDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time a party is added to the queue.
EstimatedWaitHours	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The estimated hours of wait time for a party.
EstimatedWaitMinutes	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The estimated minutes of wait time for a party.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the record was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the group.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner for this record.
PartySize	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The size of the queued party.
PartyStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The state of a party in the queue. Possible values are: • canceled • entered • exited • ready • waiting
SignUpDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when a party signed up for the queue.
WaitlistId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The ID for the queue.

LoginAsEventLog

LoginAsEventLog contains details about when a user logs in as another user in your org. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ClientId	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DelegatedUserIdentifier	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Unique ID that identifies the user who's logging in as, or impersonating, another user. For example: 00530000009M943.
DelegatedUserName	Type string Properties Filter, Group, Nillable, Sort Description The username of the user who's logging in as, or impersonating, another user.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same RequestIdentifier. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The impersonated user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description Unique ID that identifies the user who is being logged in as, or impersonated, by another user. For example: 005000000000123.

LoginEvent

The documentation has moved to [LoginEvent](#) in the *Platform Events Developer Guide*.

LoginEventLog

Login event logs contain details about your Salesforce org's user login history. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ApiType	Type string Properties Filter, Group, Nillable, Sort Description The type of API request. Possible values are: • D—Apex Class • E—SOAP Enterprise • I—SOAP Cross Instance • M—SOAP Metadata • O—Old SOAP • P—SOAP Partner • S—SOAP Apex • T—SOAP Tooling • X—XmlRPC • f—Feed • l—Live Agent • p—SOAP ClientSync
ApiVersion	Type int Properties Filter, Group, Nillable, Sort Description The version of the API that's being used. For example: 36.0.
AuthenticatedMethodReference	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol.
BrowserType	Type string Properties Filter, Group, Nillable, Sort Description The identifier string returned by the browser used at login. Example values are: - Go-http-client/1.1 - Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0 - Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36
CipherSuite	Type string Properties Filter, Group, Nillable, Sort Description The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CpuTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DatabaseTotalTime. Compare this field to CpuTime to determine whether performance issues are occurring in the database layer or in your own code.
ForwardedForIp	Type string Properties Filter, Group, Nillable, Sort Description Reserved for future use.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
LoginStatus	Type double Properties Filter, Nillable, Sort Description The status of the login attempt. For successful logins, the value is LOGIN_NO_ERROR. All other values indicate errors or authentication issues. For details, see Login Event Type — LOGIN_STATUS Values on page 2306.
LoginSubType	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The type of login flow used. Possible values are: • uiup—UI Username-Password • oauthpassword—OAuth Username-Password • oauthtoken—OAuth User-Agent • oauthhybridtoken—OAuth User-Agent for Hybrid Apps • oauthtokenidtoken—OAuth User-Agent with ID Token • oauthclientcredential—OAuth Client Credential • oauthcode—OAuth Web Server • oauthhybridauthcode—OAuth Web Server for Hybrid Apps
LoginType	Type string Properties Filter, Group, Nillable, Sort Description The type of login used to access the session. Possible values are: • 7—AppExchange • A—Application • s—Certificate-based login • k—Chatter Communities External User • n—Chatter Communities External User Third Party SSO • r—Employee Login to Community • z—Lightning Login • l—Networks Portal API Only • 6—Remote Access Client • i—Remote Access 2.0 • l—Other Apex API • R—Partner Product • w—Passwordless Login • 3—Customer Service Portal • q—Partner Portal Third-Party SSO • 9—Partner Portal • 5—SAML Idp Initiated SSO • m—SAML Chatter Communities External User SSO • b—SAML Customer Service Portal SSO • c—SAML Partner Portal SSO

Field	Details
	• h—SAML Site SSO • 8—SAML Sfdc Initiated SSO • E—SelfService • j—Third Party SSO
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdIdentifier</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RequestStatus	Type string Properties Filter, Group, Nillable, Sort Description The status of the request for a page view or user interface action. Possible values are: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For Login Event Type, this field is usually null because the event is captured before a session is created. For example: d7DEq/ANa7nNZZVD.
SourceIp	Type string Properties Filter, Group, Nillable, Sort Description The source IP of the login request.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
TransportLayerSecurityProtocol	Type string Properties Filter, Group, Nillable, Sort Description The TLS protocol used for the login. Possible values are: • 1.0 • 1.1 • 1.2
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.

Field	Details
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserName	Type string Properties Filter, Group, Nillable, Sort Description The username that's used for login.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

Field	Details
Username	Type string Properties Filter, Group, Nillable, Sort Description The username that's used for login.

LoginGeo

Represents the geographic location of the user's IP address for a login event. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) may vary. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with Manage Users permissions can access this object.

Fields

Field	Details
City	Type string Properties Filter, Group, Nillable, Sort Description The city where the user's IP address is physically located. This value is not localized.
Country	Type string Properties Filter, Group, Nillable, Sort Description The country where the user's IP address is physically located. This value is not localized.
CountryIso	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166
Latitude	Type double Properties Filter, Nillable, Sort Description The latitude where the user's IP address is physically located.
LoginTime	Type dateTime Properties Filter, Sort Description Time of the login attempt, in GMT time zone.
Longitude	Type double Properties Filter, Nillable, Sort Description The longitude where the user's IP address is physically located.
PostalCode	Type string Properties Filter, Group, Nillable, Sort Description The postal code where the user's IP address is physically located. This value is not localized.
Subdivision	Type string Properties Filter, Group, Nillable, Sort Description The name of the subdivision where the user's IP address is physically located. In the U.S., this value is usually the state name (for example, Pennsylvania). This value is not localized.

Usage

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Query showing the country for a login event, where Id=LoginGeoId from AuthSession	<code>SELECT Country FROM LoginGeo WHERE Id = 'OLE#####'</code>
Query showing the city and postal code for a login event, where Id=LoginGeoId from LoginHistory	<code>SELECT City, PostalCode FROM LoginGeo WHERE Id = 'OSO#####'</code>

LoginHistory

Represents the login history for all successful and failed login attempts for organizations and enabled portals. This object is available in API version 21.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

With one exception, only users with Manage Users or Monitor Login History permissions can access this object. The exception is that, in API version 37.0 and later, all users can retrieve their own login history records.

Fields

Field	Details
ApiType	Type string Properties Group, Nillable, Sort Description Indicates the API type, for example <code>Soap Enterprise</code>. Label is API Type.
ApiVersion	Type string Properties Group, Nillable, Sort Description Displays the API version used by the client. Label is API Version.

Field	Details
Application	Type string Properties Group, Nillable, Sort Description The application used to access the organization. Label is Application.
AuthMethodReference	Type string Properties Filter, Group, Nillable, Sort Description The authentication method used by a third-party identification provider for an OpenID Connect single sign-on protocol. This field is available in API version 51.0 and later. Label is Authentication Method Reference.
AuthenticationServiceId	Type reference Properties Filter, Group, Nillable, Sort Description The 18-character ID for an authentication service for a login event. For example, you can use this field to identify the SAML or authentication provider configuration with which the user logged in. This field is available in API version 34.0 and later. Label is Authentication Service Id. This field is a polymorphic relationship field. Relationship Name AuthenticationService Relationship Type Lookup Refers To AuthProvider, SamlSsoConfig
Browser	Type string Properties Group, Nillable, Sort Description The current browser version. Label is Browser.
CipherSuite	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description The TLS cipher suite used for the login. Values are OpenSSL-style cipher suite names, with hyphen delimiters. For more information, see OpenSSL Cryptography and SSL/TLS Toolkit. This field is available in API version 37.0 and later.
ClientVersion	Type string Properties Group, Nillable, Sort Description Version of the API client. Label is Client Version.
CountryIso	Type string Properties Filter, Group, Nillable, Sort Description The ISO 3166 code for the country where the user's IP address is physically located. For more information, see Country Codes - ISO 3166. This field is available in API version 37.0 and later.
ForwardedForIp	Type string Properties Filter, Group, Nillable, Sort Description The value in the <code>X-Forwarded-For</code> header of HTTP requests sent by the client. For logins that use one or more HTTP proxies, the <code>X-Forwarded-For</code> header is sometimes used to store the origin IP and all proxy IPs. The <code>ForwardedForIp</code> field stores whatever value the client sends, which might not be an IP address. The maximum length is 256 characters. Longer values are truncated. The <code>ForwardedForIp</code> field isn't populated for logins completed via OAuth flows or single sign-on (SSO). Available in API version 61.0 and later.
LoginGeoId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful login event. The accuracy of geolocation fields like country, city, or postal code can vary because of the nature of the technology. The Manage Users permission is required for accessing this field. This field is available in API version 34.0 and later. This field is a relationship field. Relationship Name LoginGeo Relationship Type Lookup Refers To LoginGeo
LoginSubType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of login flow used. - InternalSalesforceAuthentication—Internal Salesforce Authentication - This subtype is for internal use only. - OAuthClientCredentials—OAuth Client Credentials - OAuthHybridRefreshToken—OAuth Refresh Token for Hybrid Apps - OAuthHybridTokenExchange—OAuth Token Exchange for Hybrid Apps - OAuthHybridUserAgent—OAuth User-Agent for Hybrid Apps - OAuthHybridWebServer—OAuth Web Server for Hybrid Apps - OAuthOtpLogin—OAuth OTP Login - OAuthRefreshToken—OAuth Refresh Token - OAuthTokenExchange—OAuth Token Exchange - OAuthUserAgent—OAuth User-Agent - OAuthUserAgentIdToken—OAuth User-Agent with ID Token - OAuthUsernamePassword—OAuth Username-Password - OAuthWebServer—OAuth Web Server - SoapApiLogin—SOAP API - This subtype is for internal use only.

Field	Details
	• SoapApiLoginMobile-SOAP API (Mobile) This subtype is for internal use only. • SoapApiLoginNetworksPortal-SOAP API (Networks Portal) This subtype is for internal use only. • SoapApiLoginPortal-SOAP API (Portal) This subtype is for internal use only. • SoapApiLoginSelfService-SOAP API (Self-Service) This subtype is for internal use only. • UiPasswordReset-UI Password Reset • UsernamePasswordUiLogin-UI Username-Password Label is Login Subtype.
LoginTime	Type dateTime Properties Filter, Sort Description Time zone is based on GMT. Label is Login Time.
LoginType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of login used to access the session. • AppExchange-AppExchange • Application-Application • Certificate-Certificate-based login • ChatterCommunityPortalUnPwd-Chatter Communities External User • ChatterCommunityThirdPartySso-Chatter Communities External User Third Party SSO • CrossTenantLogin-Cross Tenant Login—For internal use only. • EmployeeLoginToCommunity-Employee Login to Community • HelpAndTraining-Help And Training • IeOfflineClient-Offline Client • LightningLogin-Lightning Login • NetworksPortalApiOnly-Networks Portal API Only

Field	Details
	• Oauth, Remote Access Client-Remote Access Client • Oauth2, Remote Access 2.0-Remote Access 2.0 • OtherApi-Other Apex API • Partner-Partner Product • PasswordlessLogin-Passwordless Login • PasswordlessPasskeyLogin-Passwordless Login via Passkeys (beta) Passwordless login with passkeys is a pilot or beta service that is subject to the Beta Services Terms at Agreements - Salesforce.com or a written Unified Pilot Agreement if executed by Customer, and applicable terms in the Product Terms Directory. Use of this pilot or beta service is at the Customer's sole discretion. • Portal-Customer Service Portal • PortalThirdPartySso-Customer Service Portal Third-Party SSO • PrmPortalThirdPartySso-Partner Portal Third-Party SSO • PrmPortal-Partner Portal • Saml-SAML Idp Initiated SSO • SamlChatterNetworks-SAML Chatter Communities External User SSO • SamlCspPortal-SAML Customer Service Portal SSO • SamlPrmPortal-SAML Partner Portal SSO • SamlSite-SAML Site SSO • Saml2-SAML Sfdc Initiated SSO • SelfService-SelfService • ThirdPartySso-Third Party SSO Label is Login Type.
LoginUrl	Type string Properties Filter, Group, Nillable, Sort Description URL from which the login request is coming. Label is Login URL.
NetworkId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the Experience Cloud site that the user is logging in to. This field is available in API version 31.0 and later, if Salesforce Experience Cloud sites are enabled for your org.
OptionsIsGet	Type boolean Properties Filter Description The HTTP method used for the session login is a GET request.
OptionsIsPost	Type boolean Properties Filter Description The HTTP method used for the session login is a POST request.
Platform	Type string Properties Group, Nillable, Sort Description Operating system on the login machine. Label is Platform.
SourceIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the incoming client request that first reaches Salesforce during a login. For example, 126.7.4.2. For clients that redirect through one or more HTTP proxies, this field stores the IP address of the first proxy to reach Salesforce. To better identify the origin IP for these cases, check the ForwardedForIp field instead. The SourceIp field doesn't support the LIKE comparison operator.
Status	Type string Properties Group, Nillable, Sort

Field	Details
	Description Displays the status of the attempted login. Status is either success or a reason for failure. Label is Status.
TlsProtocol	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The TLS protocol used for the login. Possible values are: • TLS 1.0 • TLS 1.1 • TLS 1.2 • TLS 1.3 • Unknown This field is available in API version 37.0 and later.
UserId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user logging in. Label is User ID.

Usage

Not all fields are filterable. You can only filter on the following fields:

- AuthenticationServiceId
- CipherSuite
- CountryIso
- Id
- LoginTime
- LoginType
- LoginUrl
- NetworkId
- OptionsIsGet
- OptionsIsPost
- TlsProtocol
- UserId

The API allows you to do many powerful queries. A few examples are:

Sample Query	Query String
Simple query showing UserId & LoginTime for each user	<code>SELECT UserId, LoginTime from LoginHistory;</code>
Query showing logins only after a specified date and time	<code>SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z;</code>
Query showing logins for a specific time interval	<code>SELECT UserId, LoginTime from LoginHistory WHERE LoginTime > 2010-09-20T22:16:30.000Z AND LoginTime < 2010-09-21T22:16:30.000Z;</code>
Query showing the authentication service for a SAML login event, where Id=AuthenticationServiceId from LoginHistory	<code>SELECT DeveloperName, Issuer, Version FROM SamlSsoConfig WHERE Id = 'OLE#####'</code>
Query showing the authentication service for an authentication provider login event, where Id=AuthenticationServiceId from LoginHistory	<code>SELECT Type, DeveloperName FROM AuthProvider WHERE Id = 'OSO#####'</code>

LoginIp

Represents a validated IP address. This object is available in version 28.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`

Fields

Field	Details
ChallengeMethod	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The challenge method used to confirm the user's identity. Possible values include the following. - Email - SMS - TOTP_CHOICE: The user chooses multi-factor authentication. - TOTP_ONLY: The user is required to use multi-factor authentication.

Field	Details
ChallengeSentDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the user was authenticated.
IsAuthenticated	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code> , the user has already been authenticated.
SourceIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address the user logged in from.
UsersId	Type reference Properties Filter, Group, Sort Description The ID of the user associated with this item. This is a relationship field. Relationship Name Users Relationship Type Lookup Refers To User

Usage

At every login, the IP address of the login request is checked against the validated IP addresses using LoginIp. A match means the login IP address is a known IP address. If there's no match, the address is unknown, and the user is asked to confirm their identity.

LogoutEventLog

Contains details of user sessions ending or being revoked. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ApiType	Type Contains details of user sessions ending or being revoked. string Properties Filter, Group, Nillable, Sort Description The type of API request. Possible values are: • D—Apex Class • E—SOAP Enterprise • M—SOAP Metadata • P—SOAP Partner • S—SOAP Apex • T—SOAP Tooling • f—Feed • l—Live Agent • p—SOAP ClientSync
ApiVersion	Type int Properties Filter, Group, Nillable, Sort Description The version of the API that’s being used. For example: 36.0.

Field	Details
AppType	Type double Properties Filter, Nillable, Sort Description The application type that was in use upon logging out. Example Values • 1000: Application • 1007: SFDC Application • 1014: Chat • 2501: CTI • 2514: OAuth • 3475: SFDC Partner Portal
BrowserType	Type string Properties Filter, Group, Nillable, Sort Description The identifier string returned by the browser used at login. Example values are: • Go-http-client/1.1 • Mozilla/5.0 (Macintosh; Intel Mac OS X 10.12; rv%3A50.0) Gecko/20100101 Firefox/50.0 • Mozilla/5.0 (Macintosh; Intel Mac OS X 10_11_6) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/51.0.2704.84 Safari/537.36
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
ClientVersion	Type double

Field	Details
	Properties Filter, Nillable, Sort Description The version of the client that was in use upon logging out.
IsUserInitiatedLogout	Type boolean Properties Defaulted on create, Filter, Group, Sort Description The value is 1 if the user intentionally logged out of the organization by clicking the Logout button. If the user's session timed out due to inactivity or another implicit logout action, the value is 0.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
PlatformType	Type double Properties Filter, Nillable, Sort Description The code for the client platform. If a timeout caused the logout, this field is null. Example Values • 1000: Windows • 1008: Windows 2003 • 1013: Windows 8.1 • 1015: Windows 10 • 2003: Macintosh/Apple OSX • 4000: Linux • 5005: Android • 5006: iPhone • 5007: iPad • 5200: Android 10.0

Field	Details
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
ResolutionType	Type double Properties Filter, Nillable, Sort Description The screen resolution of the client. If a timeout caused the logout, this field is null.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
SessionLevel	Type string Properties Filter, Group, Nillable, Sort Description The security level of the session that was used when logging out.
SessionType	Type string Properties Filter, Group, Nillable, Sort Description The session type that was used when logging out. Possible Values • A: API • I: APIOnlyUser • N: ChatterNetworks • z: ChatterNetworksAPIOnly

Field	Details
	- C: Content - P: OAuthApprovalUI - O: OAuth2 - T: SiteStudio - R: SitePreview - S: SubstituteUser - B: TempContentExchange - G: TempOAuthAccessTokenFrontdoor - Y: TempVisualforceExchange - F: TempUIFrontdoor - U: UI - E: UserSite - V: Visualforce - W: WDC_API
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example: 20130715233322.670. When a customer logs out by using the Logout button, the TIMESTAMP field records the actual logout time. However, when a customer is logged out automatically, Salesforce detects the event by using a process that runs every 15 minutes. TIMESTAMP values can reflect a logout time up to 15 minutes later than the actual automatic logout time.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
UserType	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The category of user license of the user accessing Salesforce services through the UI or API.

LogoutEventStream

The documentation has moved to [LogoutEventStream](#) in the *Platform Events Developer Guide*.

LookedUpFromActivity

This read-only object is displayed as a related list on an activity record (an event or a task); the list contains records that have custom lookup relationships from the activity to another object. This object is not queryable.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the related account, which is determined as follows: • The account associated with the <code>whatId</code>, if it exists; or • The account associated with the <code>whoId</code>, if it exists; otherwise • <code>null</code> For information on IDs, see Field Types This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account

Field Name	Details
ActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Indicates one of the following: • The due date of a task • The date of an event if <code>IsAllDayEvent</code> is set to <code>true</code> This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code>.
ActivityDateTime	Type dateTime Properties Aggregate, Filter, Nillable, Sort Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time. The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.
ActivitySubtype	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable. Possible values are: • Task • Email • Call • Event • LinkedIn —Available in API version 56.0 and later. • List Email

Field Name	Details
ActivityType	Type picklist Properties Filter, Group, Nillable, Sort Description Represents one of the following values: Call, Email, Meeting, or Other. Label is Type. These are default values, and can be changed. ActivityType is the union of TaskType and EventType. If the same activity appears in both dynamic picklists, duplicate activities appear. TaskType and EventType can each have a Call type. Internally, they are distinct from each other.
CallDisposition	Type string Properties Filter, Group, Nillable, Sort Description Represents the result of a given call; for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.
CallDurationInSeconds	Type int Properties Filter, Group, Nillable, Sort Description Duration of the call in seconds.
CallObject	Type string Properties Filter, Group, Nillable, Sort Description Name of a call center. Limit is 255 characters.
CallType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of call being answered: Inbound, Internal, or Outbound.

Field Name	Details
CompletedDateTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time the task was saved with a Closed status. - For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL. - For update, if the task is saved with a new Closed status, the field is reset. If the task is saved with a new non-closed status, the field is reset to NULL. If the task is saved with the same closed status (that is, unchanged) there is no change to the field.  Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected.
Description	Type textarea Properties Nillable Description Contains a description of the event or task. Limit is 32 KB.
DurationInMinutes	Type int Properties Filter, Group, Nillable, Sort Description Indicates the duration of the event or task.
EndTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following: If <code>IsAllDayEvent</code> is true, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are null, the duration defaults to one day.

Field Name	Details
	If <code>IsAllDayEvent</code> is false, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time.
<code>IsAllDayEvent</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity is an event spanning a full day, and the <code>ActivityDate</code> defines the date of the event. If the value of this field is set to <code>false</code>, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is <code>false</code>. Label is <code>All-Day Event</code>.
<code>IsClosed</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a task is closed (<code>true</code>) or not closed (<code>false</code>). The default value of this field is <code>false</code>. This field is set indirectly by setting <code>Status</code> on the task—each picklist value has a corresponding <code>IsClosed</code> value. Label is <code>Closed</code>.
<code>IsHighPriority</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates a high-priority task. The default value of this field is <code>false</code>. This field is derived from the <code>Priority</code> field.
<code>IsReminderSet</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>). The default value of this field is <code>false</code>.
<code>IsTask</code>	Type boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity is a task; if the value is set to <code>false</code>, then the activity is an event. The default value of this field is <code>false</code>. Label is Task.
IsVisibleInSelfService	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. The default value of this field is <code>false</code>. Label is Visible in Self-Service.
Location	Type string Properties Filter, Group, Nillable, Sort Description If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is <code>null</code>.
OwnerId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the user or group who owns the activity. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Calendar, Group, User
Priority	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Indicates the priority of a task, such as high, normal, or low. The default value of this field is <code>Normal</code>.
ReminderDateTime	Type dateTime Properties Filter, Nillable, Sort Description Represents the time at which a reminder is scheduled to fire if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.
StartDateTime	Type dateTime Properties Filter, Nillable, Sort Description Indicates the start date and time of the event. Available in versions 13.0 and later. The <code>StartDateTime</code> field contains the event start date. However, if the event's <code>IsAllDayEvent</code> flag is set to <code>true</code> (indicating an all-day event), then the time stamp in the <code>StartDateTime</code> field is always set to midnight in the Coordinated Universal Time (UTC) time zone. Don't attempt to alter the time stamp to account for any time zone differences. If the event's <code>IsAllDayEvent</code> flag is set to <code>false</code>, then you must translate the time portion of the time stamp in the <code>StartDateTime</code> field to or from a local time zone for the user or the application, as appropriate, and the translation must be in the Coordinated Universal Time (UTC) time zone. If this field has a value, then <code>ActivityDate</code> and <code>ActivityDateTime</code> either must be <code>null</code> or must match the value of this field.
Status	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Indicates the current status of a task. The default value of this field is <code>Not Started</code>. Each predefined status field sets a value for <code>IsClosed</code>. Possible values are: - Completed - Deferred

Field Name	Details
	- In Progress - Not Started - Waiting on someone else
Subject	Type combobox Properties Filter, Nillable, Sort Description Contains the subject of the task or event.
WhatId	Type reference Properties Filter, Group, Nillable, Sort Description The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>. This is a polymorphic relationship field. Relationship Name What Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria,

Field Name	Details
	HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
WhoId	Type reference Properties Filter, Group, Nillable, Sort Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is Name ID. This is a polymorphic relationship field. Relationship Name Who Relationship Type Lookup Refers To Contact, Lead

Usage

Query activities related to an object

1. Optionally, issue a describe call against the object whose activities you wish to query, to get a suggestion of the correct SOQL to use.
2. Issue a SOQL relationship query with a main clause that references the object, and an inner clause that references the activity custom lookup relationship; for example:

```
SELECT id, name,
(SELECT id, subject from sponsoredact__r)
FROM Contact
```

In this example *sponsoredact__r* is a user defined relationship list.

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following restrictions on users who don't have "View All Data" permission help prevent performance issues:

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with 'A'; instead, you must reference a single account record.
- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- You must sort on `ActivityDate` in descending order and `LastModifiedDate` in descending order; you can display nulls last. For example: `ORDER BY ActivityDate DESC NULLS LAST, LastModifiedDate DESC`.

Macro

Represents a macro, which is a set of instructions that tells the system to perform one or more tasks. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description Description of what this macro does.
FolderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Returns the ID of the folder that contains the macro. Available in API version 44.0 and later.
FolderName	Type string Properties Filter, Nillable, Sort Description Name of the folder that contains the macro. Available in API version 44.0 and later.

Field	Details
IsAlohaSupported	Type boolean Properties Defaulted on create, Filter Description Specifies whether the macro is supported in Salesforce Classic.
IsLightningSupported	Type boolean Properties Defaulted on create, Filter Description Specifies whether the macro is supported in Lightning Experience.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the macro record was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the macro record was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the macro.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the session record.

Field	Details
StartingContext	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The object the macro performs actions on. In Salesforce Classic, macros are supported on objects with both feed-based layouts and quick actions. In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout.

Usage

A macro definition consists of a Macro object and several associated [MacroInstruction](#) objects.

First, create a Macro object. Then, create MacroInstructions that specify objects, operations, conditions, and targets for the macro.

A macro contains an ordered list of macro instructions whose index field, `sortOrder`, is 0-based. If there's an incorrect sequence of macro instructions, the macro doesn't execute.

If you update a macro definition or add or remove instructions from a macro, make sure that the `sortOrder` field that defines the execution order is correct. To delete an entire macro definition, invoke the delete operation on the Macro object.

The table describes the supported macro instruction targets and how they relate to each other.

Note: Strings indicated by `<brackets>` are variables. The variable description describes the required type. For example, `Tab.<EntityApiName>` requires the entity name. If your custom entity name is `MyCustomObject`, your target API is `Tab.MyCustomObject__c`.

If a macro instruction listed in the table supports an implicit operation, you can use that operation as a direct child instruction without explicitly specifying a target. The hyphens used in the table illustrate the hierarchical relationship between targets. A target isn't available if its parent isn't.

Table 1: Macro Instruction Target Grammar and Hierarchy

Target API Name	Supported Operations
<code>Tab.<EntityApiName></code>	SELECT, CLOSE (implicit)
- <code>QuickAction.<EntityApiName>.<QuickActionName></code>	SELECT, SUBMIT (implicit)
- - <code>Field.<QATargetEntityApiName>.<FieldApiName></code>	SET
- - <code>Field.<QATargetEntityApiName>.<MultilineTextFieldApiName>.cursor</code>	INSERT
- - <code>Field.<QATargetEntityApiName>.<SinglelineTextFieldApiName>.end</code>	INSERT
- <code>QuickAction.Case.Email</code>	SELECT, SUBMIT (implicit)
- - <code>Field.EmailMessage.<FieldApiName></code>	SET
- - <code>Field.EmailMessage.<MultilineTextFieldApiName>.cursor</code>	INSERT

Target API Name	Supported Operations
- - Field.EmailMessage.<SinglelineTextFieldApiName>.end	INSERT
- - Field.EmailTemplate	SET
- SidebarCmp.Knowledge	SELECT
- - SearchAction.KnowledgeArticle	SELECT
- - - Field.SearchString	SET, INSERT
- - - Command.Search	SUBMIT
- - SearchResult.KnowledgeArticle.MostRecentItem	SELECT
- - - Command.AttachToRecord	SUBMIT
- - - Command.InsertToEmail	SUBMIT
- - - Command.AttachToEmailAsPDF	SUBMIT

Example: This example describes a macro that opens a quick action, sets some fields in the quick action, and submits the quick action.

```

0. SELECT Tab.Case
1.   SELECT QuickAction.Case.Email
2.     SET Field.EmailMessage.Subject
3.     SET Field.EmailMessage.ToAddress
4.     INSERT Field.EmailMessage.HtmlBody.cursor
5.     SUBMIT

```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MacroChangeEvent (API version 48.0)

Change events are available for the object.

MacroHistory

History is available for tracked fields of the object.

MacroOwnerSharingRule

Sharing rules are available for the object.

MacroShare

Sharing is available for the object.

MacroInstruction

Represents an instruction in a macro. An instruction can specify the object that the macro interacts with, the context or publisher that the macro works within, the operation or action that the macro performs, and the target of the macro's actions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
MacroId	Type reference Properties Create, Filter, Group, Sort Description ID of the macro that contains this instruction.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description Name of the instruction.
Operation	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The action that the macro instruction performs. Valid values are: • Select • Set • Insert • Submit • Close To create macro instructions that execute conditionally, these values are available in API version 46.0 and later. • IF • ELSEIF • ELSE • ENDIF
SortOrder	Type int

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description Order of this instruction in the macro.
Target	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The object that's the target of the operation. For example, the target for the active case tab (Tab.Case) or a quick action, like the Send Email action on the case object (QuickAction.Case.SendEmail). In Lightning Experience, macros are supported on standard and custom objects that allow quick actions and have a customizable page layout. In Salesforce Classic, macros are supported on objects with feed-based layouts and quick actions. You can specify relative dates and times for the following targets. • DateTime • Date • Time • DueDate • Birthday
Value	Type string Properties Create, Filter, Nillable, Sort, Update Description Value of a field. If the operation is Select, then the value is null, because the operation selects the object on which the macro performs an action. An instruction can contain both a <code>Value</code> field and a <code>ValueRecord</code> field, but only one of these fields can have a value. The other field value must be null. To create relative dates and times, specify a valid Salesforce formula, prefaced by <code>MacroFormula</code>. For example, the following formula creates a date that is 1 day from now: <code>MacroFormula:NOW() + 1</code> You can't edit custom relative formulas in the Macro Builder.
ValueRecord	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description ID of the value or record. The <code>ValueRecord</code> can be either a value or a record, but not both. An instruction can contain both a <code>Value</code> field and a <code>ValueRecord</code> field, but only one of these fields can have a value. The other field value must be null.

Usage

MacroInstructions can specify objects, operations, conditions, and targets. For example, a macro containing these instructions performs a quick action that sends an email.

```
Select Email QuickAction
Set Subject...
Set To...
Set Body...
Submit
```

You can create conditional macros using `IF`, `ELSEIF`, `ELSE`, and `ENDIF` as operations. In a conditional statement, the [ExpressionFilter](#) and [ExpressionFilterCriteria](#) objects are used to control which instructions execute. The `ExpressionFilter` object lets you define a logical expression with one or more conditions. It uses a child object, `ExpressionFilterCriteria`, to represent each condition that is evaluated.

For example, consider the following conditional statement and macro instructions.

```
IF (Case.Status EQUALS New) AND (Case.Origin EQUALS Phone)
    Select Email QuickAction
    Set Subject...
    Set To...
    Set Body...
    Submit
ELSE
    Select Update Case Detail
    Update Case Description...
    Submit
ENDIF
```

The `ExpressionFilter` object includes a `FilterConditionLogic` field containing `1 AND 2`, where 1 and 2 are `ExpressionFilterCriteria` objects. The `SortOrder` field in the `ExpressionFilterCriteria` object maps condition 1 to `Case.Status EQUALS New`, and condition 2 to `Case.Origin EQUALS Phone`. If the conditional statement evaluates to true, then the instructions in the `IF` block are executed; otherwise, the instructions in the `ELSE` block are executed.

Any number of macro instructions can be present inside an `IF`, `ELSEIF`, or `ELSE` block. In addition, conditions can be nested.

Data Model

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

MacroInstructionChangeEvent (API version 48.0)

Change events are available for the object.

MacroUsage

Represents macro usage on a record, including which macro was used, who used it, and how they used it. This object is available in API version 47.0 and later.

Supported Calls

describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()
delete() is supported in API version 55.0 and later.

Special Access Rules

This object is always read-only. Only users with “Modify All Data” permission can delete MacroUsage records.

Fields

Field	Details
AppContext	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Context in which the macro was run. Possible values are: • Aloha—Salesforce Classic • Lightning—Lightning Experience • Unknown
ConditionCount	Type int Properties Filter, Group, Nillable, Sort Description Number of conditional instructions contained in the macro at execution.
ContextRecord	Type string Properties Filter, Group, Nillable, Sort Description ID of the record on which the macro was run.
DurationInMs	Type int Properties Filter, Group, Nillable, Sort Description The execution time, in milliseconds, for the macro.
ExecutedInstructionCount	Type int Properties Filter, Group, Nillable, Sort Description The number of macro instructions that ran successfully. If the macro completed successfully, this value is the same as InstructionCount.

Field	Details
ExecutionEndTime	Type dateTime Properties Filter, Nillable, Sort Description The time at which macro execution completed.
ExecutionState	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The end state of macro execution. Possible values are • SUCCESS • FAILURE • CANCELED
FailureReason	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description If <code>ExecutionState</code> is failure, this field stores the reason for the failure. Possible values are: • ACCESS • GENERIC • TIMEOUT • UNSUPPORTED
FolderId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the folder containing the macro at the time it was used.
InstructionCount	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description The number of instructions in the macro at the start of execution.
IsFromBulk	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If true, the macro was run as a bulk macro. When a bulk macro is run on multiple records, usage is recorded per record.
MacroID	Type reference Properties Filter, Group, Sort Description ID of the macro.
Name	Type string Properties Filter, Group, idLookup, Sort Description Name of the macro.
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the group or user that owns the macro.
UserId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user that ran the macro.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MacroUsageOwnerSharingRule

Sharing rules are available for the object.

MacroUsageShare

Sharing is available for the object.

MailmergeTemplate

Represents a mail merge template (a Microsoft Word document) used for performing mail merges for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- All users can view this object, but you need the “Customize Application” permission to modify it.
- Customer Portal users can’t access this object.

Fields

Field	Details
Body	Type base64 Properties Create Description Required. Microsoft Word document to use as a mail merge template. Due to limitations with Microsoft Word mail merge templates, your client application can specify the Body field when creating these records, but not when updating them. Limit: 5 MB.
BodyLength	Type int Properties Filter, Group, Nillable, Sort Description Length of the Microsoft Word document.

Field	Details
Category	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of document template. Possible values are: • Document • Envelope • Label The default value is Document.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Text description of this mail merge template. Limit: 255 characters.
Filename	Type string Properties Create, Filter, Group, Sort Description Required. File name of the Microsoft Word document that was uploaded as a mail merge template. Limit: 255 characters in length.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
LastUsedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and time when this MailmergeTemplate was last used.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this mail merge template.
SecurityOptionsAttachmentHasFlash	Type boolean Properties Create, Filter, Update Description Required. True if Flash Injection was detected in the attachment.
SecurityOptionsAttachmentHasXSSThreat	Type boolean Properties Create, Filter, Update Description Required. True if a cross site scripting threat was detected in the attachment.
SecurityOptionsAttachmentScannedforFlash	Type boolean Properties Create, Filter, Update Description Required. True if the attachment has been scanned for Flash Injection.
SecurityOptionsAttachmentScannedForXSS	Type boolean Properties Create, Filter, Update Description Required. True if the attachment has been scanned for a cross site scripting threat.

Usage

Use this object to manage mail merge templates for your organization.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

MaintenanceAsset

Represents an asset covered by a maintenance plan in field service. Assets can be associated with multiple maintenance plans.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AssetId	Type reference Properties Create, Filter, Group, Sort, Update Description The asset associated with the maintenance asset.
ContractLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Contract line item associated with the maintenance asset. This field can only list a contract line item that is associated with the asset, and whose parent service contract is associated with the parent maintenance plan.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The date when the maintenance asset was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product request was last viewed.
MaintenanceAssetNumber	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description An auto-assigned number that identifies the maintenance asset.
MaintenancePlanId	Type reference Properties Create, Filter, Group, Sort Description Maintenance plan associated with the maintenance asset.
NextSuggestedMaintenanceDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The suggested date of service for the maintenance asset's first work order (not the date the work order is created). This corresponds to the work order's SuggestedMaintenanceDate. If left blank when the maintenance asset is created, this field inherits its initial value from the related maintenance plan. This field auto-updates after each batch is generated. Its label in the user interface is Date of the first work order in the next batch.
WorkTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Work type associated with the maintenance asset. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MaintenanceAssetChangeEvent (API version 48.0)

Change events are available for the object.

MaintenanceAssetFeed

Feed tracking is available for the object.

MaintenanceAssetHistory

History is available for tracked fields of the object.

MaintenancePlan

Represents a preventive maintenance schedule for one or more assets in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The associated account, which typically represents the customer receiving the maintenance service.

Field Name	Details
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The associated contact.
Description	Type textarea Properties Create, Nillable, Update Description A brief description of the plan.
DoesAutoGenerateWorkOrders	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Turns on auto-generation of work order batches for a maintenance plan and prohibits the manual generation of work orders via the Generate Work Orders action. If this option is selected, a new batch of work orders is generated for the maintenance plan on the <code>NextSuggestedMaintenanceDate</code> listed on each maintenance asset, or on the maintenance plan if no assets are included. If a <code>GenerationHorizon</code> is specified, the date of generation is that many days earlier.
DoesGenerateUponCompletion	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If both this option and <code>DoesAutoGenerateWorkOrders</code> are set to true, a new batch of work orders isn't generated until the last work order generated from the maintenance plan is completed. A work order is considered completed when its status falls into one of the following status categories: Cannot Complete, Canceled, Completed, or Closed. If a maintenance plan covers multiple assets, work orders are generated per asset. If a maintenance asset's final work order is completed late, its work order generation is delayed, which may cause a staggered generation schedule between maintenance assets.

Field Name	Details
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The last day the maintenance plan is valid.
Frequency	Type int Properties Create, Filter, Group, Sort, Update Description (Optional) Amount of time between work orders. The unit is specified in the <code>FrequencyType</code> field.
FrequencyType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description (Optional) The unit of frequency: • Days • Weeks • Months • Years For example, to perform monthly maintenance visits you need a work order for each visit, so enter 1 as the <code>Frequency</code> and select Months.
GenerationHorizon	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Moves up the timing of batch generation if <code>DoesAutoGenerateWorkOrders</code> is set to true. A generation horizon of 5 means the new batch of work orders is generated 5 days before the maintenance asset's (or maintenance plan's, if there are no assets) <code>NextSuggestedMaintenanceDate</code>. The generation horizon must be a whole number.
GenerationTimeframe	Type int

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description (Required) How far in advance work orders are generated in each batch. The unit is specified in the <code>GenerationTimeframeType</code> field.
<code>GenerationTimeframeType</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description (Required) The generation timeframe unit: • Days • Weeks • Months • Years For example, if you need work orders for six months, enter 6 and select Months.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
<code>LocationId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Where the service takes place.

Field Name	Details
MaintenancePlanNumber	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description (Read Only) An auto-assigned number that identifies the maintenance plan.
MaintenancePlanTitle	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A name for the maintenance plan.
MaintenanceWindowEndDays	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Days after the suggested service date on the work order that its service appointment can be scheduled.
MaintenanceWindowStartDays	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Days before the suggested service date on the work order that its service appointment can be scheduled. The maintenance window start and end fields affect the Earliest Start Permitted and Due Date fields on the maintenance plan's work orders' service appointments. For example, if you enter 3 for both the maintenance window start and end, the Earliest Start Permitted and the Due Date will be 3 days before and 3 days after, respectively, the Suggested Maintenance Date on each work order. If the maintenance window fields are left blank, the service appointment date fields list their work order's suggested maintenance date.
NextSuggestedMaintenanceDate	Type date Properties Create, Filter, Group, Sort, Update

Field Name	Details
	Description The suggested date of service for the first work order (not the date the work order is created). This corresponds to the work order's <code>SuggestedMaintenanceDate</code>. You can use this field to enforce a delay before the first maintenance visit (for example, if monthly maintenance should begin one year after the purchase date). Its label in the user interface is Date of the first work order in the next batch. For example, if you want the first maintenance visit to take place on May 1, enter May 1. When you generate work orders, the earliest work order will list a suggested maintenance date of May 1, and the dates on the later work orders will be based on the <code>GenerationTimeframe</code> and <code>Frequency</code>.  Important: Maintenance assets also list a <code>NextSuggestedMaintenanceDate</code>, which is initially inherited from the maintenance plan. If the plan has maintenance assets, this date auto-updates on the maintenance assets after each batch is generated, but doesn't update on the maintenance plan itself because batch timing is calculated at the maintenance asset level. If the plan doesn't have maintenance assets, this date auto-updates on the maintenance plan after each batch is generated.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the maintenance plan.
ServiceContractId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The service contract associated with the maintenance plan. The service contract can't be updated if any child maintenance asset is associated with a contract line item from the service contract.
StartDate	Type date Properties Create, Filter, Group, Sort, Update Description The first day the maintenance plan is valid.

Field Name	Details
SvcApptGenerationMethod	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The service appointment generation method. - One service appointment per work order - One service appointment per work order line item If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods. If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method. If Work Order Generation Method is set to One work order line item per asset, you must select a Service Appointment Generation Method.
WorkOrderGenerationMethod	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The work order generation method. - One work order per asset - One work order line item per asset If your existing maintenance plans have work orders or work order line items associated with them, you can't change their generation methods. To change pre-existing maintenance plan generation methods, either delete the work orders and regenerate them or delete the maintenance plan and recreate it with the needed generation methods. If Work Order Generation Method is left as None, the generation is defaulted to one work order per asset. When One work order line item per asset is set, and all maintenance assets have the same Next Suggested Maintenance Date on the maintenance plan, they are grouped in one work order. However, if maintenance assets have different Next Suggested Maintenance Dates, multiple work orders are created for each date. If Work Order Generation Method is set to One work order per asset, you can't set a Service Appointment Generation Method.

Field Name	Details
WorkOrderGenerationStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description (Read Only) Indicates the status of work order generation: • NotStarted—the default value, work order generation has not started • InProgress—work order generation is underway • Completed—work order generation is complete • Unsuccessful—it was not possible to generate work orders You can generate only one batch at a time.
WorkTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The associated work type. Work orders generated from the maintenance plan inherit its work type's duration, required skills and products, and linked articles. Maintenance assets covered by the plan use the same work type, though you can update them to use a different one.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MaintenancePlanChangeEvent (API version 48.0)

Change events are available for the object.

MaintenancePlanFeed

Feed tracking is available for the object.

MaintenancePlanHistory

History is available for tracked fields of the object.

MaintenancePlanOwnerSharingRule

Sharing rules are available for the object.

MaintenancePlanShare

Sharing is available for the object.

MaintenanceWorkRule

Represents the recurrence pattern for a maintenance record. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DoesFloatingWorkOrder	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the maintenance plan uses the floating work order adjustment. The default is false.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the line item was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the line item was last viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of this maintenance work rule.
NextSuggestedMaintenanceDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The next date on which this rule will generate maintenance items.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The assigned owner of the maintenance work rule.
ParentMaintenancePlanId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The maintenance plan associated with the maintenance work rule.
ParentMaintenanceRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The maintenance record this work rule applies to.
RecordsetFilterCriteriaId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the recordset filter criteria associated with this maintenance work rule. Available in API version 52.0 and later.
RecurrencePattern	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The RRULE that defines the pattern of recurrence for this work order rule.
SortOrder	Type int

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The sort order that applies to this work order rule.
Title	Type string Properties Create, Filter, Group, Sort, Update Description The title of this work order rule.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of maintenance work rule. Available values are: - Criteria-based - Calendar-based (default) Available in API version 52.0 and later.
WorkTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the work type that this work order rule generates.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[MaintenanceWorkRuleChangeEvent](#)

Change events are available for the object.

[MaintenanceWorkRuleFeed](#)

Feed tracking is available for the object.

[MaintenanceWorkRuleHistory](#)

History is available for tracked fields of the object.

[MaintenanceWorkRuleOwnerSharingRule](#)

Sharing rules are available for the object.

MaintenanceWorkRuleShare

Sharing is available for the object.

ManagedContent

Represents managed content in a Salesforce CMS workspace for use in an Experience Cloud site or a channel. The ManagedContent object represents the complete instance of a managed content record. It provides a consistent identifier for the managed content so that variants of the content item can be created over time. This object is available in API version 56.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Special Access Rules

ManagedContent is available when the Digital Experiences app is enabled.

Fields

Field	Details
ApiName	Type string Properties Filter, Group, Nillable, Sort Description The unique API name of the Salesforce CMS content. Name requirements: • must be 80 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain two consecutive underscores This field is available in API version 62.0 and later.
AuthoredManagedContentSpaceId	Type reference Properties Filter, Group, Nillable, Sort Description The Salesforce CMS workspace ID where the content resides. This field is a relationship field.

Field	Details
	Relationship Name AuthoredManagedContentSpace Relationship Type Lookup Refers To ManagedContentSpace
ContentKey	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Unique identifier of the content.
ContentTypeFullyQualifiedName	Type string Properties Filter, Group, Nillable, Sort Description The fully qualified name of the content type of this CMS content. In an enhanced CMS workspace, the <code>ContentTypeFullyQualifiedName</code> for each standard content type is: - News: <code>sfdc_cms__news</code> - Image: <code>sfdc_cms__image</code> - Document: <code>sfdc_cms__document</code> In a CMS workspace, the <code>ContentTypeFullyQualifiedName</code> for each standard content type is: - News: <code>news</code> - Image: <code>cms_image</code> - Document: <code>cms_document</code> In both CMS workspaces and enhanced CMS workspaces, the <code>ContentTypeFullyQualifiedName</code> for a custom content type is the same as the developer name of the custom content type. This field is available in API version 62.0 and later.
Name	Type string Properties Filter, Group, idLookup, Sort

Field	Details
	Description The name of the Salesforce CMS content. When you view this content in a CMS workspace, <code>Name</code> is the title of the latest content version. In an enhanced CMS workspace, <code>Name</code> is the title of the content in the workspace's default language. This field is available in API version 58.0 and later.
<code>PrimaryLanguage</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The default language of the Salesforce CMS workspace where the content resides.

Usage

When you create or add content in a Salesforce CMS workspace, the content is uniquely identified by the Salesforce CMS workspace, a content key, and a default language. `ManagedContent` can be queried through the public sObject API. Use this object to create and retrieve information for a specific managed content.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ManagedContentChangeEvent](#) on page 68 (API version 62.0)

Change events are available for the object.

ManagedContentChannel

Represents the details of a CMS channel. CMS channels correspond to managed content publishing endpoints. They deliver published content from your Salesforce CMS workspaces to an audience. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

`ManagedContentChannel` is available when the Digital Experiences app is enabled.

Fields

Field	Details
CacheControlMaxAge	Type long Properties Filter, Group, Nillable, Sort Description The amount of time, in seconds, it takes for a requested CMS content resource in the CMS channel to expire before a new request for the resource must be made.
Domain	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The domain for a public channel. Only public channels can have an assigned domain. Possible value is: • mydomain.cdn.salesforce-experience.com  Note: The mydomain value is specific to the domain of the channel.
DomainHostName	Type string Properties Filter, Nillable, Sort Description The hostname of the domain assigned to the CMS channel. Only public channels can have an assigned domain.
MediaCacheControlMaxAge	Type long Properties Filter, Group, Nillable, Sort Description The amount of time, in seconds, it takes for a requested CMS image or document content resource in the CMS channel to expire before a new request for the resource must be made. This field is available in API version 57.0 and later.
Name	Type string

Field	Details
	Properties Filter, Group, idLookup, Sort Description Name of the CMS channel.
OptionsIsCacheControlPublic	Type boolean Properties Filter Description When <code>true</code> , the CMS channel connection type is public. When <code>false</code> , the cache control is private. The default value is <code>false</code> .
OptionsIsDomainLocked	Type boolean Properties Filter Description When <code>true</code> , the domain set to the channel can't be changed. Only public channels can have this field set to <code>true</code> . If the channel type is <code>COMMUNITY</code> , the default value is <code>true</code> . For all other channel types, the default value is <code>false</code> .
OptionsIsSearchable	Type boolean Properties Filter Description When <code>true</code> , users can search for all published CMS content types within the channel. The default value is <code>false</code> .
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The connection type of the CMS channel. The connection type determines which audience can access the CMS content delivered in the channel. Possible values are: • <code>COMMUNITY</code>: User access is controlled by the settings of the Experience Cloud site. • <code>CloudToCloud</code>: Connects Salesforce CMS to the B2C Commerce Page Designer. • <code>ConnectedApp</code>: User access to the channel is controlled by the connected application associated with the channel.

Field	Details
	• PublicUnauthenticated: No user authentication required, content can be cached on public CDNs. • Record: User access to the content is controlled by the user access to the associated record. Content is only accessible to users with access to the record. • UserPermission: This value is reserved for future use.

Usage

`ManagedContentChannel` can be queried through the public sObject API. Use this object to retrieve information for a specific CMS channel.

ManagedContentInfo

Allows the creation of relationship to Product using ProductMedia. This object is available in API version 49.0 to 57.0. In API version 58.0 and later, use the ManagedContent object.

Supported Calls

`describeSObjects()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a web store.

Usage

The CMS content import process returns a ManagedContentInfo ID for each piece of content. The ManagedContentInfo entity has a 1:1 relationship with ProductMedia. To create this relationship, ProductMedia must be associated with a Product entity, for example, Product > ProductMedia > ManagedContentInfo. Use the ID to associate content uploaded through the API with the ProductMedia entity

ManagedContentSpace

Represents the complete instance of a Salesforce CMS workspace that stores managed content. Users and groups with designated permissions can access and manage the content in a CMS workspace. This object is available in API version 56.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

ManagedContentSpace is available when the Digital Experiences app is enabled.

Fields

Field	Details
ApiName	Type string Properties Filter, Group, Nillable, Sort Description The unique API name of an enhanced Salesforce CMS workspace. Name requirements: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain two consecutive underscores
DefaultLanguage	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Default language for the Salesforce CMS workspace. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified)

Field	Details
	zh_TW—Chinese (Traditional)
Description	Type textarea Properties Filter, Group, Nillable, Sort Description Description of the Salesforce CMS workspace.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Filter, Group, idLookup, Sort Description Name of the Salesforce CMS workspace.

ManagedContentVariant

Represents a variant of a managed content item. This object is available in API version 56.0 and later.

Managed content variants are associated with a `ManagedContent` object. The managed content and variants are counted as one content record in your Salesforce org.

For example, say you have a managed content item of content type `News` and a default language of English. When you translate the `News` content into other languages such as Spanish, Japanese, and French, a managed content variant for each language is created.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

`ManagedContentVariant` is available when the Digital Experiences app is enabled.

Fields

Field	Details
<code>ContentTypeFullyQualifiedName</code>	Type string Properties Filter, Group, Nillable, Sort Description The fully qualified name of the content type of this CMS content. In an enhanced CMS workspace, the <code>ContentTypeFullyQualifiedName</code> for each standard content type is: • News: <code>sfdc_cms__news</code> • Image: <code>sfdc_cms__image</code> • Document: <code>sfdc_cms__document</code> The <code>ContentTypeFullyQualifiedName</code> for a custom content type is the same as the developer name of the custom content type. This field is available in API version 62.0 and later.
<code>IsPublished</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the managed content variant is published to a channel. The default value is <code>false</code>. This field is calculated.
<code>Language</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Language of the variant.

Field	Details
ManagedContentId	Type reference Properties Filter, Group, Sort Description Globally unique identifier for the managed content item. This field is a relationship field. Relationship Name ManagedContent Relationship Type Lookup Refers To ManagedContent
ManagedContentKey	Type string Properties Filter, Group, idLookup, Sort Description Globally unique identifier for managed content that associates with the managed content variant.
ManagedContentVariantStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Publication status of the managed content. Possible values are: • Draft • Published • Revised
Name	Type string Properties Filter, Group, idLookup, Sort Description Name of the managed content variant.

Field	Details
UrlName	Type string Properties Filter, Group, Nillable, Sort Description URL name of the managed content variant.
VariantType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Type of variant. Possible value is: • Content

Usage

Managed content variants are associated with a `ManagedContent` object. The managed content and managed content variants are counted as one content record in your Salesforce org.

`ManagedContentVariant` can be queried through the public `sObject` API. Use this object to retrieve information for a specific content in a certain language and format of a managed content.

MarketingForm

Represents an Account Engagement marketing form that has been synched to Salesforce. Use forms on your website and landing pages to collect information about visitors and turn anonymous visitors into identified prospects. This object is available in API version 42.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Fields

Field Name	Details
CampaignId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related campaign.
ErrorRate	Type percent Properties Filter, Nillable, Sort Description The percentage of views that led to an error.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when the current user last viewed a record that is related to this form.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see <code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Filter, Group, Sort Description The name of the marketing form.

Field Name	Details
SubmissionRate	Type percent Properties Filter, Nillable, Sort Description The percentage of the views that led to a form submission.
TotalErrors	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times a form error prevented a submission.
TotalSubmissions	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times the form was successfully submitted.
TotalTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of link clicks from your thank you page.
TotalViews	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of times your form has been viewed. Includes multiple views from the same visitor.
Type	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description Specifies the type of marketing form record, either a form or form handler.
UniqueErrors	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of errors generated by separate visitors.
UniqueSubmissions	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of unique submissions. Removes multiple submissions from the same prospect.
UniqueTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of unique link clicks from your thank you page. Removes multiple clicks from the same prospect.
UniqueViews	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of form views by separate visitors.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MarketingFormEvent (API version 44.0)

Change events are available for the object.

MarketingFormFeed

Feed tracking is available for the object.

MarketingLink

Represents an Account Engagement marketing link record, either a custom redirect or a file, that has been synced to Salesforce. This object is available in API version 42.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

To access this object, your org must use Account Engagement and users need the CRM User or Sales User permission set.

Fields

Field Name	Details
CampaignId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related campaign.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when the current user last viewed a record that is related to this marketing link.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the current user last viewed this record. If this value is null, this record might only have been referenced (see <code>LastReferencedDate</code>) and not viewed.

Field Name	Details
Name	Type string Properties Filter, Group, Sort Description The name of the marketing link.
TargetUrl	Type url Properties Filter, Group, Sort Description The target URL of the marketing link.
TotalTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The total number of clicks for the redirect. Includes clicks from visitors and identified prospects. When a person clicks the link multiple times, each click is counted in this number.
Type	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Specifies the type of marketing link record, either a custom redirect or file.
UniqueTrackedLinkClicks	Type int Properties Defaulted on create, Filter, Group, Nillable, Sort Description The number of unique clicks for the redirect. Includes clicks from visitors and identified prospects. Only the first click is counted in this number.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MarketingFormEvent (API version 44.0)

Change events are available for the object.

MarketingLinkFeed

Feed tracking is available for the object.

MatchingRule

Represents a matching rule that is used to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule compares field values to determine whether a record is similar enough to existing records to be considered a duplicate. For example, a matching rule can specify that if the `Email` and `Phone` values of two records match exactly, the records are possible duplicates. Your organization uses matching rules with duplicate rules to define what happens when duplicates are identified.

If the rule is for a Person Account, `SubjectSubType` is automatically set to `PersonAccount`.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
<code>BooleanFilter</code>	Type string Properties Filter, Group, Nillable, Sort Description Specifies filter logic conditions.
<code>Description</code>	Type textarea Properties Filter, Group, Nillable, Sort Description The description of the matching rule.

Field Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The developer name for the matching rule.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language selected for your organization.
MasterLabel	Type string Properties Filter, Group, Sort Description The name of the matching rule.
MatchEngine	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The match engine used by the matching rule.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for matching rules for your organization.
RuleStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field Name	Details
	Description Required. The activation status of the matching rule. Values are: • <i>Inactive</i> • <i>Deactivating</i> • <i>DeactivationFailed</i> • <i>Active</i> • <i>Activating</i> • <i>ActivationFailed</i>  Important: The only valid values you can declare when deploying a package are <i>Active</i> and <i>Inactive</i>.
SubjectSubtype	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Read-only. Indicates if the matching rule is defined for the <code>Person</code> subtype of <code>Account</code>. Valid values are: • <code>PersonAccount</code> • <code>None</code> If the rule is for a Person Account, <code>SubjectSubType</code> is automatically set to <code>PersonAccount</code>.
SubjectType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The object for the matching rule.

Usage

Use the Salesforce API to retrieve and view details about `MatchingRule` and `MatchingRuleItem`. Use the Salesforce Metadata API to create, update, or delete these objects.

SEE ALSO:

[MatchingRuleItem](#)

[DuplicateRule](#)

[MatchingRule in the Salesforce Metadata API Developer's Guide](#)

MatchingRuleItem

Represents criteria used by a matching rule to identify duplicate records. This object is available in API version 33.0 and later.

A matching rule item determines which field the matching rule uses to identify a duplicate record. It also determines the method used to compare value that two records have for the field. For example, a matching rule item might specify that the `Email` field values of two records must match exactly in order for the records to be considered duplicates.

When a matching rule has multiple matching rule items, it means that multiple fields must match in order for the records to be identified as duplicates.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
<code>BlankValueBehavior</code>	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Specifies how blank fields affect whether the fields being compared are considered matches. Valid values are: <code>MatchBlanks</code> <code>NullNotAllowed</code> (default)
<code>Field</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates which field to compare when determining if a record is similar enough to an existing record to be considered a match.
<code>MatchingMethod</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Defines how the fields are compared. Choose between the exact matching method and various fuzzy matching methods. Valid values are: • <i>Exact</i> • <i>FirstName</i> • <i>LastName</i> • <i>CompanyName</i> • <i>Phone</i> • <i>City</i> • <i>Street</i> • <i>Zip</i> • <i>Title</i> For details on each matching method, see “Matching Methods Used with Matching Rules” in the Salesforce Help.
MatchingRuleId	Type reference Properties Filter, Group, Sort Description The ID for the matching rule. This is a relationship field. Relationship Name MatchingRule Relationship Type Lookup Refers To MatchingRule
SortOrder	Type int Properties Filter, Group, Sort Description The order of the matching rule items for a matching rule.

Usage

Use the Salesforce SOAP API to retrieve and view details about MatchingRule and MatchingRuleItem. Use the Salesforce Metadata API to create, update, or delete these objects.

[MatchingRule](#)

[DuplicateRule](#)

[MatchingRule in the Salesforce Metadata API Developer's Guide](#)

MerchAccPaymentMethodSet

Defines an ordered list of payment methods that are available to a merchant's customer during checkout. You can configure multiple payment method sets, each designated for a specific locale, payment region, or sale channel. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. The ISO code for any currency allowed by the organization.
DeveloperName	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description Unique name for the object given by the Payments admin.

Field	Details
MerchantAccountId	Type reference Properties Create, Filter, Group, Sort Description Foreign key to the MerchantAccount. This field is a relationship field. Relationship Name MerchantAccount Relationship Type Lookup Refers To MerchantAccount
PaymentMethodSetNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-assigned ID for the MerchAccPaymentMethodSet.
PaymentMethodSummary	Type string Properties Filter, Group, Nillable, Sort Description Summary field that is automatically populated with comma-separated values from MerchAccPaymentMethodType. This field is a calculated field.

MerchAccPaymentMethodType

Refers to a payment method that is in a payment method set, which is defined by the MerchAccPaymentMethodSet object. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only when the multicurrency feature is enabled. Contains the ISO code for any currency used by the org.
PaymentInstrumentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of instrument the payer can pay with. Possible values are: • us_bank_account - ACH_Debit • affirm - Affirm • afterpay - Afterpay • afterpay_clearpay - Afterpay/Clearpay • amazon_pay - Amazon Pay • applepay - Apple Pay • au_becs_debit - BECS_Debit • bacs_debit - BACS_Debit • bancontact - Bancontact • card - Credit Cards • cashapp - Cash App • clearpay - Clearpay • eps - EPS • googlepay - Google Pay • ideal - iDEAL • klarna - Klarna • link - Link • paypal - PayPal

Field	Details
	• <code>sepa_debit</code> - SEPA Debit • <code>venmo</code> - Venmo • <code>wechat_pay</code> - WeChat Pay
<code>PaymentMethodSetId</code>	Type reference Properties Create, Filter, Group, Sort Description ID of the <code>MerchAccPaymentMethodSet</code>. This field is a relationship field. Relationship Name <code>PaymentMethodSet</code> Relationship Type Lookup Refers To <code>MerchAccPaymentMethodSet</code>
<code>PaymentMethodSetTypeNumber</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-assigned ID for the <code>MerchAccPaymentMethodSet</code>.
<code>SortOrder</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Sort order for the <code>MechAccPaymentMethodType</code> within the <code>MerchAccPaymentMethodSetExperience</code>.

Associated Objects

This object has these associated object. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[MerchAccPaymentMethodTypeHistory](#) on page 63

History is available for tracked fields of the object.

MerchantAccount

A type of bank account that lets a merchant accept payments from a variety of payment methods, including credit or debit cards, or digital wallets. A Salesforce Payments merchant account is linked to an underlying payment gateway to process payments. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountDescription	Type textarea Properties Create, Nillable, Update Description Information about the merchant account.
CountryIsoCode	Type string Properties Create, Filter, Group, Sort, Update Description Country where the legal entity representing the account is.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Contains the ISO code for any currency allowed by the organization. Available only for organizations with multi-currency enabled.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user can have accessed this record or list view but not viewed it.
Mode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The operational mode of the merchant account. This field determines the account's ability to accept payments. For production, the account must be in Live mode. Possible values are: • Connected— Merchant account is active but it can't accept payments. This option is only valid in production orgs. • Live— Merchant account is active and can accept payments. This option is only valid in production orgs. • Test —Merchant account is active but not able to accept payments. This option is only valid in sandbox orgs, and the account can accept only test transactions.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the merchant account.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Name of the individual or group assigned to the merchant account.

Field	Details
	This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Merchant account is active and can accept payments. Possible values are: • Disabled • Enabled The default value is Disabled.
PayoutStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Money can be moved from the payment provider account to the designated merchant account. Possible values are: • Disabled • Enabled The default value is Disabled.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the state of the merchant account. Possible values are: • Active - The merchant account can accept payments.

Field	Details
	• Complete - <code>PaymentStatus</code> and <code>DepositStatus</code> are enabled and all the required information is provided. • Enabled - <code>PaymentStatus</code> and <code>PayoutStatus</code> are enabled, but the payment provider requires more information later. If the merchant doesn't provide the information, then the account becomes restricted. The time limit that the merchant has to provide the information is longer than the <code>RestrictedSoon</code> state. • Pending - The merchant account exists but it can't accept payments. This option maintains backward compatibility for accounts that were created with API version 55.0 and earlier. • Rejected - The account is rejected and an explanation is provided. • Restricted - <code>PaymentStatus</code>, <code>PayoutStatus</code>, or both are disabled, so the merchant account's operation is limited. • Restricted Soon - <code>PaymentStatus</code> and <code>PayoutStatus</code> are enabled, but the payment provider requires more information. If the merchant doesn't provide the information in a specific time period, then the account becomes restricted.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

MerchantAccountChangeEvent (API version 62.0)

Change events are available for the object.

MerchantAccountFeed

Feed tracking is available for the object.

MerchantAccountHistory

History is available for tracked fields of the object.

MerchantAccountOwnerSharingRule

Sharing rules are available for the object.

MerchantAccountShare

Sharing is available for the object.

MerchantAccountEvent

Represents a merchant account platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the [Platform Events Developer Guide](#).

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
ChangeType	Type picklist Properties Restricted picklist Description Type of merchant account event, which triggers an event notification. You can write code to listen to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates. Possible values are: • Create—Merchant account is created. • Disable—The account is deactivated. For example, the payment provider or the merchant disables an account due to fraudulent activity. • PaymentEnable—The account is active and ready to receive payments. • PayoutEnable—The account is ready to receive payouts. • Update—Merchant account property change occurs.
MerchantAccountId	Type reference Properties Nillable Description Identifies the merchant account for which the event occurs. This field is a relationship field. Relationship Name MerchantAccount Relationship Type Lookup Refers To MerchantAccount

MessagingChannel

Represents a communication channel that an end user can use to send a message to an agent. A communication channel can be an SMS number, a Facebook page, or another supported messaging channel. This object is available in API version 40.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>BusinessHoursId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The operating hours for your business, when agents are available. Available only in orgs that use Einstein Bots. This is a relationship field. Relationship Name BusinessHours Relationship Type Lookup Refers To BusinessHours
<code>ChannelAddressIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description A UUID that identifies a deployed messaging channel. This identifier is unique across orgs, so a channel with the same <code>MessagingPlatformKey</code> in a sandbox and production will have a different <code>ChannelAddressIdentifier</code> for each. Available in API version 59.0 and later.
<code>ChannelDefinitionId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The associated conversation channel definition, which is used only in Bring Your Own Channel for Messaging and Bring Your Own Channel for CCaaS. Available in API version 58.0 and later. This field is a relationship field. Relationship Name ChannelDefinition Refers To ConversationChannelDefinition
ConsentType	Type picklist Properties Create, defaultedOnCreate, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of consent, or opt-in, that is required to message users on this channel. This field is available in API version 48.0 and later. Possible values are: • DoubleOptIn • ExplicitOptIn • ImplicitOptIn (default value) The property <code>defaultedOnCreate</code> has been removed in API version 51.0 and later. Now the consent type is defaulted to <code>ImplicitOptIn</code> when the consent type isn't set on create only for channels that support consents.
ConversationEndResponse	Type textarea Properties Create, Nillable, Update Description Automated response to the customer when the agent ends the conversation. (Optional)
CriticalWaitTime	Description Reserved for future use. This field has been deprecated as of API version 52.0.
Description	Description Reserved for future use.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update

Field Name	Details
	Description The developer name for the messaging channel. This value is a concatenation of the messaging platform key and the message type.
DoubleOptInPrompt	Type textarea Properties Create, Nillable, Update Description Automated response to the end user to prompt them to doubly opt in to receiving messages. Available in API version 48.0 and later.
EngagedResponse	Type textarea Properties Create, Nillable, Update Description Automated response to the customer when the conversation is accepted by the agent. (Optional)
InitialResponse	Type textarea Properties Create, Nillable, Update Description First automated response to the customer for a new conversation. (Optional)
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a channel is active and can receive messages.
IsAuthenticated	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether a user is authenticated to a voice assistant. The org permission Live Message Voice is required to access and update this field. Available in API version 44.0 and later.

Field Name	Details
IsoCountryCode	Type string Properties Create, Filter, Group, Nillable, Sort Description Two-letter ISO 3166-1 alpha-2 code for the country that the phone number is associated with. For example, the code for United States is <code>US</code>. Available in API version 44.0 and later.
IsRequireDoubleOptIn	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether double opt-in is required (<code>true</code>) or not (<code>false</code>) for this Messaging channel. Available in API version 48.0 and later.
IsRestrictedToBusinessHours	Description Reserved for future use.
IsUserMatchByExternalIdOnly	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to restrict matching on customer by external ID only (and not use the full name). This field has been deprecated as of API version 52.0.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Reserved for future use.
MasterLabel	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Unique name for the <code>MessagingChannel</code>.

Field Name	Details
MessageType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Type of message. Possible values are: • AppleBusinessChat—Represents Apple Messages for Business. • Custom—Represents Bring Your Own Channel for Messaging or Bring Your Own Channel for CCaaS. Available in API version 58.0 and later. • EmbeddedMessaging—Represents Enhanced Chat. Available in API version 50.0 and later. • Facebook • Phone • PSTNVoice—Represents an Agentforce Voice channel that uses PSTN. Available in API version 65.0 and later. • Text • Voice • WhatsApp
MessagingPlatformKey	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Unique key for a channel that the end user can message or call based on the MessageType. • In PSTNVoice, SMS, WhatsApp, and LINE channels, the platform key is the phone number associated with this channel. • In Facebook Messenger channels, the platform key is the Facebook page ID associated with this channel. • In Apple Messages for Business channels, the platform key is the Apple Messages identifier. • In Enhanced Chat, the platform key is identical to the Channel Address Identifier.
OfflineAgentsResponse	Description Reserved for future use.
OptInPrompt	Type textarea

Field Name	Details
	Properties Create, Nillable, Update Description Automated response to the end user to prompt them to explicitly opt in to receiving messages. Available in API version 49.0 and earlier.
OptInResponse	Type textarea Properties Create, Defaulted on create, Nillable, Update Description Automated response to the end user when they opt in to messaging. Available in API versions 48.0 and 49.0. Use the <code>OptInConfirmation</code> field of the MsgChannelLanguageKeyword on page 3497 object instead.
OptionsIdentifyEndUserLanguage	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Auto-populates the Language field for this channel's messaging users if their locale is known. Supported for Enhanced Chat and Apple Messages for Business only.
OptOutResponse	Type textarea Properties Create, Defaulted on create, Nillable, Update Description Automated response to the end user when they opt out of messaging. Available in API version 48.0 only. Use the <code>OptOutConfirmation</code> field of the MsgChannelLanguageKeyword object instead.
OutsideBusinessHoursResponse	Description Reserved for future use.
PlatformType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Indicates whether the channel is <code>Standard</code> or <code>Enhanced</code>. When a standard SMS or Facebook Messenger channel is upgraded, the <code>PlatformType</code> changes from <code>Standard</code> to <code>Enhanced</code>. When a standard WhatsApp channel is upgraded, the original channel's <code>PlatformType</code> remains <code>Standard</code> and a new channel is created with a <code>PlatformType</code> of <code>Enhanced</code>. Enhanced Chat channels have a <code>PlatformType</code> of <code>Enhanced</code>.
<code>RoutingConfigurationId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies which Omni-Channel routing configuration to use. This field is required when <code>RoutingType</code> is <code>OmniSkills</code>. To learn more, see Create Routing Configurations.
<code>RoutingType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Type used to support Omni-Channel's different routing methods. • <code>OmniQueue</code> (queue-based routing) • <code>OmniSkills</code> (skills-based routing) When this value isn't set, <code>OmniQueue</code> is used.
<code>SessionHandler</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The queue or Omni-Channel flow that the channel's messaging sessions are routed to. Available in API version 51.0 and later.
<code>TargetQueueId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Queue in which incoming conversations are placed while waiting for an agent to accept. This is a relationship field. Relationship Name TargetQueue Relationship Type Lookup Refers To Group
TargetUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Messaging User or agent for the conversation. Available in API version 50.0 and earlier.

Usage

While third-party messaging channels can be created via Apex, we recommend creating channels via the Messaging Settings page in Setup. Channels created via Apex may not work and can't be deleted.

In enhanced WhatsApp, Facebook Messenger, Apple Messages for Business, and LINE channels, the flow of a channel's messaging traffic is controlled by an associated MessagingChannelUsage record. The MessagingChannelUsage determines whether the channel is active or deactivated.

MessagingChannelSkill

Junction object that represents an association between MessagingChannel and Skill. This object is available in API version 45.0 and later.

For example, when we want to use Omni-Channel skills-based routing in Live message, this object maintains the mapping between the messaging channel and the skill.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
MessagingChannelId	Type reference Properties Create, Filter, Group, Sort Description ID of the MessagingChannel on page 3411. This is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup Refers To MessagingChannel
SkillId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the Skill on page 5073. This is a relationship field. Relationship Name Skill Relationship Type Lookup Refers To Skill

MessagingChannelUsage

Represents the status of an enhanced Messaging channel or of an application in a Unified Messaging channel. This object is available in API version 60.0 and later.

A MessagingChannel can be associated with up to three MessagingChannelUsage records, each with a unique DeploymentType. The role of a MessagingChannelUsage record differs slightly depending on whether it's used in an enhanced Messaging channel or a Unified Messaging channel.

- In enhanced WhatsApp, Facebook Messenger, Apple Messages for Business, and LINE channels, each channel has one associated MessagingChannelUsage record with a DeploymentType of `Conversation`. The MessagingChannelUsage record determines the channel's flow of messaging traffic. When you activate such a channel in Setup, its MessagingChannelUsage record updates to

use a `DeploymentStatus` of `Active`, and messaging traffic can flow to and from Salesforce. Similarly, deactivating the channel in Setup causes its `MessagingChannelUsage` record to update to a `DeploymentStatus` of `Disabled`, and stops the flow of messaging traffic.

- In Unified Messaging channels, the `MessagingChannelUsage` record represents the status of a connected Service Cloud or Marketing Cloud application. For example, if a WhatsApp Unified Messaging channel is connected to both Service Cloud and Marketing Cloud, the `MessagingChannel` record has two associated `MessagingChannelUsage` records with a `DeploymentType` of `Conversation` and `MJ`, respectively. These `MessagingChannelUsage` records are created when a user selects the Marketing or Service application during Unified Messaging setup.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
<code>ConsentType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The level of customer consent required for your business to message a customer on this channel. Customers can opt out at any time. Possible values are: • <code>Implicit Opt-In</code>: By sending an initial message to your business, the customer agrees to receive messages. • <code>Explicit Opt-In</code>: The customer uses keywords to actively opt into receiving messages. • <code>Double Opt-In</code>: The customer uses keywords to opt in twice to receiving messages.
<code>DeploymentStatus</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the connected channel or application. If the <code>DeploymentStatus</code> is <code>Active</code>, messages can be sent or received (if permitted). Possible values are: • <code>New</code>—Admin selected the Marketing or Service application in Unified Messaging Setup, or created a new enhanced WhatsApp, Facebook Messenger, Apple Messages for Business, or LINE channel on the Messaging Settings page in Setup. • <code>Provisioning</code>—Admin clicked Connect on an application in Unified Messaging Setup, or Activate on an enhanced Messaging channel.

Field	Details
	• Active—Provisioning was successful and the channel can be used to message with customers via the connected application or channel. • Error—Provisioning or deprovisioning wasn't successful. The admin can retry. • Deprovisioning—Admin clicked Disconnect on an application in Unified Messaging Setup, or Deactivate on an enhanced Messaging channel. • Disabled—Deprovisioning was successful and the channel or application can no longer be used to message with customers.
DeploymentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Indicates whether the record is related to Service Cloud or Marketing Cloud. Possible values are: • Conversation—Relating to Service Cloud. • MessagingEngagement—Relating to Marketing Cloud. • MJ—Relating to Marketing Cloud. J stands for Journey Builder.
DisabledTime	Type dateTime Properties Filter, Nillable, Sort Description The time the MessagingChannelUsage record entered the Disabled state after an admin clicked Disconnect or Deactivate on the application or channel. When the record is disabled, all inbound and outbound messages aren't sent via the connected application. Any sessions with a status other than Ended or Error are automatically ended within 48 hours unless the MessagingChannelUsage record is reenabled.
ErrorReason	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If an error occurs during connection, activation, disconnection, or deactivation of a MessagingChannelUsage record, the ErrorReason provides more information about what went wrong. For example, if an associated Service Cloud application for a Unified Messaging channel is missing a fallback queue or consent keywords, the connection attempt fails with an ErrorReason of ProvisioningError. Possible values are:

Field	Details
	• DeprovisioningError • InternalError • InvalidSelection • ProvisioningError
MessagingChannelId	Type reference Properties Create, Filter, Group, Sort Description The enhanced Messaging channel or Unified Messaging channel that the MessagingChannelUsage record is associated with. A MessagingChannel can be associated with up to three MessagingChannelUsage records. This field is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup Refers To MessagingChannel
RoutingOverride	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Applicable only to MessagingChannelUsage records with a deployment type of MJ (Marketing Cloud). RoutingOverride indicates how messages are delivered in a unified channel where both the Service and Marketing applications are connected. Possible values are: • MJKeywordsOnly—If a messaging user sends a marketing keyword that is defined in Journey Builder, Journey Builder handles the message delivery and response. If a messaging user sends a non-keyword message, Omni-Channel handles the message delivery and response. • NonSessionMessages—If a messaging user is engaged in an active Service Cloud messaging session, Service Cloud handles message delivery and response. If the user isn't engaged in an active session, Journey Builder handles message delivery and response. Regardless of the RoutingOverride value, outbound messages are always handled by Service Cloud if the messaging user is engaged in an active Service Cloud messaging session. A session is considered active if its status isn't Ended or Error.

MessagingConfiguration

Represents the details for a Messaging configuration. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The API name for this Messaging configuration.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of this Messaging configuration.
MasterLabel	Type string Properties Filter, Group, Sort Description The label for the Messaging configuration.
MessagingServiceUrl	Type string Properties Filter, Group, Nillable, Sort Description The URL for the Messaging service.

Field	Details
ProvisioningServiceUrl	Type string Properties Filter, Group, Nillable, Sort Description The URL for the provisioning service.

MessagingDeliveryError

Represents a log of triggered outbound failures to verify when a triggered outbound has failed. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CreatedById	Type reference Properties Defaulted on createFilter, Group, Sort Description ID of the user who created the error.
CreatedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description Date the error was created.
DestinationPhoneNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The recipient of the phone call.
FailureReason	Type textarea Properties Create, Nillable, Update Description The provided reason for why the message failed.
FlowEntity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The entity that triggered the flow to send the message.
FullMessage	Type textarea Description Plain error text.
Id	Type id Properties Defaulted on create, Filter, Group, idLookup, Sort Description Identifier of the error.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the error has been deleted.
LastModifiedById	Type reference Properties Defaulted on create, Filter, Group, Sort Description The ID of the user who last modified the error log.

Field	Details
LastModifiedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description Date when the Messaging error log was last modified.
MessagingChannelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the MessagingChannel on page 3411. This is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup Refers To MessagingChannel
MessagingEndUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Identifier for the Messaging user. This is a relationship field. Relationship Name MessagingEndUser Relationship Type Lookup Refers To MessagingEndUser
MessagingTemplateId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Messaging template used.

Field	Details
	This is a relationship field. Relationship Name MessagingTemplate Relationship Type Lookup Refers To MessagingTemplate
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Namefield, Sort Description Name of the error. Maximum length is 80 characters.
SystemModstamp	Type dateTime Properties Defaulted on create, Filter, Sort Description System modification time for the Messaging delivery error log.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The kind of event that occurred. Possible values include: • Error (Default) • Warning

MessagingEndUser

Represents a single address—such as a phone number or Facebook page—communicating with a single Messaging channel. This object is available in API version 40.0 and later.

Note: This object is available for Einstein Conversation Insights customers whose data is stored natively on the Salesforce Platform. If you turned on Einstein Conversation Insights for the first time starting in Spring '26, this object is available to query and access using Salesforce tools. For existing ECI customers, data migration and access to related Salesforce Platform objects is scheduled to begin in Summer '26.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Account associated with this Messaging end user. Available in API version 43.0 and later. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the associated Contact. Available in API version 43.0 and later. This field is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
HasInitialResponseSent	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether an initial response has been sent to the Messaging end user (<code>true</code>) or not (<code>false</code>).
<code>IsFullyOptedIn</code>	Type boolean Properties Defaulted on create, Filter, Sort Description Indicates whether the Messaging end user has opted in to receiving messages (<code>true</code>) or not (<code>false</code>). This field compares the related messaging channel's consent requirement to the user's consent status; if the user's status meets the channel's required consent level, <code>IsFullyOptedIn</code> is set to <code>true</code> . Available in API version 48.0 and later.
<code>IsOptedOut</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the Messaging end user has opted out of receiving messages. Available in API version 48.0 and earlier. Use <code>MessagingConsentStatus</code> and <code>IsFullyOptedIn</code> instead.
<code>IsoCountryCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort Description The ISO country code associated with the Messaging end user.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
LeadId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the associated lead. Available in API version 57.0 and later. This field is a relationship field. Relationship Name Lead Relationship Type Lookup Refers To Lead
Locale	Type string Properties Create, Filter, Group, Nillable, Sort Description Reserved for future use.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The preferred language of the messaging user who participated in the messaging session. Supported for Messaging for In-App and Web and Apple Messages for Business only.
MessageType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Type of message. Possible values are: - AppleBusinessChat—Represents Apple Messages for Business. - Custom—Represents Bring Your Own Channel. Available in API version 58.0 and later.

Field	Details
	• EmbeddedMessaging—Represents Messaging for In-App and Web. Available in API version 50.0 and later. • Facebook • Phone • Text • Voice • WhatsApp
MessagingChannelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Messaging channel associated with the Messaging end user. This is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup Refers To MessagingChannel
MessagingConsentStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The consent status of the messaging user. This field is available in API version 48.0 and later. Possible values are: • DoublyOptedIn • ExplicitlyOptedIn • ImplicitlyOptedIn • OptedOut
MessagingPlatformKey	Type string Properties Create, Filter, Group, Sort

Field	Details
	Description The phone number, Facebook page ID, or unique key associated with this Messaging end user.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the Messaging end user. Because this field is editable, we don't recommend referencing it in automation. Instead, use the Messaging Platform Key.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner associated with this Messaging end user. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ProfilePictureUrl	Type url Properties Create, Filter, Group, Nillable, Sort Description The URL of the Messaging end user's profile picture.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[MessagingEndUserChangeEvent](#) (API version 62.0)

Change events are available for the object.

[MessagingEndUserHistory](#)

History is available for tracked fields of the object.

MessagingEndUserOwnerSharingRule

Sharing rules are available for the object.

MessagingEndUserShare

Sharing is available for the object.

MessagingLink

Represents the link between a Messaging Channel and where it's shared. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
EntityType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Possible values are: - Account - Case - Contact - CustomEntityDefinition—Custom Object Definition - Lead - Opportunity
MessagingChannelId	Type reference Properties Create, Filter, Group, Sort Description The channel being shared. This is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup

Field	Details
	Refers To MessagingChannel
RecordTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This is a relationship field. Relationship Name RecordType Relationship Type Lookup Refers To RecordType
ShouldAttemptAutoLink	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description No longer in use. Indicated that an incoming messaging session was auto-linked to a Salesforce contact or account based on information such as a phone number.
ShouldPromptCreate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description No longer in use. Indicated that a contact or account was created for the messaging user if none existed.

MessagingSession

Represents a session on a Messaging channel. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AcceptTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The time when an agent accepts an incoming Messaging session.
AgentMessageCount	Type int Properties Nillable Description The number of messages sent by the agent during the session.
AgentType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of agent that is assigned to the Messaging session. Possible values are: • Agent • Bot • BotToAgent—Bot & Agent • System—Used for triggered outbound messages
CaseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the case associated with this Messaging session.
ChannelEndUserFormula	Type string Properties Filter, Group, idLookup, Nillable, Sort Description A concatenation of the Messaging channel and Messaging user.

Field	Details
ChannelKey	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier for the associated Messaging channel.
ChannelLocale	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The locale of the associated Messaging channel.
ChannelName	Type string Properties Filter, Group, Nillable, Sort Description The name of the associated Messaging channel.
ChannelType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the associated Messaging channel. Possible values are: • Alexa • AppleBusinessChat—Represents Apple Messages for Business. • EmbeddedMessaging—Available in API version 55.0 and later. • Facebook • GoogleHome • Line • Omega • Phone • Text • Voice • WeChat • WebChat • WhatsApp

Field	Details
ConversationId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the related conversation. Available in API version 55.0 and later. This field is a relationship field. Relationship Name Conversation Relationship Type Lookup Refers To Conversation
EndedByType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Who or what ended the enhanced messaging session. Possible values are: • Agent • Bot • EndUser • System: – The session is inactive for a while, so the session ends. – An automation ends the session. – The session ended because of an error.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort Description The time when the Messaging session ended.
EndUserId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The ID of the end user's account record. This is a relationship field. Relationship Name EndUserAccount Relationship Type Lookup Refers To Account
EndUserContactId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the end user's contact record. This is a relationship field. Relationship Name EndUserContact Relationship Type Lookup Refers To Contact
EndUserLanguage	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The preferred language of the messaging user who participated in the messaging session.
EndUserMessageCount	Type int Properties Nillable Description The number of messages sent by the Messaging end user.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
LeadId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Lead associated with this Messaging session.
MessagingChannelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Messaging channel associated with this Messaging session. This is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup Refers To MessagingChannel
MessagingEndUserId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Messaging end user associated with this Messaging session. This is a relationship field.

Field	Details
	Relationship Name MessagingEndUser Relationship Type Lookup Refers To MessagingEndUser
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of this Messaging session.
OpportunityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the opportunity record associated with this Messaging session.
Origin	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description The origin of this Messaging session. Possible values are: • AgentInitiated • ConversationClose—Messaging user deleted the conversation in Apple Messages • ConversationControlLost—Third-party bot resumes control from Salesforce bot or agent • Help • InboundInitiated • OptIn—Opt In Status Change • OptOut—Opt Out Status Change • TriggeredOutbound Messaging sessions can't be created using Apex code. They can be created only through customer initiation or by using Process Builder, flows, or the Start Conversation action.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner associated with this Messaging session. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PreviewDetails	Type string Properties Nillable Description The preview shown to an agent for this Messaging session.
SessionKey	Type string Properties Create, Filter, Group, Nillable, Sort Description The identifier for the Messaging session.
StartTime	Type dateTime Properties Create, Filter, Nillable, Sort Description The time when the Messaging session started.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The status of the Messaging session. Possible values are: • New (standard channels only) • Active

Field	Details
	• Consent (enhanced channels only) • Waiting • Paused (enhanced channels only) • Inactive (enhanced channels only) • Ended • Error (enhanced channels only) To learn more about these statuses, see Lifecycle of a Messaging Session in Salesforce Help.
TargetUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the target user associated with this Messaging session. This is a relationship field. Relationship Name TargetUser Relationship Type Lookup Refers To User

Usage

To monitor messaging session activity, report on the MessagingSession and [MessagingSessionMetrics](#) on page 3443 objects. MessagingSessionMetrics captures metrics about a messaging session, such as agent and end user response time. See [Report on Messaging Activity in Service Cloud](#).

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[MessagingSessionChangeEvent](#) (API version 62.0)

Change events are available for the object.

[MessagingSessionFeed](#)

Feed tracking is available for the object.

[MessagingSessionHistory](#)

History is available for tracked fields of the object.

[MessagingSessionOwnerSharingRule](#)

Sharing rules are available for the object.

MessagingSessionShare

Sharing is available for the object.

MessagingSessionMetrics

Represents a metric gathered about a specific enhanced messaging session, such as average agent response time. This object is available starting in October 2024 in API version 62.0 and later.

To reference this object in reports, create a custom report type with Messaging Session as the primary object and Messaging Session Metrics as the secondary object.

Be sure to include the `MessagingSessionMetricType` field in your custom report. These records are available only for Messaging sessions created after October 1, 2024.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Multiple MessagingSessionMetrics records are generated when a session ends in an enhanced Messaging channel or Messaging for In-App and Web channel. These records aren't generated for standard messaging sessions.

Fields

Field	Details
MessagingSessionId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related messaging session. This field is a relationship field. Relationship Name MessagingSession Relationship Type Master-detail Refers To MessagingSession (the master object)
MessagingSessionMetricType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The metric that this record captures. Possible values are: - AgentMessageCount—The number of messages sent by the agent in the session. - AverageAgentResponseTime—The average number of seconds between an end user's message and the agent's response in the session. - AverageEndUserResponseTime—The average number of seconds between an agent or bot's message and the end user's response in the session. - EndUserMessageCount—The number of messages sent by the end user in the session. - MaxAgentResponseTime—The longest span of time (in seconds) between an end user's message and the agent's response in the session. - MaxEndUserResponseTime— The longest span of time (in seconds) between an agent or bot's message and the end user's response in the session. For each closed messaging session in enhanced Messaging channels and Messaging for In-App and Web, one MessagingSessionMetrics record is generated per MessagingSessionMetricType value. This means that six MessagingSessionMetrics records are generated per session.
MessagingSessionMetricValue	Type int Properties Create, Filter, Group, Sort Description The value of the measured metric. For example, if the MessagingSessionMetricType is EndUserMessageCount, a MessagingSessionMetricValue of 12 means that the end user sent 12 messages during the messaging session.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An autogenerated number identifying the MessagingSessionMetrics record.

MessagingTemplate

Represents a Messaging template used to send pre-formatted messages. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description The description of the Messaging template.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The API name for the Messaging template.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the Messaging template.
MasterLabel	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The label of the Messaging template.
Message	Type textarea Properties Create, Update

Field	Details
	Description The body text of the Messaging template.

MetadataApiOpEventLog

MetadataApiOpEventLog stores details of Metadata API retrieval and deployment requests. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
<code>ClientIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description The API client ID.
<code>ClientIp</code>	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
<code>CpuTime</code>	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The operation that's being performed. Possible Values • meta_deploy • meta_list • meta_retrieve • meta_synchronous_create • meta_synchronous_read • meta_synchronous_upsert
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description Globally unique id for a given request. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RunTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 18-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943YAS

MetadataPackage

Represents a package that has been developed in the org you're logged in to. Applies to unlocked, unmanaged, first-generation, and second-generation managed packages.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the package.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description For first-generation and second-generation managed packages, and unlocked packages with namespaces, this field is the namespace prefix assigned to the package. For unmanaged packages, or no-namespace unlocked packages, this field is blank.
PackageCategory	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of package. Valid values are: • <code>Application</code> (internal use only) • <code>Module</code> (internal use only) • <code>Package</code>—Represents either an unmanaged package or a first-generation managed package. • <code>Package2</code>—Represents either an unlocked package or a second-generation managed package. The default value is <code>Package</code>. This field is available in API version 49.0 and later.

Usage

Here are examples of the types of API queries you can perform.

Query	String
Show all managed and unmanaged packages in the org	<pre>SELECT Name, NamespacePrefix FROM MetadataPackage</pre>
Show only managed packages in the org	<pre>SELECT Name, NamespacePrefix FROM MetadataPackage WHERE NamespacePrefix <> ''</pre>

MetadataPackageVersion

Represents a package version (managed or unmanaged) that has been uploaded from the org you're logged in to.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
BuildNumber	Type int Properties Filter, Group, Nillable, Sort Description The build number of the version. For example, if you upload two beta versions, they have build numbers 1 and 2. Then, when you upload a non-beta version, the build number is 3. When you upload a new version, the build number resets to 1.
IsDeprecated	Type boolean Properties Filter, Group, Sort Description Indicates whether the package version is deprecated. Available in API version 46.0 and later.
MajorVersion	Type int

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The first number in a package version number. A version number either has an <code>x.y</code> format or an <code>x.y.z</code> format. The <code>x</code> represents the major version, <code>y</code> the minor version, and <code>z</code> the patch version.
MetadataPackageId	Type reference Properties Filter, Group, Nillable, Sort Description The 18-character package ID starting with 033.
MinorVersion	Type int Properties Filter, Group, Nillable, Sort Description The second number in a package version number. A version number either has an <code>x.y</code> format or an <code>x.y.z</code> format. The <code>x</code> represents the major version, <code>y</code> the minor version, and <code>z</code> the patch version.
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the package version.
PatchVersion	Type int Properties Filter, Group, Nillable, Sort Description The third number in a package version number, if present. A version number either has an <code>x.y</code> format or an <code>x.y.z</code> format. The <code>x</code> represents the major version, <code>y</code> the minor version, and <code>z</code> the patch version.
ReleaseState	Type picklist

Field Name	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description If the package version is a beta version, the value is Beta. Otherwise, the value is Released.

Usage

Here are examples of the types of API queries you can perform.

Query	String
Get all package versions for the package that has a MetadataPackageID of 033D00000001xQlIAI	<pre>SELECT Id, Name, ReleaseState, MajorVersion, MinorVersion, PatchVersion FROM MetadataPackageVersion WHERE MetadataPackageId = '033D00000001xQlIAI'</pre>
Get the package version for the package with a specific MetadataPackageID and a major version greater than 1	<pre>SELECT Id FROM MetadataPackageVersion WHERE MetadataPackageId ='033D00000001xQlIAI' AND MajorVersion > 1</pre>
Get released package versions for the package with a specific MetadataPackageID	<pre>SELECT Id FROM MetadataPackageVersion WHERE MetadataPackageId = '033D00000001xQlIAI' AND ReleaseState = 'Released'</pre>

Java Code Sample

Suppose you want to push version 3.4.6 of your package to all orgs. Let's write some code to identify the orgs eligible for the upgrade. This example demonstrates how to generate the list of subscriber orgs eligible to be upgraded to version 3.4.6 of a package.

This code sample uses the Web Services Connector (WSC).

```
// Finds all Active subscriber orgs that have the package installed
String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from PackageSubscribers where
OrgStatus = 'Active' and InstalledStatus = 'I'";

// Finds all MetadataPackageVersions lower than the version given, including the list
// of subscribers for each version
String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState, (%s) from"
+ " MetadataPackageVersion where MetadataPackageId = '%s' AND ReleaseState = 'Released'"

+ " AND (MajorVersion < 3 OR (MajorVersion = 3 and MinorVersion < 4))"
+ " OR (MajorVersion = 3 and MinorVersion = 4 and PatchVersion < 6))";

// conn is an EnterpriseConnection instance initialized with a ConnectionConfig object
// representing a connection to the developer org of the package
QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
PACKAGE_SUBSCRIBER_ORG_KEY_QUERY));
```

```
// This list will hold all of the PackageSubscriber objects that are eligible for upgrade
// to the given version
List<PackageSubscriber> subscribers = new ArrayList<>();
for (SObject mpvso : results.getRecords()) {

    // Cast the sObject to a MetadataPackageVersion
    MetadataPackageVersion mpv = (MetadataPackageVersion) mpvso;

    // Add subscribers to our list
    if (mpv.getPackageSubscribers() != null) {
        for (SObject psso : mpv.getPackageSubscribers().getRecords()) {
            subscribers.add((PackageSubscriber) psso);
        }
    }
}
```

Next Step

Create a push request using PackagePushRequest.

Metric

The Metric object represents the components of a goal metric such as its name, metric type, and current value.

 **Note:** The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

Fields

Field Name	Details
CompletionDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The completion date of the metric.
CurrentValue	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update

Field Name	Details
	Description The current value of the metric.
Description	Type textarea Properties Create, Nillable, Update Description The description of the metric. The maximum length is 65,535 characters.
DueDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The due date of the metric.
GoalId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the goal the metric is related to.
InitialValue	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The initial value of the metric.
IsCompletionMetric	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. If <code>true</code> , the metric measures whether or not the metric is finished. If <code>false</code> , the metric measures how much is finished compared to a targeted value.
LastComment	Type textarea

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description A comment that provides more context about the metric, such as its status or progress. The maximum length is 255 characters.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when a user last viewed a record that is related to this metric.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp that indicates when a user last viewed this metric. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, Sort, Update Description The name of the metric.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who owns the metric.
Progress	Type percent Properties Filter, Nillable, Sort

Field Name	Details
	Description Read only. The overall progress of the metric.
RecordTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the related record type.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The start date of the metric.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the metric. Possible values include: • Not Started • On Track • Behind • Critical • Completed • Postponed • Canceled • Not Completed
TargetValue	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The target value of the metric.
Weight	Type double

Field Name	Details
	Properties Create, Filter, Nillable, Sort, Update
	Description The weight of the metric. The sum of the weights should equal 100%.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MetricFeed

Feed tracking is available for the object.

MetricHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

MetricOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

MetricShare

Sharing is available for the object.

MetricDataLink

The link between the metric and the data source, such as a report.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
DatasourceFieldName	Type string
	Properties Create, Filter, Group, Sort, Update

Field Name	Details
	Description The field name of the data source, such as a report summary field.
DataSourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the data source.
LastSynchronizationTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The last time the data was synchronized.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The name given to the data link record.
TargetId	Type reference Properties Create, Filter, Group, Sort Description The ID of the metric that the data is linked to.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

MetricDataLinkHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

MigratedEmail

For internal use only.

MilestoneType

Represents a milestone (required step in a customer support process). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Update Description A description of the milestone.
Name	Type string Properties Create, Filter, idLookup, Update Description The name of the milestone.
RecurrenceType	Type picklist Properties Create, Update Description The type of recurrence for the milestone.

Usage

Use this object to query and manage the milestone type for CaseMilestone records.

SEE ALSO:

- [CaseMilestone](#)
- [SlaProcess](#)

MktJourneyDcsnSetup

Represents a collection of Marketing Cloud Engagement journeys that you can interact with by using Salesforce Flow in Marketing Cloud. This object is available in API version 65.0 and later.

You can use interaction data from a Marketing Cloud Engagement journey to trigger a Flow, or to configure decision activities in a Flow.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BusinessUnitId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The unique Marketing Cloud business unit ID to use with the collection of journeys. This ID is configured in Marketing Cloud, and is different from the Member ID (MID) or Enterprise ID (EID) of your Marketing Cloud Engagement account. This field is a relationship field. Relationship Name BusinessUnit Refers To BusinessUnit
Description	Type textarea Properties Create, Nillable, Update Description A description of the collection of journeys.

Field	Details
EnterpriseIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Enterprise ID (EID) of your parent Marketing Cloud Engagement account.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description A name for the collection of journeys.

MLField

Represents a single field in a data definition. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Entity	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The object that contains the field.
Field	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the field.

MlIntentUtteranceSuggestion

Represents a customer input, used for training purposes in the feedback loop process of a conversation. Admins can add these inputs to the intent training model. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ConfigId	Type reference Properties Filter, Group, Nillable, Sort
IntentSuggestion	Type string Properties Filter, Group, Nillable, Sort Description The recommended intent.
ReviewStatus	Type picklist Properties Filter, Group, Restricted Picklist, Sort Description Possible values are: Ignore, New
Utterance	Type string Properties Filter, Group, Sort Description The text input from the end user.
UtteranceCount	Type integer Properties Filter, Group, Sort

Field	Details
	Description A count of the Utterance field.

MLPredictionDefinition

Represents a prediction definition that specifies details about the prediction. This object is available in API version 50.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApplicationId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID of the parent AI Application.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description The language of the prediction. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
MasterLabel	Type string Properties Filter, Group, Sort Description Label that identifies the prediction throughout the Salesforce user interface.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Specifies the namespace of the prediction, if installed with a managed package.
PredictionField	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Field that the prediction is based on.
PushbackField	Type string Properties Filter, Group, Nillable, Sort Description Field that the prediction writes scores to.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the prediction. Possible values are: • Disabled • Draft • Enabled
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of model that returns the prediction values. Possible values are: • BinaryClassification • DeepLearningIntentClassification • DeepLearningNameEntityRecognition • GlobalDeepLearningIntentClassification • GlobalDeepLearningNameEntityRecognition • LanguageDetection • MulticlassClassification • Regression • ScoringSpecificOutcome

MLModel

Represents an AI model that can be used in Einstein Prediction Builder, Einstein Recommendation Builder, and other Einstein features. This object is available in API version 53.0 and later.

This object contains information that represents many types of AI models. Some fields contain information for only a specific type of model.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
ApprovalStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the model is approved, pending approval, or rejected. Possible values are: • Approved • Pending • Rejected The default value is Pending.
Dataset	Type string Properties Filter, Group, Nillable, Sort Description The ID of the dataset used to create the model.
ModelType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Indicates the type of model. Possible values are: • BinaryClassification • DecisionTree • DeepLearningIntent • DeepLearningNER • GeneralizedLinearModels • GlobalDeepLearningIntent • GlobalDeepLearningNER • GlobalLanguageDetection • GradientBoostedTrees • LinearRegression • LinearSupportVectorClassifiers • LogisticRegression • MulticlassClassification • NaiveBayes • NeuralNet • PopularityCount • RandomForest • Regression • XGBoost
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The automatically generated ID that uniquely identifies the model.
PredictionDefinitionId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related prediction definition. This field is a relationship field. Relationship Name PredictionDefinition

Field	Details
	Relationship Type Lookup
	Refers To MLPredictionDefinition
RecommendationDefinitionId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the related recommendation definition. This field is a relationship field.
	Relationship Name RecommendationDefinition
	Relationship Type Lookup
	Refers To MLRecommendationDefinition
ScoringStatus	Type picklist
	Properties Filter, Group, Restricted picklist, Sort
	Description Indicates whether scoring is enabled or disabled. Possible values are: - Disabled - Enabled
TrainingEndTime	Type dateTime
	Properties Filter, Nillable, Sort
	Description Indicates the date and time when the training ended.
TrainingStartTime	Type dateTime
	Properties Filter, Nillable, Sort

Field	Details
	Description Indicates the date and time when the training started.

MLModelFactor

Represents a field value that has a positive or negative effect on the model's score. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
Correlation	Type double Properties Filter, Nillable, Sort Description Shows the strength of association between the variable and the outcome. The higher the correlation, the greater the association.
FactorType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of factor. Possible values are: • ModelFactlet—The field value strongly influences the outcome because the model determined that this field is always important. For example, the model can decide that the field <code>Industry</code> is always important to the outcome, regardless of its value. • ModelFactor—The field value is important to the outcome because the field's value is significant. For example, the model can decide that the <code>Annual Revenue</code> field value is important to the outcome because the value is above \$1,000,000 or below \$50,000.

Field	Details
Importance	Type double Properties Filter, Nillable, Sort Description Shows how much the variable influences the outcome. The higher the value, the greater the impact.
ModelId	Type reference Properties Filter, Group, Sort Description The ID of the related model. This field is a relationship field. Relationship Name Model Relationship Type Lookup Refers To MLModel
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The automatically generated ID that uniquely identifies the model.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of model factor. Possible values are: • And • Basic • Or

Field	Details
Weight	Type double Properties Filter, Nillable, Sort Description Indicates how significant the field value is to the outcome or score. Model factlets tend to have higher weights than model factors.

MLModelFactorComponent

Represents information about the related MLModelFactor. For example, this object can represent a field value or a field range such as "Title = CEO" or "Annual Revenue >10000000". This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
FactorLabelKey	Type string Properties Filter, Group, Nillable, Sort Description Maps the model factor component to a label that can be displayed to the user.
FeatureType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description FeatureType and FeatureValue indicate a feature that doesn't have a corresponding field. For example, to indicate the feature "Percent = 97%", the FeatureType is Percent and the FeatureValue is 97. Possible values are:

Field	Details
	• Binary • Combobox • Currency • Date • DateTime • Email • ID • Integral • MultiPicklist • Percent • Phone • Picklist • Real • Text • TextArea • URL
FeatureValue	Type string Properties Filter, Group, Nillable, Sort Description The feature's value. See <code>FeatureType</code>.
LeftHandDerivedField	Type string Properties Filter, Group, Nillable, Sort Description If the model factor component is an equation, this field represents the name of the field on the left side of the equation. For example, if the model factor component is <code>Title = CEO</code>, this value is <code>Title</code>.
ModelFactorId	Type reference Properties Filter, Group, Sort Description The ID of the related <code>MLModelFactor</code>. This field is a relationship field.

Field	Details
	Relationship Name ModelFactor Relationship Type Lookup Refers To MLModelFactor
ModelId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related MLModel. This field is a relationship field. Relationship Name Model Relationship Type Lookup Refers To MLModel
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The automatically generated ID that uniquely identifies the model.
Operator	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description If the model factor component is an equation, this field represents the operator. For example, if the model factor component is <code>Title = CEO</code>, the operator is <code>Equals</code>. Possible values are: • Contains • EndsWith • Equals • GreaterThan

Field	Details
	• <code>IsNotNull</code> • <code>IsNull</code> • <code>LessThan</code> • <code>NotEquals</code> • <code>StartsWith</code>
<code>RightHandDerivedField</code>	Type string Properties Filter, Group, Nillable, Sort Description If the model factor component is an equation, this field represents the name of the field on the right side of the equation.
<code>SortOrder</code>	Type int Properties Filter, Group, Nillable, Sort Description If the model factor has multiple model factor components, this field indicates the order in which this model factor component appears.
<code>Value</code>	Type string Properties Filter, Group, Nillable, Sort Description If the model factor component specifies a value, this field represents the value. For example, if the model factor component is <code>Title = CEO</code>, this field is <code>CEO</code>.

MLModelMetric

Represents a metric or statistic about the related model, such as accuracy, precision, or RSquared. Use a model's metrics to learn about its performance and to compare it with other models. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available with Einstein Prediction Builder and Einstein Recommendation Builder.

Fields

Field	Details
BasicMetricValue	Type double Properties Filter, Nillable, Sort Description The value of a basic metric. A basic metric is a single number. For metrics that comprise a set of graph points, see <code>ComplexMetricValue</code> .
ComplexMetricValue	Type textarea Properties Nillable Description The X and Y values for a complex metric. A complex metric is a coordinate on a graph. For example, in classification models, you can use a line on a graph to create classification categories.
DataSetType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of dataset. Possible values are: • Baseline • HoldOut • Live • Model • Training
EndTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date and time when the model training finished.
GraphType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of graph. Possible values are: - ConfidencePlot - ConfusionMatrixPerThreshold - DiscountedCumulativeGainsGraph - HitRateGraph - KBasedRankingGraph - LiftPlot - MeanReciprocalRankGraph - MultiClassConfusionMatrixPerThreshold - MultiClassMisclassifications - NormalizedDiscountedCumulativeGainsGraph - PrecisionGraph - RecallGraph - RegressionErrorBands
MetricType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of metric. Possible values are: - Accuracy - AveragePrecision - BalancedAccuracy - DiscountedCumulativeGainAtK - ExpectedTopAbsoluteRank - ExpectedTopPercentileRank - F1Score - FMeasure

Field	Details
	• HitRateAtK • LiftBucket • MeanAbsoluteError • MeanAbsoluteRank • MeanAveragePrecisionAtK • MeanPercentileRank • MeanReciprocalRank • MeanReciprocalRankAtK • MeanTopReciprocalRank • NormalizedDiscountedCumulativeGainsAtK • Precision • PrecisionAtK • RSquared • Recall • RecallAtK • RootMeanSquaredError • auPR • auROC
ModelId	Type reference Properties Filter, Group, Sort Description The ID of the related MLModel. This field is a polymorphic relationship field. Relationship Name Model Relationship Type Lookup Refers To MLModel
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An automatically generated ID that uniquely identifies the metric.

Field	Details
RowCount	Type int Properties Filter, Group, Nillable, Sort Description The number of rows.
Span	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The time span for the metric. Possible values are: • Day • Hour • Month • SinceLastAction • Week
StartTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the model training started.

MLRecommendationDefinition

For internal use only.

MobileDeviceAppRegistration

Represents the details provided in a mobile device registration event from an app that uses the Engagement Mobile SDK. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DatetimeInDevice	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time of the registration event, based on values provided by the device.
DeviceModel	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The model of the device that's being registered, such as <code>iPhone 17</code> or <code>Google Pixel</code>.
DevicePlatform	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The operating system of the mobile device, such as <code>iPhone OS</code> or <code>Android</code>.
DeviceSystemToken	Type string Properties Create, Filter, Nillable, Sort, Update Description A unique token that represents the mobile device. The push notification service (such as Apple Push Notification service or Firebase Cloud Messaging) uses this token to deliver messages to the device.
DeviceSystemTokenHash	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A hash of the device token.
DeviceTimezone	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The time zone that the device is located in when the registration event occurs.
DeviceVersion	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The version or model number of the device.
Deviceid	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A unique identifier for the mobile device.
Eventid	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A unique identifier for the registration event.
IsBackgroundRefreshEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the device gives permission for the app to receive updates while it's in the background. The default value is <code>false</code>.
IsBluetoothEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether Bluetooth is enabled on the device.

Field	Details
	The default value is <code>false</code> .
<code>IsDst</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the device's locale observes daylight saving time (DST). The default value is <code>false</code> .
<code>IsLocationEnabled</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the device has location services enabled for the app. The default value is <code>false</code> .
<code>IsPushEnabled</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the device has push notifications enabled for the app. The default value is <code>false</code> .
<code>Locale</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The locale string for the device, such as <code>en_US</code> or <code>ja_JP</code> .
<code>MobileAppName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the mobile app, as configured in Setup.

Field	Details
MobileAppVersion	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The version number of the mobile app that generated the registration event.
MobileAppid	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A unique ID that represents the mobile app.
PartyIdentificationName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the party identifier for identity resolution rules.
PartyIdentificationNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID used for identity resolution comparisons.
PartyIdentificationType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A string that provides additional information about the type of party identifier used, such as Driver License or SSN.
RegistrationDatetime	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The date and time when the registration event occurred.
Registrationid	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A unique ID for the registration event.
SdkVersion	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The version of the Mobile Engagement SDK that the app uses.

MobileSecurityAssignment

Represents the assignment of mobile security policies to a profile. The policies apply to the Salesforce mobile app with Enhanced Mobile App Security enabled. This object is available in API version 54.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
DeveloperName	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code, which controls the language of the MobileSecurityAssignment.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for this MobileSecurityAssignment value. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values.

Field	Details
	- In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>ProfileId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The profile ID that the mobile security policies are assigned to. This field is a relationship field. Relationship Name Profile Refers To Profile

MobileSecurityPolicy

Enables mobile security policies on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 50.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date a mobile security policy is enforced.
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description A value indicating whether a mobile security policy is enabled. The default value is 'false'.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The two-to five-character code that represents the language and locale ISO.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label of the mobile security policy.

Field	Details
MobilePlatform	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The mobile operating system. Possible values are: • Android • iOS
MobileSecurityAssignmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the ID of the mobile security assignment. This is a relationship field. Relationship Name MobileSecurityAssignment Relationship Type Lookup Refers To MobileSecurityAssignment
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field	Details
	In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
RuleValue	Type string Properties Create, Filter, Group, Sort, Update Description Value of the mobile security policy rule.
RuleValueType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of mobile security policy rule. Possible values are: - Boolean - Text - TextList
SeverityLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The severity level of a mobile security policy. Possible values are: - Critical - Error - Info - Warn
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of mobile security policy.

Field	Details
	Possible values are: • AllowedDeviceList—Allowed Device List • Block3dTouch—Block 3D Touch • BlockCalendar—Block Calendar • BlockCamera—Block Camera • BlockContacts—Block Contacts • BlockCustomKeyboard—Block Custom Keyboard • BlockFileBackup—Block File Backup • BlockMicrophone—Block Microphone • BlockOsSharing—Block OS Share Actions • BlockedDeviceList—Blocked Device List • BrowserUriScheme—Mobile Browser URI Scheme • CheckBiometric—Check Biometric Login Data • DevicePasscode—Require Device Passcode • DisableUrlCaching—Disable URL Caching • JailbrokenDevice—Block Jailbroken Device • LogCertPin—Log Certificate Pinning • LogEmail—Log Email • LogPhonecall—Log Phone Call • LogPolicyResult—Log Security Policy Evaluation Result • LogScreenshot—Log Screenshot • LogTextmessage—Log SMS • LogoutAfterRestart—Log Out User After Device Restart • LogoutOnBiometricChange—Log Out User After Changing Biometric Login Data • MalwareDetection—Malware Detection • ManInMiddle—Block Man In The Middle Attack • MaxOffline—Maximum Days Offline Without Policy Refresh • MaximumAppVersion—Maximum Application Version • MaximumOsVersion—Maximum OS Version • MinimumAppVersion—Minimum Application Version • MinimumOsVersion—Minimum OS Version • MinimumSecurityPatchVersion—Minimum Security Patch Version • PhonecallUriScheme—Phone Call Application Handler • Screenshot—Block Screenshot

MobileSecurityUserMetric

Represents the metrics for users who have Enhanced Mobile Security policies enforced. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
MetricsDate	Type date Properties Filter, Group, Sort Description The date the metrics were collected.
UserCount	Type double Properties Filter, Nillable, Sort Description The number of users who have mobile security policies enforced.

Usage

A user with the Manage Enhanced Mobile App Security permission can run this SOQL query.

```
SELECT MetricsDate, UserCount
FROM MobileSecurityUserMetric
ORDER BY MetricsDate DESC
```

MobileSettingsAssignment

Represents the assignment of a particular field service mobile settings configuration to a user profile. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()` —available in API version 51.0 and later, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
FieldServiceMobileSettingsId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of a set of field service mobile settings.
ProfileId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the profile to associate with the set of field service mobile settings.

MobSecurityCertPinConfig

Configuration of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
CertificateHash	Type string Properties Create, Filter, Group, Sort, Update Description The unique identifier for the certificate.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API.
DomainName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the domain.
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The default value is False.
IsSubdomainIncluded	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The default value is False.
Language	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The two-to five-character code that represents the language and locale ISO.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label of the mobile security pin.
MobilePlatform	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The mobile operating system. Possible values are: • Android • iOS
MobileSecurityAssignmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the ID of the mobile security assignment. This is a relationship field. Relationship Name MobileSecurityAssignment Relationship Type Lookup Refers To MobileSecurityAssignment
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can

Field	Details
	refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <i>NamespacePrefix</i> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that aren't Developer Edition orgs, <i>NamespacePrefix</i> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
SeverityLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The severity level of a mobile security policy. Possible values are: - Critical - Error - Info - Warn
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of pin Possible values are: - AuthServer—Authentication Server - Resource—Resource

MobSecurityCertPinEvent

The event of mobile security certificate pinning on the Salesforce mobile app with Enhanced Mobile Security. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeSObjects()`

Special Access Rules

Accessing this object requires the Enhanced Mobile App Security add-on subscriptions and the Enforce Enhanced Mobile App Security user permission.

Fields

Field	Details
<code>AppPackageIdentifier</code>	Type string Properties Create Description The unique identifier for the certificate.
<code>AppVersion</code>	Type string Properties Create Description The version of the app.
<code>CertPinResults</code>	Type json Properties Create Description The results of certificate pinning.
<code>DeviceIdentifier</code>	Type string Properties Create Description The hardware IDs or IDs to uniquely identify a mobile device.
<code>DeviceModel</code>	Type string

Field	Details
	Properties Create Description The model of the mobile device.
EventDate	Type dateTime Properties Create, Nillable Description The date of the certificate pinning event.
EventDescription	Type string Properties Create, Nillable Description The description of the certificate pinning event.
EventIdentifier	Type string Properties Create, Nillable Description The ID of the certificate pinning event.
EventUuid	Type string Properties Nillable Description The universally unique identifier of the event.
OsName	Type string Properties Create Description The name of the operating system.
OsVersion	Type string

Field	Details
	Properties Create Description The version of the operating system.
ReplayId	Type string Properties Nillable Description The position of the event in the event stream.
UserId	Type reference Properties Create Description This is polymorphic relationship field. Relationship Name User Relationship Type Lookup Refers To User
WebkitVersion	Type string Properties Create, Nillable Description The version of the web browser engine developed by Apple.

MsgChannelLanguageKeyword

Represents the consent configuration for a Messaging channel. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `delete()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
CustomKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to receive the Custom Response.
CustomResponse	Type textarea Properties Nillable Description The automated response sent when a Messaging end user sends a Custom Keyword.
DoubleOptInKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to doubly opt in to receiving messages.
HelpKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to request help during a Messaging session.
HelpResponse	Type textarea Properties Nillable Description The automated response sent when a Messaging end user requests help.
MasterLanguage	Type textarea

Field	Details
	Properties Description The language used for this consent configuration.
MessagingChannelId	Type reference Properties Filter, Group, Sort Description The ID of the associated Messaging channel. This is a relationship field. Relationship Name MessagingChannel Relationship Type Lookup Refers To MessagingChannel
MessagingChannelUsageId	Type reference Properties Filter, Group, Sort Description The ID of the associated Messaging channel usage record, which is in turn associated with a messaging channel. This is a relationship field. Relationship Name MessagingChannelUsage Relationship Type Lookup Refers To MessagingChannelUsage
OptInConfirmation	Type textarea Properties Nillable Description The automated response sent when a Messaging end user opts in to receiving messages.

Field	Details
OptInKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to explicitly opt in to receiving messages.
OptOutConfirmation	Type textarea Properties Nillable Description The automated response sent when a Messaging end user opts out of receiving messages.
OptOutKeywords	Type textarea Properties Nillable Description The keywords a Messaging end user can send to opt out of receiving messages.

MsgChannelUsageExternalOrg

Represents the Enterprise ID (EID) and Business Unit (MID) for Marketing Cloud connections in a Unified Messaging channel. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ExternalOrgIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort Description The Enterprise ID (EID) of a Marketing Cloud connection.

Field	Details
ExternalSubOrgIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Business Unit (MID) of a Marketing Cloud connection.
MessagingChannelUsageId	Type reference Properties Create, Filter, Group, Sort Description The associated MessagingChannelUsage record, which must have a DeploymentType of MJ (referring to Marketing Cloud Journey Builder). This field is a relationship field. Relationship Name MessagingChannelUsage Relationship Type Lookup Refers To MessagingChannelUsage

Usage

MsgChannelUsageExternalOrg records apply only to MessagingChannelUsage records related to Marketing Cloud.

Only one MsgChannelUsageExternalOrg record can exist for each MessagingChannelUsage record with a DeploymentType of MJ. MsgChannelUsageExternalOrg records are created when an admin enters the EID and MID for a Marketing Cloud application in Unified Messaging Setup and then clicks **Connect**.

The data saved in a MsgChannelUsageExternalOrg record is used for making a connection to Marketing Cloud. If an admin disconnects a Marketing Cloud application in Unified Messaging Setup, the saved EID and MID are used during deprovisioning.

MyDomainDiscoverableLogin

Represents configuration settings when the My Domain login page type is Discovery. Login Discovery provides an identity-first login experience, where the login page contains the identifier field only. Based on the identifier entered, a handler determines how to authenticate the user. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApexHandlerId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the Apex handler that contains the Discovery authentication logic. This is a relationship field. Relationship Name ApexHandler Relationship Type Lookup Refers To ApexClass
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ExecuteApexHandlerAsId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the user who is executing the handler. Requires Manage User permission. This is a relationship field. Relationship Name ExecuteApexHandlerAs

Field Name	Details
	Relationship Type Lookup Refers To User
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the <code>MasterLabel</code> . Possible values are: • <code>da</code> (Danish) • <code>de</code> (German) • <code>en_US</code> (English) • <code>es</code> (Spanish) • <code>es_MX</code> (Spanish - Mexican) • <code>fi</code> (Finnish) • <code>fr</code> (French) • <code>it</code> (Italian) • <code>ja</code> (Japanese) • <code>ko</code> (Korean) • <code>nl_NL</code> (Dutch) • <code>no</code> (Norwegian) • <code>pt_BR</code> (Portuguese - Brazilian) • <code>ru</code> (Russian) • <code>sv</code> (Swedish) • <code>th</code> (Thai) • <code>zh_CN</code> (Chinese - Simplified) • <code>zh_TW</code> (Chinese - Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The name of the action link group template.
UsernameLabel	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Login prompt on login page when the My Domain login page type is Discovery. It supports localization with custom labels.

Usage

Use this object to access the My Domain Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. My Domain Login Discovery performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

MutingPermissionSet

Represents a set of disabled permissions and is used in conjunction with PermissionSetGroup. This object is available in API version 46.0 and later.

Use a muting permission set with a permission set group to mute certain permissions. For instance, you have a subscriber org using a managed package that contains a permission set group. To use the existing permission set group, the subscriber org can disable specific permissions with a muting permission set. Or, perhaps you have a permission set group that contains several permission sets managed by different departments. Use a muting permission set to disable specific permissions based on your organization's needs.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets

Fields

Field Name	Details
DeveloperName	Type string
	Properties Create, Filter, Group, Sort, Update

Field Name

Details

Description

The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.

Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance can slow while Salesforce generates one for each record.

Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.

Language

Type

picklist

Properties

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The language of the muting permission set.

Possible values are:

- `da` (Danish)
- `de` (German)
- `en_US` (English)
- `es` (Spanish)
- `es_MX` (Spanish - Mexican)
- `fi` (Finnish)
- `fr` (French)
- `it` (Italian)
- `ja` (Japanese)
- `ko` (Korean)
- `nl_NL` (Dutch)
- `no` (Norwegian)
- `pt_BR` (Portuguese - Brazilian)
- `ru` (Russian)
- `sv` (Swedish)
- `th` (Thai)
- `zh_CN` (Chinese - Simplified)
- `zh_TW` (Chinese - Traditional)

Field Name	Details
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The muting permission set label for the aggregated, disabled permissions.
PermissionsPermissionName	Type boolean Properties Create, Filter, Update Description One field for each permission. If <code>true</code> , the permission is disabled in the related permission set group. The number of fields varies depending on the permissions for the organization and license type. To get a list of available permissions, use <code>describeSObjects()</code> .

Usage

Use `MutingPermissionSet` to disable specified permissions within a permission set group.

Name

Non-queryable object that provides information about foreign key traversals when the foreign key has more than one parent.

This object is used to retrieve information from related records where the related record can be from more than one object type (a polymorphic foreign key). For example, the owner of a case can be either a user or a group (queue). This object allows retrieval of the owner name, whether the owner is a user or a group (queue). You can use a `describe` call to access the information about parents for an object, or you can use the `who`, `what`, or `owner` fields (depending on the object) in SOQL queries. This object can't be directly accessed.

Supported Calls

`describeSObjects()`

Fields

Field	Details
Alias	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The user alias. This field contains a value only if the related record is a user.
Email	Type email Properties Filter, Group, Nillable, Sort Description The email address of the user or group (queue).
FirstName	Type string Properties Filter, Group, Nillable, Sort Description The first name of the user, contact, or lead.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the related record is an active user (<code>true</code>) or not (<code>false</code>). This field contains a value only if the related record is a user.
LastName	Type string Properties Filter, Group, Nillable, Sort Description The last name of the user, contact, or lead.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.

Field	Details
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
MiddleName	Type string Properties Filter, Group, Nillable, Sort Description The middle name of the user contact, or lead.
Name	Type string Properties Filter, Group, Nillable, Sort Description The name of the parent of the object queried. If the parent is a user, contact, or lead, the value is a concatenation of the <code>FirstName</code>, <code>MiddleName</code>, <code>LastName</code>, and <code>Suffix</code> fields of the related record.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number of the user. This field contains a value only if the related record is a user.
Profile	Type reference Properties Filter, Nillable Description The Profile of the user. Only populated if the related record is a user.
ProfileId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description ID of the user's Profile. Only populated if the related record is a user. This field is a relationship field. Relationship Name Profile Relationship Type Lookup Refers To Profile
Suffix	Type string Properties Filter, Group, Nillable, Sort Description The name suffix of the user, contact, or lead.
Title	Type string Properties Filter, Group, Nillable, Sort Description The title of the user, for example CFO or CEO.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description A list of the types of sObject that can be an owner of this object. You can use this field to filter on a type of owner, for example, return only the leads owned by a user.
Username	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Contains the name that a user enters to log into the API or the user interface. The value for this field is in the form of an email address, and is only populated if the related record is a user.
UserRole	Type picklist Properties Filter, Nillable Description Name of the <code>Role</code> played by the user. Only populated for user rows.
UserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user role associated with this object. This field is a relationship field. Relationship Name UserRole Relationship Type Lookup Refers To UserRole

Usage

To query on relationships where the parent can be more than one type of object, use `who`, `what`, or `owner` relationship fields.

[Overview of Salesforce Objects and Fields](#)

NamedCredential

Represents a named credential, which specifies the URL of a callout endpoint and its required authentication parameters in one definition. A named credential can be specified as an endpoint to simplify the setup of authenticated callouts. This object is available in API version 33.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Note: All credentials stored within this entity are encrypted under a framework that is consistent with other encryption frameworks on the platform. Salesforce encrypts your credentials by auto-creating org-specific keys. Credentials encrypted using the previous encryption scheme have been migrated to the new framework.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
AuthProviderId	Type reference Properties Filter, Group, Nillable, Sort Description Salesforce ID of the authentication provider, which defines the service that provides the login process and approves access to the external system. Only users with the “Customize Application” and “Manage AuthProviders” permissions can view this field. This field is a relationship field. This field is only valid for legacy named credentials. This field was first available in API version 39.0, this field is deprecated in API version 56.0. Relationship Name AuthProvider Relationship Type Lookup Refers To AuthProvider
AuthTokenEndpointUrl	Type textarea Properties Nillable

Field Name	Details
	Description The URL where SON Web Tokens (JWTs) are exchanged for access tokens. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
CalloutOptionsAllowMergeFieldsInBody	Type boolean Properties Filter Description For Apex callouts, indicates whether the code can use merge fields to populate HTTP request bodies with org data. This field is available in API version 35.0 and later.
CalloutOptionsAllowMergeFieldsInHeader	Type boolean Properties Filter Description For Apex callouts, indicates whether the code can use merge fields to populate HTTP headers with org data. This field is available in API version 35.0 and later.
CalloutOptionsGenerateAuthorizationHeader	Type boolean Properties Filter Description Indicates whether Salesforce automatically generates a standard authorization header for each callout to the named credential–defined endpoint. This field is available in API version 35.0 and later.
DeveloperName	Type string Properties Filter, Group, Sort

Field Name	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Endpoint	Type textarea Properties Nillable Description The root URL of the endpoint. This field is only valid for legacy named credentials. This field is deprecated in API version 56.0.
JwtAudience	Type textarea Properties Nillable Description External service or other allowed recipients for the JSON Web Token. Written as JSON, with a quoted string for a single audience and an array of quoted strings for multiple audiences. Single audience example: "aud1". Multiple audiences example: ["aud1", "aud2", "aud3"]. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
JwtFormulaSubject	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Formula string calculating the JSON Web Token's subject. API names and constant strings, in single quotes, can be included. Allows a dynamic Subject unique per user requesting the token. For example, 'User='+\$User.Id. Use this field when <code>PrincipalType</code> is set to <code>PerUser</code>. Corresponds to Per User Subject in the user interface. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
JwtIssuer	Type string Properties Filter, Group, Nillable, Sort Description Specify who issued the JSON Web Token using a case-sensitive string. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
JwtTextSubject	Type string Properties Filter, Group, Nillable, Sort Description Static text, without quotes, that specifies the JSON Web Token subject. Use this field when <code>PrincipalType</code> is set to <code>NamedUser</code>. Corresponds to Named Principal Subject in the user interface. This field is only valid for legacy named credentials. This field was first available in API version 46.0, this field is deprecated in API version 56.0.
JwtValidityPeriodSeconds	Type int Properties Filter, Group, Nillable, Sort Description The number of seconds that the JSON Web Token is valid. This field is only valid for legacy named credentials.

Field Name	Details
	This field was first available in API version 46.0, this field is deprecated in API version 56.0.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the <code>MasterLabel</code>.
MasterLabel	Type string Properties Filter, Group, Sort Description The label for the named credential. This display value is the internal label that doesn't get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.
PrincipalType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Tracks users who are accessing the external system. <code>Anonymous</code> implies that a user identity isn't specified for external system access. <code>Named Principal</code> uses one user identity for all users to access the external system. This field is only valid for legacy named credentials. This field is deprecated in API version 56.0.

Usage

Use the NamedCredential object to query named credentials in your organization.

 **Note:** Some named credential fields rely on per-user authentication to connect with an external system. If an admin edits one of these fields, then the previously authenticated credentials can get invalidated, requiring individual users to reauthenticate.

NamedCredentialEventLog

The Named Credential event type captures information about Apex callouts that use named credentials as their endpoints. Use this event type to audit the installed managed packages that use named credentials. If you don't recognize the package namespace in the named credential event log file, then you can investigate whether a security breach has occurred. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
BotIdentifier	Type String Description The ID of the bot.
BotSessionIdentifier	Type String Description The bot session ID.

Field	Details
CallerPackageNamespace	Type String Properties Filter, Group, Nillable, Sort Description If an Apex callout using a Named Credential endpoint is initiated from a package, then this field contains the package's namespace. If the callout isn't initiated from a package, then this field is empty.
ClientIp	Type String Properties Filter, Group, Nillable, Sort Description The IP address of the client that is using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".
CpuTime	Type Double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
LoginKey	Type String Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
NamedCredentialName	Type String Properties Filter, Group, Nillable, Sort Description The name of the named credential that's the endpoint of the Apex callout.
PlannerIdentifier	Type String

Field	Details
	Description The ID of the agent planner.
RequestIdIdentifier	Type String Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
RunTime	Type Double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds..
SessionKey	Type String Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
Timestamp	Type DateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
Uri	Type String Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request.
UserIdentifier	Type String

Field	Details
	Properties Filter, Group, Nillable, Sort
	Description The 15-character ID of the user who is using Salesforce services through the UI or the API.

NamespaceRegistry

Represents a namespace that you can link to scratch orgs that were created from your org's Dev Hub. You use the namespace when developing, packaging, and releasing an app. You can't create this object with the API. Use the **Link Namespace** action in the Dev Hub graphical interface to insert a `NamespaceRegistry` record. This object is available in API version 41.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description The name of this namespace registry entry.
NamespaceOrg	Type string Properties Filter, Group, Nillable, Sort Description The org ID of the Developer Edition org where you've registered the namespace you want to link.
NamespacePrefix	Type string Properties Filter, Group, Sort Description The namespace prefix that you want to link to the scratch org.

Associated Objects

This object has these associated objects. Unless noted, they’re available in the same API version as this object.

NamespaceRegistryFeed

Feed tracking is available for the object.

NamespaceRegistryHistory

History is available for tracked fields of the object.

[ScratchOrgInfo](#)

NavigationLinkSet

Represents the navigation menu in an Experience Cloud site. A navigation menu consists of items that users can click to go to other parts of the site. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

`create()`, `delete()`, `update()`, and `upsert()` are available in API version 45.0 and later.

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Create and Update are available in API version 45.0 and later. Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization.

Field Name	Details
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Create, Defaulted on create, Nillable, and Update are available in API version 45.0 and later. Description Language for the navigation menu. Valid values are: - Chinese (Simplified): zh_CN - Chinese (Traditional): zh_TW - Danish: da - Dutch: nl_NL - English: en_US - Finnish: fi - French: fr - German: de - Italian: it - Japanese: ja - Korean: ko - Norwegian: no - Portuguese (Brazil): pt_BR - Russian: ru - Spanish: es - Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations. - Swedish: sv - Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Create and Update are available in API version 45.0 and later. Description Label for the navigation menu.
NetworkId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort Create is available in API version 45.0 and later. Update is available in API versions 45.0 to 47.0. Description ID of the Experience Cloud site.

NavigationMenuItem

Represents a single menu item in a NavigationLinkSet. Use this object to create, delete, or update menu items in your Experience Cloud site's navigation menu. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
<code>AccessRestriction</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Determines if the menu item is available to guest users who aren't required to log in to the Experience Cloud site.
<code>DefaultListViewId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description If the value of the <code>Type</code> field is <code>SalesforceObject</code> , the value is the ID of the default list view for the object.

Field Name	Details
DraftRowID	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the draft navigation menu item. The ID is unique within your organization.
Label	Type string Properties Create, Filter, Group, Sort, Update Description The text that appears in the navigation menu for this item.
NavigationLinkSetId	Type reference Properties Create, Filter, Group, Sort, Update Description The navigation menu that this item is included in.
ParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The parent navigation menu.
Position	Type int Properties Create, Filter, Group, Sort, Update Description The location of the menu item in the navigation menu.
Status	Type reference Properties Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Represents if the navigation menu item is published or not. The values can only be DRAFT, LIVE, or null. In API versions 42 and earlier, if the Status field is not set, the field defaults to LIVE. When queried and Status is not part of the query filter, only the NavigationMenuItem objects with a status of LIVE return. In API versions 43 and later, if the Status field is not set, the field defaults to DRAFT. When queried and Status is not part of the query filter, all NavigationMenuItem objects return regardless of status.
Target	Type string Properties Create, Filter, Group, Sort, Update Description If <code>Type</code> is ExternalLink or InternalLink, the target is the URL that the link points to. For ExternalLink, your entry looks like this: <code>https://salesforce.com</code>. For InternalLink, use a relative URL, such as <code>/contactsupport</code>.
TargetPrefs	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description If <code>Type</code> is ExternalLink, determines whether a navigation menu item opens in the same tab.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of navigation menu item. The available values are: • SalesforceObject—Available objects include accounts, cases, contacts, and custom objects. • ExternalLink—Links to a URL outside of your Experience Cloud site. For example, <code>https://salesforce.com</code>. • Event—An event, such as logging in, logging out, or switching accounts. Event is internal only and can't be used in custom components. • GlobalAction—Enables users to create object records, but the new record has no relationship with other records. • InternalLink—Links to a relative URL inside your Experience Cloud site. For example, <code>/contactsupport</code>.

Field Name	Details
	• NavigationalTopic—A dropdown list with links to the navigational topics in your Experience Cloud site. • SystemLink—A system link, such as a link to Experience Builder, Workspaces, or Salesforce setup.

Usage

You can add up to 20 navigation menu items. You can translate navigation menu items using the Translation Workbench.

NavigationMenuItemLocalization

Represents the translated value of a navigation menu item in an Experience Cloud site. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Navigation menus are available only in Experience Cloud sites created using Experience Builder templates. To use navigation menus in LWR templates, you must build a custom navigation menu component.

Fields

Field Name	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language of the translated navigation menu item. The picklist contains the following supported languages: • Chinese (Simplified): zh_CN • Chinese (Traditional): zh_TW • Danish: da • Dutch: nl_NL • English: en_US • Finnish: fi

Field Name	Details
	• French: <code>fr</code> • German: <code>de</code> • Italian: <code>it</code> • Japanese: <code>ja</code> • Korean: <code>ko</code> • Norwegian: <code>no</code> • Portuguese (Brazil): <code>pt_BR</code> • Russian: <code>ru</code> • Spanish: <code>es</code> • Spanish (Mexico): <code>es_MX</code> Spanish (Mexico) defaults to Spanish for customer-defined translations. • Swedish: <code>sv</code> • Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
<code>NamespacePrefix</code>	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>ParentId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the navigation menu item that this translated value applies to.

Field Name	Details
Value	Type string Properties Create, Filter, Sort, Update Description The translated text for the navigation menu item. Label is Translation Text .

Network

Represents an Experience Cloud site. Salesforce Experience Cloud lets you create branded spaces for your employees, customers, and partners. You can customize and create experiences, whether they're communities, sites, or portals, to meet your business needs, then transition seamlessly between them. Experience Cloud sites let you share information, records, and files with coworkers and stakeholders all in one place. This object is available in API version 26.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
AllowedExtensions	Type textarea Properties Filter, Nillable, Sort, Update Description Specifies the types of files allowed in your site. This list of file types lets you control what members upload and also prevents spammers from polluting your site with inappropriate files. Available in API version 36.0 and later. Separate file types with a comma (for example: <i>jpg, docx, txt</i>). You can enter lowercase and uppercase letters. You can enter up to 1,000 characters. To allow all file types, leave this field empty.
CaseCommentEmailTemplateId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort, Update Description ID of the email template used when submitting a comment on a case. This field is available in API version 28.0 and later.
ChangePasswordEmailTemplateId	Type reference Properties Filter, Group, Sort, Update Description ID of the email template used when notifying users that their password has been reset.
ChgEmailVerNewEmailTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's new email address.
ChgEmailVerOldEmailTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template used when notifying users that their email address has been changed. This email is sent to the user's old email address.
Description	Type string Properties Filter, Group, Nillable, Sort, Update Description Description of the site.
DeviceActEmailTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description ID of the email template used when users log in from an unrecognized browser, app, or IP address. The email contains a one-time password that users enter to verify their identity. This field is available in API version 53.0 and later.
EmailFooterLogoId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the Document object that displays as an image in the footer of Chatter emails.
EmailFooterText	Type string Properties Filter, Nillable, Sort, Update Description Text that displays in the footer of Chatter emails.
EmailSenderAddress	Type email Properties Filter, Group, Sort Description Read only. Email address from which emails are sent.  Note: To change the EmailSenderAddress value, you must first specify NewSenderAddress, which triggers the sending of an address change verification email. After you complete the address verification process, EmailSenderAddress changes to the specified NewSenderAddress.
EmailSenderName	Type string Properties Filter, Group, Sort, Update Description Name from which emails are sent.
enableImageOptimizationCDN	Type boolean

Field Name	Details
	Properties Filter, Update Description The setting that optimizes cached images for guest users on all devices when a site uses Salesforce's CDN for Digital Experiences. This field is available in API version 56.0 and later.
FirstActivationDate	Type date Properties Filter, Group, Nillable, Sort Description The date the site was first activated. This field is available in API version 34.0 and later. If the site was activated or inactive before the release of API version 34.0, this field returns the date that the site was first created.
ForgotPasswordEmailTemplateId	Type reference Properties Filter, Group, Sort, Update Description ID of the email template used when users forget their password.
HeadlessForgotPasswordTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template to use with the Headless Forgot Password Flow. This field is available in API version 57.0 and later.
HeadlessRegistrationTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template to use for identity verification during the Headless Registration Flow. This field is available in API version 59.0 and later.

Field Name	Details
LockoutEmailTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template used when users try to reset their password after locking themselves out because of too many login attempts. This field is available in API version 43.0 and later.
MaxFileSizeKb	Type int Properties Filter, Group, Nillable, Sort, Update Description Specifies the maximum file size (in KBs) that members can upload in your site. Available in API version 36.0 and later. Enter a number between 3072 KB and your org's maximum file size. To use the default limit of 2 GB, leave this field empty.
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description The name of the site.
NewSenderAddress	Type email Properties Filter, Group, Nillable, Sort, Update Description Email address that has been entered as the new value for <code>EmailSenderAddress</code> but hasn't been verified yet. After a user has requested to change the sender email address and has successfully responded to the verification email, the <code>NewSenderAddress</code> value overwrites the value in <code>EmailSenderAddress</code>. This value becomes the email address from which emails are sent.  Note: • If verification is pending for a new email address and you set <code>NewSenderAddress</code> to null, the verification request is canceled.

Field Name	Details
	• <code>NewSenderAddress</code> is automatically set to null after <code>EmailSenderAddress</code> has been set to the new verified address. • If verification is pending for a new email address, and you specify a different new address for this field, only the latest value is retained and used for verification.
<code>OptionsActionOverrideEnabled</code>	Type boolean Properties Filter, Update Description Override the action that occurs when users click a default button, like New or Edit, with a Lightning component. For example, show a custom window instead of the one that Salesforce provides. Assign action overrides in the Object Manager. In the UI, this setting is available in the Administration Workspace, under Administration > Preferences under Experience Management This field is available in API version 49.0 and later.
<code>OptionsAllowInternalUserLogin</code>	Type boolean Properties Filter, Update Description Specifies whether internal users can log in with their internal credentials on the site login page. This field is available in API version 37.0 and later.
<code>OptionsAllowMembersToFlag</code>	Type boolean Properties Filter, Update Description Determines whether users can flag posts, comments, or files as inappropriate. This field is available in API version 29.0 and later. The ability to flag files is available in version 30.0 and later.
<code>OptionsApexCDNCachingEnabled</code>	Type boolean Properties Filter, Update

Field Name	Details
	Description Determines whether public data from @wire calls to Apex methods is cached only for guest users. This setting applies only to sites using Salesforce's CDN for Digital Experiences. This field is available in API version 55.0 and later.
OptionsDirectMessagesEnabled	Type boolean Properties Filter, Update Description Controls the availability of direct messages in an Experience Builder site. This field is available in API version 39.0 and later.
OptionsEmbeddedLoginEnabled	Type boolean Properties Filter, Update Description Determines whether the Embedded Login feature is enabled in a site. When <code>true</code>, Embedded Login is turned on. This field is available in API version 61.0 and later.
OptionsEnableTalkingAboutStats	Type boolean Properties Filter, Update Description Determines whether site users see how many people are discussing a topic. The number of people discussing the topic appears as the user types the topic and the system gives topic suggestions. This field is available in API version 41.0 and later.
OptionsEnableTopicAssignmentRules	Type boolean Properties Filter, Update Description When true, displays knowledgeable people in key areas, for example, on Topic Detail pages.

Field Name	Details
OptionsExpFriendlyUrlsAsDefault	Type boolean Properties Filter, Update Description When true, URL slugs are on by default for - Product and Category pages of LWR Commerce stores (available in API version 58.0 and later) - Custom object pages on enhanced LWR sites (available in API version 60.0 and later) - Account and contact pages on enhanced LWR sites (available in API version 61.0 and later)
OptionsExperienceBundleBasedSnsOverrideEnabled	Type boolean Properties Filter, Update Description When true, the Service Not Available Page is an auto-generated Experience Builder-based page. When false, the Service Not Available page uses a static resource page that is set in Workspaces > Administration > Pages. The default value is true. Available in API version 52.0 and later.
OptionsGatherCustomerSentimentData	Type boolean Properties Filter, Update Description When true, collects data about user likes, upvotes, and downvotes.
OptionsGuestChatterEnabled	Type boolean Properties Filter, Update Description Specifies whether guest users can access public Chatter groups in the site without logging in.
OptionsGuestFileAccessEnabled	Type boolean Properties Filter, Update

Field Name	Details
	Description When true, lets guest users view asset files and CMS content that's available to the site. Guest users can access shared asset files and published CMS content that's made for external use, even if it isn't used. Shared asset files include images that are associated with topics, recognition badges, branding, and account branding. This preference is automatically enabled if public access is enabled at the page or site level in Experience Builder.
OptionsGuestMemberVisibility	Type boolean Properties Filter, Update Description When true, lets guest users see who else is part of the site, including non-guest users. In the UI, this setting appears in the Administration Workspace under Administration > Preferences. Available in API version 47.0 and later.
OptionsHeadlessFrgtPswEnabled	Type boolean Properties Filter, Update Description When <code>true</code>, Headless Forgot Password Flow is enabled. This field is available in API version 57.0 and later.
OptionsImageOptimizationCDNEnabled	Type boolean Properties Filter, Update Description When <code>true</code>, cached images are optimized to suit any device that guest users use to access your site. This feature is available only for sites that use Salesforce's CDN for Digital Experiences. In the UI, this setting appears in the Administration Workspace under Administration > Preferences. Available in API version 56.0 and later.
OptionsInvitationsEnabled	Type boolean Properties Filter, Update

Field Name	Details
	Description Determines whether users can invite others to the site.
OptionsKnowledgeableEnabled	Type boolean Properties Filter, Update Description Determines whether users can see knowledgeable people for topics and endorse people for topics.
OptionsLWRExperienceConnectedAppEnabled	Type boolean Properties Filter, Update Description When true, enhances the performance and scalability of Connect API calls made from Lightning web components in an enhanced LWR site. This field is available in API version 58.0 and later.  Note: This feature is a Beta Service. Customer may opt to try such Beta Service in its sole discretion. Any use of the Beta Service is subject to the applicable Beta Services Terms provided at Agreements and Terms .
OptionsMemberVisibility	Type boolean Properties Filter, Update Description Controls user visibility on a per-site basis. If true, the See other members of this site preference is enabled for the selected site. This field is available in API version 45.0 and later.
OptionsMobileImageOptimizationEnabled	Type boolean Properties Filter, Update Description If true, file asset images are optimized for mobile display. This field is available in API version 45.0 and later.
OptionsNetworkSentimentAnalysis	Type boolean

Field Name	Details
	Properties Filter, Update Description If true, enables sentiment analysis in a site. In the UI, this setting is available in the Administration Workspace, under Administration > Preferences. This field is available in API version 40.0 and later.
OptionsNicknameDisplayEnabled	Type boolean Properties Filter, Update Description Determines whether user nicknames display instead of their first and last names in most places in the site. A few restrictions to keep in mind about nickname display: - Records and user lookups on records show full names. Keep in mind, though, that you can control record and user visibility with sharing rules. - Mobile notifications in the Salesforce mobile app show full names. You can turn off mobile notifications in the app to avoid this display. - Searches by first, last, and full names aren't restricted and return matches, but the search results display only nicknames. Global search auto-complete recommendations show any first, last, and full names that the user has searched by or accessed via a record or another location. The recent items list also shows first, last, and full under the same conditions.
OptionsPrivateMessagesEnabled	Type boolean Properties Filter, Update Description Determines whether users can send and receive Chatter messages in the site.
OptionsProfileBasedLayoutsForKnowledgeSearchEnabled	Type boolean Properties Filter, Update Description When true, provides a grid layout for Knowledge search results. With grid layout in place, you can edit search profile layouts on the Knowledge object to show and hide different search result fields for different profiles. When you enable the standard grid layout, search-term highlighting isn't available. This field is available in API version 51.0 and later.

Field Name	Details
OptionsRecognitionBadgingEnabled	Type boolean Properties Filter, Update Description Determines whether Recognition Badges is enabled for the site.
OptionsReputationEnabled	Type boolean Properties Filter, Update Description Determines if reputation is calculated and displayed for members. This field is available in API version 31.0 and later.
OptionsReputationRecordConversationsDisabled	Type boolean Properties Filter, Update Description Disables the feed on reputation records.
OptionsSelfRegistrationEnabled	Type boolean Properties Filter, Update Description Determines whether customers and partners can self-register to join the site. Customers and partners are users with External Identity, Community, Customer Portal, or partner portal licenses. If <code>true</code>, displays a Not a member? link on the login page that points to the default self-registration page. This field is available in API version 28.0 and later.
OptionsSendWelcomeEmail	Type boolean Properties Filter, Update Description Determines whether a welcome email is sent when a new user is added to the site.

Field Name	Details
OptionsShowAllNetworkSettings	Type boolean Properties Filter, Update Description Determines whether settings in Experience Management that were hidden based on how you set up your site are visible or remain hidden. This field is available in API version 33.0 and later.
OptionsSiteAsContainerEnabled	Type boolean Properties Filter, Update Description Determines whether the site is an Experience Builder site (true) or a Salesforce Tabs + Visualforce site (false). This field is available in API version 29.0 and later.
OptionsThreadedDiscussionsEnabled	Type boolean Properties Filter, Update Description Indicates whether threaded discussions are enabled for the site. Available in API version 44.0 and later.
OptionsTopicFilteringForKnowledgeSearchEnabled	Type boolean Properties Filter, Update Description Determines whether topic filtering is enabled for Knowledge search. This field is available in API version 55.0 and later.
OptionsTopicSuggestionsEnabled	Type boolean Properties Filter, Update Description Enables topic suggestions when users write posts. This field is available in API version 41.0 and later.

Field Name	Details
OptionsUpDownVoteEnabled	Type boolean Properties Filter, Update Description Determines whether up and down voting is enabled for the site. This field is available in API version 41.0 and later.
PwdlessRegEmailTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template for the welcome email that users receive when they sign up with passwordless registration. This field is available in API version 61.0 and later.
SelfRegMicroBatchSubErrorEmailTemplateId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the profile assigned to users who self-register using micro-batching. Only applies if self-registration using micro-batching is enabled for the site. This field is available in API version 54.0 and later.
SelfRegProfileId	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the profile assigned to users who self-register. Only applies if self-registration is enabled for the site. This field is available in API version 29.0 and later.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Status of the site. Available values are:

Field Name	Details
	• Live—The site is online and members can access it. Label is <code>Published</code>. • DownForMaintenance—The site was previously published, but was taken offline. Members with the Create and Set Up Experiences permission can still access the setup for offline sites regardless of profile or membership. Members aren't able to access offline sites, but they still appear in the user interface dropdown menu as <code>SiteName (Offline)</code>. Label is <code>Offline</code>. • UnderConstruction—The site hasn't yet been published. When a user's profile is associated with the site, and they've Create and Set Up Experiences permission, they can access sites in this status. After a site is published, it can never be in this status again. Label is <code>Preview</code>.
<code>UrlPathPrefix</code>	Type string Properties Filter, Group, Nillable, Sort, Update Description The <code>UrlPathPrefix</code> is a unique string at the end of the URL for the site. For example, in the site URL <code>MyDomainName.my.site.com/customers</code>, <code>customers</code> is the <code>UrlPathPrefix</code>.
<code>VerificationEmailTemplateId</code>	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the email template used when users must verify their identity, for example, when they log in without a password. This field is available in API version 44.0 and later.
<code>WelcomeEmailTemplateId</code>	Type reference Properties Filter, Group, Sort, Update Description ID of the email template used when sending welcome emails to new members.

Usage

Use this object to find, view, and update sites in your org. If you're assigned the Modify All Data, View All Data, or Create and Set Up Experiences permission, you can view all sites in the org. Users without these permissions see only the Preview or Published sites that they're members of. If you're assigned the Create and Set Up Experiences permission, you can customize site settings.

SEE ALSO:
[WebStoreNetwork](#)

NetworkActivityAudit

Represents an audit trail of moderation actions in Experience Cloud sites. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
Action	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The moderation action a member performed on a post, comment, or file in an Experience Cloud site. Values are: - Flagged as Inappropriate—A member flagged a post, comment, or file as inappropriate. - Flagged as Spam - A member flagged a post, comment, or file as spam. - Unflagged—A member removed the flag from a post, comment, or file. - RemovedFlags—A moderator removed all flags from a post, comment, or file. - DeletedFlaggedItem—A moderator deleted a flagged post, comment, message, or file.

Field Name	Details
	- DeletedPendingReviewItem—A moderator deleted a post or comment with pending status. - ModerationRuleFlag—A moderation rule flagged member-generated content. - ModerationRuleBlock—A moderation rule blocked member-generated content. - ModerationRuleReplace—A moderation rule replaced member-generated content. - ModerationRuleReview—A moderation rule sent member-generated content to be reviewed and approved by a moderator. - ModerationRuleFreeze—A moderation rule froze a member because they created content too frequently within a specific time frame. - ModerationRuleNotify—A moderation rule notified moderators because a member created content too frequently within a specific time frame.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Notes entered by the user. If the entity being tracked is a file, records the version number of the file when it was flagged.
EntityCreatedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the user that created the entity being tracked.
EntityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the entity that is being tracked. The following entities are tracked: ChatterMessage, ContentDocument, ContentVersion, FeedComment, and FeedItem.
EntityType	Type picklist

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The key prefix of the entity being tracked.
Name	Type string Properties Create, Filter, Group, Sort, Update Description The ID of the item being tracked.
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Experience Cloud site where the moderation action was performed.
ParentEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the parent of the entity on which an action was performed.
ParentEntityType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The key prefix of the parent of the entity being audited.

Usage

Use this object to view an audit trail of moderation activity for your Experience Cloud sites. You must have the Modify All Data permission to access this object.

Users with Moderate Experiences Feeds, Moderate Experiences Files, or View All Data can view the audit trail using reports in the Salesforce user interface.

NetworkAffinity

Represents a junction object that associates a user profile with a Network object, that is, with an Experience Cloud site. Use NetworkAffinity to assign a default Experience Cloud site to a user profile. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To work with the NetworkAffinity object, you must have View Setup or Customize Application permission.

Fields

Field Name	Details
NetworkId	Type reference Properties Create, Filter, Group, Sort Description The ID of the default Experience Cloud site associated with a user profile.
ProfileId	Type reference Properties CreateFilter, Group, Sort, Update Description ID of the user profile the default Experience Cloud site is assigned to.

Usage

The default Experience Cloud site allows you to stamp site-agnostic email notifications to all users with that profile with the selected site's branding. The default Experience Cloud site also becomes the target destination for email notification links. Site-agnostic email notifications include notifications about records, such as cases, accounts, and opportunities.

The `NetworkId` field is not updatable through the Apex, REST API, or SOAP API. If you want to change the value for `NetworkId`, you must delete the record and create one with the right value.

NetworkAuthApiSettings

Represents the settings that control enablement, access, and security for the Headless Registration Flow, Headless Forgot Password Flow, Headless Passwordless Login Flow, and their associated APIs. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Headless identity features are set up via Experience Cloud sites. You must have an Experience Cloud site to access Headless Identity APIs and store users, even if users never interact with the site directly.

Fields

Field	Details
<code>CustomOtpDeliveryHandlerId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This field is a relationship field. The ID of a custom one-time password (OTP) delivery handler that implements the <code>Auth.CustomOneTimePasswordDeliveryHandler</code> interface.
<code>DoesForgotPasswordRequireAuth</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether authentication is required to access Headless Forgot Password API when a password reset is requested. If <code>true</code>, an access token issued to an internal integration user in your initial POST request to the <code>/services/auth/headless/forgot_password</code> endpoint is required. The access token must include the <code>forgot_password</code> scope. The default value is <code>false</code>.
<code>DoesPasswordLoginRequireAuth</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether reCAPTCHA is required for headless username-password login that uses the OAuth 2.0 for First-Party Applications draft protocol.
<code>DoesPwdlessLoginRequireAuth</code>	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether authentication is required to access Headless Passwordless Login API when user information is submitted to Salesforce. If <code>true</code>, an access token issued to an internal integration user is required in your initial POST request to the <code>/services/auth/headless/init/passwordless/login</code> endpoint. The access token must include the <code>pwdless_login_api</code> scope. The default value is <code>false</code>. This field is available in API version 59.0 and later.
DoesRegistrationRequireAuth	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether authentication is required to access Headless Registration API when user registration information is submitted to Salesforce. If <code>true</code>, an access token issued to an internal integration user in your initial POST request to the <code>/services/auth/headless/init/registration</code> endpoint is required. The access token must include the <code>user_registration_api</code> scope. The default value is <code>false</code>.
HeadlessDiscoveryExecutionUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This field is a relationship field. The ID of an integration user account to run a headless user discovery Apex handler. Relationship Name HeadlessDiscoveryExecutionUser Refers To User
HeadlessDiscoveryHandlerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description This field is a relationship field. The ID of an Apex class that implements the <code>Auth.HeadlessUserDiscoveryHandler</code> interface.

Field	Details
	Relationship Name HeadlessDiscoveryHandler Refers To ApexClass
isFirstPartyAppsAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the Experience Cloud site can use headless identity flows that use the OAuth 2.0 for First-Party Applications draft protocol.
IsForgotPwdAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the Headless Forgot Password Flow is enabled. The default value is <code>false</code>.
IsForgotPwdEmailTemplateAllowlistingEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Descriptions Determines whether email template allowlisting is enabled for the Headless Registration Flow, Headless Passwordless Login Flow, and Headless Forgot Password Flow. If <code>true</code>, the initial request to the headless API must include an <code>emailTemplate</code> parameter that contains only allowlisted email templates. The default value is <code>false</code>.
IsHeadlessUserRegistrationAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the Headless Registration Flow is enabled. The default value is <code>false</code>.

Field	Details
IsPwdlessLoginAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the Headless Passwordless Login Flow is enabled (<code>true</code>) or not (<code>false</code>). The flow is disabled by default. This field is available in API version 59.0 and later.
IsRecaptchaRequiredForgotPwd	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether a reCAPTCHA token is required to access Headless Forgot Password API when a password reset is requested. If <code>true</code>, a reCAPTCHA token is required in your initial POST request to the <code>/services/auth/headless/forgot_password</code> endpoint. The default value is <code>false</code>.
IsRecaptchaRequiredPwdlessLogin	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether a reCAPTCHA token is required to access Headless Passwordless Login API when user information is submitted to Salesforce. If <code>true</code>, a reCAPTCHA token is required in your initial POST request to the <code>/services/auth/headless/init/passwordless/login</code> endpoint. By default, a reCAPTCHA token isn't required (<code>false</code>). This field is available in API version 59.0 and later.
IsRecaptchaRequiredRgstr	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether a reCAPTCHA token is required to access Headless Registration API when user registration information is submitted to Salesforce. If <code>true</code>, a reCAPTCHA token is required in your initial POST request to the <code>/services/auth/headless/init/registration</code> endpoint. The default value is <code>false</code>.

Field	Details
IsUniversalClientRgstrAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether self-registration and passwordless login via Universal Registration API are enabled. The default value is <code>false</code>.
IsUserDisambiguationAllowedForgotPwd	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the Headless Forgot Password Flow uses the headless user discovery Apex handler that's specified in the <code>HeadlessDiscoveryHandlerId</code> field. The handler enables users to reset their password with an identifier other than their username, such as an email address, phone number, or order number. The default value is <code>false</code>.
IsUserDisambiguationAllowedUsernamePwd	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether headless login flows use the headless user discovery Apex handler that's specified in the <code>HeadlessDiscoveryHandlerId</code> field. The handler enables users to log in with an identifier other than their username, such as an email address, phone number, or order number. This field applies to the Authorization Code and Credentials Flow and the OAuth 2.0 for First-Party Applications login flow. The default value is <code>false</code>.
MaxPasswordResetAttempts	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The maximum number of password reset attempts you allow for the Headless Forgot Password Flow before the user must request a new one-time password (OTP).
NetworkId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description The ID of your Experience Cloud site. This ID is unique within your org. This field is a relationship field. Relationship Name Network Relationship Type Lookup Refers To Network
RecaptchaScoreThreshold	Type double Properties Create, Filter, Nillable, Sort, Update Description The lowest reCAPTCHA score that is accepted before rejecting a request to access Headless Identity APIs. This value must be between 0.5 and 1. Scores closer to 0.5 are more likely to be bots, while scores closer to 1 are more likely to be valid users. You must set a score threshold if <code>DoesForgotPasswordRequireAuth</code> or <code>DoesRegistrationRequireAuth</code> fields are set to <code>true</code>. reCAPTCHA settings apply to both the Headless Registration Flow and the Headless Forgot Password Flow. Google issues a reCAPTCHA score only for reCAPTCHA v3 implementations. If you implement reCAPTCHA v2, this field doesn't apply.
RecaptchaSecretKey	Type encryptedstring Properties Create, Nillable, Update Description The reCAPTCHA secret key from your API key pair. You get the API key pair from Google when you set up reCAPTCHA. The secret key helps your app securely communicate with Google. You must enter a secret key if <code>DoesForgotPasswordRequireAuth</code> or <code>DoesRegistrationRequireAuth</code> are set to <code>true</code>. reCAPTCHA settings apply to both the Headless Registration Flow and the Headless Forgot Password Flow.
RegistrationExecutionUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the user who runs your headless registration Apex handler. This field is a relationship field. Relationship Name RegistrationExecutionUser Relationship Type Lookup Refers To User
RegistrationHandlerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of your headless registration Apex handler. This field is a relationship field. Relationship Name RegistrationHandler Relationship Type Lookup Refers To ApexClass
RegistrationUserDefaultProfileId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the default profile that gets assigned to new users when they register. This field is a relationship field. Relationship Name RegistrationUserDefaultProfile Relationship Type Lookup Refers To Profile

NetworkDataCategory

Represents data categories in Lightning Web Runtime (LWR) Experience Cloud Sites. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only when your org has Digital Experiences and Knowledge or Service Catalog enabled.

Fields

Field	Details
DataCategoryGroupName	Type string Properties Filter, Group, Nillable, Sort Description Name of the data category group that contains one or more data categories.
DataCategoryName	Type string Properties Filter, Group, Nillable, Sort Description Name of the data category.
Description	Type textarea Properties Nillable Description Description of the data category.
ImageId	Type reference Properties Filter, Group, Nillable, Sort Description Image associated with the data category.

Field	Details
	This field is a relationship field. Relationship Name Image Relationship Type Lookup Refers To ManagedContent
Label	Type string Properties Filter, Group, Sort Description The name of the data category shown in the UI.
NetworkId	Type reference Properties Filter, Group, Sort Description ID of the associated Experience site. This field is a relationship field. Relationship Name Network Relationship Type Lookup Refers To Network

NetworkDiscoverableLogin

Represents the Login Discoverable page from where customers and partners log in to an Experience Cloud site. Customers and partners are users with an External Identity license or any communities license for Experience Cloud. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApexHandlerId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the Apex handler created by the Login Discovery page type.
ExecuteApexHandlerAsId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the user who is executing the handler.
NetworkId	Type reference Properties Create, Filter, Group, Sort, Update Unique Description The ID of <code>NetworkId</code> is unique within your org.
UsernameLabel	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Log in prompt on login page when the login page type is Login Discovery.

Usage

Use this object to access the Login Discovery Page, which is a login page type that prompts users to identify themselves with an email address, phone number, or custom identifier. DiscoverableLogin performs an interview-based login process, where users are first prompted to provide identity and then authenticated. For example, users receive a verification code that they enter to complete the login process.

Note: The NetworkDiscoverableLogin object is created when **Login Discovery Page** is selected as the login page type on the Login & Registration (L&R) page. If you later switch to another login page type, such as a Visualforce Page or Experience Builder Page, the object isn't deleted. The object persistence means you can't delete the Apex class associated with the

NetworkDiscoverableLogin object. To delete the Apex class, return to the L&R page and change the login page type back to **Login Discovery page**. Select another Apex class, and then you can delete the first one.

NetworkEmailTmplAllowlist

Represents an allowlist for the one-time password (OTP) email templates that are sent to end users during the Headless Registration Flow, the Headless Passwordless Login Flow, and the Headless Forgot Password Flow. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
EmailTemplateId	Type reference Properties Create, Filter, Group, Sort, Update Description The IDs of the allowlisted email templates that can be sent to users during the headless authorization flows for registration, passwordless login, and forgot password. You can list multiple template IDs. When your app sends its initial request to Headless Registration API or Headless Passwordless Login API, the <code>emailtemplate</code> parameter can include only an email template ID from the allowlist. For Headless Forgot Password API, it works the same way, but only if email template allowlisting is enabled. This field is a relationship field. Relationship Name EmailTemplate Relationship Type Lookup Refers To EmailTemplate
NetworkId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the Experience Cloud site for which the allowlist is being configured. This field is a relationship field.

Field	Details
	Relationship Name Network
	Relationship Type Lookup
	Refers To Network

NetworkFeedResponseMetric

Represents an object that stores the date and time values of question posts. It captures information for question creation, answer creation, and when an answer is marked as best answer This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

The NetworkFeedResponseMetric object is available only if both NetworksEnabled and ChatterEnabled org preferences are enabled.

Fields

Field	Details
BestCommentDateTime	Type dateTime Properties Filter, Nillable, Sort Description Represents the date and time a user created an answer that was later marked as best answer.
BestCommentId	Type reference Properties Filter, Group, Nillable, Sort Description Represents the comment that was marked as the best answer.
FeedItemCreatedById	Type reference

Field	Details
	Properties Filter, Group, Sort Description Represents the user who created the feed item.
FeedItemDateTime	Type dateTime Properties Filter, Sort Description Represents the date and time when the feed Item was created.
FeedItemId	Type reference Properties Filter, Group, Sort Description Represents the unique ID of the question post.
FirstCommentDateTime	Type dateTime Properties Filter, Nillable, Sort Description Represents the date and time when the first comment was created.
FirstCommentId	Type reference Properties Filter, Group, Nillable, Sort Description Represent the first comment on a feed Item.
MarkedAsBestCommentDateTime	Type dateTime Properties Filter, Nillable, Sort Description Represents the date and time the user marked the answer as best answer.
NetworkId	Type reference

Field	Details
	Properties Filter, Group, Sort Description Represents where the feed item was created.
ParentRecordId	Type reference Properties Filter, Group, Sort Description Represents the parent record. Parent records can include records like user, account, or group.

NetworkMember

Represents a member of an Experience Cloud site. Members can be either users in your company or external users with portal profiles. This object is available in API version 26.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
DefaultGroupNotificationFrequency	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Required. The default frequency for sending the member's group email notifications when the member joins groups in the Experience Cloud site. The valid values are: • <code>P</code>—Email on every post • <code>D</code>—Daily digests • <code>W</code>—Weekly digests

Field Name	Details
	• N—Never The default value is W. In sites, the Email on every post option is disabled once more than 10,000 members choose this setting for the group. All members who had this option selected are automatically switched to Daily digests. However, this field is not currently enabled. These values are reserved for future use.
DigestFrequency	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Required. The frequency for sending the member's personal email digest for the Experience Cloud site. The valid values are: • D—Daily • W—Weekly • N—Never The default value is D. However, daily and weekly personal digests aren't currently available in sites. These values are reserved for future use.
LastChatterActivityDate	Type date Properties Filter, Group, Nillable, Sort Description The last time the member posted or commented in the Experience Cloud site.
MemberId	Type reference Properties Filter, Group, Sort Description The ID of a person who is a member of an Experience Cloud site.
NetworkId	Type reference Properties Filter, Group, Sort Description The ID of the Experience Cloud site that the member is part of.

Field Name	Details
PreferencesDisableAllFeedsEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member can automatically receive email for updates in the Experience Cloud site, based on the types of feed emails and digests the member has enabled.
PreferencesDisableBestAnswerEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives email when someone selects their answer to a post as best. Available in API 46.0 and later.
PreferencesDisableBookmarkEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has bookmarked it.
PreferencesDisableChangeCommentEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives email every time someone comments on a change the member has made, such as an update to their profile.
PreferencesDisableDirectMessageEmail	Type boolean Properties Filter, Update

Field Name	Details
	Description When <code>false</code> , the member automatically receives email every time someone sends them a direct message in the Experience Cloud site.
<code>PreferencesDisableEndorsementEmail</code>	Type boolean Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time someone endorses them for a topic.
<code>PreferencesDisableFollowersEmail</code>	Type boolean Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time someone in the Experience Cloud site starts following the member.
<code>PreferencesDisableItemFlaggedEmail</code>	Type boolean Properties Filter, Update Description When <code>false</code> , the user automatically receives email every time a member flags a post or comment. This setting only applies for community moderators (with the Moderate Experiences Feeds permission) and group owners or managers. This field is available in API version 29.0 and later.
<code>PreferencesDisableLaterCommentEmail</code>	Type boolean Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time someone comments on a feed item after the member has commented on the feed item.
<code>PreferencesDisableLikeEmail</code>	Type boolean

Field Name	Details
	Properties Filter, Update Description When <code>false</code>, the member automatically receives email every time someone comments on a feed item after the member has liked the feed item.
PreferencesDisableMarketingCloudEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives marketing emails sent by Journey Builder. Available in API version 41.0 and later.
PreferencesDisableMentionsPostEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives email every time the member is mentioned in posts.
PreferencesDisableMessageEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives email every time the member is sent a Chatter message.
PreferencesDisableProfilePostEmail	Type boolean Properties Filter, Update Description When <code>false</code>, the member automatically receives email every time someone posts to the member's profile.
PreferencesDisableSharePostEmail	Type boolean

Field Name	Details
	Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time the member's post is shared.
PreferencesDisCommentAfterLikeEmail	Type boolean Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time someone comments on a post the member has liked.
PreferencesDisMentionsCommentEmail	Type boolean Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time the member is mentioned in comments.
PreferencesDisProfPostCommentEmail	Type boolean Properties Filter, Update Description When <code>false</code> , the member automatically receives email every time someone comments on posts on the member's profile.
ReputationPoints	Type double Properties Filter, Sort, Update Description The number of reputation points the user has accumulated by performing actions in the Experience Cloud site.

Usage

Use this object to query members of a certain Experience Cloud site and to update their email notification settings. If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all members of any Experience Cloud site, regardless of your own

membership. If you have Modify All Data or Create and Set Up Experiences, you can also update any member’s email settings. Users without these permissions can update their own email settings and can see members of the Experience Cloud sites that they’re also members of.

You can directly update reputation points for a member via the Salesforce API. You can also use Apex triggers to send custom notifications based on changes to reputation points.

NetworkMemberGroup

Represents a group of members in an Experience Cloud site. Members can be either users in your internal org or external users assigned portal profiles. An administrator adds members to an Experience Cloud site by adding a profile or a permission set, and any user with the profile or permission set becomes a member of the site. This object is available in API version 26.0 and later.

 **Note:** If a Chatter customer (from a customer group) is assigned a permission set that is also associated with an Experience Cloud site, the Chatter customer won’t be added to the site.

Prior to API version 27.0, this object was called NetworkProfile.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

 **Note:** The `upsert()` call is not supported for this object.

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
AssignmentStatus	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The status of a profile or permission set within an Experience Cloud site. Values are: • <code>Add Calculated</code>—The number of users that need to be added are calculated and the add operation is in progress. • <code>Added</code>—Users with this profile or permission set are members. • <code>Failed Add</code>—Users with this profile or permission set were not successfully made members. • <code>Failed Remove</code>—Users with this profile or permission set were not successfully removed from membership.

Field Name	Details
	- Remove Calculated—The number of users that need to be removed are calculated and the remove operation is in progress. - Waiting for Add—The profile or permission set was added to the Experience Cloud site, but the async process hasn't completed yet. After the process is complete, the status is updated to Added. - Waiting for Remove—Use this status to remove all the members belonging to a profile or permission set and remove a profile or permission set from an Experience Cloud site.
NetworkId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Experience Cloud site that this group of members is associated with.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the profile or permission set associated with the Experience Cloud site.

Usage

Use this object to view the profiles or permission sets associated with a particular Experience Cloud site. Profiles and permission sets are added and removed asynchronously, so you can also check the status of a profile or permission set that was updated in a site.

If you have Modify All Data, View All Data, or Create and Set Up Experiences, you can view all profiles or permission sets for any Experience Cloud site in the org, regardless of your membership. If you have Modify All Data or Create and Set Up Experiences, you can also add profiles or permission sets. Users without these permissions can only find profiles and permission sets for Experience Cloud sites that they're members of.

Sample Code

```
// Create a new NetworkMemberGroup with a profile as the ParentId
NetworkMemberGroup nmgInsert = new NetworkMemberGroup();
nmgInsert.setNetworkId('{enter your network ID : ODB...}');
nmgInsert.setParentId('{enter the profile or permission set ID : 00e... or 0PS...}');
SaveResult[] results = connection.create(new SObject[] { nmgInsert });

// Update an existing NetworkMemberGroup to be removed from the Network
NetworkMemberGroup nmgUpdate = new NetworkMemberGroup();
nmgUpdate.setId('{enter your NetworkMemberGroup ID : 0DL...}');
```

```
nmgUpdate.setAssignmentStatus('WaitingForRemove');
SaveResult[] results = connection.update(new SObject[] { nmgUpdate });
```

NetworkModeration

Represents a flag on an item in a community. This object is available in API version 30.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only when your org has digital experiences enabled.

Fields

Field Name	Details
EntityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the post, comment, or file that was flagged.
ModerationType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description Determines the type of flag applied to an item. Values are: - FlagAsInappropriate - FlagAsSpam
NetworkId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the community in which the item was flagged.

Field Name	Details
Visibility	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Nillable, Sort Description Determines visibility of a flagged item. Values are: • SelfAndModerators—The user who flagged the item and any moderators can see the flagged item. This is the default value. • ModeratorsOnly—Only moderators can see the flagged item. If ModeratorsOnly is selected, only moderators can set flags using the API.

Usage

Use this object to view the items flagged for moderation within a community. Additionally, users with “Moderate Feeds” and “Modify All Data” can remove flags.

Flags on items are created either when a member manually flags an item in a community (if flagging is enabled for that community), or when a trigger automatically flags an item because the item met the trigger criteria.

NetworkPageOverride

Represents information about custom pages used to override the default pages in Experience Cloud sites. You can create Experience Builder or Visualforce pages and override the default pages in a site. Using custom pages allows you to create a more personalized experience for your users. This object is available in API version 34.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Only users with the Create and Setup Experiences permission can update this object.
- You can’t override the Change Password Page with a page created using Experience Builder. You can only override it with a Visualforce page.

Fields

Field Name	Details
NetworkId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort
	Description The ID of the Experience Cloud site where a custom page is used to override a default page.
OverrideSetting	Type picklist
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description The type of the page used to override a default page in the Experience Cloud site. <code>OverrideSetting</code> can take the following values: • <code>Standard</code>—The standard page that comes by default with the site. • <code>Configurable</code>—The page created when the Configurable Self-Reg registration page type or the Login Discovery login page type is selected. • <code>Designer</code>—A custom page created using Experience Builder. • <code>Visualforce</code>—A custom page created using Visualforce.
OverrideType	Type picklist
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description The name of the default page in the Experience Cloud site that you want to override with a custom page. <code>OverrideType</code> can take the following values: • <code>LoginRequired</code> • <code>ChangePassword</code> • <code>ForgotPassword</code> • <code>SelfReg</code> • <code>Home</code>

NetworkSelfRegistration

Represents the account that self-registering Experience Cloud users are associated with by default. Self-registering users in an Experience Cloud site are required to be associated with an account, which the admin must specify while setting up self-registration for the site. If an account isn't specified, Salesforce creates person accounts (when enabled) for self-registering users. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the account that self-registering users in the Experience Cloud site are associated with.
ApexHandlerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Apex handler created by Configurable Self-Reg registration page type.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. The default value is USD.
ExecuteApexHandlerAsId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the user who is executing the configurable self-registration handler.
NetworkId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description The ID of <code>NetworkId</code> is unique within your org. You can use only one account per Experience Cloud site to assign self-registering users.
<code>OptionsDisableStandardRgstrComponent</code>	Type boolean Properties Create, Filter, Update Description Determines whether you can use standard Aura and Lightning Web Runtime (LWR) components for self-registration. If this field is <code>true</code>, self-registration flows that use these components don't work. For more control over self-registration, set this field to <code>true</code> if you're not using the standard self-registration component.
<code>OptionsIncludePassword</code>	Type Boolean Properties Create, Filter, Update Description Option on Configurable Self-Reg registration page. If true, the Include Password field is selected.
<code>OptionsShowEmail</code>	Type Boolean Properties Create, Filter, Update Description Option on Configurable Self-Reg registration page. If true, the Email field appears on the self-registration form.
<code>OptionsShowFirstName</code>	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the First Name field appears on the self-registration form.

Field Name	Details
OptionsShowLastName	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Last Name field appears on the self-registration form.
OptionsShowMobilePhone	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Mobile field appears on the self-registration form.
OptionsShowNickname	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Nickname field appears on the self-registration form.
OptionsShowUsername	Type Boolean Properties Create, Filter, Update Description Option on the Configurable Self-Reg registration page. If true, the Username field appears on the self-registration form.
PermissionSetGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the permission set group used for the self registration. This field is a relationship field. Relationship Name PermissionSetGroup

Field Name	Details
	Refers To PermissionSetGroup
VerificationMethod	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of verification method that a user must supply when registering, which can be: • SyncEmail—User must supply an email address to verify identity. • SMS—User must supply a phone number to verify identity.

NetworkUserHistoryRecent

Represents an Experience Cloud site user's history of accessed records. This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`

Special Access Rules

Only users with the Modify All Data permission can view and delete these data.

Fields

Field	Details
AccessTimestamp	Type datetime Properties Create, Filter, Sort Description The time at which the record was accessed.
ActionType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Indicates the action type taken by the user. The possible values are: • Read • Write
DomainName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The domain used to access the record.
FeedCommentId	Type reference Properties Create, Filter, Group, Sort, Update Description Feed comment accessed by the user.
FeedItemId	Type reference Properties Create, Filter, Group, Sort, Update Description Feed item accessed by the user.
NetworkId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the Experience Cloud site used to access the record or comment.
NetworkUserId	Type reference Properties Create, Filter, Group, Sort, Update Description User's Experience Cloud site user ID to access the record or comment.

Field	Details
RecordId	Type reference Properties Create, Filter, Group, Sort, Update Description The record that was accessed.
RecordKeyPrefix	Type string Properties Create, Filter, Group, Sort, Update Description Record's ID key prefix.
Url	Type string Properties Create, Filter, Group, Sort, Update Description The URL from which the user accessed the record.
UserType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of user who accessed this record. The possible values include: • Standard • Partner • Customer Portal Manager • Customer Portal User • Guest • High Volume Portal • CSN Only • Self Service

Usage

Use the NetworkUserHistoryRecent object to delete comments, posts, or record access by Experience Cloud site users who would like all such activity to be removed.

Note

Represents a note, which is text associated with a custom object or a standard object, such as a Contact, Contract, or Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Body	Type textarea Properties Create, Nillable, Update Description Body of the note. Limited to 32 KB.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsPrivate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a user who does not have the “Modify All Data” permission sets this field to <code>true</code> on a note that they do not own, then they can no longer query, delete, or update the note. Label is Private.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who owns the note.

Field	Details
	This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
ParentId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the object associated with the note. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem
Title	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update
	Description Title of the note.

Usage

Use this object to manage notes for an object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

NoteAndAttachment

This read-only object contains all notes and attachments associated with an object.

Supported Calls

`describeSObjects()`

Fields

Field	Details
<code>IsDeleted</code>	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted .
<code>IsNote</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the object contains a note (<code>true</code>) or an attachment (<code>false</code>).
<code>IsPrivate</code>	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, only the note owner or a user with the “Modify All Data” permission can view the note or query it via the API. Note that if a regular user who does not have “Modify All Data” permission sets this field to <code>true</code> on a note that they do not own, then they can no longer query, delete, or update that note. Label is Private.
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the user who owns the note and attachment. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
ParentId	Type reference Properties Filter, Group, Sort Description ID of the parent object. This is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareMetricTarget, CareObservationComponent, CarePgmProvHealthcareProvider, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider,

Field	Details
	CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareTaxonomy, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, Contract, CreditMemo, DelegatedAccount, EngagementChannelType, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, Lead, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PersonEducation, PersonLifeEvent, Product2, ProductRequest, ProductRequestLineItem, PurchaserPlan, ReceivedDocument, ServiceAppointment, ServiceResource, Shift, SocialPost, Visit, VisitedParty, Visitor, VolunteerProject, WorkOrder, WorkOrderLineItem
Title	Type string Properties Filter, Nillable, Group, Sort Description Title of the note.

Usage

Use this object to list all notes and attachments for an object.

To retrieve notes and attachments, issue a describe call on an object, which returns a query result for each activity since the record was created. You can't directly query this object.

[Note](#)

[Attachment](#)

NoteTag

Associates a word or short phrase with a Note.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

NoteTag stores the relationship between its parent TagDefinition and the Note being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

OAuthCustomScope

Represents a permission defining the protected data that a connected app can access from an external entity when Salesforce is the OAuth authorization provider.

An OAuth custom scope tells an external entity about a connected app's permissions to access protected data. The OAuth custom scope that you create in your Salesforce org corresponds to the same custom scope defined in your external entity, and assigned to the resource.

For example, you define an Order Status custom scope in your external entity that allows access to customer order status data in your order system's API. In Salesforce, you create an OAuth custom scope that you also name Order Status. You assign this custom scope to the connected app requesting access to the order status API. When the external entity receives the connected app's request to access a customer's order status, it validates the connected app's access token and Order Status scope. With a successful validation, the app can access the customer order status information in the order system's API.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the "Manage Connected Apps" permission to access this object.

Fields

Field Name	Details
Description	Type string Properties Create, Filter, Group, Sort, Update Description The description of the permission provided to the connected app by the scope. The custom scope's description must be unique, can only include alphanumeric characters, and can be up to 60 characters long. You can enter a custom label in place of a description. An advantage of using a custom label is that you can maintain reusable text in a single location and translate the text into multiple languages. See Custom Labels.  Note: The description formatting requirements that apply to custom scopes also apply to custom labels.
DeveloperName	Type string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description Use when referring to the OAuth custom scope from a program. This label must be unique, and can include only alphanumeric characters and underscores.
IsPublic	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the object is included in the connected app's OpenID Connect discovery endpoint. For more information, see OpenID Connect Discovery Endpoint.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the default language defined for the developing org.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The master label for the custom scope record. This label must be unique, and can include only alphanumeric characters and underscores.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for an OAuth custom scope that's been installed as part of a second-generation managed package. If the custom scope isn't packaged, this value is empty. This field is available in API version 61.0 and later.

OauthCustomScopeApp

Represents the name of the connected app to which the custom scope is assigned. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
OauthCustomScopeId	Type reference Properties Create, Filter, Group, Sort, Update Description The name of the connected app to which the custom scope is assigned. If the connected app is part of a package, include the package's namespace prefix with the connected app's name. Use the following format: <namespace_prefix>__<connected_app>. Use two underscores (__) between the namespace prefix and connected app's name. This is a relationship field. Relationship Name OauthCustomScope Relationship Type Lookup Refers To OauthCustomScope

OauthToken

Represents an OAuth access token for connected app authentication. Use this object to create a user interface for token management. This object is available in API version 32.0 and later.

A connected app integrates an application with Salesforce using APIs. Connected apps use standard SAML and OAuth protocols to authenticate, provide single sign-on, and provide tokens for use with Salesforce APIs. In addition to standard OAuth capabilities, connected apps allow Salesforce admins to set various security policies and have explicit control over who can use the corresponding apps. Each time that a user grants access to an application, the application obtains a new access token.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

Users with the Customize Application permission see all tokens for all users in the org. Otherwise, you see only your own tokens.

If you try to use [Apex DML operations](#) and then query this object in the same call, you get an `UncommittedWork` error with this description.

A callout was unsuccessful because of pending uncommitted work related to a process, flow, or Apex operation.
Commit or roll back the work, and then try again.

To avoid this error, execute DML operations and queries in separate, asynchronous calls.

Fields

Field Name	Details
AccessToken	Type string Properties Filter, Group, Nillable, Sort Description The refresh token for authorization.
AppMenuItemId	Type reference Properties Filter, Group, Nillable, Sort Description The unique ID for the App Picker menu item that's associated with this OAuth token. This is a relationship field. Relationship Name AppMenuItem Relationship Type Lookup Refers To AppMenuItem
AppName	Type string Properties Filter, Group, Nillable, Sort Description The label for the connected app that's associated with this OAuth token.

Field Name	Details
DeleteToken	Type string Properties Filter, Group, Nillable, Sort Description A token that can be used at the revoke OAuth token endpoint to remove this token.
Id	Type ID Properties Defaulted on create, Filter, Group, idLookup, Sort Description Reserved for future use. Currently, the value is always <code>null</code>.
LastUsedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date when the OAuth token was used.
RequestToken	Type string Properties Filter, Group, Nillable, Sort Description The authorization code that was used to request the corresponding AccessToken. With this authorization code, you can revoke the corresponding AccessToken by passing the DeleteToken.
UseCount	Type int Properties Filter, Group, Nillable, Sort Description How often the token has been used.
UserId	Type reference

Field Name	Details
	Properties Filter, Group, Nillable, Sort
	Description The owner of the token. This is a relationship field.
	Relationship Name User
	Relationship Type Lookup
	Refers To User

Usage

To delete an AccessToken, send a request to the revoke OAuth token endpoint with the DeleteToken as the parameter. For example, the URL `https://MyDomainName.my.salesforce.com/services/oauth2/revoke?token=(the DeleteToken)` causes the deletion of the token.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2,500 total. No more records are returned after 2,500. To make sure that you don't miss any records, issue a `COUNT()` query in a `SELECT` clause for OauthToken. This query gives you the total number of records. If there are more than 2,500 records, use these options to manage your results.

- Divide queries by filtering on fields like `userId` to return subsets of less than 2,500 records.
- Use **OFFSET** to get batches of 2,000 records. Start with an **OFFSET** of 0 and then increment by 2,000. If you use this option, we recommend that you also use **LIMIT** to limit each query to 2,000.

Note: The **OFFSET** clause is limited to 2,000 rows. Requesting an offset greater than 2,000 results in a `NUMBER_OUTSIDE_VALID_RANGE` error.

For example, use an initial query with this structure.

```
SELECT <desired fields> FROM OauthToken LIMIT 2000 OFFSET 0
```

Then, run another query with an offset of 2,000.

```
SELECT <desired fields> FROM OauthToken LIMIT 2000 OFFSET 2000
```

Continue to increase the offset by 2,000 until you have results for all records.

OauthTokenExchangeHandler

Represents a token exchange handler. The token exchange handler also consists of an Apex class. During the OAuth 2.0 token exchange flow, the token exchange handler is used to validate tokens from an external identity provider and to map users to Salesforce. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Sort, Update Description A description for your token exchange handler.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The API name for the handler.
IsContactCreationAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description For internal use only.
IsEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the handler is enabled for the token exchange flow. The default value is <code>false</code>.
IsUserCreationAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the handler can set up new users. During the token exchange flow, the Apex handler maps users from the identity provider to Salesforce. If the <code>IsUserCreationAllowed</code> field is <code>true</code>, the <code>canCreateUser</code> boolean in the <code>getUserForTokenSubject</code> method is <code>true</code>, and the user doesn't exist in Salesforce, the handler sets up a new User object, which Salesforce automatically inserts to finish creating the user. The default value is <code>false</code>.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the language used in the org where the token exchange handler was created. Possible values are: • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish • <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish • <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The label of the token exchange handler record.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
SupportedTokenTypesAccessToken	Type boolean Properties Create, Filter, Update Description Indicates whether the handler supports opaque access tokens from the identity provider.
SupportedTokenTypesIdToken	Type boolean Properties Create, Filter, Update Description Indicates whether the handler supports OpenID Connect ID tokens from the identity provider.
SupportedTokenTypesJwt	Type boolean Properties Create, Filter, Update Description Indicates whether the handler supports tokens from the identity provider that are in JWT format, such as JWT-based access tokens.

Field	Details
SupportedTokenTypesRefreshToken	Type boolean Properties Create, Filter, Update Description Indicates whether the handler supports OAuth 2.0 refresh tokens from the identity provider.
SupportedTokenTypesSaml2	Type boolean Properties Create, Filter, Update Description Indicates whether the handler supports SAML 2.0 assertions from the identity provider.
TokenHandlerApexId	Type reference Properties Create, Filter, Group, Sort, Update Description The Apex class associated with the token exchange handler. The class contains methods to validate the token and map users to Salesforce. It must extend the <code>Oauth2TokenExchangeHandler</code> Apex class. This field is a relationship field. Relationship Name TokenHandlerApex Relationship Type Lookup Refers To ApexClass

OauthTokenExchHandlerApp

Represents the enablement settings for a specific Salesforce connected app or external client app that's enabled for the token exchange handler. A handler can be enabled for multiple apps. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
ApexExecutionUserId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the user who runs the Apex token exchange handler. We recommend that you use an integration user. This field is a relationship field. Relationship Name ApexExecutionUser Relationship Type Lookup Refers To User
ConnectedApplicationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The connected app that's being used to integrate with Salesforce. This field is a relationship field. Relationship Name ConnectedApplication Relationship Type Lookup Refers To ConnectedApplication
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the token exchange handler is the default handler for this app. During the token exchange flow, in the token request, you can optionally include a <code>token_handler</code>

Field	Details
	parameter with the name of a specific handler's Apex class. If you don't include this parameter, Salesforce defaults to the default handler. The default value is <code>false</code>.
<code>OauthTokenExchangeHandlerId</code>	Type reference Properties Create, Filter, Group, Sort, Update Description The <code>OauthTokenExchangeHandler</code> with which these enablement settings are associated. This field is a relationship field. Relationship Name <code>OauthTokenExchangeHandler</code> Relationship Type Lookup Refers To <code>OauthTokenExchangeHandler</code>

ObjectDataImport

Represents the data import status of one or more object records. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
<code>EndDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date and time (in UTC) when the data import finished.
<code>FileName</code>	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Optional. If the data import was from a comma-delimited file (CSV), the name of the file. The maximum length is 120 characters.
ObjectDataImportNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number identifying the data import.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the user who owns the data import status record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PrimaryObject	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the primary object being imported. For example, Lead. This value is usually provided programmatically. The maximum length is 120 characters.
Result	Type textarea Properties Nillable Description The JSON response of the data object import result, including error messages.

Field	Details
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The processing status of the data object import. Possible values are: Completed In Progress

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ObjectDataImportChangeEvent

Sharing rules are available for the object.

ObjectDataImportOwnerSharingRule on page 65

Sharing rules are available for the object.

ObjectDataImportShare on page 67

Sharing is available for the object.

ObjectDataImportReference

Represents the relationships to the associated reference objects showing the source from which the data is imported. This object is available in API version 57.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

`ObjectDataImportReference` is read only and can only be queried.

Fields

Field	Details
<code>ObjectDataImportId</code>	Type reference Properties Filter, Group, Sort Description Foreign key to the <code>ObjectDataImport</code> object. This field is a relationship field. Relationship Name <code>ObjectDataImport</code> Relationship Type Lookup Refers To <code>ObjectDataImport</code>
<code>ObjectDataImportReferenceNumber</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Foreign key to the reference object. For example, <code>AsyncApiJob</code> or <code>DatasetImportRequest</code>.

ObjectMetadataTag

Represents a meta tag for a store page. Meta tags in HTML documents provide structured data used by search engines for ranking and to show content in search results. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Possible values are: • USD—U.S. Dollar The default value is USD.
Language	Type string Properties Create, Filter, Group, Sort, Update Description The language of the page meta tag.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the page meta tag.
RecordId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the product or product category with which this record is associated. This is a polymorphic relationship field. Relationship Name Record Relationship Type Lookup

Field	Details
	Refers To Product2, ProductCategory Availability in API versions: - Product2 is available in API versions 60.0 and later - ProductCategory is available in API versions 63.0 and later
TagType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of the page meta tag. Possible values are: - Description—Meta Description - Title—Title Tag
Value	Type textarea Properties Create, Filter, Group, Sort, Update Description The value of the page meta tag. This value populates the HTML tag. For example, a meta tag with a Type of Title and a Value of GoBrew Espresso renders the HTML <code><title>GoBrew Espresso</title></code> for the page.

ObjectPermissions

Represents the enabled object permissions for the parent PermissionSet. This object is available in API version 24.0 and later.

To grant a user access to an object, associate an ObjectPermissions record with a PermissionSet that's assigned to a user. ObjectPermissions records are only supported in PermissionSet, not in Profile.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
ParentId	Type reference Properties Create, Filter, Group, Sort Description The Id of this object's parent PermissionSet. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To PermissionSet
PermissionsCreate	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can create records for this object. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.
PermissionsDelete	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can delete records for this object. Requires <code>PermissionsRead</code> and <code>PermissionsEdit</code> for the same object to be <code>true</code>.
PermissionsEdit	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can edit records for this object. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.

Field Name	Details
PermissionsModifyAllRecords	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can edit all records for this object, regardless of sharing settings. Requires <code>PermissionsRead</code>, <code>PermissionsDelete</code>, <code>PermissionsEdit</code>, and <code>PermissionsViewAllRecords</code> for the same object to be <code>true</code>.
PermissionsRead	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can view records for this object.
PermissionsViewAllFields	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can view all fields and field data for this object. Available in API version 63.0 and later.
PermissionsViewAllRecords	Type boolean Properties Create, Filter, Update Description If <code>true</code>, users assigned to the parent PermissionSet can view all records for this object, regardless of sharing settings. Requires <code>PermissionsRead</code> for the same object to be <code>true</code>.
ObjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The object's API name. For example, <code>Merchandise__c</code>.

Permission Dependencies

Some user permissions have dependencies on object permissions. For example, if a permission set has the “Transfer Leads” permission, it also has “Read” and “Create” on the leads object.

You can query from ObjectPermissions up to the parent PermissionSet object. For example:

```
SELECT Parent.Name, Parent.PermissionsTransferAnyLead, PermissionsRead, PermissionsCreate
FROM ObjectPermissions
WHERE SubjectType = 'Lead'
```

Determining Object Access with “Modify All Data”

When using SOQL to query object permissions, be aware that some object permissions are enabled because a user permission requires them.

The exception to this rule is when “Modify All Data” is enabled. While it enables all object permissions, it doesn’t physically store any object permission records in the database. As a result, unlike object permissions that are required by a user permission—such as “View All Data” or “Import Leads”—the query still returns permission sets with “Modify All Data,” but the object permission record will contain an invalid ID that begins with “000”. This ID indicates that the object has full access due to “Modify All Data” and the object permission record can’t be updated or deleted. To remove full access from these objects, disable “Modify All Data” and then delete the resulting object permission record. This ensures that when using SOQL to find all the objects that have full access, it returns all objects that have this access regardless of whether it’s due to “Modify All Data” or because an administrator set full access.

For example, the following will return all permission sets that have “Read” on the Merchandise__c object, regardless of whether it’s explicitly defined on the object or implicitly defined through “Modify All Data.”

```
SELECT Id, Parent.label, SubjectType, PermissionsRead,
       Parent.PermissionsModifyAllData, ParentId
FROM ObjectPermissions
WHERE PermissionsRead = true and SubjectType = 'Merchandise__c'
```

Nesting Object Permissions

You can nest ObjectPermissions in a PermissionSet query. For example, the following returns any permission sets where “Transfer Leads” is true. Additionally, the result set will include the “Read” object permission on leads. This is done by nesting the SOQL with an object permission query using the relationship name for object permissions: ObjectPerms.

```
SELECT Id, Name, PermissionsTransferAnyLead,
       (SELECT Id, PermissionsRead from ObjectPerms where SubjectType='Lead')
FROM PermissionSet
WHERE PermissionsTransferAnyLead = true
```

As a result, it’s possible to traverse the relationship between the PermissionSet and any child-related objects (in this case, ObjectPermissions). You can do this from the PermissionSet object by using the child relationship (ObjectPerms, FieldPerms, and so on) or from the child object by referencing the PermissionSet with `Parent.permission_set_attribute`.

It’s important to consider when to use a conditional WHERE statement to restrict the result set. To query based on an attribute on the permission set object, nest the SOQL with the child relationship. However, to query based on an attribute on the child object, you must reference the permission set parent attribute in your query.

The following two queries return the same columns with different results, based on whether you use the child relationship or parent notation.

```
SELECT Id, Name, PermissionsModifyAllData,
(SELECT Id, SobjectType, PermissionsRead from Objectperms)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

versus:

```
SELECT Id, SOBJECTType, PermissionsRead, Parent.Id, Parent.Name,
Parent.PermissionsModifyAllData
FROM ObjectPermissions
WHERE SOBJECTType='Merchandise__c'
```

ObjectRelatedUrl

Represents a URL slug for a Product or Category page on a B2B Commerce or D2C Commerce LWR site, or a custom object, account, or contact page on an enhanced LWR Experience Cloud site. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Your org must have B2B Commerce or D2C Commerce license enabled for commerce use cases. ObjectRelatedUrl is available for Product2 and ProductCategory records in Commerce, and on custom object, account and contact record pages in enhanced LWR sites.

Fields

Field	Details
LanguageCode	Type string Properties Create, Filter, Group, Sort, Update Description Required. The combined language and locale ISO code, which controls the language of the object-related URL. The maximum length is 8 characters.

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the object-related URL. This field isn't editable.
ParentId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. The ID of the parent record that the <code>UrlName</code> refers to. <code>ParentId</code> can point only to Product2, ProductCategory, and custom object, account, and contact record pages. This field is a polymorphic relationship field. Relationship Name Parent Relationship Type Lookup Refers To Product2, ProductCategory, account, contact, and custom objects Availability in API versions: • Product2 and ProductCategory in LWR Commerce stores (available in API version 58.0 and later) • Custom object pages on enhanced LWR sites (available in API version 60.0 and later) • Account and contact pages on enhanced LWR sites (available in API version 61.0 and later)
Scope	Type string Properties Create, Filter, Group, Sort, Update Description Required. Helps ensure uniqueness of the <code>UrlName</code> field across all records with the same <code>Scope</code> and <code>LanguageCode</code> values. The maximum length is 18 characters.
UniqueIndex	Type string Properties Filter, idLookup, Nillable, Sort

Field	Details
	Description Ensures uniqueness for each record within your org and creates an index for lookup. This field isn't editable. This field is a calculated field.
UrlName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The URL slug for the record.

Note: When creating a query, for example, `SELECT UrlName From ObjectRelatedUrl WHERE Scope='01t'`, the WHERE condition must use `Id`, `UniqueIndex`, `Scope`, or `ParentId`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ObjectRelatedUrlChangeEvent on page 68 (API version 62.0)

Change events are available for the object.

ObjectTerritory2AssignmentRule

Represents a territory assignment rule that's associated with an object, such as Account. `ObjectTerritory2AssignmentRuleItem` can be created or deleted if the `BooleanFilter` field on its corresponding `ObjectTerritory2AssignmentRule` is `null`. Available if Sales Territories has been enabled.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories, assignment rules, assigned records, and assigned users. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
BooleanFilter	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Represents advanced filter conditions that were specified for the rule in the online application. For example, "(1 AND 2) OR 3."
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Unique Name</code>.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the rule is active (true) or inactive (false). Via the API, active rules run automatically when object records are created and edited. The exception is when the value of the <code>IsExcludedFromRealign</code> field on an object record is <code>true</code>, which prevents record assignment rules from evaluating that record.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description The language of the label in the user interface.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. The user interface label for the territory type.
ObjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The object that the rule is defined for. For API version 31, Account only.
Territory2ModelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the territory model.

ObjectTerritory2AssignmentRuleItem

A single row of selection criteria for an ObjectTerritory2AssignmentRule object. ObjectTerritory2AssignmentRuleItem can only be created or deleted if the `BooleanFilter` field on its corresponding ObjectTerritory2AssignmentRule object is a `null` value. Available if Sales Territories has been enabled.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your Salesforce sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
Field	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The standard or custom object field that the rule item will operate on.
Operation	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The criterion to apply for the rule item. For example: <i>equals</i>, <i>notContain</i>, or <i>startsWith</i>.
RuleId	Type reference Properties Create, Filter, Group, Sort Description The ID of the associated ObjectTerritory2AssignmentRule.
SortOrder	Type int Properties Create, Filter, Group, Sort, Update Description The order in which this row is evaluated in relation to other ObjectTerritoryAssignmentRuleItem objects for the given ObjectTerritoryAssignmentRule. This field is required for assignment rule items, which are used in the Boolean conditions in assignment rule formulas.
Value	Type string Properties Create, Filter, Nillable, Sort, Update Description The field value or values to evaluate. For example: if the field is <code>Billing ZIP/Postal Code</code>, a value might be <code>94105</code>.

ObjectTerritory2Association

Represents an association (by assignment) between a territory and an object record such as an account or a lead.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available after enabling Sales Territories.

Standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your sharing settings.

If you delete associations, you can query them for up to 12 hours. Keep in mind that deleted associations bypass the recycle bin.

Fields

Field Name	Details						
AssociationCause	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The means by which the record was associated with the territory. User interface field label is <code>Method</code>. Possible values are: <code>Territory2AssignmentRule</code>—Territory assignment rule association <code>Territory2Manual</code>—Manual association						
ObjectId	Type reference Properties Create, Filter, Group, Sort Description The ID of the object assigned to the territory. <table><tr><th>Object</th><th>Availability</th></tr><tr><td>Account</td><td>API version 30.0 and later</td></tr><tr><td>Lead</td><td>API version 55.0 and later</td></tr></table>	Object	Availability	Account	API version 30.0 and later	Lead	API version 55.0 and later
Object	Availability						
Account	API version 30.0 and later						
Lead	API version 55.0 and later						

Field Name	Details
	This is a polymorphic relationship field. Relationship Name Object Relationship Type Lookup Refers To Account Lead
ObjectType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the object. Possible values are: • Account • Lead
Territory2Id	Type reference Properties Create, Filter, Group, Sort Description The ID of the territory that the record is assigned to. This is a relationship field. Relationship Name Territory2 Relationship Type Lookup Refers To Territory2

ObjectUserTerritory2View

Represents a user and object, such as an account or lead, assigned to a territory. This object is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To see this object, enable Sales Territories.

Fields

Field	Details
ObjectId	Type reference Properties Filter, Group, Nillable, Sort Description Required field for querying ObjectUserTerritory2View. ID of the object that the territory user is assigned to. This field is a polymorphic relationship field. Relationship Name Object Refers To Account, Lead
RoleInTerritory2	Type picklist Properties Filter, Group, Nillable, Sort Description Role of the user assigned to the territory.
Territory2Id	Type reference Properties Filter, Group, Nillable, Sort Description ID of the territory to which the object and user are assigned. This field is a relationship field. Relationship Name Territory2 Refers To Territory2

Field	Details
UserId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user assigned to the territory. This field is a relationship field. Relationship Name User Refers To User

OmniSupervisorConfig

Represents the Command Center for Service configuration for an assigned group of supervisors. This object is available in API version 41.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()` `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.

Field	Details
	In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
IsTimelineHidden	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If set to <code>true</code>, hides the agent timeline from the supervisors assigned to this Command Center for Service configuration. The default value is <code>false</code>. This field is available in API version 53.0 and later.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The language of this Command Center for Service configuration.
MasterLabel	Type string Properties Create, Filter, Group, Sort Description A unique label name for this Command Center for Service configuration. The name must begin with a letter. The name can contain alphanumeric characters and underscores. The name can't contain spaces, two consecutive underscores, or end with an underscore. The name appears as Command Center for Service Configuration Name in the UI.
SkillVisibility	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines which work items based on skills are visible to the supervisors assigned to this Command Center for Service configuration. Possible values are: • <code>AllSkills</code> — Show work items with all skill requirements selected in this Command Center for Service configuration.

Field	Details
	• <code>AnySkill</code> — Show work items with at least one skill requirement selected in this Command Center for Service configuration. This field is available in API version 53.0 and later.

OmniSupervisorConfigAction

Represents the actions available to the supervisors of a Command Center for Service configuration. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
<code>DisplayOrder</code>	Type int Properties Create, Filter, Group, Nillable, Sort Description The order in which the action is displayed.
<code>OmniSupervisorActionType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description An action that a supervisor can perform. Possible values are: • <code>AgentDetails.CustomAction</code> • <code>AllAgents.AWSDashboard</code>—All Agents - View Amazon Real-Time Metrics • <code>AllAgents.AssignLearning</code> • <code>AllAgents.ChangeQueues</code>

Field	Details
	- AllAgents.ChangeSkills - AllAgents.CustomAction - AssignedWork.AWSDashboard—Assigned Work - View Amazon Real-Time Metrics - AssignedWork.CustomAction - AssignedWorkDetails.CustomAction - QueueDetails.CustomAction - QueuesBacklog.AWSDashboard—Queues Backlog - View Amazon Real-Time Metrics - QueuesBacklog.CustomAction - QueuesBacklog.ManageQueues—Queues Backlog - Assign Agents to Queues - SkillDetails.CustomAction - SkillsBacklog.AWSDashboard—Skills Backlog - View Amazon Real-Time Metrics - SkillsBacklog.CustomAction
OmniSupervisorConfigId	Type reference Properties Create, Filter, Group, Sort Description A unique identifier for the Command Center for Service configuration. This field is a relationship field. Relationship Name OmniSupervisorConfig Relationship Type Lookup Refers To OmniSupervisorConfig

OmniSupervisorConfigGroup

Represents the group of reps who are visible to the supervisors of a Command Center for Service configuration. The group, if visible, appears in the Agents tab of Command Center for Service. This object is available in API version 41.0 and later.

Supported Calls

create(), delete(), query(), update(), retrieve()

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
GroupId	Type reference Properties Create, Filter, Group, Nillable, Sort Description A unique identifier for the group of reps that's made visible to the supervisors who are assigned to the Command Center for Service configuration. This is a relationship field. Relationship Name Group Relationship Type Lookup Refers To Group
OmniSupervisorConfigId	Type reference Properties Create, Filter, Group, Sort Description A unique identifier for the Command Center for Service configuration. This is a relationship field. Relationship Name OmniSupervisorConfig Relationship Type Lookup Refers To OmniSupervisorConfig

OmniSupervisorConfigProfile

Represents the supervisor profiles to which a Command Center for Service configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	Type reference Properties Create, Filter, Group, Sort Description A unique identifier for the Command Center for Service configuration. This is a relationship field. Relationship Name OmniSupervisorConfig Relationship Type Lookup Refers To OmniSupervisorConfig
ProfileId	Type reference Properties Create, Filter, Group, Nillable, Sort Description A unique identifier for the profile that's associated with this Command Center for Service configuration. A profile can be associated with only one Command Center for Service configuration. This field is unique within your org. This is a relationship field. Relationship Name Profile Relationship Type Lookup Refers To Profile

OmniSupervisorConfigQueue

Represents the queues that are visible to the supervisors of a Command Center for Service configuration. The queue, if visible, appears in the Queues Backlog and Assigned Work tabs of Command Center for Service. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.
Only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	Type reference Properties Create, Filter, Group, Sort Description om A unique identifier for the Command Center for Service configuration. This is a relationship field. Relationship Name OmniSupervisorConfig Relationship Type Lookup Refers To OmniSupervisorConfig
QueueId	Type reference Properties Create, Filter, Group, Nillable, Sort Description A unique identifier for the queue that’s made visible to the supervisors who are assigned to the Command Center for Service configuration. This is a relationship field.

Field	Details
	Relationship Name Queue
	Relationship Type Lookup
	Refers To Group

OmniSupervisorConfigSkill

Represents the skills that are visible to the supervisors of a Command Center for Service configuration. These skills, if visible, appear in the Skills Backlog tab of Command Center for Service. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	Type reference
	Properties Create, Filter, Group, Sort
	Description A unique identifier for the Command Center for Service configuration. This is a relationship field.
	Relationship Name OmniSupervisorConfig
	Relationship Type Lookup
	Refers To OmniSupervisorConfig

Field	Details
SkillId	Type reference Properties Create, Filter, Group, Nillable, Sort Description A unique identifier for the skill that's made visible to the supervisors who are assigned to the Command Center for Service configuration. This is a relationship field. Relationship Name Skill Relationship Type Lookup Refers To Skill

OmniSupervisorConfigTab

Represents the visible tabs specified in a Command Center for Service configuration. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Only authenticated internal and external users can access this object.

Fields

Field	Details
DisplayOrder	Type int Properties Create, Filter, Group, Nillable, Sort Description The order in which tabs are displayed in Command Center for Service.

Field	Details
OmniSupervisorConfigId	Type reference Properties Create, Filter, Group, Sort Description A unique identifier for the Command Center for Service configuration. This is a relationship field. Relationship Name OmniSupervisorConfig Relationship Type Lookup Refers To OmniSupervisorConfig
OmniSupervisorTabType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Tabs shown on the Command Center for Service page. Possible values are: • <code>Agents</code> — the Agents tab • <code>AssignedWork</code> — the Assigned Work tab • <code>FlexiPageType</code> — A custom tab created using Lightning App Builder, with the <code>OmniSupervisorPageType</code> value of the <code>FlexiPage Type</code> field • <code>QueuesBacklog</code> — the Queues Backlog tab • <code>SkillsBacklog</code> — the Skills Backlog tab • <code>Wallboard</code> — the Wallboard tab

OmniSupervisorConfigUser

Represents the users to whom a Command Center for Service configuration applies. User-level configurations override profile-level configurations. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
OmniSupervisorConfigId	Type reference Properties Create, Filter, Group, Sort Description A unique identifier for the Command Center for Service configuration. This is a relationship field. Relationship Name OmniSupervisorConfig Relationship Type Lookup Refers To OmniSupervisorConfig
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort Description A unique identifier for the user associated with this Command Center for Service configuration. A user can be associated with only one Command Center for Service configuration. This field is unique within your org. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

OpenActivity

This read-only object is displayed in a related list of open activities—future events and open tasks—related to an object. It includes activities for all contacts related to the object. OpenActivity fields for phone calls are only available if your organization uses Salesforce CRM Call Center.

Supported Calls

`describeSObjects()`

Fields

Field	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the related account, which is determined as follows: • The account associated with the <code>whatId</code>, if it exists; or • The account associated with the <code>whoId</code>, if it exists; otherwise • <code>null</code> This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActivityDate	Type date Properties Filter, Group, Nillable, Sort Description Indicates one of the following: • The due date of a task • The date of an event if <code>IsAllDayEvent</code> is set to <code>true</code> This field has a time stamp that is always set to midnight in the Universal Time Coordinated (UTC) time zone. The time stamp doesn't represent the time of the activity; don't attempt to alter it to accommodate time zone differences. Label is <code>Date</code>.
ActivityDateTime	Type dateTime Properties Aggregate, Filter, Nillable, Sort

Field	Details
	Description Contains the event's due date if the <code>IsAllDayEvent</code> flag is set to <code>false</code>. The time portion of this field is always transferred in the Coordinated Universal Time (UTC) time zone. Translate the time portion to or from a local time zone for the user or the application, as appropriate. Label is Due Date Time. The value for this field and <code>StartDateTime</code> must match, or one of them must be <code>null</code>.
<code>ActivitySubtype</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Provides standard subtypes to facilitate creating and searching for specific activity subtypes. This field isn't updateable. Possible values are: • Task • Email • Call • Event • LinkedIn —Available in API version 56.0 and later. • List Email
<code>ActivityType</code>	Type picklist Properties Filter, Group, Nillable, Sort Description Represents one of the following values: <code>Call</code>, <code>Email</code>, <code>Meeting</code>, or <code>Other</code>. Label is <code>Type</code>. These are default values, and can be changed. <code>ActivityType</code> is the union of <code>TaskType</code> and <code>EventType</code>. If the same activity appears in both dynamic picklists, duplicate activities appear. <code>TaskType</code> and <code>EventType</code> can each have a <code>Call</code> type. Internally, they are distinct from each other.
<code>AlternateDetailId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of a record the activity is related to which contains more details about the activity. For example, an activity can be related to an EmailMessage record.

Field	Details
	This is a relationship field. Relationship Name AlternateDetail Relationship Type Lookup Refers To EmailMessage
CallDisposition	Type string Properties Filter, Group, Nillable, Sort Description Represents the result of a given call, for example, “we’ll call back,” or “call unsuccessful.” Limit is 255 characters.
CallDurationInSeconds	Type int Properties Filter, Group, Nillable, Sort Description Duration of the call in seconds.
CallObject	Type string Properties Filter, Group, Nillable, Sort Description Name of a call center. Limit is 255 characters.
CallType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of call being answered: Inbound, Internal, or Outbound.
CompletedDateTime	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date and time the task was saved with a Closed status. This value is always null.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the PartnerNetworkConnection that shared this record with your organization. This field is available only if your organization has enabled Salesforce to Salesforce and only in API versions 28.0 and later.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the PartnerNetworkConnection that your organization shared this record with. This field is available only if your organization has enabled Salesforce to Salesforce, and only in API versions 28.0 and later. The value is always null. You can use the PartnerNetworkRecordConnection object to forward records to connections.
Description	Type textarea Properties Nillable Description Contains a description of the event or task. Limit is 32 KB.
DurationInMinutes	Type int Properties Filter, Group, Nillable, Sort Description Indicates the duration of the event or task.
EndDateTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description Indicates the end date and time of the event or task. Available in versions 27.0 and later. This field is optional, depending on the following: • If <code>IsAllDayEvent</code> is <code>true</code>, you can supply a value for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time. If both fields are <code>null</code>, the duration defaults to one day. • If <code>IsAllDayEvent</code> is <code>false</code>, a value must be supplied for either <code>DurationInMinutes</code> or <code>EndTime</code>. Supplying values in both fields is allowed if the values add up to the same amount of time.
<code>IsAllDayEvent</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity is an event spanning a full day, and the <code>ActivityDate</code> defines the date of the event. If the value of this field is set to <code>false</code>, then the activity may be an event spanning less than a full day, or it may be a task. The default value of this field is <code>false</code>. Label is <code>All-Day Event</code>.
<code>IsClosed</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a task is closed (<code>true</code>) or not closed (<code>false</code>). The default value of this field is <code>false</code>. This field is set indirectly by setting <code>Status</code> on the task—each picklist value has a corresponding <code>IsClosed</code> value. Label is <code>Closed</code>.
<code>IsDeleted</code>	Type boolean Properties Defaulted on create, Filter Description Indicates whether the activity has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is <code>Deleted</code>.
<code>IsHighPriority</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates a high-priority task. The default value of this field is <code>false</code>. This field is derived from the <code>Priority</code> field.
<code>IsReminderSet</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a reminder is set for an activity (<code>true</code>) or not (<code>false</code>). The default value of this field is <code>false</code>.
<code>IsTask</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity is a task; if the value is set to <code>false</code>, then the activity is an event. The default value of this field is <code>false</code>. Label is <code>Task</code>.
<code>IsVisibleInSelfService</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If the value of this field is set to <code>true</code>, then the activity can be viewed in the self-service portal. The default value of this field is <code>false</code>. Label is <code>Visible in Self-Service</code>.
<code>Location</code>	Type string Properties Filter, Group, Nillable, Sort Description If the activity is an event, then this field represents the location of the event. If the activity is a task, then the value is <code>null</code>.
<code>OwnerId</code>	Type reference Properties Filter, Group, Nillable, Sort Description Indicates the ID of the user or group who owns the activity.

Field	Details
	This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Calendar, Group, User
PrimaryAccountId	Type reference Properties Filter, Group, Nillable, Sort Description Contains the <code>AccountId</code> value from the activity record. Available in API versions 30.0 and later to organizations that use Shared Activities.
PrimaryWhoId	Type reference Properties Filter, Group, Nillable, Sort Description Contains the <code>whoId</code> value from the activity record. Available in API versions 30.0 and later to organizations that have enabled Shared Activities.
Priority	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Indicates the priority of a task, such as high, normal, or low. The default value of this field is <code>Normal</code>.
ReminderDateTime	Type dateTime Properties Filter, Nillable, Sort Description Represents the time at which a reminder is scheduled to fire if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then either the user has deselected the reminder checkbox in the user interface or the reminder has already fired at the time indicated by the value.

Field	Details
Status	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Indicates the current status of a task. The default value of this field is <code>Not Started</code>. Each predefined status field sets a value for <code>IsClosed</code>. To obtain picklist values, query the <code>TaskStatus</code> object. Possible values are: - Completed - Deferred - In Progress - Not Started - Waiting on someone else
Subject	Type combobox Properties Filter, Nillable, Sort Description Contains the subject of the task or event.
WhatId	Type reference Properties Filter, Group, Nillable, Sort Description The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>. This is a polymorphic relationship field. Relationship Name What Relationship Type Lookup Refers To Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis,

Field	Details
	CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
WhoId	Type reference Properties Filter, Group, Nillable, Sort Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is <code>Name ID</code>. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the Whold field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is <code>Name ID</code>. This is a polymorphic relationship field. Relationship Name Who Relationship Type Lookup Refers To Contact, Lead

Usage

Query activities that are related to an object

1. Optionally, issue a describe call against the object whose activities you want to query, to get a suggestion of the correct SOQL query to use.
2. Issue a SOQL relationship query with a main clause that references the object and an inner clause that references the activity history. For example:

```
SELECT
  (SELECT ActivityDate, Description
   FROM OpenActivities)
FROM Account
WHERE Name Like 'XYZ%'
```

The user interface enforces sharing rules, filtering out related-list items that a user doesn't have permission to see.

The following constraints on users who don't have the "View All Data" permission help prevent performance issues.

- In the main clause of the relationship query, you can reference only one record. For example, you can't filter on all records where the account name starts with "A." Instead, you must reference a single account record.

```
SELECT
  (SELECT ActivityDate, Description
   FROM OpenActivities
   ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC
   LIMIT 500)
FROM Account
WHERE Name = 'Acme'
LIMIT 1
```

- In the inner clause of the query, you can't use `WHERE`.
- In the inner clause of the query, you must specify a limit of 500 or fewer on the number of rows that are returned in the list.
- In the inner clause of the query, you must sort on `ActivityDate` in ascending order and `LastModifiedDate` in descending order. You can optionally display nulls last. For example: `ORDER BY ActivityDate ASC NULLS LAST, LastModifiedDate DESC`.

SEE ALSO:

[Task](#)

OperatingHours

Represents the hours in which a service territory, service resource, or account is available for work. OperatingHours is used by Field Service, Salesforce Scheduler, Salesforce Meetings, Sales Engagement, and Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	Type textarea Properties Create, Nillable, Update Description The description of the operating hours. Add any details that aren't included in the name.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the operating hours record was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the operating hours record was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the operating hours. For example, <i>Summer Hours</i>, <i>Winter Hours</i>, or <i>Peak Season Hours</i>.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the operating hours record. This field is available in API version 59.0. This field is a polymorphic relationship field.

Field Name	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
TimeZone	Type picklist
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description The time zone that the operating hours fall within.

Usage

By default, only System Administrators can view, create, and assign operating hours.

Service territory members—which are service resources who can work in the territory—automatically use their service territory’s operating hours. If a resource needs different operating hours than their territory, create separate operating hours for them from the Operating Hours tab. Then, select the desired hours in the `Operating Hours` lookup field on the service territory member detail page.

To view a service resource’s operating hours for a particular territory, navigate to their Service Territories related list and click the Member Number for the territory. You reach the service territory member detail page, which lists the member’s operating hours and dates during which they belong to the territory.

Associated Objects

This object has the following associated objects. Unless noted, they’re available in the same API version as this object.

OperatingHoursChangeEvent (API version 54.0)

Change events are available for the object.

OperatingHoursHistory (API version 62.0)

History is available for tracked fields of the object.

OperatingHoursHistory

Represents the history of changes made to tracked fields on an operating hours record. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Field Service must be enabled in your organization, and field tracking for operating hours fields must be configured.

Fields

Field Name	Details
DataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
Field	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the field that was changed.
NewValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
OldValue	Type anyType Properties Nillable, Sort Description The value of the field before it was changed.
TimeSlotId	Type reference Properties Filter, Group, Sort Description ID of the operating hours record being tracked. The history is displayed on the detail page for this record.

OperatingHoursHoliday

Represents the day or hours for which a service territory and service resources exclusive to the service territory are unavailable in Salesforce Scheduler. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Salesforce Scheduler must be enabled.

Fields

Field	Details
DateAndTime	Type string Properties Filter, Group, Nillable, Sort Description (Read-Only) The date or time for the holiday.
HolidayId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the holiday that's related to the operating hours indicated in the OperatingHoursId field. This is a relationship field. Relationship Name Holiday Relationship Type Lookup Refers To Holiday
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date and time that the current user last viewed a record related to this object.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this object.
OperatingHoursHolidayNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description (Read-Only) An auto-generated number identifying the operating hours holiday.
OperatingHoursId	Type reference Properties Create, Filter, Group, Sort Description The ID of the operating hours that's related to the holiday indicated in the HolidayId field. This is a relationship field. Relationship Name OperatingHours Relationship Type Lookup Refers To OperatingHours

Opportunity

Represents an opportunity, which is a sale or pending deal.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Field Type
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the account associated with this opportunity. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActivityMetricId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric. This field is a relationship field. Relationship Name ActivityMetric Refers To ActivityMetric
ActivityMetricRollupId	Type reference Properties Filter, Group, Nillable, Sort Description When Einstein Activity Capture with Activity Metrics is enabled, the ID of the related activity metric rollup.

Field	Field Type
	This field is a relationship field. Relationship Name ActivityMetricRollup Refers To ActivityMetricRollup
AgeInDays	Type int Properties Aggregate, Filter, Group, Nillable, Sort Description The number of days since the opportunity was created, calculated by the current date minus the <code>created_date</code> field. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.
Amount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Estimated total sale amount. For opportunities with products, the amount is the sum of the related products. Any attempt to update this field, if the record has products, will be ignored. The update call will not be rejected, and other fields will be updated as specified, but the Amount will be unchanged.
CampaignId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of a related Campaign. This field is defined only for those organizations that have the campaign feature Campaigns enabled. The User must have read access rights to the cross-referenced Campaign object in order to create or update that campaign into this field on the opportunity. This is a relationship field. Relationship Name Campaign Relationship Type Lookup Refers To Campaign

Field	Field Type
CloseDate	Type date Properties Create, Filter, Group, Sort, Update Description Required. Date when the opportunity is expected to close.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the contact associated with this opportunity, set as the primary contact. Read-only field that is derived from the opportunity contact role, which is created at the same time the opportunity is created. This field can only be populated when it's created, and can't be updated. To update the value in this field, change the <code>IsPrimary</code> flag on the OpportunityContactRole associated with this opportunity. Available in API version 46.0 and later.
ContractId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Field Type
	Description ID of the contract that's associated with this opportunity. This is a relationship field. Relationship Name Contract Relationship Type Lookup Refers To Contract
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a Pricebook2 is specified on the opportunity (that is, the <code>Pricebook2Id</code> field is not blank), then the currency value of this field must match the currency of the PricebookEntry records that are associated with any opportunity line items it has.
Description	Type textarea Properties Create, Nillable, Update Description Text description of the opportunity. Limit: 32,000 characters.
ExpectedRevenue	Type currency Properties Filter, Nillable, Sort Description Read-only field that is equal to the product of the opportunity <code>Amount</code> field and the <code>Probability</code>. You can't directly set this field, but you can indirectly set it by setting the <code>Amount</code> or <code>Probability</code> fields.
ExportStatus	Type picklist Properties Filter, Restricted picklist, Sort

Field	Field Type
	Description Derived field for the record map for Partner Connect. The export status of this opportunity to the partner's connected org. To see this field, enable Partner Connect and add the Export Vendor Records to an Authorized Partner Org user permission to the cosell export user. See Set Up Partner Connect as a Vendor in <i>Salesforce Help</i>. Available in API version 62.0 and later.
Fiscal	Type string Properties Filter, Group, Nillable, Sort Description If fiscal years are not enabled, the name of the fiscal quarter or period in which the opportunity <code>CloseDate</code> falls. Use YYYY Q format, for example, '2006 1' for first quarter of 2006.
FiscalQuarter	Type int Properties Filter, Group, Nillable, Sort Description Represents the fiscal quarter. Valid values are 1, 2, 3, or 4.
FiscalYear	Type int Properties Filter, Group, Nillable, Sort Description Represents the fiscal year, for example, 2006.
ForecastCategory	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Restricted picklist field. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than is implied by the <code>StageName</code> value. The values of this field are fixed enumerated values. The field labels are localized to the language of the user performing the operation, if localized versions of those labels are available for that language in the user interface. In API version 12.0 and later, the value of this field is automatically set based on the value of the <code>ForecastCategoryName</code> and can't be updated any other way. The field properties Create, Defaulted on create, Nillable, and Update are not available in version 12.0. Possible values are:

Field	Field Type
	• BestCase • Closed • Forecast • MostLikely • Omitted • Pipeline
ForecastCategoryName	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The name of the forecast category. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than is implied by the <code>StageName</code> value. Available in API version 12.0 and later. Possible values are: • Best Case • Closed • Commit • Most Likely • Omitted • Pipeline
HasOpenActivity	Type boolean Properties Defaulted on create, Group, Description Indicates whether an opportunity has an open event or task (<code>true</code>) or not (<code>false</code>). Available in API version 35.0 and later.
HasOpportunityLineItem	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only field that indicates whether the opportunity has associated line items. A value of <code>true</code> means that Opportunity line items have been created for the opportunity. An opportunity can have opportunity line items only if the opportunity has a price book. The opportunity line items must correspond to PricebookEntry objects that are listed in the opportunity Pricebook2. However, you can insert opportunity line items on an opportunity

Field	Field Type
	that does not have an associated Pricebook2. For the first opportunity line item that you insert on an opportunity without a Pricebook2, the API automatically sets the <code>Pricebook2Id</code> field, if the opportunity line item corresponds to a PricebookEntry in an active Pricebook2 that has a <code>CurrencyIsoCode</code> field that matches the <code>CurrencyIsoCode</code> field of the opportunity. If the Pricebook2 is not active or the <code>CurrencyIsoCode</code> fields do not match, then the API returns an error. You can't update the <code>Pricebook2Id</code> or <code>PricebookId</code> fields if opportunity line items exist on the Opportunity. You must delete the line items before attempting to update the <code>PricebookId</code> field.
HasOverdueTask	Type boolean Properties Defaulted on create, Group, Description Indicates whether an opportunity has an overdue task (<code>true</code>) or not (<code>false</code>). Available in API version 35.0 and later.
IqScore	Type int Properties Aggregate, Filter, Group, Nillable, Sort Description The likelihood, measured on a scale of 1 to 99, that an opportunity will be won. Einstein Opportunity Scoring must be enabled. Available in API version 41.0 and later. Label is Opportunity Score.
IsClosed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Directly controlled by <code>StageName</code>. You can query and filter on this field, but you can't directly set it in a create, upsert, or update request. It can only be set via <code>StageName</code>. Label is Closed.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.

Field	Field Type
IsExcludedFromTerritory2Filter	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Indicates whether the opportunity is excluded (<i>True</i>) or included (<i>False</i>) each time the APEX filter is executed.
IsPriorityRecord	Type boolean Properties Defaulted on create, Group Description Shows whether the user has marked the opportunity as important (<i>True</i>) or not (<i>False</i>). The default value is <code>false</code>. Available in API version 53.0 and later.
IsPrivate	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <i>true</i>, only the opportunity owner, users above that role in the hierarchy, and admins can view the opportunity or query it via the API. When you mark opportunities as private, opportunity teams, opportunity splits, and sharing are removed. Label is Private. The default value is <i>False</i>.
IsSplit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only field that indicates whether credit for the opportunity is split between opportunity team members. Label is <code>IsSplit</code>. This field is available in versions 14.0 and later for organizations that enabled Opportunity Splits during the pilot period. This field should not be used. However, it's documented for the benefit of pilot customers who find references to <code>IsSplit</code> in code.
IsWon	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Field Type
	Description Directly controlled by <code>StageName</code> . You can query and filter on this field, but you can't directly set the value. It can only be set via <code>StageName</code> . Label is Won .
<code>LastActivityDate</code>	Type date Properties Filter, Group, Nillable, Sort Description Value is one of the following, whichever is the most recent: • Due date of the most recent event logged against the record. • Due date of the most recently closed task associated with the record.
<code>LastActivityInDays</code>	Type int Properties Aggregate, Filter, Group, Nillable, Sort Description The number of days since the last completed event or task for the record, calculated by the current date minus the <code>last_activity</code> field. If the <code>last_activity</code> field is null, this field is null. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.
<code>LastAmountChangedHistoryId</code>	Type reference Properties Filter, Group, Nillable, Sort Description ID of the OpportunityHistory record that contains information about when the opportunity Amount field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later. This is a relationship field. Relationship Name LastAmountChangedHistory Relationship Type Lookup Refers To OpportunityHistory
<code>LastCloseDateChangedHistoryId</code>	Type reference

Field	Field Type
	Properties Filter, Group, Nillable, Sort Description ID of the OpportunityHistory record that contains information about when the opportunity Close Date field was last updated in Winter '21 or later. Information includes the date and time of the change and the user who made the change. Available in API version 50.0 and later. This is a relationship field. Relationship Name LastCloseDateChangedHistory Relationship Type Lookup Refers To OpportunityHistory
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastStageChangeDate	Type datetime Properties Aggregate, Filter, Nillable, Sort Description The date of the last change made to the <code>Stage</code> field on this opportunity record. This field is available in API version 52.0 and later.
LastStageChangeInDays	Type int Properties Aggregate, Filter, Group, Nillable, Sort Description The number of days since the last change was made to the <code>Stage</code> field on the opportunity record, calculated by the current date minus the <code>last_stage_change_date</code> field. If the <code>last_stage_change_date</code> is null, then this field contains the value for <code>AgeInDays</code>. This field is available in API version 52.0 and later if you enabled Pipeline Inspection.

Field	Field Type
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
LeadSource	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Source of this opportunity, such as Advertisement or Trade Show.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. A name for this opportunity. Limit: 120 characters.
NextStep	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of next task in closing opportunity. Limit: 255 characters.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User who has been assigned to work this opportunity. If you update this field, the previous owner's access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. If you have set up opportunity teams in your organization, updating this field has different consequences depending on your version of the API:

Field	Field Type
	- For API version 12.0 and later, sharing records are kept, as they are for all objects. (All previous opportunity team members are kept on the opportunity team.) - For API version before 12.0, sharing records are deleted. (All previous opportunity team members are removed from the opportunity team.) - For API version 16.0 and later, users must have the Transfer Record permission in order to update (transfer) account ownership using this field. This is a relationship field. Relationship Name Owner Relationship Type Lookup Refers To User
PartnerAccountId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the partner account for the partner user that owns this opportunity. Available if Partner Relationship Management is enabled or if digital experiences is enabled and you have partner portal licenses. If you are uploading opportunities using API version 15.0 or earlier, and one of the opportunities in the batch has a partner user as the owner, the <code>Partner Account</code> field on all opportunities in the batch is set to that partner user's account regardless of whether the partner user is the owner. In version 16.0, the <code>Partner Account</code> field is set to the appropriate account for the partner user that owns the opportunity. If the owner of the opportunity is not a partner user, this field remains empty.
Pricebook2Id	Type reference Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description ID of a related Pricebook2 object. The <code>Pricebook2Id</code> field indicates which Pricebook2 applies to this opportunity. The <code>Pricebook2Id</code> field is defined only for those organizations that have products enabled as a feature. You can specify values for only one field (<code>Pricebook2Id</code> or <code>PricebookId</code>)—not both fields. For this reason, both fields are declared nillable. This is a relationship field. Relationship Name Pricebook2

Field	Field Type
	Relationship Type Lookup
	Refers To Pricebook2
PricebookId	Type reference
	Properties Create, Defaulted on create, Filter, Nillable, Update
	Description Unavailable as of version 3.0. As of version 8.0, the Pricebook object is no longer available. Use the <code>Pricebook2Id</code> field instead, specifying the ID of the Pricebook2 record.
Probability	Type percent
	Properties Create, Defaulted on create, Filter, Nillable, Sort, Update
	Description Percentage of estimated confidence in closing the opportunity. It is implied, but not directly controlled, by the <code>StageName</code> field. You can override this field to a different value than what is implied by the <code>StageName</code> . If you're changing the <code>Probability</code> field through the API using a partner WSDL call, or an Apex <code>before</code> trigger, and the value may have several decimal places, we recommend rounding the value to a whole number. For example, the following Apex in a <code>before</code> trigger uses the <code>round</code> method to change the field value: <code>o.probability = o.probability.round();</code>
PushCount	Type int
	Properties Filter, Group, Nillable, Sort
	Description The number of times an opportunity's close date has been pushed out by one calendar month. For example, moving a close date from April to May counts as one push, but moving from April 1 to April 30 doesn't count. The total is not decreased when the close date is moved in. Available in API version 53.0 and later.
RecordTypeId	Type reference
	Properties Create, Filter, Nillable, Update

Field	Field Type
	Description ID of the record type assigned to this object.
StageName	Type picklist Properties Create, Filter, Group, Sort, Update Description Required. Current stage of this record. The <code>StageName</code> field controls several other fields on an opportunity. Each of the fields can be directly set or implied by changing the <code>StageName</code> field. In addition, the <code>StageName</code> field is a picklist, so it has additional members in the returned <code>describeSObjectResult</code> to indicate how it affects the other fields. To obtain the stage name values in the picklist, query the <code>OpportunityStage</code> object. If the <code>StageName</code> is updated, then the <code>ForecastCategoryName</code> , <code>IsClosed</code> , <code>IsWon</code> , and <code>Probability</code> are automatically updated based on the stage-category mapping.
SyncedQuoteID	Type reference Properties Create, Filter, Nillable, Update Description Read only in an Apex trigger. The ID of the Quote that syncs with the opportunity. Setting this field lets you start and stop syncing between the opportunity and a quote. The ID has to be for a quote that is a child of the opportunity.
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the territory that is assigned to the opportunity. Available only if Enterprise Territory Management has been enabled for your organization. Users who have full access to an opportunity's account can assign any territory from the active model to the opportunity. Users who do <i>not</i> can assign only a territory that is also assigned to the opportunity's account. The same restriction applies to territory assignments made via Apex in system mode.
TotalOpportunityQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description Number of items included in this opportunity. Used in quantity-based forecasting.

Field	Field Type
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Type of opportunity. For example, Existing Business or New Business. Label is Opportunity Type .

 **Note:** When importing opportunity data, users need the Set Audit Fields upon Record Creation permission to assign values to audit fields such as `CreatedDate`. Audit fields are automatically updated during API operations unless you set these fields yourself.

Usage

Use the Opportunity object to manage information about a sale or pending deal. You can also sync this object with a child Quote. To update an Opportunity, your client application needs Edit permission on opportunities. You can create, update, delete, and query Attachment records associated with an opportunity via the API. To split credit for an opportunity among multiple opportunity team members, use the OpportunitySplit object.

Client applications can also create or update opportunity objects by converting a Lead with `convertLead()`.

 **Note:** On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

Sample Code—Java

This code starts the sync between an object and a child quote.

```
public void startQuoteSync() {
    Opportunity opp = new Opportunity();
    opp.setId(new ID("006D000000CpOSy"));
    opp.setSyncedQuoteId(new ID("0Q0D0000000020Z"));
    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = binding.update(new SObject[] {opp});
        // check results and do more processing after the update call ...
    }
    catch (Exception ex) {
        System.out.println("An unexpected error has occurred." + ex.getMessage());
        return;
    }
}
```

This code stops the sync between an object and a child quote.

```
public void stopQuoteSync() {
    Opportunity opp = new Opportunity();
    opp.setId(new ID("006D000000CpOSy"));
    opp.setFieldsToNull(new String[] { "SyncedQuoteId" } );
    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = binding.update(new SObject[] {opp});
        // check results and do more processing after the update call ...
    }
    catch (Exception ex) {
        System.out.println("An unexpected error has occurred." + ex.getMessage());
        return;
    }
}
```

Associated Objects

This object has these associated objects. Unless noted, they are available in the same API version as this object.

OpportunityChangeEvent (API version 44.0)

Change events are available for the object.

OpportunityFeed (API version 18.0)

Feed tracking is available for the object.

OpportunityHistory

History is available for tracked fields of the object.

OpportunityOwnerSharingRule

Sharing rules are available for the object.

OpportunityShare

Sharing is available for the object.

Additional Considerations

If you are using `before` triggers to set `Stage` and `Forecast Category` for an opportunity record, the behavior is as follows:

- If you set `Stage` and `Forecast Category`, the opportunity record contains those exact values.
- If you set `Stage` but not `Forecast Category`, the `Forecast Category` value on the opportunity record defaults to the one associated with trigger `Stage`.
- If you reset `Stage` to a value specified in an API call or incoming from the user interface, the `Forecast Category` value should also come from the API call or user interface. If no value for `Forecast Category` is specified and the incoming `Stage` is different than the trigger `Stage`, the `Forecast Category` defaults to the one associated with trigger `Stage`. If the trigger `Stage` and incoming `Stage` are the same, the `Forecast Category` is not defaulted.

If you are cloning an opportunity with products, the following events occur in order:

-  **Note:** If errors occur on an opportunity product, you must return to the opportunity and fix the errors before cloning.
If any opportunity products contain unique custom fields, you must null them out before cloning the opportunity.
- The parent opportunity is saved according to the [order of execution](#).

- The opportunity products are saved according to the [order of execution](#).

OpportunityCompetitor

Represents a competitor on an Opportunity.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CompetitorName	Type combobox Properties Create, Filter, Nillable, Sort, Update Description Name of the competitor.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
OpportunityId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description Required. ID of the associated Opportunity. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
Strengths	Type string Properties Create, Filter, Nillable, Sort, Update Description Description of the competitor's strengths. Limit: 1,000 characters.
Weaknesses	Type string Properties Create, Filter, Nillable, Sort, Update Description Description of the competitor's weaknesses. Limit: 1,000 characters.

Usage

Use this object to manage competitors on an Opportunity, associating multiple competitors on a opportunity and specifying the strengths and weaknesses of each competitor.

SEE ALSO:

[Opportunity](#)

OpportunityContactRole

Represents the role that a Contact plays on an Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ContactId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of an associated Contact. The API applies user access rights to the associated Opportunity for this object, but not to the associated Contact. The API may return rows from a query on this object that include this field's values for contacts to which the user does not have sufficient access rights. It may also return values for this field for contacts that have been deleted. In either case, the client must perform a query on the contact table for this field's value to determine whether the Contact is accessible to the user and has not been deleted. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. This field is available in API version 47.0.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North

Field	Details
	America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). The <code>IsDeleted</code> flag is usable only when the parent record is deleted to the recycle bin, and not when the <code>OpportunityContactRole</code> record is deleted directly. Label is Deleted.
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the associated Contact plays the primary role on the Opportunity (<code>true</code>) or not (<code>false</code>). Each Opportunity has only one primary contact. Label is Primary.
OpportunityId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of an associated Opportunity. This field is non-nullable, and it cannot be updated. You must provide a value for this field when creating new records. You can't change it after it has been created. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
Role	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Name of the role played by the associated Contact on the Opportunity, such as Business User or Decision Maker.

Usage

Use the Opportunity Contact Role object to manage information about contacts and roles related to opportunities. Records of this type appear in the user interface in the Opportunity Contact Role related list and on the Opportunity detail page.

Although allowed, we do not recommend that you create multiple relationships between the same Opportunity and a Contact.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunityContactRoleChangeEvent (API version 45.0)

Change events are available for the object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

OpportunityContactRoleSuggestionInsight

Represents a suggestion for a new opportunity contact role. Available in API versions 45.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

To add or decline opportunity contact role suggestions, users need a Sales Cloud Einstein license, edit access on opportunities, and read or edit access on contacts. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field Name	Details
ContactId	Type reference Properties Filter, Group, Sort

Field Name	Details
	Description The ID of the related contact record.
CreatedRecordId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the created opportunity contact role record.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Division	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The division of the suggested opportunity contact role.
LastOperationUserId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who last performed a related operation.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
OpportunityId	Type reference Properties Filter, Group, Sort Description The ID of the related opportunity.
RationaleLabel	Type string Properties Filter, Group, Nillable, Sort Description The reason why this is a suggested opportunity contact role.
Role	Type string Properties Filter, Group, Nillable, Sort Description The role of the suggested opportunity contact role.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the suggested contact. Possible values include: • New • Pending • Added • Declined

Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

OpportunityFieldHistory

Represents the history of changes to the values in the fields of an opportunity. This object is available in versions 13.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
<code>DataType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<code>Field</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the field that was changed.
<code>IsDeleted</code>	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
<code>OpportunityId</code>	Type reference Properties Filter, Group, Sort

Field	Details
	Description ID of the Opportunity. Label is Opportunity ID. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
NewValue	Type anyType Properties Nillable, Sort Description The new value of the field that was changed.
OldValue	Type anyType Properties Nillable, Sort Description The latest value of the field before it was changed.

Usage

Use this object to identify changes to any fields on an Opportunity. The OpportunityHistory object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity.

This object respects field level security on the parent object.

SEE ALSO:

[Opportunity](#)

OpportunityHistory

Represents the stage history of an opportunity.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Amount	Type currency Properties Filter, Nillable, Sort Description Estimated total sale amount.
CloseDate	Type date Properties Filter, Group, Nillable, Sort Description Date when the opportunity is expected to close.
ExpectedRevenue	Type currency Properties Filter, Nillable, Sort Description Calculated revenue based on the <code>Amount</code> and <code>Probability</code> fields.
ForecastCategory	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Category that determines the column in which an opportunity is totaled in a forecast. Label is To ForecastCategory. • BestCase • Closed • Forecast • MostLikely • Omitted • Pipeline
IsDeleted	Type boolean Properties Defaulted on create, Filter

Field	Details
	Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
OpportunityId	Type reference Properties Filter, Group, Sort Description ID of the associated Opportunity. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
PrevAmount	Type currency Properties Filter, Nillable, Sort Description The value in the opportunity's Amount field before the update of the opportunity. In OpportunityHistory records created before Winter '21, the value is null. Available in API version 50.0 and later.
PrevCloseDate	Type date Properties Filter, Group, Nillable, Sort Description The value in the opportunity's Close Date field before the update of the opportunity. In OpportunityHistory records created before Winter '21, the value is null. Available in API version 50.0 and later.
Probability	Type percent Properties Filter, Nillable, Sort Description Percentage of estimated confidence in closing the opportunity.

Field	Details
StageName	Type picklist Properties Filter, Group, Sort Description Name of the current stage of the opportunity (for example, Prospect or Proposal).

Usage

This object represents the history of a change to the `Amount`, `Probability`, `Stage`, or `Close Date` fields of an Opportunity. The `OpportunityFieldHistory` object represents the history of a change to any of the fields of an Opportunity. To obtain information about how a particular opportunity is progressing, query the `OpportunityHistory` records associated with a given Opportunity. Please note that if an opportunity's `Amount`, `Probability`, `Stage`, or `Close Date` fields have not changed, nothing will be returned in the `OpportunityHistory` objects. In this case, query the `OpportunityFieldHistory` records associated with a given Opportunity to get more information about changes to the opportunity.

This object is read-only. The system generates a new record whenever a user or client application changes the value of any of the above fields; the then-current values of all of these major fields are saved in the newly-generated object.

This object respects field-level security on the parent object.

Note: The record is automatically deleted if its parent Opportunity is deleted.

SEE ALSO:

[Opportunity](#)

OpportunityInsight

Represents an individual insight (deal prediction, follow-up reminder, or key moment) related to an opportunity record.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `query()`, `retrieve()`

Special Access Rules

To see an insight related to a specific opportunity, users need a Sales Cloud Einstein license and access to the opportunity record. As of the Spring '20 release, Pardot and Sales Engagement users no longer have access to this object.

Fields

Field Name	Details
ActualHeardWithinDays	Type int Properties Filter, Group, Nillable, Sort Description The number of days it has been since a prospect has responded for insights of type Prospect has not responded and No communication.
CloseDate	Type dateTime Properties Filter, Nillable, Sort Description The close date of the related opportunity for insights of type Opportunity is overdue and Opportunity is unlikely to close in time.
CompetitorName	Type string Properties Filter, Group, Nillable, Sort Description This field has been deprecated as of API version 45.0.
ContactName	Type string Properties Filter, Group, Nillable, Sort Description This field is not in use as of API version 46.0.
ContactTitle	Type string Properties Filter, Group, Nillable, Sort Description This field is not in use as of API version 46.0.
CurrencyIsoCode	Type picklist

Field Name	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort
	Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Division	Type picklist
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort
	Description The division of the related record.
ExpectedHeardWithinDays	Type int
	Properties Filter, Group, Nillable, Sort
	Description The expected number of days it takes to hear back from a prospect for insights of type <code>Prospect has not responded</code> and <code>No communication</code> .
LastHeard	Type dateTime
	Properties Filter, Nillable, Sort
	Description The date when the related prospect was last heard from for insights of type <code>Prospect has not responded</code> .
LastReferencedDate	Type dateTime
	Properties Filter, Nillable, Sort
	Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime
	Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
OpportunityId	Type reference Properties Filter, Group, Sort Description The ID of the related opportunity record.
Rationale	Type string Properties Filter, Group, Nillable Description The explanation for an insight, providing more background information and details that are specific to the org.
Reason	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The reason why a specific insight type is appearing. Relevant to the following insights: • Opportunity is unlikely to close in time • Opportunity slowing • Opportunity boosting • Time-consuming opportunity
TaskDue	Type dateTime Properties Filter, Nillable, Sort Description The date that a task associated with the related opportunity record is due.
Title	Type string

Field Name	Details
	Properties Filter, Group, Nillable Description The title of the insight.
TrendType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The trend type of the insight. Possible values include: • Negative • Positive • Informational
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of insight. Possible values include: • Opportunity is unlikely to close in time • Prospect has not responded • Opportunity slowing • Opportunity boosting • Time-consuming opportunity • No communication • Re-engaged opportunity • Opportunity has an overdue task • Opportunity is overdue • Opportunity has no open activity • Unusual opportunity amount

Usage

This object is read-only and isn't supported in workflows, triggers, or process builder.

OpportunityLineItem

Represents an opportunity line item, which is a member of the list of Product2 products associated with an Opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The user must have the “Edit” permission on Opportunity records to create or update opportunity line items on an opportunity.

Fields

Field	Details
CanUseQuantitySchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the opportunity product can have a quantity schedule (<code>true</code>) or not (<code>false</code>). This field is read-only.
CanUseRevenueSchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the opportunity product can have a revenue schedule (<code>true</code>) or not (<code>false</code>). This field is read-only.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.
ConnectionSentId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency enabled, and a Pricebook2 isn't specified on the parent opportunity (that is, the Pricebook2Id field is blank on the opportunity referenced by this object's OpportunityId), then the value of this field must match the currency of the CurrencyIsoCode field on the PricebookEntry records that are associated with this object.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the opportunity line item. Limit: 255 characters.
Discount	Type percent Properties Create, Filter, Nillable, Sort, Update Description Discount for the product as a percentage. When updating these records: - If you specify Discount without specifying TotalPrice, the TotalPrice is adjusted to accommodate the new Discount value, and the UnitPrice is held constant. - If you specify both Discount and Quantity, you must also specify either TotalPrice or UnitPrice so the system knows which one to automatically adjust.

Field	Details
HasQuantitySchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Indicates whether a quantity schedule has been created for this object (<code>true</code>) or not (<code>false</code>).
HasRevenueSchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a revenue schedule has been created for this object (<code>true</code>) or not (<code>false</code>). If this object has a revenue schedule, the <code>Quantity</code> and <code>TotalPrice</code> fields can't be updated. In addition, the <code>Quantity</code> field can't be updated if this object has a quantity schedule. Update requests aren't rejected but the updated values are ignored.
HasSchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If either <code>HasQuantitySchedule</code> or <code>HasRevenueSchedule</code> is <code>true</code>, this field is also <code>true</code>.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record. Available in API version 50.0 and later.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed. Available in API version 50.0 and later.
ListPrice	Type currency Properties Filter, Nillable, Sort Description Corresponds to the <code>UnitPrice</code> on the PricebookEntry that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.
Name	Type string Properties Filter, Nillable, Sort Description The opportunity line item name (known as “Opportunity Product” in the user interface). This read-only field is available in API version 30.0 and later.
OpportunityId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the associated Opportunity. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
PricebookEntryId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description Required. ID of the associated PricebookEntry. Exists only for those organizations that have Products enabled as a feature. In API versions 1.0 and 2.0, you can specify values for either this field or <code>ProductId</code>, but not both. For this reason, both fields are declared nillable. In API version 3.0 and later, you must specify values for this field instead of <code>ProductId</code>. This is a relationship field. Relationship Name PricebookEntry Relationship Type Lookup Refers To PricebookEntry
ProductId	Type reference Properties Create, Filter, Nillable Description ID of the related Product record. This field is unavailable as of version 3.0 and is only provided for backward compatibility. The Product object is unavailable beginning with version 8.0. Use the <code>PricebookEntryId</code> field instead, specifying the ID of the PricebookEntry record. This is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the related Product2 record. This is a read-only field available in API version 30.0 and later. Use the <code>PricebookEntryId</code> field instead, specifying the ID of the PricebookEntry record.
ProductCode	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description This read-only field is available in API version 30.0 and later. It references the value in the ProductCode field of the related Product2 record.
Quantity	Type double Properties Create, Filter, Sort, Update Description Read-only if this record has a quantity schedule, a revenue schedule, or both a quantity and a revenue schedule. When updating these records: • If you specify <code>Quantity</code> without specifying the <code>UnitPrice</code>, the <code>UnitPrice</code> value is adjusted to accommodate the new <code>Quantity</code> value, and the <code>TotalPrice</code> is held constant. • If you specify both <code>Discount</code> and <code>Quantity</code>, you must also specify either <code>TotalPrice</code> or <code>UnitPrice</code> so the system can determine which one to automatically adjust.
RecalculateTotalPrice	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the <code>Quantity</code> value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price. Product2 flag must be set to true.
ServiceDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when the product revenue will be recognized and the product quantity will be shipped. • Opportunity Close Date—<code>ServiceDate</code> is ignored. • Product Date—<code>ServiceDate</code> is used if not null. • Schedule Date—<code>ServiceDate</code> is used if not null and there are no revenue schedules present for this line item, that is, there are no OpportunityLineItemSchedule records with a field <code>Type</code> value of Revenue that are children of this record.

Field	Details
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number indicating the sort order selected by the user. Client applications can use this to match the sort order in Salesforce.
Subtotal	Type currency Properties Filter, Nillable, Sort Description Difference between standard and discounted pricing. Converted currency amounts when the opportunity's currency is different from the user's currency.
TotalPrice	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description This field is available only for backward compatibility. It represents the total price of the OpportunityLineItem. If you don't specify <code>UnitPrice</code>, this field is required. If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>UnitPrice</code> is required. When updating these records, you can change either this value or the <code>UnitPrice</code>, but not both at the same time. This field is nillable, but you can't set both <code>TotalPrice</code> and <code>UnitPrice</code> to null in the same update request. To insert the <code>TotalPrice</code> via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the opportunity line item has a revenue schedule. If the opportunity line item doesn't have a schedule or only has a quantity schedule, this field can be updated.
UnitPrice	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The unit price for the opportunity line item. In the Salesforce user interface, this field's value is calculated by dividing the total price of the opportunity line item by the quantity listed for that line item. Label is Sales Price. This field or <code>TotalPrice</code> is required. You can't specify both. If you specify <code>Discount</code> and <code>Quantity</code>, this field or <code>TotalPrice</code> is required.

Usage

An Opportunity can have associated OpportunityLineItem records only if the Opportunity has a Pricebook2. An OpportunityLineItem must correspond to a Product2 that is listed in the opportunity's Pricebook2. For information about inserting OpportunityLineItem for an opportunity that doesn't have an associated Pricebook2 or any existing line items, see [Effects on Opportunities](#).

This object is defined only for orgs with products enabled as a feature. If the products feature isn't enabled, this object doesn't appear in the `describeGlobal()` call, and you can't use `describeObjects()` or query the OpportunityLineItem object.

For a visual diagram of the relationships between OpportunityLineItem and other objects, see the [Product & Price Book](#) diagram.

Note:

- If the multicurrency option is enabled, the `CurrencyIsoCode` field is present. It can't be modified, and is always set to the value of the `CurrencyIsoCode` of the parent Opportunity.
- If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you've applied validation rules or Apex triggers, they're bypassed when they're first inserted.

Effects on Opportunities

Opportunities with associated OpportunityLineItem records are affected in the following ways:

- Creating an OpportunityLineItem increments the Opportunity `Amount` value by the `TotalPrice` of the OpportunityLineItem. Additionally, inserting an OpportunityLineItem increments the `ExpectedRevenue` on the opportunity by the `TotalPrice` times the opportunity `Probability`.
- The Opportunity `Amount` becomes a read-only field when the opportunity has line items. The API ignores any attempt to update this field on an opportunity with line items. Update requests aren't rejected, but the updated value is ignored.
- You can't update the `PricebookId` field or the `CurrencyIsoCode` field on the opportunity if line items exist. The API rejects any attempt to update these fields on an opportunity with line items.
- When you create or update an OpportunityLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 associated with the opportunity.
 - If the opportunity has an associated active or inactive Pricebook2, the OpportunityLineItem is created or updated.
 - If the opportunity doesn't have an associated Pricebook2, but the OpportunityLineItem corresponds to a PricebookEntry in an active Pricebook2 where the PricebookEntry has a `CurrencyIsoCode` value that matches the `CurrencyIsoCode` value of the opportunity, the API automatically sets this PriceBook2 on the opportunity.
 - If the opportunity doesn't have an associated Pricebook2, but the line item corresponds to a PricebookEntry in a Pricebook2 that isn't active or that has a `CurrencyIsoCode` value that does not match the `CurrencyIsoCode` value of the opportunity, an error is returned.
- The Opportunity `HasOpportunityLineItem` field is set to `true` when an OpportunityLineItem is inserted for that Opportunity.
- When OpportunityLineItem records are directly deleted, they aren't sent to the recycle bin and can't be undeleted. The `getDeleted()` call shows deleted OpportunityLineItem records until they're purged, which is usually within the same day or the next day.
- In Lightning, the `ListPrice`, `Name`, and `ProductCode` fields aren't populated before insert because their values are computed after the OpportunityLineItem.Product2Id value is saved. To access a value from these fields, use an After Insert trigger.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

OpportunityLineItemChangeEvent (API version 60.0)

Change events are available for the object.

SEE ALSO:

[OpportunityLineItemSchedule](#)

OpportunityLineItemSchedule

Represents information about the quantity, revenue distribution, and delivery dates for a particular `OpportunityLineItem`.

In API version 38.0 and later, when an `OpportunityLineItem` record is created for a product with a previously established schedule, an `OpportunityLineItemSchedule` record is also created.

In API version 46.0 and later, this object supports custom fields, validation rules, and Apex triggers. Deleting a schedule now also invokes delete triggers. If customizable product schedules are enabled, you can use custom fields in default schedules and customize their layout. But if you’ve applied validation rules or Apex triggers, they’re bypassed when they’re first inserted.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Nillable, Restricted picklist, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. This field is available in version 10.0 and later.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the opportunity line item schedule. Limit: 80 characters. Label is Comments.

Field	Details
OpportunityLineItemId	Type reference Properties Create, Filter Description Required. ID of the associated OpportunityLineItem.
Quantity	Type double Properties Create, Filter, Nillable, Sort, Update Description Required. The total number of units to be scheduled in a quantity schedule.
Revenue	Type currency Properties Create, Filter, Nillable, Sort, Update Description The revenue that should be recognized, or the quantity that should be shipped, or both - depending upon the value of Type.
ScheduleDate	Type date Properties Create, Filter, Group, Sort, Update Description Required. The date the associated OpportunityLineItem is to be scheduled for an event: delivery, shipping, or any other date you wish to track.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of the schedule. Required when inserting an OpportunityLineItemSchedule. Valid values include Quantity, Revenue, or Both.

Allowed Type Field Values

The allowed `Type` values for an `OpportunityLineItemSchedule` depend on the product-level schedule preferences and whether the line item has any existing schedules. The following criteria must be met:

- The `Product2` on which the `OpportunityLineItem` is based must have the appropriate `CanUseRevenueSchedule` or `CanUseQuantitySchedule` fields (or both) set to `true`.
- When you create a schedule for a line item that does not have any existing schedules, you can specify any valid value.
- If you create a schedule for a line item that already has existing schedules, the new schedule must be consistent with the existing schedules. The following matrix outlines the allowable values:

Value of <code>HasRevenueSchedule</code> on line item	Value of <code>HasQuantitySchedule</code> on line item	Allowable Type Values
false	false	Revenue, Quantity, both
false	true	Quantity
true	false	Revenue
true	true	both

Allowed Quantity and Revenue Field Values

The allowable `Quantity` and `Revenue` field values depend on the value of the `Type` field:

Type Value	Allowable Quantity Value	Allowable Revenue Value
Revenue	Null	Non-null
Quantity	Non-null	Null
both	Non-null	Non-null

The `Quantity` and `Revenue` fields have the following restrictions when this object is updated:

- For a schedule of `Type Quantity`, you can't update a null `Revenue` value to non-null. Likewise for a schedule of `Type Revenue`, you can't update a null `Quantity` value to non-null.
- You can't null out the `Quantity` field for a schedule of `Type Quantity`. Likewise you can't null out the `Revenue` field for a schedule of `Type Revenue`.
- You can't null out either the `Revenue` or `Quantity` fields for a schedule of type `Both`.

Usage

`OpportunityLineItemSchedule` supports two types of schedules:

- Quantity schedules
- Revenue schedules

The user must have edit access rights on the `Opportunity` in order to create or update line item schedules on that opportunity.

Products and Schedules Must Be Enabled

The `OpportunityLineItemSchedule` object is defined only for those organizations that have the products and schedules features enabled. If the organization does not have the products and schedules features, the `OpportunityLineItemSchedule` object is not returned in a describe, and you can't describe or query `OpportunityLineItemSchedule` records.

Effects on Opportunities and Opportunity Line Items

`OpportunityLineItemSchedule` records affect opportunities and opportunity line items in the following ways:

- Inserting an `OpportunityLineItemSchedule` of Type "Revenue" or "Quantity" increments the `TotalPrice` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule Revenue` amount. Inserting an `OpportunityLineItemSchedule` of Type `Quantity` or `Both` increments the `Quantity` field on the `OpportunityLineItem` by the `OpportunityLineItemSchedule Quantity` amount.
- Creating an `OpportunityLineItemSchedule` record affects the original opportunity:
 1. The `Opportunity Amount` is incremented the by `OpportunityLineItemSchedule revenue` amount
 2. The `Opportunity ExpectedRevenue` is incremented by the line item schedule amount multiplied by the `Opportunity Probability`
- Deleting an `OpportunityLineItemSchedule` has a similar effect on the related `OpportunityLineItem` and `Opportunity`. Deleting an `OpportunityLineItemSchedule` decrements the `OpportunityLineItemTotalPrice` by the deleted `OpportunityLineItemSchedule Quantity` or `Revenue` amount. The `Opportunity Amount` is also decremented by the `OpportunityLineItemSchedule Quantity` or `Revenue` amount, and the `Opportunity ExpectedRevenue` is reduced by `OpportunityLineItemSchedule Quantity` or `Revenue` amount multiplied by the `Opportunity Probability`.

Deleting an Opportunity Line Item Schedule

Deleting the last remaining schedule will set the corresponding `HasQuantitySchedule` or `HasRevenueSchedule` flags (or both) to `false` on the parent line item.

SEE ALSO:

[OpportunityLineItem](#)

[Product2](#)

OpportunityLineItemSplit

Represents information about an opportunity product split, including percentages, amounts, and owner. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Before creating OpportunityLineItemSplit records, enable Team Selling, set up opportunity splits, and enable product splits on at least one opportunity split type in Setup.

Fields

Field	Details
ArchivedTerritoryName	Type String Properties Filter, Group, Nillable, Sort Description The name of the associated territory that's on an archived territory model. If the OpportunityLineItemSplit isn't associated with a territory on an archived territory model, the field value is null. This field is available in API version 62.0 and later.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency enabled, and a Pricebook2 is specified on the opportunity (that is, the Pricebook2Id field isn't blank on the opportunity referenced by this object's OpportunityId), then the value of this field must match the currency of the CurrencyIsoCode field on the PricebookEntry records that are associated with this object. Possible values are: • BRL—Brazilian Real • CAD—Canadian Dollar • EUR—Euro • USD—U.S. Dollar The default value is USD.
OpportunityLineItemId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the associated parent OpportunityLineItem. This field is a relationship field.

Field	Details
	Relationship Name OpportunityLineItem Relationship Type Lookup Refers To OpportunityLineItem
Split	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Read-only. Automatically generated number identifying the split within the opportunity.
SplitAmount	Type currency Properties Filter, Nillable, Sort Description The amount or value of the split.
SplitNote	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Optional text about the split.
SplitOwnerId	Type reference Properties Create, Filter, Group, Sort Description ID of the user who is the owner of the split. This field is a relationship field. Relationship Name SplitOwner Relationship Type Lookup Refers To User

Field	Details
SplitPercentage	Type percent Properties Create, Filter, Sort, Update Description The percentage of the OpportunityLineItem's value that the split represents.
SplitTypeId	Type reference Properties Create, Filter, Group, Sort Description ID of the associated OpptyLineItemSplitType. This field is a relationship field. Relationship Name SplitType Relationship Type Lookup Refers To OpptyLineItemSplitType
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the associated territory. This field is a relationship field, and is available in API version 62.0 and later. Relationship Name Territory2 Relationship Type Lookup Refers To Territory2

Usage

Use the OpportunityLineItemSplit object to manage opportunity product splits for an opportunity.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

[OpportunityLineItemSplitHistory](#) on page 63 (API version 59.0)

History is available for tracked fields of the object.

OpportunityOwnerSharingRule

Represents a rule for sharing an opportunity with users other than the owner.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.
DeveloperName	Type string Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package and the changes are reflected in a subscriber’s organization. Corresponds to Rule Name in the user interface. This field is available in API version 24.0 and later.

Field	Details
	When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the source group. Opportunities owned by users in the source group trigger the rule to give access.
Name	Type string Properties Create, Filter, Group, Sort, Update Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.
OpportunityAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A value that represents the type of sharing being allowed. The possible values are: • Read • Edit
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID representing the target user or group. The target user or group is being given access.

Usage

Use this object to manage the sharing rules for opportunities. General sharing and Territory-related sharing use this object.

SEE ALSO:

[Case](#)

[Metadata API Developer Guide: SharingRules](#)

OpportunityPartner

This object represents a partner relationship between an Account and an Opportunity. An OpportunityPartner record is created automatically when a Partner record is created for a partner relationship between an account and an opportunity.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
AccountToId	Type reference Properties Create, Filter, Group, Sort Description ID of the partner Account in the partner relationship. This is a relationship field. Relationship Name AccountTo Relationship Type Lookup Refers To Account
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the account is the opportunity's primary partner (<code>true</code>) or not (<code>false</code>). Label is Primary .
OpportunityId	Type reference Properties Create, Filter, Group, Sort Description ID of the Opportunity that is in the partner relationship. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
ReversePartnerId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the reciprocal OpportunityPartner record in a partner relationship.
Role	Type picklist Properties Create, Filter, Group, Nillable, Sort Description The UserRole that the Account has on the Opportunity. For example, <code>Reseller</code> or <code>Manufacturer</code> .

Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates two OpportunityPartner records, one for the forward relationship and one for the reverse.

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both the Partner and OpportunityPartner records are the same.

- If you set the `IsPrimary` value to `1 (true)` upon insert of a new `OpportunityPartner`, the `IsPrimary` value is automatically set to `0 (false)` for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

SEE ALSO:

- [Partner](#)
- [AccountPartner](#)

OpportunityRelatedDeleteLog

Represents an audit log of the deletion of opportunity-related child records, such as opportunity team members, product splits, or opportunity splits. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only when the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. When multicurrency is enabled, and a Pricebook2 is specified on the parent opportunity (that is, the <code>Pricebook2Id</code> field isn't blank on the opportunity record referenced by this object's <code>OpportunityId</code>), then the value must match the currency of the <code>CurrencyIsoCode</code> field on the PricebookEntry records that are associated with this object. Possible values are: • <code>AED</code>—UAE Dirham • <code>CAD</code>—Canadian Dollar • <code>INR</code>—Indian Rupee • <code>USD</code>—U.S. Dollar The default value is <code>USD</code>.
DataType	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was deleted. Possible values are: • Double • DynamicEnum • EntityId • StaticEnum • Text
DeleteLog	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
FieldName	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The name of the field that was deleted. Possible values are: • OpportunityLineItemSplit.SplitOwnerId • OpportunityLineItemSplit.SplitPercentage • OpportunityLineItemSplit.SplitTypeId • OpportunitySplit.SplitOwnerId • OpportunitySplit.SplitPercentage • OpportunitySplit.SplitTypeId • OpportunityTeamMember.TeamMemberRole • OpportunityTeamMember.UserId • Product2.Name
OpportunityId	Type reference Properties Filter, Group, Sort Description Required. ID of the associated opportunity.

Field	Details
	This field is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
Parent	Type string Properties Filter, Group, Nillable, Sort Description ID of the record that was deleted. Records with the same Parent text indicate that the value shown in the Value field came from the same record that was previously deleted. Refer to the FieldName field to see which field is being tracked.
SubjectType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The object that's being recorded for this row of data. Possible values are: • OpportunityLineItemSplit • OpportunitySplit • OpportunityTeamMember
Value	Type anyType Properties Nillable, Sort Description The value of the field that was deleted.

OpportunityShare

Represents a sharing entry on an Opportunity.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

 **Note:** While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeSObjects()`, `create()`, `delete()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with access to the Opportunity object can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
<code>IsDeleted</code>	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
<code>OpportunityAccessLevel</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the user or group has to the opportunity. The possible values are: • <code>Read</code> • <code>Edit</code> • <code>All</code>—This value is not valid when creating, updating, or deleting records. This field must be set to an access level that's higher than the org's default access level for opportunities.
<code>OpportunityId</code>	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description ID of the opportunity associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: • <code>Owner</code>—The User is the owner of the opportunity. • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the opportunity with the user or group. • <code>Rule</code>—The User or Group has access via an opportunity sharing rule. • <code>GuestRule</code>—The User or Group has access via an opportunity guest user sharing rule. • <code>ImplicitChild</code>—The User or Group has access to the opportunity on the account associated with this opportunity. After faster account sharing recalculation is enabled, sharing entries with this value aren't returned in queries. Instead of storing implicit child shares, record access is determined dynamically. • <code>Implicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. • <code>ARImplicit</code>—The User, who belongs to a partner or customer account, has access to the opportunity via an account relationship data sharing rule. • <code>Sales Team</code>—The User has access to the opportunity because the user is on the opportunity sales team for the opportunity. The <code>OpportunityTeamMember</code> object sets the access level. See <code>OpportunityTeamMember</code> for more information. • <code>Territory</code>—The forecast manager has access because they are assigned to a territory above the territory that is assigned the opportunity.
UserOrGroupId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort
	Description ID of the user or group that has been given access to the opportunity. This field can't be updated. This is a polymorphic relationship field.
	Relationship Name UserOrGroup
	Relationship Type Lookup
	Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit opportunities owned by other users.

Note: After faster account sharing recalculation is enabled for your org, we no longer store implicit share records between accounts and their child opportunity records. Sharing entries that have a value of `ImplicitChild` in the `RowCause` field aren't returned when you query this object. Instead, the system dynamically determines whether users can access child opportunity records when they try to access them. This change speeds up ownership and sharing recalculation for accounts.

For more information, see the [Faster Account Sharing Recalculation](#) knowledge article.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

If an opportunity is shared in multiple ways with a user, you don't always see multiple sharing records. If a user has access to an opportunity for one or more of the following `RowCause` values, the records in the `OpportunityShare` object are compressed into one record with the highest level of access.

- `Manual`
- `Owner`

[Overview of Salesforce Objects and Fields](#)

OpportunitySplit

`OpportunitySplit` credits one or more opportunity team members with a portion of the opportunity amount. This object is available in API version 16.0 and later for pilot customers, and version 28.0 and later for others.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ArchivedTerritoryName	Type String Properties Filter, Group, Nillable, Sort Description The name of the associated territory that's on an archived territory model. If the OpportunityLineItemSplit isn't associated with a territory on an archived territory model, the field value is null. This field is available in API version 62.0 and later.
HasOpportunityLineItemSplit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Indicates whether the opportunity split has a split on the opportunity line item level (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>. This field is available in API version 58.0 and later.
OpportunityId	Type reference Properties Create, Filter, Group, Sort Description ID of the opportunity for which the split is being created. This field is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity
Split	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Read-only. Automatically generated number identifying the split within the opportunity.

Field	Details
SplitAmount	Type currency Properties Filter, Nillable, Sort Description Monetary amount of the split. Label is Split Amount.
SplitNote	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Enter any notes or comments about the split. The character limit is 255. Label is Split Note.
SplitOwnerId	Type reference Properties Create, Filter, Group, Sort Description The opportunity owner. This field is a relationship field. Relationship Name SplitOwner Relationship Type Lookup Refers To User
SplitPercentage	Type percent Properties Create, Filter, Sort, Update Description Split percentage that this team member receives. If the split type is validated to a 100% total, this number can range from 0 to 100. If the total isn't validated, this number can range from 0 to 1,000. Label is Split (%).

Field	Details
SplitTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Auto-generated, numeric ID for the split type defined by the OpportunitySplitType object. This field is available in API version 28 and later. If this field is blank, the system automatically specifies the default split type for the opportunity amount, which is validated to 100%. This field is a relationship field. Relationship Name SplitType Relationship Type Lookup Refers To OpportunitySplitType
Territory2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the associated territory. This field is a relationship field, and is available in API version 62.0 and later. Relationship Name Territory2 Relationship Type Lookup Refers To Territory2

Usage

Use the OpportunitySplit object to manage splits for an opportunity.

If you change the opportunity owner using the API, the old owner remains on the opportunity team with either Read-only access, or the level of access specified in your organization-wide defaults.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OpportunitySplitChangeEvent (API version 48.0)

Change events are available for the object.

OpportunitySplitHistory on page 63 (API version 59.0)

History is available for tracked fields of the object.

OpportunitySplitType

OpportunitySplitType provides unique labels and behavior for each split type. This object is available in API version 28.0 and later. There are two default split types: revenue splits, which must total 100%, and overlay splits, which can total any percentage.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Description	Type textarea Properties Create, Filter, Group, Sort, Update Description Describes the purpose of the split type, providing context to future developers.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The unique name of the object in the API. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field Name	Details
	Description Enables or disables the split type.
IsTotalValidated	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description If <code>true</code> , the split must total 100%. If <code>false</code> , the split can total any percentage.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates language of split labels in the user interface.
ManageableState	Type ManageableState enumerated list Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the manageable state of the specified component that is contained in a package: • <code>beta</code> • <code>deleted</code> • <code>deprecated</code> • <code>deprecatedEditable</code> • <code>installed</code> • <code>installedEditable</code> • <code>released</code> • <code>unmanaged</code> This field is available in API version 38.0 and later.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The user-interface label for the split type.

Field Name	Details
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
SplitEntity	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The containing record type, such as an opportunity. Available in API version 30 and later.
SplitField	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Indicates which currency field of the opportunity object is split. Available in API version 30 and later.
SplitDataStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description Indicates the status of the split type. Available in API version 30 and later.

OpportunityStage

Represents the stage of an Opportunity in the sales pipeline, such as New Lead, Negotiating, Pending, Closed, and so on.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or master label.
DefaultProbability	Type percent Properties Filter, Nillable, Sort, Description The default percentage estimate of the confidence in closing a specific opportunity for this opportunity stage value. Label is Probability (%) .
Description	Type string Properties Filter, Group, Nillable, Sort Description Description of this opportunity stage value. Limit: 255 characters.
ForecastCategory	Type picklist

Field	Details
	Properties Filter, Group, Restricted picklist, Sort Description The default forecast category for this opportunity stage value. The forecast category automatically determines how opportunities are tracked and totaled in a forecast. Possible values are: • BestCase • Closed • Forecast • MostLikely • Omitted • Pipeline
ForecastCategoryName	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Available in API version 12.0 and later. The default forecast category value for this opportunity stage value. Possible values are: • Best Case • Closed • Commit • Most Likely • Omitted • Pipeline
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this opportunity stage value is active (<code>true</code>) or not (<code>false</code>). Inactive opportunity stage values are not available in the picklist and are retained for historical purposes only.
IsClosed	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this opportunity stage value represents a closed opportunity (<code>true</code>) or not (<code>false</code>). Multiple opportunity stage values can represent a closed opportunity. Label is Closed.
IsWon	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this opportunity stage value represents a won opportunity (<code>true</code>) or not (<code>false</code>). Multiple opportunity stage values can represent a won opportunity. Label is Won.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Master label for this opportunity stage value. This display value is the internal label that does not get translated. Limit: 255 characters.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description Number used to sort this value in the opportunity stage picklist. These numbers are not guaranteed to be sequential, as some previous opportunity stage values might have been deleted.

Usage

This object represents a value in the opportunity stage picklist, which provides additional information about the stage of an Opportunity, such as its probability or forecast category. Query this object to retrieve the set of values in the opportunity stage picklist, and then use that information while processing Opportunity records to determine more information about a given opportunity. For example, the application could test whether a given opportunity is won or not based on its `StageName` value and the value of the `IsWon` property in the associated `OpportunityStage` object.

This object is read-only via the API.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

OpportunityTag

Associates a word or short phrase with an Opportunity.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist

Field Name	Details
	Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

OpportunityTag stores the relationship between its parent TagDefinition and the Opportunity being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

OpportunityTeamMember

Represents a User on the opportunity team of an Opportunity.

See also UserTeamMember, which represents a User who is on the default Opportunity team of another user.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.  Note: An OpportunityTeamMember that is deleted isn't moved to the Recycle Bin and can't be undeleted, unless the record was cascade-deleted when deleting a related Opportunity. For directly deleted OpportunityTeamMember records,

Field	Details
	don't use the <code>isDeleted</code> field to detect deleted records in SOQL queries. Instead, use <code>getDeleted()</code> .
Name	Type string Properties Filter, Nillable, Sort Description The team member name. This read-only field is available in API version 30.0 and later.
OpportunityAccessLevel	Type picklist Properties Filter, Nillable, Restricted picklist Description Opportunity access level for this team member. Valid values: • Read • Edit • All This field is supported in triggers, but not in workflows or validation rules. It's editable in API version 36.0 and later.
OpportunityId	Type reference Properties Create, Filter Description Required. ID of the Opportunity associated with this opportunity team. This field can't be updated.
PhotoURL	Type URL Properties Filter, Nillable, Sort, Group Description Read only. Retrieves the users Chatter photo URL. This field is available in API version 32.0 and later.
TeamMemberRole	Type picklist

Field	Details
	Properties Create, Filter, Nillable, Update Description Role that the team member has on the opportunity. The org’s admin sets the valid values in the Opportunity Team Roles picklist. Label is Team Role.
Title	Type string Properties Filter, Nillable, Sort, Group Description Read only. Retrieves the user’s title. This field is available in API version 36.0 and later.
UserId	Type reference Properties Create, Filter Description Required. ID of the User who is a member of the opportunity team. This field can’t be updated.

Usage

If you create a record for this object and the `OpportunityId` and `UserId` combination matches an existing record, the system updates any modified fields and returns the existing record.

In the user interface, users can set up an opportunity team for the opportunities they own. The opportunity team includes other users that are working on the opportunity with them. This object is available only in organizations that have enabled team selling.

 **Note:** The behavior for changing ownership of opportunities is different using the user interface when the previous owner is on an opportunity team. For example, when you change the owner of an opportunity using the API, the previous owner’s access becomes Read Only or the access specified in your organization-wide default for opportunities, whichever is greater. However, performing this same action in the user interface allows you to select the access level for the previous owner when the previous owner is on an opportunity team.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

OpportunityTeamMemberHistory on page 63 (API version 59.0)

History is available for tracked fields of the object.

SEE ALSO:

[UserTeamMember](#)

OpptyLineItemSplitType

Represents an opportunity product split type. This object is available in API version 58.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Description	Type textarea Properties Filter, Group, Sort Description Text description of the opportunity line item split type. Limit: 80 characters.
DeveloperName	Type string Properties Filter, Group, Sort Description The developer (API) name of the opportunity line item split type.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the opportunity line item split type is active (<code>true</code>) or not (<code>false</code>). The value of this field is inherited from the <code>IsActive</code> field of the parent <code>OpportunitySplitType</code> record.

Field	Details
IsTotalValidated	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the OpportunityLineItemSplit records associated with the OpportunityLineItem must have SplitPercent values that aggregate to 100% (<code>true</code>) or not (<code>false</code>). The value of this field is inherited from the <code>IsTotalValidated</code> field of the parent OpportunitySplitType record.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the opportunity line item split type.
MasterLabel	Type string Properties Filter, Group, Sort Description The opportunity line item split type label.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object.
OpportunitySplitTypeId	Type reference Properties Filter, Group, Sort Description The ID of the parent OpportunitySplitType. Every OpptyLineItemSplitType must have a parent OpportunitySplitType. This field is a relationship field. Relationship Name OpportunitySplitType Relationship Type Lookup

Field	Details
	Refers To OpportunitySplitType
SplitDataStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The state of the asynchronous job to delete OpportunityLineItemSplit records when the associated OpportunityLineItemSplitType record is deleted. Possible values are: • <code>DeletionFailed</code>—The job failed the last time it ran. • <code>Ready</code>—The job hasn't run or isn't running. OpportunityLineItemSplit records associated with the OpportunityLineItemSplitType can be interacted with. • <code>ToBeDeleted</code>—The job is running.
SplitEntity	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Name or ID of the entity that contains the field being split. In API version 58.0, this value is always OpportunityLineItem.
SplitField	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Name or ID of the field on OpportunityLineItem that is being split. If it's a standard field, then the value is the API name of the field. If it's a custom field, the value is the custom field definition ID.

Usage

When an OpportunitySplitType has product splits enabled in Setup, then an OpportunityLineItemSplitType record is created. For example, if there is an OpportunitySplitType record with a SplitField of `Amount` and product splits is enabled in Setup, then there is an OpportunityLineItemSplitType record with a SplitField of `TotalPrice` (since the TotalPrice field rolls up to Amount).

Order

Represents an order associated with a contract or an account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. ID of the Account associated with this order. Only updated when the order's <code>StatusCode</code> value is <i>Draft</i>. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActivatedById	Type reference Properties Filter, Group, Nillable, Sort, Update Description ID of the user who activated this order. This field is a relationship field. Relationship Name ActivatedBy Relationship Type Lookup Refers To User
ActivatedDate	Type dateTime Properties Filter, Nillable, Sort, Update

Field Name	Details
	Description Date and time when the order was activated.
BillingAddress	Type address Properties Filter, Nillable Description
BillingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City for the billing address for this order. The maximum size is 40 characters.
BillingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country for the billing address for this order. The maximum size is 80 characters.
BillingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO country code for the billing address for this order.
BillingEmailAddress	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address for this order's billing address. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.

Field Name	Details
BillingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode of the address.
BillingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
BillingPhoneNumber	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number for this order's billing address. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
BillingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal code for the billing address for this order. The maximum size is 20 characters.

Field Name	Details
BillingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State for the billing address for this order. The maximum size is 80 characters.
BillingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO state code for the order's billing address.
BillingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street address for the billing address.
BillToContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the contact that the order is billed to.
CompanyAuthorizedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the user who authorized the account associated with the order. This field is a relationship field. Relationship Name CompanyAuthorizedBy Relationship Type Lookup Refers To User

Field Name	Details
CompanyAuthorizedDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which your organization authorized the order.
ContractId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the contract associated with this order. Only updated when the order's <i>StatusCode</i> value is <i>Draft</i>. This field is a relationship field. Relationship Name Contract Relationship Type Lookup Refers To Contract
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code.
CustomerAuthorizedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the contact who authorized the order. This field is a relationship field. Relationship Name CustomerAuthorizedBy Relationship Type Lookup

Field Name	Details
	Refers To Contact
CustomerAuthorizedDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date on which the contact authorized the order.
Description	Type textarea Properties Create, Nillable, Update Description Description of the order.
EffectiveDate	Type date Properties Create, Filter, Group, Sort, Update Description Date at which the order becomes effective. Label is Order Start Date .
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date at which the order ends. Label is Order End Date .
ExternalCustomerReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The external customer ID from an ecommerce channel or any other external channel. Label is External Customer ID Reference . This field is available in API version 66.0 and later.
GrandTotalAmount	Type currency

Field Name	Details
	Properties Filter, Nillable, Sort Description Sum of <code>TotalAmount</code> and <code>TotalTaxAmount</code>. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
<code>IsReductionOrder</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Read only. Determines whether an order is a reduction order. Label is Reduction Order.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
<code>Name</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name for this order.
<code>OpportunityId</code>	Type reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description ID for the opportunity that's associated with this order.
OrderedDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that the order was placed. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
OrderManagementReferenceIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The field used by Order Management to store the external reference identifier for B2C Commerce orders. On creation, the B2C Integration sets this value to <i>B2C realm ID + "_" + B2C instance ID + "@" + B2C Commerce catalog/domain ID + "@" + B2C Commerce order number</i>. Otherwise, it isn't set. When you create an OrderSummary, if you don't specify an ExternalReferenceIdentifier value, it's set to this value. If this value is null, then the system generates a value for ExternalReferenceIdentifier. This value isn't required to be unique in an organization, but the OrderSummary ExternalReferenceIdentifier is. This field is available in API version 56.0 and later.
OrderNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Order number assigned to this order (not the unique, system-generated ID assigned during creation). The maximum size is 30 characters.
OrderReferenceNumber	Type string

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Order reference number assigned to this order. The maximum size is 80 characters.
OriginalOrderId	Type reference Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description Optional. ID of the original order that a reduction order is reducing, if the reduction order is reducing a single order. Label is Original Order. Editable only if <code>isReductionOrder</code> is <code>true</code>. If the reduction order is reducing more than one order, leave blank. This field is a relationship field. Relationship Name OriginalOrder Relationship Type Lookup Refers To Order
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. ID of the user or queue that owns this order. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentTermId	Type reference Properties Create, Defaulted on create, Filter, Group, Nillable, Sort

Field Name	Details
	Description The ID of the related payment term. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org. This field is a relationship field. Relationship Name PaymentTerm Relationship Type Lookup Refers To PaymentTerm
PoDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date of the purchase order.
PoNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Number identifying the purchase order. The maximum is 80.
Pricebook2Id	Type reference Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Required. ID of the price book associated with this order. This field is a relationship field. Relationship Name Pricebook2 Relationship Type Lookup Refers To Pricebook2
QuoteId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the quote that's associated with this order. If you set <code>QuoteId</code> to null, <code>QuoteLineItemId</code> on all of the order's child order products is set to null.
<code>RecordTypeId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the record type assigned to this order.
<code>RelatedOrderId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The original order that a change order was created from. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later. This field is a relationship field. Relationship Name RelatedOrder Relationship Type Lookup Refers To Order
<code>RelatedOrderType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the related order type. Possible values are: - ChangeOrder - SupplementalOrder

Field Name	Details
	TransferOrder
SalesChannelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Reference to a sales channel entity. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
SalesStoreId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the RetailStore or WebStore associated with this Order. This field is a polymorphic relationship field. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v46.0 and later. Relationship Name SalesStore Relationship Type Lookup Refers To WebStore
ShippingAddress	Type address Properties Filter, Nillable Description Shipping address for the order.
ShippingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description City of the shipping address. The maximum size is 40 characters.
ShippingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country of the shipping address. The maximum size is 80 characters.
ShippingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO country code for the order's shipping address.
ShippingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode of the shipping address.
ShippingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
ShippingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.

Field Name	Details
ShippingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal code of the shipping address. The maximum size is 20 characters.
ShippingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State of the shipping address. The maximum size is 80 characters.
ShippingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO state code for the order's shipping address.
ShippingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street address of the shipping address. Maximum of 255 characters.
ShipToContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the contact that the order is shipped to.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field Name	Details
	Description Picklist of values that indicate order status. Each value is associated with one of the status categories defined in <code>StatusCode</code>. For example, the status picklist might contain <i>Draft</i>, <i>Ready for Review</i>, and <i>Ready for Activation</i> values with a <code>StatusCode</code> of <i>Draft</i>.
<code>StatusCode</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The status category for the order. Label is Status Category. Valid values are: • <code>Draft</code> • <code>Activated</code> • <code>Superseded</code>—This value is applicable only to Revenue Cloud Advanced users and is available in API version 64.0 and later. To use supplemental orders, also known as in-flight amendments, create a status that's associated with the <code>Superseded</code> status code. .
<code>TaxLocaleType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of tax calculation that Salesforce uses for the order's order items. VAT regions use gross tax, which includes tax in all sale amounts. US regions use net tax, which calculates tax separately from the initial sale amount and then adds the sale and tax amounts together in a total. Use <code>TaxLocaleType</code> to determine which types of tax fields to show on your order. If <code>TaxLocaleType</code> is null, the order shows all tax fields. Gross Tax Fields <code>TotalAdjDeliveryAmtWithTax</code> <code>TotalAdjProductAmtWithTax</code> <code>TotalProductAdjDistAmtWithTax</code> <code>TotalDeliveryAdjDistAmtWithTax</code> This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v49.0 and later.

Field Name	Details
TotalAdjDeliveryAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Sum of delivery line amounts, delivery line adjustments, and tax. Order products with null Type fields aren't included. This field is a gross tax field. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v49.0 and later.
TotalAdjProductAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Sum of product line amounts, line adjustments, and tax. Order products with null Type fields aren't included. This field is a gross tax field. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v49.0 and later.
TotalAdjustedDeliveryAmount	Type currency Properties Filter, Nillable, Sort Description Sum of delivery line amounts and delivery line adjustments. Order products with null Type fields aren't included. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalAdjustedDeliveryTaxAmount	Type currency Properties Filter, Nillable, Sort Description Sum of delivery line tax amounts and delivery line tax adjustments.

Field Name	Details
	This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalAdjustedProductAmount	Type currency Properties Filter, Nillable, Sort Description Sum of product line amounts and line adjustments. Order products with null Type fields aren't included. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalAdjustedProductTaxAmount	Type currency Properties Filter, Nillable, Sort Description Sum of line tax amounts and line tax adjustments. Order products with null Type fields aren't included. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalAmount	Type currency Properties Filter, Sort Description The net total amount for the order products associated with this order. This field is available in API v48.0 and later.
TotalDeliveryAdjDistAmount	Type currency Properties Filter, Nillable, Sort Description Roll-up of the order's delivery adjustment distributed amounts. Used only when the Order Adjustment Group has a Type value of Header.

Field Name	Details
	This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalDeliveryAdjDistAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Roll-up of the order's delivery adjustment distributed amounts and tax. Used only when the Order Adjustment Group has a Type value of Header. This field is a gross tax field. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v49.0 and later.
TotalDeliveryAdjDistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Roll-up of the order's delivery adjustment distributed tax amounts. Used only when the Order Adjustment Group has a Type value of Header. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalProductAdjDistAmount	Type currency Properties Filter, Nillable, Sort Description Roll-up of the order's product adjustment distributed amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalProductAdjDistAmtWithTax	Type currency

Field Name	Details
	Properties Filter, Nillable, Sort Description Roll-up of the order's product adjustment distributed amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header. This field is a gross tax field. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v49.0 and later.
TotalProductAdjDistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Roll-up of the order's product adjustment distributed tax amounts. Order products with null Type fields aren't included. Used only when the Order Adjustment Group has a Type value of Header. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Roll-up of all taxes on the order, including delivery taxes, price adjustment taxes, and product taxes. This field is available with Salesforce Order Management, Revenue Cloud, or B2B Commerce license. This field is available in API v48.0 and later.
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description To show more information about your order, you can add custom values to the <code>Type</code> picklist. By default, the <code>Type</code> field doesn't perform any actions or show any values.

Usage

The `Status` field specifies the current state of an order. Status strings represent its current state (*Draft* or *Activated*).

When a client application creates an order, the `Status Code` must be *Draft* and the `Status` must be any value that corresponds to a `Status Code` of *Draft*. The application can then activate an order by updating it and setting the value in its `Status` field to an *Activated* state. However, the `Status` field is the only field you can update when activating the order.

After an order is activated, your client application can change the `Status` back to the *Draft* state—but only if the order doesn't have any child reduction order products. Your client application can delete orders when the `Status` is *Draft* but not when its `Status` is *Activated*.

Client applications can use the API to create, update, delete, and query any Attachment associated with an order.

Orders Without Price Books

If your organization manages products and price books in an external platform, you can use Salesforce API to create orders and order items without values for their price book and price book entry fields. This feature is available only for Salesforce orgs with the B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus packages. Admins enable orders without price books by going to Salesforce Order Settings and selecting the Optional Price Book setting.

In a standard order, Salesforce prompts the sales rep to select a price book when they add the first order product to the order. The sales rep can then add order products that have price book entries in the selected price book. In an order without a price book, Salesforce hides the order's Add Products button and Edit Products button so that sales reps must manage their products and price books by using their external system.

You can create orders without price books only by creating an order with the Salesforce API and leaving the `Pricebook2Id` field null. Orders without price books follow several different guidelines compared to standard orders.

- Orders without price books don't support reduction orders or change orders.
- Order products without price book entries require list prices.
- Orders without price books support only order items without price book entries. Orders with price books support only order items with price book entries.
-  **Important:** Orders without price books are supported with B2B licenses only. Salesforce Order Management requires price books for orders and price book entries for order products.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderChangeEvent (API version 44.0)

Change events are available for the object.

OrderFeed (API version 29.0)

Feed tracking is available for the object.

OrderHistory

History is available for tracked fields of the object.

OrderOwnerSharingRule

Sharing rules are available for the object.

OrderAction

Indicates the type of order, such as a new sale or a cancellation. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available if Subscription Management is enabled in your org.

Fields

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name given to the order action.
OffsetOrderItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the previous order item that is being modified by the business action. For example, the order that is being canceled. This is a relationship field. Relationship Name OffsetOrderItem Relationship Type Lookup Refers To OrderItem
OrderId	Type reference Properties Create, Filter, Group, Sort Description The order containing the order item that implements the business action. This is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order
SourceAssetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset that is changed as a result of the business action. For example, the asset that is being canceled. This is a relationship field. Relationship Name SourceAsset Relationship Type Lookup Refers To Asset

Field	Details
Subtype	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The subtype of the action on the order line item. Valid values are: - FieldAmendment - Rollback - StartDateAdjustment - TransferFrom - TransferTo This field is available with Revenue Cloud in API version 64.0 and later.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The business action that created the order product. Valid values are: - Add - Amend - Cancel - No Change - Renew - Transfer—Available with Revenue Cloud in API version 65.0 and later.

OrderAdjustmentGroup

Group containing a set of adjustments applied to an order. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
AdjustmentBasisReferenceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific coupon applied. This is a polymorphic relationship field. Relationship Name AdjustmentBasisReference Relationship Type Lookup Refers To Coupon This field is available in API version 54.0 and later. This field can only refer to Coupon when B2B Commerce is enabled.
AdjustmentCauseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific promotions applied. This field is a polymorphic relationship field. Relationship Name AdjustmentCause Relationship Type Lookup Refers To PriceAdjustmentTier, Promotion This field is available in API version 52.0 and later. This field can only refer to Promotion when B2B Commerce is enabled.

Field	Details
AdjustmentSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the origin of the adjustment. Possible values are: • Discretionary—The adjustment originates from a decision made by an individual, for example, a manager’s discount granted to a client. • Promotion—The adjustment originates from a promotion, for example, a holiday sale discount. • Rule—Reserved for future use. • System—The adjustment originates from the system, for example, a volume discount after the amount of items reaches a specific number. This field is available in API version 57.0 and later.
AdjustmentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the type of mathematical adjustment to be applied to the order. Possible values are: • AdjustmentAmount—The adjustment is a numerical amount, for example, a cash discount of 20. • AdjustmentPercentage—The adjustment is a percentage amount, for example, a 10% discount. • OverrideAmount—The adjustment is a manual price override. This field is available in API version 57.0 and later.
AdjustmentValue	Type double Properties Create, Filter, Nillable, Sort, Update Description The specified <code>AdjustmentType</code>’s amount to be applied to the order. For example, when the <code>AdjustmentType</code> value is <code>AdjustmentAmount</code>, the <code>AdjustmentValue</code> is expected to equal the value of the <code>TotalAmount</code> field.

Field	Details
	When the <code>AdjustmentType</code> value is <code>AdjustmentPercentage</code>, the <code>AdjustmentValue</code> represents the percentage number, and the <code>TotalAmount</code> field's value will show the calculated adjustment amount. This field is available in API version 57.0 and later.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The currency used for the checkout session. Default value is <code>USD</code>. Possible values are: • <code>USD</code>—U.S. Dollar
Description	Type textarea Properties Create, Nillable, Update Description User-entered information about the order adjustment group.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all total amounts of all adjustments in this group, including tax.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The user-defined name of the order adjustment group.
OrderId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of the order related to the adjustments in this order adjustment group.

Field	Details
	This field is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order
Priority	Type int Properties Create, Filter, Group, Nillable, Sort Description A numeric value that represents the order of precedence of the order adjustment group. It can also represent the order of precedence when applying the <code>AdjustmentType</code> values. For example, an order can have two adjustments: a \$100 discount and a 10% discount. This field will tell the pricing engine which adjustment needs to be applied first. This field is available in API version 57.0 and later.
RelatedAdjustmentGroupId	Type reference Properties Filter, Group, Nillable, Sort Description The unique identifier of the original order's adjustment group. This field is a useful reference in change order scenarios. This field is a relationship field. Relationship Name RelatedAdjustmentGroup Relationship Type Lookup Refers To OrderAdjustmentGroup
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The total of all order adjustments in this order adjustment group, excluding tax.

Field	Details
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description The total tax for all order adjustments in this order adjustment group.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates how the adjustment was applied to the order. Possible values are: • Header: — The adjustment was applied to the order's balance, and then distributed among the order products in the adjustment group. • SplitLine— The adjustment was applied to order product balances for the order products in the adjustment group.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrderAdjustmentGroupChangeEvent](#) on page 68

Change events are available for the object.

[OrderAdjustmentGroupFeed](#) on page 55

Feed tracking is available for the object.

[OrderAdjustmentGroupHistory](#) on page 63

History is available for tracked fields of the object.

OrderAdjustmentGroupSummary

Represents the current properties and state of a group of related price adjustments. Associated with a set of `OrderItemAdjustmentLineSummaries` that apply to `OrderItemSummaries` belonging to one `OrderSummary`. Corresponds to one or more order adjustment group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

An OrderAdjustmentGroupSummary can represent an adjustment to an entire order as a group of adjustments to each of its products. For example, representing “10% off the order” as a set of 10% off adjustments to each product on the order. It can also represent an adjustment that applies to a subset of the products on an order. For example, representing “buy one, get one 50% off” as a 25% off adjustment to each of two products.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustmentBasisReferenceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific coupon applied. This is a polymorphic relationship field. Relationship Name AdjustmentBasisReference Relationship Type Lookup Refers To Coupon This field is available in API version 54.0 and later.
AdjustmentCauseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific promotions applied. This is a polymorphic relationship field. Relationship Name AdjustmentCause

Field	Details
	Relationship Type Lookup Refers To Promotion This field is available in API version 52.0 and later.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description ISO code for the currency of the OrderSummary associated with the adjustments in the group. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
Description	Type textarea Properties Create, Nillable, Update Description Description of the OrderAdjustmentGroupSummary. This field can be edited.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, including tax, of the associated OrderItemAdjustmentLineSummaries.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Name of the OrderAdjustmentGroupSummary.
OrderSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderSummary associated with the OrderAdjustmentGroupSummary.
OriginalOrderAdjGroupId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the original OrderAdjustmentGroup associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, not including tax, of the associated OrderItemAdjustmentlineSummaries.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAmount.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Type of the OrderAdjustmentGroupSummary. Header represents an order-level adjustment with an OrderItemAdjustmentLineSummary for each OrderItemSummary on the OrderSummary. SplitLine represents any other related set of OrderItemAdjustmentLineSummaries.

Field	Details
	Possible values are: • <code>Header</code> • <code>SplitLine</code> If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

[OrderItemAdjustmentLineSummary](#)

OrderChangeLog

Represents a log record of all change requests made to an order post activation. A log record is always one-to-one to change an order request. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Commerce Cloud standard objects in the inventory data model require at least one of the following licenses: B2B Commerce, D2C Commerce.

Fields

Field	Details
<code>ChangeLineId</code>	Type reference Properties Filter, Group, Sort

Field	Details
	Description The ID of the main change line created as a result of the change request. For example, if you change an order item, the <code>ChangeLineId</code> would be the change OrderItem ID, or if you change a shipping address, the <code>ChangeLineId</code> would be the change OrderDeliveryGroup ID. This field is a polymorphic relationship field. Relationship Name ChangeLine Relationship Type Lookup Refers To OrderAdjustmentGroup, OrderDeliveryGroup, OrderItem, OrderItemAdjustmentLineItem, OrderItemTaxLineItem
ChangeLineType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The method used to implement the change. Possible values are: • Delta • New
ChangeOrderId	Type reference Properties Filter, Group, Sort Description The ID of the change order. This field is a relationship field. Relationship Name ChangeOrder Relationship Type Lookup Refers To Order
ChangeRequest	Type string

Field	Details
	Properties Filter, Group, idLookup, Sort Description The unique ID of the request of which this change is a part.
ChangeSummary	Type textarea Properties Description A human-readable summary of the change details. Here's an example of a change summary: <pre>Reduced quantity by -3. Change adjustment by \$15. Added an adjustment of \$20. Changed tax by \$-0.11, effective 1/1/2020. Added a tax of \$1.5, effective 1/1/2020.</pre>
ChangeType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of the change request. Possible values are: • NewAdjustmentGroups—Add a new header level adjustment. • NewLineAdjustments—Add a new line level adjustment. • NewOrderItems—Add a new order item. • QuantityChange—Add or remove quantity from an original order item.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The ISO code for any currency allowed by the organization. Possible value is: • USD—U.S. Dollar The default value is USD.

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name for the order change log.
RelatedLineId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the main line that is changed as a result of this change. This field is a polymorphic relationship field. Relationship Name RelatedLine Relationship Type Lookup Refers To OrderAdjustmentGroup, OrderDeliveryGroup, OrderItem, OrderItemAdjustmentLineItem, OrderItemTaxLineItem
RelatedOrderId	Type reference Properties Filter, Group, Sort Description The ID of the order that is changed. This field is a relationship field. Relationship Name RelatedOrder Relationship Type Master-detail Refers To Order (the master object)
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description The order status of the change order. Possible values are: • Activated • Draft

Usage

Order change log entries are automatically created each time an order is modified.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderChangeLogFeed on page 55

Feed tracking is available for the object.

OrderChangeLogHistory on page 63

History is available for tracked fields of the object.

OrderChgReasonCategMap

The mapping between an order change reason and a service flow category. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Category	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The service flow that reasons are being categorized by. Possible values are: • Cancel

Field	Details
	- CancelAll - CancelFee - Discount - Exchange - RMA - Return - ReturnFee
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The currency code of the order. Possible values are: - EUR—Euro - GBP—British Pound - USD—U.S. Dollar The default value is <code>USD</code>.
Description	Type textarea Properties Create, Nillable, Update Description The description of the mapping.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Whether the category mapping is active. The default value is <code>false</code>.
IsAvailableForExternalUser	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Whether the mapping can be accessed and used by external users. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the mapping.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the mapping. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
Reason	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The order change reason that's being categorized.

Field	Details
	Possible values are: • Damaged • DoorLocked • IncorrectPrice • Rejected • WrongItem The default value is Damaged.

OrderDeliveryGroup

A group of order items that share a delivery method and address. The delivery method and address are used during the fulfillment process, such as shipping as a gift, downloading, picking up in store, or shipping to a standard address. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
<code>DeliverToAddress</code>	Type address Properties Filter, Nillable Description The delivery group's order items are delivered to this address. Created based on the values of the other <code>DeliverTo</code> fields.
<code>DeliverToCity</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description City address value. Sent to <code>DeliverToAddress</code> .
<code>DeliverToCompanyName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
<code>DeliverToCountry</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country address value. Sent to <code>DeliverToAddress</code>
<code>DeliverToFullFirstName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
<code>DeliverToFullLastName</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
<code>DeliverToFullName</code>	Type string Properties Filter, Group, Nillable, Sort Description
<code>DeliverToFullSalutation</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Possible values are:

Field	Details
	• Dr. • Mr. • Mrs. • Ms. • Prof.
DeliverToGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Geocode accuracy address value. Sent to DeliverToAddress.
DeliverToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Latitude address value. Sent to DeliverToAddress.
DeliverToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Longitude address value. Sent to DeliverToAddress.
DeliverToName	Type string Properties Create, Filter, Nillable, Group, Sort, Update Description Name of the delivery recipient. Sent to DeliverToAddress.
DeliverToPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal Code address value. Sent to DeliverToAddress.

Field	Details
DeliverToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State address value. Sent to DeliverToAddress.
DeliverToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street address value. Sent to DeliverToAddress.
DeliveryInstructions	Type textarea Properties Create, Nillable, Update Description Text field for users to add other delivery instructions.
Description	Type textarea Properties Create, Nillable, Update Description User-defined description for this delivery group.
DesiredDeliveryDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The buyer's target delivery date for the order items included in the delivery group.
EmailAddress	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The buyer's email address.

Field	Details
GiftMessage	Type textarea Properties Create, Nillable, Update Description An optional gift message that the buyer can define if they're sending the order items as a gift to another recipient. Applies to all order items in the delivery group.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the group's total delivery amount and total tax amount.
IsGift	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description All items in the delivery group are gifts.
OrderDeliveryGroupNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Unique number used for referencing this order delivery group.
OrderDeliveryMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the order delivery method related to this order delivery group.
OrderId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description ID of the parent order for this order delivery group. An order can have multiple order delivery groups.
PhoneNumber	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the buyer.
PromisedDeliveryDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Merchant-defined date that the items in this group will be delivered to the customer. Usually defined based on an estimated date from the shipping provider.
RelatedDeliveryGroupId	Type reference Properties Filter, Group, Nillable, Sort Description The original delivery group. Used for reference in change order scenarios.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all adjustments (of type Delivery Charge) made to order items in the order delivery group.
TotalAdjustmentAmtWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of all adjustments (of type Delivery Charge) made to order items in the order delivery group, including tax. This is a gross tax field.

Field	Details
	To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all adjustments (of type Delivery Charge) made to tax lines for order items in the order delivery group.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all Total Amount fields (of type Delivery Charge) on order items within this delivery group. On an order item, the total amount equals the quantity multiplied by the unit price, including adjustments and tax.
TotalLineAmount	Type currency Properties Filter, Nillable, Sort Description The sum of order items (of the type Delivery Charge). On an order item, the total line amount equals the quantity multiplied by the unit price, before adjustments or tax.
TotalLineAmtWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of all TotalLineAmtWithTax fields (of type Delivery Charge) on order items within this delivery group. On an order item, the total line amount with tax equals the quantity multiplied by the unit price, plus tax, before adjustments. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.

Field	Details
TotalLineTaxAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all Total Line Tax Amount fields (of type Delivery Charge) on order items within this delivery group. On an order item, the total line tax amount equals the total tax for that line.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all Total Tax Amount fields (of type Delivery Charge) on order items within this order delivery group.

OrderDeliveryGroupSummary

Represents the current properties and state of a group of OrderItemSummaries, belonging to one OrderSummary, to be fulfilled using the same delivery method and delivered to the same address. A single shipment can include them all, but that isn't guaranteed. Corresponds to one or more order delivery group objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description ISO code for the currency of the OrderSummary associated with the OrderDeliveryGroupSummary. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
DeliverToAddress	Type address Properties Filter, Nillable Description Address of the recipient. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
DeliverToCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address city.
DeliverToCompanyName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
DeliverToCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address country.

Field	Details
DeliverToFullFirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
DeliverToFullLastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description
DeliverToFullName	Type string Properties Filter, Group, Nillable, Sort Description
DeliverToFullSalutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Possible values are: • Dr . • Mr . • Mrs . • Ms . • Prof .
DeliverTo GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy of the geocode for the recipient address. Possible values are: • Address • Block • City

Field	Details
	- County - ExtendedZip - NearAddress - Neighborhood - State - Street - Unknown - Zip
DeliverToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with FulfilledToLongitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
DeliverToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with FulfilledToLatitude to specify the precise geolocation of the recipient address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
DeliverToName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name on the recipient address. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
DeliverToPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Recipient address postal code.
DeliverToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address state.
DeliverToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Recipient address street.
DeliveryInstructions	Type textarea Properties Create, Nillable, Update Description Special instructions for the delivery. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
Description	Type textarea Properties Create, Nillable, Update Description Description of the OrderDeliveryGroupSummary. This field can be edited.
DesiredDeliveryDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Desired date for delivery. This field is informational, available for customizations. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
EmailAddress	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the recipient. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
GiftMessage	Type textarea Properties Create, Nillable, Update Description Gift message to include. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, including adjustments and tax, of the delivery charges associated with the OrderDeliveryGroupSummary. This value only includes OrderItemSummaries of type code Charge.
IsGift	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the OrderDeliveryGroupSummary represents a gift. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
OrderDeliveryGroupSummaryNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the OrderDeliveryGroupSummary.
OrderDeliveryMethodId	Type reference Properties Filter, Group, Sort Description ID of the order delivery method specified for the OrderDeliveryGroupSummary. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
OrderSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderSummary associated with the OrderDeliveryGroupSummary.
OriginalOrderDeliveryGroupId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the original order delivery group associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.

Field	Details
PhoneNumber	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the recipient. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
PromisedDeliveryDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Promised date for delivery. This field is informational, available for customizations. Users with the Edit Delivery Information user permission can modify this field. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description Total price adjustments applied to delivery charges associated with the OrderDeliveryGroupSummary. This value only includes adjustments to OrderItemSummaries of type code Charge.
TotalAdjustmentAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of the price adjustments applied to the delivery charges associated with the OrderDeliveryGroupSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later.

Field	Details
TotalAdjustment TaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustmentAmount.
TotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, including adjustments but not tax, of the delivery charges associated with the OrderDeliveryGroupSummary. This value only includes adjustments to OrderItemSummaries of type code Charge.
TotalLineAmount	Type currency Properties Filter, Nillable, Sort Description Total, not including adjustments or tax, of the delivery charges associated with the OrderDeliveryGroupSummary.
TotalLineAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total of the delivery charges associated with the OrderDeliveryGroupSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later.
TotalLineTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalLineAmount.
TotalTaxAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort
	Description Tax on the TotalAmount.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrderDeliveryGroupSummaryChangeEvent](#) (API version 62.0)

Change events are available for the object.

SEE ALSO:

[OrderDeliveryGroup](#)

[OrderItemSummary](#)

OrderDeliveryMethod

Shows the customizations and options that a buyer selected for their delivery method. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
Carrier	Type picklist
	Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The carrier that the buyer chose for their delivery method. Developers must add values to this field.
ClassOfService	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The carrier class of service that the buyer chose for their delivery method. Developers must add values to this field.
Description	Type textarea Properties Create, Nillable, Update Description Description of the delivery method.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Assign new delivery groups to active delivery methods.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Default name of this record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user who owns an order delivery method record.
ProductId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. This product represents a delivery charge order product for a delivery using this delivery method. For example, you could create a product that represents an overnight express charge and assign it to an overnight express delivery method.
ReferenceNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Reference number for an external delivery method.
ShippingCarrierMethod	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. A specific shipping service provided by a shipping carrier, such as Ground, 2Day, and NextDay. Depends on the range of transit times available for each carrier.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrderDeliveryMethodChangeEvent](#) (API version 62.0)

Change events are available for the object.

OrderHistory

Represents historical information about changes that have been made to the standard fields of the associated order, or to any custom fields with history tracking enabled.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
<code>DataType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<code>Field</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Name of the order field that was modified, or a special value to indicate some other modification to the order.
<code>NewValue</code>	Type anyType Properties Nillable, Sort Description New value of the modified order field. Maximum of 255 characters.

Field Name	Details
OldValue	Type anyType Properties Nillable, Sort Description Previous value of the modified order field. Maximum of 255 characters.
OrderId	Type reference Properties Filter, Group, Sort Description ID of the order associated with this record. This is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order

Usage

Order history entries are automatically created each time an order is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field-level security on the parent object.

SEE ALSO:

[Order](#)

OrderItem

Represents an order product that your organization sells.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The user must have Edit permission on Order records to create or update order products on an order. The user must have Edit permission on Order records to delete an order product.

Fields

Field Name	Details
AdjustedLineAmount	Type currency Properties Filter, Nillable, Sort Description Line amount following line adjustments, excluding tax. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
AdjustedLineAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Line amount following line adjustments, including tax. This field is a gross tax field. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v49.0 and later.
AggregatedQuantity	Type double Properties Filter, Nillable, Sort Description The quantity of a order item's grouped transaction lines or the products that have been sold and converted to assets. This field is available in API version 64.0 and later.
AvailableQuantity	Type double Properties Filter, Nillable, Sort

Field Name	Details
	Description The amount of an order product that is available to be reduced. Value must be greater than or equal to 0. An order product is reducible only if <code>AvailableQuantity</code> is greater than 0. Value is always 0 if the order product's parent order is a reduction order.
<code>BatchIdentifier</code>	Type string Properties Filter, Group, Nillable, Sort Description Identifies a product bundle in a transaction processing batch to ensure that order items from the same bundles are processed together. This field is available in API version 64.0 and later.
<code>BillingFrequency2</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The time period that indicates how often the order item is billed. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • Annual • Monthly
<code>CurrencyIsoCode</code>	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderItem. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.

Field Name	Details
	This field is available in API version 49.0 and later.
DeliveryEstimationReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique reference ID for the delivery estimation.
DeliveryEstimationTimeZone	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Time zone in which the estimated delivery times are based.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of this object. For Commerce stores, during checkout, this field is populated with the value of a product name. The product name is copied from the <code>CartItem.Name</code> field of a cart item that corresponds to the <code>OrderItem</code>.
DoesAutomaticallyRenew	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the order item is set to automatically renew (true) or not (false). This field is available in API version 64.0 and later.
EarliestEstimatedDeliveryDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Earliest estimated date for the item to be delivered.
EarliestEstimatedDeliveryTime	Type timeOnly

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Earliest estimated time of the day for the item to be delivered.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. Last day the order product is available.
EndTimeTime	Type datetime Properties Create, Filter, Group, Nillable, Sort, Update Description The end date and time of the order item, derived from the End Date and End Time fields in the time zone specified in the Start and End Time Zone field. If the time zone isn't specified, the default is Coordinated Universal Time (UTC). Label is End Date Time. This field is available in Revenue Cloud in API version 65.0 and later.
EndTime	Type timeOnly Properties Create, Filter, Group, Nillable, Sort, Update Description The end time of the order item. Label is End Time. This field is available in Revenue Cloud in API version 65.0 and later.
GrossUnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description Unit price including tax. This field is a VAT field that includes tax. Salesforce populates it on order creation only when <code>Order.TaxLocaleType</code> has a value of Gross.

Field Name	Details
IsOrderItemLocked	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the order item and its children are locked (true) or not (false). Locked order items and their children cannot be modified, added, or deleted. This field is available in API version 63.0 and later.
LastEstimatedDeliveryDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Latest estimated date for the item to be delivered.
LastEstimatedDeliveryTime	Type timeOnly Properties Create, Filter, Group, Nillable, Sort, Update Description Latest estimated time of the day for the item to be delivered.
LineNumber	Type int Properties Create, Filter, Group, Nillable, Sort Description The number used to organize lines on the order. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
ListPrice	Type currency Properties Create, Filter, Nillable, Sort Description List price for the order product. Inherited value from the associated <code>PriceBookEntry</code> upon order product creation.

Field Name	Details
ListPriceTotal	Type currency Properties Create, Filter, Nillable, Sort, Update Description The ListPrice times the Quantity. This field is a calculated field. This field is available in API version 55.0 and later. This field is available with Subscription Management.
NetUnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The unit price after all price adjustments are applied. This field is available in API version 55.0 and later. This field is available with Subscription Management.
OrderActionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related order action. The order action indicates the type of order; for example, a new sale or a cancellation. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. Relationship Name OrderAction Relationship Type Lookup Refers To OrderAction
OrderDeliveryGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The delivery group for the order product.

Field Name	Details
	This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later. This field is a relationship field. Relationship Name OrderDeliveryGroup Relationship Type Lookup Refers To OrderDeliveryGroup
OrderId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the order that this order product is a child of. This field is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order
OrderItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Automatically generated number that identifies the order product.
OriginalOrderItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required if <code>isReductionOrder</code> on the parent order is <code>true</code>. ID of the original order product being reduced. This field is a relationship field.

Field Name	Details
	Relationship Name OriginalOrderItem Relationship Type Lookup Refers To OrderItem
PeriodBoundary	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The period boundary helps determine the start and end date of the billing periods. This field is available in API version 55.0 and later. This field is available with Subscription Management and Revenue Cloud. Possible values are: • AlignToCalendar—the period starts on the first day of the term unit; for example, the first day of the month. • Anniversary—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. • DayOfPeriod—the period starts on the day indicated by PeriodBoundaryDay. • LastDayOfPeriod—the period starts on the last day of the pricing term unit; for example, the last day of the month. Keep these considerations in mind for amendment, renewal, and cancellations of assets in Revenue Cloud. • The value of the PeriodBoundary field is copied from the AssetActionSource (initial sale), by default. • For termed selling models where the PeriodBoundary value is Anniversary, the value of the PeriodBoundary field is automatically converted to DayOfPeriod. • Start date adjustment operation on an asset preserves the original value without conversion.
PeriodBoundaryDay	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Required when <code>PeriodBoundary</code> is <code>DayOfPeriod</code>. Indicates the day of the week or month that marks the period boundary. Must be an integer from 1 through 31. This field is available in API version 55.0 and later. This field is available with Subscription Management and Revenue Cloud. Keep these considerations in mind for amendment, renewal, and cancellations of assets in Revenue Cloud. • The value of the <code>PeriodBoundary</code> field is copied from the <code>AssetActionSource</code> (initial sale), by default. • When <code>PeriodBoundary</code> field value is converted from <code>Anniversary</code> to <code>DayOfPeriod</code> for termed selling models, the value of the <code>PeriodBoundaryDay</code> field is automatically populated with the day value from <code>AssetActionSource.StartDate</code>. • Start date adjustment operation on an asset preserves the original value without conversion.
<code>PeriodBoundaryStartMonth</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Nillable, Sort, Update Description The field is populated based on input in the <code>StartDate</code>, <code>PeriodBoundary</code>, and <code>PeriodBoundaryDay</code> when <code>BillingFrequency2</code> is <code>Annual</code> or by manual user entry. Possible values are: • 1-January • 2-February • 3-March • 4-April • 5-May • 6-June • 7-July • 8-August • 9-September • 10-October • 11-November • 12-December Keep these considerations in mind for amendment, renewal, and cancellations of assets in Revenue Cloud. • The value of the <code>PeriodBoundary</code> field is copied from the <code>AssetActionSource</code> (initial sale), by default.

Field Name	Details
	- For termed selling models where <code>PeriodBoundary</code> field value is <code>Anniversary</code> and <code>PricingTermUnit</code> field value is <code>ANNUAL</code>, <code>SEMI_ANNUAL</code>, or <code>QUARTERLY</code>, the value of the <code>PeriodBoundaryStartMonth</code> field is automatically recalculated by using <code>AssetActionSource.StartDate.month</code>. - Start date adjustment operation on an asset preserves the original value without conversion.
PricebookEntryId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required. ID of the associated PricebookEntry. Specify this field when creating OrderItem records. It can't be changed in an update. If you have a B2B Commerce, B2B Commerce Starter, B2B Commerce Growth, or B2B Commerce Plus license, Salesforce users can create orders without price books and order items without price book entries. This field is a relationship field. Relationship Name PricebookEntry Relationship Type Lookup Refers To PricebookEntry
PriceRevisionPolicyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The price uplift policy associated with this order item. This field is a relationship field. Relationship Name PriceRevisionPolicy Refers To PriceRevisionPolicy Label is Price Revision Policy. This field is available in Revenue Cloud in API version 65.0 and later.

Field Name	Details
PricingTermCount	Type double Properties Create, Filter, Nillable, Sort, Update Description A calculated field indicating the number of pricing terms in the subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management.
PricingTransactionType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the type of pricing transaction. For example, a new sale, a cancellation, an amendment, or a renewal. Possible values: • AmendmentAtLastNegotiatedPrice—Calculate the price of the amended order item by using the same price book and price adjustments as the new sale item. For example, an order item that is amended by using a pricing transaction type of AmendmentAtLastNegotiatedPrice is priced by using the same price book information and price adjustments as the new sale item. The amended order item has the same price as the new sale order item. • AmendmentStartingFromListPrice—Calculate the price of the amended order item by using current price book information, disregarding any pricing information or adjustments that were applied to the new sale item. Typically, an amended order item has a different price than the new sale transaction item. • Cancellation—Calculate the price of the canceled transaction. For example, a 1-year subscription purchased on January 1, is canceled on July 31. The price of the canceled products and services from August 1 through Dec 31 is calculated. • NewSale—The price of a new transaction is calculated. • RenewalAtLastNegotiatedPrice—Calculate the price of the order item by using the same price book and price adjustments as the new sale item. For example, an order item that is renewed by using a pricing transaction type of RenewalAtLastNegotiatedPrice is priced by using the same price book information and price adjustments as the new sale item. The renewal order item has the same price as the new sale order item. • RenewalAtListPrice—Calculate the price of the order item by using current price book information, disregarding any pricing information or

Field Name	Details
	adjustments that were applied to the new sale item. Typically, a renewal order item has a different price than the new sale order item. This field is available in API version 55.0 and later. This field is available with Subscription Management.
ProFormaBillingPeriodAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The initial amount for the billing period. The final amount for the billing period can include subsequent amendments, discounts, or charges. This field is available in API version 55.0 and later. This field is available with Subscription Management.
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Product2 associated with this OrderItem. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductSellingModelId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related product selling model. The product selling model defines one method by which a product is sold; for example, as a one-time sale, an evergreen subscription, or a termed subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field.

Field Name	Details
	Relationship Name ProductSellingModel Relationship Type Lookup Refers To ProductSellingModel
ProrationPolicyId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related proration policy. The proration policy defines how the price is calculated for each subscription period. For example, whether partial periods are allowed, and how the remainder amounts are handled. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. Relationship Name ProrationPolicy Relationship Type Lookup Refers To ProrationPolicy
Quantity	Type double Properties Create, Filter, Sort, Update Description Required. Number of units of this order product.
QuoteLineItemId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the associated quote line item. If this field is specified, the quote line item's Quoteld must match the Quoteld for the order product's parent order.

Field Name	Details
ReferencePrice	Type currency Properties Create, Filter, Nillable, Sort Description The original or reference price of the order product. This field is available in API version 63.0 and later.
RelatedChangeIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort Description The identifier used to group all related order items in the same change order. This field is available in API version 63.0 and later.
RelatedOrderItemID	Type reference Properties Create, Filter, Sort, Group Description Required for change orders, shows the original order product. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
RoundedLineAmount	Type currency Properties Filter, Sort Description The rounded line amount, before tax and adjustments. Currency with decimal values of 0.5 and higher round to the next-highest whole unit of currency. The formula to calculate the rounded line amount is: IF(TotalLineAmount != NULL, TotalLineAmount, Quantity * UnitPrice) This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
RoundedLineAmtWithTax	Type currency

Field Name	Details
	Properties Filter, Nillable, Sort Description The rounded line amount, including tax. Currency with decimal values of 0.5 and higher round to the next-highest whole unit of currency. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v49.0 and later.
ServiceDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Start date for the order product. Label is Start Date.
ServiceDateTime	Type datetime Properties Create, Filter, Group, Nillable, Sort, Update Description The service date and time of the order item, which is derived from the Service Date and Service Time fields in the time zone specified in the Service and End Time Zone field. If the time zone isn't specified, the default is Coordinated Universal Time (UTC). Label is Service Time. This field is available in Revenue Cloud in API version 65.0 and later.
ServiceEndTimeZone	Type timeOnly Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the time zone for the order item's service and end dates, times, and datetimes. Label is Service and End Time Zone. This field is available in Revenue Cloud in API version 65.0 and later.
ServiceTime	Type timeOnly

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The service time of the order item. Label is Service Time. This field is available in Revenue Cloud in API version 65.0 and later.
StartingPriceTotal	Type currency Properties Create, Filter, Nillable, Sort, Update Description The starting unit price times the quantity. This field is available in API version 55.0 and later. This field is available with Subscription Management.
StartingUnitPriceSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether the starting unit price was entered manually or calculated. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • Manual • System
SupplementalChangeType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the order item change type in the supplemental order. Possible values are: • Add • Amend • Cancel • No Change This field is available in API version 64.0 and later.

Field Name	Details
TaxTreatmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related tax treatment. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. Relationship Name TaxTreatment Relationship Type Lookup Refers To TaxTreatment
TotalAdjustedLineTaxAmount	Type currency Properties Filter, Sort Description Sum of line tax amount and line adjustment tax amounts. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalAdjustmentAmount	Type currency Properties Filter, Sort Description Roll up of the order product's price adjustments. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalAdjustmentAmtWithTax	Type currency Properties Filter, Sort Description Roll up of the order product's price adjustments, including tax.

Field Name	Details
	This field is a gross tax field. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v49.0 and later.
TotalAdjustmentDistAmount	Type currency Properties Filter, Sort Description Roll up of all adjustments on the order. Used only if the OrderAdjustmentGroup has a Type value of Header. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalAdjustmentDistTaxAmount	Type currency Properties Filter, Sort Description Roll up of all adjustment tax amounts on the order. Used only if the OrderAdjustmentGroup has a Type value of Header. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalAdjustmentDistAmtWithTax	Type currency Properties Filter, Sort Description Roll up of all adjustment tax amounts on the order, including tax. Used only if the OrderAdjustmentGroup has a Type value of Header. This field is a gross tax field. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v49.0 and later.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Sort

Field Name	Details
	Description Sum of the order product's tax adjustments. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Equals <code>TotalPrice + TotalTaxAmount</code> for the order item. This field is a gross tax field. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v49.0 and later.
TotalLineAdjustmentAmount	Type currency Properties Filter, Sort Description The sum of line-level adjustments for the order product. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalLineAdjustmentAmtWithTax	Type currency Properties Filter, Sort Description The sum of line-level adjustments for the order product, including tax. This field is a gross tax field. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v49.0 and later.
TotalLineAdjustmentTaxAmount	Type currency Properties Filter, Sort Description Total tax amount for adjustments made to the order product.

Field Name	Details
	This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalLineAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The line amount of the order product, before price adjustments, inclusive of quantity, and pricing term count for subscription. The decimal places for this value must match the decimal places for the currency being used. For example, if the currency is the US dollar, the decimal place for TotalLineAmount must be 2. If the currency is the Japanese yen, the decimal place for TotalLineAmount must be 0. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalLineTaxAmount	Type currency Properties Filter, Sort Description Total tax amount for this order product, excluding tax on adjustments. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalPrice	Type currency Properties Filter, Nillable, Sort Description Total price for this order product. The calculations for this field's value are different if Commerce Orders are enabled. Default Value $TotalPrice = (UnitPrice * Quantity)$ Commerce or Revenue Cloud Orders If TotalLineAmount is null, then $TotalPrice = (ROUND (UnitPrice * Quantity) + TotalAdjustmentAmount)$. The $ROUND (UnitPrice * Quantity)$ is stored in the RoundedLineAmount field. Otherwise, $TotalPrice = ROUND (TotalLineAmount) + TotalAdjustmentAmount$. The $ROUND (TotalLineAmount)$ is also stored in the RoundedLineAmount field.

Field Name	Details
	This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TotalTaxAmount	Type currency Properties Filter, Sort Description Sum of the order product's tax and any adjustments. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
Type	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Describes what the order item represents. Each value is associated with one type code, shown here in parentheses. Possible values are: • <code>Delivery Charge (Charge)</code> — A charge, such as a delivery fee. • <code>Fee (Charge)</code> — A charge, such as a return fee. This value is available in API v56.0 and later. • <code>Order Product (Product)</code> — An item that can be ordered. This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.
TypeCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category associated with the type. A type code can be associated with one or more types. Possible values are: • <code>Charge</code> • <code>Product</code> This field is available with Salesforce Order Management or Revenue Cloud. This field is available in API v48.0 and later.

Field Name	Details
UnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description Unit price for the order product.

Usage

An order can have associated order product records only if the order has a price book associated with it. An order product must correspond to a product that is listed in the order's price book.

Orders with associated OrderItem records are affected. When OrderItem records are directly deleted, they aren't sent to the recycle bin and can't be undeleted. The `getDeleted()` call shows deleted OrderItem records until they're purged, which is usually within the same day or the next day.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderItemChangeEvent (API version 44.0)

Change events are available for the object.

OrderItemFeed (API version 29.0)

Feed tracking is available for the object.

OrderItemHistory

History is available for tracked fields of the object.

SEE ALSO:

[Order](#)

[OrderItemSummary](#)

OrderItemAdjustmentLineItem

An adjustment that has been made to an order item. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
AdjustmentAmountScope	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Used with <code>AdjustmentValue</code> to determine the amount of the adjustment. Possible values are: • <code>Total</code>—The adjustment scope is the total price. • <code>Unit</code>—The adjustment scope is the unit price. • <code>UnproratedTotal</code>—The adjustment scope is the unprorated total price.
AdjustmentBasisReferenceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific coupon applied. This is a polymorphic relationship field. Relationship Name AdjustmentBasisReference Relationship Type Lookup Refers To Coupon This field is available in API version 54.0 and later.
AdjustmentCauseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific promotions applied. This is a polymorphic relationship field.

Field	Details
	Relationship Name AdjustmentCause Relationship Type Lookup Refers To Promotion This field is available in API version 52.0 and later.
AdjustmentSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the origin of the adjustment. Possible values are: • Discretionary—The adjustment originates from a decision made by an individual, for example, a manager's discount granted to a client. • Promotion—The adjustment originates from a promotion, for example, a holiday sale discount. • Rule—Reserved for future use. • System—The adjustment originates from the system, for example, a volume discount after the amount of items reaches a specific number. This field is available in API version 57.0 and later.
AdjustmentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the type of mathematical adjustment to be applied to the order. Possible values are: • AdjustmentAmount—The adjustment is a numerical amount, for example, a cash discount of 20. • AdjustmentPercentage—The adjustment is a percentage amount, for example, a 10% discount. • OverrideAmount—The adjustment is a manual price override. This field is available in API version 57.0 and later.
AdjustmentValue	Type double

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The specified <code>AdjustmentType</code>'s amount to be applied to the order item. For example, when the <code>AdjustmentType</code> value is <code>AdjustmentAmount</code>, the <code>AdjustmentValue</code> is expected to equal the value of the <code>Amount</code> field. When the <code>AdjustmentType</code> value is <code>AdjustmentPercentage</code>, the <code>AdjustmentValue</code> represents the percentage number, and the <code>Amount</code> field's value will show the calculated adjustment amount. This field is available in API version 57.0 and later.
Amount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The net total value of the adjustment line. The value is rounded to the nearest possible amount associated with the currency of the order item.
AppliedPromotionDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time on which the promotion was applied to the asset.
CouponCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the coupon code that was applied.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. Default value is <code>USD</code>. Possible values are:

Field	Details
	USD—U.S. Dollar
Description	Type textarea Properties Create, Nillable, Update Description Users can add a custom description to the record to provide additional detail.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the adjustment line.
OrderAdjustmentGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The order adjustment group that contains the order item adjustment line item.
OrderId	Type reference Properties Filter, Group, Nillable, Sort Description The parent order of the order item related to the adjustment line.
OrderItemId	Type reference Properties Create, Filter, Group, Sort Description The order item that the adjustment line applies to.
Priority	Type int Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description A numeric value that represents the order of precedence of the order adjustment group. It can also represent the order of precedence when applying the <code>AdjustmentType</code> values. For example, an order can have two adjustments: a \$100 discount and a 10% discount. This field will tell the pricing engine which adjustment needs to be applied first. This field is available in API version 57.0 and later.
RelatedAdjustmentLineItemId	Type reference Properties Filter, Group, Nillable, Sort Description The original order item adjustment line. Useful for reference in change order scenarios.
TotalAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Equals the order item's price plus <code>TotalTaxAmount</code> for the order item adjustment line item. This is a gross tax field. To access Commerce Orders fields, your org must have a Salesforce Order Management license. Commerce Orders fields are available only in Lightning Experience. This field is available in API v49.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description The total amount of tax applied to the adjustment line.

OrderItemAdjustmentLineSummary

Represents the current properties and state of price adjustments on an `OrderItemSummary`. Corresponds to one or more order item adjustment line item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustmentBasisReferenceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific coupon applied. This is a polymorphic relationship field. Relationship Name AdjustmentBasisReference Relationship Type Lookup Refers To Coupon This field is available in API version 54.0 and later.
AdjustmentCauseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the specific promotions applied. This is a polymorphic relationship field. Relationship Name AdjustmentCause Relationship Type Lookup Refers To Promotion This field is available in API version 52.0 and later.

Field	Details
Amount	Type currency Properties Filter, Sort Description Amount, not including tax, of the OrderItemAdjustmentLineSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description ISO code for the currency of the OrderItemSummary to which the adjustment applies. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
Description	Type textarea Properties Create, Nillable, Update Description Description of the OrderItemAdjustmentLineSummary. This field can be edited.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the OrderItemAdjustmentLineSummary.
OrderAdjustmentGroup SummaryId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description If this object belongs to an OrderAdjustmentGroupSummary, this value is the ID of that OrderAdjustmentGroupSummary.
OrderItemSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderItemSummary to which the OrderItemAdjustmentLineSummary applies.
OrderSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderSummary associated with the OrderItemSummary to which this OrderItemAdjustmentLineSummary applies.
OriginalOrderItemAdjustmentLineItemId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the original OrderItemAdjustmentLine associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
Priority	Type integer Properties Create, Nillable Description Numerical rank used to apply promotions in the correct order. This field is available in API version 52.0 and later.
TotalAmtWithTax	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Total amount of the adjustment, inclusive of tax. This amount is equal to Amount + TotalTaxAmount. This field is available in API version 49.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the Amount.

OrderItemGroup

Stores the group information for line items in an order. It also stores the aggregated line field information (subtotal). It contains a parent-child relationship to order. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the group.

Field	Details
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Reserved for future use.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the group.
OrderId	Type reference Properties Create, Filter, Group, Sort Description ID of the order that this order product is a child of. This field is a relationship field. Relationship Name Order Relationship Type Master-detail Refers To Order (the master object)
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number indicating the sort order selected by the user.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Reserved for future use.

Field	Details
SummarySubtotal	Type currency Properties Create, Filter, Nillable, Sort, Update Description The total amount of all the line items in the group.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the group. Possible values are: CPQOrderGroup—CPQ Line Grouping The default value is CPQOrderGroup.

OrderItemRecipient

Represents a site, employee, or other entity for which services are being ordered. This includes essential details such as the recipient's name, contact information, and the specific site or location where the services will be provided. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BroadbandConnectionType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the broadband connection that's available at the address.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MaxDownloadSpeed	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum download speed available at the address.
MaxUploadSpeed	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum upload speed available at the address.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the customer's site or location.
OrderId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The order associated with the recipient. This field is a relationship field. Relationship Name Order Relationship Type Master-detail Refers To Order (the master object)
RecipientType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of recipient of the order. Possible values are: • Location • Subscriber The default value is Location.
ServiceAddrValidationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the address was validated.
Service Account	Type entityid Properties Create, Filter, Group, Nillable, Sort, Update Description Reference to the Account Entity where the product is used, serviced, or installed.
ServiceAddrValidationMsg	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The message sent after the validation of the address.
ServiceAddrValidationResult	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the status of the address validation. Possible values are: - Fail - Partial Success - Success The default value is Success.
ServiceAddress	Type address Properties Filter Description The address where the recipient receives the order.
ServiceCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city where the recipient receives the order.
ServiceCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The country where the recipient receives the order.
ServiceGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Specifies the accuracy level of the geocoded address coordinates. Possible values are: • Address • Block • City • County • ExtendedZip—Extended Zip • NearAddress—Near Address • Neighborhood • State • Street • Unknown • Zip
ServiceLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The latitude of the location where the recipient receives the order.
ServiceLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The longitude of the location where the recipient receives the order.
ServicePostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code of the address.
ServiceState	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The state where the recipient receives the order.
ServiceStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street where the recipient receives the order
ServiceabilityCheckDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the serviceability check was done.
ServiceabilityData	Type textarea Properties Create, Nillable, Update Description The information about serviceability, such as broadband connection, download, and upload speeds available at the address.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrderItemRecipientChangeEvent](#)

Change events are available for the object.

[OrderItemRecipientFeed](#)

Feed tracking is available for the object.

[OrderItemRecipientHistory](#)

History is available for tracked fields of the object.

[OrderItemRecipientOwnerSharingRule](#)

Sharing rules are available for the object.

[OrderItemRecipientShare](#)

Sharing is available for the object.

OrderItemRelationship

Describes a relationship between order products. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management or Revenue Cloud is enabled.

Fields

Field	Details
AssociatedOrderItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The unique identifier of the associated order product. This field is a relationship field. In a bundle relationship, this order product is the bundle component. Relationship Name AssociatedOrderItem Relationship Type Lookup Refers To OrderItem
AssociatedOrderItemInventory	Type picklist Properties Create, Filter, Group, Nillable, Sort Description A static enum that describes the associated order item inventory in the OrderItemSummaryRelationship. Possible values are: IncludedInMainInventory—The child product’s inventory is included in the main inventory.

Field	Details
	NotIncludedInMainInventory—The child product’s inventory isn’t included in the main inventory. Relationship Name AssociatedOrderItemInventory
AssociatedOrderItemPricing	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates how the associated order product is priced relative to the main order product. The value is informative; the system doesn’t check whether the associated order product is included in the bundle price. Possible values are: - IncludedInBundlePrice—The associated order product’s cost is \$0 because it’s included in the bundle’s price. - NotIncludedInBundlePrice—The associated order product has a cost because it’s not included in the bundle’s price.
AssociatedOrderItemRole	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Describes the position of the associated order product in the relationship. Possible values are: - BundleComponent—The associated order product is part of a bundle. - SetComponent—The associated order product is part of a set.
AssociatedQuantScaleMethod	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description How the quantity of the associated order product scales, relative to the main order product. The value is informative; the system doesn’t check whether the scaled quantities are correct. Possible values are: Constant— The associated order’s product quantity remains the same in relation to the main order product’s quantity. For example, the main order product has a quantity of one and the associated order product has a quantity of one.

Field	Details
	Proportional— The associated order's product quantity increases or decreases based on the main order product's quantity. For example, the main order product has a quantity of one and the associated order product has a quantity of two. In other words, there are two associated order products for every one main order product. The default value is <code>Proportional</code>.
IsPriceInclusive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether child products are included in the root bundle price. If set to <code>true</code>, the price of each child product is zero. The default value is <code>false</code>.
MainOrderItemId	Type reference Properties Create, Filter, Group, Sort Description The main order product's unique identifier. This field is a relationship field. In a bundle relationship, this order product is the bundle parent. Relationship Name MainOrderItem Relationship Type Lookup Refers To OrderItem
MainOrderItemRole	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the role of the main order product in the relationship. Possible values are: Bundle— The main order product is the bundle parent. Set— The main order product is the set parent. Subscription Management doesn't support the <code>Set</code> value.

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the order product relationship.
OrderId	Type reference Properties Filter, Group, Nillable, Sort Description The unique identifier of the related order. This field is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order
ProductRelationshipTypeId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of the record that describes the relationship between the main and associated order products. This field is a relationship field. Relationship Name ProductRelationshipType Relationship Type Lookup Refers To ProductRelationshipType
RootOrderItemId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description The root order item for the order item relationship. In a bundle relationship, the root order item is the root bundle. This field is a relationship field.
	Relationship Name RootOrderItem
	Refers To OrderItem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderItemRelationshipFeed

Feed tracking is available for the object.

OrderItemRelationshipHistory

History is available for tracked fields of the object.

OrderItemSummary

Represents the current properties and state of a product or charge on an OrderSummary. Corresponds to one or more order item objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustedLineAmount	Type currency
	Properties Filter, Nullable, Sort

Field	Details
	Description Total, including line adjustments but not order-level adjustments or tax, of the OrderItemSummary. This is a calculated field.
AdjustedLineAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total price of the OrderItemSummary, inclusive of adjustments and tax. This amount is equal to AdjustedLineAmount + TotalAdjustedLineTaxAmount. This is a calculated field. This field is available in API version 49.0 and later.
AssetId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the associated asset. This field is available in API version 60.0 and later. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the OrderItemSummary. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.

Field	Details
	This field is available in API version 49.0 and later.
DeliveryEstimationReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique reference ID for the delivery estimation.
DeliveryEstimationTimeZone	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Timezone in which the estimated delivery times are based.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the OrderItemSummary. This field can be edited.
EarliestEstimatedDeliveryDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Earliest date when the item is estimated to be delivered.
EarliestEstimatedDeliveryTime	Type timeOnly Properties Create, Filter, Group, Nillable, Sort, Update Description Earliest time of the day when the item is estimated to be delivered.
EndDate	Type date Properties Filter, Group, Nillable, Sort

Field	Details
	Description End date of the OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
GrossUnitPrice	Type currency Properties Filter, Nillable, Sort Description Unit price, including tax, of the OrderItemSummary. This value is equal to UnitPrice + the amount of tax on the UnitPrice. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later.
LastEstimatedDeliveryDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Latest date when the item is estimated to be delivered.
LastEstimatedDeliveryTime	Type timeOnly Properties Create, Filter, Group, Nillable, Sort, Update Description Latest time of the day when the item is estimated to be delivered.
LineNumber	Type int Properties Filter, Group, Nillable, Sort Description The order line number assigned to this OrderItemSummary. For example, if this object is the third in the displayed list of OrderItemSummaries belonging to the OrderSummary, this value is 3.

Field	Details
	If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
<code>ListPrice</code>	Type currency Properties Filter, Nillable, Sort Description List price of the product represented by this <code>OrderItemSummary</code>. If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
<code>MainOrderItemSummaryId</code>	Type reference Properties Create, Filter, Group, Sort Description The primary order item summary ID of this order item summary. This field is a relationship field. Relationship Name MainOrderItemSummary Relationship Type Master-detail Refers To OrderItemSummary (the master object)
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the <code>OrderItemSummary</code>.
<code>OrderDeliveryGroupSummaryId</code>	Type reference Properties Filter, Group, Sort Description ID of the <code>OrderDeliveryGroupSummary</code> to which this object belongs.

Field	Details
	This field is a relationship field. Relationship Name OrderDeliveryGroupSummary Relationship Type Lookup Refers To OrderDeliveryGroupSummary
OrderManagementBillingType	Type enum Properties Filter, Restricted Picklist, Sort Description The type of entitlement, either PPO or GMV, that is used to track Order Summary usage.
OrderSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderSummary to which this object belongs. This field is a relationship field. Relationship Name OrderSummary Relationship Type Lookup Refers To OrderSummary
OriginalOrderItemId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the original order item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false. This field is a relationship field. Relationship Name OriginalOrderItem Relationship Type Lookup

Field	Details
	Refers To OrderItem
PricebookEntryId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the pricebook entry associated with this OrderItemSummary. This field is available in API version 54.0 and later. This field is a relationship field. Relationship Name PricebookEntry Relationship Type Lookup Refers To PricebookEntry
Product2Id	Type reference Properties Filter, Group, Sort Description ID of the product represented by this OrderItemSummary. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductCode	Type string Properties Filter, Group, Nillable, Sort Description Product code of the product represented by this OrderItemSummary.
Quantity	Type double

Field	Details
	Properties Filter, Sort Description Current total quantity of products represented by this order item summary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityReturned). If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityAllocated	Type double Properties Filter, Sort Description Allocated quantity on this order item summary. This quantity is associated with one or more FulfillmentOrderLineItems. If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityAvailableToCancel	Type double Properties Filter, Nillable, Sort Description Quantity that can still be canceled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToFulfill. This is a calculated field.
QuantityAvailableToFulfill	Type double Properties Filter, Nillable, Sort Description Quantity available to be fulfilled on this OrderItemSummary. Equal to QuantityOrdered minus (QuantityCanceled and QuantityAllocated). This value duplicates QuantityAvailableToCancel. This is a calculated field.
QuantityAvailableToReship	Type double Properties Filter, Nillable, Sort

Field	Details
	Description Quantity available to be reshipped on this OrderItemSummary. Equal to QuantityFulfilled minus (QuantityReshipped and QuantityReturnInitiated). This field is available in API version 53.0 and later. This is a calculated field.
QuantityAvailableToReturn	Type double Properties Filter, Nillable, Sort Description Quantity available to be returned on this OrderItemSummary. Equal to QuantityFulfilled minus QuantityReturnInitiated. This is a calculated field.
QuantityCanceled	Type double Properties Filter, Sort Description Canceled quantity on this OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityFulfilled	Type double Properties Filter, Sort Description Fulfilled quantity on this OrderItemSummary. This quantity can no longer be canceled. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityNetOrdered	Type double Properties Filter, Nillable, Sort Description Quantity available to be allocated on this OrderItemSummary. Equal to QuantityOrdered minus QuantityCanceled.

Field	Details
QuantityOrdered	Type double Properties Filter, Sort Description Ordered quantity on this OrderItemSummary. It includes the originally ordered quantity plus any quantity added to the order later. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityReshipped	Type double Properties Filter, Nillable, Sort Description Reshipped quantity on this OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 53.0 and later.
QuantityReturned	Type double Properties Filter, Sort Description Returned quantity on this OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
QuantityReturnInitiated	Type double Properties Filter, Sort Description Quantity returned or pending return on this OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

Field	Details
QuantityShipped	Type double Properties Create, Filter, Nillable, Sort, Update Description Quantity shipped on this OrderItemSummary. This field is available in API version 52.0 and later.
ReferencePrice	Type currency Properties Create, Filter, Nillable, Sort Description The original or reference price of the order product. This field is available in API version 63.0 and later.
ReservedAtLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Reserved for future use.
ServiceDate	Type date Properties Filter, Group, Nillable, Sort Description Service or start date of the OrderItemSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Status of the OrderItemSummary. The default value is ORDERED. When a quantity value changes, each status formula is evaluated in order. If a formula is true, no more evaluations are performed for that change.

Field	Details
	Possible values and their formulas, in the order of evaluation, are: • RETURNINITIATED—Return Initiated — (Quantity > 0) & (QuantityReturnInitiated = QuantityFulfilled) & (QuantityReturned < QuantityReturnInitiated) • RESHIPED—Reshipped — (QuantityReshipped = QuantityFullfilled) & (QuantityFullfilled > 0) & (QuantityReturnInitiated = 0) & (QuantityFullfilled = QuantityOrdered) • RETURNED—Returned — (Quantity = 0) & (QuantityReturned > 0) • CANCELED—Canceled — (Quantity = 0) & (QuantityCancelled > 0) & (QuantityReturned = 0) • FULFILLED—Fulfilled — (Quantity > 0) & ((QuantityOrdered - QuantityCancelled) <= QuantityFulfilled) • PARTIALLYFULFILLED—Partially Fulfilled — (QuantityFulfilled > 0) & (QuantityFulfilled < (QuantityOrdered - QuantityCancelled)) • ALLOCATED—Allocated — (Quantity > 0) & (Quantity <= QuantityAllocated) • PARTIALLYALLOCATED—Partially Allocated — (QuantityAllocated > 0) & (QuantityAllocated < Quantity) • ORDERED—Ordered — None of the other formulas apply • PAID—Paid — N/A
StockKeepingUnit	Type string Properties Filter, Group, Nillable, Sort Description The stock keeping unit (SKU) of the Product2 associated with the OrderItemSummary. This field is available in API version 49.0 and later.
TaxTreatmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related tax treatment. This field is available in API version 63.0 and later. This field is available with Subscription Management. This field is a relationship field. Relationship Name TaxTreatment Relationship Type Lookup

Field	Details
	Refers To TaxTreatment
TotalAdjustedLineTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the AdjustedLineAmount. This is a calculated field.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description Total of all price adjustments applied to this OrderItemSummary. This is a calculated field.
TotalAdjustmentAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of all price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
TotalAdjustmentDistAmount	Type currency Properties Filter, Nillable, Sort Description Total of all order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. This is a calculated field.
TotalAdjustmentDistAmtWithTax	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Total amount of the order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalAdjustmentDistAmount + TotalAdjustmentDistTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
TotalAdjustmentDistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustmentDistAmount. This is a calculated field.
TotalAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustmentAmount. This is a calculated field.
TotalAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total price of the OrderItemSummary, inclusive of tax. This amount is equal to TotalPrice + TotalTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
TotalLineAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description Total of all non-order-level price adjustments applied to this OrderItemSummary. This value includes OrderItemAdjustmentLineSummaries that don't belong to an OrderAdjustmentGroupSummary, or that belong to an OrderAdjustmentGroupSummary of type SplitLine. This is a calculated field.
TotalLineAdjustmentAmtWithTax	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Total of all non-order-level price adjustments applied to this OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAdjustmentAmount + TotalLineAdjustmentTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
TotalLineAdjustmentTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalLineAdjustmentAmount. This is a calculated field.
TotalLineAmount	Type currency Properties Filter, Nillable, Sort Description Total, not including adjustments or tax, of the OrderItemSummary. If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
TotalLineAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total unadjusted amount of the OrderItemSummary, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount. This field is available in API version 49.0 and later. This is a calculated field.
TotalLineTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalLineAmount. This is a calculated field.

Field	Details
TotalPrice	Type currency Properties Filter, Nillable, Sort Description Total, including line and order-level adjustments but not tax, of the OrderItemSummary. This is a calculated field.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalPrice. This is a calculated field.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type of the OrderItemSummary. Delivery Charge indicates that the OrderItemSummary represents a delivery charge. Fee indicates that it represents another type of fee, such as a return fee. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code, shown here in parentheses. Possible values are: • Delivery Charge (Charge) • Fee (Charge) This value is available in API v56.0 and later. • Order Product (Product) If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
TypeCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type code of the OrderItemSummary. Charge indicates that the OrderItemSummary represents a charge or fee. Product indicates that it represents any other type of product, service, or charge. A type code can be associated with one or more types. Possible values are:

Field	Details
	• Charge • Product If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
UnitPrice	Type currency Properties Filter, Nillable, Sort Description Unit price of the product represented by the <code>OrderItemSummary</code>. If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrderItemSummaryChangeEvent](#) (API version 62.0)

Change events are available for the object.

[OrderSummary](#)

OrderItemSummaryChange

Represents a change to an `OrderItemSummary`, usually a reduction in quantity due to a cancel or return. Corresponds to a change order item. This object is available in API version 48.0 and later.

This object is used for calculations and doesn't have a default record page.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
ChangeOrderItemId	Type reference Properties Filter, Group, Sort Description ID of the associated change order item.
ChangeType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Type of change represented by the OrderItemSummaryChange. Possible values are: • Add • AddTax • Cancel • CancelFee • DeliveryChargeAdjustment • FeeAdjustment • Modify • OrderAdjustmentGroup • OrderDeliveryGroup • ProductAdjustment • Return • ReturnFee
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description ISO code for the currency of the OrderSummary associated with the OrderItemSummaryChange. The default value is USD.

Field	Details
	Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
IsPreFulfillment	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the change occurs before the OrderItemSummary has been fulfilled.
OrderItemSummary ChangeNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the OrderItemSummaryChange.
OrderItemSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderItemSummary to which the change applies.
OrderSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderSummary to which the associated OrderItemSummary belongs.
Reason	Type picklist Properties Defaulted on create, Filter, Group, Sort Description Reason for the change. You can customize this list.

Field	Details
	The list has one default value: Unknown

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

OrderItemSummaryChangeChangeEvent (API version 62.0)
Change events are available for the object.

[OrderItemSummary](#)

OrderItemSummaryRelationship

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later. An exchange order is an OrderSummary object whose SourceProcess property is set to Exchange. An original order summary can have an exchange order, which in turn can have yet another exchange order, and so on. The OrderSummaryRelationship object maintains this relationship between OrderSummary objects.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssociatedOrderItemInventory	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Controls whether the inventory of the associated order item is included in the inventory of the main order item. Possible values are: - IncludedInMainInventory—Included in Main Inventory - NotIncludedInMainInventory—Not Included in Main Inventory
AssociatedOrderItemSumPricing	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description An enum that describes how the related order item summary is priced relative to the primary order item summary. Possible values are: - IncludedInBundlePrice—Included in Bundle Price - NotIncludedInBundlePrice—Not Included in Bundle Price
AssociatedOrderItemSummaryId	Type reference Properties Create, Filter, Group, Sort Description The related order item summary of this order item summary relationship. For bundle relationships, this denotes the ID of the child order item summary. This field is a relationship field. Relationship Name AssociatedOrderItemSummary Refers To OrderItemSummary
AssociatedOrderItemSummaryRole	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The role of the associated order item summary of this relationship. Possible values are:

Field	Details
	• <code>AddOnComponent</code>—Addon Component • <code>BundleComponent</code>—Bundle Component • <code>ClassificationComponent</code>—Product Classification Component • <code>SetComponent</code>—Set Component
<code>AssociatedQuanScaleMethod</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description An enum that describes how to scale the quantity of the associated order item summary relative to the main order item summary. Possible values are: • <code>Constant</code> • <code>Proportional</code> The default value is <code>Proportional</code>.
<code>CurrencyIsoCode</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency of the OrderSummary. Possible values are: • <code>USD</code>—U.S. Dollar The default value is <code>USD</code>.
<code>MainOrderItemSummaryId</code>	Type reference Properties Create, Filter, Group, Sort Description The primary order item summary ID of this order item summary relationship. This field is a relationship field. Relationship Name <code>MainOrderItemSummary</code> Relationship Type Master-detail Refers To <code>OrderItemSummary</code> (the master object)

Field	Details
MainOrderItemSummaryRole	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The role of the primary order item summary of this relationship. Possible values are: • AddOn—Addon Parent • Bundle—Bundle Parent • Set—Set Parent
MainOrderSummaryId	Type reference Properties Create, Filter, Group, Sort Description The ID of the main order item summary. This field is a relationship field. Relationship Name MainOrderSummary Refers To OrderSummary
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the relationship.
OrderItemRelationshipId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The order summary ID of the order item summary. This field is a relationship field. Relationship Name OrderItemRelationship

Field	Details
	Refers To OrderItemRelationship
ProductRelatedComponentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The lookup ID from the product related component. This field is a relationship field. Relationship Name ProductRelatedComponent Refers To ProductRelatedComponent
ProductRelationshipTypeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The lookup from the product relationship type. This field is a relationship field. Relationship Name ProductRelationshipType Refers To ProductRelationshipType

OrderItemTaxLineItem

The tax amount that has been applied to an order item. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Orders entities, your org must have a Salesforce Order Management license. Commerce Orders entities are available only in Lightning Experience.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort, Update Description The total amount of the tax line. The value is rounded to the nearest possible amount associated with the currency of the order item.
CalculationReferenceNumber	Type string Properties Create, Filter, Group, Nillable, Sort Description Reference number provided by the tax provider, such as Stripe, in the tax calculation API response. This field is available in API version 62.0.
Description	Type textarea Properties Create, Nillable, Update Description Users can add a custom description to the record to provide additional detail.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the tax line.
OrderId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the parent order for the order item related to the tax line
OrderItemAdjustmentLineItemId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The order item adjustment line item that the tax line applies to.
OrderItemId	Type reference Properties Create, Filter, Group, Sort Description The order item that the tax line applies to.
Rate	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage value of the tax. Null if the tax is a flat amount.
ReferenceNumber	Type string Properties Create, Filter, Group, Nillable, Sort Description Reference number provided by the tax provider (like Stripe) for each line item in the tax calculation API call. Use this unique ID to revert taxes during cancellation or return of an order. This field is available in API version 62.0.
RelatedTaxLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The original order item tax line. Useful for reference in change order scenarios.
TaxEffectiveDate	Type date Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The date used to calculate the effective tax rate. This field may require an update to accommodate different buyer time zones.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Shows whether the amount on the tax line is an estimate or the final calculated amount. Doesn't set a value by default. Users can define automation to set and change the value as needed. Possible values are: • Actual • Estimated

OrderItemTaxLineItemSummary

Represents the current tax on an OrderItemSummary or OrderItemAdjustmentLineSummary. Corresponds to one or more order item tax line items, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
Amount	Type currency Properties Filter, Sort Description Amount of tax represented by the OrderItemTaxLineItemSummary.

Field	Details
	If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.
CalculationReferenceNumber	Type string Properties Filter, Group, Nillable, Sort Description Reference number provided by the tax provider, such as Stripe, in the tax calculation API response.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description ISO code for the currency of the <code>OrderSummary</code> associated with the <code>OrderItemTaxLineItemSummary</code>. The default value is <code>USD</code>. Possible values are: • <code>DKK</code>—Danish Krone • <code>EUR</code>—Euro • <code>GBP</code>—British Pound • <code>USD</code>—U.S. Dollar This field is available in API version 49.0 and later.
Description	Type textarea Properties Nillable, Update Description Description of the <code>OrderItemTaxLineItemSummary</code>. This field can be edited.
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description Name of the <code>OrderItemTaxLineItemSummary</code>.

Field	Details
OrderItemAdjustmentLineSummaryId	Type reference Properties Filter, Group, Nillable, Sort Description If this object represents tax on an adjustment, this value is the ID of the OrderItemAdjustmentLineSummary to which the tax applies. If this value is null, the adjustment applies to an OrderItemSummary.
OrderItemSummaryId	Type reference Properties Filter, Group, Sort Description If this object represents tax on an OrderItemSummary, this value is the ID of that OrderItemSummary. If this object represents tax on an adjustment, this value is the ID of the OrderItemSummary to which the adjustment applies.
OrderSummaryId	Type reference Properties Filter, Group, Sort Description ID of the OrderSummary that the associated OrderItemSummary or OrderItemAdjustmentLineSummary belongs to.
OriginalOrderItemTaxLineItemId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the original order item tax line item associated with this summary object. Nillable=true only if the associated order summary is unmanaged. For managed order summaries, nillable=false.
Rate	Type percent Properties Filter, Nillable, Sort Description Tax rate used to calculate the Amount.

Field	Details
	If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
<code>ReferenceNumber</code>	Type string Properties Filter, Group, Nillable, Sort Description Reference number provided by the tax provider (like Stripe) for each line item in the tax calculation API call. Use this unique ID to revert taxes during cancellation or return of an order.
<code>TaxEffectiveDate</code>	Type date Properties Filter, Group, Sort Description Date on which the Amount was calculated. Important due to tax rate changes over time. If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code>, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
<code>TransactionReferenceNumber</code>	Type string Properties Filter, Group, Nillable, Sort, Update Description Reference number provided by the tax provider, such as Stripe, in the tax transaction commit API request.
<code>Type</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates whether the Amount is actual or estimated. Possible values are: • Actual • Estimated

Field	Details
	If the <code>OrderLifeCycleType</code> field on the associated <code>OrderSummary</code> is set to <code>UNMANAGED</code> , then users with the <code>Edit Unmanaged Order Summaries</code> or <code>B2B Commerce Integrator</code> user permission can modify this field.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrderItemTaxLineItemSummaryChangeEvent](#) (API version 62.0)

Change events are available for the object.

[OrderItemAdjustmentLineSummary](#)

[OrderItemSummary](#)

[OrderItemTaxLineItem](#)

OrderItemType

Shows whether the order product is a product line or charge line. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>ApiName</code>	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
<code>IsDefault</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether this is the default order item type status value (<code>true</code>) or not (<code>false</code>) in the picklist.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Master label for this order item type status value. This display value is the internal label that doesn't get translated.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description Number used to sort this value in the order item status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted.
TypeCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Code indicating the type of order item. Possible values are: • <code>Charge</code>—API Name <code>DeliveryCharge</code>. • <code>Product</code>—For API Name <code>Product</code>.

OrderOwnerSharingRule

Represents a rule which determines order sharing access for the order's owners.

Note: To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
CreatedById	Type reference Properties Defaulted on create, Filter, Group, Sort Description ID of the creator of the order owner sharing rule.
CreatedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description Date when the order owner sharing rule was created.
Description	Type string Properties Create, Filter, Nillable, Sort, Update Description Description of the order owner sharing rule. Maximum length is 1,000 characters.
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the developer of the order owner sharing rule.
GroupId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description ID of the group whose orders are shared.
Id	Type ID Properties Defaulted on create, Filter, Group, idLookup, Sort Description ID of the order owner sharing rule.
LastModifiedById	Type reference Properties Defaulted on create, Filter, Group, Sort Description ID of the user who last modified the order owner sharing rule.
LastModifiedDate	Type dateTime Properties Defaulted on create, Filter, Sort Description Date when the order owner sharing rule was last modified.
Name	Type string Properties Create, Filter, Group, idLookup, Namefield, Sort, Update Description Name of the order owner sharing rule. Maximum length is 80 characters.
OrderAccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Access level for the order owner sharing rule.
SystemModstamp	Type dateTime

Field	Details
	Properties Defaulted on create, Filter, Sort Description System modification time for the order owner sharing rule.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the user or group with whom order access is shared.

Usage

Use this object to manage the sharing rules for orders. For example, the following code creates an order owner sharing rule between two public groups, which can also contain portal users.

```
OrderOwnerSharingRule rule = new OrderOwnerSharingRule();
rule.setName("RuleName"); // Set the sharing rule name
rule.setDeveloperName("RuleDeveloperName"); // Set the sharing rule developer name
rule.setGroupId("00Gx000000000000"); // Set the group of users to share records from
rule.setUserOrGroupId("00Gx000000000001"); // Set the group of users to share records to
rule.setOrderAccessLevel("Edit");
connection.create(rule);
```

[Metadata API Developer Guide: SharingRules](#)

OrderPaymentSummary

Represents the current properties and state of payments using a single payment method that are applied to one OrderSummary. This object is available in API version 48.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Unlike most summary objects, an OrderPaymentSummary isn't related to a similarly named order payment object. Instead, it combines values from multiple payment objects that use the same payment method and apply to the same OrderSummary.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AuthorizationAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that has been authorized.
AuthorizationReversalAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the AuthorizationAmount that has been reversed.
AvailableToCaptureAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that's available to be captured. Equal to AuthorizationAmount minus (CapturedAmount and PendingCaptureAmount and AuthorizationReversalAmount and PendingReverseAuthAmount). However, if the calculated amount is a negative number, this value is 0.
AvailableToRefundAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that's available to be refunded. Equal to CapturedAmount plus PendingCaptureAmount minus (RefundedAmount and PendingRefundAmount). However, if the calculated amount is a negative number, this value is 0.
BalanceAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Total balance of all payments associated with this summary object.
CapturedAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that has been captured.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the OrderPaymentSummary. Order Management APIs and actions that create an OrderPaymentSummary for an OrderSummary set this value. The default value is USD. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar This field is available in API version 49.0 and later.
FullName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The full name of the payment method user.
LastPaymentGatewayLogId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the most recent payment gateway log associated with the OrderPaymentSummary.

Field	Details
LastPaymentGatewayMessage	Type string Properties Create, Filter, Nillable, Sort, Update Description The most recent message received from the payment gateway associated with the OrderPaymentSummary.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last viewed a record related to this record. This field is available in API version 49.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last viewed this record. A null value can mean that this record was only referenced (LastReferencedDate) and not viewed. This field is available in API version 49.0 and later.
Method	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the OrderPaymentSummary.
OrderSummaryId	Type reference Properties Create, Filter, Group, Sort Description ID of the OrderSummary associated with the OrderPaymentSummary.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the user who currently owns this OrderPaymentSummary. Default value is the user logged in to the API to perform the create.
PaymentCreditedAmount	Type currency Properties Filter, Nillable, Sort Description Total amount of credit associated with this OrderPaymentSummary. This field is available in API version 65.0 and later.
PaymentMethodId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the payment method associated with this OrderPaymentSummary.
PendingAuthorizationAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that's pending authorization.
PendingCaptureAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that's pending capture.
PendingRefundAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that's pending refund.

Field	Details
PendingReverseAuthAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the AuthorizationAmount that's pending reversal.
RefundedAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that was refunded.
ReservedBalanceTotalAmount	Type currency Properties Filter, Nillable, Sort Description Calculated field that summarizes the ReservedBalanceAmount for all OrderPaymentSummaryReferences for the OrderPaymentSummary.
Type	Type string Properties Create, Filter, Group, Sort Description The payment method type associated with the OrderPaymentSummary. For example, visa, mastercard, check, or giftcard.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

OrderPaymentSummaryChangeEvent (API version 62.0)

Change events are available for the object.

OrderPaymentSummaryFeed

Feed tracking is available for the object.

OrderPaymentSummaryOwnerSharingRule

Sharing rules are available for the object.

OrderPaymentSummaryShare

Sharing is available for the object.

[PaymentMethod](#)

OrderPaymentSummaryReference

OrderPaymentSummaryReference is a junction object that allows an order payment summary to be shared with another order summary. This object is available in API version 60.0 and later.

An order summary can share an order payment summary with any of its child order summaries (exchange order summaries). Each child can share the order payment summary with its children, and so on. Conceptually, the original order summary and its children form a tree structure, with the original order summary as the root node. If a new order payment summary is created for an exchange order summary anywhere in the tree, the new order payment summary can only be shared with that exchange order summary's children (and their descendents), if any.

The purpose of the OrderPaymentSummaryReference object is to establish how order summaries share order payment summaries. This is only possible if the relationship between the two order summaries has already been established. A corresponding OrderSummaryRelationship record must already exist that relates a parent order summary (MainOrderSummary) with its child (AssociateOrderSummary). The record's AssociatedRelationshipType field must be set to Exchange.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AuthorizationAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that has been authorized.

Field	Details
CapturedAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that has been captured.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the OrderPaymentSummary. Order Management APIs and actions that create an OrderPaymentSummary for an OrderSummary set this value. The default value is USD. Possible values are: • EUR—Euro • USD—U.S. Dollar The default value is USD.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last viewed a record related to this record. This field is available in API version 49.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the current user last viewed this record. A null value can mean that this record was only referenced (LastReferencedDate) and not viewed. This field is available in API version 49.0 and later.
Method	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the OrderPaymentSummary.
OrderPaymentSummaryId	Type reference Properties Create, Filter, Group, Sort Description ID of the OrderPaymentSummary shared with the OrderSummary (exchange order). This field is a relationship field. Relationship Name OrderPaymentSummary Relationship Type Lookup Refers To OrderPaymentSummary
OrderSummaryId	Type reference Properties Create, Filter, Group, Sort Description ID of the OrderSummary (exchange order) that the OrderPaymentSummary is shared with. This field is a relationship field. Relationship Name OrderSummary Relationship Type Lookup Refers To OrderSummary
RefundedAmount	Type currency Properties Filter, Nillable, Sort Description Amount of the OrderPaymentSummary that was refunded.

Field	Details
ReservedBalanceAmount	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Reserved balance amount for the exchange order for the order payment summary relationship.
ReservedBalanceTotalAmount	Type currency Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Summary of all the ReservedBalanceAmount for all the order payment summary references.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Type of reference between the OrderSummary and the OrderPaymentSummary. Possible values are: • Shared

OrderShare

Represents a sharing entry on an Order. This object is available in API version 48.0 and later.

You can only create, edit, and delete sharing entries for standard objects whose `RowCause` field is set to `Manual`. Sharing entries for standard objects with different `RowCause` values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
OrderAccessLevel	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Level of access that the user or group has to the order. Possible values are: • All—Owner. This value isn't valid when creating, updating, or deleting records. • Edit—Read/Write • Read—Read Only
OrderId	Type reference Properties Filter, Group, Sort Description ID of the order associated with this sharing entry. This field can't be updated. This is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order
RowCause	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is Manual. If no value is specified, the field defaults to Manual. All other RowCause values are read-only. After the sharing entry is created, this field can't be edited.
UserOrGroupId	Type reference Properties Filter, Group, Sort

Field	Details
	Description ID of the user or group that has been given access to the order. This field can't be updated. This is a polymorphic relationship field.
	Relationship Name UserOrGroup
	Relationship Type Lookup
	Refers To Group, User

Usage

This object allows you to determine which users and groups can view or edit orders owned by other users.

If you attempt to create a record that matches an existing record, any modified fields are updated, the system returns the existing record.

OrderStatus

Represents the status of the order entity. This object is available in API version 48.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether this is the default order status value (<code>true</code>) or not (<code>false</code>) in the picklist.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Master label for this order status value. This display value is the internal label that doesn't get translated.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description Number used to sort this value in the order status picklist. These numbers aren't guaranteed to be sequential, as some previous contract status values might have been deleted.
StatusCode	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the order. Possible values are: • <code>Activated</code> • <code>Draft</code> • <code>Superseded</code>—This value is applicable only to Revenue Cloud Advanced users and is available in API version 64.0 and later.

Usage

This object represents a value in the order status picklist. The order status picklist provides additional information about the status of an Order, such as its current state (`Draft`, `Activated`, or `Superseded`). You can query these records to retrieve the set of values in the order status picklist, and then use that information while processing Order objects to determine more information about a given order. For example, the application could test whether a given order is activated based on its Status value and the value of the StatusCode property in the associated OrderStatus object.

OrderSummary

Represents the current properties and state of an order. Corresponds to one or more order objects, consisting of an original object and any change objects applicable to it. This object is available in API version 48.0 and later.

For performance and data integrity reasons, CRUD operations on OrderSummary records don't fire Apex triggers.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the account or person account associated with the OrderSummary. It represents the shopper in the storefront. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
ActiveProcess ExceptionCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of active process exceptions on the OrderSummary.

Field	Details
	This field is available in API version 50.0 and later.
BillingAddress	Type address Properties Filter, Nillable Description Billing address associated with the OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
BillingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Billing address city.
BillingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Billing address country.
BillingCountryCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO country code for the billing address. The default value is <code>US</code>.
BillingEmailAddress	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address on the billing address.
BillingGeocodeAccuracy	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The accuracy of the geocode for the billing address. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
BillingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with BillingLongitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with BillingLatitude to specify the precise geolocation of the billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingPhoneNumber	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the billing address.

Field	Details
BillingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Billing address postal code.
BillingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Billing address state.
BillingStateCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO state or province code for the billing address.
BillingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Billing address street.
BillToContactId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Contact associated with the OrderSummary. It represents the shopper in the storefront when not using person accounts. If the <code>OrderLifeCycleType</code> field is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later.
	Relationship Name BillToContact

Field	Details
	Relationship Type Lookup Refers To Contact
BusinessModel	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The business model of the OrderSummary. Possible values are: • B2B • B2C This field is available in API version 53.0 and later.
ChangeOrderId	Type reference Properties Filter, Group, Nillable, Sort Description Reserved for future use.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the OrderSummary. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD. This field is available in API version 49.0 and later.
Description	Type textarea

Field	Details
	Properties Create, Nillable, Update Description Description of the OrderSummary. This field can be edited.
EffectiveDate	Type date Properties Create, Filter, Group, Sort, Update Description Date at which the order becomes effective. Label is Order Start Date. This field is available in API version 64.0 and later.
ExternalReferenceIdentifier	Type string Properties Filter, Group, idLookup, Nillable, Sort, Update Description Used internally to prevent duplicate records. This value is case-sensitive. In API version 56.0 and later, for orders ingested from B2C Commerce, this value is set to <i>B2C realm ID + "_" + B2C instance ID + "@" + B2C Commerce catalog/domain ID + "@" + B2C Commerce order number</i>. In API version 55.0, the standard B2C Commerce integration set this value to "SFDC" + "@" + <i>nanotime</i> + "@" + <i>UUID</i> and High Scale Orders set it to the value used in later versions. This field is available in API version 54.0 and later.
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description Total amount, including adjustments and tax, of the OrderSummary.
IsSuspended	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the OrderSummary is suspended. The default value is false. This field is available in API version 50.0 and later.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
OperationInProgress	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Current operation. Possible values are: • Cancellation • None
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
OrderedDate	Type dateTime Properties Filter, Nillable, Sort Description Date of the original order associated with this OrderSummary. If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.
OrderLifeCycleType	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description Specifies whether the OrderSummary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged OrderSummary is stored in Salesforce for reference purposes. - Some Order Management APIs reject input records that are associated with unmanaged OrderSummaries. - Order Management does not update financial bucket fields on some records that are associated with unmanaged OrderSummaries. - A user with the EditUnmanagedOrderSummaries or B2BCommerceIntegrator permission can edit certain fields on objects related to unmanaged OrderSummaries that are normally only accessible via APIs. Possible values are: - MANAGED—Managed - UNMANAGED—Unmanaged This field is available in API version 49.0 and later.
OrderNumber	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the OrderSummary.
OrderProductLineCount	Type int Properties Filter, Group, Nillable, Sort Description Total number of unique products ordered on this Order Summary. This field is available in API version 52.0 and later.
OriginalOrderId	Type reference Properties Filter, Group, Sort Description ID of the original order associated with this OrderSummary. Label is Original Order. This field is a relationship field. Relationship Name OriginalOrder

Field	Details
	Relationship Type Lookup
	Refers To Order
OwnerId	Type reference
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description The ID of the user who currently owns this OrderSummary. Default value is the ID of the user who created the record. This field is a polymorphic relationship field.
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
PoDate	Type dateTime
	Properties Create, Filter, Nillable, Sort, Update
	Description Purchase order date associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 52.0 and later.
PoNumber	Type string
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Purchase order number associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field.

Field	Details
Pricebook2Id	Type reference Properties Filter, Group, Nillable, Sort Description ID of the pricebook associated with this OrderSummary. This field is available in API version 54.0 and later. This field is a relationship field. Relationship Name Pricebook2 Relationship Type Lookup Refers To Pricebook2
RoutingAttempts	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The number of attempts that have been made to route the order summary to inventory locations. This field is available in API version 51.0 and later.
SalesChannelId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the SalesChannel associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is a relationship field. Relationship Name SalesChannel Relationship Type Lookup Refers To SalesChannel

Field	Details
SalesStoreId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the RetailStore or WebStore associated with this OrderSummary. If the <code>OrderLifeCycleType</code> field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is a relationship field. Relationship Name SalesStore Relationship Type Lookup Refers To WebStore
SourceProcess	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Describes the order process that created the OrderSummary. Possible values are: • <code>Exchange</code> The OrderSummary was created by an Exchange process • <code>OrderOnBehalf</code> The OrderSummary was created by an Order on Behalf Of process • <code>Standard</code> The OrderSummary was not created by an Order on Behalf Of or Exchange process This field is available in API version 57.0 and later.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Status of the order summary. Unlike the Status and Status Category fields on the order and FulfillmentOrder objects, this field is optional. We recommend that you use the same values in this picklist that you use in the Status picklist for the order object.

Field	Details
SourceOrderSummaryId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the source order summary that's associated with this OrderSummary. This field is populated when the SourceProcess of this OrderSummary is an exchange process. Relationship Name SourceOrderSummary Relationship Type Lookup Refers To OrderSummary
TaxLocaleType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The system used to handle tax on the original Order associated with the OrderSummary. Gross usually applies to taxes like value-added tax (VAT), and Net usually applies to taxes like sales tax. Automatic taxes use currency to determine if the tax is added on top of the price (excluded) or included in the price. Possible values are: • Gross (displays most prices and taxes as combined values) • Net (displays most prices and taxes as separate values) • Automatic (displays most prices and taxes as combined or separate, based on the currency) If the OrderLifeCycleType field on the associated OrderSummary is set to UNMANAGED, then users with the Edit Unmanaged Order Summaries or B2B Commerce Integrator user permission can modify this field. This field is available in API version 49.0 and later.
TotalAdjDelivery AmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedDeliveryAmount + TotalAdjustedDeliveryTaxAmount.

Field	Details
	This field is available in API version 49.0 and later.
TotalAdjDistAmount	Type currency Properties Filter, Nillable, Sort Description Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary. This amount is equal to TotalProductAdjDistAmount plus TotalDeliveryAdjDistAmount.
TotalAdjDistAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total of distributed adjustments applied to OrderItemSummaries belonging to this OrderSummary, inclusive of tax. This amount is equal to TotalAdjDistAmount plus TotalAdjDistTaxAmount. This field is available in API version 49.0 and later.
TotalAdjDistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjDistAmount.
TotalAdjFeeAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total amount of all OrderItemSummaries of type Fee belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedFeeAmount plus TotalAdjustedFeeTaxAmount. This field is available in API version 56.0 and later.
TotalAdjProductAmtWithTax	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Total amount of all OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of item-level adjustments and tax. This amount is equal to TotalAdjustedProductAmount plus TotalAdjustedProductTaxAmount. This field is available in API version 49.0 and later.
TotalAdjustedDeliveryAmount	Type currency Properties Filter, Nillable, Sort Description Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary.
TotalAdjustedDeliveryTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustedDeliveryAmount.
TotalAdjustedFeeAmount	Type currency Properties Filter, Nillable, Sort Description Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type Fee belonging to this OrderSummary. This field is available in API version 56.0 and later.
TotalAdjustedFeeTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalAdjustedFeeAmount. This field is available in API version 56.0 and later.
TotalAdjustedProductAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort
	Description Total, including item-level adjustments but not order-level adjustments or tax, of all OrderItemSummaries of type code Product belonging to this OrderSummary.
TotalAdjustedProductTaxAmount	Type currency
	Properties Filter, Nillable, Sort
	Description Tax on the TotalAdjustedProductAmount.
TotalAmount	Type currency
	Properties Filter, Nillable, Sort
	Description Total, including adjustments but not tax, of all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedProductAmount plus TotalAdjustedFeeAmount plus TotalAdjustedDeliveryAmount.
TotalDeliveryAdjDistAmount	Type currency
	Properties Filter, Nillable, Sort
	Description Total of all order-level price adjustments applied to OrderItemSummaries of type Delivery Charge belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.
TotalDeliveryAdjDistAmtWithTax	Type currency
	Properties Filter, Nillable, Sort
	Description Total of all order-level price adjustments applied to OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalDeliveryAdjDistAmount + TotalDeliveryAdjDistTaxAmount. This field is available in API version 49.0 and later.

Field	Details
TotalDeliveryAdjDistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalDeliveryAdjDistAmount.
TotalDeliveryAmount	Type currency Properties Filter, Nillable, Sort Description Sum of the Total Line Amounts of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 54.0 and later.
TotalDeliveryAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total of all OrderItemSummaries of type Delivery Charge belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalDeliveryAmount + TotalDeliveryTaxAmount. This field is available in API version 54.0 and later.
TotalDeliveryTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalDeliveryAmount. This field is available in API version 54.0 and later.
TotalFeeAdjDistAmount	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Total of all order-level price adjustments applied to OrderItemSummaries of type Fee belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. This field is available in API version 56.0 and later.
TotalFeeAdj DistAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total of all order-level price adjustments applied to OrderItemSummaries of type Fee belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalFeeAdjDistAmount + TotalFeeAdjDistTaxAmount. This field is available in API version 56.0 and later.
TotalFeeAdj DistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalFeeAdjDistAmount. This field is available in API version 56.0 and later.
TotalFeeAmount	Type currency Properties Filter, Nillable, Sort Description Sum of the Total Line Amounts of all OrderItemSummaries of type Fee belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 56.0 and later.
TotalFeeAmountWithTax	Type currency Properties Filter, Nillable, Sort Description Total of all OrderItemSummaries of type Fee belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalFeeAmount + TotalFeeTaxAmount.

Field	Details
	This field is available in API version 56.0 and later.
TotalFeeTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalFeeAmount. This field is available in API version 56.0 and later.
TotalProductAdjDistAmount	Type currency Properties Filter, Nillable, Sort Description Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header.
TotalProductAdjDistAmtWithTax	Type currency Properties Filter, Nillable, Sort Description Total of all order-level price adjustments applied to OrderItemSummaries of type code Product belonging to this OrderSummary, inclusive of tax. This value includes OrderItemAdjustmentLineSummaries that belong to OrderAdjustmentGroupSummaries of type Header. It is equal to TotalProductAdjDistAmount + TotalProductAdjDistTaxAmount. This field is available in API version 49.0 and later.
TotalProductAdjDistTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalProductAdjDistAmount.
TotalProductAmount	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description Sum of the Total Line Amounts of all OrderItemSummaries of type code Product belonging to this OrderSummary, not including adjustments or tax. This field is available in API version 54.0 and later.
TotalProductAmount WithTax	Type currency Properties Filter, Nillable, Sort Description Total of all OrderItemSummaries of type code Product belonging to this OrderSummary, including tax but not including adjustments. It is equal to TotalProductAmount + TotalProductTaxAmount. This field is available in API version 54.0 and later.
TotalProductTaxAmount	Type currency Properties Filter, Nillable, Sort Description Tax on the TotalProductAmount. This field is available in API version 54.0 and later.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description Total tax on all OrderItemSummaries belonging to this OrderSummary. Equal to TotalAdjustedDeliveryTaxAmount plus TotalAdjustedFeeTaxAmount plus TotalAdjustedProductTaxAmount.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

OrderSummaryChangeEvent (API version 62.0)

Change events are available for the object.

OrderSummaryFeed

Feed tracking is available for the object.

OrderSummaryOwnerSharingRule

Sharing rules are available for the object.

OrderSummaryShare

Sharing is available for the object.

OrderSummaryAdditionalInfo

Stores information related to OrderSummary including context around the order, such as inventory reservation details, order origination, and other values that Einstein uses to perform order analysis. Only reservation details can be stored in this object. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustmentsVersion	Type text Properties Filter, Group, Nillable, Sort Description Represents the adjustment algorithm that was used to create adjustments for this order
CurrencyIsoCode	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description ISO code for the currency of the OrderSummary associated with the OrderSummaryAdditionalInfo. Possible values are: • GBP—British Pound • USD—U.S. Dollar The default value is USD.
InventoryReservationExtRef	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Holds an external reference identifier for tracking the inventory reservation.
InventoryReservationIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Inventory reservation identifier for the order, if available. Since this value can come from external systems, the value type has no lookup or enforcement.
InventoryReservationMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Holds any details or other relevant information that can further explain the status of the reservation.
InventoryReservationState	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the reservation, if available. Possible values are: • DEFERRED

Field	Details
	• NOT_APPLICABLE • PERMANENT • TEMPORARY
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the OrderSummaryAdditionalInfo record.
OrderId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Unique ID of the order associated with this record. This field is a relationship field. Relationship Name Order Relationship Type Lookup Refers To Order
OrderSummaryId	Type reference Properties Filter, Group, Nillable, Sort Description Unique ID of the associated OrderSummary to which the specific OrderSummaryAdditionalInfo applies. This field is a relationship field. Relationship Name OrderSummary Relationship Type Lookup Refers To OrderSummary

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who currently owns this record. Default value is the ID of the user who created the record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

OrderSummaryRelationship

Junction object used to track how an original order summary (created before any exchanges have occurred) relates to other order summary objects in a chain of exchange orders. This object is available in API version 60.0 and later.

An exchange order is an OrderSummary object whose `SourceProcess` property is set to Exchange. An original order summary can have an exchange order, which in turn can have yet another exchange order, and so on. The OrderSummaryRelationship object maintains this relationship between OrderSummary objects.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AssociatedOrderSummaryId	Type reference Properties Create, Filter, Group, Sort Description ID of the associated OrderSummary. This field is a relationship field. Relationship Name AssociatedOrderSummary Relationship Type Lookup Refers To OrderSummary
AssociatedOrderSummaryStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Status of the associated OrderSummary. Possible values are: • Activated • Approved • Canceled • Created • Fulfilled • Returned • Waiting to Fulfill The default value is Created.

Field	Details
AssociatedRelationshipType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Relationship type of the associated OrderSummary. Possible values are: • Exchange
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. Possible values are: • EUR—Euro • USD—U.S. Dollar The default value is USD.
MainAttachedToId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of an Order (Change Order) or a ReturnOrder that belongs to the parent OrderSummary (whose ID is stored in the <code>MainOrderSummaryId</code> field). This field is a polymorphic relationship field. Relationship Name MainAttachedTo Relationship Type Lookup Refers To Order, ReturnOrder
MainOrderSummaryId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description ID of the associated OrderSummary's parent. This field is a relationship field. Relationship Name MainOrderSummary Relationship Type Lookup Refers To OrderSummary
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the OrderSummaryRelationship.
RootOrderSummaryId	Type reference Properties Create, Filter, Group, Sort Description ID of the original OrderSummary that existed before any exchange orders were created. This field is a relationship field. Relationship Name RootOrderSummary Relationship Type Lookup Refers To OrderSummary

OrderSummaryRoutingSchedule

Represents an attempt to route an order summary to one or more inventory locations for fulfillment. You can use it to schedule future attempts and to record completed attempts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce license is enabled.

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the order summary routing schedule.
OrderSummaryId	Type reference Properties Create, Filter, Group, Sort Description (Master-Detail) The order summary associated with the routing schedule.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User who currently owns this order summary routing schedule. Default value is the User logged in to the API to perform the create.

Field	Details
Reason	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Reason for the routing attempt. You can customize this list. The list has one default value: Unknown
ScheduleStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Identifies whether this routing attempt has already run or is scheduled to run. Possible values are: - ABANDONED - COMPLETED - SCHEDULED
ScheduledDatetime	Type dateTime Properties Create, Filter, Sort, Update Description Identifies when this routing attempt was run or is scheduled to run. If the <code>ScheduleStatus</code> is ABANDONED or COMPLETED, then you can't modify this value.

Organization

Represents key configuration information for an organization.

Executing a SOQL SELECT query returns the value of fields in this object, but no value is visible for some of the fields.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
Address (beta)	Type address Properties Filter, Nillable Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
AllowsSelfServiceLogin	Type boolean Properties Defaulted on create, Filter, Update Description Indicates whether the organization allows Self-Service login (<code>true</code>) or not (<code>false</code>).
City	Type string Properties Filter, Group, Nillable, Sort, Update Description Name of the city for the organization's address.
ComplianceBccEmail	Type email

Field	Details
	Properties Filter, Group, Nillable, Sort Description Email address for compliance blind carbon copies. Limit: 80 characters.
Country	Type string Properties Filter, Group, Nillable, Sort Description Name of the country for the organization's address. Limit: 80 characters.
CountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the organization's address. Enable state and country/territory picklists to use this field. For more information, see Enable and Disable State and Country/Territory Picklists in Salesforce Help.
DailyWebToCaseCount	Type int Properties Filter, Nillable Description The number of web form submissions that have been converted to cases for the day.
DailyWebToCaseLimit	Type int Properties Filter, Nillable Description The maximum number of web form submissions that can be converted to cases per day.
DailyWebToLeadCount	Type int

Field	Details
	Properties Filter, Nillable Description The number of web form submission that have been converted to leads for the day
DailyWebToLeadLimit	Type int Properties Filter, Nillable Description The maximum number of web form submissions that can be converted to leads per day.
DefaultAccountAccess	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description In API version 10.0 and later, represents the default access level for accounts, contracts, and assets. The possible values are: • None • Read • Edit • ControlledByLeadOrContact • ControlledByCampaign In versions before 10.0, DefaultAccountAndContactAccess represented this value.
DefaultAccountAndContactAccess	Type picklist Properties Filter, Nillable, Restricted picklist Description Default access level for accounts, contacts, contracts, and assets. This field is supported for backward compatibility only and is not available in API version 10.0 or later. In version 10.0 and later, use either DefaultAccountAccess or DefaultContactAccess.

Field	Details
DefaultCalendarAccess	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Default access level for calendars. The possible values are listed, followed by the user interface labels in parentheses: • HideDetails (Hide Details) • HideDetailsInsert (Hide Details and Add Events) • ShowDetails (Show Details) • ShowDetailsInsert (Show Details and Add Events) • AllowEdits (Full Access)
DefaultCampaignAccess	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Default access level for campaigns. The possible values are: • None • Read • Edit • All
DefaultCaseAccess	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Default access level for cases. The possible values are: • None • Read • Edit • ReadEditTransfer
DefaultContactAccess	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Default access level for contacts. The possible values are: • None • Read • Edit • ControlledByParent In versions before 10.0, <code>DefaultAccountAndContactAccess</code> represented this value. When <code>DefaultContactAccess</code> is set to "Controlled by Parent," you can't update the <code>ContactAccessLevel</code> field.
<code>DefaultLeadAccess</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Default access level for leads. The possible values are: • NoneRead • Edit • ReadEditTransfer
<code>DefaultLocaleSidKey</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description Default locale SID key. For more information on picklist options, see Supported Number, Name, and Address Formats (ICU) in Salesforce help.
<code>DefaultOpportunityAccess</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Default access level for opportunities. The possible values are: • None • Read • Edit

Field	Details
	- ControlledByLeadOrContact - ControlledByCampaign
DefaultPricebookAccess	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Default access level for price books. The possible values are listed, followed by the user interface labels in parentheses: - None (No access) - Read (Read only) - ReadSelect (Use)
DefaultTerritoryCaseAccess	Type picklist Properties Filter, Group, Nillable, Sort Description Default access level for cases associated with accounts in territories. The possible values are: - None - Read - Edit - ControlledByLeadOrContact - ControlledByCampaign
DefaultTerritoryContactAccess	Type picklist Properties Filter, Group, Nillable, Sort Description Default access level for contacts associated with accounts in territories. The possible values are: - NoneRead - Edit - ControlledByLeadOrContact - ControlledByCampaign When <code>DefaultContactAccess</code> is set to "Controlled by Parent" you can't update this field.

Field	Details
DefaultTerritoryOppAccess	Type picklist Properties Filter, Group, Nillable, Sort Description Default access level for opportunities in territories. Valid values: • NoneRead • Edit • ControlledByLeadOrContact • ControlledByCampaign
Division	Type string Properties Filter, Group, Nillable, Sort, Update Description The name of the division for this organization. This field is not related to the Division object.
Fax	Type phone Properties Filter, Group, Nillable, Sort, Update Description Fax number. Limit: 40 characters.
FiscalYearStartMonth	Type int Properties Filter, Group, Nillable, Sort Description Number that corresponds to the month that this organization's fiscal year starts.
HomepageHtml	Type textarea Properties Nillable, Update

Field	Details
	Description The Home tab custom links and company message for this organization.
InstanceName	Type string Properties Filter, Group, Nillable, Sort Description Read-only. The name of the instance. Available in API version 31.0 or later.
IsSandbox	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Indicates whether the current organization is a sandbox (<code>true</code>) or production (<code>false</code>) instance. Available in API version 31.0 or later.
LanguageLocaleKey	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description The same as <code>Language</code> , the two-to-five character code which represents the language and locale ISO code. This controls the language for labels displayed in an application.
LastWebToCaseDate	Type dateTime Properties Filter, Nillable Description The last date that a web form submission was converted to a case.
LastWebToLeadDate	Type dateTime Properties Filter, Nillable

Field	Details
	Description The last date that a web form submission was converted to a lead.
Latitude	Type double Properties Filter, Nillable, Sort, Update Description Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
Longitude	Type double Properties Filter, Nillable, Sort, Update Description Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations .
MaxActionsPerRule	Type int Properties Filter, Nillable Description Maximum number of actions per workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.
MaxRulesPerEntity	Type int Properties Filter, Nillable Description Maximum number of rules per object, inclusive of workflow, assignment, escalation, and auto-response rules. This field is unavailable in version 15.0 and later.
MonthlyPageViewsEntitlement	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The number of page views allowed for the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.
MonthlyPageViewsUsed	Type int Properties Filter, Group, Nillable, Sort Description The number of page views used in the current calendar month for the sites in your organization. To access this field, Salesforce Sites must be enabled for your organization. This field is generally available in API versions 18.0 and later.
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description The name of the organization.
NamespacePrefix	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.

Field	Details
	In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OrganizationType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Edition of the organization, for example Enterprise Edition or Unlimited Edition.
Phone	Type phone Properties Filter, Group, Nillable, Sort, Update Description Phone number for the organization.
PostalCode	Type string Properties Filter, Group, Nillable, Sort, Update Description Postal code for the address of the organization. Limit: 20 characters.
PreferencesEventScheduler	Type boolean Properties Update Description Indicates whether opportunities require products (<code>true</code>) or not (<code>false</code>).
PreferencesRequireOpportunityProducts	Type boolean Properties Filter, Update Description Indicates whether opportunities require products (<code>true</code>) or not (<code>false</code>).

Field	Details
PreferencesSlBrowserEnabled	Type boolean Properties Filter, Update Description Indicates whether the Salesforce mobile web is enabled for all users in your organization (<code>true</code>) or is disabled for all users (<code>false</code>). This field is available in API version 29.0 or later.
PreferencesTerminateOldestSession	Type boolean Properties Filter, Update Description Indicates whether the oldest login session is automatically closed when a policy specifying the maximum number of sessions is triggered. This field is available in API version 35.0 — 49.0. As of API version 50.0, this field is removed.
PreferencesTransactionSecurityPolicy	Type boolean Properties Filter, Update Description Indicates whether the Transaction Security feature has been enabled. This field is available in API version 35.0 — 49.0. As of API version 50.0, this field is removed.
PrimaryContact	Type string Properties Filter, Group, Nillable, Sort, Update Description Name of the primary contact for the organization. Limit: 80 characters.
ReceivesAdminInfoEmails	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the organization receives administrator emails (<code>true</code>) or not (<code>false</code>).
<code>ReceivesInfoEmails</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the organization receives informational email from Salesforce (<code>true</code>) or not (<code>false</code>).
<code>SelfServiceCasePlural</code>	Type string Properties Filter, Nillable, Update Description The plural version of the term used to represent the Case object in the Self-Service portal.
<code>SelfServiceCaseSingle</code>	Type string Properties Filter, Nillable, Update Description The singular version of the term used to represent the Case object in the Self-Service portal.
<code>SelfServiceCaseSubmitRecordTypeId</code>	Type reference Properties Filter, Nillable, Update Description The ID of the record type associated with a case submitted via the Self-Service portal.
<code>SelfServicDefaultCaseOrigin</code>	Type string Properties Filter, Nillable, Update Description The default origin of a case submitted via the Self-Service portal.

Field	Details
<code>SelfServiceEmailSenderAddress</code>	Type email Properties Filter, Nillable, Update Description The Self-Service email address from which new Self-Service user and password email messages are sent, such as <code>support@acme.com</code>.
<code>SelfServiceEmailSenderName</code>	Type string Properties Filter, Nillable, Update Description The name associated with the email address in the <code>SelfServiceEmailSenderAddress</code> field, such as <code>Acme Customer Support</code>.
<code>SelfServiceEmailUserOnCaseCreationTemplateId</code>	Type reference Properties Filter, Nillable, Update Description The ID of the email template used when email is sent to a Self-Service user when he or she creates a case.
<code>SelfServiceEnabledForResponseRules</code>	Type boolean Properties Filter, Nillable, Update Description Indicates whether the Self-Service portal is enabled for auto-response rules (<code>true</code>) or not (<code>false</code>).
<code>SelfServiceFeatureConfig</code>	Type int Properties Filter, Nillable, Update Description An integer representing the active Self-Service feature configuration for this organization.

Field	Details
SelfServiceLogoutUrl	Type url Properties Filter, Nillable, Update Description The Web page that displays when a Self-Service user logs out of the Self-Service portal.
SelfServiceMaxNumSuggestions	Type int Properties Filter, Nillable, Update Description The maximum number of suggested solutions allowed for a Self-Service case.
SelfServiceNewCommentCheckedByDefault	Type boolean Properties Defaulted on create, Filter, Update Description If <code>true</code>, When a customer notification is automatically sent when a new comment is added to a case.
SelfServiceNewCommentTemplateId	Type reference Properties Filter, Nillable, Update Description The ID of the email template used to send a notification to Self-Service users when a public comment is added to one of their cases.
SelfServiceNewPassTemplateId	Type reference Properties Filter, Nillable, Update Description The ID of the email template used when new passwords are generated for Self-Service users.

Field	Details
SelfServiceNewUserTemplateId	Type reference Properties Filter, Nillable, Update Description The ID of the email template used when new Self-Service users are enabled.
SelfServicePageHeight	Type int Properties Filter, Nillable, Update Description The maximum height in pixels of Self-Service pages.
SelfServicePageWidth	Type int Properties Filter, Nillable, Update Description The maximum width in pixels of Self-Service pages.
SelfServiceSelfClosedCaseStatus	Type picklist Properties Filter, Nillable, Update Description The default status for cases closed by Self-Service users.
SelfServiceSolutionCategoryAvailable	Type boolean Properties Defaulted on create, Filter, Update Description Indicates whether solution categories are available in the Self-Service portal (<code>true</code>) or not (<code>false</code>).
SelfServiceSolutionCategoryStartNodeId	Type reference Properties Filter, Nillable, Update

Field	Details
	Description The ID of the top-level category in the Self-Service portal.
SelfServiceSolutionPlural	Type string Properties Filter, Nillable, Update Description The plural version of the term used to represent the Solution object in the Self-Service portal.
SelfServiceSolutionSingle	Type string Properties Filter, Nillable, Update Description The singular version of the term used to represent the Solution object in the Self-Service portal.
SelfServiceStyleSheetUrl	Type url Properties Filter, Nillable, Update Description The public URL of your organization's Self-Service portal stylesheet.
SelfServiceWelcomePageConfig	Type int Properties Filter, Nillable, Update Description Integer that represents the welcome page configuration for the Self-Service portal.
SelfServiceWelcomeText	Type string Properties Filter, Nillable, Update Description The custom welcome message displayed at the top of the Self-Service home page when Self-Service users log in. Limit: 32,000 characters.

Field	Details
SignupCountryIsoCode	Type string Properties Filter, Group, Nillable, Sort Description The ISO country code specified by the user for a sign-up request.
State	Type string Properties Filter, Group, Nillable, Sort, Update Description State of the address of the organization. Limit: 80 characters.
StateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO state code for the organization's address.
Street	Type textarea Properties Filter, Group, Nillable, Sort, Update Description Street address for the organization. Limit: 255 characters.
TrialExpirationDate	Type dateTime Properties Filter, Nillable, Sort Description The date that this organization's trial license expires.
TimeZoneSidKey	Type picklist Properties Filter, Group, Restricted picklist, Sort, Update Description Identifies the default time zone of the organization.

Field	Details
UiSkin	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The user interface theme selected for the organization.
UsesStartDateAsFiscalYearName	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the calendar year when the fiscal year begins is referred to as the year of the company's fiscal year (<code>true</code>) or not (<code>false</code>). For example, if the fiscal year begins in February 2006, a <code>true</code> value means the fiscal year is FY2006, and a <code>false</code> value means the fiscal year is FY2007.
UsesWebToCase	Type boolean Properties Filter, Nillable, Update Description Indicates whether this organization can use Web-to-Case (<code>true</code>) or not (<code>false</code>).
UsesWebToLead	Type boolean Properties Filter, Nillable, Update Description Indicates whether this organization can use Web-to-Lead (<code>true</code>) or not (<code>false</code>).
WebToCaseAssignedEmailTemplateId	Type reference Properties Filter, Nillable, Update Description The ID of the email template used when a new case is assigned to a user via Web-to-Case.

Field	Details
WebToCaseCreatedEmailTemplateId	Type reference Properties Filter, Nillable, Update Description The ID of the email template used when a new case is created via Web-to-Case.
WebToCaseDefaultCreatorId	Type reference Properties Filter, Nillable, Update Description The ID of the user specified as the default creator of cases created via Web-to-Case.
WebToCaseDefaultOrigin	Type string Properties Filter, Group, Nillable, Sort, Update Description The default value for the Case Origin field on cases submitted via Web-to-Case. Limit: 40 characters.

Usage

Query this object to obtain information about an organization's settings. Only one organization object exists per organization.

[Overview of Salesforce Objects and Fields](#)

OrgDeleteRequest

Represents a request to delete a developer edition (DE) org. This object is available in API version 42.0 and later. It is available only in Developer and Database.com editions.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated ID of this OrgDeleteRequest object.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort Description The ID of the user who initiated the org delete request.
RequestType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Specifies whether you want to deactivate or reactivate the org. When you deactivate an org, you have 30 days to change your mind and reactivate it. After 30 days, the org is locked, and you must contact Salesforce Customer Support to reactivate it. After 60 days, the org is permanently deleted from Salesforce servers. Valid values: • Deactivate • Reactivate

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[OrgDeleteRequestOwnerSharingRule](#)

Sharing rules are available for the object.

[OrgDeleteRequestShare](#)

Sharing is available for the object.

OrgEmailAddressSecurity

Defines the assignment of a user profile to an org-wide email address. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
OrgWideEmailAddressId	Type reference Properties Create, Filter, Group, Sort Description The ID of an organization-wide email address. This field is a relationship field. Relationship Name OrgWideEmailAddress Relationship Type Lookup Refers To OrgWideEmailAddress
ParentId	Type reference Properties Create, Filter, Group, Sort Description The profile ID that's allowed to use an organization-wide email address. This field is a relationship field. Relationship Name Parent Relationship Type Lookup

Field	Details
	Refers To Profile

Usage

You can use this object with `OrgWideEmailAddress` and `Profile` objects to retrieve user profiles that have access to a specific org-wide email address. To find specific users, use the `ProfileId` field on the `User` object.

You can also retrieve the org-wide email addresses that a specific user can access. Note that any users assigned to those org-wide email addresses via permission set aren't returned.

OrgMetric

Represents a feature or metric that Salesforce Optimizer evaluates. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in orgs where Salesforce Optimizer is enabled. Requires the Modify All Data and Customize Application user permissions.

Fields

Field	Details
Category	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description The category of the feature evaluated. Possible values are: • Custom Code • Custom Layouts • Fields • Improve Org Security • Improve User Experience

Field	Details
	• Increase User Adoption • Object Limits • Org Limits • Reports And Dashboards • Usage • User Management • Workflow The default value is Org Limits.
FeatureType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description The feature evaluated. For a full list, see Features Evaluated in Salesforce Optimizer. The default value is Unassigned Page Layouts.
LatestOrgMetricScanSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The feature's OrgMetricScanSummaryID from the most recent Optimizer evaluation. This field is a relationship field. Relationship Name LatestOrgMetricScanSummary Refers To OrgMetricScanSummary on page 3913
Name	Type string Properties Filter, Group, idLookup, Sort Description A unique number that identifies the feature.

SEE ALSO:

[Salesforce Help: Improve Your Implementation with Salesforce Optimizer](#)

OrgMetricScanResult

Represents data or an item associated with a feature's results in a Salesforce Optimizer evaluation. For example, for the Custom Field Limit feature, an OrgMetricScanResult object represents an object flagged for approaching the custom field limit. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `upsert()`

Special Access Rules

This object is only available in orgs where Salesforce Optimizer is enabled. Requires the Modify All Data and Customize Application user permissions.

Fields

Field	Details
Date	Type dateTime Properties Create, Filter, Nillable, Sort Description The date associated with an item in a feature's Optimizer evaluation. Example For the Unsupported Browsers feature, <code>Date</code> indicates the date that the user last logged in with an unsupported browser.
Flags	Type int Properties Create, Filter, Group, Nillable, Sort Description The flags associated with an item in a feature's Optimizer evaluation. Example For the API Versions feature, <code>Flags</code> indicates the API version of an object that Optimizer evaluates as outdated.
ItemStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort

Field	Details
	Description The recommended action for an item in a feature's Optimizer evaluation. Possible values are: • Action Required • Immediate Action Required • No Action Required • Not Currently Enabled • Review Required • Unable to Analyze The default value is No Action Required.
Name	Type string Properties Create, Filter, Group, idLookup, Sort Description The name of the item in a feature's Optimizer evaluation, such as an object name. Example For the Unassigned Roles feature, Name refers to the name of the unassigned role.
Object	Type string Properties Create, Filter, Group, Nillable, Sort Description The object ID associated with the item in a feature's Optimizer evaluation. For the Release Update feature only, Object indicates the release that the update is scheduled for. Example For the Unused Reports feature, Object refers to the ID of the unused report.
OrgMetricScanSummaryId	Type reference Properties Create, Filter, Group, Sort Description The feature's OrgMetricScanSummary ID from the most recent Optimizer run. This field is a relationship field. Relationship Name OrgMetricScanSummary

Field	Details
	Relationship Type Master-detail Refers To OrgMetricScanSummary on page 3913 (the master object)
Profile	Type int Properties Create, Filter, Group, Nillable, Sort Description The profile ID associated with the item in a feature's Optimizer evaluation.
Quantity	Type int Properties Create, Filter, Group, Nillable, Sort Description A quantity associated with the item in a feature's Optimizer evaluation. Example For the Custom Field Limits feature, <code>Quantity</code> indicates the total number of fields on an object that approaches the custom field limit.
Type	Type string Properties Create, Filter, Group, Nillable, Sort Description The type of item or data in a feature's Optimizer evaluation. Example For the Unsupported Browsers feature, <code>Type</code> indicates the unsupported browser and platform used.
Url	Type url Properties Create, Filter, Group, Nillable, Sort Description The URL associated with the item in a feature's Optimizer evaluation. Example For the Unassigned Page Layouts feature, the <code>URL</code> represents a link to the unassigned layout.

Field	Details
User	Type string Properties Create, Filter, Group, Nillable, Sort Description The user ID or username associated with the item in a feature's Optimizer evaluation. For the Release Update feature only, <code>User</code> indicates the name of the release update that requires review. Example For the User Logins feature, <code>User</code> indicates the username of a user who hasn't recently logged in.

[Salesforce Help: Improve Your Implementation with Salesforce Optimizer](#)

OrgMetricScanSummary

Represents the results summary for a specific feature in a Salesforce Optimizer evaluation. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `upsert()`

Special Access Rules

This object is only available in orgs where Salesforce Optimizer is enabled. Requires the Modify All Data and Customize Application user permissions.

Fields

Field	Details
ErrorMessage	Type picklist Properties Create, Filter, Group, Nillable, Sort Description The message returned if an error occurred during the most recent Optimizer evaluation.

Field	Details
FeatureLimit	Type int Properties Create, Filter, Group, Nillable, Sort Description The numerical limit of a feature. Example For the Custom Field Limits feature, <code>FeatureLimit</code> is 500 for Developer Edition orgs.
ImplementationEffort	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description The estimated time needed to complete the recommended actions for the feature. Possible values are: • 1 - 2 hours • 30 - 60 minutes • < 30 minutes • > 2 hours The default value is 30 minutes.
ItemCount	Type int Properties Create, Filter, Group, Nillable, Sort Description The number of issues found for the feature. Corresponds to the number of <code>OrgMetricScanResult</code> objects generated for the feature in an Optimizer evaluation.
Name	Type string Properties Filter, Group, idLookup, Sort Description A number that identifies the feature's results summary.
OrgMetricId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The OrgMetric ID that represents the feature analyzed in the Optimizer evaluation. This field is a relationship field. Relationship Name OrgMetric Relationship Type Master-detail Refers To OrgMetric on page 3908 (the master object)
PercentUsage	Type percent Properties Create, Filter, Nillable, Sort Description A percentage associated with a feature. Example For the Incomplete Chatter Profiles feature, the <code>PercentUsage</code> value is 100 if 100% of users have complete Chatter profiles.
ScanDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The time that the report for the Optimizer evaluation was generated.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort Description The recommended action for the feature. Possible values are: • Action Required • Immediate Action Required • No Action Required • Not Currently Enabled • Review Required • Unable to Analyze

Field	Details
	The default value is <code>No Action Required</code> .
<code>Unit</code>	Type string Properties Create, Filter, Group, Nillable, Sort Description The unit of measurement used in the feature's results summary. Example For the Data Storage feature, the <code>Unit</code> is MB.

SEE ALSO:

OrgSnapshot

Represents a snapshot of a scratch org. Snapshots capture the state of a scratch org so that you can use it to quickly spin up new scratch orgs using its configuration. This object is available in API version 61.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

A snapshot must belong to the Dev Hub org that you're using to create the scratch org. You must enable the scratch org snapshot feature in your Dev Hub org using Setup.

Fields

Field	Details
<code>Content</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Reserved for future use.

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort Description A free-form text field (maximum 255 characters) for you to enter a description of this scratch org snapshot.
Error	Type string Properties Filter, Group, Nillable, Sort Description Reserved for future use.
ExpirationDate	Type date Properties Filter, Group, Nillable, Sort Description Date when the scratch org snapshot expires.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and <code>LastReferenceDate</code> isn't null, the user accessed this record or list view indirectly.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the user who owns the scratch org snapshot. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Provider	Type picklist Properties Filter, Group, Restricted picklist, Sort Description For internal use only.
ProviderSnapshot	Type string Properties Filter, Group, Nillable, Sort Description For internal use only.
ProviderSnapshotVersion	Type string Properties Filter, Group, Sort Description For internal use only.
SnapshotName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the scratch org snapshot. This field value is unique within your org.
SourceOrg	Type string

Field	Details
	Properties Create, Filter, Group, Sort Description The org ID of the scratch org that the snapshot was created from.
Status	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Status of the snapshot. Possible values are: • Active—The snapshot is created and can be used to create scratch orgs. • Error—The snapshot couldn't be created. • Expired—The snapshot has expired. • In Progress—The snapshot is in the process of being created. • New—The snapshot creation request has been received. The default value is New .

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[OrgSnapshotFeed](#) on page 55

Feed tracking is available for the object.

[OrgSnapshotHistory](#) on page 63

History is available for tracked fields of the object.

[OrgSnapshotShare](#) on page 67

Sharing is available for the object.

OrgWideEmailAddress

Represents an organization-wide email address for user profiles.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only authenticated users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
Address	Type email Properties Create, Filter, Sort, Update Description An email alias that can be used by users of your org.
DisplayName	Type string Properties Create, Filter, Sort, Update Description The name used to identify the sender of the email.
IsAllowAllProfiles	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, any user profile in your organization can use this object. If <code>false</code>, only specified user profiles can use this object when sending email. If you do not have the appropriate user profile, you can't use this object. The default value is <code>false</code>.
IsVerified	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the email address has been verified by its owner. The default value is <code>false</code>. This field is available in API version 58.0 and later. Purpose Picklist Possible values are <code>DefaultNoreply</code>, <code>UserSelection</code>, <code>UserSelectionAndDefaultNoReply</code>

Field	Details
Purpose	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates how an email address can be used. <code>UserSelection</code> allows users with the correct profile to select the address as the From address for an email. Possible values are <code>DefaultNoreply</code>, <code>UserSelection</code>, <code>UserSelectionAndDefaultNoReply</code>.

Usage

This object represents an email alias to use as the From address for an email, which can be selected by users with a user profile. You can pass in the `OrgWideEmailAddress` ID when calling `sendEmail()` for a `SingleEmailMessage`.

OSAsyncChgCompletedEvent

An event that allows the processing of the credit memo, invoices, and other entities after a bulk action has successfully completed. The event provides all of the values that would exist on the synchronous APIs. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `describeSObjects()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
ActionType	Type string Properties Create, Nillable Description The type of the action that gets applied to Order Summary Possible values are: • <code>CANCEL_ALL</code>

Field	Details
	RETURN_ALL
AsyncOperationLogId	Type reference Properties Create, Nillable Description The ID of the AsyncOperationLog. This field is a relationship field. Relationship Name AsyncOperationLog Refers To AsyncOperationLog
CurrencyIsoCode	Type string Properties Create, Nillable Description The ISO code for the currency of the OrderSummary that's associated with the FulfillmentOrder. This field is available only for orgs with multicurrencies enabled. Possible values are: - CNY—Chinese Yuan - GBP—British Pound - USD—U.S. Dollar The default value is USD.
EventUuid	Type string Properties Nillable Description Uniquely identifies an event message. The ID used to match the events that are returned in the callback result with the events in the publish call.
FeeChangeOrderId	Type reference Properties Create, Nillable Description The change order for the fee ID. This order usually used for invoices.

Field	Details
	This field is a relationship field. Relationship Name FeeChangeOrder Refers To Order
GrandTotalAmount	Type double Properties Create, Nillable Description The new order summary's grand total. This amount is equal to TotalAmount + TotalTaxAmount.
InFulfillmentChangeOrderId	Type reference Properties Create, Nillable Description The change order for any items during fulfillment. This field is a relationship field. Relationship Name InFulfillmentChangeOrder Refers To Order
OrderSummaryId	Type reference Properties Create, Nillable Description The foreign key for the master Order Summary entity. This field is a relationship field. Relationship Name OrderSummary Refers To OrderSummary
PostFulfillmentChangeOrderId	Type reference

Field	Details
	Properties Create, Nillable Description The change order for any items post-fulfillment. This ID is used for credit memos refunds This field is a relationship field. Relationship Name PostFulfillmentChangeOrder Refers To Order
PreFulfillmentChangeOrderId	Type reference Properties Create, Nillable Description The change order for any items that haven't been fulfilled. This field is a relationship field. Relationship Name PreFulfillmentChangeOrder Refers To Order
TotalAdjDistAmount	Type double Properties Create, Nillable Description The total distributed adjustment amount without taxes.
TotalAdjDistTaxAmount	Type double Properties Create, Nillable Description The total distributed adjustment taxes.
TotalAdjustedDeliveryAmount	Type double Properties Create, Nillable

Field	Details
	Description The total delivery adjusted amount without taxes.
TotalAdjustedDeliveryTaxAmount	Type double Properties Create, Nillable Description The total delivery adjusted tax amount .
TotalAdjustedProductAmount	Type double Properties Create, Nillable Description The total adjusted product amount without tax.
TotalAdjustedProductTaxAmount	Type double Properties Create, Nillable Description The total adjusted product tax amount. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.
TotalAmount	Type double Properties Create, Nillable Description The total amount, not including taxes.
TotalExcessFundsAmount	Type double Properties Create, Nillable Description The amount used to determine if a refund is needed pre-fulfillment.
TotalFeeAmount	Type double

Field	Details
	Properties Create, Nillable Description Total fee amount, not including taxes.
TotalFeeTaxAmount	Type double Properties Create, Nillable Description The total fee tax amount.
TotalRefundableAmount	Type double Properties Create, Nillable Description The amount that can be refunded to the client.
TotalRequiredFundsAmount	Type double Properties Create, Nillable Description The total amount of required funds.
TotalTaxAmount	Type double Properties Create, Nillable Description The combined total of all taxes.

OutOfOffice

Represents a user-set value on a profile that shows when the user intends to be out of the office. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `undelete()`, `upsert()`, `update()`

Special Access Rules

In Lightning Experience, lets users set a message next to their name in Chatter to show when they plan to be out of the office. The message appears in Lightning Experience, Salesforce Classic, and mobile views. Messages expire automatically after their end date. You can control whether out-of-office functionality is available to your users. Set it up in the Out of Office section in **Setup > Chatter Settings**.

Only internal users can set an out-of-office message.

Fields

Field Name	Details
EndDate	Type dateTime Properties Create, Filter, Sort, Update Description The date of the last day a person is out of the office. After the message expires, it goes away automatically.
IsEnabled	Type boolean Properties Create, Defaulted on create Description Indicates whether an out-of-office message can be displayed for a user. The default value is <code>true</code> .
Message	Type string Properties Create, Filter, Group, Sort, Update Description The message portion of the out-of-office message. This text, along with start and end dates, is appended to the user's name in the Salesforce user interface. The maximum length of this string is 40 characters.
StartDate	Type dateTime Properties Create, Filter, Sort, Update Description The date of the first day a person is out of the office.

Field Name	Details
UserId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user associated with the out-of-office message.

Usage

- Maximum message length is 60 characters.
- Users can set only their own out-of-office message. An admin can set an out-of-office message for any user.
- The out-of-office message can be set only for internal users.

OutgoingEmail

For internal use only.

OutgoingEmailRelation

For internal use only.

OwnedContentDocument

Represents a file owned by a user. This object is available in version 30.0 and later.

Supported Calls

`describeSObjects()`

Fields

Field Name	Details
ContentDocumentId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the document.

Field Name	Details
	This is a relationship field. Relationship Name ContentDocument Relationship Type Lookup Refers To ContentDocument
ContentSize	Type int Properties Filter, Group, Nillable, Sort Description The size of the document in bytes for documents smaller than 2 GB. In API version 66.0 and later, we recommend that you use the <code>ContentSizeLong</code> field even for documents smaller than 2 GB.
ContentSizeLong	Type long Properties Filter, Group, Nillable, Sort Description The size of the document in bytes up to 10 GB. This field is available in API version 66.0 and later.
ContentUrl	Type url Properties Filter, Group, Nillable, Sort Description URL for links and Google Docs. This field is set only for links and Google Docs, and is one of the fields that determine the <code>FileType</code>. This field is available in API version 31.0 and later.
ExternalDataSourceName	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The name of the external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 32.0 and later.
ExternalDataSourceType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Type of external data source in which the document is stored. This field is set only for external documents that are connected to Salesforce. This field is available in API version 35.0 and later.
FileExtension	Type string Properties Filter, Group, Nillable, Sort Description File extension of the document. This field is available in API version 31.0 and later.
FileType	Type string Properties Filter, Group, Nillable, Sort Description Type of document, which is determined by the file extension.
OwnerId	Type reference Properties Filter, Group, Sort Description ID of the owner of the document. This is a relationship field. Relationship Name Owner Relationship Type Lookup

Field Name	Details
	Refers To User
Title	Type string Properties Filter, Group, idLookup, Sort Description Title of the document.

OwnerChangeOptionInfo

Represents default and optional actions that can be performed when a record's owner is changed. Available in API version 35.0 and later, but to query for change owner metadata, use the OwnerChangeOptionInfo object in Tooling API instead. For more information, see [OwnerChangeOptionInfo](#) in the Tooling API.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Use `EntityId` or `DurableId` when querying this object.

PackageInstallEventLog

PackageInstallEventLog stores details about package installation in the organization. This object is available in API version 62.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ClientId	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
ErrorType	Type string Properties Filter, Group, Nillable, Sort Description A general categorization of any error that's encountered.
IsManaged	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True if the operation is performed on a managed package. The default value is <code>false</code>.
IsPush	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True if the package was installed as a result of a push upgrade. The default value is <code>false</code>.
IsReleased	Type boolean

Field	Details
	Properties Defaulted on create, Filter, Group, Sort Description True if the operation is performed on a released package. The default value is <code>false</code>.
IsSuccessful	Type boolean Properties Defaulted on create, Filter, Group, Sort Description True if the package was successfully installed. The default value is <code>false</code>.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: <code>GeJCsym5eyvtEK2I</code>.
OperationType	Type string Properties Filter, Group, Nillable, Sort Description The type of package operation. Possible Values • INSTALL • UPGRADE • EXPORT • UNINSTALL • VALIDATE_PACKAGE • INIT_EXPORT_PKG_CONTROLLER
PackageName	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The name of the package that's being installed.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>REQUEST_ID</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
Uri	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: <code>/home/home.jsp</code> .
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 18-character ID of the user who's using Salesforce services through the UI or the API. For example: <code>00530000009M943YAS</code>

PackageLicense

Represents a license for an installed managed package. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field Name	Details
AllowedLicenses	Type int Properties Filter, Group, Sort Description The number of users allowed to use the package.
ExpirationDate	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The date and time when the package license expires.
IsAvailableForIntegrations	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Reserved for future use.
IsProvisioned	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Reserved for internal use.
NamespacePrefix	Type string Properties Filter, Group, Sort Description The namespace prefix associated with the package.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the license. Possible values are: Active, Expired, Free, and Trial.
UsedLicenses	Type int Properties Filter, Group, Sort Description The number of users who have a license to the package.

Usage

Use this object to determine the number of licenses allowed and in use for a managed package installed in your organization.

The following example demonstrates the use of the API to manage licenses for a package. The example defines an Apex class that does the following.

- Retrieves the PackageLicense record for the specified package (identified by its namespace prefix).
- Defines a function that returns a list of all users with the specified profile.
- Creates a UserPackageLicense record for each user with that profile, which has the effect of assigning a license for the package to all users with that profile.
- Returns an error message if the number of users exceeds the number of available licenses.

```
public class AssignPackageLicense {

    static String PACKAGE_NAMESPACE_PREFIX = 'acme_101';
    static String PROFILE_ID = '00exx000000jz1SAAQ';
    public static String exceptionText {get; set;}

    public AssignPackageLicense() {
        exceptionText = 'Initialized';
    }

    static List<User> getUsersWithProfile(){
        String userQuery = 'SELECT Id FROM User WHERE ProfileId = :PROFILE_ID';
        List<User> matchingUsers = new List<User>();
        matchingUsers = [SELECT Id FROM User WHERE ProfileId = :PROFILE_ID];
        return matchingUsers;
    }

    public static void assignLicenseByProfile() {
        //find the PackageLicense Id
        PackageLicense pl = [SELECT Id, NamespacePrefix, AllowedLicenses, UsedLicenses,
            ExpirationDate, Status FROM PackageLicense WHERE
            NamespacePrefix = :PACKAGE_NAMESPACE_PREFIX];
        System.assert(pl != null, 'PackageLicense cannot be null.');
```

List<User> usersToAssignLicenses = getUsersWithProfile();

List<UserPackageLicense> firstUPLs = new List<UserPackageLicense>();

//create a new UserPackageLicense record for each user with the specified profile

```
for (Integer i = 0; i < usersToAssignLicenses.size(); i++){
    UserPackageLicense upl = new UserPackageLicense();
    upl.PackageLicenseId = pl.Id;
    upl.UserId = usersToAssignLicenses[i].Id;
    firstUPLs.add(upl);
}

try {
    //bulk insert
    insert(firstUPLs);
} catch(DmlException e) {
    for (Integer i = 0; i < e.getNumDml(); i++) {
        // process exception here
    }
}
```

```
System.debug(e.getDmlMessage(i));
String status = e.getDmlStatusCode(i);
System.debug(status + ' ' + e.getDmlMessage(i));
if(status.equals('LICENSE_LIMIT_EXCEEDED')){
    exceptionText = 'You tried to assign more licenses than available. '
    + ' You tried to create ' + firstUPLs.size()+' licenses but only have '
    + (pl.AllowedLicenses - pl.UsedLicenses) + ' licenses free.';
    System.debug(exceptionText);
}
}
}
}
```

PackagePushError

Represents an error encountered during a push request. The number of PackagePushError records created depends on the number of push jobs in the request that result in an error.

Supported Calls

describeSObjects(), query(), retrieve()

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the [Salesforce Partner Community](#).

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
ErrorDetails	Type string Properties Nillable, Sort Description Explanation of the error.
ErrorMessage	Type string

Field Name	Details
	Properties Nillable, Sort Description The error code that appears in the API.
ErrorSeverity	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Valid values are: - Error - Warning
ErrorTitle	Type string Properties Nillable, Sort Description The error message title that appears in the API.
ErrorType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Valid values are: - ApexTestFailure - DeployError - FeatureMissing - IneligibleUpgrade - LimitExceeded - LockingFailure - PACError - UnclassifiedError
PackagePushJobId	Type reference Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description Required. The parent push job record ID.

Usage

Suppose that your push upgrade request wasn't successful due to some of its jobs failing. Let's write some code to find out what those errors were.

This code sample uses the Web Services Connector (WSC).

```
// Retrieves all PackagePushError objects associated with the PackagePushJob with the given
// ID
final String PACKAGE_PUSH_ERROR_QUERY = "Select ErrorMessage, ErrorDetails, ErrorTitle,"
+ " ErrorSeverity, ErrorType from PackagePushError where PackagePushJobId = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_ERROR_QUERY, job.getId()));

StringBuilder errorMessages = new StringBuilder();
errorMessages.append("Errors for PackagePushJob [").append(job.getId()).append("]:")
.append("\n");

// There can be multiple PackagePushErrors for a given PackagePushJob
for(SObject r : queryResult.getRecords()) {
    PackagePushError e = (PackagePushError) r;
    errorMessages.append("Title: ").append(e.getErrorTitle()).append("\n");
    errorMessages.append("Severity: ").append(e.getErrorSeverity()).append("\n");
    errorMessages.append("Type: ").append(e.getErrorType()).append("\n");
    errorMessages.append("Message: ").append(e.getErrorMessage()).append("\n");
    errorMessages.append("Details: ").append(e.getErrorDetails()).append("\n");
    errorMessages.append("\n");
}

String errors = errorMessages.toString();
```

PackagePushJob

Represents an individual push job for upgrading a package in an org from one version to another version. There can be multiple push jobs created for one push request. For example, if you want to upgrade five orgs as part of one push, you have one PackagePushRequest record and five PackagePushJob records.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the [Salesforce Partner Community](#).

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
DurationSeconds	Type int Properties Group, Nillable Description The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0.
EndTime	Type dateTime Properties Create, Nillable, Update Description The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0.
PackagePushRequestId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The ID of the parent push request record that must have been created.
StartTime	Type dateTime Properties Create, Nillable, Update Description The date and time (UTC) at which the push upgrade started, in ISO 8601 format. This field is new in API version 51.0.

Field Name	Details
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The status of the job. Valid values are: • Canceled • Created (default) • Failed • In Progress • Pending • Succeeded Don't specify this value when you create the push job. The default value of Created is used.
SubscriberOrganizationKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The organization key of the org where the package is upgraded. This references orgKey in PackageSubscriber.

Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using MetadataPackageVersion and created the push request using PackagePushRequest. Now let's write some code to create a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
PackageSubscriber[] subscribers = new PackageSubscriber[];

// ... populate eligible and desired subscribers

// Create the PackagePushJob array
PackagePushJob[] jobs = new PackagePushJob[subscribers.length];

for (int i = 0; i < subscribers.length; i++) {
    // create a job for each subscriber...
    PackagePushJob job = new PackagePushJob();
    // ... associate it to the PackagePushRequest ppr...
    job.setPackagePushRequestId(ppr.getId());
    // ... and add the orgKey
```

```

    job.setSubscriberOrganizationKey(subscribers[i].getOrgKey());
    jobs[i] = job;
}

// Save the jobs
SaveResult[] saveResults = conn.create(jobs);

// Add the newly generated id's to the PackagePushJob objects
for (int i = 0; i < saveResults.length; i++) {
    if (saveResults[i].isSuccess()) {
        jobs[i].setId(saveResults[i].getId());
    }
}
}

```

Or, if you're using REST API, submit a POST request to the PackagePushJob sObject endpoint, as in the following example. SOAP API is also supported. This example returns the push job ID (starting with 0DX) that is required to query the status of the job.

```

POST
/services/data/v38.0/objects/packagepushjob/
{
  "PackagePushRequestId" : "0DV...",
  "SubscriberOrganizationKey" : "00DR00..."
}

```

Checking the Status of a Push Job

To check the job status, simply query the Status field. For example:

```
SELECT Id, Status FROM PackagePushJob WHERE PackagePushRequestId ='0DV...'
```

Here's an example in Java.

```

// Finds the status of the PackagePushJob with the given id
String PACKAGE_PUSH_JOB_STATUS_QUERY = "Select status from PackagePushJob where Id = '%s'";

// job is a PackagePushJob instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_JOB_STATUS_QUERY,
job.getId()));

// extract the status from the QueryResult
String status = ((PackagePushJob) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushJob instance with the latest status
job.setStatus(status);

```

You can also continuously poll the job status until the job is done. The following Java example polls the status every 10 seconds.

```

// The set of states that indicate a PackagePushJob has completed
final Set<String> TERMINAL_STATES = new HashSet<>();
TERMINAL_STATES.add("Succeeded");
TERMINAL_STATES.add("Failed");
TERMINAL_STATES.add("Canceled");

String status = queryJobStatus(job); // this method returns the status as retrieved in the
previous code sample

// If the status is not one of the completed statuses...

```

```
while(!TERMINAL_STATES.contains(status)) {  
    Thread.sleep(10 * 1000); // ... wait 10 seconds and try again  
    status = queryJobStatus(job);  
}
```

PackagePushRequest

Represents the push request for upgrading a package in one or many orgs from one version to another version.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review, and unlocked packages. To enable push upgrades for your managed package, log a support case in the [Salesforce Partner Community](#).

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
DurationSeconds	Type int Properties Group, Nillable Description The length of time in seconds, that the push upgrade took to complete. This field is new in API version 51.0.
EndTime	Type dateTime Properties Create, Nillable, Update Description The date and time (UTC) at which the push upgrade ended, in ISO 8601 format. This field is new in API version 51.0.

Field Name	Details
PackageVersionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The non-beta, non-deprecated package version that the package is being upgraded to.
ScheduledStartTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (UTC) at which the push request is processed, in ISO 8601 format. Set this value to the earliest time that you want Salesforce to attempt to start the push. As a best practice, schedule pushes at off-peak hours like 1:00 AM Saturday. If you don't specify a value, the push starts when the package push request's Status is set to <code>Pending</code>.  Note: Scheduled push upgrades begin as soon as resources are available on the Salesforce instance, which is either at or after the start time you specify. In certain scenarios, the push upgrade could start a few hours after the scheduled start time.
StartTime	Type dateTime Properties Create, Nillable, Update Description The date and time (UTC) at which the push upgrade actually started, in ISO 8601 format. This field is new in API version 51.0.
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the push. Valid values are: • Canceled • Created (default) • Failed • In Progress • Pending

Field Name	Details
	• Succeeded Don't specify this value when you create the push request. The default value of Created is used. Later, change the status to Pending to schedule the push upgrade.

Usage

Suppose that you want to push version 3.4.6 of your package to all orgs. You've already identified the orgs eligible for the upgrade by using `MetadataPackageVersion`. Now let's write some code to create a push request, which holds a push job for each eligible org.

This code sample uses the Web Services Connector (WSC).

```
// Create a new PackagePushRequest for the versionId to upgrade to
// (for example, versionId is the "04t..." id of version
// 3.4.6 of the package
PackagePushRequest ppr = new PackagePushRequest();
ppr.setPackageVersionId(versionId);

// Optionally, set the start time of the PackagePushRequest to schedule it to begin
// automatically; scheduledStartTime is a java.util.Calendar instance
ppr.setScheduledStartTime(scheduledStartTime);

// Save the PackagePushRequest
SaveResult[] saveResults = conn.create(new SObject[] { ppr });
if (saveResults[0].isSuccess()) {
    // Add the newly generated Id to the object
    ppr.setId(saveResults[0].getId());
} else {
    for (Error error : saveResults[0].getErrors()) {
        System.out.println(error.getMessage());
    }
}
```

Or, if you're using REST API, submit a POST request to the `PackagePushRequest sObject` endpoint, as in the following example. SOAP API is also supported.

This example returns the push request ID (starting with ODV) that's required to create push jobs.

```
POST
/services/data/v38.0/objects/packagepushrequest/
{
  "PackageVersionId" : "04t...",
  "ScheduledStartTime" : "2016-08-24T21:00:00"
}
```

As your next step, create a push job for each eligible subscriber you want to upgrade using `PackagePushJob`.

Scheduling the Push Upgrade

To signal that the push upgrade is ready to be processed, change the status of the push request to Pending. If you didn't set a `ScheduledStartTime`, the push upgrade starts immediately after you change the status.

See the following Java example.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Pending");
conn.update(new SObject[] { ppr });
```

If you're using REST API, submit a PATCH request to the PackagePushRequest sObject endpoint, as in the following example. SOAP API is also supported.

```
PATCH
/services/data/v38.0/objects/packagepushrequest/0DV...
{
  "Status" : "Pending"
}
```

Checking the Status of a Push Request

The PackagePushRequest status is `Succeeded` if all its associated jobs are successful; it's `Failed` if at least one job failed.

```
// Finds the status of the PackagePushRequest for a given Id
final String PACKAGE_PUSH_REQUEST_STATUS_QUERY = "Select status from PackagePushRequest"
+
  " where Id = '%s'";

// ppr is a PackagePushRequest instance
QueryResult queryResult = conn.query(String.format(PACKAGE_PUSH_REQUEST_STATUS_QUERY,
  ppr.getId()));

// extract the status from the QueryResult
String status = ((PackagePushRequest) queryResult.getRecords()[0]).getStatus();

// optionally, update the PackagePushRequest instance with the latest status
ppr.setStatus(status);
```

You can also check the status of a job by querying the PackagePushJob's `Status` field.

Aborting a Push Request

You can abort a package push request by changing its status to `Canceled`.

For example, if you're using the REST API, submit a PATCH request to the PackagePushRequest sObject endpoint.

```
PATCH
/services/data/v38.0/objects/packagepushrequest/0DV...
{
  "Status" : "Canceled"
}
```

The following example is for Java.

```
// ppr is the PackagePushRequest instance
ppr.setStatus("Canceled");
```

You can abort a package push request only if its status is `Created` or `Pending`. If the abort succeeds, all associated push jobs are also canceled. If you try to abort when the current PackagePushRequest status is `Canceled`, `Succeeded`, `Failed`, or `In Progress`, the abort doesn't occur, and an error message is returned.

PackageSubscriber

Represents an installation of a package in an org. This object contains installation information for managed or unlocked packages developed in the org you're logged in to.

One record is created per installation. For example, if 5 orgs installed 2 packages, 10 records are created.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To initiate a push upgrade for a first-generation managed package, the Upload AppExchange Packages user permission is required.

To initiate a push upgrade for an unlocked or second-generation managed package, the Create and Update Second-Generation Packages user permission is required.

The push upgrade feature is only available to first- and second-generation managed packages that have passed AppExchange security review. To enable push upgrades for your managed package, log a support case in the [Salesforce Partner Community](#).

For unlocked packages, push upgrades are enabled by default.

Fields

Field Name	Details
CustomUpgradeType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The type of push upgrade customization. Possible values are: • <code>BlockedBySubscriber</code>—Blocked By Subscriber • <code>None</code> The default value is <code>None</code>.
HasRestrictionEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the subscriber org has blocked push upgrades. The default value is <code>false</code>.

Field Name	Details
InstalledStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description If the package is installed in the org, the value is <code>1</code>.
InstanceName	Type string Properties Filter, Group, Nillable, Sort Description The instance that hosts the subscriber org.
IsCustomUpgradeAllowed	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the package developer has allowed a subscriber to opt into customized push upgrades. The default value is <code>false</code>.
MetadataPackageId	Type reference Properties Filter, Group, Nillable, Sort Description The package ID. Package IDs have a prefix of <code>033</code>. This field is available in API version 49.0 and later.
MetadataPackageVersionId	Type reference Properties Filter, Group, Nillable, Sort Description The 18-character package version ID starting with <code>04t</code>.
OrgKey	Type string

Field Name	Details
	Properties Filter, Group, Nillable, Sort Description The 15-character ID that represents the Salesforce org.
OrgName	Type string Properties Filter, Group, Nillable, Sort Description The name of the org where the package is installed.
OrgStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Valid values are: • Active • Demo • Free • Inactive • Trial Orgs with an <code>OrgStatus</code> of <code>Inactive</code> can't receive push upgrades.
OrgType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Valid values are: • Production • Sandbox
ParentOrg	Type string Properties Filter, Group, Nillable, Sort

Field Name	Details
	Description The production org from which a sandbox was created.

Usage

Here are examples of the types of API queries you can perform.

Query	String
Get all package subscriber orgs with a specific package ID	SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE MetadataPackageVersionId = '04t...'
Get all package subscriber orgs that have an installed package created by the org you're logged in to	SELECT Id, OrgKey, OrgStatus, OrgName, OrgType FROM PackageSubscriber WHERE InstalledStatus = 'i'

Filter PackageSubscriber Objects by Instance

If you have packages with many subscribers, querying PackageSubscriber objects can take a while. To improve query performance, add filters to your PackageSubscriber queries, such as an InstanceName filter. InstanceName is a field that represents the instance that the subscriber org is hosted on.

1. Get the org's package and the latest released version of the package.

```
/**
 * Get the MetadataPackage object corresponding to this org's managed package
 */
public MetadataPackage getMetadataPackage() throws ConnectionException {
    // retrieve the managed package, which won't have an empty namespace
    QueryResult result = conn.query("select id from MetadataPackage where namespaceprefix
<> ''");

    return (MetadataPackage) result.getRecords()[0];
}

/**
 * Get the latest MetadataPackageVersion object of the given MetadataPackage
 */
public MetadataPackageVersion getLatestMetadataPackageVersion(MetadataPackage
metadataPackage)
throws ConnectionException {
    // get the latest released version of the given package
    String query = "Select id, ReleaseState, MajorVersion, MinorVersion, PatchVersion,
MetadataPackageId"
        + " From MetadataPackageVersion"
        + " Where MetadataPackageId = '%s' and ReleaseState = 'Released'"
        + " Order by majorversion desc, minorversion desc, patchversion desc";
```

```

    QueryResult result = conn.query(String.format(query, metadataPackage.getId()));

    return (MetadataPackageVersion) result.getRecords()[0];
}

```

2. Get eligible subscribers. The following query strings and methods are modified to allow querying for PackageSubscribers filtered by an instance.

```

static final String PACKAGE_SUBSCRIBER_ORG_KEY_QUERY = "Select OrgKey from
PackageSubscribers where OrgStatus = 'Active'"
+ " and InstalledStatus = 'I'"
+ " and InstanceName = '%s'"; // placeholder for instance values

static final String METADATA_PACKAGE_VERSION_QUERY = "Select Id, Name, ReleaseState,
(%) from MetadataPackageVersion"
+ " where MetadataPackageId = '%s' AND ReleaseState = 'Released'"
+ " AND (MajorVersion < %s OR (MajorVersion = %s and MinorVersion < %s))"
+ " OR (MajorVersion = %s and MinorVersion = %s and PatchVersion < %s));"

/**
 * Get all PackageSubscribers on the given instance that are eligible to upgrade to the
 * given
 * MetadataPackageVersion
 */
public PackageSubscriber[] getEligibleSubscriberIds(MetadataPackageVersion version,
String instanceName) throws ConnectionException {
    String allPackageId = version.getMetadataPackageId();
    Integer major = version.getMajorVersion();
    Integer minor = version.getMinorVersion();
    Integer patch = version.getPatchVersion();

    return getEligibleSubscriberIds(major, minor, patch, allPackageId, instanceName);
}

public PackageSubscriber[] getEligibleSubscriberIds(Integer major, Integer minor, Integer
patch, String packageId, String instanceName) throws ConnectionException {
    String subscriberQuery = String.format(PACKAGE_SUBSCRIBER_ORG_KEY_QUERY, instanceName);
    QueryResult results = conn.query(String.format(METADATA_PACKAGE_VERSION_QUERY,
subscriberQuery, packageId, major, major, minor, major, minor, patch));

    return Arrays.stream(results.getRecords()).map(MetadataPackageVersion.class::cast)
        .filter(mpv -> mpv.getPackageSubscribers() != null)
        .flatMap(mpv -> Arrays.stream(mpv.getPackageSubscribers().getRecords()))
        .map(PackageSubscriber.class::cast)
        .toArray(PackageSubscriber[]::new);
}

```

3. Put it all together. The following code sample shows how to use the previous methods to modify the workflow to perform package pushes by instance.

```

String[] instances = { "NA4" }; // Here we list the instances we would like to push to
MetadataPackage metadataPackage = api.getMetadataPackage();
MetadataPackageVersion version = api.getLatestMetadataPackageVersion(metadataPackage);

```

```
// do pushes by instance to avoid API timeouts retrieving PackageSubscribers
for (String instanceName : instances) {
    PackageSubscriber[] eligibleSubscribers = api.getEligibleSubscriberIds(version,
    instanceName);

    // ... proceed with creating PushRequests and PushJobs as before
}
```

Participant

Represents a participant in a ConversationParticipant. An existing or new Participant is referenced each time a new ConversationParticipant is created. This object is available in API version 57.0 and later.

 **Note:** This object is available for Einstein Conversation Insights customers whose data is stored natively on the Salesforce Platform. If you turned on Einstein Conversation Insights for the first time starting in Spring '26, this object is available to query and access using Salesforce tools. For existing ECI customers, data migration and access to related Salesforce Platform objects is scheduled to begin in Summer '26.

Supported Calls

describeSObjects(), query(), retrieve()

Fields

Field	Details
ParticipantAppType	Type string Properties Filter, Group, idLookup, Sort Description The type of app used by the participant, such as messaging, chatbot, live_message, agent.
ParticipantRole	Type string Properties Filter, Group, Nillable, Sort Description The role of this participant in the conversation, such as System, Agent, Chatbot, EndUser, Supervisor, or Router.
ParticipantSubject	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The subject of this participant in the conversation.

Partner

Represents a partner relationship between two Account records or between an Opportunity record and an Account record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>AccountFromId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required if <code>OpportunityId</code> is null. ID of the main account in a partner relationship between two accounts. Specifying this field when creating a Partner record creates two AccountPartner records, one for each direction of the relationship. If you specify the <code>OpportunityId</code> field, you can't specify this field as well. This is a relationship field. Relationship Name AccountFrom Relationship Type Lookup Refers To Account
<code>AccountToId</code>	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description Required. ID of the Partner Account related to either an opportunity or an account. You must specify this field when creating an Opportunity Partner or an Account Partner record. This is a relationship field. Relationship Name AccountTo Relationship Type Lookup Refers To Account
IsPrimary	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Valid for Opportunity Partners only. Indicates that the account is the primary partner for the opportunity. Only one account can be marked as primary for an opportunity. If you set this field to 1 (<code>true</code>) upon insert of a new opportunity partner, this field is automatically set to 0 (<code>false</code>) for any other primary partners for that opportunity. Label is Primary.
OpportunityId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required if <code>AccountFromId</code> is null. ID of the opportunity in a partner relationship between an account and an opportunity. Specifying this field when creating a record creates an OpportunityPartner record. If you specify the <code>AccountFromId</code> field, you can't also specify this field. This is a relationship field. Relationship Name Opportunity Relationship Type Lookup Refers To Opportunity

Field	Details
ReversePartnerId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the reciprocal Partner record in a partner relationship.
Role	Type picklist Properties Create, Filter, Group, Nillable, Sort Description UserRole that the account has toward the related opportunity or account, such as consultant or distributor.

Roles

In the Salesforce user interface, system administrators can set up the valid role values and their corresponding reverse role values in the PartnerRole object. Each account in the relationship is assigned a `Role` (such as `Consultant` or `Distributor`) designating that account's role toward the related account or opportunity.

Creating an Account-Opportunity Partner Relationship

When you create a partner relationship between an account and an opportunity (when you create a Partner record and specify the `OpportunityId` field), the API automatically creates two OpportunityPartner records, one for the forward relationship and one for the reverse.

- The value of the Partner field `AccountToId` maps to the value of the OpportunityPartner field `AccountToId`.
- The values of the `OpportunityId`, `Role`, and `IsPrimary` fields in both the Partner and OpportunityPartner records are the same.
- If you set the `IsPrimary` value to 1 (`true`) upon insert of a new OpportunityPartner, the `IsPrimary` value is automatically set to 0 (`false`) for any existing primary partners for that opportunity.

This mapping allows the API to manage the records and their relationships efficiently.

Creating an Account-Account Partner Relationship

When you create a partner relationship between two accounts (when you create a Partner record and specify the `AccountFromId`), the API automatically creates two AccountPartner records, one for the forward relationship and one for the reverse. For example, if you create a Partner relationship with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`, the API automatically creates two AccountPartner records:

- The forward relationship AccountPartner with "Acme, Inc." as the `AccountFromId` and "Acme Consulting" as the `AccountToId`.
- The reverse relationship AccountPartner with "Acme Consulting" as the `AccountFromId` and "Acme, Inc." as the `AccountToId`.

- The value of the `Role` field in the reverse relationship `AccountPartner` is set to the `PartnerRole` record `ReverseRole` value associated with the value of the `Role` field in the forward relationship `AccountPartner`.

This mapping allows the API to manage the records and their relationships efficiently.

PartnerFundAllocation

Represents allocated funds from a partner marketing budget for channel partners. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Amount	Type currency Properties Create, Filter, Sort, Update Description Total amount of the allocation.
BudgetId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the partner marketing budget.
ChannelPartnerId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the channel partner.

Field Name	Details
	 Note: The ChannelPartnerId field isn't supported for formula fields, custom buttons, or custom links for the PartnerFundAllocation object. This limitation also applies to the PartnerMarketingBudget and PartnerFundRequest objects.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the allocation.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the allocation.
Title	Type string Properties Create, Filter, Group, Sort, Update Description The title of the allocation.

Field Name	Details
TotalApprovedFcs	Type currency Properties Filter, Nillable, Sort Description Total amount of approved fund claims.
TotalApprovedFrs	Type currency Properties Filter, Nillable, Sort Description Total amount of approved fund requests.
TotalReimbursedFcs	Type currency Properties Filter, Nillable, Sort Description Total amount of reimbursed fund claims.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[PartnerFundAllocationFeed](#)

Feed tracking is available for the object.

[PartnerFundAllocationHistory](#)

History is available for tracked fields of the object.

[PartnerFundAllocationOwnerSharingRule](#)

Sharing rules are available for the object.

[PartnerFundAllocationShare](#)

Sharing is available for the object.

PartnerFundClaim

Represents a claim of funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

Supported Calls

`create()` `delete()` `describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()`
`search()` `update()`, `upsert()`

Fields

Field Name	Details
AllocationId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the partner fund allocation.
Amount	Type currency Properties Create, Filter, Sort, Update Description Amount of the claim.
BudgetId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the partner marketing budget.
ChannelPartnerId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the channel partner.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the fund claim.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the fund claim.
RequestId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the partner fund request.
Status	Type picklist Properties Create, Filter, Group, Nillable Restricted picklist, Sort, Update Description Status of the fund claim. Values are: • Draft • Approved • Rejected • Paid
Title	Type string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update
	Description Title of the fund claim.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[PartnerFundClaimFeed](#)

Feed tracking is available for the object.

[PartnerFundClaimHistory](#)

History is available for tracked fields of the object.

[PartnerFundClaimOwnerSharingRule](#)

Sharing rules are available for the object.

[PartnerFundClaimShare](#)

Sharing is available for the object.

PartnerFundRequest

Represents a request for funds from the partner marketing budget by a channel partner. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()` `describeLayout()` `describeSObjects()`
`getDeleted()` `getUpdated()` `query()` `retrieve()` `search()` `update()`, `upsert()`

Fields

Field Name	Details
Activity	Type picklist
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Activity that is covered by the funds, for example, a trade show or seminar.
AllocationId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the partner fund allocation.
Amount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Approved amount of request.
BudgetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the partner marketing budget.
ChannelPartnerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the channel partner.  Note: The ChannelPartnerId field isn't supported for formula fields, custom buttons, or custom links for the PartnerFundRequest object. This limitation also applies to the PartnerFundAllocation and PartnerMarketingBudget objects.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the fund request.
DesiredOutcome	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description Desired outcome if requested funds are used.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the fund request.
RequestedAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Amount of the fund request.
Status	Type picklist Properties Create, Filter, Nillable, Group, Restricted picklist, Sort, Update Description Status of the fund request. Values are: • Draft • Approved

Field Name	Details
	Rejected
Title	Type string Properties Create, Filter, Group, Sort, Update Description Title of the fund request.
TotalApprovedFcs	Type currency Properties Filter, Nillable, Sort Description Total amount of approved fund claims.
TotalReimbursedFcs	Type currency Properties Filter, Nillable, Sort Description Total amount of reimbursed fund claims.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[PartnerFundRequestFeed](#)

Feed tracking is available for the object.

[PartnerFundRequestHistory](#)

History is available for tracked fields of the object.

[PartnerFundRequestOwnerSharingRule](#)

Sharing rules are available for the object.

[PartnerFundRequestShare](#)

Sharing is available for the object.

PartnerMarketingBudget

Represents a budget that provides funds to channel partners for selling and marketing products and services. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Amount	Type currency Properties Create, Filter, Sort, Update Description Total amount of the budget.
ChannelPartnerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the channel partner. This field is available in API version 45.0 and later.  Note: The ChannelPartnerId field isn't supported for formula fields, custom buttons, or custom links for the PartnerMarketingBudget object. This limitation also applies to the PartnerFundAllocation and PartnerFundRequest objects.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the budget.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when the budget is no longer available.
IsIgnoreValidation	Type boolean

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description When enabled, ignores restrictions related to the child objects connected to the budget. Note that individual totals for allocation amounts, request amounts, and claims amounts cannot exceed the total of their parent budget. Field is default off (false) on create. Once enabled (true), this field cannot be disabled. This field is available in API version 44.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of the budget.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Date when the budget becomes available.
Title	Type string

Field Name	Details
	Properties Create, Filter, Group, Sort, Update Description Title of the budget.
TotalAllocatedAmount	Type currency Properties Filter, Nillable, Sort Description Total funds allocated to channel partners or as a fund pool.
TotalApprovedFcs	Type currency Properties Filter, Nillable, Sort Description Total amount of approved fund claims.
TotalApprovedFrs	Type currency Properties Filter, Nillable, Sort Description Total amount of approved fund requests.
TotalReimbursedFcs	Type currency Properties Filter, Nillable, Sort Description Total amount of reimbursed fund claims.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Type of budget. Values are: Co-Operated Budget—Funds accrue based on a percentage of partner sales. The funds are available based on previous activity.

Field Name	Details
	• Marketing Funds—Funds are issued to partners in advance of sales. The funds are awarded based on predicted or expected behavior.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[PartnerMarketingBudgetFeed](#)

Feed tracking is available for the object.

[PartnerMarketingBudgetHistory](#)

History is available for tracked fields of the object.

[PartnerMarketingBudgetOwnerSharingRule](#)

Sharing rules are available for the object.

[PartnerMarketingBudgetShare](#)

Sharing is available for the object.

PartnerNetworkConnection

Represents a Salesforce to Salesforce connection between Salesforce organizations.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
<code>AccountId</code>	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Account associated with this connection.
<code>ConnectionName</code>	Type string

Field	Details
	Properties Filter, idLookup, Sort Description A descriptive name for the connection. Limit: 295 characters.
ConnectionStatus	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the Salesforce to Salesforce connection. The picklist includes the following values: • Sent • Received • Pending • Accepted • Rejected • Inactive • Disconnecting • ConnectionSuspended • SubscribeInProgress • UsersInitialSync • BulkSyncMetadata
ConnectionType	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The type of Salesforce to Salesforce connection. The picklist includes the following values: • Standard • Replication This field is available in API version 30.0 and later.
ContactId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the Contact associated with this connection.
IsSyncAuditFields	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether audit fields are synced between the primary and secondary organization in a replication connection. This field is available in API version 32.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
IsSyncMetadata	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether supported types of metadata are synced from the primary to the secondary organization in a replication connection. This field is available in API version 33.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
IsSyncUsers	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Specifies whether users with standard Salesforce user licenses are synced between the primary and secondary organization in a replication connection. This field is available in API version 35.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
PrimaryContactId	Type reference Properties Filter, Group, Sort Description ID of the User associated with this connection.
ReplicationRole	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description The role of this Salesforce organization in the replication connection. The picklist includes the following values: • Primary • Secondary This field is available in API version 30.0 and later, and is only accessible in Salesforce organizations where Organization Sync is enabled.
ResponseDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the connection was accepted or rejected.

Usage

Represents Salesforce to Salesforce standard and replication connections. This object is referenced by all objects that have been shared with other organizations, enabling you to determine which connections shared a record with you. If the organization does not have Salesforce to Salesforce enabled, the PartnerNetworkConnection object is not available, and you can't access it via the API.

SEE ALSO:

[PartnerNetworkRecordConnection](#)

PartnerNetworkRecordConnection

Represents a record shared between Salesforce organizations using Salesforce to Salesforce.

Supported Calls

`create()`, `query()`

Special Access Rules

As of Winter '21 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
ConnectionId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required. ID of the connection a record is shared with.
EndDate	Type dateTime Properties Filter, Nillable, Sort Description Date that sharing of the record was stopped.
LocalRecordId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the shared record.
ParentRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the parent record of the shared record.
PartnerRecordId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the shared record in the connection's organization.
RelatedRecords	Type string Properties Create, Filter, Nillable, Sort

Field	Details
	Description A comma-separated list of API names for child records to be shared with a parent record.
SendClosedTasks	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Forwards closed tasks related to the shared record.
SendEmails	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Sends an email notifying the connection's representative that you have forwarded the record to them. Only new recipients of a record will receive a notification email.
SendOpenTasks	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Forwards open tasks related to the shared record.
StartDate	Type dateTime Properties Filter, Nillable, Sort Description Date that the shared record was accepted.
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of the shared record. One of the following values: • Active (received) • Active (sent)

Field	Details
	• Connected • Inactive • Inactive (converted) • Inactive (deleted) • Pending (sent)

Usage

When you create a `PartnerNetworkRecordConnection`, you forward a record to a connection.

Note: Attempting to forward a record from an object to which the connection is not subscribed results in an `Invalid Partner Network Status` error.

When you delete a `PartnerNetworkRecordConnection`, you stop sharing a record with a connection.

- To share a record, use the following fields: `LocalRecordID` and `ConnectionId`
- To share a child of a parent record, use the following fields: `LocalRecordID`, `ConnectionId`, and `ParentRecordID`
- To share a child of a parent record and its child records, use the following fields: `LocalRecordID`, `ConnectionId`, `ParentRecordID`, and `RelatedRecords`

If the organization does not have Salesforce to Salesforce enabled, the `PartnerNetworkRecordConnection` object is not available, and you can't access it using the API.

SEE ALSO:

[PartnerNetworkConnection](#)

PartnerNetworkSyncLog

Represents the Org Sync Log tab in Salesforce, where Salesforce administrators can track the replication of record inserts and updates being performed in Organization Sync. The Connection Detail page for the replication connection also displays the Org Sync Log's twenty most recent entries, and provides a link to the log.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

The Org Sync Log tab can only be added in organizations where Organization Sync has been enabled. To add the tab to the Salesforce user interface, users must also have the "Manage Connections" user permission.

Fields

Field Name	Details
ConnectionEvent	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The action being replicated to the partner organization, such as a record insertion.
ConnectionId	Type reference Properties Filter, Group, Sort Description The ID of the Salesforce to Salesforce replication connection in which the replication event succeeded or failed.
Description	Type textarea Properties Nillable Description A description of the replication event.
EntityType	Type string Properties Filter, Group, Nillable, Sort Description The type of record being inserted or updated.
Error	Type string Properties Filter, Group, Nillable, Sort Description The code used to describe the replication failure or success.
LocalRecord	Type string Properties Filter, Group, Sort

Field Name	Details
	Description The record being inserted or updated.
Status	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description An item is added to the Organization Sync Log if it failed to be replicated to the linked organization. This picklist includes the following values: - Failed: The replication continued to fail after multiple retries, and won't be retried further. - Resolved: The replication succeeded after retrying. - Retrying: Salesforce is retrying the replication. This field is available in API version 35.0 and later.

PartnerRole

Represents a role for an account Partner, such as consultant, supplier, and so on.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description Uniquely identifies a picklist value so it can be retrieved without using an id or master label.

Field	Details
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description Master label for this partner role value. This display value is the internal label that does not get translated. Limit: 255 characters.
ReverseRole	Type picklist Properties Filter, Group, Nillable, Sort Description Name of the reverse role that corresponds to this partner role. For example, if the role is “subcontractor,” then the reverse role might be “general contractor.” In the user interface, assigning a partner role to an account creates a reverse partner relationship so that both accounts list the other as a partner.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description Number used to sort this value in the partner role picklist. These numbers are not guaranteed to be sequential, as some previous partner role values might have been deleted.

Usage

This object represents a value in the partner role picklist. In the user interface, the partner role picklist provides additional information about the role of a Partner, such as their corresponding reverse role. Query this object to retrieve the set of values in the partner role picklist, and then use that information while processing `PartnerRole` records to determine more information about a given partner role. For example, the application could determine the reverse role of a given `Partner Role` value and the value of the `ReverseRole` property in the associated `PartnerRole` object.

[Overview of Salesforce Objects and Fields](#)

PartyConsent

Represents consent preferences for an individual. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Action	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The action that the Individual is consenting to. Possible values are: • CrossDevice • DataCollection • Reidentification • Segment • ShareData • Target
CaptureContactPointType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Indicates how you captured consent. Possible values are: • Email • MailingAddress • Phone • Social • Web
CaptureDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Required. Date when consent was captured.

Field	Details
CaptureSource	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Indicates how you captured consent. For example, a website or online form.
DoubleConsentCaptureDate	Type dateTime Properties Filter, Group, Nillable, Sort Description The specific date and time the consent was confirmed for the data subject via a secondary verification method (for example, clicking a link in a confirmation email). Essential for high-standard Double Opt-In audit trails.
EffectiveFrom	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the data subject's consent becomes valid. Use this field to track the beginning of the legal period for which the party has agreed to data processing or communication.
EffectiveTo	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the data subject's consent expires or is scheduled to end. This field helps automate compliance by identifying when consent should no longer be honored.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the party consent record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the account owner associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PartyId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. Represents the record based on the Individual object you want to associate consent with. This is a relationship field. Relationship Name Party Relationship Type Lookup Refers To Individual

Field	Details
PrivacyConsentStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Required. Identifies whether the individual associated with this record agrees to this form of contact. Possible values are: • NotSeen • OptIn • OptInPending—Available in API version 58.0 and later. • OptOut • OptOutPending—Available in API version 58.0 and later. • Seen

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PartyConsentChangeEvent

Change events are available for the object.

PartyConsentFeed

Feed tracking is available for the object.

PartyConsentHistory

History is available for tracked fields of the object.

PartyConsentOwnerSharingRule

Sharing rules are available for the object.

PartyConsentShare

Sharing is available for the object.

Payment

Represents a single event when a shopper makes a payment. For credit cards, this event is a payment capture or payment sale, but it doesn't appear on the shopper's credit card statement. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

 **Note:** You can edit or delete a payment only in draft state, which you specify with the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account of the customer who made the payment. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
Amount	Type currency Properties Create, Filter, Sort, Update Description The amount to be debited or captured.
Balance	Type currency Properties Filter, Nillable, Sort Description The total amount – the net applied amount.
CancellationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The date that the payment was voided.
CancellationEffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the cancellation of this payment takes effect.
CancellationGatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The gateway provides this date following a successful cancellation request.
CancellationGatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description System-provided unique transaction ID from the payment gateway.
CancellationGatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
CancellationSfResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A Salesforce result code that can be mapped to one or more gateway result codes. We recommend that the payment gateway adapter layer maps gateway-specific codes to the Salesforce result code.
ClientContext	Type textarea

Field	Details
	Properties Nillable Description Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Users can provide additional details about the payment record. Supports a maximum of 1000 characters.
CorporateCurrencyCvsnDate	Type date Properties Filter, Group, Nillable, Sort, Update Description The date on which the invoice s total amount with tax was converted to the corporate currency. Available in API version 63.0 and later.
CorporateCurrencyCvsnRate	Type double Properties Filter, Nillable, Sort, Update Description The exchange rate that s used to convert the invoice s total amount with tax to the corporate currency. Available in version 63.0 and later.
CorporateCurrencyISOCode	Type string Properties Filter, Group, Nillable, Sort, Update Description The currency ISO code of the corporate currency. Available in version 63.0 and later.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Three-letter ISO 4217 currency code associated with the payment group record.
Date	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when this payment record was created.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that this payment takes effect.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the user who initiated the payment.
GatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The gateway provides this date for reference following a successful gateway communication.
GatewayRefDetails	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Field	Details
GatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique transaction ID created by the payment gateway.
GatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code that must map to a Salesforce-specific result code. One Salesforce result code can map to multiple gateway result codes.
GatewayResultCodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the gateway's result code.
ImpactAmount	Type currency Properties Filter, Nillable, Sort Description Shows the payment's financial impact against the customer's accounts receivable. If the payment is valid, this value is the negative of the payment amount. If the payment is voided, this value is 0.
IpAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The IP address of the user who initiated the payment.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record is possibly referenced (LastReferencedDate) but not viewed.
LegalEntityId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The legal entity used in this invoice. Available in API version 65.0 and later. This field is a relationship field. Relationship Name LegalEntity Refers To LegalEntity
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The MAC address of the person who initiated the payment.
NetApplied	Type currency Properties Filter, Nillable, Sort Description Total payment amount that has been applied, including adjustments.
NetPaymentCreditApplied	Type currency Properties Filter, Sort

Field	Details
	Description Total payment amount that has been credited. This amount is equal to TotalPaymentCreditApplied - TotalPaymentCreditUnapplied. This field is a calculated field. This field is available in API version 65.0 and later.
NetRefundApplied	Type currency Properties Filter, Nillable, Sort Description Total refund amount that has been applied to the payment, including adjustments.
OrderPaymentSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Order payment summaries show the balances of each authorization, capture, and refund made against an order.
PaymentAuthorizationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The authorization record for this payment. If there's a delayed capture (when the capture occurs after the authorization), all captures must be made against a previously successful authorization transaction. This field is a relationship field. Relationship Name PaymentAuthorization Relationship Type Lookup Refers To PaymentAuthorization
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of the payment gateway that processed the payment. If there's a delayed payment, the field is populated from the authorization record. This field is a relationship field. Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Payment groups organize all the payment transactions that have been made against a record such as an account or contract. If there's a delayed payment, the field is populated from the authorization record. This field is a relationship field. Relationship Name PaymentGroup Relationship Type Lookup Refers To PaymentGroup
PaymentIntentGuid	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort Description Unique ID of the payment sent to Stripe or PayPal. Links the Payments Merchant Account record with the payment at the payment provider.
PaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment method that the customer used to provide this payment information.

Field	Details
	This field is a relationship field. Relationship Name PaymentMethod Relationship Type Lookup Refers To PaymentMethod
PaymentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-created unique ID for this payment record.
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the customer who initiated the payment.
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether the payment has been made outside of the payment platform. Possible values are: • External: Transactions happened outside of the Salesforce payments platform. • Salesforce: Salesforce made and recorded an external call to the payment gateway.
SfResultCode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are:

Field	Details
	• Decline: The gateway call failed, but if the problem is fixed and the transaction is retried, it can work. For example, the customer had insufficient funds or briefly lost their connection. • Indeterminate: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • PermanentFail: The gateway call failed. If tried again, it still doesn't work. Gateway calls fail permanently for one of two reasons: – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • RequiresReview: The customer bank requires more information before completing the payment. • Success: The gateway call succeeded. • SystemError: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • ValidationError: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines the state of this payment. Possible values are: • Canceled: This payment has been unapplied from its target and can no longer be allocated. • Draft: The payment can be edited before posting it and allocating it to a target. The payment can also be deleted. • Processed: This payment has been finalized and can be allocated against a target. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
TotalApplied	Type currency Properties Filter, Nillable, Sort Description The total amount of this payment's balance that has been applied against an invoice.

Field	Details
TotalPaymentCreditApplied	Type currency Properties Filter, Sort Description The total amount of all credit types that have been applied against this payment. This field is a calculated field. This field is available in API version 65.0 and later.
TotalPaymentCreditUnapplied	Type currency Properties Filter, Sort Description The total amount of all credit types that haven't been applied against this payment. This field is a calculated field. This field is available in API version 65.0 and later.
TotalRefundApplied	Type currency Properties Filter, Nillable, Sort Description The total amount of a refund that has been applied against this payment.
TotalRefundUnapplied	Type currency Properties Filter, Nillable, Sort Description The total amount of a previously applied refund that has since been unapplied from this payment.
TotalUnapplied	Type currency Properties Filter, Nillable, Sort Description The total amount of this payment that was previously applied and then unapplied.

Field	Details
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines how the customer used this payment. Possible values are: • Capture • Sale

PaymentAuthAdjustment

Shows information about an adjustment made to an authorized transaction. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account for the payment authorization adjustment. Inherited from the payment authorization.

Field	Details
	This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
Amount	Type currency Properties Create, Filter, Sort, Update Description Amount of adjustment applied to the parent payment authorization.
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the payment authorization adjustment record.
Date	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that the adjustment occurred.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The date that the adjustment takes effect on the authorization.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the parent payment authorization owner.
GatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that the reversal transaction occurred in the payment gateway.
GatewayRefDetails	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
GatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique transaction ID created by the payment gateway.
GatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code

Field	Details
GatewayResultCodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.
IpAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The IP address of the user who initiated the payment adjustment.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The MAC address of the person who initiated the payment.
PaymentAuthAdjustmentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description System-provided unique ID for a payment authorization adjustment record.
PaymentAuthorizationId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the payment authorization on which the adjustment occurred. This is a relationship field. Relationship Name PaymentAuthorization Relationship Type Lookup Refers To PaymentAuthorization
PaymentIntentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the payment intent record. This field is a relationship field. Relationship Name PaymentIntent Relationship Type Lookup Refers To PaymentIntent
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the customer who initiated the authorization adjustment.
ProcessingMode	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines whether the payment has been made outside of the payment platform. Possible values are: • <code>External</code>—Transactions happened outside of the Salesforce payments platform. • <code>Salesforce</code>—Salesforce made and recorded an external call to the payment gateway.
<code>SfResultCode</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are: • <code>Decline</code>—The gateway call failed, but it might work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection. • <code>Indeterminate</code>—The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • <code>PermanentFail</code>—The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: – <code>Hard Decline</code>: The customer's payment account has been closed or terminated. – <code>Fraud</code>: The gateway recognized the payment or payment method as known fraud. • <code>RequiresReview</code>—The customer bank requires more information before completing the payment. • <code>Success</code>—The gateway call succeeded. • <code>SystemError</code>—Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • <code>ValidationError</code>—Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
<code>Status</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines the state of the payment authorization reversal.

Field	Details
	Possible values are: • Canceled—The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance. • Draft: The payment authorization reversal can be edited before applying it against the parent authorization. • Pending: The payment authorization reversal is pending. This value is available in API version 61.0 and later. • Processed—The payment authorization reversal has been finalized. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines how the customer used the reversal. Possible value is: • Reversal

PaymentAuthorization

Represents a single payment authorization event where users can capture or reverse a payment against a reserve of funds. This object is available in API version 48.0 and later.

A common type of payment authorization occurs when a user sees a pending transaction against their credit card account.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Note: You can only delete a payment in draft state, which you specify in the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Customer account. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
Amount	Type currency Properties Create, Filter, Sort, Update Description The amount authorized for the payment event.
Balance	Type currency Properties Filter, Nillable, Sort Description Authorized amount – total processed captured amount – total processed authorization reversal amount. Balance can be positive or negative.
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Users can enter comments to provide additional details about the authorization.
CurrencyIsoCode	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the payment authorization record.
Date	Type dateTime Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description By default, the day the authorization record was created. Users can also enter a different date. Editable only when the payment authorization's status is Draft.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date on which the authorization takes effect. Editable only when the payment authorization's status is Draft.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the person who initiated the payment.
ExpirationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Authorizations can't be captured after their expiration dates.
GatewayAuthCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Authorization approval code from the payment gateway.

Field	Details
GatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that of the gateway communication that leads to the successful payment authorization.
GatewayRefDetails	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Additional data that can't be stored in other fields on the payment record. You can use this field for transactions following the initial transaction that creates the payment record. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
GatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique transaction ID from the payment gateway.
GatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
GatewayResultCodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.
IpAddress	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The IP address of the user who initiated the payment authorization.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The MAC address of the person who initiated the payment.
OrderPaymentSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Order payment summaries show the balances of each authorization, capture, and refund made against an order.
PaymentAuthorizationNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-provided unique ID for a payment authorization record.

Field	Details
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The Salesforce payment gateway record that created this authorization. This gateway will be used for subsequent captures. This is a relationship field. Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Payment groups organize all the payment transactions that have been made against a record such as an account or contract. Populated from the authorization record if there is delayed payment. This is a relationship field. Relationship Name PaymentGroup Relationship Type Lookup Refers To PaymentGroup
PaymentIntentGuid	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort Description Unique ID of the payment sent to Stripe or PayPal. Links the Payments Merchant Account record with the payment at the payment provider.
PaymentMethodId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The customer payment method provided during this authorization. This is a relationship field. Relationship Name PaymentMethod Relationship Type Lookup Refers To PaymentMethod
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the person who initiated the payment.
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether the payment has been made outside of the payment platform. Possible values are: • External—Transactions happened outside of the Salesforce payments platform. • Salesforce—Salesforce made and recorded an external call to the payment gateway.
SfResultCode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are: • Decline—The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection.

Field	Details
	• Indeterminate—The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • PermanentFail—The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • RequiresReview—The customer bank requires more information before completing the payment. • Success—The gateway call succeeded. • SystemError—Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • ValidationError—Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines the state of this payment. Possible values are: • Canceled—This payment has been unapplied from its target and can no longer be allocated. • Draft—The payment can be edited before posting it and allocating it to a target. • Failed—Authorization for the payment failed. • Pending— • Processed—This payment has been finalized and can be allocated against a target. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
TotalAuthReversalAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all processed authorization reversals against the payment authorization. This is a calculated field.

Field	Details
TotalPaymentCaptureAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all authorization captures related to this payment authorization.

SEE ALSO:

[OrderPaymentSummary](#)

PaymentCredit

Tracks the amount of money returned to the customer. The return can be a store credit, a gift card, or another type of credit. It's linked to the original payment record and includes the total credit amount issued. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled. Users require the PaymentCredit and PaymentPlatform permission sets.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account of the customer who made the payment. This field is a relationship field. This is a required field. Relationship Name Account

Field	Details
	Refers To Account
Amount	Type currency Properties Create, Filter, Sort Description The amount to be credited. This is a required field.
Balance	Type currency Properties Filter, Nillable, Sort Description Balance of payment credits (NetApplied - TotalCredit TransactionAmount - TotalCredit PendingTransactionAmount).
Comments	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Provide additional details about the payment credit transaction.
CreditMemoId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the credit memo associated with the payment credit. This field is a relationship field. Relationship Name CreditMemo Refers To CreditMemo
CreditType	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Credit types available. This is a dynamic picklist that the user can define. Possible values are: • Credit • Gift Card • Gift Certificate
CreditTypeCategory	Type picklist Properties Filter, Group, Restricted picklist, Sort Description A static enum showing the credit category type. Possible value is: • Credit
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Contains the ISO code for any currency allowed by the organization. Possible values are: • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.
EffectiveDate	Type dateTime Properties Create, Filter, Sort, Update Description Effective date of the payment credit.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
NetApplied	Type currency Properties Filter, Nillable, Sort Description Total of all credit amounts applied for this payment credit (TotalCreditApplied - TotalCreditUnapplied).
OrderPaymentSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the order payment summary. This field is a relationship field. Relationship Name OrderPaymentSummary Refers To OrderPaymentSummary
PaymentCreditNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description ID of the payment credit record. This field is automatically generated. Example: PC-{0000000000}.

Field	Details
PaymentId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the payment associated with the payment credit. This field is a relationship field. Relationship Name Payment Refers To Payment
ReturnOrderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the return order associated with the payment credit. This field is a relationship field. Relationship Name ReturnOrder Refers To ReturnOrder
TotalApplied	Type currency Properties Filter, Nillable, Sort Description Sum of all applied amounts from the payment credit line payment.
TotalCreditPendingTxnAmt	Type currency Properties Filter, Nillable, Sort Description Sum of pending payment credits.
TotalCreditTxnAmt	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Sum of processed payment credits.
TotalUnapplied	Type currency Properties Filter, Nillable, Sort Description Sum of all the unapplied amounts from the payment credit line payment.

PaymentCreditLinePayment

A payment credit line payment. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled. Users require the `PaymentCredit` and `PaymentPlatform` permission sets.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort Description Amount to apply to or unapply from the payment to the credit. This is a required field.
AppliedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Date payment was applied. Can be the current date or a provided date.
AssociatedAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the customer account. This field is a relationship field. Relationship Name AssociatedAccount Refers To Account
AssociatedLineId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the associated line. This field is a relationship field. Relationship Name AssociatedLine Refers To PaymentCreditLinePayment
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Contains the ISO code for any currency allowed by the organization. Possible values are: • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description regarding the payment credit.
HasBeenUnapplied	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the refund line record with type <code>Applied</code> has been unapplied. Not applicable for a refund line record with type <code>Unapplied</code>. This is a required field.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
PaymentCreditId	Type reference Properties Create, Filter, Group, Sort Description ID of the payment credit. This field is a relationship field. This is a required field. Relationship Name PaymentCredit

Field	Details
	Refers To PaymentCredit
PaymentCreditLine PaymentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Number of the payment credit line payment. This field is automatically generated. Example: PCLP-{000000000}.
PaymentId	Type reference Properties Create, Filter, Group, Sort Description ID of the applied payment credit. This field is a relationship field. Relationship Name Payment Relationship Type Master-detail Refers To Payment (the master object)
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Payment credit type. This is a required field. Possible values are: • Applied • Unapplied
UnappliedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description Date payment was unapplied. Can be the current date or a provided date.

PaymentCreditTransaction

A payment credit transaction. This object is available in API version 65.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs or if the B2B Commerce or D2C Commerce license is enabled. Users require the `PaymentCredit` and `PaymentPlatform` permission sets.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort Description Amount of the payment credit transaction. This is a required field.
AssociatedAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the customer account. This field is a relationship field. Relationship Name AssociatedAccount Refers To Account

Field	Details
ClientContext	Type textarea Properties Nillable Description Additional information about the payment credit transaction.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Contains the ISO code for any currency allowed by the organization. Possible values are: • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.
ExternalReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Reference ID used to track the payment credit transaction.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.

Field	Details
PaymentCreditId	Type reference Properties Create, Filter, Group, Sort Description ID of the payment credit. This field is a relationship field. This is a required field. Relationship Name PaymentCredit Relationship Type Master-detail Refers To PaymentCredit (the master object)
PaymentCreditTransactionNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Number of the payment credit transaction. This field is automatically generated. Example: PCT- { 000000000 }.
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Credit transaction processing mode. Possible values are: • External • Salesforce This is a required field.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description A static enum showing the status of the credit transaction.

Field	Details
	Possible values are: • Canceled • Draft • Failed • Pending • Processed
TransactionMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Message describing the transaction.

PaymentGateway

Platform object that represents the connection to an external payment gateway. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Admin-provided details about a record. Maximum of 1000 characters.

Field	Details
DefaultTapToPayLocation	Type string Properties Filter, Group, Nillable, Sort Description Stores the locationId of the location record created at Stripe. The Field Service app uses the location to process where tap-to-pay transactions are made.
ExternalReference	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description Identifier of an external payment gateway. This field is unique within your organization.
GatewayMode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The operational mode of the payment gateway. This field determines the payment gateway's ability to accept payments. For production orgs, the gateway must be in Live mode. Possible values are: • Connected— Payment gateway is active but it can't accept payments. This option is only valid in production orgs. • Live— Payment gateway is active and can accept payments. This option is only valid in production orgs. • Test —Payment gateway is active but not able to accept payments. This option is only valid in sandbox orgs, and the account can accept only test transactions.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible this record is only referenced (LastReferencedDate) but not viewed.
MerchantAccountId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the merchant account used by the payment gateway. This merchant account links to a merchant account at a payment processor. This field is a relationship field. Relationship Name MerchantAccount Relationship Type Lookup Refers To MerchantAccount
MerchantCredentialId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the merchant credential setup entity to reference merchant information. This field is a relationship field. Relationship Name MerchantCredential Relationship Type Lookup Refers To NamedCredential
PaymentGatewayName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Admin-defined name for the payment gateway.

Field	Details
PaymentProcessor	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Name of payment gateway provider. Possible values are: • Paypal • Stripe
PaymentStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The payment gateway is active and can accept payments. Possible values are: • Enabled • Disabled The default value is Disabled.
PayoutStatus	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Money can be moved from the payment provider account to the merchant bank account linked to it. Possible values are: • Enabled • Disabled The default value is Disabled.
PaymentGatewayProviderId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the payment gateway that handles transactions between the merchant account and the payment processor.

Field	Details
	This field is a relationship field. Relationship Name PaymentGatewayProvider Relationship Type Lookup Refers To PaymentGatewayProvider
ProviderAccount	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Account ID assigned by the payment provider that identifies the linked Salesforce Payments account.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines whether Salesforce Payments can use this payment gateway for calls to the external payment gateway. Inactive payment gateways can't be used. Possible values are: • Active - the merchant account can accept payments. • Complete - <code>PaymentStatus</code> and <code>DepositStatus</code> are enabled and the account provided all the required information. • Enabled - <code>PaymentStatus</code> and <code>PayoutStatus</code> are enabled, but the payment provider can require more information later. If the merchant doesn't provide the information then the account can become restricted. The time limit that the merchant has to provide the information is longer than the <code>RestrictedSoon</code> state. • Pending - The merchant account exists but it can't accept payments. This option maintains backward compatibility for accounts that were created with API version 55.0 and earlier. Pending is no longer in use for API version 57.0 and higher. • Rejected - The payment provider has rejected the merchant account with an explanation. • Restricted - merchant account functionality is limited. This state is only applicable if <code>PaymentStatus</code>, <code>PayoutStatus</code>, or both are disabled. • RestrictedSoon - <code>PaymentStatus</code> and <code>PayoutStatus</code> are enabled, but the payment provider requires more information. If the merchant doesn't provide the information in a specific time period, then the merchant account becomes restricted.

PaymentGatewayLog

Stores information exchanged between the Salesforce payments platform and external payment gateways. Gateway logs can also record payloads from external payment entities. This object is available in API version 48.0 and later.

Deleting or archiving a payment gateway log doesn't impact financial data on other payment entities.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
GatewayAuthCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Authorization approval code from the gateway.
GatewayAVSCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Code sent by gateways that use an address verification system.
GatewayDate	Type dateTime

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The date and time that of the gateway communication that leads to the creation of this gateway log.
GatewayMessage	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Information or error messages sent from the gateway.
GatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique transaction ID created by the payment gateway.
GatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
GatewayResultCodeDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the gateway's result code. This field is useful for providing more information around why the gateway returned a certain result code.
InteractionStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Describes the result of communication between the payments platform and a payment gateway.

Field	Details
	Possible values are: - Failed - Initiated - NoOp - Success - Timeout
InteractionType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Describes the type of interaction with the gateway. This field is required for logs created in Salesforce. Possible values are: - Authorization - AuthorizationReversal - Avs - Capture - CheckGiftCardBalance - PostAuth - ReferencedRefund - Sale - Tokenize - Void
IsNotification	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description For asynchronous transactions, shows whether the gateway log belongs to the notification (yes) or the initial transaction (no). Possible values are: - No - Yes
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OrderPaymentSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Order payment summaries show the balances of each authorization, capture, and refund made against an order.
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The Payments Platform payment gateway record used for communication with the external payment gateway. This field is a relationship field. Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentGatewayLogNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description System-generated unique ID for this payment gateway log record.
ReferencedEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Foreign key with DomainSet of PaymentAuth and Payment. This field is a polymorphic relationship field. Relationship Name ReferencedEntity Relationship Type Lookup Refers To CardPaymentMethod, Payment, PaymentAuthAdjustment, PaymentAuthorization, Refund
Request	Type textarea Properties Create, Nillable, Update Description Raw payload. No sensitive attributes are stored.
Response	Type textarea Properties Create, Nillable, Update Description Raw payload.
RetryCategory	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The retry category returned by the payment gateway for the failed payment. This field is available in API version 66.0 and later. Possible values are: • CardLimit— Insufficient funds, exceeded spending limits, or other restrictions on the card.

Field	Details
	• <code>GatewayConnection</code>—Connectivity or communication errors between systems, including upstream gateway errors. • <code>PaymentInformation</code>—Missing or incorrect data such as incorrect card numbers, addresses, or currencies. • <code>PaymentProcessing</code>—Payment account is invalid, closed, restricted, or the transaction was declined for reasons other than insufficient funds. • <code>Security</code>—Security violations or issues such as fraud, risk, authentication, verification, and authorization. • <code>Unknown</code>—Payment gateway error code isn't recognized or isn't mapped to a specific category.
<code>SfRefNumber</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description If an <code>IdempotencyKey</code> was passed in the API request, its value is stored here in text format.
<code>SfResultCode</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are: • <code>Decline</code>: The gateway call failed. If the transaction is attempted again, it can still work. For example, the customer has insufficient funds or briefly lost their connection. • <code>Indeterminate</code>: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • <code>PermanentFail</code>: The gateway call failed and can't work. Gateway calls fail permanently for one of two reasons: – <code>Hard Decline</code>: The customer's payment account has been closed or terminated. – <code>Fraud</code>: The gateway recognized the payment or payment method as known fraud. • <code>RequiresReview</code>: The customer bank requires more information before completing the payment. • <code>Success</code>: The gateway call succeeded. • <code>SystemError</code>: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes.

Field	Details
	• <code>ValidationError</code>: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.

PaymentGatewayProvider

Setup entity for payment gateways. Defines the connection to a payment gateway Apex adapter. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
<code>ApexAdapterId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of an APEX adapter class. The adapter interacts with your payment gateway to complete transactions. This field is unique within your organization. This field is a relationship field. Relationship Name ApexAdapter Relationship Type Lookup Refers To ApexClass
<code>Comments</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Additional details about a record. Maximum of 1000 characters.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description (Optional) An internal name you assign the adapter. For reference only.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
IdempotencySupported	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If the same payment request is made in rapid succession, this field defines whether the Payments platform charges the customer or merchant's card multiple times for the same transaction. This situation can occur when a user clicks a Pay button twice, or the gateway's server goes down after fulfilling a payment request and the client immediately tries making another payment. If this field has a value of Yes, the Payments platform ignores identical payment requests made immediately after an original request. Different payment gateways have varying levels of idempotency support. When configuring a new payment gateway integration, plan accordingly. Possible values are: • No • Yes
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Customer language used for the payment gateway.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MasterLabel	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description User-friendly name of the payment gateway provider.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description Namespace for the payment gateway platform.

PaymentGroup

Top-level object that groups all payment transactions that are processed for an order or invoice. PaymentGroup is a standalone object, so it isn't required for users to execute payment transactions (authorizations, captures, refunds, and sales). This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
PaymentGroupNumber	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description System-defined unique ID for the payment group.
SourceObjectId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The order or invoice related to all the payment transactions in the payment group. This is a relationship field.
	Relationship Name SourceObject
	Relationship Type Lookup
	Refers To Order

PaymentInitiationSource

Represents the originating source of a payment. This information helps other Salesforce products integrate with Salesforce Payments. This object is available in API version 63.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort, Update Description The account record that initiated this payment. This field is a relationship field. Relationship Name Account Refers To Account
Application	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort, Update Description Salesforce application initiating the payment. Possible values are: • Collections • Commerce • Custom • FieldService • OrderManagement • Payments • Revenue • Sales • Scheduler • Service
Channel	Type string Properties Filter, Group, Nillable, Sort, Update Description The origin of the submitted payment. For example, D2C, virtual terminal, or merchant MOTO (mail order or phone order).
CollectionPlanId	Type reference Properties Filter, Group, Nillable, Sort, Update

Field	Details
	Description The collection plan record that submitted payment. This field is available only for merchant-initiated payment collections. For example, a merchant collects an outstanding balance using a Pay Now payment link or over the phone. This field is a relationship field. Relationship Name CollectionPlan Refers To CollectionPlan
ContactId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The contact record of the contact that made the payment. This field is a relationship field. Relationship Name Contact Refers To Contact
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. This field contains the ISO code for any currency allowed by the organization. Possible values are: • AUD—Australian Dollar • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
Name	Type string Properties Filter, Group, idLookup, Sort, Update Description Name of the payment initiation source record. For example, d9e01178-b6878-2f4b-a14d-b0132b7ret67
OpportunityId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The opportunity record that made the payment. This field is a relationship field. Relationship Name Opportunity Refers To Opportunity
OrderSummaryId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The order summary record that initiated the payment. This field is available with Salesforce Order Management and Commerce applications. This field is a relationship field.

Field	Details
	Relationship Name OrderSummary
	Refers To OrderSummary
PaymentScheduleItemId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description The payment schedule item record that initiated the payment. This field is available only with the Scheduler application. This field is a relationship field.
	Relationship Name PaymentScheduleItem
	Refers To PaymentScheduleItem
Process	Type string
	Properties Filter, Group, Nillable, Sort, Update
	Description Component within the application that's initiating the payment. Maximum length of the string is 255 characters. For example, managed or custom checkout, product description page (PDP).
QuoteId	Type reference
	Properties Filter, Group, Nillable, Sort, Update
	Description The quote record that initiated the payment. This field is a relationship field.
	Relationship Name Quote
	Refers To Quote
ServiceAppointmentId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort, Update Description The service appointment record that initiated the payment. This field is available only with the Field Service application. This field is a relationship field. Relationship Name ServiceAppointment Refers To Appointment
SiteId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The site record that initiated the payment. This field is for applications that don't have a web store, but created a digital experience site to accept payments This field is a relationship field. Relationship Name Site Refers To Site
WebCartId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The web cart record that submitted the payment. This field is a relationship field. Relationship Name WebCart Refers To WebCart
WebStoreId	Type reference Properties Filter, Group, Nillable, Sort, Update

Field	Details
	Description The web store record that initiated the payment. For example, a B2B, D2C, or Pay Now store. This field is a relationship field. Relationship Name WebStore Refers To WebStore
WorkOrderId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The work order record that submitted the payment. This field is available only for the Field Service application. This field is a relationship field. Relationship Name WorkOrder Refers To WorkOrder
WorkOrderLineItemId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The work order line item record that made the payment. This field is only available with the Field Service application. This field is a relationship field. Relationship Name WorkOrderLineItem Refers To WorkOrderLineItem

PaymentIntent

Represents data temporarily stored during a transaction's lifecycle that can identify the buyer, the merchant, and the amount the buyer is sending to the merchant. Data such as timestamp and amount returned can also be stored in PaymentIntent. This object is available in API version 58.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description The account record of the buyer. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
AmountCapturable	Type currency Properties Filter, Nillable, Sort Description Payment amount that a merchant can collect after the fulfillment of an order.
AmountRefundable	Type currency Properties Filter, Nillable, Sort Description The amount of the payment that the merchant can refund.
AuthorizationReversalAmount	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description Amount canceled before completing the transfer of funds from buyer to merchant.
AuthorizedAmount	Type currency Properties Filter, Nillable, Sort Description Amount authorized by the payer's bank.
BillingAddress	Type address Properties Filter, Nillable Description The billing address of the account holder. This field is the compound form of the billing address. Read-only. For details on compound address fields, see Address Compound Fields.
BillingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address. The maximum size is 40 characters.
BillingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address. The maximum size is 80 characters.
BillingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the billing address.

Field	Details
BillingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the billing address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
BillingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
BillingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.
BillingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address. Maximum size is 20 characters.
BillingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address. Maximum size is 80 characters.
BillingStreet	Type textarea

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Details for the billing address.
CapturedAmount	Type currency Properties Filter, Nillable, Sort Description Total amount that a merchant secured from a buyer.
ContextData	Type string Properties Nillable Description Additional metadata or information about a payment, such as the source of the payment, user data, or any other relevant information that can help in processing or tracking the payment.
CurrencyIsoCode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description ISO code for any currency allowed by the organization. Available only for orgs with the multicurrency feature enabled. Possible values are: • Euro • USD The default is USD.
DisputeEvidenceDueDate	Type dateTime Properties Filter, Nillable, Sort Description Date by which the merchant must submit information related to the dispute.

Field	Details
DisputeFee	Type currency Properties Filter, Nillable, Sort Description The amount that the credit card company charges the merchant for each disputed payment. The fee is also known as a chargeback fee.
DisputeStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The state of the disputed transaction. Possible values are: • Closed—The dispute inquiry is closed. • Created—The payment gateway opens a payment dispute. • Lost—The bank ruled in the account owner's favor and refunded the charge. The refund is permanent and the dispute fee isn't returned. • Won—The bank ruled in the merchant's favor. The issuing bank returns the debited chargeback amount to the payment gateway, who passes this amount back to the merchant.
DisputedAmount	Type currency Properties Filter, Nillable, Sort Description The amount the customer is challenging.
EntryMode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates how the payment information was provided. Possible values are: • Flow—Salesforce flow that initiated the payment. • Merchant—The credit card isn't available so the merchant entered the payment information via the phone or an email. • Payer_Online—The payer entered their payment information online.

Field	Details
	• <code>Place_Order_V2</code>—The payment was initiated from the Place Order V2 Orchestration. • <code>TapToPay</code>—The card was available and the payer tapped that card or device on the payment terminal.
<code>Guid</code>	Type string Properties Filter, Group, idLookup, Nillable, Sort Description Unique ID of the payment sent to Stripe or PayPal. This ID links the Payments Merchant Account record with the payment at the payment provider.
<code>IncurrenceStatus</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of an orphaned payment. An orphaned payment occurs when a payment transaction is complete, but the workflow is disrupted, and the payment isn't recorded in the consuming flow. An unexpected error can cause an orphaned payment. For example, a payment is accepted at checkout, but the order doesn't get placed because of a network issue. Possible values are: • <code>Canceled</code>—The workflow was disrupted and the payment was canceled or refunded. • <code>Claimed</code>—The payment was recorded and the workflow was completed. • <code>Pending</code>—The consuming workflow hasn't recorded the payment yet. If there isn't a value for this field, it means that the consumer doesn't rely on it to track orphaned payments.
<code>IntentAmount</code>	Type currency Properties Filter, Nillable, Sort Description Total amount that a merchant expects to receive from a buyer.
<code>IsCaptureComplete</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Verification whether the funds for a given payment are paid.

Field	Details
	The default value is <code>false</code> .
IsEvidenceSubmitted	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Status of the requested information that the merchant provides to the bank about the dispute. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced but not viewed.
MerchantAccountId	Type reference Properties Filter, Group, Sort Description Required field. The merchant account record associated with a payment intent record. This field is a relationship field. Relationship Name MerchantAccount Relationship Type Lookup Refers To MerchantAccount
PaymentGatewayId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description The payment gateway record that processed the payment. Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentGroupId	Type reference Properties Filter, Group, Nillable, Sort Description Payment groups organize all the payment transactions that have been made against a record such as an account or contract. This is a relationship field. This field is available in API version 65.0 and later. Relationship Name PaymentGroup Relationship Type Lookup Refers To PaymentGroup
PaymentInitiationSourceId	Type reference Properties Filter, Group, Nillable, Sort Description The payment initiation source record associated with the payment. The record identifies the originating application and object of the payment..lo Relationship Name PaymentInitiationSource Relationship Type Lookup Refers To PaymentInitiaionSource

Field	Details
PaymentIntentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Autogenerated number assigned to the payment record, for example <code>PI-000000001</code>.
PaymentLinkGmvDate	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Date the payment is captured from a payment link transaction. The total amount paid is expressed as the Gross Merchandise Value (GMV).
PaymentLinkId	Type reference Properties Filter, Group, Nillable, Sort Description The payment link record. This field is a relationship field. Relationship Name PaymentLink Relationship Type Lookup Refers To PaymentLink
PaymentMethodDetails	Type string Properties Filter, Group, Nillable, Sort Description Additional information about the payment method type such as the four last digits of a card number.
PaymentMethodId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The payment method record, indicating a card payment method, digital wallet, or alternative payment method. This field is a polymorphic relationship field. Relationship Name PaymentMethod Relationship Type Lookup Refers To PaymentMethod
PaymentMethodSubType	Type string Properties Filter, Group, Nillable, Sort Description A payment method that exists as a subtype of a payment method type. For example, Visa, Mastercard, and American Express exist as subtypes of payment method types such as Apple Pay and Google Pay.
PaymentMethodType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Payment method used for the transaction.
ProviderReference	Type string Properties Filter, Group, Nillable, Sort Description A payment record at the payment gateway that identifies the payment provider.
RefundedAmount	Type currency Properties Filter, Nillable, Sort Description Total or partial amount refunded to the buyer due to product return, merchant's lack of inventory, or shipping and delivering problems.

Field	Details
ShippingAddress	Type address Properties Filter, Nillable Description Delivery address for the purchase. The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
ShippingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. City maximum size is 40 characters.
ShippingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. Country maximum size is 80 characters.
ShippingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The ISO country code for the shipping address.
ShippingGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the shipping address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
ShippingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
<code>ShippingLongitude</code>	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
<code>ShippingPostalCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. The maximum size of the postal code is 20 characters.
<code>ShippingState</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. State maximum size is 80 characters.
<code>ShippingStreet</code>	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Details of the shipping address. Maximum of 255 characters.
<code>Status</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Status of the payment record. Possible values are:

Field	Details
	• Authorized • Canceled • Created • Expired • Failed • PartiallyCaptured • PartiallyRefunded • Pending • Refunded • Succeeded
SubmittedById	Type reference Properties Filter, Group, Nillable, Sort Description The submitted by record, which identifies who processes the payment on the customer's behalf. The customer provides the authorization to submit the payment over the phone or through the mail. This field is a relationship field. Relationship Name SubmittedBy Relationship Type Lookup Refers To User

PaymentIntentEvent

Represents a payment intent platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the [Platform Events Developer Guide](#).

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
ChangeType	Type picklist Properties Restricted picklist Description Type of payment intent event that triggers an event notification. You can write code to operate conditionally on the value of this field. For example, you can ignore an authorization but get notified of captures. Possible values are: • Authorize—Payment is authorized. • AuthorizeFailure—There's an error preventing the payment authorization • Capture—Payment is captured. • CaptureFailure— An error prevented the payment capture. • Refund—Payment is refunded. • RefundFailure—An error prevented the payment refund.
PaymentInitiationSourceApplication	Type picklist Properties Nillable, Restricted picklist Description Salesforce application initiating the payment. This field is available in API version 63.0 and later. Possible values are: • Collections • Commerce • Custom • FieldService • OrderManagement • Payments • Revenue • Sales • Scheduler

Field	Details
	• Service
PaymentInitiationSourceChannel	Type string Properties Nillable Description Identifies the channel in the Payment Initiation Source record for which the event occurs. This field is available in API version 63.0 and later.
PaymentInitiationSource	Type reference Properties Nillable Description Identifies the Payment Initiation Source record for which the event occurs. This field is available in API version 63.0 and later. This field is a relationship field. Relationship Name PaymentInitiationSource Refers To PaymentInitiationSource
PaymentInitiationSourceProcess	Type string Properties Nillable Description Identifies the process in the Payment Initiation Source record for which the event occurs.
PaymentIntentGuid	Type string Properties Nillable Description Identifies the GUID in the Payment Initiation Source record for which the event occurs. This field is available in API version 63.0 and later.
PaymentIntent	Type reference Properties Nillable

Field	Details
	Description Identifies the PaymentIntent record for which the event occurs. This field is available in API version 63.0 and later. This field is a relationship field. Relationship Name PaymentIntent Relationship Type Lookup Refers To PaymentIntent
PaymentLink	Type reference Properties Nillable Description Identifies the payment link record for which the event occurs. This field is available in API version 63.0 and later. This field is a relationship field. Relationship Name PaymentLink Refers To PaymentLink

PaymentLineInvoice

Represents a payment allocated to or unallocated from an invoice. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated. Commerce Payments entities are available only in Lightning Experience.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort Description Total amount applied or unapplied by this payment line.
AppliedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date that this line was applied to an invoice or payment. If this field is null, it inherits the value of the payment line invoice's Date field.
AssociatedAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The account for this payment line's target invoice. This is a relationship field. Relationship Name AssociatedAccount Relationship Type Lookup Refers To Account
AssociatedPaymentLineId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The paymentLine that was unapplied. Populated only when PaymentLineInvoice's Type field has a value of Unapplied. This is a relationship field. Relationship Name AssociatedPaymentLine

Field	Details
	Relationship Type Lookup Refers To PaymentLineInvoice
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.
Date	Type dateTime Properties Create, Filter, Nillable, Sort Description The date and time that this payment line was created.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort Description Defines the date and time when the payment line application or unapplication becomes effective.
EffectiveImpactAmount	Type currency Properties Filter, Nillable, Sort Description Shows how this payment invoice line impacts a customer's accounts receivable. This value is positive when PaymentLineInvoice's Type field is Applied, and negative when PaymentLineInvoice's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0.  Note: EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same payment.

Field	Details
HasBeenUnapplied	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether this payment line has been unapplied from the target invoice. Has a value of NA when PaymentInvoiceLine's Type field has a value of Unapplied. Can be No or Yes if Type has a value of Applied. Possible values are: • NA • No • Yes
ImpactAmount	Type currency Properties Filter, Nillable, Sort Description Shows the payment's financial impact against the customer's accounts receivable. If PaymentLineInvoice has a Type of Applied, the ImpactAmount is the negative equivalent of the line's Amount field. Otherwise, ImpactAmount equals Amount.
InvoiceId	Type reference Properties Create, Filter, Group, Sort Description Target invoice for this payment line. This is a relationship field. Relationship Name Invoice Relationship Type Lookup Refers To Invoice
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, and LastReferenceDate is not null, the user accessed this record or list view indirectly.
PaymentBalance	Type currency Properties Filter, Nillable, Sort Description Total balance of this line's parent payment record following the application or unapplication of this payment line.
PaymentId	Type reference Properties Create, Filter, Group, Sort Description Parent payment for this payment line. This is a relationship field. Relationship Name Payment Relationship Type Lookup Refers To Payment
PaymentLineInvoiceNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-defined unique ID for this payment line.

Field	Details
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether this payment line has been applied or unapplied to the target invoice. Possible values are: • Applied • Unapplied
UnappliedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date that this payment line was unapplied from the target invoice. Populated only when the Type field equals Unapplied. Inherits the value of the Date field.

Usage

Use a payment line to apply all or part of a payment’s balance to an invoice. The PaymentLineInvoice object represents the balance taken from the payment and applied toward the invoice. You can apply a payment’s balance when you create the payment record or afterward. The payment line must have the same currency as the parent payment.

A payment line has an amount, which represents the total amount taken from the payment, and balance, which represents the remaining amount after the payment line has been applied to an invoice. A payment’s amount can’t be less than the sum of all of its payment line amounts.

One payment can have multiple payment lines. A payment line must be related to only payment.

You can create multiple payment lines on a payment apply each line to different invoices on the same account, or to invoices on different accounts.

Here’s one way you could use Salesforce API to apply a payment to an invoice using a payment line.

PaymentLink

A link that a merchant can share with customers to collect payments for products and services. The payment link, which you can embed into a Salesforce app or send directly to a customer, directs the customer to a Pay Now payment page. The page can show a total amount owed or an itemized list of products, shipping and tax charges, and a total amount owed. The customer enters their contact and payment details, and submits their payment. The amounts are shown in the store's currency. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license with the Payments permission enabled for your org. Salesforce Payments entities are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Payer account. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
Amount	Type currency Properties Create, Filter, Sort, Update Description Amount the payer owes.
CartId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the cart record. Relationship Name Cart Relationship Type Lookup Refers To Webcart
CollectionPlanId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The collection plan associated with the payment link. This field is a relationship field. Available in API version 63.0 and later with Financial Services and Automotive Cloud. Relationship Name CollectionPlan Refers To CollectionPlan
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description 3-digit ISO code for the payment currency that is shown on the Pay Now page. Possible values are: • EUR – Euro • GBP – British Pound • USD – US Dollar The default value is USD.
Description	Type textarea Properties Create, Nillable, Update

Field	Details
	Description Text on the Pay Now payment page that's visible to your customers. This text can communicate any information you want.
Expiry Time	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that the payment link expires. The time is based on the user's time zone, not the org's time zone.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record can be referenced and not viewed directly.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who owns this record. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentInitiationSource	Type string

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The origin of the payment, based on the information in the Payment Link record.
PaymentLinkNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-generated number that identifies the payment link.
PaymentMethodSetId	Type reference Properties Create, Filter, Group, Sort, Update Description Reference to the PaymentMethodSet object, which determines what payment methods are shown to the payer. This field is a relationship field. Relationship Name PaymentMethodSet Relationship Type Lookup Refers To MerchAccPaymentMethodSet
PaymentScheduleItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment schedule item associated with the payment link. This field is a relationship field. Available in API version 63.0 and later with Financial Services and Automotive Cloud. Relationship Name PaymentScheduleItem Refers To PaymentScheduleItem

Field	Details
PaymentUrl	Type url Properties Filter, Group, Sort Description Unique URL of the Pay Now page. This URL IS auto-generated, and not editable.
QrCodeImageId	Type reference Properties Filter, Group, Nillable, Sort Description Reference to the QR code image included in the payment link record. This field is a relationship field. Relationship Name QrCodeImage Relationship Type Lookup Refers To ContentVersion
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Indicates whether the payment link is active and can be used. Possible values are: • Active • Disabled The default value is Active.
TaxAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Amount of the tax for the purchase. This amount is shown on the Pay Now page.

Field	Details
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Title of the Pay Now page, indicating what is being paid.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description Indicates the type of payment link created, which the merchant can share with the customer to receive payment. The payment link also determines which Pay Now page is generated and what's included on that page. Possible values are: • <code>CheckoutWithOrder</code> (only for orgs with Payments and Commerce)—includes the amount owed based on the products you select, lists the products purchased, and calculates tax using the billing address and selected shipping options. After a customer makes a payment, this link type creates an order record. • <code>PredefinedAmount</code>—shows only an amount due for products purchased. The merchant enters the amount due when creating the payment link. • <code>WithProducts</code>—Deprecated. New payment links can't be created with this link type. The default value is <code>PredefinedAmount</code>.
UsageType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description Determines whether the payment link is used one time or multiple times before the configured expiration date and time. Possible values are: • <code>MultiUse</code> • <code>SingleUse</code> The default value is <code>MultiUse</code>.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[PaymentLinkOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[PaymentLinkShare](#) on page 67

Sharing is available for the object.

PaymentLinkEvent

Represents a payment link platform event. Subscribe to these events so you can listen and respond to them when they're published. For example, create a Salesforce Flow that is triggered when one of these events is published. This object is available in API version 59.0 and later.

For more information about platform events, see the [Platform Events Developer Guide](#).

Supported Calls

`describeSObjects()`

Special Access Rules

To access Salesforce Payments objects, you must have a Salesforce Payments license and Payments must be enabled for your org. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
ChangeType	Type picklist Properties Restricted picklist Description Type of payment link event, which triggers and event notification. Possible values are: - Create—Payment link created. - Delete—Payment link deleted. - Update—Payment link property changed.
PaymentLinkId	Type reference

Field	Details
	Properties Nillable
	Description Type of payment link event. You can write code to operate conditionally on the value of this field. For example, you can ignore a create change but get notified of updates. This field is a relationship field.
	Relationship Name PaymentLink
	Relationship Type Lookup
	Refers To PaymentLink

PaymentMethod

Represents the method that a buyer uses to compensate the seller of a good or service. Common payment methods include cash, checks, credit or debit cards, money orders, bank transfers, and online payment services. This object is available in API version 48.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The account entity linked to this payment method. This field is a relationship field.
	Relationship Name Account

Field	Details
	Relationship Type Lookup Refers To Account
Comments	Type textarea Properties Nillable Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.
CompanyName	Type string Properties Filter, Group, Nillable, Sort Description Company name for this payment method. Part of the payment method's address.
ImplementorType	Type string Properties Filter, Group, Nillable, Sort Description Shows the type of payment method.
IsAutoPayEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the payment method can be used for recurring payments (True) or not (False). The default value is False. This field is available in API v55.0 and later. For orgs that upgraded from v54.0, you must add this field to the Payment Method page layout in the UI. It isn't automatically added.
Name	Type string Properties Filter, Group, idLookup, Sort

Field	Details
	Description A unique number assigned to the payment method. Numbers start at 1000 and are read only, but administrators can change the format.
NickName	Type string Properties Filter, Group, Nillable, Sort Description User-defined nickname for this payment method.
PaymentMethodAddress	Type address Properties Filter, Nillable Description Full address related to the alternative payment method. For more information about address fields, see Address Compound Fields .
PaymentMethodCity	Type string Properties Filter, Group, Nillable, Sort Description Payment method address details.
PaymentMethodCountry	Type string Properties Filter, Group, Nillable, Sort Description Payment method address details.
PaymentMethodDetails	Type string Properties Filter, Group, Nillable, Sort Description Optional information about the payment method type. This field is available in API version 57.0 and later.

Field	Details
PaymentMethodGeocodeAccuracy	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Accuracy level of the geocode for the payment method address. An accuracy level contains information about the location of a latitude and longitude. For more information about geolocation fields, see Geolocation Compound Field. Possible values are: • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
PaymentMethodLatitude	Type double Properties Filter, Nillable, Sort Description Latitude of the payment method address. Used with the PaymentMethodLongitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodLongitude	Type double Properties Filter, Nillable, Sort Description Longitude of the payment method address. Used with the PaymentMethodLatitude to specify the precise geolocation of the address. For details on geolocation compound fields, see Compound Field Considerations and Limitations.
PaymentMethodPostalCode	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Part of the address for this payment method.
PaymentMethodState	Type string Properties Filter, Group, Nillable, Sort Description Payment method address details.
PaymentMethodStreet	Type textarea Properties Filter, Group, Nillable, Sort Description Payment method address details.
PaymentMethodSubType	Type string Properties Filter, Group, Nillable, Sort Description More information about the payment method. For example, if the PaymentMethodType is Visa, this field can be a digital wallet. This field is available in API version 57.0 and later.
PaymentMethodType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The payment method used for the transaction, such as Visa, Mastercard, EPS, SepaDebit, UnionPay, and Klarna. Method types can also be direct debit payments like ACH, Bacs, and BACS. This field is available in API version 57.0 and later.
SavedPaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the saved payment method record.

Field	Details
	Relationship Name SavedPaymentMethod Relationship Type Lookup Refers To SavedPaymentMethod
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The state of the payment method. Possible values are: • Active—The Payments platform can use the payment method to make payments. • Canceled—The Payments platform can no longer use the payment method to make payments. • InActive—The Payments platform currently can't use the payment method to make payments. Admins can change this value to Active when needed.

PymtSchdDistributionMethod

Indicates how the total payment is divided into partial payments. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description User-entered description of the payment schedule distribution method.
DistributionCount	Type int Properties Create, Filter, Group, Sort, Update Description The number of payment schedule items for the payment schedule. The payment schedule items are used to distribute the payment schedule's total payment into partial payments. Possible values are: 1—Full distribution. Currently, each payment schedule must have exactly one payment schedule item.
DistributionMethodType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Distribution method time interval. Possible values are: FullDistribution—The full amount on the payment schedule is distributed to a single payment schedule item. LumpSum—The specified payment amount on the payment schedule is distributed to a single payment schedule item. Available in API version 65.0 and later with Financial Services and Automotive Cloud. Monthly—The specified payment amount on the payment schedule is distributed evenly across multiple monthly payments. Available in API version 65.0 and later with Financial Services and Automotive Cloud. Quarterly—The specified payment amount on the payment schedule is distributed evenly across multiple quarterly payments. Available in API version 65.0 and later with Financial Services and Automotive Cloud. Weekly—The specified payment amount on the payment schedule is distributed evenly across multiple weekly payments.

Field	Details
	Available in API version 65.0 and later with Financial Services and Automotive Cloud.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description User-entered name for the payment schedule distribution method.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

PaymentScheduleTreatmentDtl

Contains configuration information for the payment schedule treatment detail. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
DateOffset	Type int Properties Create, Filter, Group, Sort, Update Description A number equal to or less than 0. The date offset is subtracted from the processing date reference to determine the processing date. For example, suppose that the invoice due date is 01/17/2022 and offset is -7. In this case, the payment schedule item is processed by the jobs that run on or before 01/10/2022.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The user-entered description of the payment schedule treatment detail.
InstallmentPaymentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates how the payment amount is divided into multiple payments. Possible values are:

Field	Details
	Percentage
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
PaymentMethodSelectionType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates how the payment method is specified. Possible values are: - Manual—the payment method is entered by a user - MostRecentAutopay—the payment method is the most recent automatic payment method used
PaymentRunMatchingValue	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Possible values are: - AMER - APAC - EMEA

Field	Details
PaymentScheduleTreatmentDetailNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated unique identifier for this payment schedule treatment detail.
PaymentScheduleTreatmentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related payment schedule treatment. This field is a relationship field. Relationship Name PaymentScheduleTreatment Relationship Type Lookup Refers To PaymentScheduleTreatment
Percentage	Type percent Properties Create, Filter, Nillable, Sort, Update Description Indicates the percentage of the source amount that is used to create the payment schedule.
ProcessingDateReference	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the source of the reference date. Possible values are: • InvoiceDueDate—use the invoice’s due date as the date reference • UserInputDate—User Input Date Available in API version 65.0 and later with Financial Services and Automotive Cloud.

Field	Details
PymtSchdDistributionMethodId	Type reference Properties Create, Filter, Group, Sort, Update Description The distribution method that contains the information on how to create the payment schedule items. This field is a relationship field. Relationship Name PymtSchdDistributionMethod Relationship Type Lookup Refers To PymtSchdDistributionMethod

PaymentTerm

Defines your company's method and expectations for receiving payment. This object is available in API version 55.0 and later.

Timely payment helps your company maintain cash flow. Payment terms are used to determine the payment due date on invoices. Use with the PaymentTermItem object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description User-defined field that describes the payment term. For example, use <i>Net 30</i> to describe a payment term where the payment is due within 30 days of the billing date.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this payment term is the default term for your org. A default payment term must be defined in your org. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the payment term. For example, <i>Net 30</i> or <i>Cash on delivery (COD)</i>. This name appears on the invoice.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description Indicates whether the payment term is available for use on invoices. Possible values are: • Active—The payment term is available for use and can be applied to an order. Only active payment terms can be applied to transactions or orders. • Draft—The payment term exists but isn't activated yet. • Inactive—The payment term exists but can't be applied to new transactions or orders. The default value is Draft .

Usage

A payment term is applied to an order or transaction, and is passed on to the billing schedule that's used to generate the invoice. The due date on the invoice is derived from the payment.

For example, a Net 30 payment term means that the customer has 30 days to pay from the invoice date. Suppose that an invoice with a Net 30 payment term is generated on January 1. The invoice date is January 1, and the due date is January 31 (1 + 30 days = 31).

PaymentTermItem

Defines the attributes of a payment term that your company uses. The `PaymentTermItem` is used to determine the due date on invoices. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Description	Type textarea

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description User-defined field that describes the details of the payment term item.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated sequential number, such as PTI-000001.
PaymentTermId	Type reference Properties Create, Filter, Group, Sort Description The ID of the payment term that this payment term item is associated with. This field is a relationship field. Relationship Name PaymentTerm Relationship Type Lookup Refers To PaymentTerm

Field	Details
PaymentTimeframe	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the time period when the payment is expected. Possible values are: • Standard—Indicates that payment is expected by the date specified in the payment term. If payment isn't received by the due date, the payment becomes overdue. The default value is Standard.
Period	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the number of units in the payment period. Used with the <code>PeriodUnit</code> field. For example, to define a payment term of Net 30, enter <i>30</i> as the <code>Period</code> and select <i>Days</i> as the <code>PeriodUnit</code>.
PeriodUnit	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the unit of time for the payment period. Used with the <code>Period</code> field. For example, to define a payment term of Net 30, enter <i>30</i> as the <code>Period</code> and select <i>Days</i> as the <code>PeriodUnit</code>. Possible values are: • Days
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specifies how the payment term and invoice due date are derived. Possible values are: • Period-Based—Tells the system to use the <code>Period</code> and <code>PeriodUnit</code> fields to calculate the invoice due date.

Field	Details
	The default value is <code>Period-Based</code> .

PaymentSchedule

The payment schedule represents a collection of payments that a customer wants to collect at different times for a certain record. A schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
<code>AvailableRequestedAmount</code>	Type currency Properties Filter, Nillable, Sort Description The payment schedule's remaining amount available for the creation of payment schedule items. Equals <code>TotalRequestedAmount - TotalLineRequestedAmount</code> .
<code>Comments</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Optional user-defined comments.

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the payment group record.
DefaultPaymentAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description When a payment run creates payments from a payment schedule item, it sets the payment's account to the item's <code>PaymentAccountId</code>. Upon payment schedule item creation, the item's <code>PaymentAccountId</code> inherits the schedule's <code>DefaultPaymentAccountId</code>. However, you can override the <code>PaymentAccountId</code> with a different account as needed. If you do, future payments made from the item use the new account. This is a relationship field. Relationship Name DefaultPaymentAccount Relationship Type Lookup Refers To Account
DefaultPaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description When a payment run creates payments from a payment schedule ID, it sets the payment's account to the item's <code>PaymentMethodId</code>. Upon payment schedule item creation, the item's <code>PaymentMethodId</code> inherits the schedule's <code>DefaultPaymentMethodId</code>. However, you can override the <code>PaymentMethodId</code> with a different account as needed. If you do, future payments made from the item will use the new account. Relationship Name DefaultPaymentMethod Relationship Type Lookup Refers To CardPaymentMethod, DigitalWallet

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user who created the payment schedule. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentScheduleNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-generated reference number for the payment schedule.
PaymentScheduleTreatmentDt1Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The payment schedule treatment detail associated with the payment schedule record. This field is a relationship field. Available in API version 65.0 and later with Financial Services and Automotive Cloud. Relationship Name PaymentScheduleTreatmentDtl Refers To PaymentScheduleTreatmentDtl
PaymentSource	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the name of the funding source that is used to fulfill a payment commitment. Available in API version 63.0 and later with Financial Services and Automotive Cloud.
ReferenceEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The object that receives payments as a result of payment schedule items processed from the payment schedule. This is a polymorphic relationship field. Relationship Name ReferenceEntity Relationship Type Lookup Refers To API version 55.0 and later: - Contract - Order - Invoice API version 62.0 and later with Financial Services and Automotive Cloud: CollectionPlan
RemainingAmountToBeProcessed	Type currency

Field	Details
	Properties Filter, Nillable, Sort Description The total pending amount of payment schedule items that haven't yet been processed for payment. Equals <code>TotalLineRequestedAmount - TotalProcessedAmount</code>.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the payment schedule. Possible values are: • Accepted: The payment schedule is approved and is ready for payment run evaluation. Available in API version 65.0 and later with Financial Services and Automotive Cloud. • Approval Pending: The payment schedule needs approval. Available in API version 65.0 and later with Financial Services and Automotive Cloud. • Canceled: Payment runs can't evaluate payment schedules or use them to create payments. • Completed: All of the payment schedule's payment schedule items have been processed for payments. • Draft: The payment schedule can be edited and configured. Payment runs don't evaluate draft payment schedules. • On Hold: The payment schedule can't be considered for payment runs due to missing information, the need for additional review, or other unresolved external factors. Available in API version 65.0 and later with Financial Services and Automotive Cloud. • Open: The payment schedule is available for payment run evaluation. • Rejected: The payment schedule isn't approved and can't be considered for payment run evaluation. Available in API version 65.0 and later with Financial Services and Automotive Cloud.
TotalAppliedAmount	Type currency Properties Filter, Nillable, Sort Description The amount of all payment schedule items that have been applied to payments. This is a calculated field.

Field	Details
TotalCanceledAmount	Type currency Properties Filter, Nillable, Sort Description The sum of all RequestedAmount values on payment schedule items with a status of Canceled.
TotalPaymentsReceived	Type currency Properties Filter, Nillable, Sort Description The cumulative sum of payments received for all payment schedule items linked to a payment schedule. This field is a calculated field. Available in API version 63.0 and later with Financial Services and Automotive Cloud.
TotalPaymentScheduleItemAmount	Type currency Properties Filter, Nillable, Sort\ Description The total amount allocated from the payment schedule to its payment schedule items. Equals the sum of each payment schedule item's RequestedAmount – the sum of each payment schedule item's Canceled Amount.
TotalProcessedAmount	Type currency Properties Filter, Nillable, Sort Description The sum of ProcessedAmount values on payment schedule items with a status of Processed.
TotalRequestedAmount	Type currency Properties Create, Filter, Sort, Update

Field	Details
	Description The total amount available for a payment schedule to distribute to its payment schedule items. The sum of payment schedule items can't be greater than the <code>TotalLineRequestedAmount</code> of the parent payment schedule.
Type	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of payment for which the payment schedule is created. Available in API version 65.0 and later with Financial Services and Automotive Cloud. Possible values are: • <code>PaymentPlan</code>—Payment Plan • <code>PromiseToPay</code>—Promise to Pay
UsageType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the usage type for the record. Possible value is: • <code>CollectionPlan</code> Available in API version 62.0 and later with Financial Services and Automotive Cloud.

PaymentScheduleItem

A payment schedule contains one or more payment schedule items, where each item represents one payment to be processed. Each of a schedule's items can have different payment configuration fields, such as payment methods, payment dates, and payment accounts. When a payment scheduler launches a payment run, the run evaluates active payment schedule items, and picks them up for payment processing if they align with the scheduler's payment criteria. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Optional user-defined comments.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the payment schedule item record.
LastPaymentGatewayLogId	Type reference Properties Filter, Group, Nillable, Sort Description The most recent payment gateway log created following a payment gateway request to make a payment based on the payment schedule item. This is a relationship field. Relationship Name LastPaymentGatewayLog Relationship Type Lookup Refers To PaymentGatewayLog
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
PaymentAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account assigned to payments made from the payment schedule item. When a payment schedule item is created, its <code>PaymentAccountId</code> inherits the payment schedule's <code>DefaultPaymentAccountId</code> . However, you can provide a new <code>PaymentAccountId</code> at any time. If you change the <code>PaymentAccountId</code> , only payments made after the change use the new account. This is a relationship field. Relationship Name PaymentAccount Relationship Type Lookup Refers To Account
PaymentBatchRunId	Type reference Properties Filter, Group, Nillable, Sort Description The payment batch run that evaluated the payment schedule item for payment processing. This is a relationship field. Relationship Name PaymentBatchRun Relationship Type Lookup

Field	Details
	Refers To PaymentBatchRun
PaymentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment that a payment run created for the payment schedule item after picking up the parent payment schedule. This field is unique within your organization This is a relationship field. Relationship Name Payment Relationship Type Lookup Refers To Payment
PaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment method assigned to payments created from the payment schedule item. When a payment schedule item is created, its <code>PaymentMethodId</code> inherits the payment schedule's <code>DefaultPaymentMethodId</code>. However, you can provide a new <code>PaymentMethodId</code> at any time. If you change the <code>PaymentMethodId</code>, only payments made after the change use the new account. Relationship Name PaymentMethod Relationship Type Lookup Refers To CardPaymentMethod, DigitalWallet
PaymentProcessingMessage	Type string Properties Filter, Nillable, Sort Description Shows information about whether the payment creation process has completed.

Field	Details
PaymentsReceived	Type currency Properties Create, Filter, Nillable, Sort, Update Description The payment received from the borrower for the payment schedule item.
PaymentRunMatchingValue	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The value used to match a payment schedule item to a payment run based on the payment run's matching criteria.
PaymentScheduleId	Type reference Properties Create, Filter, Group, Sort Description The parent payment schedule for the payment schedule item. This is a relationship field. Relationship Name PaymentSchedule Relationship Type Lookup Refers To PaymentSchedule
PaymentScheduleItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description User-defined reference number for the payment schedule item.
PaymentSource	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The feature that caused a payment to be created from the payment schedule item. Possible values are: • <code>PaymentRun</code>
<code>PaymentsReceived</code>	Type currency Properties Create, Filter, Nillable, Sort, Update Description The payment received from the borrower for the payment schedule item. Available in API version 63.0 and later with Financial Services and Automotive Cloud.
<code>ProcessedAmount</code>	Type currency Properties Filter, Nillable, Sort Description The amount of the payment schedule item that has been processed for payment and converted to a payment record.
<code>RequestedAmount</code>	Type currency Properties Create, Filter, Sort, Update Description The initial amount of the payment schedule item upon creation.
<code>Status</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the payment schedule item. Possible values are: • <code>Applied</code>: The payment schedule item has been successfully applied. • <code>Apply Failed</code>: The payment run encountered an error when attempting to process the payment schedule item for payment. For more information, review the payment run's revenue transaction error log. • <code>Approval Pending</code>: The payment schedule item is waiting for approval before it can be processed by payment runs.

Field	Details
	Available in API version 65.0 and later with Financial Services and Automotive Cloud. • Canceled: The payment schedule item can't be picked up by payment runs for processing. When a user or process changes the item's status to Canceled, the item's <code>CanceledAmount</code> becomes <code>RequestedAmount - ProcessedAmount</code>. • Deferred Payment The payment schedule item has been postponed and will be processed at a later date. Available in API version 65.0 and later with Financial Services and Automotive Cloud. • Payment Waived Off The payment schedule item has been canceled, and the payment will not be processed. Available in API version 65.0 and later with Financial Services and Automotive Cloud.
TargetPaymentProcessingDate	Type date Properties Create, Filter, Group, Sort, Update Description The date after picking up a payment schedule item that the payment run makes a payment request to the payment gateway.
UsageType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the usage type for the record. Possible value is: • <code>CollectionPlan</code> Available in API version 62.0 and later with Financial Services and Automotive Cloud.

PaymentSchedulePolicy

Contains configuration information for the payment schedule policy. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and the PaymentScheduleAutomation permission, and Billing (Revenue Cloud). For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
DefaultTreatmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The default payment schedule treatment. This field is a relationship field. Relationship Name DefaultTreatment Relationship Type Lookup Refers To PaymentScheduleTreatment
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description User-entered description of the payment schedule policy.
IsOrgDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description <code>true</code> if the payment schedule policy is the default policy for the org, otherwise <code>false</code>. An org can have a maximum of one default payment policy. The default value is <code>false</code>.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The user-entered name of the payment policy.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the creator of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	Description The payment schedule policy's status. Possible values are: • Active • Canceled • Draft • Inactive
TreatmentSelection	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the payment schedule treatment. Possible values are: • Default—use the payment schedule treatment indicated by <code>DefaultTreatmentId</code>.

PaymentScheduleTreatment

Contains configuration information for the payment schedule. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Subscription Management and Billing (Revenue Cloud).

For information about this object that's available with Billing (Revenue Cloud), including its special access rules, see the [Revenue Cloud Developer Guide](#).

Fields

Field	Details
Description	Type textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The user-entered description of the payment schedule treatment.
IsApprovalRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this payment schedule treatment requires approval or not. Available in API version 65.0 and later with Financial Services and Automotive Cloud. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The user-entered name of the payment schedule treatment.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PaymentPlanTag	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A list of key annotations or insights about the payment plan, such as requires approval or recommended, to help guide the user in selecting the most suitable payment plan. Available in API version 65.0 and later with Financial Services and Automotive Cloud.
PaymentSchedulePolicyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related payment schedule policy. This field is a relationship field. Relationship Name PaymentSchedulePolicy Relationship Type Lookup Refers To PaymentSchedulePolicy
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The payment schedule treatment's status.

Field	Details
	Possible values are: • Active • Canceled • Draft • Inactive
TriggerSource	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the action that caused the payment schedule treatment to be created. Possible values are: • InvoicePosted—an invoice is posted • UserAction—User Action Available in API version 65.0 and later with Financial Services and Automotive Cloud.

PendingOrderSummary

Object representing a B2C Commerce order ingested via High Scale Orders before an OrderSummary is created for it. Optimized for online transaction processing (OLTP). This object is available in API version 55.0 and later.

Supported Calls

`describeLayout()`, `query()`

Special Access Rules

This object is only available in Salesforce Order Management orgs where the High Scale Orders feature is enabled.

Fields

Field	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the account or person account associated with the PendingOrderSummary. It represents the shopper in the storefront. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
BillToContactId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Contact associated with the PendingOrderSummary. It represents the shopper in the storefront when not using person accounts. This field is a relationship field. Relationship Name BillToContact Relationship Type Lookup Refers To Contact
BillingEmailAddress	Type email Properties Filter, Group, Sort Description Email address on the billing address.
BillingPhoneNumber	Type phone Properties Filter, Group, Nillable, Sort Description Phone number of the billing address.

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the original Order associated with the PendingOrderSummary. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar The default value is USD.
Description	Type string Properties Filter, Group, Nillable, Sort Description Description of the PendingOrderSummary.
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description This field is used internally. This field isn't synced with ZOS, so you can't use it in a query or insert operation.
ExternalReferenceIdentifier	Type string Properties Filter, Group, Sort Description Used internally to prevent duplicate records. This value is case-sensitive. On creation, this value is set to <i>B2C realm ID + "_" + B2C instance ID + "@" + B2C Commerce catalog/domain ID + "@" + B2C Commerce order number</i>. When the OrderSummary is created, this value is copied to its ExternalReferenceIdentifier field. If you ingest orders from multiple sources, you can maintain uniqueness by including a prefix based on the source.

Field	Details
GrandTotalAmount	Type currency Properties Filter, Sort Description Total amount, including adjustments and tax, of the PendingOrderSummary.
OrderNumber	Type string Properties Filter, Group, Sort Description Name of the PendingOrderSummary.
OrderedDate	Type dateTime Properties Filter, Sort Description Date of the original order associated with this PendingOrderSummary.
Payload	Type textarea Properties Description The order data payload.
PayloadType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The datatype of the Payload. Possible values are: • JSON_GZIP • JSON_RAW
ProcessingInstructions	Type textarea Properties Nillable

Field	Details
	Description Instructions about how the HSOI service should create the order summary. Options include using the default without customizations or using a custom flow. Also includes instructions about how the HSOI service should dedupe account and contact information using platform duplication and matching rules or by using simple email methods.
SalesChannelId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the SalesChannel associated with this PendingOrderSummary. The SalesChannel Name matches the B2C Commerce catalog/domain ID. This field is a relationship field. Relationship Name SalesChannel Relationship Type Lookup Refers To SalesChannel
SalesStoreId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the RetailStore or WebStore associated with this PendingOrderSummary. This field is a relationship field. Relationship Name SalesStore Relationship Type Lookup Refers To WebStore
ShopperName	Type string Properties Filter, Group, Sort Description The first name and last name of the shopper that placed the original order.

Usage

If you need to view or service an ingested B2C Commerce order before the automated High Scale Orders process has created an OrderSummary for it, you can manually trigger creation of the OrderSummary. In Salesforce, open the PendingOrderSummaries list, find the record, and click **Import**.

PendingOrderSummary only supports certain methods and queries. It doesn't support Apex triggers.

Supported Apex Methods:

- `Database.query(queryString)`
- `Database.query(queryString, accessLevel)`

Supported SOAP API Methods:

- `create()`
- `delete()`
- `describeLayout()`
- `query()`
- `queryMore()`

Supported REST API Methods:

- `/services/data/vXX.X/objects/sObject/` GET
- `/services/data/vXX.X/objects/sObject/id/` GET
- `/services/data/vXX.X/objects/sObject/id/` DELETE
- `/services/data/vXX.X/objects/sObject/id/` POST
- `/services/data/vXX.X/objects/sObject/describe/compactLayouts/` GET
- `/services/data/vXX.X/objects/sObject/quickActions/` GET

Supported Queries:

convertCurrency() function

Example: `SELECT Id, convertCurrency(AnnualRevenue) FROM Account`

Child-to-Parent subquery

Example: `SELECT ExternalReferenceIdentifier, Account.Name FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a'`

Limit clause

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a' LIMIT 1`

Filter by index

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'a'`

Filter by secondary index

Example: `SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE AccountId = 'xxx'`

ORDER BY clause

When using ORDER BY, you don't need to specify a direction. However, if you sort ASC, you can't use NULLS LAST. If you sort DESC, you can only use NULLS LAST.

```
Example: SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier
```

```
Example: SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier ASC NULLS FIRST
```

```
Example: SELECT ExternalReferenceIdentifier FROM PendingOrderSummary ORDER BY ExternalReferenceIdentifier DESC NULLS LAST
```

Equality filter

Range filters aren't supported.

```
Example: SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier = 'realm_tenant@storesite@0000001'
```

```
Invalid example: SELECT ExternalReferenceIdentifier FROM PendingOrderSummary WHERE ExternalReferenceIdentifier < 'a'
```

SEE ALSO:

- [OrderSummary](#)
- [Order](#)

PendingServiceRouting

Represents the routing details of a work item that's waiting to be routed or assigned. This object is available in API version 40.0 and later.

Supported Calls

```
create(), delete(), describeObjects(), getDeleted(), getUpdated(), query(), retrieve(), undelete(), update(), upsert()
```

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Fields

Field	Details
BotId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the Enhanced Einstein Bot or AI agent that performed the work. This is a relationship field. This field is available in API version 52.0 and later. This field is a relationship field.

Field	Details
	Relationship Name Bot
	Relationship Type Lookup
	Refers To BotDefinition
BotType	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort
	Description Indicates the type of bot. Valid values are: • Bot. Refers to an Einstein bot. • ExternalCopilot. Refers to an AI agent with whom your customers can interact. The default value is Bot. This field is available in API version 63.0 and later.
CapacityPercentage	Type percent
	Properties Create, Filter, Nillable, Sort, Update
	Description Indicates the amount of work that this work item represents as a percentage. Valid values are from 0 to 100. Voice calls must have a capacity percentage of 100. If an agent receives a voice call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%.
CapacityWeight	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description Indicates the amount of work that this work item represents as a whole number. Voice calls must use the entire capacity weight.
CustomRequestedDateTime	Type dateTime
	Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Retains the datetime of this work item's initial request, so work items are rerouted using the datetime of the initial work request. When left blank, work items are rerouted using the datetime when they're rerouted.
DropAdditionalSkillsTimeout	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Time to wait before a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills. If CustomRequestedDateTime is set in the PendingServiceRouting object, DropAdditionalSkillsTimeout uses CustomRequestedDateTime as the start time. If CustomRequestedDateTime + DropAdditionalSkillsTimeout has already passed, Omni-Channel immediately drops the additional skills after the pending service request is created.
ExternalBotId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the third-party bot that handles the work item. This is a relationship field. This field is available in API version 64.0 and later. Relationship Name ExternalBot Relationship Type Lookup Refers To ExternalConversationBotDef
GroupId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Omni-Channel queue.
IsInterruptible	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether a work item consumes interruptible or primary capacity. The default value is <code>false</code>. Available in version 57.0 and later when the Interruptible Capacity feature is enabled.
<code>IsOwnerChangeInitiated</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a work item owner change triggered the direct assignment of this work item to the agent. The default value is <code>false</code>.
<code>IsPreferredUserRequired</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether this work item stays with the preferred user even when the user isn't available. The default value is <code>false</code>. This field is available in API version 50.0 and later. When a specific agent is required, don't set <code>PushTimeout</code>. These options aren't supported in this case.
<code>IsPushAttempted</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a push has been attempted. <code>true</code> if this work item was pushed to an agent at least one time and <code>false</code> otherwise.
<code>IsPushed</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this work item is pushed to an agent.
<code>IsReadyForRouting</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether this work item is ready to be routed to an agent. If <code>true</code>, you can't edit this PendingServiceRouting record.
IsStatusChangeInitiated	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a work item status change triggered the direct assignment of this work item to the agent. The default value is <code>false</code>. This field is available in API version 50.0 and later.
IsTransfer	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this work item routing is a transfer request.
LastDeclinedAgentSession	Type string Properties Filter, Group, Nillable, Sort Description Chat session ID of the agent who last declined this work item.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the PendingServiceRouting record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner of this PendingServiceRouting record.

Field	Details
PausedCapacityPercentage	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later.
PausedCapacityWeight	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The amount of capacity that's consumed when this work item is paused. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only. This field is available in API version 62.0 and later.
PreferredUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the preferred user to handle the work item.
PushTimeout	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The time limit set for an agent to respond to an item before it's rerouted and the agent's status is changed accordingly. The time limit is measured in seconds. This field is available in API version 36.0 and later. Effective API version 57.0, for inbound Voice calls, this field represents the time limit set for an agent to respond to a call before it's declined. The value must be from 0 through 20. The value is capped at 20, so any number greater than that is treated as 20 seconds. Latency on the part of the telephony provider can result in agents having less than 20 seconds to answer a call before it's rerouted. When an agent attempts to answer a call within 20 seconds and finds that the call was rerouted, the agent's status remains unchanged. This scenario applies to these telephony models. • Service Cloud Voice with Amazon Connect • Service Cloud Voice with Partner Telephony from Amazon Connect

Field	Details
	When <code>IsPreferredUserRequired</code> is set to true, don't set this option. When a specific agent is required, this option isn't supported.
QueueId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Omni-Channel queue. Due to API changes, <code>QueueId</code> is no longer recommended. Use <code>GroupId</code> instead.
RoutingModel	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Type of routing model. Possible values are: • <code>ExternalRouting</code> • <code>LeastActive</code> • <code>MostAvailable</code>
RoutingPriority	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Order in which work items are routed to agents. This field is considered with skills-based routing only. Queue-based routing sets a work item's priority from the routing configuration.
RoutingType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the work item is routed by queue or by skills-based routing. Possible values are: • <code>QueueBased</code> • <code>SkillsBased</code>

Field	Details
SecondaryRoutingPriority	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the secondary routing priority.
Serial	Type int Properties Filter, Group, Nillable, Sort Description Serial number of the PendingServiceRouting record. The serial number is automatically incremented each time the PendingServiceRouting record is modified.
ServiceChannelId	Type reference Properties Create, Filter, Group, Sort Description ID of the service channel.
TransferRequesterId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The user ID of the rep who reassigned the work using the Reassign action. This field is populated in reassigned AgentWork records only, not the original AgentWork record. This is a relationship field. This field is available in API version 63.0 and later. Relationship Name TransferRequester Relationship Type Lookup Refers To User
WorkItemId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description ID of the work item. Refers To Custom objects and these standard objects: Account, Activity, Case, Claim, ClaimCoverage, ClaimRecovery, Contact, ContactRequest, CustomEntityData, Incident, Lead, LiveChatTranscript, MessagingSession, Opportunity, Orchestration Work Items, Order, Order, PaymentRequest, PersonTraining, Referral, SocialPost, SwarmMember, and VoiceCall. WorkOrder is available in version 58.0 and later.

Usage

When you use the PendingServiceRouting object for queue-based routing, the object doesn't invoke triggers before or after insert, or any action (trigger, workflow rule, validation) that could interfere with the creation of the record.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

PendingServiceRoutingChangeEvent (API version 62.0)

Change events are available for the object.

PendingServiceRoutingOwnerSharingRule

Sharing rules are available for the object.

PendingServiceRoutingShare

Sharing is available for the object.

Limits

You can view the number of Pending Service Routing records that are currently in use in your org, as well as the current hourly use rate. From Setup, enter *Omni-Channel* in the Quick Find box and select **Limits**. The Limits page also displays the current Pending Service Routing record usage percentage and the Pending Service Routing record limits for your org.

PendingServiceRoutingInteractionInfo

Represents PendingServiceRouting interaction information that's used when work is routed to an agent. For a screen pop, it specifies which records to open when work is routed to an agent from a specific channel. PendingServiceRoutingInteractionInfo is read-only. This object is available in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled. To view this object, you must have the “Manage Flow” user permission.

Fields

Field	Details
IsFocused	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this record shows on the agent’s screen when multiple records open at the same time.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the PendingServiceRoutingInteractionInfo.
PendingServiceRoutingId	Type reference Properties Filter, Group, Sort Description The ID of the PendingServiceRouting on page 4109 from which the AgentWork on page 466 is created. This is a relationship field. Relationship Name PendingServiceRouting Relationship Type Lookup Refers To PendingServiceRouting
PrimaryRecordId	Type reference Properties Filter, Group, Sort

Field	Details
	Description The ID of the object that's routed to the agent through Omni-Channel.
	Relationship Name PrimaryRecord
	Relationship Type Lookup
TargetFlowName	Type string
	Properties Filter, Group, Nillable, Sort
	Description The API name and namespace prefix, if any, of the screen flow to open when work is routed to the agent. This field and the <code>TargetFlowId</code> field can't be populated at the same time. Available in API version 57.0 and later.
TargetObjectId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The record to open when work is routed to the agent. This field is required in API version 56.0 and earlier. In API version 57.0 and later, this field is optional and can't be populated at the same time as the <code>TargetFlowName</code> field.
	Relationship Name TargetObject
	Relationship Type Lookup

Period

Represents a fiscal period defined in `FiscalYearSettings`.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only Chatter Free users and standard users can access this object.

Fields

Field	Details
EndDate	Type date Properties Filter, Group, Sort Description The last date of the fiscal period.
FiscalYearSettingsId	Type reference Properties Filter, Nillable, Group, Sort Description The parent record for this period. This is a relationship field. Relationship Name FiscalYearSettings Relationship Type Lookup Refers To FiscalYearSettings
FullyQualifiedLabel	Type string Properties Group, Nillable Description Represents the period's complete name in the UI. For example, "September FY 2016".
IsForecastPeriod	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the period is associated with Salesforce Forecasting (<code>true</code>) or not (<code>false</code>).
Number	Type int Properties Filter, Nillable, Group, Sort

Field	Details
	Description If the labeling scheme of your fiscal year's quarters or months is numbered, this field indicates the relative number of the row.
PeriodLabel	Type picklist Properties Filter, Group, Nillable, Sort Description If the months in your fiscal year use custom names, then this field contains the appropriate name for rows of type Month.
QuarterLabel	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description If the quarters in your fiscal year use custom names, then this field contains the appropriate name for rows of type Quarter.
StartDate	Type date Properties Filter, Group, Sort Description The first date of the fiscal period.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the period is of type Month, Quarter, Week, or Year. Label is the field value.

Usage

In API version 36.0 and earlier, querying the Period object yields no results. In API version 37.0 and later, a query returns period records.

SEE ALSO:

[FiscalYearSettings](#)

PermissionSet

Represents a set of permissions that's used to grant more access to one or more users without changing their profile or reassigning profiles. This object is available in API version 22.0 and later.

PermissionSet has a read-only child relationship with PermissionSetGroup. PermissionSet contains the aggregated permissions for the group.

You can use permission sets to grant access, but not to deny access.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations
- Assign Permission Sets
- Manage Profiles and Permission Sets

To view the following settings, assignments, and permissions for standard and custom objects in a specified permission set, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

Fields

Field Name	Details
Description	Type string Properties Create, Filter, Nillable, Group, Sort, Update Description A description of the permission set. Limit: 255 characters.

Field Name	Details
HasActivationRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the permission set requires an associated active session (<code>true</code>) or not (<code>false</code>).
IsCustom	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the permission set is custom (created by an admin); if <code>false</code>, the permission set is standard and related to a specific permission set license.
IsOwnedByProfile	Type boolean Properties Defaulted on create, Filter, Group, Sort Description If <code>true</code>, the permission set is owned by a profile. Available in API version 25.0 and later.
Label	Type string Properties Create, Filter, Group, Sort, Update Description The permission set label, which corresponds to Label in the user interface. Limit: 80 characters.
LicenseId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of either the related PermissionSetLicense or UserLicense associated with this permission set. Available in API version 38.0 and later. Use this field instead of <code>UserLicenseId</code>, which is deprecated and only available up to API Version 37.0. This is a polymorphic relationship field. Relationship Name License

Field Name	Details
	Relationship Type Lookup Refers To PermissionSetLicense, UserLicense
Name	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. Corresponds to API Name in the user interface. Limit: 80 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix for a permission set that's been installed as part of a managed package. If the permission set isn't packaged or is part of an unmanaged package, this value is empty. Available in API version 23.0 and later.
Permissions PermissionName	Type boolean Properties Create, Filter, Update Description One field for each permission. If <code>true</code> , users assigned to this permission set have the named permission. The number of fields varies depending on the permissions for the organization and license type. To get a list of available permissions in the SOAP API, use <code>describeObjects()</code> .
PermissionSetGroupId	Type reference Properties Filter, Group, Nillable, Sort Description If the permission set is owned by a permission set group, this field returns the ID of the permission set group. If the permission set isn't owned by a permission set group, this field returns a null value. Available in API version 45.0 and later.

Field Name	Details
	This is a relationship field. Relationship Name PermissionSetGroup Relationship Type Lookup Refers To PermissionSetGroup
ProfileId	Type reference Properties Filter, Group, Nillable, Sort Description If the permission set is owned by a profile, this field returns the ID of the Profile. If the permission set isn't owned by a profile, this field returns a null value. Available in API version 25.0 and later. This is a relationship field. Relationship Name Profile Relationship Type Lookup Refers To Profile
Type	Type reference Properties Filter, Group, Nillable, Sort Description Available in API version 46.0 and later.
UserLicenseId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the UserLicense associated with this permission set. This field is nillable in API version 26.0 and later and available up to API version 37.0 In API version 38.0 and later, use <code>LicenseId</code>.

Usage

Use the PermissionSet object to query existing permission sets.

For example, to search for all permission sets that contain the “Modify All Data” permission:

```
SELECT Name, PermissionsModifyAllData
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

When combined with the PermissionSetAssignment object, you can create a nested query that returns all users assigned to a particular permission like “Modify All Data”:

```
SELECT Name, (SELECT AssigneeId FROM Assignments)
FROM PermissionSet
WHERE PermissionsModifyAllData=true
```

If the permission set isn’t assigned to a user, you can also create or delete a permission set.

User Licenses

The user license controls the permissions that are available in a permission set.

Every permission set can be associated with a user license or permission set license. If you plan to assign a permission set to multiple users with different user and permission set licenses, leave `LicenseId` empty. If only users with one type of license use this permission set, set the `LicenseId` to that single user or permission set license. If you want a permission set associated with a permission set license, then set `LicenseId` to the permission set license. To get the `LicenseId`, run this query:

```
SELECT Id, Name
FROM UserLicense
```

Alternatively, to query a user or profile for the `LicenseId`.

```
SELECT Id, Profile.UserLicenseId
FROM User
```

Child Objects

When using the API, think of each permission set or related set of access controls as an empty container that you fill with permission records.

In the API, a permission set can contain user, object, and field permissions, and setup entity access settings for other settings, such as Apex classes.

- ObjectPermissions and FieldPermissions objects are available in API version 24.0 and later.
- The SetupEntityAccess object is available in API version 25.0 and later.
- The PermissionSetGroupComponent object is available in API version 45 and later.

Only user permissions are managed in the PermissionSet API object; all other permission types are managed in child API objects.

In these child objects, access is stored in a record, while the absence of a record indicates no access. To return a record in a SOQL query, a minimum permission or setting is required for each child object.

Because permissions are stored in related objects, it’s important to understand what questions to ask when using SOQL. For example, let’s say you want to know which permission sets have “Delete” on an object. You also want to know which ones include permissions that allow approval of a return merchandise authorization (where the approval checkbox is controlled with field permissions). Asking

the right questions when using SOQL with permission sets ensures that you get the information you need, such as whether to migrate permissions or assign a permission set to a user.

For example, the following returns all permission sets where the “Read” permission is enabled for the Merchandise__c object.

```
SELECT SubjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = True AND SubjectType = 'Merchandise__c'
```

You can query for all permission sets that have “Read” on an object. However, you can’t query for permission sets that have no access on an object, because no records exist for that object. For example, the following returns no records because the object must have at least “Read” to return any records.

```
SELECT SubjectType, ParentId, PermissionsRead
FROM ObjectPermissions
WHERE PermissionsRead = False AND SubjectType = 'Merchandise__c'
```

If you have at least the “Read” permission on an object, you can create a conditional query on other permissions in the same object. For example, the following returns any records where the object has at least the “Read” permission but not the “Edit” permission.

```
SELECT ParentId, PermissionsRead, PermissionsEdit
FROM ObjectPermissions
WHERE PermissionsEdit = False AND SubjectType = 'Merchandise__c'
```

To set an object or field permission to no access, delete the record that contains the permission. For example, to disable all object permissions in the Merchandise__c object for a particular permission set, first query to retrieve the ID of the object permission record.

```
SELECT Id
FROM ObjectPermissions
WHERE SubjectType = 'Merchandise__c'
```

Then delete the IDs returned from the query.

Note: If you try to update the object or field permissions by setting all permissions to false, the permission record is automatically deleted. Any subsequent queries for the record ID won’t return results and you must add a new permission record to grant access.

View a Permission Set with Nested Queries

You can build on the PermissionSet object using child relationships that show all of the permissions in a single permission set. For example, the following returns all permission sets and displays the “Transfer Leads” permission, as well as any “Read” permissions on any objects and fields.

```
SELECT Label, PermissionsTransferAnyLead,
(SELECT SubjectType, PermissionsRead FROM ObjectPerms),
(SELECT SubjectType, Field, PermissionsRead FROM FieldPerms)
FROM PermissionSet
```

Associated Profiles

In API version 25.0 and later, every profile is associated with a permission set that stores the profile’s user, object, and field permissions, as well as setup entity access settings. You can query permission sets that are owned by profiles but not modify them.

The following example returns all permission sets, including those owned by a profile.

```
SELECT Id, Label, ProfileId, Profile.Name
FROM PermissionSet
```

The following returns all permission sets except those permissions owned by profiles.

```
SELECT Id, Label, ProfileId, Profile.Name, IsOwnedByProfile
FROM PermissionSet
WHERE IsOwnedByProfile = FALSE
```

Because permission sets have child objects in the API, you can query their values on permission sets owned by a profile. For example, the following returns all enabled object permission records for profiles only.

```
SELECT Id, ParentId, PermissionsRead, ObjectType, Parent.ProfileId
FROM ObjectPermissions
WHERE Parent.IsOwnedByProfile = TRUE
```

Once you have the IDs for permission sets that are owned and not owned by profiles, use the [PermissionSetAssignment](#) object to see if users can access objects or fields via their profile permissions or their permission sets. For example, the following SOQL query returns all users who have the “Read” permission on the Merchandise__c object. It also specifies whether the permission is granted through a profile or permission set.

```
SELECT Assignee.Name, PermissionSet.Id, PermissionSet.IsOwnedByProfile
FROM PermissionSetAssignment
WHERE PermissionSetId
IN (SELECT ParentId
FROM ObjectPermissions
WHERE SObjectType = 'Merchandise__c' AND PermissionsRead = true)
```

Note: For permission sets that are owned by profiles, don’t use Name and Label values that are returned in a query. Name and Label values from queries can change.

SEE ALSO:

[ObjectPermissions](#)
[FieldPermissions](#)
[SetupEntityAccess](#)
[PermissionSetAssignment](#)
[Profile](#)

PermissionSetAssignment

Represents a user’s assignment to a permission set or permission set group. This object is available in API version 22.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Summer ’20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets
- Manage User

Fields

Field Name	Details
AssigneeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user that is assigned the permission set indicated in <code>PermissionSetId</code> or the permission set group indicated in <code>PermissionSetGroupId</code>. This is a relationship field. Relationship Name Assignee Relationship Type Lookup Refers To User
ExpirationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that the assignment of the permission set or permission set group expires for the specified user. This field is available in API version 52.0 and later.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the assignment is active (<code>true</code>) or not (<code>false</code>). Defaults to <code>false</code>. This field is available in API version 52.0 and later.
IsRevoked	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the assignment was revoked (<code>true</code>) or not (<code>false</code>). Defaults to <code>false</code>. This field is available only if user access policies are enabled. This field is available in API version 57.0 and later.

Field Name	Details
LastCreatedByChangeId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user access change record related to this permission set or permission set group assignment. This field is available only if user access policies are enabled. This field is available in API version 57.0 and later. This field is a relationship field. Relationship Name LastCreatedByChange Relationship Type Lookup Refers To UserAccessChange
LastDeletedByChangeId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user access change record related to this permission set or permission set group assignment being revoked. This field is available only if user access policies are enabled. This field is available in API version 57.0 and later. This field is a relationship field. Relationship Name LastCreatedByChange Relationship Type Lookup Refers To UserAccessChange
PermissionSetGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the permission set group assigned to the user specified in AssigneeId. This field is available in API version 45.0 and later. This is a relationship field.

Field Name	Details
	Relationship Name PermissionSetGroup Relationship Type Lookup Refers To PermissionSetGroup
PermissionSetId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the permission set assigned to the user specified in AssigneeId. This is a relationship field. Relationship Name PermissionSet Relationship Type Lookup Refers To PermissionSet

Usage

Finding Permission Set Assignments

Use the PermissionSetAssignment object to query permission set assignments to find out which permission sets are assigned to which users. Because each user can be assigned to many permission sets and each permission set can be assigned to many users, each PermissionSetAssignment ID represents the association of a single user and single permission set.

For example, to search for all permission sets assigned to a particular user:

```
SELECT Id, PermissionSetId
FROM PermissionSetAssignment
WHERE AssigneeId = '005600000017cKt'
```

To search for all users assigned to a particular permission set:

```
SELECT Id, AssigneeId
FROM PermissionSetAssignment
WHERE PermissionSetId = '0PS300000000000e'
```

You can also create a new permission set assignment, or use delete to remove a permission set that's assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

User Licenses

When assigning a permission set, if the PermissionSet has a `UserLicenseId`, its `UserLicenseId` and the Profile `UserLicenseId` must match. To determine a user's license assignment, query the user's profile and then query the profile's license.

For example, to find a user's profile ID:

```
SELECT Id, ProfileId
FROM User
WHERE Id = '005D00000001GMAT'
```

To find a permission set's `UserLicenseId`:

```
SELECT Id, LicenseId
FROM PermissionSet
WHERE Id = '0PS30000000000e'
```

If the IDs match, the assignment succeeds.

To find all the permission sets with no license that are assigned to any user:

```
SELECT Id, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE PermissionSet.LicenseId = null
```

Revoked Assignments from User Access Policies

After you revoke a permission set or permission set group assignment via a user access policy, the `IsRevoked` field is updated to `true`. The `PermissionSetAssignment` record isn't deleted. If the permission set or permission set group is assigned to the user again, the `IsRevoked` field is then updated to `false`.

To find permission set or permission set group assignments that were revoked:

```
SELECT Id, ExpirationDate, Assignee.Name, PermissionSet.Name
FROM PermissionSetAssignment
WHERE IsRevoked=true ALL ROWS
```

SEE ALSO:

[PermissionSet](#)

PermissionSetGroup

Represents a group of permission sets and the permissions within them. Use permission set groups to organize permissions based on job functions or tasks. Then, you can package the groups as needed. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeObject()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, to view this object, users must have one of these permissions:

- View Setup and Configuration

- Manage Session Permission Set Activations
- Assign Permission Sets

To edit this object, users must have the Manage Profiles and Permission Sets permission.

Fields

Field Name	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The Permission Set Group description.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The permission set group name used in the API.
HasActivationRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the permission set group requires an associated active session (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> . This field is available in API version 53.0 and later.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The Permission Set Group language. Possible values are: • <code>da</code> (Danish) • <code>de</code> (German) • <code>en_US</code> (English) • <code>es</code> (Spanish) • <code>es_MX</code> (Spanish - Mexican)

Field Name	Details
	• <code>fi</code> (Finnish) • <code>fr</code> (French) • <code>it</code> (Italian) • <code>ja</code> (Japanese) • <code>ko</code> (Korean) • <code>nl_NL</code> (Dutch) • <code>no</code> (Norwegian) • <code>pt_BR</code> (Portuguese - Brazilian) • <code>ru</code> (Russian) • <code>sv</code> (Swedish) • <code>th</code> (Thai) • <code>zh_CN</code> (Chinese - Simplified) • <code>zh_TW</code> (Chinese - Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The permission set group label for the aggregated permissions.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The permission set group namespace prefix.
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Indicates permission set group recalculation status. • <code>Updated</code>. The group is current. • <code>Outdated</code>. The group requires recalculation. • <code>Updating</code>. The group is in recalculation mode. • <code>Failed</code>. The group recalculation failed.

Usage

Use the PermissionSetGroup object to query existing permission set groups and to find which aggregated permissions are included in the group.

For example, to search for all object permissions in a permission set group named StandardAccountingUsers:

```
SELECT SObjectType
FROM ObjectPermissions
WHERE Parent.PermissionSetGroup.DeveloperName = 'StandardAccountingUsers'
```

To create a permission set group using REST API, you can submit a POST request.

```
POST
/services/data/v45.0/tooling/objects/PermissionSetGroup/

{
  "DeveloperName": "Sales", "MasterLabel": "sales_label"
}
```

PermissionSetGroupComponent

A junction object that relates the PermissionSetGroup and PermissionSet objects via their respective IDs; enables permission set group recalculation to determine the aggregated permissions for the group. This object is available in API version 45.0 and later.

PermissionSetGroupComponent is a child object of PermissionSet and PermissionSetGroup.

Supported Calls

create(), delete(), describeObject(), query(), retrieve()

Special Access Rules

As of Spring '20 and later, only users with the "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
PermissionSetGroupId	Type reference Properties Create, Filter, Group, Sort Description The unique permission set group ID. This is a relationship field. Relationship Name PermissionSetGroup

Field Name	Details
	Relationship Type Lookup
	Refers To PermissionSetGroup
PermissionSetId	Type reference
	Properties Create, Filter, Group, Sort
	Description The unique permission set ID of a permission set in a permission set group. This is a relationship field.
	Relationship Name PermissionSet
	Relationship Type Lookup
	Refers To PermissionSet

Usage

Use the PermissionSetGroupComponent object to add members to or delete members from a permission set group, or to query for group members.

PermissionSetLicense

Represents a license that's used to enable one or more users to receive a specified permission without changing their profile or reassigning profiles. You can use permission set licenses to grant access, but not to deny access. This object is available in API version 29.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
DeveloperName	Type string Properties Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
ExpirationDate	Type date Properties Filter, Group, Nillable, Sort Description The date at which the permission set license expires.
IsAvailableForIntegrations	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the permission set license is enabled for integrations (<code>true</code>) or not (<code>false</code>). When this field is set to <code>true</code>, Salesforce integration features can access data. The default value is <code>false</code>. This field is read-only in the API and can be edited only in Setup. If integrations are required for feature functionality and the license isn't enabled for integrations, you receive an error when setting up the session-based permission set or executing the feature. Only enable integrations if necessary for the feature.
IsSupplementLicense (Developer Preview)	Type boolean

Field Name	Details
	Properties Defaulted on create, Filter, Group, Sort Description Indicates whether a custom permission set license is a supplement license (<code>true</code>) or a foundation license (<code>false</code>). The default value is <code>false</code>. This field is only available if the Partner Licensing Platform developer preview is enabled. This field is available in API version 55.0 and later.  Note: The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language of the permission set license.
MasterLabel	Type string Properties Filter, Group, Sort Description The label of the permission set license. Label is Permission Set License Label.
MaximumPermissions <i>PermissionName</i>	Type boolean Properties Filter Description One field for each permission. For example, <code>MaximumPermissionsIdentityConnect</code> corresponds to the "Use Identity Connect" permission. If <code>true</code>, this <code>PermissionSetLicense</code> grants the specified permission. The number of fields varies depending on the permissions available for the organization.
PermissionSetLicenseKey	Type string

Field Name	Details
	Properties Filter, Group, idLookup, Sort Description A string that uniquely identifies a particular permission set license.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of a permission set license. If Active , the permission set license is available. If Disabled , the permission set license has expired.
TotalLicenses	Type int Properties Filter, Group, Sort Description The total number of this permission set license that are available to your organization.
UsedLicenses	Type int Properties Filter, Group, Sort Description The number of this permission set license that are currently assigned to users.

Usage

Users with the “View Setup and Configuration” permission can use the PermissionSetLicense object to view the set of currently defined permission set licenses in your organization.

Use the PermissionSetLicense object to query existing permission licenses.

For example, to return a list of all active permission set licenses:

```
SELECT MasterLabel
FROM PermissionSetLicense
WHERE Status = 'Active'
```

When combined with the PermissionSetLicenseAssign object, you can create a nested query that returns all users assigned to a particular permission set license like “Identity Connect”:

```
SELECT MasterLabel, (SELECT AssigneeId FROM PermissionSetLicenseAssign)
FROM PermissionSetLicense
WHERE MaximumPermissionsIdentityConnect=true
```

SEE ALSO:

[PermissionSetLicenseAssign](#)

PermissionSetLicenseAssign

Represents the association between a User and a PermissionSetLicense. This object is available in API version 29.0 and later.

Note: The relationship name for PermissionSetLicenseAssign is *PermissionSetLicenseAssignments*.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Assign Permission Sets

Fields

Field Name	Details
AssigneeId	Type reference Properties Create, Filter, Group, Sort Description ID of the User to assign the permission set license specified in <code>PermissionSetLicenseId</code>. This is a relationship field. Relationship Name Assignee Relationship Type Lookup Refers To User

Field Name	Details
IsRevoked	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Reserved for internal use. This field is available in API version 58.0 and later.
LastCreatedByChangeId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user access change record related to this permission set license assignment. This field is available only if user access policies are enabled. This field is available in API version 58.0 and later. This field is a relationship field. Relationship Name LastCreatedByChange Relationship Type Lookup Refers To UserAccessChange
LastDeletedByChangeId	Type reference Properties Create, Filter, Group, Sort Description ID of the user access change record related to this permission set license assignment being revoked. This field is available only if user access policies are enabled. This field is available in API version 58.0 and later. This field is a relationship field. Relationship Name LastCreatedByChange Relationship Type Lookup Refers To UserAccessChange
PermissionSetLicenseId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Sort
	Description The ID of the permission set license the user is assigned to. This is a relationship field.
	Relationship Name PermissionSetLicense
	Relationship Type Lookup
	Refers To PermissionSetLicense

Usage

Use the PermissionSetLicenseAssign object for querying permission set license assignments to find out which permission set licenses are assigned to which users. Because each user can be assigned to many permission set licenses, each PermissionSetLicenseAssign ID represents the association of a single user and single permission set license.

For example, to search for all of the permission sets assigned to a particular user:

```
SELECT Id, PermissionSetLicenseId
FROM PermissionSetLicenseAssign
WHERE AssigneeId = '005D0000001RFek'
```

To search for all users assigned to a particular permission set license:

```
SELECT AssigneeId
FROM PermissionSetLicenseAssign
WHERE PermissionSetLicenseId = '0PLD000000003mwOAA'
```

You can also create a new permission set license assignment, or use delete to remove a permission set license that's been assigned to a user. To update an assignment, delete an existing assignment and insert a new one.

SEE ALSO:

[PermissionSetLicense](#)

PermissionSetLicenseDefinition (Developer Preview)

Represents the definition of a custom permission set license, which entitles specified features in a package. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access `PermissionSetLicenseDefinition`, you must have the Partner Licensing Platform developer preview enabled. To participate in this developer preview, submit a participation request via the [Partner Licensing Platform Developer Preview](#) Partner Community group.

 **Note:** The Partner Licensing Platform is available as a developer preview. The Partner Licensing Platform isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. All commands, parameters, and other features are subject to change or deprecation at any time, with or without notice. Don't implement functionality developed with these commands or tools in your production package.

Fields

Field	Details
<code>DeveloperName</code>	Type string Properties Create, Filter, Group, Sort, Update Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
<code>IsSupplementLicense</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the custom permission set license is a supplement license (<code>true</code>) or a foundation license (<code>false</code>). The default value is <code>false</code>. This field is available in API version 55.0 and later.
<code>Language</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application.

Field	Details
LicenseExpirationPolicy	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The license expiration policy of the custom permission set license. Possible values are: • BlockNamespaceAccess—Package access is blocked for existing users when all custom permission set licenses expire. This is the default value. • AllowNamespaceAccess—Package access isn't blocked for existing users when all custom permission set licenses expire. This field is available in API version 55.0 and later.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label for this PermissionSetLicenseDefinition value. This display value is the internal label that does not get translated.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
UserLicenseRestrictions	Type textarea

Field	Details
	Properties Create, Nillable, Update Description The user license categories that can be assigned the custom permission set license. If no user license categories are specified, all users can be assigned the license. Possible values include: • <code>\${communities}</code> • <code>\${communitiesLogin}</code> • <code>\${customerCommunities}</code> • <code>\${customerCommunitiesLogin}</code> • <code>\${internal}</code> • <code>\${partnerCommunity}</code> • <code>\${partnerCommunityLogin}</code> • <code>\${platform}</code> For more information, see User License Restriction Categories (Developer Preview). This field is available in API version 55.0 and later.

Usage

After the `PermissionSetLicenseDefinition` is created, it must be referenced in `LicenseDefinitonCustomPermission`.

For more information, see the [Partner Licensing Platform Developer Guide \(Developer Preview\)](#).

PermissionSetTabSetting

Represents a permission set tab setting. Requires the View Setup permission. Use this object to query all tab settings of the permission set. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
Name	Type string Properties Create, Filter, Group, Sort Description The tab name.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The permission set Id. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To PermissionSet
Visibility	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates whether the tab is visible by default. Possible values are: • DefaultOff • DefaultOn

Usage

Use the PermissionSetTabSetting object to find tab setting visibility settings, parent permission sets, and so forth.

For example, to find the visibility setting of a tab named “standard-Lead,” do something like the following.

```
SELECT Visibility
FROM PermissionSetTabSetting
WHERE Name = 'standard-Lead'
```

PersnlBatchDecision

Represents a batch personalization that delivers personalization decisions (content or recommendations) to a customer segment. Available in API version 64.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
ActivationTriggerType	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Type of trigger that activates the batch personalization decision. The default value is <code>None</code> and possible values are: • <code>Automatic</code>—Automatically On Job Completion • <code>None</code>
BatchStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Status of the batch personalization decision. The default value is <code>Active</code> and possible values are: • <code>Active</code> • <code>Error</code> • <code>Paused</code>
DataSpaceId	Type reference Properties Filter, Group, Sort Description The ID of the data space from where batch personalization decision resources originate. Relationship Name DataSpace

Field	Details
	Refers To DataSpace
Description	Type string Properties Filter, Group, Nillable, Sort Description Text description of the batch personalization decision.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description The unique name of the batch personalization decision in the API.
ErrorCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The issue that's causing an error. The default value is <code>None</code> and possible values are: • <code>ConfigurationMissingError</code>—A required configuration setting is missing. • <code>DpcJobError</code>—A problem occurred during processing. • <code>Internal Error</code>—An internal error occurred during processing. • <code>ModelValidationError</code>—The model is invalid. • <code>None</code>
RefreshMode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description How the batch personalization data is refreshed. The default value is <code>FULL_REFRESH</code> and possible values are: • <code>FULL_REFRESH</code>—Generates new decisions for all members in a segment. • <code>INCREMENTAL</code>—Generates decisions only for the new members added to the segment after the last run.

Field	Details
Name	Type string Properties Filter, Group, idLookup, Sort Description Required. The name of the batch personalization decision.

Usage

PersnlBatchDecision provides details about refresh modes, model versions, and refresh states for specific market segments.

PersonAccountOwnerPowerUser

Represents a user who can own more than 50,000 customer or partner portal accounts. Person account owner power users can own a large number of either customer or partner users. Their role can't be changed and they must be at the root of the role hierarchy. Person account owner power user objects can't be created if deferred sharing is turned on for your org. Person account owner power user objects can be created while deferred sharing is turned off for an org. Deferred sharing can be turned back on after person account owner power user objects have been created. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Create a PersonAccountOwnerPowerUser object. Enter the user ID of the power user and the type of users that they can own, `Customer Portal` or `Partner`.

 **Note:** Only users at the highest level of a hierarchy can be added to the PersonAccountOwnerPowerUser object.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API.

Field	Details
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language that the user's account is set to. The user is specified using the <code>UserId</code> field. See Salesforce Help for a full list of languages.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label entered when the person account owner power user is created.
PortalType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of portal user account that the person account owner power user can own. A possible value is: • <code>CustomerPortal</code>—Customer Portal
UserId	Type reference Properties Create, Filter, Group, Sort Description The unique ID associated with the person account owner power user. This field is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

PersonalOrgInfo

Represents the information for a Tableau Next personal org. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

To access this object, you must have Tableau Next enabled in your org and a Tableau Next permission set.

Fields

Field	Details
DeletedBy	Type string Properties Filter, Group, Nillable, Sort Description The user ID that deleted the personal org.
DeletedDate	Type date Properties Filter, Group, Nillable, Sort Description The date the personal org was deleted.
Description	Type textarea Properties Create, Nillable Description The description for the personal org.
Details	Type string Properties Create, Filter, Group, Nillable, Sort

Field	Details
	Description The details for the personal org.
ErrorCode	Type string Properties Filter, Group, Nillable, Sort Description The error code for the personal org.
IsPersonalOrgDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the personal org is deleted (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the personal org was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the personal org was last viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The API name of the personal org.
OrgName	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The name of the personal org.
PersonalOrg	Type string Properties Filter, Group, Nillable, Sort Description The ID of the personal org.
PrimaryOrgUser	Type string Properties Create, Filter, Group, Sort, Update Description The email for the primary user of the personal org.
PrimaryOrgUserIdentifier	Type string Properties Filter, Group, Sort Description The user ID for the primary user of the personal org.
SignupCountry	Type string Properties Filter, Group, Sort Description The country of the personal org signup.
SignupEmail	Type email Properties Filter, Group, Sort Description The user email used for personal org signup.
SignupInstance	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The Salesforce org instance used for personal org signup.
SignupLanguage	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The language used for personal org setup. Possible values are: • da—Danish • de—German • en_US—English • es—Spanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish • th—Thai • zh_CN—Chinese (Simplified) • zh_TW—Chinese (Traditional)
SignupUsername	Type string Properties Filter, Group, Sort Description The user name used for personal org signup.
SourceType	Type picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort Description The source of the personal org. Possible values are: • TableauEinstein—Tableau Next
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The status of the personal org. Possible values are: • Active • Creating • Deleted • Error • New The default value is New.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PersonalOrgInfoFeed on page 55

Feed tracking is available for the object.

PersonalOrgInfoHistory on page 63

History is available for tracked fields of the object.

PersonalizationDecision

Represents a set of targeting rules within a personalization point that determine an individual's eligibility to receive personalized content and the content to deliver. Available in API version 62.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. The default value is USD. This is an optional field.
DataSetId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the data space from where a personalization decision's resources originate. This is a required field. Relationship Name DataSet Refers To DataSet
Description	Type String Properties Filter, Group, Nillable, Sort Description Text description of the personalization decision. This is an optional field.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description System or user-generated API name for the personalization decision. This is a required field.
Name	Type string Properties Filter, Group, idLookup, Sort

Field	Details
	Description The text label that identifies the personalization decision.
PersonalizationPointId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to a personalization point. Relationship Name PersonalizationPoint Relationship Type Primary-detail Refers To PersonalizationPoint (the primary object)
PersonalizerId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the personalizer service called at runtime, which retrieves the necessary information for a decision response. Relationship Name Personalizer Refers To PersonalizationRecommender
Priority	Type int Properties Filter, Group, Nillable, Sort Description Represents the order in which personalization decisions are evaluated. If an individual qualifies for multiple decisions, the one with the highest priority is returned. The possible values are positive integers such as 1, 2, and 3.
State	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Picklist value that indicates the state of the decision. The default value is <code>Draft</code> , and accepted values are <code>Draft</code> and <code>Live</code> . Personalization evaluates only live decisions.

Usage

Use this object for defining and managing personalized responses. It includes targeting rules to determine eligibility and specifies the content to return, such as product recommendations.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PersonalizationDecisionChangeEvent

Change events are available for the object.

PersonalizationDecisionFeed

Feed tracking is available for the object.

PersonalizationDecisionHistory

History is available for tracked fields of the object.

PersonalizationDecisionOwnerSharingRule

Sharing rules are available for the object.

PersonalizationDecisionShare

Sharing is available for the object.

PersonalizationObjective

Represents a specific business outcome that you want to achieve when creating a recommender. Available in API version 62.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
<code>CurrencyIsoCode</code>	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description Three letter ISO currency codes for supported currencies. The default value is USD. This is an optional field.
DataSpaceId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the data space where an objective's resources originate. This is a required field. Relationship Name DataSource Refers To DataSource
Description	Type String Properties Filter, Group, Nillable, Sort Description Text description of the personalization objective. This is an optional field.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description System or user-generated API name for the personalization objective. This is a required field.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the personalized objective was referenced by another resource.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description Timestamp that indicates the last time a user viewed the personalization objective.
Name	Type string Properties Filter, Group, idLookup, Sort Description The text label that identifies the personalization objective.

Usage

Use this object to define a business objective. The personalized, targeted recommendations generated using deep learning algorithms are intended to help achieve this objective. For example, the objective “maximizing revenue” can return recommendations that aim to increase checkout frequency, increase cart value at checkout, or both.

Associated Objects

This object has these associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

[PersonalizationObjectiveChangeEvent](#)

Change events are available for the object.

[PersonalizationObjectiveFeed](#)

Feed tracking is available for the object.

[PersonalizationObjectiveHistory](#)

History is available for tracked fields of the object.

[PersonalizationObjectiveOwnerSharingRule](#)

Sharing rules are available for the object.

[PersonalizationObjectiveShare](#)

Sharing is available for the object.

PersonalizationPoint

Represents a specific touch point in an experience where a personalization decision can be made. It connects a data space, profile data graph, personalization type, and response template to deliver personalized content at that time in a customer journey. Available in API version 62.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
AbnExperimentId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to a related experiment. Relationship Name AbnExperiment Refers To AbnExperiment
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. The default value is USD. This is an optional field.
DataSpaceId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the data space where a personalization point's resources originate. This is a required field. Relationship Name DataSpace Refers To DataSpace
Description	Type String Properties Filter, Group, Nillable, Sort Description Text description of the personalization point. This is an optional field.

Field	Details
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description System or user-generated API name for the personalization point. This is a required field.
IsAuthenticationRequired	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the personalization point must use authenticated endpoints for real-time data capture and recommendation requests. When set to <code>true</code>, all interactions with Data Cloud are secured and verified. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the personalized point was referenced by another resource.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time a user viewed the personalization point.
MaxItemsCount	Type int Properties Filter, Group, Nillable, Sort Description Indicates the maximum number of recommendations to return.
Name	Type string

Field	Details
	Properties Filter, Group, idLookup, Sort Description The text label that identifies the personalization point.
PersonalizationSchemaEnum	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Picklist value that indicates the type of personalization schema, which is related to where a personalization decision is created. The accepted values are - DecisionDefined - ExperienceVariation - FlowPath
PersonalizationSchemaId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the schema that's related to the personalization point. Relationship Name PersonalizationSchema Refers To PersonalizationSchema
ProfileDataGraphId	Type reference Properties Filter, Group, Sort Description Unique identifier that refers to the profile data graph that's used with the personalization point. Relationship Name ProfileDataGraph Refers To DataGraph
RootPersonalizationPoint	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Indicates the personalization point from where data is gathered.
Source	Type string Properties Filter, Group, Nillable, Sort Description Indicates the personalization point from where data is gathered.
SourceRecordId	Type reference Properties Filter, Group, Nillable, Sort Description Unique identifier that refers to the specific record that contains the personalization point. Relationship Name SourceRecord Refers To FlowRecordElement, ManagedContent
Status	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Indicates the state of the personalization point. The default value is <code>Processing</code>, and the accepted values are: • Active • CreateError—Error • DeleteError—Error • Deleting • EditError—Error • Processing

Usage

Use this object to define a specific touch point in an experience where personalization decisions can be made. For example, a personalization point can be an banner on a webpage. After setting up data space, profile data graph, personalization type, and schema, you can add decisions and targeting rules to the personalization point to tailor the user experience.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

PersonalizationPointChangeEvent

Change events are available for the object.

PersonalizationPointFeed

Feed tracking is available for the object.

PersonalizationPointHistory

History is available for tracked fields of the object.

PersonalizationPointOwnerSharingRule

Sharing rules are available for the object.

PersonalizationPointShare

Sharing is available for the object.

PersonalizationSchema

Represents a personalization response template that’s used when you build a personalization decision. Available in API version 62.0 and later.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Three letter ISO currency codes for supported currencies. The default value is USD. This is an optional field.
DataSetId	Type reference

Field	Details
	Properties Filter, Group, Sort Description Unique identifier that refers to the data space where a response template's resources originate. This is a required field. Relationship Name DataSpace Refers To DataSpace
Description	Type String Properties Filter, Group, Nillable, Sort Description Text description of the response template. This is an optional field.
DeveloperName	Type string Properties Filter, Group, Nillable, Sort Description System or user-generated API name for the personalization response template. This is a required field.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time the personalized response template was referenced by another resource.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp that indicates the last time a user viewed the response template.
Name	Type string

Field	Details
	Properties Filter, Group, idLookup, Sort
	Description The text label that identifies the personalization response template.
PersonalizationType	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description Indicates the kind of personalization content to present. The default value is Recommendations, and the accepted values are ManualContent and Recommendations.

Usage

A response template outlines the attributes that marketers use to configure the personalization response. It defines an expected format and shape for all decision response data.

- For a recommendation-focused personalization, the response template can include an optional placeholder attribute to include header text before a set of recommendations.
- For a manual content personalization, the response template can include placeholders for background images, links, call-to-action text, and so on.

Associated Objects

This object has these associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PersonalizationTargetInfo

Represents a target for an audience. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ContainerId	Type reference Properties Filter, Group, Sort Description ID of the Experience Cloud site or org that contains the target.
DraftRowId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the draft PersonalizationTargetInfo.
GroupName	Type string Properties Filter, Group, Sort Description Group name of the target. Groups bundle related targets. You can have up to 2,000 groups and 500 targets per group.
PublishStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Publish status of the target. Possible values are: • Draft • Live
TargetType	Type picklist

Field	Details
	Properties Filter, Group, Restricted picklist, Sort Description The type of the target. Possible values are: • ExperienceVariation • NavigationLinkSet • Topic • CollaborationGroup • KnowledgeArticle • ContentDocument • ManagedContent • Report • Dashboard • Custom objects You can have up to 2,500 ExperienceVariation targets and 25,000 record targets.
TargetValue	Type string Properties Filter, Group, Sort Description Value of the target. For ExperienceVariation, this is the developer name of the Experience Variation or the record ID for the object.

PermissionUpdateEventLog

Permission update events represent changes to object, field, and user permissions and setup entity access that occur in profiles and permission sets. The event type also tracks if you clone profiles or change whether session activation is required in permission sets or permission set groups. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
Context	Type string Properties Filter, Group, Nillable, Sort Description The context for what is happening for this update.
Description	Type string Properties Filter, Group, Nillable, Sort Description A description of the update that occurred in the profile, permission set, or permission set group.
FeatureIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the feature, such as a profile, permission set, or permission set group, that was updated.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
PermissionType	Type string Properties Filter, Group, Nillable, Sort Description The type of permission, such as user, object, or field, or setup entity access, such as tab settings or Apex class access, that was updated.

Field	Details
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.
UpdateType	Type string Properties Filter, Group, Nillable, Sort Description For object permissions, user permissions, and setup entity access, the type of update that occurred. For example, a permission was updated or deleted. For other changes in profiles, permission sets, or permission set groups, this information is tracked in the DESCRIPTION field.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who made the permission update.

PersonTraining

Represents an assignment of a learning module in Workforce Engagement. This object is available in API version 54.0 and later.

Supported Calls

```
create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(),
retrieve(), undelete(), update(), upsert()
```

Special Access Rules

The org requires a Workforce Engagement license and an Enablement Sites (myTrailhead) license. The user requires at least one Workforce Engagement permission set assigned to them: Workforce Engagement Admin, Workforce Engagement Analyst, Workforce Engagement Planner, or Workforce Engagement Agent.

Workforce Engagement Management uses this object to route training to agents. To assign modules to agents, users with the Learning Manager profile require Read, Create, and View All Records access to this object. To receive routed modules, users with the Learner profile require Read access to this object.

Fields

Field	Details
AssigneeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description A valid user ID for the user who's assigned the training. <code>AssigneeId</code> can't be empty if the <code>Status</code> field is <code>Assigned</code>. We recommend that you set <code>AssigneeId</code> to the value in <code>OwnerId</code>. This is a relationship field. Relationship Name Assignee Relationship Type Lookup Refers To User
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description The name of the learning module.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The user who owns the person training. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the training. Possible values are: • A—Assigned; when the <code>Status</code> is assigned, the <code>AssigneeId</code> field can't be empty. • C—Completed • I—In Progress • N—New • P—Paused The default value is 'N'.
TrainingId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the learning module. This is a relationship field. Relationship Name Training

Field	Details
	Relationship Type Lookup Refers To LearningContent
TrainingType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of training. Possible values are: • T—Trailhead

Usage

In version 54.0 and later releases, Workforce Engagement uses this object instead of the AgentTraining object to route learning modules to agents. If you set up agent engagement in your org in an earlier release, we rename AgentTraining records as PersonTraining records.

PicklistValueInfo

Represents the active picklist values for a given picklist field. This object is available in API version 40.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
DurableId	Type string Properties Filter, Group, Nillable, Sort Description Unique identifier for the field.
EntityParticleId	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Represents the picklist field to which this value is related. Relationship Name EntityParticle Relationship Type Lookup Refers To EntityParticle
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the picklist value is active or not.
IsDefaultValue	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this value is the default for the picklist field. Only one value can be the default value.
Label	Type string Properties Filter, Group, Nillable, Sort Description The label for the picklist value.
ValidFor	Type string Properties Filter, Group, Nillable, Sort Description A set of bits where each bit indicates a controlling value for which this picklist value is valid.

Field	Details
Value	Type string Properties Filter, Group, Nillable, Sort Description The API name of the picklist value.

PickTicket

A PickTicket represents quantities of one or more products to be picked for fulfillment at a location. It can include products belonging to one or more fulfillment orders. This object is available in API version 57.0 and later.

A PickTicket is associated with one or more PickTicketAssignments and one or more PickTicketProducts. Each PickTicketAssignment represents the relationship between the PickTicket and a FulfillmentOrder. Each PickTicketProduct represents the quantity of a product to be picked as part of the PickTicket. If multiple FulfillmentOrders associated with the PickTicket include the same product, one PickTicketProduct can represent the total quantity of that product to be picked for all of those FulfillmentOrders.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with an Order Management Growth license.

Fields

Field	Details
AssignedToId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The user assigned to pick the items associated with the PickTicket. This field is a relationship field. Relationship Name AssignedTo Relationship Type Lookup

Field	Details
	Refers To User
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed data in this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible the user accessed data in this record or list view but didn't view it directly.
LocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location fulfilling the items to be picked. This field is a relationship field. Relationship Name Location Relationship Type Lookup Refers To Location
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the PickTicket record. By default, the asset owner is the user who created the record. This field is a polymorphic relationship field.

Field	Details
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User
PickTicketNumber	Type string
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description Name of the PickTicket.
Status	Type picklist
	Properties Create, Filter, Group, Printed, Sort, Update
	Description Status of the PickTicket. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes, but the status category picklist is fixed because processing is based on those values. If you customize the status picklist, include at least one status value for each status category. Default values are: • Assigned (Active) • Canceled (Canceled) • Completed (Completed) • Created (Active) • Draft (Draft) • Picked (Active) • Picking (Active)
StatusCategory	Type picklist
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort
	Description Status category of the PickTicket. Processing of the PickTicket depends on this value. Each status category corresponds to one or more status values. Possible values are: • ACTIVE

Field	Details
	• CANCELED • COMPLETED • DRAFT The default value is DRAFT.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PickTicketFeed on page 55

Feed tracking is available for the object.

PickTicketShare on page 67

Sharing is available for the object.

SEE ALSO:

[PickTicketAssignment](#)

[PickTicketProduct](#)

PickTicketAssignment

Represents the association of a FulfillmentOrder with a PickTicket. A PickTicket has one PickTicketAssignment for each FulfillmentOrder containing products to be picked as part of that PickTicket. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with an Order Management Growth license.

Fields

Field	Details
AttachedToId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description ID of the FulfillmentOrder to associate with a PickTicket. This field is a relationship field. Relationship Name AttachedTo Relationship Type Lookup Refers To FulfillmentOrder
PickTicketAssignmentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the PickTicketAssignment.
PickTicketId	Type reference Properties Create, Filter, Group, Sort Description ID of the PickTicket to associate with a FulfillmentOrder. This field is a relationship field. Relationship Name PickTicket Relationship Type Lookup Refers To PickTicket

SEE ALSO:

[PickTicket](#)[FulfillmentOrder](#)[PickTicketProduct](#)

PickTicketProduct

Represents a quantity of a product to be picked as part of a PickTicket. It can include quantities for multiple FulfillmentOrders. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with an Order Management Growth license.

Fields

Field	Details
PickTicketId	Type reference Properties Create, Filter, Group, Sort Description ID of the PickTicket associated with the PickTicketProduct. This field is a relationship field. Relationship Name PickTicket Relationship Type Lookup Refers To PickTicket
PickTicketProductNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the PickTicketProduct.
PickedQuantity	Type double Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description Quantity of the PickTicketProduct that has been picked.
Product2Id	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the product associated with the PickTicketProduct. This field is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductCode	Type string Properties Filter, Group, Nillable, Sort Description Product code of the product associated with the PickTicketProduct.
Quantity	Type double Properties Create, Filter, Sort, Update Description Total quantity that's requested to be picked of the associated product.
RejectReason	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The reason why some or all of the requested quantity isn't being picked. Possible values are: - Defected - Other - Out of stock

Field	Details
RejectedQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The requested quantity that hasn't been picked. When the status category of the associated PickTicket is set to <code>Completed</code>, this value is automatically calculated as <code>Quantity - PickedQuantity</code>.
StockKeepingUnit	Type string Properties Filter, Group, Nillable, Sort Description The stock keeping unit (SKU) of the associated product.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[PickTicketProductFeed](#) on page 55

Feed tracking is available for the object.

PipelineInspectionListView

Represents a pipeline view, an intelligence view, or a saved filter. A pipeline view shows a set of opportunity records, based on specific criteria. An intelligence view shows a set of account, lead, or contact records, based on specific criteria. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable the Pipeline Inspection user permission and the Pipeline Inspection setting. To create and modify list views, users must have the Create and Customize List Views permission. To create and modify public list views, users must have the Manage Public List Views permission.

Fields

Field	Details
ChangePeriodLiteralType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The date literal associated with the pipeline changes metrics group, used for filtering by a custom time period. Possible values are: • CUSTOM_DATE • FOUR_WEEKS_AGO • ONE_MONTH_AGO • ONE_WEEK_AGO • START_OF_THE_PERIOD • THIS_MONTH • THIS_WEEK • THREE_MONTHS_AGO • THREE_WEEKS_AGO • TWO_MONTHS_AGO • TWO_WEEKS_AGO
ChangePeriodStartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The start date used when filtering by a custom time period for pipeline changes metrics and forecast category metrics groups.
DateLiteralType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field

Details

Description

The date literal associated with the pipeline and intelligence views, used for filtering by the close date, created date, or activity date.

Possible values are:

	Accounts	Contacts & Leads	Opportunities
ALL_TIME	✓	✓ * *	✓ * *
CUSTOM_DATE	✓	✓	✓
DATE_NONE *	✓		
LAST_180_DAYS *	✓		
LAST_365_DAYS *	✓		
LAST_90_DAYS *	✓		
LAST_MONTH		✓	
NEXT_FISCAL_QUARTER			✓
NEXT_MONTH			✓
NEXT_WEEK			✓

Field

Details

	Accounts	Contacts & Leads	Opportunities
THIS_FISCAL_QUARTER		✓	✓
THIS_MONTH		✓	✓
THIS_WEEK		✓	✓

* Available in API version 60.0 and later.

** Available on the "My Important" list views.

EndDate

Type

date

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The end date used when filtering by a custom time period for close dates.

IsSystemManaged

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

Indicates whether the system is managing changes to visibility and deletion of a pipeline view (`true`) or not (`false`).

The default value is `false`.

ListViewId

Type

reference

Properties

Create, Filter, Group, Sort

Description

The ID of the associated ListView record. This field is unique within your organization.

This is a relationship field.

Relationship Name

ListView

Field	Details
	Relationship Type Lookup Refers To ListView
MarketSegments	Type textarea Properties Create, Nillable, Update Description The customer segments selected in the Prospecting Center view. This field is available in API version 61.0 and later.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The start date used when filtering by a custom time period for close dates.
SummaryField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The opportunity field specified in a pipeline view to summarize pipeline inspection metrics. Possible values are standard field names or custom field IDs for custom currency and number fields. - Amount - ExpectedRevenue - TotalOpportunityQuantity <i>custom_field_ID</i> This field is available in API version 56.0 and later.
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the user whose records you want to see by default in the list view. This field is a relationship field.

Field	Details
	This field is available in API version 58.0 and later. Relationship Name User Relationship Type Lookup Refers To User
ViewType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The corresponding API name for the pipeline or intelligence view type. Possible values are: • MY_ACCOUNTS—Available in API version 60.0 and later. • MY_CONTACTS • MY_IMPORTANT_ACCOUNTS—Available in API version 60.0 and later. • MY_IMPORTANT_CONTACTS • MY_IMPORTANT_LEADS • MY_IMPORTANT OPPORTUNITIES • MY_LEADS • MY_PIPELINE • MY_PROSPECTING_CENTER_ACCOUNTS—Available in API version 61.0 and later.

Usage

Use this object to retrieve the metadata for a pipeline inspection view.

PipelineInspectionSumField

Use this object to learn which field from the opportunity object is used to aggregate Pipeline Inspection metrics on a pipeline view. This object is available in API version 56.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To use PipelineInspectionSumField, enable Pipeline Inspection. Users with a Pipeline Inspection user permission, the Customize Application permission or the Modify All Data permission can access this object. To create and modify records, users must have either the Customize Application permission or the Modify All Data permission.

Fields

Field	Details
SubjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The object that stores the summary fields. Possible values are: • Opportunity
SummaryField	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The field used to summarize Pipeline Inspection metrics. Possible values are standard field names or custom field IDs for custom currency and number fields. • Amount • ExpectedRevenue • TotalOpportunityQuantity • custom_field_ID

PipelineInspMetricConfig

Represents the configuration of a forecast category metric that appears in the Pipeline Inspection view. This object is available in API version 55.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Read only. The unique name of a Pipeline Inspection metric configuration in the API.
IsCumulative	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read only. Whether the metric is cumulative.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Read only. The language of the Pipeline Inspection metric.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Customized label of the Pipeline Inspection metric. Limit: 50 characters.
Metric	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The Pipeline Inspection metric. Possible values are: • BestCase • ClosedLost • ClosedWon • Commit

Field	Details
	• MostLikely • OpenPipeline • TotalPipeline

PipelineInspMetricConfigLocalization

Represents the translated label of a Pipeline Inspection metric. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language of the Pipeline Inspection metric.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix of the Pipeline Inspection metric language.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related Pipeline Inspection metric. This field is a relationship field. Relationship Name Parent

Field	Details
	Relationship Type Lookup
	Refers To PipelineInspMetricConfig
Value	Type textarea
	Properties Create, Filter, Sort, Update
	Description The value of the Pipeline Inspection metric.

PlatformAction

PlatformAction is a virtual read-only object. It enables you to query for actions displayed in the UI, given a user, a context, device format, and a record ID. Examples include standard and custom buttons, quick actions, and productivity actions.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
ActionListContext	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description Required. The list context this action applies to. Valid values are: - Assistant - BannerPhoto - Chatter - Dockable - FeedElement - Flexipage - Global - ListView

Field	Details
	• <code>ListViewDefinition</code> • <code>ListViewRecord</code> • <code>Lookup</code> • <code>MruList</code> • <code>MruRow</code> • <code>ObjectHomeChart</code> • <code>Photo</code> • <code>Record</code> • <code>RecordEdit</code> • <code>RelatedList</code> • <code>RelatedListRecord</code>
<code>ActionTarget</code>	Type textarea Properties Nillable Description The URL to invoke or describe the action when the action is invoked. If the action is a standard button overridden by a Visualforce page, the <code>ActionTarget</code> returns the URL of the Visualforce page, such as <code>/apex/pagename</code>. This field is available in API version 35.0 and later.
<code>ActionTargetType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of the target when this action is triggered. Valid values are: • <code>Describe</code>—applies to actions with a user interface, such as quick actions • <code>Invoke</code>—applies to actions with no user interface, such as action links or invocable actions • <code>Visualforce</code>—applies to standard buttons overridden by a Visualforce page
<code>ActionTargetUrl</code>	Type string Properties Filter, Group, Nillable, Sort Description URL to invoke or describe the action when the action is invoked. This field is deprecated in API version 35.0 and later. Use <code>ActionTarget</code> instead.

Field	Details
Category	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Applies only to action links. Denotes whether the action link shows up in the feed item list of actions or the overflow list of actions. Valid values are: • Primary • Overflow
ConfirmationMessage	Type string Properties Filter, Group, Nillable, Sort Description Applies only to action links. The message to display before the action is invoked. Field is null if no confirmation is required before invoking the action.
DeviceFormat	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Specifies which action icon the PlatformAction query returns. If this field isn't specified, it defaults to Phone. Valid values are: • Aloha • Desktop • Phone • Tablet
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description The unique ID for the PlatformAction. If the action doesn't have an ID, its API name is used.
GroupId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description The unique ID of a group of action links.
IconContentType	Type string Properties Filter, Group, Nillable, Sort Description The content type—such as .jpg, .gif, or .png—of the icon for this action. Applies to both custom and standard icons assigned to actions.
IconHeight	Type int Properties Filter, Group, Nillable, Sort Description The height of the icon for this action. Applies only to standard icons.
IconUrl	Type url Properties Filter, Group, Nillable, Sort Description The URL of the icon for this action.
IconWidth	Type int Properties Filter, Group, Nillable, Sort Description The width of the icon for this action. Applies only to standard icons.
InvocationStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of the action within the feed item. Applies to action links only. Valid values are: - Failed - New - Pending

Field	Details
	• <code>Successful</code>
<code>InvokedByUserId</code>	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who most recently invoked this action within the current feed item. Applies to action links only. This is a relationship field. Relationship Name InvokedByUser Relationship Type Lookup Refers To User
<code>IsGroupDefault</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Denotes whether this action is the default in an action link group. False for other action types. Applies to action links only.
<code>IsMassAction</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the action can be performed on multiple records. This field is available in API version 38.0 and later.
<code>Label</code>	Type string Properties Filter, Group, Sort Description The label to display for this action.

Field	Details
PrimaryColor	Type string Properties Filter, Group, Nillable, Sort Description The primary color of the icon for this action.
RelatedListRecordId	Type string Properties Filter, Group, Nillable, Sort Description Represents the ID of a record in an object's related list. This field is available in API version 38.0 and later.
RelatedSourceEntity	Type string Properties Filter, Group, Nillable, Sort Description When the <code>ActionListContext</code> is <code>RelatedList</code> or <code>RelatedListRecord</code>, this field represents the API name of the related list to which the action belongs.
Section	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The section of the user interface the action resides in. Applicable only to Lightning Experience. Valid values are: • ActivityComposer • CollaborateComposer • NotesComposer • Page • SingleActionLinks This field is available in API version 35.0 and later.
SourceEntity	Type string Properties Filter, Group, Sort

Field	Details
	Description Required. The object or record with which this action is associated.
Subtype	Type string Properties Filter, Group, Nillable, Sort Description The subtype of the action. For quick actions, the subtype is <code>QuickActionType</code> . For custom buttons, the subtype is <code>WebLinkTypeEnum</code> . For action links, subtypes are <code>Api</code> , <code>ApiAsync</code> , <code>Download</code> , and <code>Ui</code> . Standard buttons and productivity actions have no subtype.
TargetObject	Type string Properties Filter, Group, Nillable, Sort Description The type of object record the action creates, such as a contact or opportunity. This field is available in API version 41.0 and later.
TargetUrl	Type string Properties Filter, Nillable, Sort Description The URL that a custom button or link points to. This field is available in API version 41.0 and later.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of the action. Valid values are: • <code>ActionLink</code>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI. • <code>CustomButton</code>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript. • <code>InvocableAction</code>

Field	Details
	<code>ProductivityAction</code>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can't edit productivity actions. <code>QuickAction</code>—A global or object-specific action. <code>StandardButton</code>—A predefined Salesforce button such as New, Edit, and Delete.

Usage

`PlatformAction` can be described using `describeSObject()`.

You can directly query for `PlatformAction`. For example, this query returns all fields for actions associated with each of the records of the listed objects:

```
SELECT ExternalId, ActionTargetType, ActionTargetUrl, ApiName, Category,
       ConfirmationMessage, ExternalId, GroupId, UiTheme, IconUrl, IconContentType,
       IconHeight, IconWidth, PrimaryColor, InvocationStatus, InvokedByUserId,
       IsGroupDefault, Label, LastModifiedDate, Subtype, SourceEntity, Type
FROM PlatformAction
WHERE SourceEntity IN ('001xx000003DGsH', '001xx000003DHBq', 'Task') AND
       ActionListContext = 'Record';
```

Note: To query `PlatformAction`, provide the `ActionListContext` and `SourceEntity`. If you query for `ActionListContext` with a value of `RelatedList`, and don't specify a `RelatedSourceEntity`, the query returns the API name of the related list. In API v43.0 and before, `SourceEntity = 'Object API Name'` and `ActionListContext = 'ListView'` is an invalid combination to fetch quick actions in a SOQL query. Use `SourceEntity = 'Object ID'` and `ActionListContext = 'ListView'` instead.

This query uses multiple `ActionListContext` values in its `WHERE` clause to return all actions in the Lightning Experience user interface (`DeviceFormat = 'Desktop'`) for the specified object:

```
SELECT ActionListContext, Label, Type, Subtype, Section, SourceEntity,
       RelatedSourceEntity, ActionTarget, ActionTargetType, ApiName, Category,
       ConfirmationMessage, DeviceFormat, ExternalId, GroupId, IconContentType,
       IconHeight, IconUrl, IconWidth, Id, InvocationStatus, InvokedByUserId,
       IsGroupDefault, LastModifiedDate, PrimaryColor
FROM PlatformAction
WHERE ActionListContext IN ('Record', 'Chatter', 'RelatedList') AND
       SourceEntity = '001xx000003DlvX' AND
       DeviceFormat = 'Desktop';
```

PlatformEventUsageMetric

Contains usage data for event publishing and delivery to CometD and Pub/Sub API clients, `empApi` Lightning components, and event relays. If Enhanced Usage Metrics isn't enabled, usage data is available for the last 24 hours, ending at the last hour, and for historical daily usage. In API 58.0 and later, you can enable Enhanced Usage Metrics to get usage data by event name and client for granular time intervals. `PlatformEventUsageMetric` contains separate usage metrics for platform events and change data capture events. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects(), query()`

Fields

Field	Details
<code>Client</code>	Type string Properties Filter, Group, Nillable, Sort Description This field is available only when Enhanced Usage Metrics is enabled. The ID of the client. The <code>Client</code> field is populated with one of the following values. The <code>Client</code> field can be one of these values. - For a Streaming API (CometD) client and the empApi Lightning component, the client value is the ID of the CometD session. - For a Pub/Sub API client, the client value is <code>PUB_SUB_API</code>. - For an event relay, the client value is <code>EVENT_RELAY</code>. - For the publish usage of Change Data Capture events, the client value is <code>SYSTEM</code>. - For publish usages using REST API, the client value is <code>REST_API</code>. - For publish usages using Flow, the client value is <code>FLOW</code>. - For publish usages using SOAP API, the client value is <code>SOAP_API</code>. - For publish usages using Bulk API, the client value is <code>BULK_API</code>. - For Apex, the publish usage client value is <code>APEX</code> and the delivery usage client value is the Apex Trigger ID starting with 01q.
<code>EndDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The end date and time in UTC used for querying usage metrics. The date granularity is hourly. To get usage data for the last 24 hours, the end date is the current date in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-04T11:00:00.000Z To get historical data, the end date in UTC is the end of the date range with hours specified as 0. For example: 2020-08-04T00:00:00.000Z. To query a date range, you can use the <code><</code> or <code><=</code> operators. For the date format to use, see Date Formats and Date Literals in the <i>SOQL and SOSL Reference</i>.

Field	Details
EventName	Type string Properties Filter, Group, Nillable, Sort Description This field is available only when Enhanced Usage Metrics is enabled. The API name of a custom platform event or a change event. - Custom platform event with the label My Event: <code>My_Event__e</code> - Change event example: <code>AccountChangeEvent</code> When you query usage metrics for <code>EventName</code>, specify the <code>UsageType</code> field in the <code>SELECT</code> or <code>WHERE</code> clause.
EventType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description This field is available when Enhanced Usage Metrics is enabled. The type of event you would like to query usage metrics for, such as a change event or a custom platform event. Possible values are: <code>CHANGE__EVENT</code>—A Change Data Capture event. <code>CUSTOM__PLATFORM__EVENT</code>—A platform event that an admin defined in your Salesforce org. When you query usage metrics for <code>EventType</code>, specify the <code>UsageType</code> field in the <code>SELECT</code> or <code>WHERE</code> clause.
ExternalId	Type string Properties Filter, Group, Nillable, Sort Description This field is not in use.
Name	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The name of the metric to get usage for. Possible values are:

Field	Details			
	- CHANGE_EVENTS_DELIVERED—Number of change data capture events delivered to CometD and Pub/Sub API clients, empApi Lightning components, and event relays - CHANGE_EVENTS_PUBLISHED—Number of change data capture events published - PLATFORM_EVENTS_DELIVERED—Number of platform events delivered to CometD and Pub/Sub API clients, empApi Lightning components, and event relays - PLATFORM_EVENTS_PUBLISHED—Number of platform events published			
StartDate	Type dateTime Properties Filter, Nillable, Sort Description The start date and time in UTC used for querying usage metrics. The date granularity is hourly. To get usage data for the last 24 hours, the start date is the previous day in UTC. The time is the current time in UTC rounded down to the previous hour. For example, 11:23 is 11:00 and the date format is: 2020-08-03T11:00:00.000Z To get historical data, the start date is the start of the date range with hours specified as 0. For example: 2020-08-03T00:00:00.000Z. To specify a date range, you can use the > or >= operators. If Enhanced Usage Metrics is enabled, keep in mind these tips. - Make sure the time span between StartDate and EndDate is valid for the TimeSegment value chosen. - The maximum date range that you can specify between StartDate and EndDate is 60 days. For the date format to use, see Date Formats and Date Literals in the <i>SOQL and SOSL Reference</i>.			
TimeSegment	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description This field is available when Enhanced Usage Metrics is enabled. The time interval used for aggregating usage data returned in the query results. Valid TimeSegment values depend on the time range specified with StartDate and EndDate. Possible values are: <table><tr><td>Daily</td><td>Usage data is aggregated for each day within the specified time range.</td><td>Valid only if the time range specified with StartDate and EndDate in the query is at least 24 hours.</td></tr></table>	Daily	Usage data is aggregated for each day within the specified time range.	Valid only if the time range specified with StartDate and EndDate in the query is at least 24 hours.
Daily	Usage data is aggregated for each day within the specified time range.	Valid only if the time range specified with StartDate and EndDate in the query is at least 24 hours.		

Field	Details		
	Hourly	Usage data is aggregated for each hour within the specified time range.	Valid only if the time range specified with <code>StartDate</code> and <code>EndDate</code> in the query is between one hour and 24 hours.
	FifteenMinutes	Usage data is aggregated for each 15-minute period within the specified time range.	Valid only if the time range specified with <code>StartDate</code> and <code>EndDate</code> in the query is between 15 minutes and one hour.

UsageType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description This field is available when Enhanced Usage Metrics is enabled. The type of event usage metrics to query for, such as event publishing or event delivery. Use this field with the <code>EventName</code> or <code>EventType</code> fields. Possible values are: - PUBLISH—Usage metrics for published events. - DELIVERY—Usage metrics for events that were delivered to subscribers.
-----------	---

Value	Type long Properties Filter, Group, Nillable, Sort Description The usage value for the specified metric and date range.
-------	--

Usage

For more information, see [Monitor Platform Event Publishing and Delivery Usage](#) in the *Platform Events Developer Guide*.

PlatformStatusAlertEvent

The documentation has moved to [PlatformStatusAlertEvent](#) in the *Platform Events Developer Guide*.

PortalDelegablePermissionSet

PortalDelegablePermissionSet is a base platform object used to store permission sets that can be assigned by a delegated portal/external user admin (DPUA) to portal users. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The unique string used to identify the record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language used in the org.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Required. The unique string to identify the record.
PermissionSetId	Type reference Properties Create, Filter, Group, Sort, Update Description The unique ID of the permission set the DPUA profile can assign to other portal users.

Field	Details
ProfileId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the DPUA profile.

PresenceConfigDeclineReason

Represents the settings for a decline reason that a presence user provides when declining work. This object is available in API version 37.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceDeclineReasonId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the PresenceDeclineReason record.
PresenceUserConfigId	Type reference Properties Create, Filter, Group, Sort Description The ID of the PresenceUserConfig record where the decline reasons are added.

PresenceDeclineReason

Represents an Omni-Channel decline reason that agents can select when declining work requests. This object is available in API version 37.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.
As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The language of the PresenceDeclineReason.

Field	Details
MasterLabel	Type string Properties Create, Filter, Group, Sort Description The label for the PresenceDeclineReason .

PresenceUserConfig

Represents a configuration that determines a presence user's settings. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `update()`, `query()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
AcwExtensionDuration	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum length of time, measured in seconds, an agent can spend on After Conversation Work (ACW) each time they extend the timer. You must set this field if <code>HasAcwExtensionEnabled</code> is set to <code>true</code> . Specify a value from 10 through 3600. This field is available in API version 56.0 and later.
AfterConvoWorkMaxTime	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The maximum length of time, measured in seconds, an agent has to complete After Conversation Work (ACW). You must set this field if <code>HasAfterConvoWorkTimer</code> is set to <code>true</code>. Specify a value from 10 through 3600. This field is available in API version 56.0 and later.
Capacity	Type int Properties Create, Filter, Group, Sort Description The maximum number of work units an agent can be assigned at one time.
CustomSoundId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Relationship Name CustomSound Relationship Type Lookup Refers To StaticResource Description The ID of the static resource for the custom sound selected to play for the <code>PresenceUserConfig</code> object.
DeveloperName	Type string Properties Create, Filter, Group, Sort Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.

Field	Details
	Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
HasAcwExtensionEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If set to <code>true</code>, agents can extend their After Conversation Work (ACW) time. Available only if <code>HasAfterConvoWorkTimer</code> is set to <code>true</code>. If set to <code>true</code>, you must also set the <code>AcwExtensionDuration</code> and <code>MaxExtensions</code> fields. The default value is <code>true</code>. This field is available in API version 56.0 and later.
HasAfterConvoWorkTimer	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If set to <code>true</code>, After Conversation Work (ACW) time can be configured for the channel. If set to <code>true</code>, you must also set the <code>AfterConvoWorkMaxTime</code> field. The default value is <code>false</code>. This field is available in API version 56.0 and later.
Language	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The language of the presence configuration.
MasterLabel	Type string Properties Create, Filter, Group, Sort Description The label of the presence configuration.
MaxExtensions	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The maximum number of times an agent can extend their After Work Conversation (ACW) time. Specify a value from 1 through 10. You must set this field if <code>HasAcwExtensionEnabled</code> is set to <code>true</code>. This field is available in API version 56.0 and later.
OptionsAllowAnyDestinationQueueToTransfer	Type boolean Properties Create, Filter, Update Description Indicates that a rep can transfer a message from an enhanced Messaging channel to any queue (<code>true</code>) or only the selected queues (<code>false</code>). This field is available in API version 61.0 and later.
OptionsAllowAnyDestinationFlowToTransfer	Type boolean Properties Create, Filter, Update Description Indicates that a rep can transfer a message from an enhanced Messaging channel to any flow (<code>true</code>) or only the selected flows (<code>false</code>). This field is available in API version 61.0 and later.
OptionsAllowAnyDestinationProfileToTransfer	Type boolean Properties Create, Filter, Update Description Indicates that a rep can transfer a message from an enhanced Messaging channel to any profile (<code>true</code>) or only the selected profiles (<code>false</code>). This field is available in API version 61.0 and later.
OptionsIsAutoAcceptEnabled	Type boolean Properties Create, Filter Description Indicates whether work items that are routed to agents are automatically accepted (<code>true</code>) or not (<code>false</code>). Available only if <code>OptionsIsDeclineEnabled</code> is set to <code>false</code>.

Field	Details
OptionsIsDeclineEnabled	Type boolean Properties Create, Filter Description Indicates whether agents can decline work items that are routed to them (<code>true</code>) or not (<code>false</code>). Available only if <code>OptionsIsAutoAcceptEnabled</code> is set to <code>false</code>.
OptionsIsDeclineReasonEnabled	Type boolean Properties Create, Filter Description Indicates whether agents can select a reason for declining work requests (<code>true</code>) or not (<code>false</code>). This can be selected only if decline reasons are enabled.
OptionsIsDisconnectSoundEnabled	Type boolean Properties Create, Filter Description Indicates whether a sound is played when agents are disconnected from Omni-Channel (<code>true</code>) or not (<code>false</code>).
OptionsIsRequestSoundEnabled	Type boolean Properties Create, Filter Description Indicates whether a sound plays with incoming work requests (<code>true</code>) or not (<code>false</code>). Set to <code>true</code> by default.
PresenceStatusOnDeclineId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the presence status that's automatically assigned to the agent when the agent declines a work item. Available only if <code>OptionsIsDeclineEnabled</code> is set to <code>true</code>.
PresenceStatusOnPushTimeoutId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort Description The ID of the presence status that's automatically assigned to the agent when the agent doesn't respond to a work item before push timeout occurs. Available in API version 36.0 and later.
SoundLength	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The length of time that a sound plays when new work is assigned to an agent.

PresenceUserConfigProfile

Represents a configuration that determines the settings that are assigned to presence users who are assigned to a specific profile. User-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceUserConfigId	Type reference Properties Create, Filter, Group, Sort Description If an individual user is also assigned a presence configuration through the PresenceUserConfigProfile, this configuration will override that.

Field	Details
ProfileId	Type reference Properties Create, Filter, Group, Sort Description The ID of the profile that's associated with this presence configuration. A profile can be associated with only one presence configuration.

PresenceUserConfigUser

Represents a configuration that determines the settings that are assigned to a presence user. These user-level configurations override profile-level configurations. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
PresenceUserConfigId	Type reference Properties Create, Filter, Group, Sort Description The ID of the presence configuration.
UserId	Type reference Properties Create, Filter, Group, Sort Description The ID of the user who's associated with this presence configuration. A user can be associated with only one presence configuration.

PriceAdjustmentGroupShape

Defines the business logic for a top-level price adjustment, for example, a discount applied to an entire order. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()` `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
AdjustmentSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the source of the adjustment. This field is available with B2B Commerce. Possible values are: • Discretionary—The adjustment is entered manually, for example, by a sales rep. • Promotion—The adjustment is part of a promotion. • Rule—Reserved for future use. • System—The adjustment is configured by the system data, for example, as part of a pricing rule or discount schedule.
AdjustmentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the adjustment is a percentage, an amount, or an override. Possible values are: • AdjustmentAmount—Reserved for future use. The adjustment value is a numerical amount. • AdjustmentPercentage— The adjustment value is a percentage. • OverrideAmount— The override value is a numerical amount.

Field	Details
AdjustmentValue	Type double Properties Create, Filter, Nillable, Sort Description The value of the adjustment. To indicate a discount, use a negative number.
Description	Type textarea Properties Create, Nillable Description User-entered description of the price adjustment group. Available in API versions 57.0.
PriceAdjustmentCauseId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the record that is the source of the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the price adjustment tier record. This field is a polymorphic relationship field. Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To PriceAdjustmentTier
PriceAdjustmentGroupShapeName	Type string Properties Create, Filter, Group, idLookup, Sort Description Name of the price adjustment group shape.
Priority	Type int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort Description A positive integer indicating the order in which this price adjustment group is applied, relative to other price adjustment groups. A <code>Priority</code> of 1 indicates this price adjustment group is applied first. Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied before amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.  Note: The value of <code>Priority</code> must be unique among price adjustment groups in the same sales transaction.
<code>SalesTransactionShapeId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the sales transaction that the price adjustment group belongs to. This field is a relationship field. Relationship Name SalesTransactionShape Relationship Type Lookup Refers To SalesTransactionShape
<code>TotalAmount</code>	Type currency Properties Create, Filter, Nillable, Sort Description The total amount of adjustments of all related price adjustment items, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to the sum of the <code>TotalAmount</code> fields in the related price adjustment items.

PriceAdjustmentItemShape

Defines the business logic for an item-level price adjustment, for example, a discount on an order item. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management, B2B Commerce, or B2C Commerce.

Fields

Field	Details
AdjustmentAmountScope	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Used with <code>AdjustmentValue</code> to determine the amount of the adjustment. Possible values are: • Total—The adjustment applies to the line item's total and isn't multiplied by the quantity. For example, let's say a sales transaction item quantity is 10 and the <code>TotalLineAmount</code> is 1000. If the price adjustment item has an <code>AdjustmentValue</code> of -10, an <code>AdjustmentType</code> of <code>AdjustmentAmount</code>, and an <code>AdjustmentAmountScope</code> of <code>Total</code>, the \$10 discount is applied to the total line amount. The <code>TotalAmount</code> of the price adjustment item is $\\$1000 + (-\\$10) = \\$990$. • Unit—The adjustment is multiplied by the line item's quantity. For example, let's say a sales transaction item quantity is 5 and the <code>TotalLineAmount</code> is 1000. If the price adjustment item has an <code>AdjustmentValue</code> of -10, an <code>AdjustmentType</code> of <code>AdjustmentAmount</code>, and an <code>AdjustmentAmountScope</code> of <code>Unit</code>, the \$10 discount is applied to each line amount. The <code>TotalAmount</code> of the price adjustment item is $\\$1000 + (-\\$10 \times 5) = \\$950$. • UnproratedTotal—No adjustment is applied to the line items.
AdjustmentSource	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the source of the adjustment. Possible values are: • Discretionary— The adjustment is entered manually; for example, by a sales rep.

Field	Details
	• Promotion— The adjustment is a promotion. • Rule— Reserved for future use. • System— The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule.
AdjustmentType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the adjustment is a percentage, an amount, or an override. Possible values are: • AdjustmentAmount—The adjustment value is a numerical amount. • AdjustmentPercentage— The adjustment value is a percentage. • OverrideAmount— The override value is a numerical amount.
AdjustmentValue	Type double Properties Create, Filter, Nillable, Sort Description The value of the adjustment. Used together with AdjustmentAmountScope to determine the amount of the adjustment.
Description	Type textarea Properties Create, Nillable Description The user-entered description of the price adjustment item. Available in API version 57.0.
PriceAdjustmentCauseId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the record that caused the adjustment. For example, if the price adjustment is due to a promotion, this field contains the ID of the Promotion record. If the price adjustment is due to a price adjustment tier, this field contains the ID of the PriceAdjustmentTier record. This field is a polymorphic relationship field.

Field	Details
	Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To PriceAdjustmentTier
PriceAdjustmentGroupShapeId	Type reference Properties Create, Filter, Group, Nillable, Sort Description A reference to the object interface or object that summarizes the values from multiple price adjustment items. If the related entity is an object, the object must implement the <code>PriceAdjustmentGroupShape</code> object. This field is a relationship field. Relationship Name PriceAdjustmentGroupShape Relationship Type Lookup Refers To PriceAdjustmentGroupShape
PriceAdjustmentItemShapeName	Type string Properties Create, Filter, Group, idLookup, Sort Description The name of the price adjustment item shape.
Priority	Type int Properties Create, Filter, Group, Nillable, Sort Description A positive integer indicating the order in which this price adjustment item is applied, relative to other price adjustment items. A <code>Priority</code> of 1 indicates this price adjustment item is applied first. Price adjustments with a null priority are applied after price adjustments with a specified priority. If two or more price adjustments have a null priority, percentage adjustments are applied before amount adjustments. Applying a percentage adjustment before an amount adjustment results in a larger total adjustment.

Field	Details
	 Note: The value of <code>Priority</code> must be unique among price adjustment items related to the same price adjustment group. For example, you can't have two price adjustment items with a priority of 1. For example, let's say that two price adjustment items apply to the same item to be priced. The first price adjustment, <code>Spring_Promotion</code>, defines a 10% discount and has <code>Priority</code> of 1. The second price adjustment, <code>Early_Renewal_Discount</code>, defines a \$2,000 discount and has a <code>Priority</code> of 2. In this case, the <code>Spring_Promotion</code> price adjustment is applied before the <code>Early_Renewal_Discount</code> price adjustment.
<code>SalesTransactionItemShapeId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the sales transaction shape item that the price adjustment item applies to. This field is a relationship field. Relationship Name <code>SalesTransactionItemShape</code> Relationship Type Lookup Refers To <code>SalesTransactionItemShape</code>
<code>TotalAmount</code>	Type currency Properties Create, Filter, Nillable, Sort Description The total amount of the adjustment that applies to the item to be priced, inclusive of quantity, prorated for the duration of the subscription. For example, let's say the price adjustment item has an <code>AdjustmentAmountScope</code> of <code>Unit</code>, an <code>AdjustmentType</code> of <code>AdjustmentAmount</code>, and an <code>AdjustmentValue</code> of <code>-10</code>. This configuration indicates a \$10 per-unit discount. If the subscription is priced for 12 months and the pricing term is 1, the <code>PricingTermCount</code> on the sales transaction item is 12. If the quantity is 5, the value of <code>TotalAmount</code> is $5 \times 12 \times -10 = -600$.

PriceAdjustmentSchedule

Represents a series of discounts offered depending on your product's configuration, quantity, and when they're purchased in combination with other products. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when the B2B Commerce license is enabled or when Subscription Management is enabled.

Fields

Field	Details
AdjustmentMethod	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The method for applying tiered pricing. Possible values are: • Range—All items receive the discount of the highest tier the quantity falls in. • Slab—Items receive the discount defined for the tier they fall in. The default value is Range. Term-based discounts can't be of type Slab. This field is available in API version 51.0 and later. The Slab method functions in the same way as the Range method.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the price adjustment schedule.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the price adjustment schedule is active (true) or not (false). You can change this field's value as often as necessary. Label is Active. The default value is False.
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description Indicates whether the price adjustment schedule has been archived (<code>true</code>) or not (<code>false</code>). This field is read-only.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. The name of the price adjustment schedule. This field is read-only. Label is Price Adjustment Schedule Name.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The Salesforce ID of the sales representative who owns the price adjustment schedule.
ScheduleType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Indicates how the price adjustment is determined. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later. Possible values are: • Attribute—The characteristics or properties of a product determine the price adjustment. • Bundle—The price adjustment that is determined when you want to sell a group of products or services as a unit. • Custom—The price adjustment that can be customized for the user's needs.

Field	Details
	Term—The length of the subscription determines the price adjustment. Available in API version 58.0 and later. Volume—The quantity purchased determines the price adjustment. The default value is Volume.

Usage

When you create a `PriceAdjustmentSchedule`, you associate `PriceAdjustmentTiers` with it. A `PriceAdjustmentSchedule` is inactive until at least one `PriceAdjustmentTier` is added to it. A `PriceAdjustmentSchedule` comprises all related `PriceAdjustmentTiers`, with a maximum limit of 25 `PriceAdjustmentTiers` for Subscription Management.

To use `PriceAdjustmentSchedule`, associate it with a `PriceBookEntry`.

- You can associate a `PriceBookEntry` with up to five `PriceAdjustmentSchedules`, but only one `PriceAdjustmentSchedule` can be associated with a `PriceBookEntry`.
- When you activate or deactivate a `PriceAdjustmentSchedule`, its `PriceBookEntry` association is also activated or deactivated.
- An adjustment to a `PriceBookEntry` is applied only if the associated `PriceAdjustmentSchedule` is active.
- After a `PriceAdjustmentSchedule` is associated with a `PriceBookEntry`, if multicurrency is enabled, the `currencyIsoCode` field can't be modified.
- When you associate a `PriceAdjustmentSchedule` with a `PricebookEntry`, a junction object `PricebookEntryAdjustment` is created.

You can modify the `PriceAdjustmentTier` object, and the `ScheduleType` and `AdjustmentMethod` fields, only when a `PriceAdjustmentSchedule` is inactive.

Code Sample

```
public void priceAdjustmentScheduleSample()
{
    try
    {
        /* This code snippet will do the following:

        * 1. Create a new Price Adjustment Schedule
        * 2. Create and attach a Price Adjustment Tier to the Schedule
        * 3. Activate the Schedule
        * 4. Create a new PricebookEntry Adjustment. This will associate the Schedule to a
        Pricebook Entry. */

        //Create a Price Adjustment Schedule
        PriceAdjustmentSchedule pas = new PriceAdjustmentSchedule();
        pas.Name = 'Sample PAS';
        pas.Description = 'Sample Price Adjustment Schedule';
        pas.AdjustmentMethod = 'Range';
        insert pas;

        //Attach a valid Price Adjustment Tier
        PriceAdjustmentTier pat = new PriceAdjustmentTier();
        pat.PriceAdjustmentScheduleId = pas.Id;
        pat.LowerBound = 1.0;
        pat.UpperBound = 100.0;
    }
}
```

```
pat.TierType = 'AdjustmentPercentage';
pat.TierValue = 5.0;
insert pat;

//Activate the Schedule
pas.IsActive = true;
upsert pas;

//Create a new PricebookEntry Adjustment
PricebookEntryAdjustment pbea = new PricebookEntryAdjustment();
pbea.PricebookEntryId = '01uRM0000007Hb5YAE';
pbea.PriceAdjustmentScheduleId = pas.Id;
insert pbea;

} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
```

SEE ALSO:

- [PriceAdjustmentTier](#)
- [PricebookEntryAdjustment](#)

PriceAdjustmentTier

Represents a discount tier in a price adjustment schedule. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
LowerBound	Type double
	Properties Create, Filter, Sort, Update

Field	Details
	Description The minimum quantity the discount can be applied to. It must be a positive integer and less than or equal to the upper bound of the tier.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description For internal use only.
PriceAdjustmentScheduleId	Type reference Properties Create, Filter, Group, Sort Description The ID of the price adjustment schedule that the discount is applied to.
TierType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The unit of the discount. Possible values are: • AdjustmentAmount—An amount discounted from an item's list price. Label is Amount. • AdjustmentPercentage—A percentage discounted from an item's list price. Label is Percentage. • AdjustmentOverride—An override of an item's list price. Label is Override.
TierValue	Type double Properties Create, Filter, Sort, Update Description The value of the discount.
UpperBound	Type double Properties Create, Filter, Nillable, Sort, Update

Field	Details
	Description The maximum quantity the discount can be applied to. The quantity must be a positive integer. Not inclusive. Set this value one digit higher than the quantity you want the tier to include. For example, if a tier's upper bound is 99, set the value of <code>UpperBound</code> to 100. For the last tier, the value is optional.

Usage

To use `PriceAdjustmentTiers`, associate them with a `PriceAdjustmentSchedule`.

Tiers can't overlap, and no gaps are allowed between tiers.

SEE ALSO:

[PriceAdjustmentSchedule](#)

Pricebook2

Represents a price book that contains the list of products that your org sells.

Note: Price books are represented by `Pricebook2` objects. As of API version 8.0, the `Pricebook` object is no longer available. Requests containing `Pricebook` are refused, and responses don't contain the `Pricebook` object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the price book.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates whether the price book is active (<code>true</code>) or not (<code>false</code>). Inactive price books are hidden in many areas in the user interface. You can change this field's value as often as necessary. Label is Active.
IsArchived	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the price book has been archived (<code>true</code>) or not (<code>false</code>). This field is read only.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the price book has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsStandard	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the price book is the standard price book for the org (<code>true</code>) or not (<code>false</code>). Every org has one standard price book—all other price books are custom price books.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Name of this object. This field is read-only for the standard price book. Label is Price Book Name .
ValidFrom	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when a Commerce price book is initially valid. If this field is <code>null</code> , the price book is valid immediately when active. Available in API version 48.0 and later.
ValidTo	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when a Commerce price book is valid to. If this field is <code>null</code> , the price book is valid until it's deactivated. Available in API version 48.0 and later.

Usage

A price book is a list of products that your org sells.

- Each org has one standard price book that defines the standard or generic list price for each product or service that it sells.
- An org can have multiple custom price books to use for specialized purposes, such as for discounts, different channels or markets, or select accounts or opportunities. While your client application can create, delete, and update custom price books, your client application can only update the standard price book.
- For some orgs, the standard price book is the only price needed. If you set up other price books, you can reference the standard price book when setting up list prices in custom price books.

Use this object to query standard and custom price books that have been configured for your org. A common use of this object is to allow your client application to obtain valid Pricebook2 object IDs for use when configuring PricebookEntry records via the API.

Your client application can perform the following tasks on PricebookEntry objects:

- Query

- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

PriceBook2, Product2, and PricebookEntry Relationships

In the API:

- Price books are represented by Pricebook2 records (as of version 8.0, the Pricebook object is no longer available).
- Products are represented by Product2 records (as of version 8.0, the Product object is no longer available).
- Each price book contains zero or more entries (represented by PricebookEntry records) that specify the products that are associated with the price book. A price book entry defines the price for which you sell a product at a particular currency.

These objects are defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature enabled, the Pricebook2 object doesn't appear in the `describeGlobal()` call, and you can't access it via the API.

If you delete a Pricebook2 while a line item references PricebookEntry in the price book, the line item is unaffected, but the Pricebook2 is archived and unavailable from the API.

For a visual diagram of the relationships between Pricebook2 and other objects, see [Product and Schedule Objects](#).

Price Book Setup

The process of setting up a price book via the API usually means:

1. Load product data into Product2 records (creating one Product2 record for each product that you want to add).
2. For each Product2 record, create a PricebookEntry that links the Product2 record to the standard Pricebook2. Define a standard price for a product at a given currency (if you have multicurrency enabled) before defining a price for that product in the same currency in a custom price book.
3. Create a Pricebook2 record to represent a custom price book.
4. For each Pricebook2 record, creating a PricebookEntry for every Product2 that you want to add, specifying unique properties for each PricebookEntry (such as the `UnitPrice` and `CurrencyIsoCode`) as needed.

Code Sample—Java

```
public void pricebookSample() {
    try {
        //Create a custom pricebook
        Pricebook2 pb = new Pricebook2();
        pb.setName("Custom Pricebok");
        pb.setIsActive(true);
        SaveResult[] saveResults = connection.create(new SObject[]{pb});
        pb.setId(saveResults[0].getId());

        // Create a new product
        Product2 product = new Product2();
        product.setIsActive(true);
        product.setName("Product");
        saveResults = connection.create(new SObject[]{product});
    }
}
```

```

product.setId(saveResults[0].getId());

// Add product to standard pricebook
QueryResult result = connection.query(
    "select Id from Pricebook2 where isStandard=true"
);
SObject[] records = result.getRecords();
String stdPbId = records[0].getId();

// Create a pricebook entry for standard pricebook
PricebookEntry pbe = new PricebookEntry();
pbe.setPricebook2Id(stdPbId);
pbe.setProduct2Id(product.getId());
pbe.setIsActive(true);
pbe.setUnitPrice(100.0);
saveResults = connection.create(new SObject[]{pbe});

// Create a pricebook entry for custom pricebook
pbe = new PricebookEntry();
pbe.setPricebook2Id(pb.getId());
pbe.setProduct2Id(product.getId());
pbe.setIsActive(true);
pbe.setUnitPrice(100.0);
saveResults = connection.create(new SObject[]{pbe});
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Pricebook2ChangeEvent (API version 48.0)

Change events are available for the object.

Pricebook2History

History is available for tracked fields of the object.

Pricebook2History

Represents historical information about changes that have been made to the standard fields of the associated Pricebook2, or to any custom fields with history tracking enabled. This object is available in API version 66.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

This object is always read-only.

Fields

Field	Details
Pricebook2Id	Type reference Properties Filter, Group, Sort Description ID of the Pricebook2 associated with this record. This is a relationship field. Relationship Name Pricebook2 Relationship Type Lookup Refers To Pricebook2
DataType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
Field	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Name of the price book field that was modified, or a special value to indicate some other modification to the price book.
IsDeleted	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). This is a standard system field. Label is Deleted .
NewValue	Type anyType Properties Nillable, Sort Description New value of the modified price book field. Maximum of 255 characters.
OldValue	Type anyType Properties Nillable, Sort Description Previous value of the modified price book field. Maximum of 255 characters.

Usage

Price book history entries are indirectly created each time a price book is modified.

Two rows are added to this record when foreign key fields change. One row contains the foreign key object names that display in the online application. For example, `Jane Doe` is recorded as the name of a Contact. The other row contains the actual foreign key ID that is only returned to and visible from the API.

This object respects field level security on the parent object.

SEE ALSO:

[Pricebook2](#)

PricebookEntry

Represents a product entry (an association between a Pricebook2 and Product2) in a price book.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

 **Note:** Salesforce Object Search Language (SOSL) allows you to search records across standard and custom objects. When filtering records in the PriceBookEntry object using SOSL, you can only sort by fields related to Product2.

Field	Details
ActivePriceAdjustmentQuantity	Type int Properties Filter, Group, Nillable, Sort Description The count of active price adjustment schedules associated with the price book entry. This field is available in API version 49.0 and later. This field is available with a B2B or D2C Commerce license.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this price book entry is active (<code>true</code>) or not (<code>false</code>). Although you can never delete PricebookEntry records, your client application can set this flag to <code>false</code>. Inactive PricebookEntry records are hidden in many areas in the user interface. You can change this flag on a PricebookEntry record as often as necessary.
IsArchived	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the PricebookEntry has been archived (<code>true</code>) or not (<code>false</code>). This field is set to <code>true</code> when the Product2 record it's associated with is archived, or when the Pricebook2 record is archived. This field is read only. Available in API version 45.0 and later. Label is Archived.

Field	Details
Name	Type string Properties Filter, Group, Nillable, Sort Description Name of this PricebookEntry record. This read-only field references the value in the Name field of the Product2 record. Label is Product Name.
Pricebook2Id	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Pricebook2 record with which this record is associated. This field must be specified when creating Pricebook2 records. It can't be changed in an update. This field is a relationship field. Relationship Name Pricebook2 Relationship Type Lookup Refers To Pricebook2
Product2Id	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Product2 record with which this record is associated. This field must be specified when creating Product2 records. It can't be changed in an update. This is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductCode	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description Product code for this record. This read-only field references the value in the ProductCode field of the associated Product2 record.
ProductSellingModelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the related product selling model. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. Relationship Name ProductSellingModel Relationship Type Lookup Refers To ProductSellingModel
UnitPrice	Type currency Properties Create, Filter, Sort, Update Description Required. Unit price for this price book entry. You can specify a value only if <code>UseStandardPrice</code> is set to <code>false</code>. Label is List Price.
UseStandardPrice	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this price book entry uses the standard price defined in the standard Pricebook2 record (<code>true</code>) or not (<code>false</code>). If set to <code>true</code>, then the <code>UnitPrice</code> field is read-only, and the value is the same as the <code>UnitPrice</code> value in the corresponding PricebookEntry in the standard price book (that is, the PricebookEntry record whose <code>Pricebook2Id</code> refers to the standard price book and whose <code>Product2Id</code> and <code>CurrencyIsoCode</code> are the same as this record). For PricebookEntry records associated with the standard Pricebook2 record, this field must be set to <code>true</code>.

Usage

Use this object to define the association between your organization’s products (Product2) and your organization’s standard price book or to custom price books (Pricebook2). Create one PricebookEntry record for each standard or custom price and currency combination for a product in a Pricebook2.

When creating these records, you must specify the IDs of the associated Pricebook2 record and Product2 record. Once these records are created, your client application can’t update these IDs.

This object is defined only for those organizations that have products enabled as a feature. If the organization doesn’t have the products feature enabled, then the PricebookEntry object doesn’t appear in the describeGlobal call, and you can’t access it.

If you delete a PriceBookEntry that is referenced by a line item, the line item is unaffected, but the PriceBookEntry is archived and unavailable from the API. Deleted PriceBookEntry records can’t be recovered.

You must load the standard price for a product before you’re permitted to load its custom prices.

Associated Objects

This object has the following associated objects. Unless otherwise noted, they’re available in the same API version as this object.

PricebookEntryChangeEvent(API version 57.0)

Change events are available for the object.

PricebookEntryHistory

History is available for tracked fields of the object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

PricebookEntryAdjustment

Read-only junction object created when you associate a price adjustment schedule with a price book entry. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
Name	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description For internal use only.
PriceAdjustmentScheduleId	Type reference
	Properties Create, Filter, Group, Sort, Update
	Description The ID of the price book entry adjustment.
PricebookEntryId	Type reference
	Properties Create, Filter, Group, Sort, Update
	Description The ID of the price book entry that this price book entry adjustment is associated with.

SEE ALSO:

[PriceAdjustmentSchedule](#)

PriceProtectionExecution

Represents an instance of running the price protection process, capturing execution time, status, and the effective date of price changes. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ExecutionJobId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Data processing engine instance responsible for creating price protection records. This field is a relationship field. Relationship Name ExecutionJob Refers To BatchCalcJobDefinition
ExecutionReferenceNumber	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description Unique reference number generated by the Data Processing Engine for this execution. This can be used to associate related line items to the same execution.
LastExecutionTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date and time when the price protection execution was last performed by the Data Processing Engine.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the record was last referenced. This is used internally to optimize performance and user experience.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and timestamp when the record was last viewed in the Salesforce UI. Helps track user engagement.

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-generated name for the price protection execution record. Used as the primary identifier within the system.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Identifier for the user or group that owns this record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
PriceChangeEffectiveDate	Type date Properties Create, Filter, Group, Sort, Update Description Date when the new price goes into effect as part of the price protection execution.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Represents the current lifecycle status of the price protection execution process. Possible values are: - Completed - New - Processing

PriceProtectExecLineItem

Represents a line item created as part of a Price Protection Execution. This object is available in API version 63.0 and later.

A PriceProtectExecLineItem record is automatically generated by the Data Processing Engine when eligible product transactions are processed for price protection. It links to execution records, products, and pricing terms, and stores per-unit pricing, eligibility, and calculation details.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Sort, Update Description References the partner account related to the transaction being evaluated for price protection. This field is a relationship field. Relationship Name Account Refers To Account
CalculatedAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Total protected amount calculated based on the applicable price difference and quantity.
CalculationReferenceRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the rebate or pricing rule used to compute the claim. This field is a relationship field.

Field	Details
	Relationship Name CalculationReferenceRecord
	Refers To ProgramRebateType
ClaimReferenceId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Links to the related rebate claim, if one has been generated. This field is a polymorphic relationship field.
	Relationship Name ClaimReference
	Refers To RebateClaim
HasWarnings	Type boolean
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates if the execution line item has associated warnings. The default value is <code>false</code> .
InTransitQuantity	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description Quantity of the product in transit.
IsEligible	Type boolean
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description Indicates whether the record qualifies for price protection. The default value is <code>false</code> .

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the record was last referenced by a user or system.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and timestamp when the record was last opened in the UI.
LocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the inventory or sales location relevant to the line item. This field is a relationship field. Relationship Name Location Refers To Location
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Auto-generated identifier for the line item record.
NewSalePricePerUnit	Type currency Properties Create, Filter, Nillable, Sort, Update Description The new sale price per unit after the price change.

Field	Details
NewSalePriceType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Type of sale price applied post-adjustment (e.g., List Price, Net Price).
PriceDifference	Type currency Properties Filter, Nillable, Sort Description Difference between the old and new sale price per unit. This field is a calculated field.
PriceProtectionExecutionId	Type reference Properties Create, Filter, Group, Sort Description Links to the parent Price Protection Execution record. This field is a relationship field. Relationship Name PriceProtectionExecution Relationship Type Master-detail Refers To PriceProtectionExecution (the master object)
PriceProtectionTermId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the Price Protection Term used for evaluating eligibility and calculations. This field is a relationship field. Relationship Name PriceProtectionTerm Refers To PriceProtectionTerm

Field	Details
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description References the product involved in the price protection claim. This field is a relationship field. Relationship Name Product Refers To Product2
RemainingQuantity	Type double Properties Create, Filter, Sort, Update Description Quantity of product still eligible for claim after partial adjustments.
SalePricePerUnit	Type currency Properties Create, Filter, Sort, Update Description Original sale price per unit before the price adjustment.
SalePriceType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Type of sale price recorded during the original transaction.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Current processing state of the line item. Possible values are: • Complete

Field	Details
	• Error • New • ReadyForClaim—Ready For Claim • ReadyForPricing—Ready For Pricing • ReadyForSimulation—Ready For Simulation
StatusReason	Type string Properties Create, Filter, Nillable, Sort, Update Description Additional explanation or message associated with the current status.
TransactionDate	Type date Properties Create, Filter, Group, Sort, Update Description Date when the original sale or transaction occurred.
TransactionReferenceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Reference to the transaction record from which this line item originates. This field is a polymorphic relationship field. Relationship Name TransactionReference Refers To PartnerUnsoldInventory
WarningMessage	Type string Properties Create, Filter, Nillable, Sort, Update Description Descriptive warning associated with this line item, if applicable.

PriceProtectionTerm

Represents a configuration record that defines the rules, types, and eligible conditions for price protection. This object is available in API version 63.0 and later.

A PriceProtectionTerm record is referenced during claims processing to calculate supported price and quantity adjustments based on predefined terms.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CalculationReferenceRecordId	Type reference Properties Create, Filter, Group, Sort, Update Description Rebate type that's applicable for the claim amount calculation. This field is a relationship field. Relationship Name CalculationReferenceRecord Refers To ProgramRebateType
IsPayable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the inventory is eligible for payment or refund after a price protection adjustment. The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the record was last referenced by the current user. Useful for activity tracking.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and the timestamp when the record was last viewed by the user. Helps in understanding record engagement.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Unique name for the Price Protection Term. This is typically used as a primary identifier for UI display or business logic.
NewSalePriceType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Defines the type of new sale price applicable after a price protection scenario. This helps classify how the adjusted sale price can be handled.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Identifier for the user or group who owns the record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User

Field	Details
PriceProtectionType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Defines the type of price protection applied. Possible values are: • PriceProtection—Price Protection • ReversePriceProtection—Reverse Price Protection The default value is PriceProtection.
SalePriceType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the type of sale price before price protection is applied. This helps calculate the protection delta during claim processing.
SupportedPricePercent	Type percent Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Indicates the percentage of the price that is supported for price protection. Helps calculate eligible claim amounts.
SupportedQuantityPercent	Type percent Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Indicates the percentage of quantity that is eligible for price protection. Used to determine prorated reimbursement.

PrivacyHold

Represents a Privacy Hold that indicates that a record should be preserved from masking or deletion by Data Management policies in Privacy Center. This object is available in API version 59.0 and later.

Use Privacy Hold with Data Management policies in Privacy Center. Add a condition to your policy to exclude records with an active Privacy Hold status from masking or deletion actions.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Hold user permission.

Fields

Field	Details
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the Privacy Hold ends.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if Privacy Hold is active on the record. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the Privacy Hold.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PrivacyHoldReasonId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the associated Privacy Hold Reason. This field is a relationship field. Relationship Name PrivacyHoldReason Relationship Type Lookup Refers To PrivacyHoldReason
ReferenceRecordId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort, Update
	Description The ID of the record marked for the Privacy Hold. This field is a polymorphic relationship field.
	Relationship Name ReferenceRecord
	Relationship Type Lookup
	Refers To Account, Contact, Individual, Lead, User
ReferenceRecordType	Type picklist
	Properties Filter, Group, Restricted picklist, Sort
	Description The type of object the record with the Privacy Hold is associated with. Possible values are: • Account • Contact • Individual • Lead • User
RegisteredDate	Type date
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The date the Privacy Hold was added to the record.

PrivacyHoldReason

Represents the business or legal purpose for why a record has a Privacy Hold. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Hold user permission.

Fields

Field	Details
Detail	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The details of the Privacy Hold Reason, such as the business or legal purpose for the hold.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the Privacy Hold Reason.
OwnerId	Type reference

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field.
	Relationship Name Owner
	Relationship Type Lookup
	Refers To Group, User

PrivacyJobSession

Represents the status of past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later. This object is Read-only.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
<code>CreationDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date and time the policy job was created.
<code>CurrentObject</code>	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The name of the object that the policy job is currently processing.
EndTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time the policy job finished executing.
FailureLog	Type textarea Properties Nillable Description The description of why the policy job failed to execute.
JobStartType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description How the policy job session was started. Possible values are: • manual • scheduled
JobStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Represents the status of the policy job session. Possible values are: • cancelled • completed • failures • inactive • running • running_next

Field	Details
	• scheduled • suspended
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Represents the job session record. This is a serialized, automatically generated number field.
OptionsProcessingFailed	Type boolean Properties Filter Description Indicates that the policy job session failed to process the records with the deletion or masking rules in the policy.
OptionsTraversalComplete	Type boolean Properties Filter Description Indicates that the policy job session was completed without errors.
OptionsTraversalFailed	Type boolean Properties Filter Description Indicates that the policy job session was completed with errors.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. Relationship Name Owner

Field	Details
	Relationship Type Lookup
	Refers To Group, User
PolicyDescription	Type string
	Properties Filter, Group, Nillable, Sort
	Description The description of the policy the job session is associated with.
PolicyName	Type string
	Properties Filter, Group, Nillable, Sort
	Description The name of the policy the job session is associated with.
PolicyType	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description The type of policy the job session is associated with. Possible values are: • <code>datamanagement</code>—Data Management. • <code>datamask</code>—This policy type is reserved for future use. • <code>rtbf</code>—Right to Be Forgotten.
PrivacyPolicyDefinitionId	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the policy the job session is executing for. This field is a relationship field.
	Relationship Name PrivacyPolicyDefinition
	Relationship Type Lookup

Field	Details
	Refers To PrivacyPolicyDefinition
PrivacyRtbfRequestId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the Right to Be Forgotten request the policy job is executing for. This field is a relationship field. Relationship Name PrivacyRtbfRequest Relationship Type Lookup Refers To PrivacyRTBFRequest
ScheduledTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time the policy job session is scheduled to run.
SerializedPolicy	Type textarea Properties Nillable Description The serial ID of a snapshot of the policy the job session is for. A snapshot of the policy is taken to maintain consistent metadata for the policy the job is for, in case changes are made to the policy while the job is executing.
StartTime	Type dateTime Properties Filter, Nillable, Sort Description The date and time the policy job session started executing.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

[PrivacyJobSessionOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[PrivacyJobSessionShare](#) on page 67

Sharing is available for the object.

PrivacyObjectSession

Represents the status of each object being processed in past, ongoing, and scheduled policy jobs in Privacy Center. This object is available in API version 59.0 and later.

See the status of each object as a policy executes. For example, if a Data Management policy includes an Account object and a Contact object, then a PrivacyObjectSession record is created for each object.

Each object in a policy has five potential queues to enter. The first queue captures and stores records targeted by the policy filters. If the first queue run fails to capture every record, then the object goes through three retry attempts to capture the remaining records. The fifth queue stores the record IDs of any records that weren’t captured in any of the four attempts.

This object is Read-only.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
CurrentEntity	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe name of the object in the policy.
Name	Typestring PropertiesAutonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Represents the job session record. This is a serialized, automatically generated number field.
ObjectFailureLog	Type textarea Properties Nillable Description This field is reserved for later use.
ObjectStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The policy execution status for the object. Possible values are: - processing_completed - processing_failed - processing_ongoing - processing_pending - traversal_completed - traversal_failed - traversal_ongoing
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the owner of the account associated with the customer that the policy was executed for. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
PolicyNode	Type string Properties Filter, Group, Nillable, Sort Description The ID of the object in the serialized policy. This field associates the object session in the policy execution with the coordinating object in the Privacy Center policy.
Position	Type int Properties Filter, Group, Nillable, Sort Description Represents a record's position in the batch queue for the object being processed.
PrivacyJobSessionObjectId	Type reference Properties Filter, Group, Sort Description The ID of the policy job session. This field is a relationship field. Relationship Name PrivacyJobSessionObject Relationship Type Lookup Refers To PrivacyJobSession
ProcessType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The type of action being executed on the object in the policy. Possible values are: • delete • mask • retry_delete • retry_mask

Field	Details
ProcessedFailures	Type int Properties Filter, Group, Nillable, Sort Description The number of records the policy execution failed to process.
ProcessedSuccesses	Type int Properties Filter, Group, Nillable, Sort Description The number of records the policy execution successfully processed.
ProcessedTotal	Type int Properties Filter, Group, Nillable, Sort Description The total number of records processed in the policy job.
Processor	Type string Properties Filter, Group, Nillable, Sort Description The name of the deletion, masking, or traversal processor executing the policy job.
Queue	Type string Properties Filter, Group, Nillable, Sort Description This field is reserved for later use.
QueueLength	Type int Properties Filter, Group, Nillable, Sort Description The total number of records in the queue to be processed by the policy job.

Field	Details
RecordsAffected	Type int Properties Filter, Group, Nillable, Sort Description The number of records processed by the policy job.
Retry	Type int Properties Filter, Group, Nillable, Sort Description The queue number of the retry session after a failed policy execution attempt. Each attempt to retry the policy execution is put into a retry queue.
TraversalEndTime	Type dateTime Properties Filter, Nillable, Sort Description The end time of the record-capturing phase for the object session.
TraversalStartTime	Type dateTime Properties Filter, Nillable, Sort Description The start time of the record-capturing phase for the object session.
UniqueConstraint	Type string Properties Filter, Group, idLookup, Nillable, Sort Description For internal use only.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PrivacyRequest

See details and monitor the status of Data Subject Access Requests made in Privacy Center. This object is available in API version 54.0 and later.

Supported Calls

```
create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(),
retrieve(), search(), undelete(), update(), upsert()
```

Special Access Rules

This object is for Privacy Center customers with the ReadAllData or PrivacyDataAccess permissions.

Fields

Field	Details
CompletedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the request was completed.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the Privacy Request.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
RelatedRecord	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Data Subject Access Request (DSAR) or Right to Be Forgotten request (RTBF) record related to the request.
StartedDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the request was started.

Field	Details
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the status of the request. Possible values are: • Approved • Cancelled • Completed • Created • In Progress • Rejected
TargetRecord	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The record that is listed in the request.
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Represents the type of request that was made. Possible values are: • DSAR • GlobalOptOut • RTBF

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[PrivacyRequestFeed](#) on page 55

Feed tracking is available for the object.

PrivacyRequestHistory on page 63

History is available for tracked fields of the object.

PrivacyRequestOwnerSharingRule on page 65

Sharing rules are available for the object.

PrivacyRequestShare on page 67

Sharing is available for the object.

Usage

In API version 66.0 and later, users can click **New Privacy Request** to create privacy requests directly from the Privacy Requests page. This action supports Right to Be Forgotten (RTBF) request types. The New Privacy Request button uses a custom dialog based on search criteria defined in Setup. The standard New button uses the default record creation dialog. To streamline the user interface and avoid redundancy, hide the standard New button.

PrivacyRTBRequest

Represents a Right to Be Forgotten Request made in Privacy Center. This object is available in API version 59.0 and later.

Supported Calls

```
create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(),
retrieve(), search(), undelete(), update(), upsert()
```

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
Description	Typestring PropertiesCreate, Filter, Group, Nillable, Sort, Update DescriptionThe description of the customer’s Right to Be Forgotten request.
JobRecord	Typestring PropertiesCreate, Filter, Group, Sort, Update DescriptionThe record ID that is processed by the Right to Be Forgotten request.

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the Right to Be Forgotten request.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner of the account associated with this customer. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PolicyNameId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The name of the Right to Be Forgotten policy applied to this request. This field is a relationship field. Relationship Name PolicyName Relationship Type Lookup Refers To PrivacyPolicyDefinition
Status	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents the status of the request. Possible values are: • Cancelled • Complete • Error • Pending • Scheduled

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[PrivacyRTBFRequestHistory](#) on page 63

History is available for tracked fields of the object.

[PrivacyRTBFRequestOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[PrivacyRTBFRequestShare](#) on page 67

Sharing is available for the object.

PrivacySessionRecordFailure

Represents error messages encountered during policy job executions in Privacy Center. This object is available in API version 59.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available for users with the Privacy Center license and the Manage Privacy Center Policies user permission.

Fields

Field	Details
ErrorMessage	Type textarea Properties Nillable Description The description of the error encountered during the policy job execution.
ErrorType	Type string Properties Filter, Group, Nillable, Sort Description The type of error encountered during the policy job execution.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Represents the job session record. This is a serialized, automatically generated number field.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the owner of the account associated with the customer that the policy was executed for. This field is a polymorphic relationship field. Relationship Name Owner

Field	Details
	Relationship Type Lookup
	Refers To Group, User
PrivacyObjectSessionId	Type reference
	Properties Filter, Group, Sort
	Description The ID of the object in the policy job session. This field is a relationship field.
	Relationship Name PrivacyObjectSession
	Relationship Type Lookup
	Refers To PrivacyObjectSession
RecordIdNumber	Type string
	Properties Filter, Group, Nillable, Sort
	Description The ID of the record that failed to be processed by the policy job.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[PrivacySessionRecordFailureOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[PrivacySessionRecordFailureShare](#) on page 67

Sharing is available for the object.

Problem

Problems represent the root cause data of one or more incidents. This object contains all the details of a problem, documenting the history of the problem from detection to closure. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Category	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of problem. Administrators set field values.
Description	Type textarea Properties Create, Nillable, Update Description A description of the problem. This field can store up to 32 KB of data, but only the first 255 characters appear in reports.
Impact	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The problem's impact. Possible values are: • High • Low • Medium The default value is 'High'.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time (in UTC) when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time (in UTC) when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view. (LastReferencedDate) but not viewed it.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description This is a polymorphic relationship field that represents the user or group assigned to resolve the problem. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ParentProblemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of a problem above one or more related problems in a problem hierarchy. This is a relationship field. Relationship Name ParentProblem Relationship Type Lookup Refers To Problem
Priority	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The impact and urgency of the problem. Possible values are: • Critical • High • Low • Moderate The default value is 'Critical'.
PriorityOverrideReason	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The reason why the priority should be changed or edited.
ProblemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique, system-generated problem number.
ResolutionDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time (in UTC) when the problem was resolved.
ResolutionSummary	Type textarea Properties Create, Nillable, Update Description A description of the steps needed to resolve the incident.
ResolvedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the user who resolved the problem. This is a relationship field. Relationship Name ResolvedBy Relationship Type Lookup Refers To User
RootCauseSummary	Type textarea Properties Create, Nillable, Update Description A description of the problem resolution or root cause. This field can store up to 32 KB of data, but only the first 255 characters display in reports.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Any custom or granular stages customers wants to track. This will be a dependent picklist. Possible values are: • Closed • Fix in Progress • Known Error • New • Open • Pending Change • Resolved • Root Cause Analysis • Work In Progress The default value is 'New'.
StatusCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The status of the problem. Possible values are: • Closed • FixInProgress • KnownError • New • Open • PendingChange • Resolved • RootCauseAnalysis • WorkInProgress The default value is 'New'.
SubCategory	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of problem. One level deeper than Category. Administrators set field values.
Subject	Type string Properties Create, Filter, Group, Sort, Update Description A brief description of the problem.
Urgency	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description A measure of how long a resolution can be delayed until an incident, problem, or change has a significant business impact. Possible values are: • High • Low • Medium The default value is 'High'.

ProblemIncident

Represents a junction object that relates a Problem to an Incident. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
IssueId	Type reference Properties Create, Filter, Group, Sort Description A polymorphic relationship field that represents a related Problem or Incident. This field is a polymorphic relationship field. Relationship Name Issue Relationship Type Lookup Refers To Incident, Problem
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated ID of the incident that's related to the problem.
RelatedEntityType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The object type of the related entity. Possible values are: • Incident

Field	Details
	• Problem
RelatedIssueId	Type reference Properties Create, Filter, Group, Sort Description A polymorphic relationship field that represents a related Problem or Incident. This field is a polymorphic relationship field. Relationship Name RelatedIssue Relationship Type Lookup Refers To Incident, Problem
RelationshipType	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Shows how the Problem and Incident records relate to each other. Possible values are: • Caused By • Similar The default value is Caused By.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ProblemIncidentChangeEvent](#) on page 68

Change events are available for the object.

[ProblemIncidentFeed](#) on page 55

Feed tracking is available for the object.

[ProblemIncidentHistory](#) on page 63

History is available for tracked fields of the object.

ProblemRelatedItem

Represents a junction object that relates a Problem to an Asset. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Sort Description The Asset ID that's linked to the Problem. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
Comment	Type textarea Properties Create, Nillable, Update Description A description of the problem as it relates to the item.
ImpactLevel	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The related item's impact on the problem. Possible values are: • High

Field	Details
	• Low • Medium The default value is High.
ImpactType	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The effect of the problem-related item on business operations. Possible values are: • Business-Blocking • Not Business-Blocking • Partially Business-Blocking The default value is Business-Blocking.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The auto-generated ID of the problem-related item.
ProblemId	Type reference Properties Create, Filter, Group, Sort Description The Problem ID that's related to the Asset. This field is a relationship field. Relationship Name Problem Relationship Type Lookup Refers To Problem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ProblemRelatedItemChangeEvent](#) on page 68

Change events are available for the object.

[ProblemRelatedItemFeed](#) on page 55

Feed tracking is available for the object.

[ProblemRelatedItemHistory](#) on page 63

History is available for tracked fields of the object.

ProcessDefinition

Represents the definition of a single approval process.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Portal and communities users with the Customer Community Plus and Partner Community licenses can access this object. All users in org with approvals enabled have read access to ProcessDefinition.

Fields

Field	Details
Description	Type textarea Properties Filter, Nillable, Sort Description A description of this process, with a maximum of 3,000 characters.
DeveloperName	Type string Properties Filter, Group, Sort Description The unique process name, used internally.
LockType	Type picklist Properties Filter, Group, Restricted picklist, Sort

Field	Details
	Description The type of lock applied to the record being approved. When a record is in the approval process, it's always locked, and only an administrator can edit it. However, the currently assigned approver can also be allowed to edit the record. • Total • Admin • Owner • Workitem • Node • none
Name	Type string Properties Filter, Group, idLookup, Sort Description The external name of the process; the name seen by users.
State	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The current state of this process. • Active • Inactive • Obsolete
TableEnumOrId	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Specifies the object associated with the approval process, such as Account or Contact.
Type	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The type of this process.

Field	Details
	- Approval Process—Used to control the action taken for a record. - State-based Process—Used internally to track various control processes, such as for developing Salesforce Knowledge articles.

Usage

Use this object to read the description of an approval process. The definition is read-only.

ProcessException

Represents a business exception, such as a processing failure on an order summary. A separate process is required to resolve the failure that caused the process exception before processing can continue. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AttachedToId</code>	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the object associated with the ProcessException. This field is a polymorphic relationship field. Relationship Name AttachedTo Relationship Type Lookup Refers To AsyncOpSyndicationFeedFile, AsyncOperationTracker CreditMemo, FulfillmentOrder, Invoice, Order, OrderItem, OrderItemSummary, OrderPaymentSummary, OrderSummary, Payment, PaymentAuthorization, Refund, ReturnOrder
<code>CaseId</code>	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the case associated with the ProcessException. This field is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case
Category	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description ProcessingException type. You can customize the category picklist to represent your business processes. Possible values are: • Fulfillment • Invoicing • Order Activation • Order Approval • Order To Asset • Order Item Summary To Asset • Order To Billing Schedule • Payment The default value is Order Activation.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for the currency of the OrderSummary associated with the ProcessException. Possible values are: • DKK—Danish Krone • EUR—Euro

Field	Details
	• GBP—British Pound • USD—U.S. Dollar The default value is USD.
Description	Type textarea Properties Create, Nillable, Update Description Detailed description of the ProcessException.
ExternalReference	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of external entities associated with the ProcessException.
FlowOrchestrationInstRelaObj	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The flow orchestration instance related object associated with this record. This field is a relationship field. Relationship Name FlowOrchInstRelaObj Relationship Type Lookup Refers To FlowOrchestrationInstRelaObj
GroupById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID used in the entity to group exceptions, such as the Async Operation Tracker. This field is a polymorphic relationship field. Relationship Name GroupBy

Field	Details
	Refers To AsyncOperationTracker
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.
Message	Type string Properties Create, Filter, Group, Sort, Update Description Short description of the ProcessException
OrderSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the OrderSummary associated with the ProcessException. The ProcessException component is displayed on this OrderSummary. This field is a relationship field. Relationship Name OrderSummary Relationship Type Lookup Refers To OrderSummary

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User who currently owns this ProcessException. Default value is the User who created the record. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Priority	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Resolution priority for the ProcessException. You can customize the priority picklist to represent your business processes. Possible values are: • High • Low The default value is Low.
ProcessExceptionNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The unique name of the ProcessException, formatted as PE-(00000000).
Severity	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description Severity of the ProcessException. Each severity value corresponds to one severity category. You can customize the severity picklist to represent your business processes. If you customize the severity picklist, include at least one severity value for each severity category. Possible values are: • High • Low The default value is High.
SeverityCategory	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Severity category of the ProcessException. Each severity category corresponds to one or more severity values. The severity category is used to show the severity icon in the ProcessException list view. Possible values are: • HIGH • LOW • MEDIUM
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Status of the ProcessException. Each status corresponds to one status category, shown here in parentheses. You can customize the status picklist to represent your business processes. If you customize the status picklist, include at least one status value for each status category. Possible values are: • Ignored (Inactive) • New (Active) • Paused (Inactive) • Resolved (Resolved) • Triaged (Active) • Voided (Inactive) The default value is New.

Field	Details
StatusCategory	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Status category of the ProcessException. Each status category corresponds to one or more statuses. Possible values are: • ACTIVE • INACTIVE • RESOLVED

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProcessExceptionChangeEvent (API version 62.0)

Change events are available for the object.

ProcessExceptionOwnerSharingRule

Sharing rules are available for the object.

ProcessExceptionOwnerSharingRule

Sharing rules are available for the object.

ProcessFlowMigration

Represents a process's migrated criteria and the resulting migrated flow. This object is available in API version 58.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort

Field	Details
	Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.
Language	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Lanaguage of the <code>MasterLabel</code>. Possible values are: • <code>af</code>—Afrikaans • <code>am</code>—Amharic • <code>ar</code>—Arabic • <code>ar_AE</code>—Arabic (United Arab Emirates) • <code>ar_BH</code>—Arabic (Bahrain) • <code>ar_DZ</code>—Arabic (Algeria) • <code>ar_EG</code>—Arabic (Egypt) • <code>ar_IQ</code>—Arabic (Iraq) • <code>ar_JO</code>—Arabic (Jordan) • <code>ar_KW</code>—Arabic (Kuwait) • <code>ar_LB</code>—Arabic (Lebanon) • <code>ar_LY</code>—Arabic (Libya) • <code>ar_MA</code>—Arabic (Morocco) • <code>ar_OM</code>—Arabic (Oman) • <code>ar_QA</code>—Arabic (Qatar) • <code>ar_SA</code>—Arabic (Saudi Arabia) • <code>ar_SD</code>—Arabic (Sudan) • <code>ar_SY</code>—Arabic (Syria) • <code>ar_TN</code>—Arabic (Tunisia) • <code>ar_YE</code>—Arabic (Yemen) • <code>bg</code>—Bulgarian • <code>bn</code>—Bengali • <code>bs</code>—Bosnian • <code>ca</code>—Catalan • <code>cs</code>—Czech • <code>cy</code>—Welsh • <code>da</code>—Danish

Field	Details
	• de—German • de_AT—German (Austria) • de_BE—German (Belgium) • de_CH—German (Switzerland) • de_LU—German (Luxembourg) • el—Greek • el_CY—Greek (Cyprus) • en_AE—English (United Arab Emirates) • en_AU—English (Australian) • en_BE—English (Belgium) • en_CA—English (Canadian) • en_CY—English (Cyprus) • en_DE—English (Germany) • en_GB—English (UK) • en_HK—English (Hong Kong) • en_IE—English (Ireland) • en_IL—English (Israel) • en_IN—English (Indian) • en_MT—English (Malta) • en_MY—English (Malaysian) • en_NL—English (Netherlands) • en_NZ—English (New Zealand) • en_PH—English (Philippines) • en_SG—English (Singapore) • en_US—English • en_ZA—English (South Africa) • es—Spanish • es_AR—Spanish (Argentina) • es_BO—Spanish (Bolivia) • es_CL—Spanish (Chile) • es_CO—Spanish (Colombia) • es_CR—Spanish (Costa Rica) • es_DO—Spanish (Dominican Republic) • es_EC—Spanish (Ecuador) • es_GT—Spanish (Guatemala) • es_HN—Spanish (Honduras) • es_MX—Spanish (Mexico) • es_NI—Spanish (Nicaragua)

Field	Details

Field	Details
	- sv—Swedish - sw—Swahili - ta—Tamil - te—Telugu - th—Thai - tl—Tagalog - tr—Turkish - uk—Ukrainian - ur—Urdu - vi—Vietnamese - xh—Xhosa - zh_CN—Chinese (Simplified) - zh_HK—Chinese (Hong Kong) - zh_MY—Chinese (Malaysia) - zh_SG—Chinese (Singapore) - zh_TW—Chinese (Traditional) - zu—Zulu
MasterLabel	Type string Properties Filter, Group, Sort Description The label for the ProcessFlowMigration.
MigratedCriteriaLabel	Type string Properties Filter, Group, Nillable, Sort Description The label of the criteria that was migrated.
MigratedCriteriaName	Type string Properties Filter, Group, Nillable, Sort Description The name of the criteria that was migrated.

Field	Details
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace of the package containing the process flow migration object.

ProcessInstance

Represents an instance of a single, end-to-end approval process. Use this and the node, step, and workitem process instance objects to create approval history reports.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

For approval process instances that were completed before the Summer '14 rollout, all Process Instance fields are automatically populated, with one exception: `CompletedDate` is never populated for approval process instances that were completed before January 1, 2013. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstance fields are automatically populated, with two exceptions: `CompletedDate` and `LastActorId` are populated only after the approval process instance is complete.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
CompletedDate	Type dateTime Properties Filter, Nillable, Sort Description The completion date and time of the approval process. The <code>ElapsedTimeDay</code> , <code>ElapsedTimeHours</code> , and <code>ElapsedTimeMinutes</code> field values are calculated using <code>CompletedDate</code> .
ElapsedTimeInDays	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The total elapsed time in days between when the approval process instance was started and now.
ElapsedTimeInHours	Type double Properties Filter, Nillable, Sort Description The total elapsed time in hours between when the approval process instance was started and now.
ElapsedTimeInMinutes	Type double Properties Filter, Nillable, Sort Description The total elapsed time in minutes between when the approval process instance was started and now.
LastActorId	Type reference Properties Group, Filter, Nillable, Sort Description The last actor that approved, rejected, or recalled the process. This is a relationship field. Relationship Name LastActor Relationship Type Lookup Refers To User
ProcessDefinitionId	Type reference Properties Group, Filter, Sort Description The ID of this approval process instance. This is a relationship field.

Field	Details
	Relationship Name ProcessDefinition
	Relationship Type Lookup
	Refers To ProcessDefinition
Status	Type picklist
	Properties Filter, Group, Restricted picklist, Sort
	Description The status of this approval process instance. Possible values are: • Approved • Fault • Held • NoResponse • Pending • Reassigned • Rejected • Removed • Started
SubmittedById	Type reference
	Properties Filter, Group, Nillable, Sort
	Description The ID of the user who submitted the approval process. This is a relationship field.
	Relationship Name SubmittedBy
	Relationship Type Lookup
	Refers To User
TargetObjectId	Type reference

Field**Details****Properties**

Filter, Group, Sort

Description

ID of the object affected by this approval process instance.

This is a polymorphic relationship field.

Relationship Name

TargetObject

Relationship Type

Lookup

Refers To

Account, Accreditation, ActivationTarget, Address, AlternativePaymentMethod, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskIndDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, Award, BoardCertification, BusinessLicense, BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CodeSet, CodeSetBundle, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, ConsumptionRate, ConsumptionSchedule, Contact, ContactEncounter, ContactEncounterParticipant, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, CreditMemoLine, DataStream, DataUseLegalBasis, DataUsePurpose, DelegatedAccount, DigitalSignature, DocumentChecklistItem, DuplicateRecordItem, DuplicateRecordSet, EmailMessage, EngagementChannelType, EnrollmentEligibilityCriteria, ExternalEventMapping, HealthCareDiagnosis, HealthCareProcedure, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, Identifier, IdentityDocument, Image, IndividualApplication, Invoice, InvoiceLine, Lead, Location, LocationTrustMeasure, MarketSegment, MarketSegmentActivation, MemberPlan, MessagingEndUser, MessagingSession, MktCalculatedInsight, Opportunity, Order, OrgMetricScanResult, OrgMetricScanSummary, OtherComponentTask, PartyConsent, PaymentAuthAdjustment, PersonEducation, PersonLanguage, PersonLifeEvent, PersonName, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductFulfillmentLocation, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, PromptAction, PurchaserPlan, PurchaserPlanAssn, QuickTextUsage, Quote, ReceivedDocument,

Field	Details
	ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderItemAdjustment, ReturnOrderItemTax, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, ServiceTerritoryWorkType, SharingRecordCollection, SharingRecordCollectionItem, SharingRecordCollectionMember, Shift, Shipment, ShipmentItem, SkillRequirement, SocialPost, Solution, StreamingChannel, UnitOfMeasure, UserProvisioningRequest, VideoCall, VideoCallParticipant, VideoCallRecording, Visit, VisitedParty, Visitor, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember

Usage

Use this object to query or retrieve an approval process.

The following SOQL query returns details for all the ProcessInstanceStep records related to individual ProcessInstance records. The nested query references `Steps`, which is the child `relationshipName` for ProcessInstanceStep in the ProcessInstance object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM Steps)
FROM ProcessInstance
```

The following SOQL query returns details for all the ProcessInstanceWorkItem records related to individual ProcessInstance records. The nested query references `Workitems`, which is the child `relationshipName` for ProcessInstanceWorkItem in the ProcessInstance object.

```
SELECT Id, (SELECT Id, ActorId, ProcessInstanceId FROM Workitems)
FROM ProcessInstance
```

ProcessInstanceHistory can help provide a unified read-only view of the ProcessInstanceStep and ProcessInstanceWorkItem objects.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProcessInstanceHistory

History is available for tracked fields of the object.

ProcessInstanceChangeEvent (API Version 58.0)

Change events are available for the object.

SEE ALSO:

- [ProcessInstanceHistory](#)
- [ProcessInstanceStep](#)
- [ProcessInstanceWorkitem](#)

ProcessInstanceHistory

This read-only object shows all steps and pending approval requests associated with an approval process (ProcessInstance).

Supported Calls

`describeSObjects()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field	Details
<code>ActorId</code>	Type reference Properties Filter, Group, Sort Description ID of the user who is assigned to this ProcessInstance. This is a polymorphic relationship field. Relationship Name Actor Relationship Type Lookup Refers To Group, User
<code>Comments</code>	Type string Properties Filter, Nillable, Sort Description Comments for a ProcessInstanceStep . This field doesn't apply to ProcessInstanceWorkitem records.
<code>ElapsedTimeInDays</code>	Type double Properties Filter, Nillable, Sort Description The total time in days between when the approval process instance was started and when it was completed.
<code>ElapsedTimeInHours</code>	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The total time in hours between when the approval process instance was started and when it was completed.
ElapsedTimeInMinutes	Type double Properties Filter, Nillable, Sort Description The total time in minutes between when the approval process instance was started and when it was completed.
IsPending	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the ProcessInstance is pending (<code>true</code>) or not (<code>false</code>).
OriginalActorId	Type reference Properties Filter, Group, Sort Description ID of the user who was originally assigned this ProcessInstance. This is a polymorphic relationship field. Relationship Name OriginalActor Relationship Type Lookup Refers To Group, User
ProcessInstanceId	Type reference Properties Filter, Group, Sort Description ID of the ProcessInstance. This is a relationship field.

Field	Details
	Relationship Name ProcessInstance Relationship Type Lookup Refers To ProcessInstance
ProcessNodeId	Type reference Properties Filter, Group, Nillable, Sort Description ID of this step. This is a relationship field. Relationship Name ProcessNode Relationship Type Lookup Refers To ProcessNode
RemindersSent	Type int Properties Filter, Group, Nillable, Sort Description Number of reminders that have been sent. Default is 0 (zero).
StepStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates the status of the ProcessInstanceStep.
TargetObjectId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the object being approved.

Field**Details**

This is a polymorphic relationship field.

	UserProvisioningRequest, VideoCall, VideoCallParticipant, VideoCallRecording, Visit, VisitedParty, Visitor, VolunteerProject, WorkBadgeDefinition, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup, WorkTypeGroupMember

Usage

This object helps you replicate the related list functionality of the Salesforce user interface for approval processes. Use `ProcessInstanceHistory` for a unified read-only view of the `ProcessInstanceStep` and `ProcessInstanceWorkItem` objects. You can't query `ProcessInstanceHistory`. Instead, you can query `ProcessInstanceHistory` by including it in a nested query on the parent `ProcessInstance` object. For example, this SOQL query returns all the `ProcessInstanceHistory` records related to individual `ProcessInstance` records. The nested query references `StepsAndWorkItems`, which is the child `relationshipName` for `ProcessInstanceHistory` in the `ProcessInstance` object.

```
SELECT Id, (SELECT Id, StepStatus, Comments FROM StepsAndWorkItems)
FROM ProcessInstance
```

This object respects field-level security on the parent object.

[ProcessInstance](#)

[ProcessInstanceStep](#)

[ProcessInstanceWorkItem](#)

ProcessInstanceNode

Represents a step in an instance of an approval process. Compare to `ProcessNode`, which describes the step in a process definition. Use this object to retrieve approval history.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

`ProcessInstanceNode` fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all `ProcessInstanceNode` fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
CompletedDate	Type dateTime Properties Filter, Nillable, Sort Description The completion date and time of this step in the approval process. The <code>ElapsedTimeDay</code>, <code>ElapsedTimeHours</code>, and <code>ElapsedTimeMinutes</code> field values are calculated using <code>CompletedDate</code>.
ElapsedTimeInDays	Type double Properties Filter, Nillable, Sort Description The total time in days since this step was started.
ElapsedTimeInHours	Type double Properties Filter, Nillable, Sort Description The total time in hours since this step was started.
ElapsedTimeInMinutes	Type double Properties Filter, Nillable, Sort Description The total time in minutes since this step was started.
LastActorId	Type reference Properties Filter, Group, Nillable, Sort Description The last actor that approved or rejected this step. This is a relationship field. Relationship Name LastActor

Field	Details
	Relationship Type Lookup Refers To User
NodeStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of this approval instance, for example Started, Pending, or Approved.
ProcessInstanceId	Type reference Properties Filter, Group, Sort Description The approval process this step is part of. This is a relationship field. Relationship Name ProcessInstance Relationship Type Lookup Refers To ProcessInstance
ProcessNodeId	Type reference Properties Filter, Group, Sort Description The identifier for this step. This is a relationship field. Relationship Name ProcessNode Relationship Type Lookup Refers To ProcessNode

Field	Details
ProcessNodeName	Type string Properties Filter, Group, Nillable, Sort Description The name of this step. The contents of this field can be publicly viewed.

ProcessInstanceStep

Represents one work item in an approval process (ProcessInstance).

 **Note:** Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceStep fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceStep fields are populated only after the approval process instance is next acted upon after the Summer '14 rollout.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ActorId	Type reference Properties Filter, Group, Sort Description ID of the user who's assigned to this approval step. This is a polymorphic relationship field. Relationship Name Actor Relationship Type Lookup Refers To Group, User

Field	Details
Comments	Type string Properties Filter, Nillable, Sort Description Limit: 4,000 bytes. The contents of this field can be publicly viewed.
ElapsedTimeInDays	Type double Properties Filter, Nillable, Sort Description The total time in days since this step was started.
ElapsedTimeInHours	Type double Properties Filter, Nillable, Sort Description The total time in hours since this step was started.
ElapsedTimeInMinutes	Type double Properties Filter, Nillable, Sort Description The total time in minutes since this step was started.
OriginalActorId	Type reference Properties Filter, Group, Sort Description ID of the user who was originally assigned to this approval step. This is a polymorphic relationship field. Relationship Name OriginalActor Relationship Type Lookup

Field	Details
	Refers To Group, User
ProcessInstanceId	Type reference Properties Filter, Group, Sort Description ID of the ProcessInstance that this approval step belongs to. This is a relationship field. Relationship Name ProcessInstance Relationship Type Lookup Refers To ProcessInstance
StepNodeId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the node currently assigned to this approval step.
StepStatus	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The status of this approval step. • Approved • Fault • Held • NoResponse • Pending • Reassigned • Rejected • Removed • Started

Field	Details
	If the approval step requires unanimous approval and one approver rejects the request, the value of this field for the other approvers changes to NoResponse. Likewise, if approval is based on the first response and an approver responds, the value of this field for the other approvers changes to NoResponse.

Usage

Query or retrieve a new step in an approval process (ProcessInstance).

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

ProcessInstanceStepChangeEvent (API Version 58.0)

Change events are available for the object.

SEE ALSO:

[ProcessInstance](#)

[ProcessInstanceHistory](#)

[ProcessInstanceWorkitem](#)

ProcessInstanceWorkitem

Represents a user's pending approval request.

Note: Exceptions apply to approval history data retrieved with this object and are available only via SOAP API. For each approval process instance that was pending when Summer '14 became available for your organization, some field values are never populated or are populated only after the rollout. Other fields are populated only after the approval process instance is next acted upon—such as when a user approves, rejects, or reassigns an approval request—after the Summer '14 rollout.

ProcessInstanceWorkitem fields are never populated for approval process instances that were completed before the Summer '14 rollout. For approval process instances that were pending during the Summer '14 rollout, all ProcessInstanceWorkitem fields are populated after the approval process instance is next acted upon after the Summer '14 rollout, with three exceptions. The `ElapsedTimeInDays`, `ElapsedTimeInHours`, and `ElapsedTimeInMinutes` fields are never populated in ProcessInstanceWorkitem records for which equivalent ProcessInstanceStep records were created before the Summer '14 rollout.

For all other ProcessInstanceWorkitem records, these three fields are populated after the approval process instance is next acted upon after the Summer '14 rollout.

ProcessInstanceHistory combines fields from ProcessInstanceStep and ProcessInstanceWorkitem. As a result, incorrect elapsed times of 0 can appear in ProcessInstanceHistory records because the elapsed time fields were never populated in the related ProcessInstanceWorkitem record.

Note: Knowledge articles use ProcessInstanceWorkitem records to track the article history, so ProcessInstanceWorkitems records associated with Knowledge articles can't be deleted.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
ActorId	Type reference Properties Filter, Group, Sort, Update Description ID of the user responsible for approving an approval request. This field is a polymorphic relationship field. Relationship Name Actor Relationship Type Lookup Refers To Group, User
ElapsedTimeInDays	Type double Properties Filter, Nillable, Sort Description The total time in days since this approval request was started.
ElapsedTimeInHours	Type double Properties Filter, Nillable, Sort Description The total time in hours since this approval request was started.
ElapsedTimeInMinutes	Type double Properties Filter, Nillable, Sort Description The total time in minutes since this approval request was started.

Field	Details
OriginalActorId	Type reference Properties Filter, Group, Sort, Update Description ID of the user originally assigned this approval request. This field is a polymorphic relationship field. Relationship Name OriginalActor Relationship Type Lookup Refers To Group, User
ProcessInstanceId	Type reference Properties Filter, Group, Sort, Update Description ID of the ProcessInstance associated with this approval request. This field is a relationship field. Relationship Name ProcessInstance Relationship Type Lookup Refers To ProcessInstance

Usage

Use this object to manage a pending approval request for a user.

SEE ALSO:

[ProcessInstance](#)
[ProcessInstanceHistory](#)
[ProcessInstanceStep](#)

ProcessNode

Describes a step in a process definition. Compare to `ProcessInstanceNode`, which describes a step in a running process. This object is available in API version 31.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
Description	Type textarea Properties Filter, Nillable, Sort Description A description of this node, no longer than 3,000 bytes.
DeveloperName	Type string Properties Filter, Group, Sort Description The external name of the node that's seen by users.
Name	Type string Properties Filter, Group, idLookup, Sort Description The unique node name.
ProcessDefinitionId	Type reference Properties Filter, Group, Sort Description ID of the object affected by this approval instance. A relationship field. Relationship Name ProcessDefinition

Field	Details
	Relationship Type Lookup
	Refers To ProcessDefinition

Usage

Use this object to get details about the process node or the process definition that it's associated with.

ProducerCommission

Represents a producer's commission for an insurance policy. The commission can be calculated from the commissionable transactions or can be populated from an external system. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommissionableAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The amount on which the commission is applied. This can be a transaction amount or a portion of the premium.
CommissionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The calculated commission amount for the insurance policy transaction.
CommissionScheduleId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the associated Commission Schedule, which is the commission calculation tied to the product or producer. This is a relationship field. Relationship Name CommissionSchedule Relationship Type Lookup Refers To CommissionSchedule
InsurancePolicyAssetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The insured item for which the commission was calculated. This is a relationship field. Relationship Name InsurancePolicyAsset Relationship Type Lookup Refers To InsurancePolicyAsset
InsurancePolicyCoverageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the policy coverage for which the commission was calculated. This is a relationship field. Relationship Name InsurancePolicyCoverage Relationship Type Lookup Refers To InsurancePolicyCoverage

Field	Details
InsurancePolicyId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The insurance policy for which the commission was calculated. This is a relationship field. Relationship Name InsurancePolicy Relationship Type Lookup Refers To InsurancePolicy
InsurancePolicyTransactionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The transaction for which the commission record was created. This is a relationship field. Relationship Name InsurancePolicyTransaction Relationship Type Lookup Refers To InsurancePolicyTransaction
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
MaxCommissionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The maximum commission calculated for the product or producer for a commissionable event. Constrains the output from the commission schedule.
MinCommissionAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The minimum commission calculated for the product or producer for a commissionable event. Constrains the output from the commission schedule.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the producer commission.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the record owner. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
ParentProducerCommissionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The original commission record that was adjusted or modified. This is a relationship field. Relationship Name ParentProducerCommission Relationship Type Lookup Refers To ProducerCommission
PaymentDatetime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date on which the commission was paid.
ProcessingProducerId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The producer who performed the commissionable event. This is a relationship field. Relationship Name ProcessingProducer Relationship Type Lookup Refers To Producer
ProducerId	Type reference Properties Create, Filter, Group, Sort, Update Description The producer, broker, brokerage, or other user who receives the commission.

Field	Details
	This is a polymorphic relationship field. Relationship Name Producer Relationship Type Lookup Refers To Account, Contact, Producer
ProducerProductionCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The production code for the producer who performs the commissionable event.
SourceSystem	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The system from which the producer commission record was sourced.
SourceSystemIdentifier	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The ID of the producer commission record in the source system. This field is unique within your organization.
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the status of the commission payment. Possible values are: • Disputed • Paid • Pending • Reversed

Field	Details
Type	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the type of commission paid to a producer, account, or contact for a commissionable transaction. Possible values are: • Advance • Bonus • Chargeback • Commission • Contingent Commission

Product2

Represents a product that your company sells.

This object has several fields that are used only for quantity and revenue schedules (for example, annuities). Schedules are available only for orgs that have enabled the products and schedules features. If these features aren't enabled, the schedule fields don't appear, and you can't query, create, or update the fields.

 **Note:** As of API version 8.0, the Product object is no longer available. Requests that contain Product are refused, and responses don't contain the Product object. Use the Products2 object instead.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `ConfigureDuringSale` and `IsSoldOnlyWithOtherProds` fields are available in version 58.0 and later when Industry Automotive or Subscription Management is enabled.

Fields

Field	Details
BillingPolicyId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related billing policy. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later. This field is a relationship field. Relationship Name BillingPolicy Relationship Type Lookup Refers To BillingPolicy
CanUseQuantitySchedule	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the product can have a quantity schedule (<code>true</code>) or not (<code>false</code>). Label is Quantity Scheduling Enabled.
CanUseRevenueSchedule	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the product can have a revenue schedule (<code>true</code>) or not (<code>false</code>). Label is Revenue Scheduling Enabled.
ConnectionReceivedId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the PartnerNetworkConnection that shared this record with your org. This field is available when Salesforce to Salesforce is enabled.
ConnectionSentId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description ID of the PartnerNetworkConnection that this record is shared with. This field is available Salesforce to Salesforce is enabled. In API version 16.0 and later, this value is <code>null</code>. Use PartnerNetworkRecordConnection object to forward records to connections.
ConfigureDuringSale	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines whether a user can edit a configuration when creating a bundle order or quote. This field is available in API version 58.0 and later. This field is available when Industries Automotive or Subscription Management is enabled. Possible values are: - Allowed—Changes are allowed while adding line items to a bundle; for example, when adding products or editing quantity. - NotAllowed—Changes aren't allowed.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A text description of this record. Label is Product Description.
DisplayUrl	Type url Properties Create, Filter, Nillable, Sort, Update Description URL leading to a specific version of a record in the linked external data source.

Field	Details
ExternalDataSourceId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the related external data source.
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique identifier of a record in the linked external data source. For example, <i>ID #123</i>.
Family	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Name of the product family associated with this record. Product families are configured as picklists in the user interface. To obtain a list of valid values, call <code>describeObjects()</code> and process the result for the values associated with the <code>Family</code> field. Label is Product Family.
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Inactive Product2 records are hidden in many areas in the user interface. You can change the <code>IsActive</code> flag on a Product2 object as often as necessary. Label is Active.
IsArchived	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Describes whether the product is archived. The default value is <code>false</code>.
IsDeleted	Type boolean

Field	Details
	Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.
IsSerialized	Type boolean Properties Create, Filter, Group, Sort, Update Description Indicates if a product is a serialized product (<code>true</code>) or not (<code>false</code>). Label is Serialized.
IsSoldOnlyWithOtherProds	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the product can be sold independently or only as part of a bundle. This field is available in API version 58.0 and later. This field is available when Industries Automotive or Subscription Management is enabled. The default value is <code>false</code>, which means that the product can be sold independently.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
Name	Type string

Field	Details
	Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Default name of this record. Label is Product Name.
NumberOfQuantityInstallments	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description If the product has a quantity schedule, the number of installments.
NumberOfRevenueInstallments	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description If the product has a revenue schedule, the number of installments.
ProductClass	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description This field is read-only. Its value is determined by the value of the <code>Type</code> field and whether the product is associated with a ProductAttribute record. It describes whether a product is a bundle, set, or simple product, a variation parent, or a product variation. Possible values are: • Bundle—This product is a parent or component in a product bundle. • Set—This product is included in a product set. • Simple—This product has no variations • VariationParent—This product is a variation parent. It's the base product for one or more product variations and, though it has its own stock-keeping unit (SKU), isn't a sellable entity. Instead, it's the parent of sellable entities—its variations. • Variation—This product is a variation of a parent product. Each variation has its own SKU. When the value of <code>ProductClass = VariationParent</code>, it never changes. The value of <code>ProductClass</code> changes between <code>Simple</code> and <code>Variation</code> when you attach or detach a ProductAttribute record to the product. If you attach a ProductAttribute record to a product, then the product's <code>ProductClass</code> value changes to <code>Variation</code>. Conversely, when you detach all

Field	Details
	<code>ProductAttribute</code> records from a product, the <code>ProductClass</code> value changes to <code>Simple</code>. The default value is <code>Simple</code>. This field is available in API version 50.0 and later. It was introduced to support of B2B and B2C Commerce implementations.
<code>ProductCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Default product code for this record. Your org defines the product's code-naming pattern.
<code>QuantityInstallmentPeriod</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If the product has a quantity schedule, the amount of time covered by the schedule.
<code>QuantityScheduleType</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the quantity schedule, if the product has one.
<code>QuantityUnitOfMeasure</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Unit of the product; for example, kilograms, liters, or cases. This field comes with only one value, <code>Each</code>, so consider creating your own. The <code>QuantityUnitOfMeasure</code> field on <code>ProductItem</code> inherits this field's values.
<code>RecalculateTotalPrice</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Changes behavior of OpportunityLineItem calculations when a line item has child schedule rows for the <code>Quantity</code> value. When enabled, if the rollup quantity changes, then the quantity rollup value is multiplied against the sales price to change the total price.
RevenueInstallmentPeriod	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If the product has a revenue schedule, the time period covered by the schedule.
RevenueScheduleType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the revenue schedule, if the product has one.
StockCheckMethod	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The method for how a product's inventory is checked. Stock checks on parent products are common when bundles are prepackaged and individual child components can't be sold separately. Stock checks on child products are common when bundles aren't prepackaged and must be put together during fulfillment. If bundles aren't prepackaged, child components can usually be sold separately. Possible values are: • <code>Null</code>—Check stock on the product SKU. • <code>DoNotCheck</code>—The stock shouldn't be check. • <code>ParentProduct</code>—If the product is a parent of a bundle, check stock on the parent product. • <code>ChildProducts</code>—If the product is a parent of a bundle, check stock on the child components.
StockKeepingUnit	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The SKU for the product. Use in tandem with or instead of the <code>ProductCode</code> field. For example, you can track the manufacturer's identifying code in the Product Code field and assign the product a SKU when you resell it.
<code>TaxPolicyId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related tax policy. This field is available when Subscription Management is enabled. This field is available in API version 55.0 and later. This field is a relationship field. Relationship Name TaxPolicy Relationship Type Lookup Refers To TaxPolicy
<code>TransferRecordMode</code>	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description If serialized, indicates when the serial number is recorded. This field is visible based on field-level security. The value affects the read-only value of the <code>Product2TransferMode</code> field on the <code>ProductTransfer</code> object. Possible values are: • <code>SendAndReceive</code> —The serial number is recorded when sending or receiving. • <code>ReceiveOnly</code> —The serial number is recorded when receiving only.
<code>Type</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field

Details

Description

The type of product. This field's value affects the read-only value of the `ProductClass` field on the `Product2` object. The following mappings define how the `Type` selection updates the `ProductClass`.

- `Base`—When `Type = Base`, then `ProductClass = VariationParent`.
- `Null`—When `Type = Null`, then `ProductClass = Simple` for standalone products.
- `Null`—When `Type = Null`, then `ProductClass = Variation` for variation products.
- `Bundle`—When `Type = Bundle`, then `ProductClass = Bundle`.
- `Set`—When `Type = Set`, then `ProductClass = Set`.

**Note:**

- Revenue Cloud doesn't support products with these specific combinations: `Type = Base` and `ProductClass = VariationParent` or `Type = Null` and `ProductClass = Variation`.
- Values `Null`, `Base`, `Bundle`, and `Set` are available in environments where both Commerce and Revenue Cloud co-exist.
- The `Type` field can only be updated from `Null` to `Bundle` for products with a `Simple ProductClass`.

This field is available when Revenue Cloud, B2B Commerce, B2C Commerce, or other clouds with PCM add-on is enabled.

This field is available in API version 50.0 and later.

UnitOfMeasureId

Type

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The ID of the unit of measure associated with the product.

This field is a relationship field.

This field is available when Revenue Cloud is enabled.

This field is available in API version 63.0 and later.

Relationship Name

UnitOfMeasure

Refers To

UnitOfMeasure

Schedule Enabled Flags

When enabling the schedules feature, you can decide whether to enable quantity schedules, revenue schedules, or both. In addition, you can use the API to control quantity and revenue scheduling at the product level via the `CanUseQuantitySchedule` and `CanUseRevenueSchedule` flags. A value of `true` for either flag indicates that the product and any `OpportunityLineItems` can have a schedule of that type. These flags can be set when creating or updating `Product2` records.

Default Schedule Fields

The remaining schedule fields for this object define default schedules. Default schedule values are used to create an `OpportunityLineItemSchedule` when an `OpportunityLineItem` is created for the `Product`.

The default schedule fields support the following valid values (all fields are also nillable).

Field	Valid Values
<code>RevenueScheduleType</code>	Divide, Repeat
<code>RevenueInstallmentPeriod</code>	Daily, Weekly, Monthly, Quarterly, Yearly
<code>NumberOfRevenueInstallments</code>	Integer from 1 to 150, inclusive.
<code>QuantityScheduleType</code>	Divide, Repeat
<code>QuantityInstallmentPeriod</code>	Daily, Weekly, Monthly, Quarterly, Yearly
<code>NumberOfQuantityInstallments</code>	Integer from 1 to 150, inclusive

When you attempt to set the schedule fields when creating or updating, the API applies cross-field integrity checks. The integrity requirements are:

- If the schedule type is nil, the installment period and number of installments must be nil.
- If the schedule type is set to any value, then the installment period and number of installments must be non-nil.

Any create or update that fails these integrity checks is rejected with an error.

These default schedule fields, `CanUseQuantitySchedule`, and `CanUseRevenueSchedule`, are restricted picklist fields and are available only if the org has the schedules feature enabled.

Usage

Use this object to define the default product information for your org. This object is associated by reference with `Pricebook2` objects via `PricebookEntry` objects. The same product can be represented in different price books as price book entries. In fact, the same product can be represented multiple times (as separate `PricebookEntry` records) in the same price book with different prices or currencies. A product can only have one price for a given currency within the same price book. To be used in custom price books, all standard prices must be added as price book entries to the standard price book.

 **Note:** Note: You can't create lookup fields to `Product2` object, which have **Required** check box set to true or the **Don't Allow Deletion** radio button selected, as the platform would otherwise interpret this and throw an error that you cannot create a master-detail relationship to the object.

You can query the products that have been configured for your org. For example, you can allow your client application to obtain valid product IDs for use when configuring `PricebookEntry` records via the API. Your client application can perform the following tasks on `PricebookEntry` objects:

- Query
- Create for the standard price book or custom price books.
- Update
- Delete
- Change the `IsActive` field when creating or updating records

This object is defined only for those orgs that have products enabled as a feature. If the org doesn't have the products feature, this object doesn't appear in the `describeGlobal` call, and you can't describe or query this object.

If you try to delete a product via the API but there's an opportunity that uses that product, the delete fails. The workaround is to delete the product in the user interface, which gives you an option to archive the product.

Note: On opportunities and opportunity products, the workflow rules, validation rules, and Apex triggers fire when an update to a child opportunity product or schedule causes an update to the parent record. This means your custom application logic is enforced when there are updates to the parent record, ensuring higher data quality and compliance with your organization's business policies.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Product2ChangeEvent (API version 44.0)

Change events are available for the object.

Product2Feed (API version 18.0)

Feed tracking is available for the object.

Product2History

History is available for tracked fields of the object.

Product2OwnerSharingRule (API version 50.0)

Sharing rules are available for the object.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

Product2DataTranslation

Represents the translated values of the data stored within a [Product2](#) record's fields. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.

- To view this object, you must have the “View Setup and Configuration” permission

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The translated value for the Product2 description.
IsOutOfDate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the translation is out-of-date (<code>true</code>) or current (<code>false</code>). A translation is out-of-date if the parent Product2 record is updated after the last translation was filed.
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language for these translated values.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The translated value for the Product2 record name. This field is required to translate the text in other fields.
ParentId	Type reference Properties Create, Filter, Group, Sort, Update Description The record ID of the Product2 associated with the data that is being translated.

Usage

Use this object to translate the data stored in a Product2 record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the Product2 object, additional Product2DataTranslation fields exist for translating the data contained within those fields.

You can't use a custom external id field in an upsert call for a Product2DataTranslation object.

ProductAttribute

Represents the attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

create, delete, describeLayout(), describeSObjects(), getDeleted, getUpdated, query(), retrieve(), undelete, update, upsert

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The default value is USD. Possible values are: • USD—U.S. Dollar
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the product attribute set.
ProductId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The ID of the product that the attribute is associated with. This field is unique within your organization.
Sequence	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The order that product attributes appear in.
VariantParentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the variation parent record associated with the product attribute.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductAttributeEvent (API version 55.0)

Change events are available for the object.

ProductAttributeSet

Represents a group of attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeSObjects()`, `query()`, `retrieve()`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the product attribute set.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Possible values are: • da—Danish • de—German • en_US—English • esSpanish • es_MX—Spanish (Mexico) • fi—Finnish • fr—French • it—Italian • ja—Japanese • ko—Korean • nl_NL—Dutch • no—Norwegian • pt_BR—Portuguese (Brazil) • ru—Russian • sv—Swedish

Field	Details
	• <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label of the product attribute set.

ProductAttributeSetItem

Represents a set of attributes that can be associated with a product. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeSObjects()`, `query()`, `retrieve()`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
Field	Type reference Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The field's API name.
FieldApiName	Type string Properties Filter, Sort Description A derived field whose values comes from CustomFieldDefinition object.

Field	Details
IsGroupedBy	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if product variations are grouped by a specific attribute. This field is available in API version 64.0 and later.
ProductAttributeSetId	Type reference Properties Create, Filter, Group, Sort Description The ID of the product attribute set.
Sequence	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The order that product attributes appear in.

ProductAttributeSetProduct

Represents the product associated with a set of attributes. This object is available in API version 50.0 and later.

Supported Calls

`create`, `delete`, `describeLayout()`, `describeSObjects()`, `getDeleted`, `getUpdated`, `query()`, `retrieve()`, `undelete`, `update`, `upsert`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access products.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The default value is <code>USD</code>. Possible values are: • <code>USD</code>—U.S. Dollar
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the product associated with the product attribute set.
ProductAttributeSetId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the product attribute set.
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the product associated with the product attribute set.

ProductCatalog

The container that holds a Product Category hierarchy. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the Industries, Retail, or B2B Commerce license.

Fields

Field	Details
CatalogCode	Type text Properties Create, Filter, Nillable, Sort, Update Description A unique ID associated with the catalog. Maximum size is 80 alphanumeric characters.
CatalogType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The category of an entry in the catalog. Possible values are: • Sales • ServiceProcess—Service Process The default value is Sales.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Possible values are: • EUR—Euro • USD—U.S. Dollar The default value is USD.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the category.

Field	Details
EffectiveEndDate	Type dateTime Properties Filter, Nillable, Sort Description The date after which the catalog is unavailable to end users.
EffectiveStartDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the catalog is available to end users.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the ProductCatalog record.
NumberOfCategories	Type int Properties Filter, Group, Nillable, Sort

Field	Details
	Description Number of ProductCategory records assigned to this ProductCatalog record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the owner. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The lifecycle state of the catalog. Possible values include: Draft, Active, Inactive

ProductCategory

Represents the category that products are organized in. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
CatalogId	Type reference Properties Create, Filter, Group, Sort Description The ID of the catalog.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The default value is <code>USD</code>.
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the category.
IsNavigational	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the category.
NumberOfProducts	Type int Properties Filter, Group, Nillable, Sort Description The number of products in a category.
ParentCategoryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the product's parent category. Relationship Name ParentCategory Relationship Type Lookup Refers To ProductCategory
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Order that the category is displayed in.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ProductCategoryChangeEvent](#) (API version 55.0)

Change events are available for the object.

ProductCategoryProduct

Holds the relation between product and product category to assign products to a category. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the Industries, Retail, or B2B Commerce license.

Fields

Field	Details
Catalog	Type reference Properties Filter, Group, Sort Description The foreign key to the ProductCatalog ID of the Category.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Possible values are: • EUR—Euro • USD—U.S. Dollar The default value is USD.

Field	Details
EffectiveEndDate	Type dateTime Properties Filter, Nillable, Sort Description The date after which the catalog is unavailable to end users.
EffectiveStartDate	Type dateTime Properties Filter, Nillable, Sort Description The date on which the catalog is available to end users.
IsPrimaryCategory	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the ProductCategory is the primaryProductCategory for a given product in a ProductCatalog. The default value is <code>false</code>.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the ProductCategoryProduct record.
ProductCategory	Type reference Properties Create, Filter, Group, Sort Description Foreign key to the ProductCategory ID.
Product	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description ID of the product.
ProductToCategory	Type string Properties Filter, Group, Sort Description Concatenated Product ID and Category ID.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The lifecycle state of the catalog. Possible values include: Draft, Active, Inactive

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductCategoryProductEvent (API version 55.0)

Change events are available for the object.

ProductCategoryDataTranslation

Represents the translated values for the data stored within a [ProductCategory](#) record's fields. This object is available in API version 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- Translation Workbench and data translation must be enabled in your org.
- To view this object, you must have the "View Setup and Configuration" permission

Fields

Field	Details
Description	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The translated value for the Product Category description.
IsOutOfDate	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the translation is out-of-date (<code>true</code>) or current (<code>false</code>). A translation is out-of-date if the parent ProductCategory record is updated after the last translation was filed.
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language for these translated values.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The translated value for the Product Category name.
ParentId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the category being translated.

Usage

Use this object to translate the data stored in a Product Category record into the different languages supported by Salesforce. If data translation is enabled for custom fields on the ProductCategory object, additional ProductCategoryDataTranslation fields exist for translating the data contained within those fields.

ProductComponentGroup

Represents the logical grouping of associated products in a bundle and the products’ arrangement policy (group cardinality). This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Industries EPC or Subscription Management is enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description Describes the group items of a product bundle feature. For example, a group’s contents can be the associated products that accompany a main product in a bundle.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a related record or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user indirectly accessed this record (<code>LastReferencedDate</code>), but not viewed it.
<code>MaxBundleComponents</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum number of associated products allowed in a group.
<code>MinBundleComponents</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The minimum number of associated products allowed in a group.
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the product component group. Maximum length is 255 characters (of any type).
<code>OwnerId</code>	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The unique identifier of the owner of this object. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Field	Details
ParentProductId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier associated with the main product record. This field is a relationship field. Relationship Name ParentProduct Relationship Type Lookup Refers To Product2
Sequence	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Determines the arrangement of the order products when configuring a bundle or set.

ProductConsumed

Represents an item from your inventory that was used to complete a work order or work order line item in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Note: To create products consumed, you need Read permission on product items.

Note: To delete or undelete product consumed for non-serialized products, you need Edit, Create, and Read permission on product consumed. For product consumed records that lookup to serialized products, you need Modify All Data or Modify All Records permission on product consumed.

Fields

Field Name	Details
Description	Type textarea Properties Create, Nillable, Update Description Notes and context about the product consumed.
IsConsumed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that a product consumed has been processed if the Product2 it refers to has IsSerialized=true selected. The default is false.
IsLocked	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the product consumed record is locked or not. The default value is <code>false</code>.
IsProduct2Serialized	Type boolean Properties Create, Filter, Nillable, Sort, Update Description Indicates if a product is a serialized product. The default is false.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product consumed was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The date when the product consumed was last viewed.
MayEdit	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the product consumed record can be edited or not. The default value is <code>false</code>.
PricebookEntryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Price book associated with the product consumed. If the work order and the product item's associated product are related to the same price book, the Price Book Entry auto-populates based on the product item.
Product2Id	Type reference Properties Filter, Group, Nillable, Sort Description Product associated with the product consumed.
ProductConsumedNumber	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description (Read Only) Auto-generated number identifying the product consumed.
ProductId	Type reference Properties Create, Filter, Group, Nillable, Sort

Field Name	Details
	Description Product item associated with the product consumed. Creating a product consumed record subtracts the quantity consumed from the linked product item's quantity.
ProductName	Type string Properties Filter, Group, Nillable, Sort Description Name for the product consumed.
QuantityConsumed	Type double Properties Create, Filter, Sort, Update Description The quantity of products consumed.
QuantityUnitOfMeasure	Type picklist Properties Filter, Group, Nillable, Sort Description Units of the consumed item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.
TotalPrice	Type currency Properties Filter, Nillable, Sort Description The total price paid for the product items.
UnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The price per unit of the product consumed.

Field Name	Details
WorkOrderId	Type reference Properties Create, Filter, Group, Sort Description Work order that the product was consumed for.
WorkOrderLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Work order line item that the product was consumed for.

Usage

When a product is consumed during the completion of a work order, create a product consumed record to track its consumption. You can add products consumed to work orders or work order line items. Track product consumption at the line item level if you want to know which products were used for each line item's tasks.

The way you use products consumed depends on how closely you want to track the state of your inventory in Salesforce. If you want to track the entire lifecycle of items in your inventory, including their storage, transfer, and consumption, link your products consumed records to product items. This approach ensures that your inventory numbers auto-update to reflect the consumption of products from your inventory. If you want to track product consumption only, however, specify a Price Book Entry on each product consumed record and leave the Product Item field blank.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductConsumedChangeEvent (API version 48.0)

Change events are available for the object.

ProductConsumedFeed

Feed tracking is available for the object.

ProductConsumedHistory

History is available for tracked fields of the object.

ProductDetectedPriceChange

Represents a detected change in price for a product associated with a partner account. This object is available in API version 63.0 and later.

A ProductDetectedPriceChange record is automatically created when the system identifies a change in product pricing that can require price protection evaluation or further processing.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description References the partner account for which the price change was detected. This field is a relationship field. Relationship Name Account Refers To Account
EffectiveDate	Type date Properties Create, Filter, Group, Sort, Update Description Date when the new price becomes effective for the product.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the record was last referenced by the current user. Useful for activity tracking.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description Date and the timestamp the record was last referenced by a user or system process.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Unique name or identifier for the price change record.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description User or group that owns this record. This is a polymorphic relationship field. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
ProcessingStatus	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the current processing stage of the price change. Possible values are: - Completed - Inactive - New - Processing—In Progress
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description References the product for which the price change was detected.

Field	Details
	This field is a relationship field.
	Relationship Name Product
	Refers To Product2

ProductEntitlementTemplate

Represents predefined terms of customer support (Entitlement) that users can add to products (Product2).

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only Salesforce admins, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
EntitlementTemplateId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the entitlement template. Must be a valid ID.
Product2Id	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Product2 associated with the entitlement template. Must be a valid ID.

Usage

Use to query and manage entitlement templates.

SEE ALSO:
[Entitlement](#)

ProductFeaturedProduct

Represents the user-defined collection of featured products that are meant to cross-sell or upsell with your product. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
FeatrProdtRelaType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines how the featured product is related to the product. Possible values are: - Complete the Look - Featured Products - New Arrivals - Top Seller
FeaturedProductId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the featured product that is linked to the product. This field is a relationship field.

Field	Details
	Relationship Name FeaturedProduct Refers To Product2
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the user-defined collection of featured products.
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the product that your company sells. This field is a relationship field. Relationship Name Product Refers To Product2
Sequence	Type int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Defines the order in which featured products are displayed.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ProductFeaturedProductChangeEvent](#)

Change events are available for the object.

ProductItem

Represents the stock of a particular product at a particular location in field service, such as all bolts stored in your main warehouse.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The date when the product item was last modified. Its label in the user interface is Last Modified Date.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The date when the product item was last viewed.
LocationId	Type reference Properties Create, Filter, Group, Sort Description Location associated with the product item. This usually indicates where the product item is stored. This is a relationship field. Relationship Name Location Relationship Type Lookup Refers To Location
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The product item's owner. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Product2Id	Type reference Properties Create, Filter, Group, Sort Description Product associated with the product item, which represents the type of product in your inventory. This is a relationship field.

Field Name	Details
	Relationship Name Product2
	Relationship Type Lookup
	Refers To Product2
ProductItemNumber	Type string
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description (Read Only) Auto-generated number identifying the product item.
ProductName	Type string
	Properties Filter, Group, Nillable, Sort
	Description A name for the product item. Try to select a name that indicates what is being stored where; for example, Batteries in Warehouse A.
QuantityOnHand	Type double
	Properties Create, Filter, Sort, Update
	Description The quantity at the location. If you want to add a serial number, this value must be 1.
QuantityUnitOfMeasure	Type picklist
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Units of the product item; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.
SerialNumber	Type string
	Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description A unique number for identification purposes. If you want to enter a serial number, the Quantity on Hand must be 1.

Usage

Each product item is associated with a product and a location in Salesforce. If a product is stored at multiple locations, the product will be tracked in a different product item for each location.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductItemChangeEvent (API version 48.0)

Change events are available for the object.

ProductItemFeed

Feed tracking is available for the object.

ProductItemHistory

History is available for tracked fields of the object.

ProductItemOwnerSharingRule

Sharing rules are available for the object.

ProductItemShare

Sharing is available for the object.

ProductItemTransaction

Represents an action taken on a product item in field service. Product item transactions are auto-generated records that help you track when a product item is replenished, consumed, or adjusted.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `undelete()`, `upsert()`

Special Access Rules

- Field Service must be enabled.
- Only users with Modify All Data or Modify All Records permissions can delete this object.

Fields

Field Name	Details
Description	Type textarea Properties Create, Nillable, Update Description A description of the transaction. The description is blank when the transaction record is created, but can be updated.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (LastReferencedDate), but not viewed it.
ProductItemId	Type reference Properties Create, Filter, Group, Sort Description The associated product item. This is a relationship field. Relationship Name ProductItem Relationship Type Lookup Refers To ProductItem

Field Name	Details
ProductItemTransactionNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description (Read Only) Auto-generated number identifying the product item transaction.
Quantity	Type double Properties Create, Filter, Sort Description The quantity of the product item involved in the transaction. If inventory was consumed, the quantity is negative.
RelatedRecordId	Type reference Properties Filter, Group, Nillable, Sort Description (Read Only) The product consumed or product transfer related to the action. If the action wasn't related to consumption or transfer, the related record is blank. This is a polymorphic relationship field. Relationship Name RelatedRecord Relationship Type Lookup Refers To ProductTransfer, Visit
TransactionType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The action that the transaction tracks. - Replenished: When a part is stocked at a location. A Replenished transaction is created when a product item is created. - Consumed: When parts are consumed to complete a work order. A Consumed transaction is created when a record is added to the Products Consumed related list on a work order or work order line item.

Field Name	Details
	- Adjusted: When there's a discrepancy or a change in consumption. An Adjusted transaction is created when a product item's Quantity on Hand is edited, a product consumed is updated or delete, or a product transfer is deleted. - Transferred: When parts are transferred between locations.

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

[ProductItemTransactionChangeEvent](#)

Change events are available for the object.

[ProductItemTransactionFeed](#)

Feed tracking is available for the object.

[ProductItemTransactionHistory](#)

History is available for tracked fields of the object.

ProductMedia

Represents the rich media, including images and attachments, that can be added to products. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access product media.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The default value is <code>USD</code>. Possible values are: <code>USD</code>—U.S. Dollar

Field	Details
ElectronicMediaGroupId	Type reference Properties Create, Filter, Group, Sort, Update Description Unique ID of the media group. This field is a relationship field. Relationship Name ElectronicMediaGroup Relationship Type Lookup Refers To ElectronicMediaGroup
ElectronicMediaId	Type reference Properties Create, Filter, Group, Sort, Update Description Unique ID of the media record. This field is a polymorphic relationship field. Relationship Name ElectronicMedia Relationship Type Lookup Refers To ManagedContent, ManagedContentInfo
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the media.
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of the product that the media is associated with. This field is a relationship field. Relationship Name Product Relationship Type Lookup Refers To Product2
SortOrder	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The order that product media is displayed in.

Associated Objects

[ProductMediaChangeEvent](#) (API version 57.0)

Change events are available for the object.

[ProductMediaHistory](#) on page 63

History is available for tracked fields of the object.

[ProductMediaOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[ProductMediaShare](#) on page 67
Sharing is available for the object.

ProgramProduct

Represents a junction between Program and Product2. This will hold Product2 values related to a Program. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only with the EAndU Cloud Program Access permission set.

Fields

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the ProgramProduct object.
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description The Product2 object associated with the Program. This field is a relationship field. Relationship Name Product Relationship Type Lookup Refers To Product2

Field	Details
ProgramId	Type reference Properties Create, Filter, Group, Sort, Update Description The Program parent object associated with the record. This field is a relationship field. Relationship Name Program Relationship Type Lookup Refers To Program
Status	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Specifies the status of the ProgramProduct object. Possible values are: • Active • Inactive • Pending For Approval

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProgramProductChangeEvent

Change events are available for the object.

ProgramProductFeed

Feed tracking is available for the object.

ProgramProductHistory

History is available for tracked fields of the object.

ProgramProductOwnerSharingRule

Sharing rules are available for the object.

ProgramProductShare

Sharing is available for the object.

ProductQuantityRule

Represents the relationship between a quantity rule and a product. This object assigns quantity rules to a product. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The ProductQuantityRule object is available only if the B2B Commerce license or Automotive Cloud license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. This field is exposed in orgs that have multicurrency enabled. Default value is USD. Possible values are: • EUR—Euro • USD—U.S. Dollar
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the product quantity rule.
ProductId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the product. This field is a relationship field.

Field	Details
	Relationship Name Product
	Relationship Type Lookup
	Refers To Product2
PurchaseQuantityRuleId	Type reference
	Properties Create, Filter, Group, Sort
	Description ID of the related purchase quantity rule. This field is a relationship field.
	Relationship Name PurchaseQuantityRule
	Relationship Type Lookup
	Refers To PurchaseQuantityRule

ProductRelatedComponent

Represents a product that is included in a product bundle, a set, or a product and an add-on. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

In version 58.0 and later, this object is available when B2B Commerce, B2C Commerce, Industries Automotive, Industries EPC, or Subscription Management is enabled.

In version 57.0, this object is available when B2B Commerce, B2C Commerce, or Industries Automotive is enabled.

Fields

Details	
ChildProductId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of the associated product. This field is a relationship field. In a bundle relationship, this item is the child product. Relationship Name ChildProduct Relationship Type Lookup Refers To Product2
ChildProductRole	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The position of the associated product in the relationship. Possible values are: • AddOnComponent—The child product is an add-on to another product. Available in API version 58.0 and later. • BundleComponent—The child product is a component in a bundle. • SetComponent—The child product is a component in a set.
ChildSellingModelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The unique identifier of the associated product's sales model. This field is a relationship field. Relationship Name ChildSellingModel Relationship Type Lookup

Details	
Refers To ProductSellingModel	
DoesBundlePriceIncludeChild	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the bundle price includes the associated product's price.
IsComponentRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the associated product is required for configuring a bundle or set. The default value is <code>false</code> .
IsDefaultComponent	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the associated product is part of the product bundle or set automatically, or can be added after the bundle's or set's creation. The default value is <code>false</code> .
IsQuantityEditable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether you can edit the component's quantity in the bundle or set after the bundle's or set's creation. The default value is <code>false</code> .
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Details

Description

The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.

LastViewedDate

Type

dateTime

Properties

Filter, Nillable, Sort

Description

The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user accessed this record or list view (`LastReferencedDate`) without viewing it.

MaxQuantity

Type

double

Properties

Create, Filter, Nillable, Sort, Update

Description

The associated product's allowed maximum quantity.

MinQuantity

Type

double

Properties

Create, Filter, Nillable, Sort, Update

Description

The associated product's allowed minimum quantity.

Name

Type

string

Properties

Autonumber, Defaulted on create, Filter, idLookup, Sort

Description

The name of the associated product.

ParentProductId

Type

reference

Properties

Create, Filter, Group, Sort

Description

The unique identifier of the main product around which the bundle or set is built.
This field is a relationship field.

Details	
	Relationship Name ParentProduct
	Relationship Type Lookup
	Refers To Product2
ParentProductRole	Type picklist
	Properties Filter, Group, Restricted picklist, Sort
	Description Indicates the position of the main product in the relationship. Possible values are: • AddOn—The main product is the add-on parent. Available in API version 58.0 and later. • Bundle—The main product is the bundle parent. • Set— The main product is the set parent.
ParentSellingModelId	Type reference
	Properties Create, Filter, Group, Nillable, Sort
	Description The unique identifier of the main product's sales model. This field is a relationship field.
	Relationship Name ParentSellingModel
	Relationship Type Lookup
	Refers To ProductSellingModel
ProductComponentGroupId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The unique identifier of the group of a product bundle or set. This group contains the associated products that can be included in the main product's bundle or set. This field is a relationship field.

Details**Relationship Name**

ProductComponentGroup

Relationship Type

Lookup

Refers ToProductComponentGroup

ProductRelationshipTypeId

Type

reference

Properties

Create, Filter, Group, Sort, Update

Description

The unique identifier of the record that describes the relationship between the main and associated products.

This field is a relationship field.

Relationship Name

ProductRelationshipType

Relationship Type

Lookup

Refers ToProductRelationshipType

Quantity

Type

double

Properties

Create, Defaulted on create, Filter, Nillable, Sort, Update

Description

The unit count of the associated product.

QuantityScaleMethod

Type

picklist

Properties

Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The scaling method is used to calculate the associated product's quantity based on changes made to the main product's quantity in a transaction.

Possible values are:

- **Constant** — The associated product's quantity remains the same in relation to the main product's quantity. For example, the main product has a quantity of one and the associated component has a quantity of one. If you increase the quantity of the main product to two, the associated component's quantity remains at one.
-

	Details
	<code>Proportional</code> — The associated product’s quantity increases or decreases based on the main product’s quantity. For example, the main component has a quantity of one and the associated product has a quantity of two. If you increase the quantity of the main product to two, the associated product’s quantity increases to four. The default value is <code>Proportional</code>.
Sequence	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Determines the arrangement of the order products when configuring a bundle or set.

ProductRelationshipType

Defines the relationship between two sales transaction items. For example, defines a relationship between a bundle and a bundle component. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

In version 58.0 and later, this object is available when B2B Commerce, B2C Commerce, or Subscription Management is enabled.

In version 57.0, this object is available when B2B Commerce or B2C Commerce is enabled.

Fields

Field	Details
AssociatedProductRoleCat	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort Description The position category that the associated product plays in the relationship. Possible values are: <code>AddOnComponent</code> —The associated product is an add-on.

Field	Details
	• <code>BundleComponent</code> — The associated product is part of a bundle. • <code>SetComponent</code> — The associated product is part of a set.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
<code>MainProductRoleCat</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The position category that the main product plays in the relationship. Possible values are: • <code>AddOn</code>—The parent of the add-on. • <code>Bundle</code>—The bundle parent. • <code>Set</code>—The set parent.
<code>Name</code>	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the relationship between two product items.

ProductRequest

Represents an order for a part or parts in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Authenticated external users can create and update ProductRequest objects.

Fields

Field Name	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account associated with the product request. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
CaseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The case associated with the product request. This is a relationship field. Relationship Name Case

Field Name	Details
	Relationship Type Lookup Refers To Case
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is Currency ISO Code.
Description	Type textarea Properties Create, Nillable, Update Description A text field for details not recorded in the provided fields.
DestinationLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Where the product is delivered. This is a relationship field. Relationship Name DestinationLocation Relationship Type Lookup Refers To Location
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The date when the product request was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product request was last viewed.
NeedByDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date the product must be delivered by.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the shipment. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
ProductRequestNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-assigned number that identifies the shipment.
ShipToAddress	Type address

Field Name	Details
	Properties Filter, Nillable Description The address that the product is to be delivered to.
ShipToCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city that the product is to be delivered to.
ShipToCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The country that the product is to be delivered to.
ShipToCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description A two letter uppercase country code conforming to the ISO 3166-1 alpha-2 standard.
ShipToGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The accuracy of the geocode for the shipping address.
ShipToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The latitude of the location where the product is to be delivered to.

Field Name	Details
ShipToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The longitude of the location where the product is to be delivered to.
ShipToPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code of the address where the product is to be delivered to.
ShipToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the state where the product is to be delivered to.
ShipToStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description A two letter uppercase state code conforming to the ISO 3166-1 alpha-2 standard.
ShipToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street address where the product is to be delivered to.
ShipmentType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type of shipment. The picklist includes the following values by default:

Field Name	Details
	• None • Rush • Overnight • Next Business Day • Pick Up
SourceLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location the product is shipped from. This is a relationship field. Relationship Name SourceLocation Relationship Type Lookup Refers To Location
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Status of the product transfer.
WorkOrderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The work order that the product request is related to. This is a relationship field. Relationship Name WorkOrder Relationship Type Lookup Refers To WorkOrder

Field Name	Details
WorkOrderLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The work order line item that the product request is related to. This is a relationship field. Relationship Name WorkOrderLineItem Relationship Type Lookup Refers To WorkOrderLineItem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductRequestChangeEvent (API version 48.0)

Change events are available for the object.

ProductRequestFeed

Feed tracking is available for the object.

ProductRequestHistory

History is available for tracked fields of the object.

ProductRequestOwnerSharingRule

Sharing rules are available for the object.

ProductRequestShare

Sharing is available for the object.

ProductRequestLineItem

Represents a request for a part in field service. Product request line items are components of product requests.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled. You can't use product request line item as a master in an master detail relationship (through a custom field) with a custom object with data.

Fields

Field Name	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account associated with the product request line item. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
CareProgramEnrolleeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the care program enrollee associated with the product request line item. This field is available from API version 49.0 and later. This is a relationship field. Relationship Name CareProgramEnrollee Relationship Type Lookup Refers To CareProgramEnrollee
CaseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The case associated with the product request line item. This is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case
Description	Type textarea Properties Create, Nillable, Update Description Details not recorded in the provided fields.
DestinationLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Where the product is delivered. This is a relationship field. Relationship Name DestinationLocation Relationship Type Lookup Refers To Location
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type dateTime

Field Name	Details
	Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
NeedByDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date the product must be delivered by.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The product request that the line item belongs to. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To ProductRequest
Product2Id	Type reference Properties Create, Filter, Group, Sort, Update Description The product associated with the product request line item. This is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2

Field Name	Details
ProductRequestLineItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description (Read Only) An auto-assigned number that identifies the product request line item.
QuantityRequested	Type double Properties Create, Filter, Sort, Update Description The amount requested.
QuantityUnitOfMeasure	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Units of the requested product; for example, grams, liters, or units. The picklist values can be customized.
ShipToAddress	Type address Properties Filter, Nillable Description The physical address where the product is needed.
ShipToCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city of the address where the product is needed.
ShipToCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The country of the address where the product is needed.
ShipToGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the address where the product is needed. See Compound Field Considerations and Limitations for details on geolocation compound fields. This field is available in the API only.
ShipToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with Longitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. This field is available in the API only.
ShipToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with Latitude to specify the precise geolocation of the address where the product is needed. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields. This field is available in the API only.
ShipToPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code of the address where the product is needed.
ShipToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The state of the address where the product is needed.
ShipToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street of the address where the product is needed.
ShipmentType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The type of shipment. The picklist includes the following values, which can be customized: • Rush • Overnight • Next Business Day • Pick Up
SourceLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Where the product is at the time of the request. This is a relationship field. Relationship Name SourceLocation Relationship Type Lookup Refers To Location
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The status of the shipment. The picklist includes the following values, which can be customized: • Draft • Submitted • Received
WorkOrderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The work order for which the product is needed. This is a relationship field. Relationship Name WorkOrder Relationship Type Lookup Refers To WorkOrder
WorkOrderLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The work order line item for which the product is needed. This is a relationship field. Relationship Name WorkOrderLineItem Relationship Type Lookup Refers To WorkOrderLineItem

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductRequestLineItemChangeEvent (API version 48.0)

Change events are available for the object.

ProductRequestLineItemFeed

Feed tracking is available for the object.

ProductRequestLineItemHistory

History is available for tracked fields of the object.

ProductRequired

Represents a product that is needed to complete a work order or work order line item in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product required was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product required was last viewed.
ParentRecordId	Type reference Properties Create, Filter, Group, Sort

Field Name	Details
	Description The work order or work order line item that the product is required for. This is a polymorphic relationship field. Relationship Name ParentRecord Relationship Type Lookup Refers To Visit, WorkOrder, WorkOrderLineItem, WorkType
ParentRecordType	Type string Properties Filter, Group, Nillable, Sort Description Indicates whether the parent record is a work order or a work order line item.
Product2Id	Type reference Properties Create, Filter, Group, Sort, Update Description The required product. This is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductName	Type string Properties Filter, Group, Nillable, Sort Description The name of the product required.
ProductRequiredNumber	Type string

Field Name	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort
	Description (Read only) Auto-generated number identifying the product required.
QuantityRequired	Type double
	Properties Create, Filter, Nillable, Sort, Update
	Description Quantity required of the product.
QuantityUnitOfMeasure	Type picklist
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Units of the required product; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.

Usage

Required products can be added to work types, work orders, and work order line items to ensure that the assigned service resource arrives with the right equipment.

Adding required products to work types saves you time and keeps your business processes consistent. Work orders and work order line items inherit their work type's required products. For example, if all light bulb replacement jobs require a ladder and a light bulb, add the ladder and light bulb as required products to your Light Bulb Replacement work type. When it's time to create a work order for a customer's light bulb replacement, applying that work type to the work order adds the required products.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductRequiredChangeEvent

Change events are available for the object.

ProductRequiredFeed

Feed tracking is available for the object.

ProductRequiredHistory

History is available for tracked fields of the object.

ProductSellingModel

Defines one method by which a product can be sold; for example, as a one-time sale, an evergreen subscription, or a term-defined subscription. If the product is sold on subscription, this object defines the subscription's term. A product can have multiple product selling models. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available with Revenue Cloud and Subscription Management. This object is available for Commerce when the Subscriptions (Beta) permission is enabled.

Fields

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name given to the product selling model.
PricingTerm	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the duration of the pricing term for a given selling model. Used with <code>PricingTermUnit</code>. For example, if this field's value is 1 and the <code>PricingTermUnit</code> is <code>Months</code>, the subscription is priced monthly. If the selling model is one-time, this field must be null. Possible value is: 1
PricingTermUnit	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description The unit of time used to define the pricing term. Used with <code>PricingTerm</code> to define the length of the pricing term. For example, if this field is <code>Months</code> and <code>PricingTerm</code> is 1, the subscription is priced monthly. If the selling model is one-time, this field must be null. Possible values are: • <code>Annual</code>—UI label is <code>Years</code> • <code>Months</code>
<code>SellingModelType</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Indicates whether the product is sold as a one-time sale, an evergreen subscription, or a subscription with a defined term. Possible values are: • <code>Evergreen</code>—A subscription without an end date. An evergreen subscription continues until the customer affirmatively cancels it. • <code>OneTime</code>—A product that isn't sold as a subscription. • <code>TermDefined</code>—A subscription with a defined end date. The subscription continues for a specified time period. When the term ends, the subscription ends. The default value is <code>OneTime</code>.
<code>Status</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The status of the product selling model. Possible values are: • <code>Active</code>—An active product selling model can't be deleted, and only the <code>Name</code> and <code>Status</code> fields can be modified. An active product selling model can't be changed back to draft. • <code>Draft</code>—A draft product selling model can be modified and deleted. • <code>Inactive</code>—An inactive product selling model can't be deleted, and only the <code>Name</code> and <code>Status</code> fields can be modified. An inactive product selling model can't be changed back to draft. The default value is <code>Draft</code>.

ProductSellingModelOption

A junction object between Product Selling Model and Product2. This object is available in API version 55.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available when Subscription Management or Commerce Subscriptions is enabled. Some fields require Industries EPC to be enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description The description of the product selling model option.
DisplayName	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the product selling model option to display to customers.
Increment	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The number of pricing term units that can be used to increase a subscription term.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description Indicates the default product selling model for a product. Setting a default is optional. A product can only have one default product selling model. The default value is <code>false</code>. This field requires Industries EPC.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view but not viewed it.
Maximum	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum number of pricing term units for a subscription term.
Minimum	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The minimum number of pricing term units for a subscription term.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the product selling model.

Field	Details
Product2Id	Type reference Properties Create, Filter, Group, Sort Description The ID of the Product2 record associated with this ProductSellingModelOption record. This is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
ProductSellingModelId	Type reference Properties Create, Filter, Group, Sort Description The ID of the ProductSellingModel record associated with this ProductSellingModelOption record. This is a relationship field. Relationship Name ProductSellingModel Relationship Type Lookup Refers To ProductSellingModel
ProrationPolicyId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the ProrationPolicy record associated with this ProductSellingModelOption record. This is a relationship field. Relationship Name ProrationPolicy Relationship Type Lookup

Field	Details
	Refers To ProrationPolicy

ProductServiceCampaign

Represents a set of activities to be performed on a product service campaign asset, such as a product recall for safety issues or product defects. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description Description of the product service campaign.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which the product service campaign ends.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the asset was last modified. The UI label is Last Modified Date.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the asset was last viewed.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The product service campaign's owner. By default, the product service campaign owner is the user who created the product service campaign record. The UI label is Product Service Campaign Owner.
Priority	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The priority of the product service campaign. Possible values are: • Critical • High • Low • Medium
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Product2 associated with this campaign. The UI label is Product.
ProductServiceCampaignName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the product service campaign.

Field	Details
StartDate	Type date Properties Create, Filter, Group, Sort, Update Description The date on which the product service campaign starts.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The status of the product service campaign. The picklist includes the following values, which can be customized: • New—Product service campaign created, but there hasn't yet been any activity. • In Progress—Product service campaign has begun. • On Hold—Work is paused. • Completed—Work is complete. • Cannot Complete—Work couldn't be completed. • Closed—All work and associated activity is complete. • Canceled—Work is canceled, typically before any work began.
StatusCategory	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The category that each <code>Status</code> value falls into. The <code>StatusCategory</code> field has eight default values: seven values that are identical to the default <code>Status</code> values, and <code>None</code> for statuses without a status category. If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, add it the <i>On Hold</i> category. To learn which processes reference <code>StatusCategory</code>, see How are Status Categories Used?
Type	Type picklist Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The type of the product service campaign. The picklist includes the following values, which can be customized: • <code>Modification</code>—The asset requires an on-site alteration. • <code>Recall</code>—The asset must be returned to the manufacturer for modification or upgrade. • <code>Service</code>—The asset needs to be serviced. • <code>Upgrade</code>—The asset needs updating.
<code>WorkTypeId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The work type associated with the product service campaign. A customer uses this field as a guide when setting work type for work orders for the product service campaign. Duration, Duration Type, and required skills.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ProductServiceCampaignFeed](#)

Feed tracking is available for the object.

[ProductServiceCampaignHistory](#)

History is available for tracked fields of the object.

[ProductServiceCampaignOwnerSharingRule](#)

Sharing rules are available for the object.

[ProductServiceCampaignShare](#)

Sharing is available for the object.

ProductServiceCampaignItem

Represents a product service campaign's asset. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset associated with the product service campaign. Must be present if <code>Product2Id</code> is not present.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the asset was last modified. Its UI label is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time that the asset was last viewed.
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Product2 associated with this campaign. The UI label is Product. Must be present if <code>AssetID</code> is not present.
ProductServiceCampaignId	Type reference Properties Create, Filter, Group, Sort Description Required. The item's parent product service campaign record.
ProductServiceCampaignItemNumber	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The ID of the product service campaign item.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The status of the product service campaign item. The picklist includes the following values, which can be customized: • New—Product service campaign item created, but there hasn't yet been any activity. • In Progress—Product service campaign item has begun. • On Hold—Product service campaign item is paused. • Completed—Product service campaign item is complete. • Cannot Complete—Product service campaign item couldn't be completed. • Closed—All product service campaign item and associated activity is complete. • Canceled—Product service campaign item is canceled, typically before any work began.
StatusCategory	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The category that each <code>Status</code> value falls into. The <code>StatusCategory</code> field has eight default values: seven values that are identical to the default <code>Status</code> values, and <code>None</code> for statuses without a status category. If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, add it to the <i>On Hold</i> category. To learn which processes reference <code>StatusCategory</code>, see How are Status Categories Used?

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProductServiceCampaignItemFeed

Feed tracking is available for the object.

ProductServiceCampaignItemHistory

History is available for tracked fields of the object.

ProductServiceCampaignItemOwnerSharingRule

Sharing rules are available for the object.

ProductServiceCampaignItemShare

Sharing is available for the object.

ProductServiceCampaignItemStatus

Represents a status for a product service campaign item in field service. This object is available in API version 51.0 and later.

Supported Calls

describeSObjects(), query(), retrieve()

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description The API name of the status value.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the status value is the default status on product service campaign items when true. Only one status value can be the default.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description The label for the picklist value in the UI.

Field	Details
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description The value's position in the dropdown list in the UI.
StatusCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The status category that the value corresponds to. The Status Category field has seven values that are identical to the default Status values.

Usage

The Status field on product service campaign items comes with the following values:

- New—Product service campaign item created, but there hasn't been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work couldn't be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The ProductServiceCampaignItemStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Supplier—creates a product service campaign item status record, and vice versa.

Note: Product service campaign items also come with a Status Category field whose values are identical to the default status values. If you create custom status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, add it to the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

ProductServiceCampaignStatus

Represents a status for a product service campaign in field service. This object is available in API version 51.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ApiName	Type string Properties Filter, Group, idLookup, Sort Description The API name of the status value.
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates that the status value is the default status on product service campaigns when <code>true</code>. Only one status value can be the default.
MasterLabel	Type string Properties Filter, Group, Nillable, Sort Description The label for the picklist value in the UI.
SortOrder	Type int Properties Filter, Group, Nillable, Sort Description The value's position in the dropdown list in the UI.
StatusCode	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description The status category that the value corresponds to. The Status Category field has seven values that are identical to the default Status values.

Usage

The Status field on product service campaigns comes with the following values:

- New—Product service campaign created, but there hasn’t been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work couldn’t be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The ProductServiceCampaignStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Supplier—creates a product service campaign status record, and vice versa.

 **Note:** Product service campaigns also come with a Status Category field whose values are identical to the default status values. If you create custom status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, add it to the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

ProductTransfer

Represents the transfer of inventory between locations in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Description	Type textarea Properties Create, Nillable, Update Description Details not recorded in the provided fields.
DestinationLocationId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The place the product is to be delivered. This is a relationship field. Relationship Name DestinationLocation Relationship Type Lookup Refers To Location
ExpectedPickupDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date the product is expected to be picked up.
IsReceived	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Checkbox identifying that the product was received.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product request was last modified. Its label in the user interface is Last Modified Date.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product request was last viewed.

Field Name	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Owner of the product transfer. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Product2Id	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup field for the product associated with the product transfer. This is a relationship field. Relationship Name Product2 Relationship Type Lookup Refers To Product2
Product2TransferRecordMode	Type reference Properties Filter, Group, Nillable, Sort Description If serialized, indicates when the serial number is recorded. It is visible on the product transfer as a read-only field depending on the field-level security. Possible values are: • <code>SendAndReceive</code> —The serial number is recorded when sending or receiving. • <code>ReceiveOnly</code> —The serial number is recorded when receiving only. Relationship Name Product2.TransferRecordMode

Field Name	Details
	Relationship Type Lookup Refers To Product2.TransferRecordMode
ProductRequestId	Type reference Properties Filter, Group, Nillable, Sort Description Lookup field for the product request associated with the product transfer. This is a relationship field. Relationship Name ProductRequest Relationship Type Lookup Refers To ProductRequest
ProductRequestLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup field for the product request line item associated with the product transfer. This is a relationship field. Relationship Name ProductRequestLineItem Relationship Type Lookup Refers To ProductRequestLineItem
ProductTransferNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-assigned number that identifies the product transfer.

Field Name	Details
QuantityReceived	Type double Properties Create, Filter, Nillable, Sort, Update Description Amount of product received at the destination location.
QuantitySent	Type double Properties Create, Filter, Sort, Update Description Amount of product sent from the source location.
QuantityUnitOfMeasure	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The units of the product, for example grams, liters, or units.
ReceivedById	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup field for the contact who received the product at the destination location. This is a polymorphic relationship field. Relationship Name ReceivedBy Relationship Type Lookup Refers To Group, User
ReturnOrderId	Type reference Properties Filter, Group, Nillable, Sort Description The return order associated with the product transfer.

Field Name	Details
	This is a relationship field. Relationship Name ReturnOrder Relationship Type Lookup Refers To ReturnOrder
ReturnOrderLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The return order line item associated with the product transfer. This is a relationship field. Relationship Name ReturnOrderLineItem Relationship Type Lookup Refers To ReturnOrderLineItem
ShipmentExpectedDeliveryDate	Type dateTime Properties Filter, Nillable, Sort Description Lookup field for the shipment related to the product transfer.
ShipmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup field for the shipment related to the product transfer. This is a relationship field. Relationship Name Shipment Relationship Type Lookup

Field Name	Details
	Refers To Shipment
ShipmentStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description Lookup field for the shipment related to the product transfer.
ShipmentTrackingNumber	Type string Properties Filter, Group, Nillable, Sort Description Lookup field for the shipment related to the product transfer.
ShipmentTrackingUrl	Type url Properties Filter, Group, Nillable, Sort Description Lookup field for the shipment related to the product transfer.
SourceLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Lookup field for the source location related to the product transfer. This is a relationship field. Relationship Name SourceLocation Relationship Type Lookup Refers To Location
SourceProductItemId	Type reference

Field Name	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description Lookup field for the product item related to the product transfer.
	Relationship Name SourceProductItem
	Relationship Type Lookup
	Refers To ProductItem
Status	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update
	Description Status of the product transfer.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductTransferChangeEvent (API version 48.0)

Change events are available for the object.

ProductTransferFeed

Feed tracking is available for the object.

ProductTransferHistory

History is available for tracked fields of the object.

ProductTransferOwnerSharingRule

Sharing rules are available for the object.

ProductTransferShare

Sharing is available for the object.

ProductWarrantyTerm

Defines the relationship between a product or product family and warranty term. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CoveredProductFamily	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The product family that the warranty term applies to.
CoveredProductId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the product that the warranty term applies to.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product warranty term was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the product warranty term was last viewed.
ProductWarrantyTermNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The identifier for this product warranty term.

Field	Details
WarrantyTermId	Type reference
	Properties Create, Filter, Group, Sort
	Description The ID of the warranty term.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ProductWarrantyTermChangeEvent (API version 62.0)

Change events are available for the object.

Profile

Represents a profile, which defines a set of permissions to perform different operations. Operations can include creating a custom profile or querying, adding, updating, or deleting information.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, Customer Portal and Partner Portal users *can't* access this object.

To view the following settings, assignments, and permissions for standard and custom objects in a specified profile, the View Setup and Configuration permission is required.

- Client settings
- Field permissions
- Layout assignments
- Object permissions
- Permission dependencies
- Permission set tab settings
- Permission set group components
- Record types

Starting in Winter '21, only users with correct permissions can view profile names other than their own if the Profile Filtering setting is enabled.

 **Important:** Profile names are also exposed when users with permissions to perform the following tasks take these actions:

- Create a tab or record type with a wizard step that includes the assignment of tabs and record types to profiles.
- Configure a login flow where viewing profile lists is required to make flow associations.
- Set up delegated admins where looking up profiles is needed to identify assignable profiles.
- Administer an org as a delegated customer admin.
- Administer an org as a delegated admin to view and assign profiles of the delegated group.

Fields

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the profile.
IsSsoEnabled	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, users assigned to this profile can delegate username and password authentication to a corporate database instead of the user database.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this profile. Available in API version 29.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this profile. Available in API version 29.0 and later.

Field	Details
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the profile.
Permissions <i>PermissionName</i>	Type boolean Properties Create, Filter, Update Description One field for each permission. If <code>true</code>, users assigned to this profile have the named permission. The number of fields varies depending on the permissions for the org and license type.  Tip: To get a list of available permissions in SOAP API, use <code>describeObjects()</code>.
UserLicenseId	Type reference Properties Create, Filter, Group, Sort Description ID of the UserLicense associated with this profile. This is a relationship field. Relationship Name UserLicense Relationship Type Lookup Refers To UserLicense
UserType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The category of user license. Each <code>UserType</code> is associated with one or more UserLicense records. Each UserLicense is associated with one or more profiles. In API version 10.0 and later, valid values include:

Field	Details
	- Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is Standard. - PowerPartner: User whose access is limited because they're a partner and typically access the application through a partner portal or Experience Cloud site. Label is Partner. - CspLitePortal: user whose access is limited because they're an org's customer and access the application through a Customer Portal or Experience Cloud site. Label is High Volume Portal. - CustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is Customer Portal User. - PowerCustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is Customer Portal Manager. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy. - CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is Chatter Free. - Guest: user whose access is limited because they're an unauthenticated user without login credentials. Label is Guest. <code>UserType</code> replaces <code>LicenseType</code>, which is unavailable as of API version 10.0. In API versions 8.0 and 9.0 <code>LicenseType</code> is still available with the following valid values: - AUL: Lightning Platform user license. Label is Apex Platform. - AUL1: Lightning Platform user license with only one user. Label is Apex Platform One. - Salesforce: Salesforce user license. Label is Salesforce. - PackageManager: user who can create and work with managed packages for AppExchange. Label is Package Manager. - PRM: user whose access is limited because they're a partner and typically accesses the application through a partner portal. Label is Partner. - CustomerUser: user whose access is limited because they're an org's customer and accesses the application through a Customer Portal. Label is Customer Portal User. - CustomerManager: user whose access is limited because they're an org's customer and accesses the application through a Customer Portal. Label is Customer Portal Manager. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy. In API version 53.0 and later, you can't set the value of <code>UserType</code> using Apex.

Usage

Use the Profile object to create custom profiles that start without any permissions enabled except for required permissions for the profile's user license. While you can use the Profile Metadata type to deploy profiles, we recommend that you use the Profile SOAP API object because it allows you to create empty profiles.

You can also query the set of currently configured user profiles in your org. Your client application can use Profile objects to obtain valid profile IDs for use when querying or modifying users through the API.

In the user interface, profiles can be used to assign user licenses from specific pools (Lightning Platform user license or Salesforce user license, for example). When users are reassigned to profiles with different license types, the number of available licenses in the old license type pool increases, one per user assignment updated. Also, the number of available licenses decreases by the same amount in the new license type pool.

SEE ALSO:

- [Overview of Salesforce Objects and Fields](#)
- [PermissionSet](#)

ProfileSkill

Represents a profile skill, which describes a user’s professional knowledge. This is a global record for the organization, and users are associated through the ProfileSkillUser object.

 **Note:** For information about Live Agent skills, see the [Skill](#) topic.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	Type textarea Properties Create, Nillable, Update Description Description of the profile skill.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp indicating when the current user last viewed a record related to this profile skill. Available in API version 29.0 and later.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field Name	Details
	Description The timestamp indicating when the current user last viewed this profile skill. Available in API version 29.0 and later.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the profile skill.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the profile skill. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
UserCount	Type int Properties Filter, Group, Nillable, Sort Description The number of users with the profile skill.

Usage

Use the ProfileSkill object to look up the attributes of a skill that can be assigned to a user. This is a global object and is not owned by any specific user.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillFeed (API version 34.0)

Feed tracking is available for the object.

ProfileSkillHistory

History is available for tracked fields of the object.

ProfileSkillOwnerSharingRule

Sharing rules are available for the object.

ProfileSkillShare

Sharing is available for the object.

ProfileSkillEndorsement

Represents a detail relationship of ProfileSkillUser. An endorsement of a profile skill shows approval and support of another user's publicly declared skill.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the profile skill being endorsed.
ProfileSkillUserId	Type reference Properties Create, Filter, Group, Sort Description The ID of the ProfileSkillUser record that is being endorsed. This is a relationship field. Relationship Name ProfileSkillUser Relationship Type Lookup Refers To ProfileSkillUser

Field Name	Details
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The user ID of the person giving the endorsement. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

Usage

Use the ProfileSkillEndorsement object to query about a single endorsement given to a user about a specific skill. Users can't endorse themselves, they can only be endorsed by others unless they are administrators with the "Modify All Data" permission.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillEndorsementChangeEvent (API version 62.0)

Change events are available for the object.

ProfileSkillEndorsementFeed (API version 34.0)

Feed tracking is available for the object.

ProfileSkillEndorsementHistory

History is available for tracked fields of the object.

ProfileSkillShare

Represents a sharing entry on a ProfileSkill.

You can only create, edit, and delete sharing entries for standard objects whose RowCause field is set to Manual. Sharing entries for standard objects with different RowCause values are created as a result of your Salesforce org's sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren't stored at all.

Note: While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it's possible that we'll stop storing certain share records to improve performance. As a best practice, don't create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Level of access that the User or Group has to the ProfileSkill. The possible values are: • Read • Edit • All (This value is not valid for <code>create()</code> or <code>update()</code> calls.) This value must be set to an access level that is higher than the organization's default access level for ProfileSkill objects.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the parent object, if any. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To ProfileSkill
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field Name	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code>. If no value is specified, the field defaults to <code>Manual</code>. All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Values may include: <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the ProfileSkill with them. <code>Owner</code>—The User is the owner of the ProfileSkill or is in a role above the ProfileSkill owner in the role hierarchy.
UserOrGroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the User or Group that has been given access to the ProfileSkill. This is a polymorphic relationship field. Relationship Name UserOrGroup Relationship Type Lookup Refers To Group, User

Usage

This object is read only. It is visible because of constraints to the ProfileSkill object, but it is ignored and does not control which users and groups can view and edit ProfileSkill records owned by other users.

ProfileSkillUser

Represents a detail relationship of User. The object connects profile skills with users.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
EndorsementCount	Type int Properties Filter, Group, Nillable, Sort Description The number of endorsements.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the skill user.
ProfileSkillId	Type reference Properties Create, Filter, Group, Sort Description The ID of the ProfileSkill. This is a relationship field. Relationship Name ProfileSkill Relationship Type Lookup Refers To ProfileSkill
UserId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the user. This field can't be changed once it is created. This is a relationship field. Relationship Name User Relationship Type Lookup

Field Name	Details
	Refers To User

Usage

Use this object to assign specific skills to specific users. ProfileSkillUser appears on the Overview tab on the Chatter profile page. Users can only create a skill mapping for themselves, they can't create skill mappings for others unless they are administrators with the "Modify All Data" permission. Additionally, users can only edit this object if they are the context user and are not editing the `userId` field.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ProfileSkillUserFeed (API version 34.0)

Feed tracking is available for the object.

ProfileSkillUserHistory

History is available for tracked fields of the object.

ProgramRebateType

Represents a rebate structure associated with a Rebate Program. This object is available in API version 63.0 and later.

A ProgramRebateType record is created to define how benefits are calculated—such as accruals, payouts, or both—based on specified measure fields and logic.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccrualRate	Type double Properties Create, Filter, Nillable, Sort, Update Description The rate of accrual based on the value selected in the Measure Type field. For example, when the measure type is percent and you enter 10, the accrual rate is 10%.

Field	Details
AggregateObjectName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The object that stores the aggregation results.
BenefitQualifierField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The field on the aggregation object used to define thresholds for qualifying benefits (minimum or maximum).
CalcObjectId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Links to a calculation definition from the Data Processing Engine. This field is a relationship field. Relationship Name CalcObject Refers To BatchCalcJobDefinition
CalculationBasis	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the method used to calculate the rebate amount. Possible values are: • Accrual • Payout • PayoutAndAccrual—Payout and Accrual The default value is Payout.

Field	Details
CalculationMethod	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Defines how tiered rebate benefits are calculated. Possible values are: • Retrospective • Stepped The default value is Retrospective.
CalculationType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of rebate calculation logic to use. Possible values are: • AggregateBased—Aggregate Based • Custom • GrowthBased—Growth Based • PerTransaction—Per Transaction
ExecutionProcedureId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Links to business rules that define custom execution logic. This field is a relationship field. Relationship Name ExecutionProcedure Refers To ExpressionSet
FilterAction	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Logical operator to apply between filter conditions. Possible values are: • <code>AllConditionsMet</code>—All Conditions Are Met (AND) • <code>AnyConditionMet</code>—Any Condition Is Met (OR) • <code>CustomLogic</code>—Custom Condition Logic • <code>NoConditionsMet</code>—No Conditions Are Met
<code>FilterCriteria</code>	Type textarea Properties Nillable Description Holds the filter conditions in textual format. Used to define eligibility criteria for rebate qualification.
<code>FilterLogic</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Logical formula used to combine filter conditions, typically using field references and logical operators.
<code>IsIntegratable</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description When selected, allows this rebate type to be applied on transactional records such as orders or opportunities. The default value is <code>false</code>.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description Date and the timestamp when the record was last referenced by the user. Useful for user activity tracking.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description Date and the timestamp when the record was last opened or viewed. Tracks user interaction history.
MeasureField	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The aggregation object field used with measure type and benefit value to calculate the rebate amount. This is required for the Amount per Unit and Percentage of Revenue measure types.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Unique name that identifies the rebate type configuration. Used as a reference label across related components.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Identifies the user or group that owns this record. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
ProductFilterType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Specifies whether the rebate applies to included or excluded products. Possible values are: • <code>ExcludeProducts</code>—Exclude Products • <code>IncludeProducts</code>—Include Products
RebateMeasureType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the method to measure benefit payout. Possible values are: • <code>AmountperUnit</code>—Amount per Unit • <code>Custom</code> • <code>FixedAmount</code>—Fixed Amount • <code>PercentageOfRevenue</code>—Percentage of Revenue
RebateProgramId	Type reference Properties Create, Filter, Group, Sort, Update Description Links this rebate type to its parent rebate program. This field is a relationship field. Relationship Name RebateProgram Relationship Type Master-detail Refers To RebateProgram (the master object)
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specifies whether the rebate type is currently active. Possible values are: • <code>Active</code>

Field	Details
	• <code>Inactive</code> The default value is <code>Inactive</code>.
<code>UnitOfMeasureId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Identifies the unit of measure associated with the rebate type. This field is a relationship field. Relationship Name UnitOfMeasure Refers To UnitOfMeasure
<code>ValidityDuration</code>	Type int Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description Duration for which the inventory is eligible for price protection.
<code>ValidityDurationType</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Unit of time used to measure ValidityDuration. Possible values are: • <code>Days</code> • <code>Months</code> • <code>Years</code> The default value is <code>Years</code>.

Promotion

Represents a promotion for B2B or D2C stores. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Some of the fields on the Promotion object are available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
<code>AreQualItemsExclFromDiscounts</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Exclude qualifying items from discount. You can use this field to create buy-one-get-one promotions. The default value is false. This field is available in API version 56.0 and later.
<code>CurrencyIsoCode</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
<code>Description</code>	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the promotion.
<code>DiscountOrder</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether to apply discounts first to the least expensive products or to the most expensive products. Possible values are:

Field	Details
	- LeastExpensive - MostExpensive The default value is MostExpensive. This field is available in API version 56.0 and later.
DiscountRestriction	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether to restrict the products that can be discounted based on the least expensive qualifying product. Possible values are: - LeastExpensive - None The default value is None. This field is available in API version 56.0 and later.
DisplayName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Display name of the promotion.
EndTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date and time when the promotion ends.
ExclusivityType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Determines whether a promotion can be combined with other promotions. Possible values are: No - Can be combined with other promotions.

Field	Details
	<code>Class</code> - Can't be combined with a promotion of the same class (product, order, or shipment), but allows for promotions of separate classes to be combined. For example, an order discount on top of a product discount. <code>Global</code> - Only promotion that can be applied to the order, regardless of class. The default value is <code>Class</code>. This field is available in API version 58.0 and later.
<code>IsActive</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the promotion is active (true) or inactive (false). The default value is false.
<code>IsApproachingDiscountApplicable</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the promotion shows an approaching discount message. Set an approaching discount threshold value on the <code>PromotionQualifier</code> object. This field is available in API version 64.0 and later. The default value is false.
<code>IsAutomatic</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether the promotion is automatic or manual. If the promotion is automatic, it automatically applies to eligible carts with no buyer action required. If the promotion is manual, the buyer applies a coupon to redeem the promotion. The default value is false.
<code>IsCommercePromotion</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the promotion is a B2B Commerce promotion (true) or not (false).

Field	Details
	The default value is false.
IsTiered	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the promotion uses promotion tiers (true) or not (false). This value can't be changed. The default value is false. A tiered promotion can have up to 10 associated tiers. This field is available in API version 57.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced and not directly accessed.
MaximumUsageCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Maximum number of times the promotion can be applied to a cart. If left blank, the default value is 1. This field is available in API version 56.0 and later.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update

Field	Details
	Description Name of the promotion.
Objective	Type textarea Properties Create, Filter, Nillable, Sort, Update Description More information, if any, about the purpose of the promotion.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who created the promotion. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
PriorityNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Priority for the promotion. The priority determines which promotions apply first. The lower the number, the higher the priority.
QualifierCriteria	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If a promotion has multiple qualifiers, this field determines whether all qualifiers must be met or whether any must be met for the promotion to apply. Possible values are: • All

Field	Details
	Any The default value is 'All'. This field is available in API version 53.0 and later.
StartDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Date and time when the promotion begins.
TargetCriteria	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description If a promotion has multiple targets, indicates whether a cart must meet the criteria for any target or the criteria for all targets. Possible values are: - All - Any This field is available in API version 56.0 and later.
TermsAndConditions	Type textarea Properties Create, Nillable, Update Description Terms and conditions the buyer accepts before applying the promotion. This field is available in API version 53.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PromotionFeed on page 55

Feed tracking is available for the object.

PromotionHistory on page 63

History is available for tracked fields of the object.

PromotionShare on page 67

Sharing is available for the object.

SEE ALSO:

- PromotionTier

PromotionLineItemRule

Lists compound conditions about a promotion. This object is available in API version 59.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssociatedReferenceId	Type Reference Properties Create, Filter, Group, Sort Description ID of the associated reference. Relationship Name AssociatedReference Relationship Type Lookup Refers To PromotionQualifier, PromotionTarget
AssociatedType	Type Picklist

Field	Details
	Properties Create, Filter, Group, Restricted picklist, Sort Description Specifies the type of object the rule is associated with. Possible values are: - PromotionQualifier - PromotionTarget
Name	Type String Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the promotion rule.
OperatorType	Type Picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Operator type for promotion line item rule. Possible values are: - EQUAL_TO - GREATER_THAN - GREATER_THAN_OR_EQUAL_TO - LESS_THAN - LESS_THAN_OR_EQUAL_TO - NOT_EQUAL_TO The default value is EQUAL_TO.
OwnerId	Type Reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner. Relationship Name Owner Relationship Type Lookup

Field	Details
	Refers To Group, User
Type	Type Picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Specifies the type on which the rule is being applied. Possible values are: • Attribute • Price • Product • ProductCategory
TypeReferenceId	Type Reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the type. Relationship Name TypeReference Relationship Type Lookup Refers To Product2, ProductCategory
TypeValue	Type String Properties Create, Filter, Group, Nillable, Sort, Update Description Value of the type selected.

PromotionMarketSegment

Represents a market segment within B2B Commerce that promotions can be assigned to. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionMarketSegment object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the promotion segment.

Field	Details
PromotionId	Type reference Properties Create, Filter, Group, Sort Description The ID of the promotion that you want to associate with your promotion segment. This is a relationship field. Relationship Name Promotion Relationship Type Lookup Refers To Promotion
PromotionSegmentId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the promotion segment that you want to associate with. This is a relationship field. Relationship Name PromotionSegment Relationship Type Lookup Refers To PromotionSegment

PromotionQualifier

Represents the product, product category, or order that you want to target with your promotion qualifier in a B2B or D2C store. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionQualifier object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
ApproachingDiscountThreshold	Type currency Properties Create, Filter, Nillable, Sort, Update Description The amount that a customer has to reach before seeing an approaching discount message. For example, if a promotion qualifier minimum is set at \$150 and this field is set at \$50, then a customer receives a banner notification that they're approaching the discount when they have at least \$50 in their cart. This field is available in API version 64.0 and later.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
ExternalQualifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A qualifying product or product category stored outside of Salesforce. This field is available in API version 56.0 and later.

Field	Details
	 Note: This field is available through the API only.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
MinimumAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The minimum dollar amount that a buyer must purchase to qualify for the promotion.
MinimumQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description The minimum quantity that a buyer must purchase to qualify for the promotion.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Name of the promotion qualifier.
PromotionId	Type reference

Field	Details
	Properties Create, Filter, Group, Sort Description The ID of the promotion that you want to associate with your promotion qualifier. This is a relationship field. Relationship Name Promotion Relationship Type Lookup Refers To Promotion
PromotionTierId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the promotion tier associated with the qualifier. Only used with tiered promotions. This is a relationship field. This field is available in API version 57.0 and later. Relationship Name PromotionTier Relationship Type Lookup Refers To PromotionTier
QualifierId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the qualifier. This is a polymorphic relationship field. Relationship Name Qualifier Relationship Type Lookup Refers To Product2, ProductCategory

Field	Details
QualifierOperator	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Possible values are: • EQUAL_TO • NONE • NOT_EQUAL_TO
QualifierProductCategoryName	Type string Properties Filter, Group, Nillable, Sort Description The name of the product category referenced in the qualifier. This field is available in API version 55.0 and later.
QualifierProductName	Type string Properties Filter, Group, Nillable, Sort Description The name of the product referenced in the qualifier. This field is available in API version 55.0 and later.
QualifierProductSku	Type string Properties Filter, Group, Nillable, Sort Description The stock keeping unit of the product referenced in the qualifier. This field is available in API version 55.0 and later.
QualifierRuleCriteriaType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of qualifier rule criteria. Possible values are:

Field	Details
	- All - Any
QualifierType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of qualifier that you want to add to the promotion. <code>Product</code> applies the qualifier to a single product, <code>ProductCategory</code> to a predetermined group of products, and <code>TransactionTotal</code> to the entire order. Possible values are: - Product - ProductCategory - TransactionTotal

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

PromotionSegment

Represents a promotion segment, which you can assign to different stores or buyer groups, allowing them to access the promotion. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionSegment object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the promotion segment.

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of the user who created this promotion segment. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

PromotionSegmentBuyerGroup

Represents a promotion segment, associated with a buyer group, and used for B2B Commerce. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionSegmentBuyerGroup object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
BuyerGroupId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Buyer Group that you want to include in your market segment. This is a relationship field. Relationship Name BuyerGroup Relationship Type Lookup Refers To BuyerGroup
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record. This field is available in API version 53.0 and later.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed. This field is available in API version 53.0 and later.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the promotion segment.
PromotionSegmentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the promotion segment you want to associate with your buyer group. This is a relationship field. Relationship Name PromotionSegment Relationship Type Lookup Refers To PromotionSegment

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PromotionSegmentSalesStore

Represents a promotion segment, associated with a store, and used for B2B Commerce. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionSegmentSalesStore object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the promotion segment.
PromotionSegmentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the promotion segment you want to associate with your store. This is a relationship field. Relationship Name PromotionSegment Relationship Type Lookup Refers To PromotionSegment
SalesStoreId	Type reference Properties Create, Filter, Group, Sort Description The ID of the store you want to include in your promotion segment. This is a relationship field. Relationship Name SalesStore

Field	Details
	Relationship Type Lookup
	Refers To WebStore

PromotionTarget

Represents the product, product category, or order that you want to target with your promotion in a B2B Store or D2C store. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionTarget object is available only if the B2B Commerce or D2C Commerce license is enabled.

Fields

Field	Details
AdjustmentAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The promotion discount is expressed as an amount, not as a percentage.
AdjustmentPercent	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage discount of the promotion. Valid values include numbers from 1 through 100.
AdjustmentType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of adjustment discount applied to the product or group of products. Possible values are: • <code>FixedAmountOffLineItemTotal</code>—Fixed amount off the total of all line items. • <code>FixedAmountOffTransaction</code>—Fixed amount off the entire transaction. This value is available in API version 56.0 and later. • <code>FixedAmountOffUnitPrice</code>—Fixed amount off the unit price. • <code>FixedPrice</code>—Fixed price for a product. This value is available in API version 56.0 and later. • <code>TotalFixedPrice</code>—Fixed price for a set number of products. Requires a quantity limit. This value is available in API version 56.0 and later. • <code>FixedAmountOffUnitPrice</code>—Fixed amount off the unit price. • <code>PercentageDiscount</code>—Percentage discount. • <code>BonusProduct</code>—Gift product at no additional cost after qualifying purchases. This value is available in API version 64.0 and later.
CurrencyIsoCode	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
ExternalTarget	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A target product or product category stored outside of Salesforce. This field is available in API version 56.0 and later.  Note: This field is available through the API only.
IsMinItemCountRequired	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code>, the max value in the <code>RestrictionQuantity</code> field must be met before the promotion is applied. The default value is <code>false</code>. This field is available in API version 56.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.
Name	Type string

Field	Details
	Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the promotion target.
PromotionId	Type reference Properties Create, Filter, Group, Sort Description The ID of the promotion that you want to reference. This is a relationship field. Relationship Name Promotion Relationship Type Lookup Refers To Promotion
PromotionTierId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the promotion tier associated with the target. Only used with tiered promotions. This is a relationship field. This field is available in API version 57.0 and later. Relationship Name PromotionTier Relationship Type Lookup Refers To PromotionTier
RestrictionQuantity	Type double Properties Create, Filter, Nillable, Sort, Update Description Maximum number of times the discount can be applied to the target. This field is available in API version 56.0 and later.

Field	Details
TargetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the product or product category that you want to target. This is a polymorphic relationship field. Relationship Name Target Relationship Type Lookup Refers To Product2, ProductCategory
TargetOperator	Type enum Properties Create, Filter, Group, Restricted picklist, Sort, Update Description For product and category targets, specify if the qualifying product or item in the qualifying category must be in the cart to determine if the cart satisfies the promotions criteria. For example, a quantity or amount across one or more items. This field is available in API version 59.0 and later. Possible values are: • EQUAL_TO—Specifies that the qualifying product or item in the qualifying category must be in the cart. • NOT_EQUAL_TO—Specifies that the qualifying product or item in the qualifying category isn't required to be in the cart. • NONE—Specifies that none of the other possible values apply. If the target type is for an order, you must use none.
TargetProductCategoryName	Type string Properties Filter, Group, Nillable, Sort Description The name of the product category referenced in the target. This field is available in API version 55.0 and later.
TargetProductName	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The name of the product referenced in the target. This field is available in API version 55.0 and later.
TargetProductSku	Type string Properties Filter, Group, Nillable, Sort Description The stock keeping unit of the product referenced in the target. This field is available in API version 55.0 and later.
TargetRuleCriteriaType	Type enum Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Controls what promotion rules must be met for the promotion to be valid. This field is available in API version 59.0 and later. Possible values are: • ALL—Specifies that all of the promotion rules must be met. • ANY—Specifies that any of the promotion rules can be met.
TargetType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The target of the promotion. Possible values are: • Product—Applies the promotion to a single product. • ProductCategory—Applies the promotion to a group of products. • Shipping—Applies the promotion to all shipping methods on the order. • StandardShippingRate—Applies the promotion to a single shipping method on the order.

Field	Details
	Transaction—Applies the promotion to the entire order.

PromotionTier

Represents a tier of a promotion that includes multiple tiers. A promotion can have up to 10 tiers. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, it can mean that the user accessed this record or list view (<code>LastReferencedDate</code>) but didn't view it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the promotion tier.
PromotionId	Type reference Properties Create, Filter, Group, Sort Description ID of the promotion associated with the promotion tier. This field is a relationship field. Relationship Name Promotion Relationship Type Lookup Refers To Promotion
Rank	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Priority of the tier among the associated promotion's tiers. Tiers are evaluated in order from lowest to highest rank. Each tier in a promotion must have a unique rank.

Usage

Use promotion tiers with promotion qualifiers and promotion targets to create tiered promotions. Instead of associating one promotion qualifier and one promotion target with each promotion, associate one promotion qualifier and one promotion target with each promotion tier.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

PromotionTierFeed on page 55

Feed tracking is available for the object.

PromotionTierHistory on page 63

History is available for tracked fields of the object.

Prompt

Represents record details about an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Important: Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see [Guidelines for In-App Guidance in Managed Packages](#) in Salesforce Help.

For more information about creating managed packages, see [Create a First-Generation Managed Package](#).

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace for a First-Generation Managed Packages](#) and [What happens to my namespace prefix when I install a package?](#).

Fields

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the language used in the org where the in-app guidance was created.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label. Maximum of 80 characters.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can

Field	Details
	refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

PromptAction

Represents how the user interacted with the in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Fields

Field	Details
<code>LastDisplayDate</code>	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date the in-app guidance was last displayed to the user.

Field	Details
LastResult	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the last user interaction. Valid values are: • CustomAction • Dismiss • Error • Finish—(walkthroughs only) • NoAction • NotSeen • Snooze
LastResultDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Indicates the date the in-app guidance was last interacted with.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the in-app guidance.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the owner. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup

Field	Details
	Refers To Group, User
PromptVersionId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the PromptVersion object. This is a relationship field. Relationship Name PromptVersion Relationship Type Lookup Refers To PromptVersion
SnoozeUntil	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The timestamp for when the user's snooze request expires. The user won't see the prompt again until they navigate to the page after the snooze time expires.
StepCount	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the total number of steps in the walkthrough. Available in API version 49.0 and later.
StepNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10. Available in API version 49.0 and later.

Field	Details
TimesActionTaken	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of times that the user took action on the in-app guidance.
TimesDismissed	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of times that the user dismissed the in-app guidance.
TimesDisplayed	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of times that the in-app guidance was displayed to the user.
TimesSnoozed	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The total number of times the user snoozes the prompt.
UserId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the user. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

Associated Objects

This object has the following associated objects. They are available in API version 46.0 and later.

PromptActionOwnerSharingRule

Sharing rules are available for the object.

PromptActionShare

Sharing is available for the object.

PromptError

Represents the error or warning associated with the PromptAction. Available in API version 52.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Fields

Field	Details
IsError	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the in-app guidance had an error <code>true</code> or a warning <code>false</code>. The default is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the PromptError record.

Field	Details
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User or Group.
PromptActionId	Type reference Properties Create, Filter, Group, Sort, Update Description ID of the PromptAction that the PromptError is related to.
StepNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the step number that the user encountered an error or warning in a walkthrough.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the type of error or warning. Possible values are: • NoAccessToApp—A step on this walkthrough is on an app that some of your users don't have access to. • NoAccessToPage—A step on the walkthrough is on a page that some of your users don't have access to. • ReferenceElementNotFound—The target element has moved or is no longer on your page. Targeted prompts attached to unavailable elements convert to floating prompts. Check your access to the element, or enter targeting mode and reassign the targeted prompt. • Unavailable—Users tried to open this walkthrough using its URL, but it's inactive or the users aren't licensed to see it. To make it accessible to users, check its settings or activate it.

Associated Objects

This object has the following associated objects. They are available in API version 52.0 and later.

PromptErrorOwnerSharingRule

Sharing rules are available for the object.

PromptErrorShare

Sharing is available for the object.

PromptActionOwnerSharingRule

Represents a rule which determines `PromptAction` sharing access for the owners. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Fields

Field	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the access level of users for in-app guidance. Valid values are <code>Read</code> and <code>Edit</code>.
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Description of the in-app guidance. Maximum of 255 characters.

Field	Details
DeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.
GroupId	Type reference Properties Create, Filter, Group, Sort Description ID of the group whose <code>PromptAction</code> are shared.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the in-app guidance.
UserOrGroupID	Type reference Properties Create, Filter, Group, Sort Description ID of the user or group with whom <code>PromptAction</code> access is shared.

PromptActionShare

Represents a sharing entry on a prompt action record. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

You can only create, edit, and delete sharing entries for standard objects whose RowCause field is set to Manual. Sharing entries for standard objects with different RowCause values are created as a result of your Salesforce org’s sharing configuration and are read-only. For some sharing mechanisms, such as sharing sets, sharing entries aren’t stored at all.

 **Note:** While Salesforce currently maintains read-only sharing entries for multiple sharing mechanisms, it’s possible that we’ll stop storing certain share records to improve performance. As a best practice, don’t create customizations that rely on the availability of these sharing entries. Any changes to sharing behavior will be communicated before they occur.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Fields

Field	Details
AccessLevel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates the access level of users for in-app guidance. Valid values are Read, Edit, and All.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the parent.
RowCause	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Reason that this sharing entry exists. If you're creating a sharing entry, the only permitted value is <code>Manual</code> . If no value is specified, the field defaults to <code>Manual</code> . All other <code>RowCause</code> values are read-only. After the sharing entry is created, this field can't be edited. Valid values include: <code>Rule</code>—The User or Group has access via a sharing rule. <code>GuestRule</code>—The User or Group has access via a guest user sharing rule. <code>Manual</code>—The User or Group has access because a User with "All" access manually shared the prompt action with them. <code>Owner</code>—The User is the owner of the prompt action.
<code>UserOrGroupId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of the User or Group.

PromptLocalization

Represents the translated value of a label for record details about in-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see [Guidelines for In-App Guidance in Managed Packages](#) in Salesforce Help.

For more information about creating managed packages, see [Create a First-Generation Managed Package](#).

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace for a First-Generation Managed Packages](#) and [What happens to my namespace prefix when I install a package?](#).

Fields

Field	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Indicates the language used in the org where the in-app guidance was created.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the in-app guidance.
Value	Type textarea Properties Create, Filter, Sort, Update

Field	Details
	Description The actual translated record details for the in-app guidance.

PromptVersion

Represents an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Prompts and walkthroughs help users discover your products and services, adopt your processes, or learn how to use a new feature. Add prompts and walkthroughs in Lightning Experience pages or apps or in supported Experience Cloud site pages. Add an optional action button or link that goes to a URL. Track views, action button clicks, and walkthrough completions.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, see [Considerations for Creating In-App Guidance](#) and [Permissions for Creating and Accessing In-App Guidance](#) in *Salesforce Help* for permissions.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see [Guidelines for In-App Guidance in Managed Packages](#) in *Salesforce Help*.

For more information about creating managed packages, see [Create a First-Generation Managed Package](#).

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace for a First-Generation Managed Packages](#) and [What happens to my namespace prefix when I install a package?](#).

Fields

Field	Details
ActionButtonLabel	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Label for the action button or link. Maximum of 25 characters. For a walkthrough, specify this value on the last step.

Field	Details
ActionButtonLink	Type url Properties Create, Filter, Nillable, Sort, Update Description URL for the action button or link. Maximum of 1,000 characters. You can't use the GROUP BY option in a SOQL query for this field. For a walkthrough, specify this value on the last step.
Body	Type textarea Properties Create, Update Description Body content. In API version 60.0 and later, enter up to 4,000 characters for all prompt types. In earlier API versions, enter up to 240 characters for floating prompts and targeted prompts. Enter up to 4,000 characters for docked prompts. For docked prompts, the maximum characters include HTML markup, not just readable text.
DelayDays	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of days between occurrences. For a walkthrough, specify this value on the first step.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description. Maximum of 255 characters.
DismissButtonLabel	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Label for the dismiss button of a floating or targeted prompt. Maximum of 15 characters.

Field	Details
DisplayPosition	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The position of a floating prompt on the page. Valid values are: • TopLeft • TopCenter • TopRight • MiddleLeft • MiddleCenter • MiddleRight • BottomLeft • BottomCenter • BottomRight
DisplayType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of prompt. Valid values are: • DockedComposer—A docked prompt • FloatingPanel—A floating prompt • Targeted—A targeted prompt. Available in API version 52.0 and later.
ElementRelativePosition	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The location of a targeted prompt relative to the element. This field is available in API version 52.0 and later. Valid values are: • BottomCenter • BottomLeft • BottomRight • LeftBottom • LeftCenter • LeftTop

Field	Details
	• RightBottom • RightCenter • RightTop • TopCenter • TopLeft • TopRight
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date to stop showing the in-app guidance. For a walkthrough, specify this value on the first step.
Experience	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description This field corresponds to the Environment picklist in In-App Guidance Builder. Available in version 60.0 and later. Possible values are: • Lightning—Default. The in-app guidance is used in a Lightning Experience app or page. • Site—The in-app guidance is used in a supported Experience Cloud site page.
ExperienceContextId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required if the value of Experience is Site. The ID of the Experience Cloud site context associated with the in-app guidance prompt. Available in version 60.0 and later. This field is a polymorphic relationship field. Relationship Name ExperienceContext Relationship Type Lookup Refers To Site

Field	Details
Header	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Label for the header of a docked prompt. This value is the label contained in the window's browser bar. Maximum of 36 characters.
ImageAltText	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the alt text of an image. Required if <code>ImageLocation</code> or <code>ImageID</code> is specified.
ImageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the ContentAsset that holds the image. Required if <code>ImageLocation</code> or <code>ImageAltText</code> is specified. This is a relationship field. Relationship Name Image Relationship Type Lookup Refers To ContentAsset
ImageLocation	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates the location of the image in relation to the body text. Required if <code>ImageID</code> or <code>ImageAltText</code> is specified. Valid values are: • Top • Bottom • Right, which is for floating or targeted prompts only • Left, which is for floating or targeted prompts only

Field	Details
IndexWithIsPublished	Type string Properties Filter, idLookup, Nillable, Sort Description Used by Salesforce for efficient querying.
IndexWithoutIsPublished	Type string Properties Filter, idLookup, Nillable, Sort Description Used by Salesforce for efficient querying.
IsPublished	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the in-app guidance is active (<code>true</code>) or not (<code>false</code>).
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label. Maximum of 80 characters.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the in-app guidance. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Prompt

Field	Details
PublishedByUserId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the user who activated the in-app guidance. If the in-app guidance is part of a package, this value is the user who installed the package. This is a relationship field. Relationship Name PublishedByUser Relationship Type Lookup Refers To User
PublishedDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the date the in-app guidance was activated. If installed from a package, this value is the date when the package was installed. For walkthroughs, this field can only be specified on the first step.
ReferenceElementContext	Type textarea Properties Create, Nillable, Update Description Used by Salesforce to identify the element that the targeted prompt is associated with. Available in API version 52.0 and later.
ShouldDisplayActionButton	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether an action button or link is included (<code>true</code>) or not (<code>false</code>).
ShouldIgnoreGlobalDelay	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the in-app guidance ignores the global time delay and instead shows on page load (<code>true</code>) or not (<code>false</code>). This field is available in API version 48.0 and later.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Indicates the date to start showing the in-app guidance. For a walkthrough, specify this value on the first step. In API version 48.0 and earlier, this field is required.
StepNumber	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Required for walkthroughs only. Indicates the number of the last step the user viewed or interacted with in a walkthrough. Include up to 10 steps. Numbers must be consecutive without repeated or skipped numbers. Available in API version 49.0 and later.
TargetAppDeveloperName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The app's developer name where the in-app guidance appears. Deprecated in API version 51.0 and later.
TargetAppNamespacePrefix	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The app's namespace prefix where the in-app guidance appears. This value must match the target app's <code>NamespacePrefix</code> in the org that the package is being installed into. Maximum of 15 characters. Deprecated in API version 51.0 and later.

Field	Details
TargetPageKey1	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. Used by Salesforce to identity the prompt's page location along with targetPageKey2, targetPageKey3, targetPageKey4, and targetPageType.
TargetPageKey1Ref	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Used by Salesforce to identify the prompt's page location along with TargetPageKey2, TargetPageKey3, TargetPageKey4, and TargetPageType.
TargetPageKey2	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Used by Salesforce to identify the prompt's page location along with TargetPageKey1, TargetPageKey3, TargetPageKey4, and TargetPageType.
TargetPageKey3	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Used by Salesforce to identify the prompt's page location along with TargetPageKey1, TargetPageKey2, TargetPageKey4, and TargetPageType.
TargetPageKey4	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Used by Salesforce to identify the page location along with TargetPageKey1, TargetPageKey2, TargetPageKey3, and TargetPageType. This field is available in API version 53.0 and later.

Field	Details
TargetPageType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The type of page where the in-app guidance appears.
TargetRecordType	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Used by Salesforce to determine if in-app guidance is specific to a record type. This field is available in API version 53.0 and later. Relationship Name TargetRecordType Relationship Type Lookup Refers To RecordType
ThemeColor	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates which custom theme color is applied to the in-app guidance. Required if <code>ThemeSaturation</code> is specified. For a walkthrough, specify this value on the first step. Valid values are: • <code>Theme1</code>—derived from the current brand color • <code>Theme2</code>—derived from the current page background color • <code>Theme3</code>—derived from the current global header color • <code>Theme4</code>—derived from the current app theme color
ThemeSaturation	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description Indicates which color value, or saturation, is applied to the in-app guidance that has a custom theme color. Required if <code>ThemeColor</code> is specified. For a walkthrough, specify this value on the first step. Valid values are: • <code>Dark</code> • <code>Light</code>
<code>TimesToDisplay</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Required if recurrences are scheduled. The maximum number of times to show the in-app guidance. Salesforce detects whether the user interacts with the in-app guidance, then determines whether to show the in-app guidance again or cancel scheduled recurrences. Maximum value of 30. For a walkthrough, specify this value on the first step.
<code>Title</code>	Type string Properties Create, Filter, Group, Sort, Update Description Required. The label for the title. Maximum of 36 characters.
<code>UserAccess</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates which permissions can see the in-app guidance. Valid values are: • <code>Everyone</code>, which indicates that there's no permission restrictions • <code>SpecificPermissions</code>, which indicates that only users with all the specific user permissions specified can see the in-app guidance In API version 48.0 and earlier, this field is required.
<code>UserProfileAccess</code>	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates which profiles can see the in-app guidance. This field is available in API version 48.0 and later. Valid values are:

Field	Details
	• <code>Everyone</code>, which indicates that there are no profile restrictions • <code>SpecificProfiles</code>, which indicates that users with any of the specified user profiles can see the in-app guidance
<code>VersionNumber</code>	Type int Properties Create, Filter, Group, Sort, Update Description Required. The number remains 1 since multiple versions aren't saved in the org.
<code>VideoLink</code>	Type url Properties Create, Filter, Nillable, Sort, Update Description The embed URL for a video in a docked prompt. Maximum of 1,000 characters. You can specify this field or the <code>image</code> field, but not both. This field is available in API version 48.0 and later. See Considerations for Creating In-App Guidance.

PromptVersionLocalization

Represents the translated value of a label for-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To add, edit, manage, and view prompts and walkthroughs in Lightning Experience or in Experience Cloud sites, multiple permissions are required. See [Permissions for Creating and Accessing In-App Guidance](#) in Salesforce Help.

Prompts and Walkthroughs in Managed Packages

For considerations about including in-app guidance in a managed package, see [Guidelines for In-App Guidance in Managed Packages](#) in Salesforce Help.

For more information about creating managed packages, see [Create a First-Generation Managed Package](#).

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace for a First-Generation Managed Packages](#) and [What happens to my namespace prefix when I install a package?](#).

Fields

Field	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Indicates the language used in the org where the in-app guidance was created.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Sort Description ID of the in-app guidance.
Value	Type textarea Properties Create, Filter, Sort, Update

Field	Details
	Description The actual translated label of the in-app guidance.

Prospect

Represents a prospect. A prospect is an individual who has shared contact information, but isn't yet qualified. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Address	Type address Properties Filter, Nillable Description Street address of the prospect. Up to 255 characters are allowed.
AnnualRevenue	Type currency Properties Create, Filter, Nillable, Sort, Update Description The prospect company's yearly revenue.
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City that's included in the prospect's address.
Company	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's company.
ConvertedAccountId	Type reference Properties Filter, Group, Nillable, Sort Description Object reference ID that points to the account into which the prospect converted. This is a relationship field. Relationship Name ConvertedAccount Refers To Account
ConvertedContactId	Type reference Properties Filter, Group, Nillable, Sort Description Object reference ID that points to the contact into which the prospect converted. This is a relationship field. Relationship Name ConvertedContact Refers To Contact
ConvertedDate	Type date Properties Filter, Group, Nillable, Sort Description Date on which this prospect was converted.
ConvertedLeadId	Type reference Properties Filter, Group, Nillable, Sort

Field	Details
	Description Object reference ID that points to the lead into which the prospect has been converted. This is a relationship field. This field is a relationship field. Relationship Name ConvertedLead Refers To Lead
ConvertedOpportunityId	Type reference Properties Filter, Group, Nillable, Sort Description Object reference ID that points to the opportunity into which the prospect has been converted. This is a relationship field. Relationship Name ConvertedOpportunity Refers To Opportunity
Country	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The Prospect's country.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.
Description	Type textarea Properties Create, Nillable, Update

Field	Details
	Description The prospect's description.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's email address.
FirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's first name. Up to 40 characters allowed.
GenderIdentity	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's self-identified experience of their gender, which does or doesn't correspond to the prospect's designated sex at birth.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Accuracy level of the geocode for the address. For details on geolocation compound fields, see Geolocation Compound Field on page 18.
Industry	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Primary business of the prospect's company
IsConverted	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether the prospect has been converted (<code>true</code>) or not (<code>false</code>). Label is Converted.
LastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Required. The Last name of the prospect. Up to 80 characters are allowed.
Latitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations on page 19.
LeadSource	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The origin or source of the lead.
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations on page 19.
Name	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description Concatenation of <code>FirstName</code> , <code>MiddleName</code> , <code>LastName</code> , and <code>Suffix</code> up to 203 characters, including whitespaces.
<code>NumberOfEmployees</code>	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number of employees at the prospect's company. Label is Employees .
<code>Phone</code>	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's phone number.
<code>PostalCode</code>	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal code that's included in the prospect's address. Label is Zip/Postal Code .
<code>ProspectRecordName</code>	Type string Properties Filter, Group, idLookup, Sort Description The name of the prospect record used for managing prospects.
<code>ProspectStatus</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The status of the prospect. Possible values are: • Contacted • New

Field	Details
	• Nurturing • Qualified • Unqualified The default value is New.
Salutation	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's preferred title. Possible values are: • Dr . • Mr . • Mrs . • Ms . • Mx . • Prof .
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State that's included in the prospect's address.
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street number or name that's included in the prospect's address.
Title	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The prospect's business title, such as CFO or CEO. The maximum size is 128 characters. When converting a prospect to a person account, the conversion fails if the prospect Title field contains more than 80 characters.

ProspectingAgentDataSource

For internal use only.

ProspectingAgentRcmdTarget

Represents prospecting information suggested by generative AI. This object is available in API version 66.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available if Agentforce Prospecting is enabled in your org and your org has an Agentforce for Sales or an Agentforce for an Industry add-on license. To access this object, you need the Sales Agentic Prospecting Manager user permission.

Fields

Field	Details
ExpirationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date the recommendation expires, after which the recommendation is automatically deleted.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Required. The ID associated with the owner of the AI-generated recommendation. The owner can be an individual user or a list. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User

Field	Details
Rationale	Type textarea Properties Create, Nillable Description The explanation of why the agent recommended the target contact or lead. The rationale provides context to guide users in their decision making.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The status of the AI-generated recommendation. Possible values are: • Accepted • New – Default • Rejected
TargetId	Type reference Properties Create, Filter, Group, Nillable, Sort Description Required. The ID associated with the contact or lead recommended by the AI agent. This field is a polymorphic relationship field. Relationship Name Target Refers To Contact, Lead

ProspectingAgentSpec

For internal use only.

ProspectingAgentSpecParm

For internal use only.

ProspectingAgentUserSpec

For internal use only.

ProrationPolicy

Defines how the price of a subscription is divided into time periods and how the price is calculated for each time period. This object is available in API version 55.0 and later.

The proration policy defines whether partial periods are allowed and how remainder amounts are handled.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Special Access Rules

This object is available when Subscription Management is enabled.

Fields

Field	Details
<code>ArePartialPeriodsAllowed</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort Description Indicates whether a subscription can be canceled partway through a period. Set the value to <code>True</code> if a subscription can be canceled partway through a period. Otherwise, set the value to <code>false</code>. For example, if the proration period is monthly and this field is <code>true</code>, then customers can cancel a subscription partway through the month. If the proration period is monthly and this field is <code>false</code>, then the subscription is canceled at the end of the current month. The default value is <code>false</code>.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.

Field	Details
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list <code>viewLastReferencedDate</code> but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort Description The name of the proration policy.
ProrationPolicyType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of proration policy. Possible values are: • <code>StandardTimePeriods</code>—Indicates that the proration policy divides the subscription into similar time periods, and prorates the subscription using the time periods. For example, a monthly subscription that's subscribed to for 12 months for a total amount of \$120 is prorated as \$10 per month.
RemainderStrategy	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Indicates how the leftover amount from the price calculation is allocated. For example, if the total amount is \$100 and the subscription has 12 periods, the price per period is \$8.33, with \$0.04 remaining. To indicate that the \$0.04 is included in the first period, use the value <code>AddToFirst</code>. To indicate that the \$0.04 is included in the final period, use the value <code>AddToLast</code>. Possible values are: • <code>AddToFirst</code>—Add the remaining amount to the first period. • <code>AddToLast</code>—Add the remaining amount to the last period.

PublicComplaint

Represents the complaints submitted by public users. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Fields added in API version 58.0 are available if the add-on license for Financial Services Cloud is enabled.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the Account associated with this complaint. This field is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
BusinessAddress	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The address of the business.
BusinessName	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The name of the business.
CauseSubtype	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The subtype of complaint cause. This field is available in API version 58.0 and later. Possible values are: Misleading advertisement or documentation
CauseType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The type of complaint cause. This field is available in API version 58.0 and later. Possible values are: Product Communication
Comments	Type textarea Properties Create, Nillable, Update Description Additional details about the complaint. This field is available in API version 51.0 and later.
CompensationAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description Any amount of money offered to resolve the complaint. This field is available in API version 58.0 and later.
ComplaintCaseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The ID of the related Case. This field is available in API version 58.0 and later. This field is a relationship field. Relationship Name ComplaintCase Relationship Type Lookup Refers To Case
ComplaintCaseStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Sort Description The status of the related Case. This field is available in API version 58.0 and later. Possible values are: • Closed • Escalated • In Progress • Merged • New • On Hold • Response Received • Waiting for Customer • Working The default value is New.
ComplaintSubType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The subtype of complaint. All values except <code>Fire Safety</code> are available in API version 58.0 and later. Possible values are: • Account Opening/Closure • Amount Not Dispensed • Attempts to Collect Debt not Owed

Field	Details
	• Auto Debit Mandate • Communication Tactics • Credit Limit Changed • Credit Report / Credit Score • Delays / Timescales • Disputes over sums/charges • Errors / not following instructions • Fire Safety • Fraud Handling • Inaccessible ATMs • Inaccessible Branch Entrances • Inaccessible Mobile banking features • Inaccessible Website • Misleading Advertising • Mobile Banking - Features or Functionality • No Written Notification About Debt • Online Banking - Features or Functionality • Other General Admin/Customer Service • Others • Problem when Making Payments • Product Disclosure Information • Product Performance/Features • Unauthorised Transaction(s) • Unclear Arrangement • Unclear Guidance • Unsuitable Advice
ComplaintSummary	Type textarea Properties Create, Nillable, Update Description The summary of customer complaints and related cases. This field is available in API version 62.0 and later.
ComplaintType	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The type of complaint. All values except <code>Safety</code> are available in API version 58.0 and later. Possible values are: • <code>Accessibility Issues</code> • <code>Advising, Selling and Arranging</code> • <code>Digital or Technology</code> • <code>Financial Hardship or Collections</code> • <code>General Admin/ Customer Service</code> • <code>Information, sums/ charges or Product Performance</code> • <code>Lending / Credit</code> • <code>Marketing or Corporate Communications</code> • <code>Others</code> • <code>Safety</code> • <code>Transaction Related</code>
Description	Type textarea Properties Create, Filter, Nillable, Sort, Update Description A description of the complaint.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description The email of the complainant.
EscalationCause	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The reason the complaint was escalated. This field is available in API version 58.0 and later. Possible values are: • <code>Alleged ADA Violation</code> • <code>Alleged Discrimination</code> • <code>Alleged MLA Violation</code>

Field	Details
	• Alleged SCRA Violation • Alleged UDAAP Violation • Consumer Protection Agency Involvement • Lawsuit Filed • Media Involvement • None • Received by Executive Leadership The default is None.
FirstName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The given name of the complainant.
IncidentDate	Type date Properties Create, Filter, Group, Sort, Update Description The date of the incident. The default is the date this record was created, but this field is editable.
IsComplainantAuthorized	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Whether the person who filed the complaint is an authorized representative of the Account. This field is available in API version 58.0 and later. The default value is <code>false</code>.
IsReporterConfidential	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The reporter's request for confidentiality. The default value is <code>false</code>.

Field	Details
LastName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The family name of the complainant.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, possibly the user only accessed this record or list view (<code>LastReferencedDate</code>) but didn't view it.
MobileNumber	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description The mobile number of the complainant.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the complaint.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the complaint owner. This field is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
Priority	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The priority of the complaint. Possible values are: • Critical • High • Low • Medium The default value is Medium.
ProductType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The product that the complaint is about. This field is available in API version 58.0 and later. Possible values are: • ATM / debit card • Credit Card or Prepaid Card • Insurance • Investments • Merchant Services • Mobile / electronic banking • Money transfers, virtual currency, and money services • Mortgage / Home Finance • Other

Field	Details
	• Personal Loan / other loans • Vehicle loan or lease
ReceivedDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date the complaint was received. This field is available in API version 58.0 and later.
ReferenceRecordId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset, vehicle, or financial account that's associated with the public complaint. This field is available in API version 64.0 and later with Automotive Cloud. This field is a relationship field. Relationship Name ReferenceRecord Relationship Type Lookup Refers To Financial Account, Asset, Vehicle, Product2
ReporterAddress	Type textarea Properties Create, Filter, Nillable, Sort, Update Description The address of the reporter for further communication.
ReporterCategory	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description Role of the reporter in the organization. Possible values are: • Childcare Providers • Healthcare worker

Field	Details
	• Law Enforcement • Medical Examiners • Mental Health Professionals • Other • School Personnel • Social Worker The default value is School Personnel.
ReporterOrganization	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The organization the reporter is part of.
ShouldInclInRegulatoryRpt	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Whether this complaint must be included in a regulatory report. This field is available in API version 58.0 and later. The default value is false.
SourceType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The source of the complaint. This field is available in API version 58.0 and later. Possible values are: • Branch • Consumer Protection Agency • Contact Centre • Mobile App • Regulatory Agency • Social Media • Web Chat

Field	Details
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description The status of the complaint. Possible values are: • In Review • Resolved • Submitted The default value is Submitted.
Subject	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Subject of the complaint. This field is available in API version 51.0 and later.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[PublicComplaintFeed](#) on page 55

Feed tracking is available for the object.

[PublicComplaintHistory](#) on page 63

History is available for tracked fields of the object.

[PublicComplaintOwnerSharingRule](#) on page 65

Sharing rules are available for the object.

[PublicComplaintShare](#) on page 67

Sharing is available for the object.

PurchaseQuantityRule

Represents a rule that restricts the quantity of a product that can be purchased. The rule can be an increment, minimum, or maximum rule. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `PurchaseQuantityRule` object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The ISO code for the currency that's specified on the buyer's account. Default value is <code>USD</code>. Possible values are: • <code>EUR</code>—Euro • <code>USD</code>—U.S. Dollar
Increment	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Quantity of product that can be added with each increase.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The timestamp when the current user last viewed this record or list view. If this value is null, and <code>LastReferenceDate</code> is not null, the user accessed this record or list view indirectly.
Maximum	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Maximum quantity that can be purchased.
Minimum	Type double Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description Minimum quantity that can be purchased.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Name of the purchase quantity rule.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the creator of this object. This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User

PushTopic

Represents a query that is the basis for notifying Streaming API clients of changes to records in an org. This object is available in API version 21.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available only if Streaming API is enabled for your org.
- Users with the Create permission can create this record.
- To receive notifications, users must have read access on both the object in the PushTopic query and the PushTopic itself.

Fields

Field	Details
ApiVersion	Type double Properties Create, Filter, Sort, Update Description Required. API version to use for executing the query specified in <code>Query</code>. It must be an API version greater than 20.0. If your query applies to a custom object from a package, this value must match the package's <code>ApiVersion</code>. Example value: 66.0
Description	Type string Properties Create, Filter, Nillable, Sort, Update Description Description of the PushTopic. Limit: 400 characters
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the record currently counts towards the organization's allocation.

Field	Details
Name	Type string Properties Create, Filter, Group, Sort, Update Description Required. Descriptive name of the PushTopic, such as <code>MyNewCases</code> or <code>TeamUpdatedContacts</code>. Limit: 25 characters. This value identifies the channel and must be unique.
NotifyForFields	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Specifies which fields are evaluated to generate a notification. Possible values are: • All • Referenced (default) • Select • Where
NotifyForOperationCreate	Type boolean Properties Create, Filter, Update Description <code>true</code> if a create operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. This field is available in API version 29.0 and later.
NotifyForOperationDelete	Type boolean Properties Create, Filter, Update Description <code>true</code> if a delete operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. Clients must connect using the <code>cometd/29.0</code> (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.
NotifyForOperationUndelete	Type boolean

Field	Details
	Properties Create, Filter, Update Description <code>true</code> if an undelete operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. Clients must connect using the <code>cometd/29.0</code> (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.
<code>NotifyForOperationUpdate</code>	Type boolean Properties Create, Filter, Update Description <code>true</code> if an update operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. This field is available in API version 29.0 and later.
<code>NotifyForOperations</code>	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Specifies which record events may generate a notification. In API version 29.0 and later, this field is read-only, and doesn't contain information about delete and undelete events. Use <code>NotifyForOperationCreate</code>, <code>NotifyForOperationDelete</code>, <code>NotifyForOperationUndelete</code> and <code>NotifyForOperationUpdate</code> to specify which record events should generate a notification. Possible values are: • All (default) • Create • Extended • Update A value of <code>Extended</code> means that neither create or update operations are set to generate events.
<code>Query</code>	Type string Properties Create, Filter, Sort, Update Description Required. The SOQL query statement that determines which record changes trigger events to be sent to the channel.

Field	Details
	Limit: 1,300 characters

Usage

The PushTopic defines when notifications are generated in the channel. Determine which fields to configure by checking out these links in the *Streaming API Developer Guide*.

- [PushTopic Queries](#)
- [Events](#)
- [Notifications](#)

PushUpgradeCustomization

Customized push upgrades allow a package subscriber to block push upgrades to their org. Package developers control which subscribers can opt into customized push upgrades. Each push upgrade customization maps to a specific package and to a specific subscriber org. This object is available in API version 60.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CustomUpgradeType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The type of push upgrade customization. Possible values are: • <code>BlockedBySubscriber</code>—Blocked By Subscriber • <code>None</code> The default value is <code>None</code>.

Field	Details
HasRestrictionEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the subscriber org has blocked push upgrades. The default value is <code>false</code>.
IsCustomUpgradeAllowed	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the package developer has allowed a subscriber to opt into customized push upgrades. The default value is <code>false</code>.
IsRestrictionOverridden	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether customized push upgrades have been overridden by Salesforce Customer Support for the subscriber org. The default value is <code>false</code>.

QueuedExecutionEventLog

Queued Execution events contain details about queued executions—for example, batch Apex. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DB_CPU_TIME. Compare this field to CPU_TIME to determine whether performance issues are occurring in the database layer or in your own code.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.

Field	Details
RequestStatus	Type string Properties Filter, Group, Nillable, Sort Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT.

Field	Details
	For example: 20130715233322.670.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site.

Field	Details
	• SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

QueueRoutingConfig

Represents the settings that determine how work items are routed to agents. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
CapacityPercentage	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel. Voice calls must have a capacity percentage of <code>100</code>. If an agent receives a voice call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%. This field is available in API version 33.0 and later.
CapacityWeight	Type double Properties Create, Filter, Nillable, Sort, Update Description The amount of an agent's capacity for work items that's consumed by a work item from this service channel.

Field	Details
	For example, if an agent has a capacity of 6, and cases are assigned a capacity weight of 2, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items. Voice calls must use the entire capacity weight. This field is available in API version 33.0 and later.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
DropAdditionalSkillsTimeout	Type int Properties Create, Filter, Group Nillable, Sort, Update Description The number of seconds to wait before a skill marked as Additional Skill is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.
IsAttributeBased	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this routing is attribute-based. Available in API version 45.0 and later.
Language	Type picklist

Field	Details
	Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The language of the presence status.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label of the presence status.
OverflowAssigneeId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the user or queue that's set as the Overflow Assignee.
PausedCapacityPercentage	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage of an agent's capacity for work items that's consumed by a paused work item from this service channel. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only.
PausedCapacityWeight	Type double Properties Create, Filter, Nillable, Sort, Update Description The amount of an agent's capacity for work items that's consumed by a paused work item from this service channel. The paused capacity feature is available with status-based capacity and Enhanced Omni-Channel only.
PushTimeout	Type int Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The number of seconds set for push timeout. 0 is returned when push timeout isn't enabled. Available in API version 36.0 and later.
RoutingModel	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The routing type that determines how work items are routed (pushed) to agents. Possible values are <code>Least Active</code> and <code>Most Available</code> .
RoutingPriority	Type int Properties Create, Filter, Group, Sort, Update Description The priority in which work items from the service channels that are related to this routing configuration are routed to agents. Work items from routing configurations that have lower priority values (for example, <code>0</code>) are routed to agents first.
ServiceChannelId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the service channel that's associated with this configuration. This field is available in API version 32.0 and earlier.

Question

Represents a question in a zone that users can view and reply to.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available if the Answers permission and AnswersEnabled preference or PortalFeed permission and PortalFeedEnabled preference are enabled in your org.

Fields

Field	Details
BestReplyId	Type reference Properties Filter, Group, Nillable, Sort, Update Description The ID of the reply that has been identified as the best answer to the question. Use the user interface to identify the best answer for a question.
BestReplySelectedById	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user who selected the best answer to the question. This field is available in API version 24.0 and later. In API version 24.0 through version 29.0, you must update this field using the UI. In API version 30.0 and later, you can update this field using the API.
Body	Type textarea Properties Create, Nillable, Update Description Description of the question.
CommunityId	Type reference Properties Create, Filter, Group, Sort Description The zone ID associated with the question. After you create a question, you can't change the zone ID associated with that question.
CreatorFullPhotoUrl	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorName	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
HasSingleFieldForContent	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the content of a Chatter Answers question is: • Included in only one field: <code>Title</code> if the content is unformatted and less than 255 characters; or <code>Body</code> if the content is formatted or more than 255 characters (<code>true</code>) • Included in two fields: <code>Title</code> and <code>Body</code> (<code>false</code>) This field also determines if content displays in one or two fields in Chatter Answers question feeds. This field is available in API version 25.0 and later.
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update

Field	Details
	Description The timestamp for when the current user last viewed a record related to this record.
LastReplyDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time the last reply (child Reply object) was posted.
LastReplyId	Type reference Properties Filter, Group, Nillable, Sort Description Read only. The ID of the last reply (child Reply object) posted to the question.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MostReportAbusesOnReply	Type int Properties Filter, Group, Nillable, Sort Description The most number of user-reported abuses on a Reply associated with the question. This field is available in API version 24.0 and later.
NumReplies	Type int Properties Filter, Group, Nillable, Sort Description The number of replies (child Reply object) that users have submitted for the question.

Field	Details
NumReportAbuses	Type int Properties Filter, Group, Nillable, Sort Description Represents the number of user-reported abuses on the question. This field is available in API version 24.0 and later.
NumSubscriptions	Type int Properties Filter, Group, Nillable, Sort Description Represents the number of users following the question. This field is available in API version 24.0 and later.
Origin	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description The source of the question, such as <code>Chatter Answers</code>. This field is available in API version 24.0 and later.
Title	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The descriptive title of the question.
UpVotes	Type int Properties Filter, Group, Nillable, Sort Description The total number of up votes for the question.
VoteScore	Type double

Field	Details
	Properties Filter, Nillable, Sort
	Description The internal score of the question, used to sort questions and articles on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself doesn't display in the application user interface.
	 Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.

Usage

Use this object to track questions in a zone.

QuestionDataCategorySelection

A data category selection represents a data category that classifies a question.

This object can be used to associate a question with a data category from a data category group or to query the categorization for a question.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To create, read or update data category selection, you must have create, read or update permission on the categorized question. Users who can update question can also delete its category selection. Users who can create questions can only select categories visible to their role.

Fields

Field Name	Details
DataCategoryGroupName	Type DataCategoryGroupReference
	Properties Create
	Description Unique name of the data category group which has a category associated with the question.

Field Name	Details
DataCategoryName	Type DataCategoryGroupReference Properties Create Description Unique name of the data category associated with the question.
ParentId	Type reference Properties Create, Filter Description ID of the question associated with the data category selection.

Usage

Every question can be categorized in a data category. You can use the QuestionDataCategorySelection object to query and manage question categorization. Client applications can create categorization for a question. They can also delete, query, and retrieve question categorization.

Warning: Even though the API lets you select more than one category for QuestionDataCategorySelection, the Answers tab only supports one data category selection for questions. Selecting multiple categories through QuestionDataCategorySelection may result in unexpected behavior in the Answers tab, such as losing your multiple selections. You should only select one data category when using QuestionDataCategorySelection.

Sample Code—Java

In the following example, the `selectCategory` method adds a category to a question data category selection. The `retrieveCategorySelections` method returns all the categories from a question data category selection.

```
public void selectCategory(ID parentId, String categoryGroupName, String categoryName) {
    try {
        QuestionDataCategorySelection categorySelection = new
QuestionDataCategorySelection();

        categorySelection.setParentId(parentId);
        categorySelection.setDataCategoryGroupName(categoryGroupName);
        categorySelection.setDataCategoryName(categoryName);
        binding.create(new SObject[] {categorySelection});
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }
}

public String[] retrieveCategorySelections(String parentId) {
    QueryResult qr = null;
```

```
try {
    qr = binding.query("SELECT DataCategoryName FROM QuestionDataCategorySelection
WHERE Id = '" + parentId + "'");
} catch (RemoteException e) {
    System.out.println("An unexpected error has occurred." + e.getMessage());
}

String[] categoryNames = new String[qr.getRecords().length];
for (int index = 0; index < qr.getRecords().length; index++) {
    categoryNames[index] =
((QuestionDataCategorySelection)qr.getRecords()[index]).getDataCategoryName();
}

return categoryNames;
}
```

Salesforce Knowledge uses a similar object for article data category selection. See [Article Type __DataCategorySelection](#) [__DataCategorySelection](#) for SOQL examples using this object.

SEE ALSO:
[Article Type __DataCategorySelection](#) [__DataCategorySelection](#)

QuestionReportAbuse

Represents a user-reported abuse on a Question in a Chatter Answers zone. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the Question from which the user reported abuse.
QuestionId	Type reference Properties Create, Filter, Group, Sort

Field	Details
	Description The ID of the Question from which the user reported abuse.
Reason	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The reason the user reported abuse on the Question, such as Spam, Hateful, or Inappropriate.

Usage

Use this object to track user-reported abuse on questions created in a Chatter Answers zone.

QuestionSubscription

Represents a subscription for a user following a Question. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommunityId	Type reference Properties Filter, Group, Nillable, Sort Description Required. ID of the zone associated with the Question the user is following. This field can't be updated.
Name	Type string Properties Autonumber, Defaulted on create, Filter, Sort

Field	Details
	Description The name of the question subscription.
QuestionCreatedDate	Type dateTime Properties Filter, Nillable, Sort Description Required. Creation date of the Question which the user is following. This field can't be updated.
QuestionId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the Question which the user is following. This field can't be updated.
SubscriberId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. ID of the User who is following the Question. This field can't be updated.

Usage

Things to consider when following a Question:

- A user can only follow questions that they have permission to view.
- Administrators and users with the “Modify All Data” permission can configure other users to follow questions that the other user has read access to.
- Administrators and users with the “Modify All Data” permission can configure users to stop following questions.

Queries on QuestionSubscription:

- Users with the “Read” permission on Question can see which questions other users are following.
- A query must include a LIMIT clause and the limit can't exceed 1,000.
- A query using a WHERE clause can only filter by fields on Question.

QueueSubject

Represents the mapping between a queue Group and the types associated with the queue, including custom objects.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

A queue is a Group whose `Type` is `Queue`. To create a Group, you must have the Manage Users permission.

Fields

Field	Details
<code>QueueId</code>	Type reference Properties Create, Filter, Group, Sort Description The ID of a queue. This field is a relationship field. Relationship Name Queue Relationship Type Lookup Refers To Group
<code>SubjectType</code>	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description A list of object types that can be associated with the queue specified by the <code>QueueId</code>.

Usage

Use this object to associate a queue with the `sObject` that can be associated with the queue, including custom objects.

Warning: You can't update or insert more than 18 queues at once when using the Bulk API.

SEE ALSO:

[Overview of Salesforce Objects and Fields](#)

QuickText

This object stores a snippet of text that allows users to send a quick response to a customer. Use quick text to create greetings, answers to common questions, short notes, and more. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update Description A customizable picklist that can be used to group multiple related quick text records together
Channel	Type multipicklist Properties Create, Defaulted on create, Filter, Nillable, Update Description A multi-select picklist that can be used to specify where specific quick text messages are available, such as in Chat or in the Email publisher in Case Feed.
FolderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Returns the ID of the folder that contains the quick text. Available in API version 44.0 and later. This is a relationship field. Relationship Name Folder Relationship Type Lookup

Field Name	Details
	Refers To Folder
FolderName	Type string Properties Filter, Nillable, Sort Description Name of the folder that contains the quick text. Available in API version 44.0 and later.
IsInsertable	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description If <code>true</code> , the quick text is available in the channels selected in the <code>Channel</code> field. If <code>false</code> , the quick text is not available. The label in the UI is Include in selected channels . By default: • This field is set to <code>true</code> on quick text records created from the Quick Text page or via the API. • This field is set to <code>false</code> on quick text records created during the Einstein Reply Recommendations reply publishing process.
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last interacted with this record, directly or indirectly.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.

Field Name	Details
Message	Type textarea Properties Create, Filter (unavailable in API version 25.0 and later), Sort (unavailable in API version 25.0 and later), Update Description The content of the quick text record
Name	Type string Properties Create, Filter (unavailable in API version 25.0 and later), Group, idLookup, Sort (unavailable in API version 25.0 and later), Update Description A descriptive label for the quick text record
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description ID of the User or Queue that owns the quick text record This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Group, User
SourceType	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description (Used with Einstein Reply Recommendations.) Indicates how the text was composed. This field is not available in the UI. Possible values are: • <code>EINSTEIN_GENERATED</code>—Text was generated by Einstein Reply Recommendations

Field Name	Details
	• <code>USER_EDITED</code>—Text was generated by Einstein Reply Recommendations, and then edited by a user • <code>USER_GENERATED</code>—User wrote the text

Usage

Use this object to create and manage the quick text messages available to users. You can categorize multiple quick text records into groups using the `Category` field. The `Category` field can also be a parent to multiple custom-dependent Picklist fields to create a hierarchical structure of categories.

QuickText is also used in Einstein Reply Recommendations, a feature that recommends stock replies for support agents to use in chats in the Lightning Service Console. During setup, Einstein Reply Recommendations scans past chats to generate a list of commonly used replies. Each generated reply is a `ReplyText` record. The admin then publishes, or converts, the replies to quick text, creating a corresponding QuickText record for each reply. Therefore, certain QuickText fields are used only on quick text records that originated as a `ReplyText` record.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuickTextChangeEvent (API version 48.0)

Change events are available for the object.

QuickTextHistory

History is available for tracked fields of the object.

QuickTextOwnerSharingRule

Sharing rules are available for the object.

QuickTextShare

Sharing is available for the object.

QuickTextUsage

Represents the usage of quick text on a record, including which quick text was used, who used it, and how they used it. Quick text is a snippet of text that allows users to send a quick response to a customer. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is always read-only.

Fields

Field	Details
AppContext	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Context in which the quick text was used. Possible values are: • Aloha—Salesforce Classic • Lightning—Lightning Experience • Unknown
Channel	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The channel in which the quick text was used. Possible values are: • Email • Event • Generic • Internal • Knowledge • Live Agent • Messaging • Phone • Portal • Social • Task
FolderId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the folder containing the quick text at the time it was used. This is a relationship field. Relationship Name Folder

Field	Details
	Relationship Type Lookup
	Refers To Folder
LaunchSource	Type picklist
	Properties Filter, Group, Nillable, Restricted picklist, Sort
	Description How the user started the quick text. Possible values are: - Floater - Keyboard shortcut - Macro - Toolbar
LoggedTime	Type dateTime
	Properties Filter, Nillable, Sort
	Description The time when the quick text was used.
Name	Type string
	Properties Filter, Group, idLookup, Sort
	Description Name of the quick text.
OwnerId	Type reference
	Properties Filter, Group, Sort
	Description ID of the group or user that owns the quick text. This is a polymorphic relationship field.
	Relationship Name Owner
	Relationship Type Lookup

Field	Details
	Refers To Group, User
QuickTextID	Type reference Properties Filter, Group, Sort Description ID of the quick text. This is a relationship field. Relationship Name QuickText Relationship Type Lookup Refers To QuickText
UserId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the user that used the quick text. This is a relationship field. Relationship Name User Relationship Type Lookup Refers To User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[QuickTextUsageChangeEvent](#) (API version 62.0)

Change events are available for the object.

[QuickTextUsageOwnerSharingRule](#)

Sharing rules are available for the object.

[QuickTextUsageShare](#)

Sharing is available for the object.

Quote

Represents a quote, which is a record showing proposed prices for products and services. Available in API version 18.0 and later.

Quotes can be created from and synced with opportunities, and emailed as PDFs to customers

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the account that's associated with the quote.
AdditionalAddress	Type address Properties Filter, Nillable Description Compound form of the additional address. Read-only. See Address Compound Fields for details on compound address fields.
AdditionalCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City for the quote's additional address. Up to 40 characters allowed.
AdditionalCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country for the quote's additional address. Up to 80 characters allowed.

Field	Details
AdditionalCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO country code for the quote's additional address.
AdditionalLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>AdditionalLongitude</code> to specify the precise geolocation of an additional address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
AdditionalLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>AdditionalLatitude</code> to specify the precise geolocation of an additional address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
AdditionalName	Type string Properties Filter, Group, Nillable, Sort Description Name associated with the quote's additional address. Limited: 255 characters.
AdditionalPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal Code for the quote's additional address.
AdditionalState	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description State for the quote's additional address. Up to 80 characters allowed.
AdditionalStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO state code for the quote's additional address.
AdditionalStreet	Type textarea Properties Create, Filter, Nillable, Group, Sort, Update Description Street name for the quote's additional address.
BillToContactId	Type reference Properties Create, Filter, Nillable, Group, Sort, Update Description ID of the contact that the order is billed to. This field is available in API version 56.0 and later. This field is available with Subscription Management.
BillingAddress	Type address Properties Filter, Nillable Description Compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.
BillingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City for the quote's billing address. Up to 40 characters allowed.

Field	Details
BillingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country for the quote's billing address. Up to 80 characters allowed.
BillingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO country code for the quote's billing address.
BillingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
BillingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
BillingName	Type string Properties Filter, Group, Nillable, Sort Description Entity that the quote is billed to.
BillingPostalCode	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Postal Code for the quote's billing address.
BillingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State for the quote's billing address. Up to 80 characters allowed.
BillingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO state code for the quote's billing address.
BillingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street name for the quote's billing address.
CalculationStatus	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Price calculations are performed by Salesforce. Tax calculations are performed by a third-party tax provider integration with Salesforce. Both of these calculations are asynchronous, and you can use this field to see the status of the asynchronous processes. This field is available with Subscription Management or Revenue Cloud. Possible values are: - CompletedWithPricing—Indicates that pricing is complete and tax will now be calculated. - CompletedWithTax—Indicates that pricing and tax calculation are complete.

Field	Details
	- CompletedWithoutPricing—Indicates that pricing and tax calculation were skipped. - ConfigurationFailed—Indicates that configuration failed. Available in API version 62.0 - ConfigurationInProgress—Indicates that the configuration is in progress. Available in API version 62.0 - GroupRampConfigurationFailed—Indicates that the checks for group ramps have failed. Available in API version 65.0 and later. - NotStarted - PriceCalculationFailed—Indicates that pricing failed. Available in API version 58.0 and later. - PriceCalculationInProgress—Available in API version 58.0 and later. - PriceCalculationQueued—The request is sent to the asynchronous price calculation process, but the process hasn't started. Available in API version 58.0 and later. - QuoteRequestFailed—Indicates that the requested quote changes weren't saved. Available in API version 62.0 - QuoteRequestPartiallySaved—Indicates that the requested quote changes were partially saved. Available in API version 62.0 - ReconciliationFailed—Indicates that the arrangement of quote data failed. Available in API version 62.0 - ReconciliationInProgress—Indicates that the arrangement of data is in progress. For a sales rep, this value appears as Saving on the quote page. Available in API version 62.0 - SaveFailedOrIncomplete—Some or all of the records couldn't be saved. For example, some of the quote line item records weren't saved. Available in API version 58.0 and later. - Saving - TaxCalculationFailed - TaxCalculationInProgress - TaxCalculationSuccess—Available in API versions 56.0 and 57.0 - TaxCalculationWaiting The default value is NotStarted.
CanCreateQuoteLineItems	Type boolean Properties Create, Defaulted on create, Group Description This field isn't used.

Field	Details
ContactId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the contact that's associated with the quote.
ContractId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the contract that's associated with the quote.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Restricted picklist Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a <code>Pricebook2Id</code> specified on the quote, then the currency value of this field must match the currency of the PricebookEntry objects that are associated with any quote line items it has. This value is copied from the related Opportunity and can't be changed.
Description	Type textarea Properties Nillable Description Text description of the quote. Limit: 32,000 characters.
Discount	Type percent Properties Filter, Nillable, Sort Description The difference between the QuoteLineItem record's subtotal and its discounted total, divided by the QuoteLineItem's subtotal. Expressed as a percentage.

Field	Details
Email	Type email Properties Filter, Group, Nillable, Sort Description The email address of the contact who's associated with the quote.
ExpirationDate	Type date Properties Create, Filter, Nillable, Update Description The date when this quote is no longer valid.
Fax	Type phone Properties Create, Filter, Nillable, Update Description The fax number for the contact who's associated with the quote.
GrandTotal	Type currency Properties Filter, Nillable Description The total price of the quote plus shipping and taxes.  Note: The <code>GrandTotal</code> is a system-calculated summary field and is not directly referenceable or usable in custom formula fields on the Quote object. Attempts to do so result in an error message. For example, "Error: Field GrandTotal does not exist. Check spelling." To perform calculations based on the total value of a quote, consider using a Roll-Up Summary field from related Quote Line Items or performing calculations directly on the QuoteLineItem on page 4572 object.
IsSyncing	Type boolean Properties Defaulted on create, Filter Description Indicates whether the quote is syncing with an opportunity.

Field	Details
LastReferencedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type date Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view but not viewed it directly.
LineItemCount	Type int Properties Filter, Nillable Description The number of line items on the quote.
Name	Type string Properties Create, Filter, idLookup, Update Description Required. Name for the quote. Limit: 225 characters.
OpportunityId	Type reference Properties Create, Filter Description ID for the opportunity associated with the quote.
Phone	Type phone Properties Create, Filter, Nillable, Update

Field	Details
	Description The phone number of the contact who's associated with the quote.
Pricebook2Id	Type reference Properties Create, Filter, Nillable, Update Description ID of the price book associated with the quote.
QuoteAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the account associated with the quote. This field is available in API version 58.0 and later only when the Create Quotes Without a Related Opportunity setting on the Quotes Settings page is enabled. This field is a relationship field. Relationship Name QuoteAccount Refers To Account
QuoteNumber	Type string Properties Defaulted on create, Filter Description A system-generated number that identifies the quote.
QuoteToAddress	Type address Properties Filter, Nillable Description Compound form of the quote to address. Read-only. See Address Compound Fields for details on compound address fields.
QuoteToCity	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description City for the address to send the quote to for approval, such as a third party-agency representing a buyer. Up to 40 characters allowed.
QuoteToCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country for the address to send the quote to for approval. Up to 80 characters allowed.
QuoteToLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>QuoteToLongitude</code> to specify the precise geolocation of a quote to address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.
QuoteToLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>QuoteToLatitude</code> to specify the precise geolocation of a quote to address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.
QuoteToName	Type string Properties Create, Filter, Nillable, Update Description The name of the entity (such as a person or business) that the quote is sent to for approval. Limit: 255 characters.
QuoteToPostalCode	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Postal code for the address to send the quote to for approval.
QuoteToState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State for the address to send the quote to for approval. Up to 80 characters allowed.
QuoteToStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street name for the address to send the quote to for approval.
RecordSource	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the source application context for the record. This field is available with Digital Insurance in API version 66.0 and later. Possible values are: • DigitalInsurance • Null
RecordTypeID	Type reference Properties Create, Filter, Nillable, Update Description ID of the record type assigned to the object.
RelatedWorkId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort Description Relationship field that's visible only if Field Service and Quotes are enabled in the Salesforce org. This field refers to the work order that the quote is created from. When a mobile worker creates a quote using the New Quote action in the Field Service mobile app, this field is automatically populated. This field is used in the related list that shows all of the quotes related to the work order.
ShippingAddress	Type address Properties Filter, Nillable Description Compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.
ShippingCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description City for the quote's shipping address. Up to 40 characters allowed.
ShippingCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Country for the quote's shipping address. Up to 80 characters allowed.
ShippingCountryCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO country code for the quote's shipping address.
ShippingHandling	Type currency Properties Create, Filter, Nillable, Update

Field	Details
	Description The total shipping and handling costs for the quote.
ShippingLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between –90 and 90 with up to 15 decimal places.
ShippingLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between –180 and 180 with up to 15 decimal places.
ShippingName	Type string Properties Create, Filter, Nillable, Update Description The name of the entity (such as a person or business) that the quote is sent to for approval.
ShippingPostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Postal code for the quote's shipping address.
ShippingState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description State for the quote's shipping address. Up to 80 characters allowed.

Field	Details
ShippingStateCode	Type picklist Properties Create, Filter, Group, Nillable, Sort, Update Description ISO state code for the quote's shipping address.
ShippingStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description Street name for the quote's shipping address.
Status	Type picklist Properties Create, Defaulted on create, Filter, Nillable, Update Description The status of the quote. The standard options are: • —None— • Draft • Needs Review • In Review • Approved • Rejected • Presented • Accepted • Denied
Subtotal	Type currency Properties Filter, Nillable Description The sum of sales price multiplied by quantity for line items, not including the discount.
Tax	Type currency

Field	Details
	Properties Create, Filter, Nillable, Update Description The total taxes for the quote.
TotalPrice	Type currency Properties Filter, Nillable Description The total of the quote line items after discounts and before taxes and shipping.
TotalPriceWithTax	Type currency Properties Filter, Nillable, Sort Description The sum of TotalPrice and TotalTaxAmount. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org.
TotalTaxAmount	Type currency Properties Filter, Nillable, Sort Description The total amount of all taxes. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org. This field is a calculated field.

Usage

Use Quote to manage proposed product prices for customers. To update a Quote, your client application needs “Edit” permission.

- Client applications can create, update, delete, and query Attachment records associated with a quote via the API.
- You can sync a quote and its parent Opportunity.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

QuoteChangeEvent (API version 44.0)

Change events are available for the object.

QuoteFeed (API version 39.0)

Feed tracking is available for the object.

QuoteHistory (API version 57.0)

History is available for tracked fields of the object.

QuoteOwnerSharingRule (API version 41.0)

Sharing rules are available for the object.

QuoteShare (API version 41.0)

Sharing is available for the object.

[QuoteDocument](#)

[Opportunity](#)

QuoteAction

Indicates the type of sales transaction that's being quoted; for example, a renewal sale. This object is available in API version 59.0 and later.

If a quote doesn't have a quote action, Salesforce treats it as a quote of the `Add` type. When such a quote is used to create an order, Salesforce automatically creates an order action of the `Add` type.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available in orgs with Revenue Cloud. It's also available in Industries Automotive and Industries Field Service.

Fields

Field	Details
CurrencyIsoCode	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field	Details
	Description ISO code of the currency. Use only one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as <code>USD</code>, <code>GBP</code>, or <code>JPY</code>. Must be unique within your organization. Label is Currency ISO Code. The default value is <code>USD</code>. See Supported Currencies (ICU) for a list of currency codes Salesforce supports. This field is available in Revenue Cloud in API version 66.0 and later.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user accessed this record or list view indirectly, but didn't view it.
<code>Name</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name given to the quote action.
<code>QuoteId</code>	Type reference Properties Create, Filter, Group, Sort Description The quote related to this quote action. This field is a relationship field. Relationship Name Quote

Field	Details
	Relationship Type Lookup Refers To Quote
SourceAssetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset changed by this sales transaction. For example, if the quote action is a quantity amendment, this field contains the ID of the asset that's amended. This field is a relationship field. Relationship Name SourceAsset Relationship Type Lookup Refers To Asset
Subtype	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The subtype of the action on the quote line item. Valid values are: • DowngradeFrom—Available in API version 66.0 and later. • DowngradeTo—Available in API version 66.0 and later. • FieldAmendment • Rollback • StartDateAdjustment • SwapIn—Available in API version 66.0 and later. • SwapOut—Available in API version 66.0 and later. • TransferFrom • TransferTo • UpgradeFrom—Available in API version 66.0 and later. • UpgradeTo—Available in API version 66.0 and later. This field is available with Revenue Cloud in API version 64.0 and later.

Field	Details
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The type of sales transaction that the related quote is for. Valid values are: • Add • Amend • Association—Available in API version 66.0 and later. • Cancel • No Change • Renew • Transfer—Available with Revenue Cloud in API version 65.0 and later.

QuoteAdjustmentGroup

Group containing a set of adjustments applied to a quote. This object is available in API version 58.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
AdjustmentSource	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates the origin of the price adjustment. Possible values are: • Discretionary—The adjustment is entered manually; for example, by a sales rep.

Field	Details
	Promotion—The adjustment is part of a promotion; for example, a holiday sale discount. Rule—The adjustment is due to a price rule. System—The adjustment originates from the system, for example, a volume discount.
AdjustmentType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates the type of mathematical adjustment to be applied to the quote. Possible values are: AdjustmentAmount—The adjustment is a numerical amount, for example, a cash discount of 20. AdjustmentPercentage—The adjustment is a percentage amount, for example, a 10% discount. OverrideAmount—The adjustment is a manual price override. Available in API version 59.0 and later.
AdjustmentValue	Type double Properties Filter, Sort Description The specified AdjustmentType amount that is applied to the quote. For example, when AdjustmentType is AdjustmentAmount, AdjustmentValue is the cash amount of the price adjustment. When AdjustmentType value is AdjustmentPercentage, AdjustmentValue is the percent value of the price adjustment. When AdjustmentType is OverrideAmount, AdjustmentValue overrides the total amount of the quote.
Description	Type textarea Properties Nillable Description User-entered information about the quote adjustment group.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description The user-defined name of the quote adjustment group.
Priority	Type int Properties Filter, Group, Nillable, Sort Description A numeric value that represents the order of precedence of the quote adjustment group. It can also represent the order of precedence when applying the <code>AdjustmentType</code> values. For example, a quote can have two adjustments: a \$100 discount and a 10% discount. This field indicates which adjustment to apply first.
QuoteId	Type reference Properties Filter, Group, Sort Description The ID of the quote related to the adjustments in this group. This field is a relationship field. Relationship Name Quote Relationship Type Lookup Refers To Quote
TotalAmount	Type currency Properties Filter, Sort Description The total of all quote adjustments in this quote adjustment group, excluding tax.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[QuoteAdjustmentGroupChangeEvent](#) on page 68

Change events are available for the object.

QuoteAdjustmentGroupFeed on page 55

Feed tracking is available for the object.

QuoteAdjustmentGroupHistory on page 63

History is available for tracked fields of the object.

QuoteAdjustmentGroupOwnerSharingRule on page 65

Sharing rules are available for the object.

QuoteAdjustmentGroupShare on page 67

Sharing is available for the object.

QuoteDocument

Represents a quote in document format. Available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ContentVersionDocumentId	Type reference Properties Create, Filter, Group, Sort Description ID for the document's version.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Restricted picklist Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a <code>Pricebook2Id</code> specified on the quote, then the currency value of this field must match the currency of the <code>PricebookEntry</code> objects that are associated with any quote line items it has.
Discount	Type percent

Field	Details
	Properties Filter, Nillable, Sort Description The discount for the quote used in the document.
Document	Type base64 Properties Create, Nillable Description The binary data of the document stored in the QuoteDocument object.
DocumentTemplate	Type string Properties Create, Filter, Group, Nillable, Sort Description The ID of the template used to generate the document.
GrandTotal	Type currency Properties Filter, Nillable, Sort Description Grand total for the quote used in the document.
Name	Type string Properties Filter, idLookup, Sort Description Name of the quote document.
QuoteId	Type reference Properties Create, Filter, GroupSort Description ID for the quote used for the document.
Status	Type picklist

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The status of the document. Possible values are: - Completed - Failed - Generating - In Progress - None - Queued The default value is <code>None</code>.

Usage

Use the QuoteDocument object to store a document that can be used to present the quote information to the customer.

SEE ALSO:

- [Quote](#)
- [QuoteLineItem](#)

QuoteLineGroup

Stores the group information for line items in a quote. It also stores the aggregated line field information (subtotal). It contains a parent-child relationship to quote. This object is available in API version 61.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
Description	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the group.
EndDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Reserved for future use.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the group.
QuoteId	Type reference Properties Create, Filter, Group, Sort Description The quote associated with the group. This field is a relationship field. Relationship Name Quote Relationship Type Master-detail Refers To Quote (the master object)
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Number indicating the sort order selected by the user.

Field	Details
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description Reserved for future use.
SummarySubtotal	Type currency Properties Create, Filter, Nillable, Sort, Update Description The total amount of all the line items in the group.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of the group. Possible values are: CPQQuoteGroup—CPQ Line Grouping The default value is CPQQuoteGroup.

QuoteLineItem

Represents a quote line item, which is a member of the list of Product2 products associated with a quote, along with other information about those line items on that quote. Available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The user must have “Edit” permissions on quote records to create or update quote line items on a quote. The user must have “Edit” permissions on quote records to delete a quote line item.

Some of the fields are available when you turn on Subscription Management.

Fields

Field	Details
BatchIdentifier	Type string Properties Filter, Group, Nillable, Sort Description Identifier for a product bundle in a transaction processing batch. This value makes sure that quote lines from the same bundles process together.
BillingFrequency	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The time period that indicates how often the quote line item is billed. This field is available in API version 55.0 and later. This field is available when Subscription Management is enabled. Possible values are: • Annual • Monthly
BillingReference	Type string Properties Create, Filter, Group, Nillable, Sort Description Reference to the original quote for which this quote line item is created. This field is available in API version 61.0 and later.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for organizations enabled for multiple currencies. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a Pricebook2 specified on the quote (the <code>Pricebook2Id</code> field isn't blank), then the currency value of this field must match the currency of the PricebookEntry objects for any associated quote line items. This value comes from the related quote and can't be changed.

Field	Details
CustomProductName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Custom product name for the quote line item.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Text description of the line item. Limit: 225 characters.
Discount	Type percent Properties Create, Filter, Nillable, Sort, Update Description The optional discount percentage, specified by the sales representative at the line level. Editable number from 0 to 100.
DiscountAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The fixed amount discount to apply to the quote line item. Available in API version 59.0 and later.
DoesAutomaticallyRenew	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates that the quote line item is set to automatically renew (True) or not (False). The default value is <code>false</code>.
Division	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.
EffectiveGrantDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date on which the resources associated with the quote line item are granted.
EndDate	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description If the quote line item is sold on subscription, this field indicates the date on which the subscription ends. This field is available in API version 55.0 and later. This field is available if Subscription Management is enabled in your org. You can indicate a subscription's length by using either <code>StartDate</code> and <code>EndDate</code>, or by using <code>StartDate</code> and <code>SubscriptionTerm</code>. If you provide a value for both <code>EndDate</code> and <code>SubscriptionTerm</code>, <code>EndDate</code> is used to determine the subscription's length.
EndTime	Type dateTime Properties Filter, Nillable, Sort Description The end date and time of the quote line item, which is derived from the End Date and End Time fields in the time zone specified in the Start and End Time Zone field. If the time zone isn't specified, the default is Coordinated Universal Time (UTC). This field is available in Revenue Cloud in API version 65.0 and later.
EndQuantity	Type double Properties Filter, Nillable, Sort

Field	Details
	Description If the quote line item is sold on a subscription, this field indicates the end quantity when the subscription ends. This field is available in API version 60.0 and later. This field is available with Subscription Management.
EndTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The end time of the quote line item. This field is available in Revenue Cloud in API version 65.0 and later.
HasQuantitySchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a quantity schedule.
HasRevenueSchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a revenue schedule. If this object has a revenue schedule, the <code>GrandTotal</code> and <code>TotalPrice</code> fields can't be updated. In addition, the <code>Quantity</code> field can't be updated if this object has a quantity schedule. The system ignores any attempt to update this field. The update isn't rejected but the updated value is ignored.
HasSchedule	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Read-only. Indicates whether the line item uses schedules.
IsPrimarySegment	Type boolean

Field	Details
	Properties Filter, Group, Sort Description Indicates whether the segment for the quote line item is a primary segment (true) or not (false). The default value is <code>false</code>.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user only accessed this record or list view (LastReferencedDate) but not viewed it.
LegalEntityId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the legal entity record associated with the quote line item. This field is a relationship field. Relationship Name LegalEntity Refers To LegalEntity
LineNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort

Field	Details
	Description Read-only. An automatically generated number identifying the quote line item. In the form of QL-XXXXX.
ListPrice	Type currency Properties Filter, Nillable, Sort Description Read-only. Corresponds to the UnitPrice on the PricebookEntry that is associated with this line item, which can be in the standard price book or a custom price book. A client app can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.
ListPriceTotal	Type currency Properties Filter, Nillable, Sort Description The ListPrice times the Quantity. This field is a calculated field.
Margin	Type percent Properties Create, Filter, Nillable, Sort, Update Description The optional margin percentage, specified by the sales representative at the line item level. This field is available in Revenue Cloud in API version 65.0 and later.
MarginAmount	Type currency Properties Create, Filter, Nillable, Sort, Update Description The optional margin amount, specified by the sales representative at the line item level. This field is available in Revenue Cloud in API version 65.0 and later.
NetTotalPrice	Type currency Properties Filter, Nillable, Sort

Field	Details
	Description The price after all adjustments, inclusive of quantity, prorated for the duration of the subscription. This field is a calculated field equal to <code>TotalAdjustmentAmount</code> plus <code>TotalLineAmount</code>. This field is available in API version 56.0 and later. This field is available with Subscription Management.
NetUnitPrice	Type currency Properties Filter, Nillable, Sort Description The unit price after all price adjustments are applied.
OpportunityLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the related opportunity line item. This field is populated by the API during creation of the quote line item. Not editable. Available in API version 40.0 and later.
ParentQuoteLineItemId	Type reference Properties Filter, Group, Nillable, Sort Description The unique identifier of the related line item in the parent quote. This field is populated by the API during creation of the quote line item. This field is available in version 58.0 and later. This field is available when Subscription Management is enabled. This field is a relationship field. Relationship Name ParentQuoteLineItem Relationship Type Lookup Refers To QuoteLineItem
PartnerDiscountPercent	Type percent

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description The partner's discount percent applied to the quote lines. Available in API version 59.0 and later.
PartnerUnitPrice	Type currency Properties Create, Filter, Nillable, Sort, Update Description The unit price after applying the discount given to the partner for the quote line item. Available in API version 59.0 and later.
PeriodBoundary	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The period boundary helps determine the start and end date of the billing periods. This field is available in API version 55.0 and later. This field is available with Subscription Management and Revenue Cloud. Possible values are: • AlignToCalendar—the period starts on the first day of the term unit; for example, the first day of the month. • Anniversary—The start date determines the boundary. For example, if a monthly subscription starts on September 13, the subscription starts on the 13th day of each month. • DayOfPeriod—the period starts on the day indicated by <code>PeriodBoundaryDay</code>. • LastDayOfPeriod—the period starts on the last day of the pricing term unit. Keep these considerations in mind for amendment, renewal, and cancellations of assets in Revenue Cloud. • The value of the <code>PeriodBoundary</code> field is copied from the <code>AssetActionSource</code> (initial sale), by default. • For termed selling models where the <code>PeriodBoundary</code> value is <code>Anniversary</code>, the value of the <code>PeriodBoundary</code> field is automatically converted to <code>DayOfPeriod</code>. • Start date adjustment operation on an asset preserves the original value without conversion.

Field	Details
PeriodBoundaryDay	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description Required when <code>PeriodBoundary</code> is <code>DayOfPeriod</code>. Indicates day of the week or month that marks the period boundary. Must be an integer from 1 through 31. This field is available in API version 55.0 and later. This field is available with Subscription Management and Revenue Cloud. Keep these considerations in mind for amendment, renewal, and cancellations of assets in Revenue Cloud. • The value of the <code>PeriodBoundary</code> field is copied from the <code>AssetActionSource</code> (initial sale), by default. • When <code>PeriodBoundary</code> field value is converted from <code>Anniversary</code> to <code>DayOfPeriod</code> for termed selling models, the value of the <code>PeriodBoundaryDay</code> field is automatically populated with the day value from <code>AssetActionSource.StartDate</code>. • Start date adjustment operation on an asset preserves the original value without conversion.
PeriodBoundaryStartMonth	Type picklist Properties Create, Filter, Group, Restricted picklist, Nillable, Sort, Update Description The field is populated based on input in the <code>StartDate</code>, <code>PeriodBoundary</code>, and <code>PeriodBoundaryDay</code> when <code>BillingFrequency</code> is <code>Annual</code> and <code>PricingTermUnit</code> is <code>Annual</code> or by manual user entry. Possible values are: • 1-January • 2-February • 3-March • 4-April • 5-May • 6-June • 7-July • 8-August • 9-September • 10-October • 11-November • 12-December

Field	Details
	Keep these considerations in mind for amendment, renewal, and cancellations of assets in Revenue Cloud. - The value of the <code>PeriodBoundary</code> field is copied from the <code>AssetActionSource</code> (initial sale), by default. - For termed selling models where <code>PeriodBoundary</code> field value is <code>Anniversary</code> and <code>PricingTermUnit</code> field value is <code>ANNUAL</code>, <code>SEMI_ANNUAL</code>, or <code>QUARTERLY</code>, the value of the <code>PeriodBoundaryStartMonth</code> field is automatically recalculated by using <code>AssetActionSource.StartDate.month</code>. - Start date adjustment operation on an asset preserves the original value without conversion.
<code>PricebookEntryId</code>	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the associated PricebookEntry. Exists only for orgs with Products enabled. In API 38.0 and earlier, if <code>Product2Id</code> is populated with <code>PricebookEntryId</code> data, you receive an error message. In API 39.0 and later, <code>Product2Id</code> is nulled, and <code>PricebookEntryId</code> is populated with the <code>PricebookEntryId</code> data.
<code>PriceRevisionPolicyId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The price uplift policy associated with this quote line item. This field is a relationship field. Relationship Name PriceRevisionPolicy Refers To PriceRevisionPolicy Label is Price Revision Policy. This field is available in Revenue Cloud in API version 65.0 and later.
<code>PricingContractId</code>	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The contract used for pricing that's associated with the quote line item.

Field	Details
	This field is a relationship field. Relationship Name PricingContract Refers To Contract
PriceWaterfallIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The price waterfall identifier generated by Salesforce Pricing that's associated with the pricing of the detail record. Available in API version 60.0 and later.
PricingTerm	Type int Properties Filter, Group, Nillable, Sort Description The number of terms in the subscription. For example, if a monthly subscription is priced yearly, this field is 12. This field is available in API version 55.0 and later. This field is available with Subscription Management.
PricingTermCount	Type double Properties Filter, Nillable, Sort Description A calculated field indicating the number of pricing terms in the subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management.
PricingTermUnit	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The unit of time for the pricing term. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • Annual—Available in API version 58.0 and later. UI label is Years.

Field	Details
	Months.
Product2Id	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the Product2 associated with this QuoteLineItem. In API 38.0 and earlier, if Product2Id is populated with PricebookEntryId data, you receive an error message. In API 39.0 and later, Product2Id is nulled, and PricebookEntryId is populated with the PricebookEntryId data.
ProductInstanceIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the product instance that's added to a quote. Each quote line item created for the same product instance has the same product instance identifier value.
ProductSellingModelId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related product selling model. This field is available in API version 55.0 and later. This field is available with Subscription Management. This field is a relationship field. Relationship Name ProductSellingModel Relationship Type Lookup Refers To ProductSellingModel
ProrationPolicyId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the related proration policy. This field is available in API version 55.0 and later. This field is available with Subscription Management.

Field	Details
	This field is a relationship field. Relationship Name ProrationPolicy Relationship Type Lookup Refers To ProrationPolicy
Quantity	Type double Properties Create, Filter, Sort, Update Description Required. The number of units for the line item.
QuantityUnitOfMeasureId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The unit of measure for the quantity, start quantity, and end quantity. This field is a relationship field. Relationship Name QuantityUnitOfMeasure Refers To UnitOfMeasure
QuoteActionId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the related quote action. This field is available in API version 58.0 and later. This field is available with Subscription Management and Revenue Lifecycle Management. This field is a relationship field. Relationship Name QuoteAction Relationship Type Lookup Refers To QuoteAction

Field	Details
QuoteId	Type reference Properties Create, Filter, Group, Sort Description Required. ID of the associated quote.
QuoteLineGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the quote line group for the quote line item. This field is a relationship field. Relationship Name QuoteLineGroup Refers To QuoteLineGroup
QuoteLineItemRecipientId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the recipient for the quote line item. This field is a relationship field. Relationship Name QuoteLineItemRecipient Refers To QuoteLineItemRecipient
RampIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ramp ID used to group quote line item segments.
RelatedQuoteLineItemId	Type reference

Field	Details
	Properties Filter, Group, Nillable, Sort Description The quote line item ID related to the order item created. This field is a relationship field. Relationship Name RelatedQuoteLineItem Refers To OrderItem This field is available in Revenue Cloud in API version 65.0 and later.
SegmentIdentifier	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The ID of the segment.
SegmentName	Type string Properties Filter, Group, Nillable, Sort Description The name of the quote line item segment.
SegmentType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The time period for the segment. Possible values are: • Custom • FreeTrial—Free Trial • Yearly The default value is Yearly.
SellingModelType	Type picklist

Field	Details
	Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the quote line item is sold as a one-time purchase, an evergreen subscription, or as a termed subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • Evergreen • OneTime • TermDefined The default value is OneTime.
ServiceDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description The date when the product revenue is recognized and the product quantity is shipped.
SortOrder	Type int Properties Create, Filter, Group, Nillable, Sort, Update Description The value of where the line item is in the sorted order such as 1, 2, 3. The SortOrder value determines the order in which a quote line item appears in the Quote Line Items related list and the Quote PDF. Client apps can use this value to match the sort order in Salesforce. This field is only available in API versions 21.0 and greater.
StartDate	Type date Properties Create, Filter, Group, Nillable, Sort, Update Description If the quote line item is sold on subscription, this field indicates the date on which the subscription starts. This field is available in API version 55.0 and later. This field is available with Subscription Management.
StartDateTime	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The start date and time of the quote line item, which is derived from the Start Date and Start Time fields in the time zone specified in the Start and End Time Zone field. If the time zone isn't specified, the default is Coordinated Universal Time (UTC). This field is available in Revenue Cloud in API version 65.0 and later.
StartEndTimeZone	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The time zone for the quote line item's start and end dates, times, and datetimes. This field is available in Revenue Cloud in API version 65.0 and later.
StartTime	Type time Properties Create, Filter, Nillable, Sort, Update Description The start time of the quote line item. This field is available in Revenue Cloud in API version 65.0 and later.
StartQuantity	Type double Properties Create, Filter, Nillable, Sort Description If the quote line item is sold on a subscription, this field indicates the item quantity when the subscription starts. This field is available in API version 60.0 and later. This field is available with Subscription Management.
StartingPriceTotal	Type currency Properties Filter, Nillable, Sort Description The starting unit price times the quantity.
StartingUnitPriceSource	Type picklist

Field	Details
	Properties Filter, Group, Nillable, Restricted picklist, Sort Description Indicates whether the starting unit price was entered manually or calculated. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: - Manual - System - Inherited
Status	Type dynamic picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Represents the status of the quote line item. This field is available in API version 60.0 and later. The <code>QuoteLineItemStatus</code> permission is required to access this field. Possible values are: - In Progress - Pending - Approved - Rejected Default value is In Progress.
SubscriptionTerm	Type int Properties Filter, Group, Nillable, Restricted picklist, Sort Description The number of terms in the subscription. You can indicate a subscription's length by using either <code>StartDate</code> and <code>EndDate</code>, or by using <code>StartDate</code> and <code>SubscriptionTerm</code>. If you provide a value for both <code>EndDate</code> and <code>SubscriptionTerm</code>, <code>EndDate</code> is used and <code>SubscriptionTerm</code> is ignored.
SubscriptionTermUnit	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description The unit of time used to define the subscription. This field is available in API version 55.0 and later. This field is available with Subscription Management. Possible values are: • Annual—UI label is <code>Years</code> • Months
Subtotal	Type currency Properties Filter, Nillable, Sort Description The line item's <code>Quantity</code> multiplied by the <code>UnitPrice</code>. In Revenue Cloud, <code>Subtotal</code> is set to <code>TotalLineAmount</code> when <code>TotalLineAmount</code> has a value.
TotalAdjustment	Type percent Properties Filter, Nillable, Sort Description The total discount percentage applied at the line item level. This percentage is calculated by using the formula: $(\text{Total Line Amount} - \text{Net Total Price}) / \text{Total Line Amount}$. This field is available in Revenue Cloud in API version 65.0 and later.
TotalAdjustmentAmount	Type currency Properties Filter, Nillable, Sort Description The sum of the adjustments applied to the quote line item, inclusive of quantity, prorated for the duration of the subscription. This field is available in API version 56.0 and later. This field is available with Subscription Management.
TotalCost	Type currency Properties Filter, Nillable, Sort Description The total cost of all products sold in the quote, calculated by multiplying the quantity by the unit cost.

Field	Details
	This field is available in Revenue Cloud in API version 65.0 and later.
TotalLineAmount	Type currency Properties Filter, Nillable, Sort Description The total price of the quote line item, before price adjustments, inclusive of quantity, prorated for the duration of the subscription. This price is a calculated field equal to <code>ListPrice</code> times <code>Quantity</code> times <code>PricingTermCount</code>. This field is available in API version 56.0 and later. This field is available with Subscription Management.
TotalMargin	Type percent Properties Filter, Nillable, Sort Description The effective margin percentage at the line item level. This percentage is calculated by using the formula: $(\text{Net Total Price} - \text{Total Cost}) / \text{Net Total Price}$. This field is available in Revenue Cloud in API version 65.0 and later.
TotalMarginAmount	Type currency Properties Filter, Nillable, Sort Description The effective margin amount at the line item level. This amount is calculated by subtracting total cost from net total price. This field is available in Revenue Cloud in API version 65.0 and later.
TotalPrice	Type currency Properties Filter, Nillable, Sort Description Read-only. Calculated by applying the <code>Discount</code> to the <code>Subtotal</code>. This field is nillable, but you can't set both <code>TotalPrice</code> and to null in the same update. To insert the for a quote line item via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read only if the quote line item has a revenue schedule.

Field	Details
UnitCost	Type currency Properties Create, Filter, Nillable, Sort, Update Description The unit cost of a product sold as part of the quote. This field is available in Revenue Cloud in API version 65.0 and later.
UnitPrice	Type currency Properties Create, Filter, Sort, Update Description Required. The price per unit for the quote line item.
UnitPriceUplift	Type percent Properties Create, Filter, Nillable, Sort, Update Description The percentage increase of the quote line item's unit price.
ValidationResult	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies whether the quote line item was configured and priced by Revenue Lifecycle Management. A quote can be activated only after all its quote line items are configured and priced by Revenue Lifecycle Management. Valid values are: • warning—Indicates that the quote line item wasn't configured and priced by Revenue Lifecycle Management. Available in API version 60.0 and later.
Visibility	Type picklist Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Specifies how Salesforce shows a quote line item in the Transaction Line Editor and a quote document. Possible values are: • Always—Quote line items are always displayed in the Transaction Line Editor. • Never—Quote line items aren't displayed in the Transaction Line Editor or in the quote document. • Quote Document Only—Quote line items are displayed only in the quote document, but not in the Transaction Line Editor. • Transaction Line Editor Only—Quote line items are displayed only in the Transaction Line Editor, but not in the quote document. The default value is Always.

Usage

A quote record can have QuoteLineItem records only if the quote has a Pricebook2. A QuoteLineItem must correspond to a Product2 that is listed in the quote's Pricebook2.

 **Note:** If the multicurrency option is enabled, the `CurrencyIsoCode` field is present. It can't be modified, it's always set to the value of the `CurrencyIsoCode` of the parent quote.

Effects on Quotes

Quotes with related QuoteLineItem objects are affected in the following ways:

- Creating a QuoteLineItem increments the quote value by the `TotalPrice` of the QuoteLineItem.
- When you create or update a QuoteLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 associated with the quote.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteLineItemChangeEvent (API version 44.0)

Change events are available for the object.

QuoteLineItemHistory (API version 57.0)

History is available for tracked fields of the object.

QuoteLineItemRecipient

Represents a site, employee, or other entity for which services are being quoted. This could include details such as the recipient's name, contact information, associated site or location, and any specific requirements or preferences for the quoted services. This object is available in API version 62.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
BroadbandConnectionType	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the broadband connection that's available at the address.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.
MaxDownloadSpeed	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum download speed available at the address.

Field	Details
MaxUploadSpeed	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The maximum upload speed available at the address.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the customer's site or location.
QuoteId	Type reference Properties Create, Filter, Group, Sort Description The quote associated with the recipient. This field is a relationship field. Relationship Name Quote Relationship Type Master-detail Refers To Quote (the master object)
RecipientType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the type of recipient of the service. Possible values are: • Location • Subscriber The default value is Location.

Field	Details
ServiceAddrValidationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the address was validated.
Service Account	Type entityid Properties Create, Filter, Group, Nillable, Sort, Update Description Reference to the Account Entity where the product is used, serviced, or installed.
ServiceAddrValidationMsg	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The message sent after the validation of the address.
ServiceAddrValidationResult	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the status of the address validation. Possible values are: • Fail • Partial Success • Success The default value is Success.
ServiceAddress	Type address Properties Filter Description The address where the recipient receives the service.

Field	Details
ServiceCity	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city where the recipient receives the service.
ServiceCountry	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The country where the recipient receives the service.
ServiceGeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Specifies the accuracy level of the geocoded address coordinates. Possible values are: • Address • Block • City • County • ExtendedZip—Extended Zip • NearAddress—Near Address • Neighborhood • State • Street • Unknown • Zip
ServiceLatitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The latitude of the location where the recipient receives the service.

Field	Details
ServiceLongitude	Type double Properties Create, Filter, Nillable, Sort, Update Description The longitude of the location where the recipient receives the service.
ServicePostalCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code of the address.
ServiceState	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The state where the recipient receives the service.
ServiceStreet	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update Description The street where the recipient receives the service.
ServiceabilityCheckDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time when the serviceability check was done.
ServiceabilityData	Type textarea Properties Create, Nillable, Update

Field	Details
	Description The information about serviability, such as broadband connection, download, and upload speeds available at the address.
SiteName	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The name of the customer's site or location.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[QuoteLineItemRecipientHistory](#)

History is available for tracked fields of the object.

QuoteLinePriceAdjustment

Indicates the calculated price adjustment that is applied to the quote line, for example, a calculated volume discount or the prorated value of a manual discount. Use the quote line price adjustment to inform potential customers about the type, value, and total amount of their discounts. This object is available in API version 56.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is available with Subscription Management.

Fields

Field	Details
AdjustmentAmountScope	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort

Field	Details
	Description Used with <code>AdjustmentValue</code> to determine the amount of the adjustment. Possible values are: • <code>Total</code>—The adjustment applies to the line item's total and isn't multiplied by the quantity. The adjustment amount is prorated for the duration of the subscription. • <code>Unit</code>—The adjustment is multiplied by the line item's quantity, prorated for the duration of the subscription. • <code>UnproratedTotal</code>—The adjustment applies to the line item's total and isn't multiplied by the quantity. The adjustment amount isn't prorated for the duration of the subscription.
<code>AdjustmentSource</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The source of the adjustment. Possible values are: • <code>Discretionary</code>—The adjustment is entered manually; for example, by a sales rep. • <code>Promotion</code>—Reserved for future use. • <code>Rule</code>—The adjustment results from a system rule, such as a price rule or product rule. • <code>System</code>—The adjustment is determined by the pricing configuration for the product; for example, as part of a discount schedule.
<code>AdjustmentType</code>	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of adjustment to apply to a quote line. Possible values are: • <code>AdjustmentAmount</code>—The adjustment is a numerical amount, for example, a cash discount of 20. • <code>AdjustmentPercentage</code>—The adjustment is a percentage amount, for example, a 10% discount. • <code>OverrideAmount</code>—The adjustment is a manual price override. Available in API version 59.0 and later.
<code>AdjustmentValue</code>	Type double

Field	Details
	Properties Filter, Sort Description The value of the adjustment. Used together with <code>AdjustmentAmountScope</code> to determine the amount of the adjustment.
AppliedPromotionDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time on which the promotion was applied to the asset.
CouponCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the coupon code that was applied.
Description	Type textarea Properties Nillable Description The system-entered description of the quote line price adjustment.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The system-entered name of the quote line price adjustment.
PriceAdjustmentCauseId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the record that caused the adjustment. Null if <code>AdjustmentSource</code> is <code>Discretionary</code> , indicating a manual adjustment.

Field	Details
	For example, if the price adjustment is due to a price adjustment tier, this field contains the ID of the <code>PriceAdjustmentTier</code> record. This field is a polymorphic relationship field. Relationship Name PriceAdjustmentCause Relationship Type Lookup Refers To PriceAdjustmentTier
Priority	Type int Properties Filter, Group, Nillable, Sort Description Reserved for future use.
QuoteAdjustmentGroupId	reference int Properties Filter, Group, Nillable, Sort Description The ID of the quote adjustment group, which totals all price adjustments for the quote. This field is a relationship field. Relationship Name QuoteAdjustmentGroup Relationship Type Lookup Refers To QuoteAdjustmentGroup
QuoteLineItemId	Type reference Properties Filter, Group, Sort Description The ID of the quote line item that this price adjustment applies to. This field is a relationship field. Relationship Name QuoteLineItem

Field	Details
	Relationship Type Lookup
	Refers To QuoteLineItem
TotalAmount	Type currency
	Properties Filter, Sort
	Description The total amount of the adjustment that applies to the quote line item, inclusive of quantity, prorated for the duration of the subscription.

QuoteLineRelationship

Describes the relationship between quote line items, such as items in a bundle. When you create a QuoteLineRelationship object, it's immutable: it can't be edited or removed. This object is available in API version 58.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available if Subscription Management or Revenue Cloud is enabled.

Fields

Field	Details
AssociatedQuantScaleMethod	Type picklist
	Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update
	Description How to scale the quantity of the associated quote line, relative to the main quote line. If this field has a non-null value, you can't edit the associated quote line's quantity. Possible values are: • Constant— The associated quote's line quantity remains the same in relation to the main quote line's quantity. For example, the main quote line has a quantity of one and

Field	Details
	the associated quote line has a quantity of one. If you increase the quantity of the main quote line to two, the associated quote line's quantity remains at one. Proportional— The associated order's item quantity increases or decreases based on the main quote line's quantity. For example, the main quote line has a quantity of one and the associated quote line has a quantity of two. If you increase the quantity of the main quote line to two, the associated quote line's quantity increases to four. The default value is Proportional.
AssociatedQuoteLineId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of the associated quote line item. This field is a relationship field. In a bundle relationship, this quote line is the bundle component. Relationship Name AssociatedQuoteLine Relationship Type Lookup Refers To QuoteLineItem
AssociatedQuoteLinePricing	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Indicates how the associated quote line item is priced relative to the main quote line item. Possible values are: IncludedInBundlePrice— The associated quote line's cost is \$0 because it's included in the bundle's price. NotIncludedInBundlePrice— The associated quote line has a cost because it's not included in the bundle's price.
AssociatedQuoteLineRole	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Describes the position of the associated quote line item in the relationship.

Field	Details
	Possible values are: • <code>BundleComponent</code>—The associated quote line item is part of a bundle. • <code>SetComponent</code>—The associated quote line item is part of a set.
<code>IsPriceInclusive</code>	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether child products are included in the root bundle price. If set to <code>true</code>, the price of each child product is zero. The default value is <code>false</code>.
<code>LastReferencedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record indirectly, for example, through a list view or related record.
<code>LastViewedDate</code>	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
<code>MainQuoteLineId</code>	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of the main quote line item. This field is a relationship field. In a bundle relationship, this quote line is the bundle parent. Relationship Name MainQuoteLine Relationship Type Lookup

Field	Details
	Refers To QuoteLineItem
MainQuoteLineRole	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates the position of the main quote line item in the relationship. Possible values are: • Bundle—The main quote line item is the bundle parent. • Set—The main quote line item is the set parent.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the quote line relationship.
ProductRelatedComponentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The ID of the product related component. This field is a relationship field. Relationship Name ProductRelatedComponent Refers To ProductRelatedComponent
ProductRelationshipTypeId	Type reference Properties Create, Filter, Group, Sort Description The unique identifier of record that describes the relationship between the main and associated quote lines. This field is a relationship field.

Field	Details
	Relationship Name ProductRelationshipType Relationship Type Lookup Refers To ProductRelationshipType
QuoteId	Type reference Properties Filter, Group, Nillable, Sort Description The unique identifier of the quote to which the main and associated quote lines belong. This field is a relationship field. Relationship Name Quote Relationship Type Lookup Refers To Quote
RootQuoteLineId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The root quote line for the quote line relationship. In a bundle relationship, the root quote line is the root bundle. This field is a relationship field. Relationship Name RootQuoteLine Refers To QuoteLineItem

Associated Objects

This object has the following associated objects.

[QuoteLineRelationshipFeed](#)

Feed tracking is available for the object.

QuoteLineRelationshipHistory

History is available for tracked fields of the object.

QuoteItemTaxItem

The tax that is applied to a quote line item. This object is available in API version 55.0 and later.

Supported Calls

```
create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(),
retrieve(), update(), upsert()
```

Special Access Rules

This object is available if Subscription Management is enabled in your org. This object is also available in Enterprise, Unlimited, and Developer Editions of Revenue Cloud.

Fields

Field	Details
Amount	Type currency Properties Filter, Sort Description The tax amount for the quote line item.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the org. Possible values are: - BHD—Bahraini Dinar - EUR—Euro - JPY—Japanese Yen - USD—U.S. Dollar The default value is 'USD'.

Field	Details
Description	Type textarea Properties Nillable Description User-defined description of the tax. For example, state sales tax or value-added tax (VAT).
Name	Type string Properties Filter, Group, idLookup, Sort Description Name of the tax.
QuoteLineItemId	Type reference Properties Filter, Group, Sort Description ID of the related quote line item. This is a relationship field. Relationship Name QuoteLineItem Relationship Type Lookup Refers To QuoteLineItem
Rate	Type percent Properties Filter, Nillable, Sort Description If the tax is a percentage tax, then this field contains the percent value. If the tax is a fixed amount, then this field is null.
TaxEffectiveDate	Type date Properties Filter, Group, Sort

Field	Details
	Description The date used to calculate the tax rate.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Whether the tax is estimated or calculated by the tax provider. Possible values are: - Actual - Estimated

QuoteLineWorkSource

Represents an association between a quote and work sources, such as assets, quote line items, order products, or work type groups. This object is available in API version 63.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The asset associated with the quote work source. This field is a relationship field. Relationship Name Asset Refers To Asset

Field	Details
OrderItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The order product associated with the quote work source. This field is a relationship field. Relationship Name OrderItem Refers To OrderItem
QuoteId	Type reference Properties Create, Filter, Group, Sort Description The quote associated with the quote work source. This field is a relationship field. Relationship Name Quote Relationship Type Master-detail Refers To Quote (the master object)
QuoteLineItemId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The quote associated with the quote work source. This field is a relationship field. Relationship Name QuoteLineItem Refers To QuoteLineItem
WorkTypeGroupId	Type reference

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The quote associated with the work source This field is a relationship field.
	Relationship Name WorkTypeGroup
	Refers To WorkTypeGroup

QuoteRecipientGroup

Represents a recipient group for which offers or products with the same configuration are being added. This also includes reusing these groups to add or remove recipients. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActualMemberCount	Type int Properties Filter, Group, Nillable, Sort Description The actual number of members in the quote recipient group.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the quote recipient group.
ExpectedMemberCount	Type int

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description The expected number of members in the quote recipient group.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the quote recipient group.
QuoteId	Type reference Properties Create, Filter, Group, Sort Description The ID of a quote recipient group. This field is a relationship field. Relationship Name Quote Relationship Type Master-detail Refers To Quote (the master object)

Field	Details
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Indicates whether the quote recipient group is active. Possible values are: • Active • Inactive The default value is Active.

QuoteRecipientGroupMember

Represents a junction between a quote line item recipient and a quote recipient group. This object is available in API version 64.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user referenced this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The most recent date on which a user viewed this record.

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the quote recipient group member.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The ID of a quote recipient group member. This field is a polymorphic relationship field. Relationship Name Owner Refers To Group, User
QuoteLineItemRecipientId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The quote line item recipient associated with the quote recipient group. This field is a relationship field. Relationship Name QuoteLineItemRecipient Refers To QuoteLineItemRecipient
QuoteRecipientGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The quote line item recipient group associated with the quote recipient group. This field is a relationship field. Relationship Name QuoteRecipientGroup

Field	Details
	Refers To QuoteRecipientGroup

RecentFieldChange

Use this virtual object to see how an opportunity has changed in the past seven days. Learn the previous value of a field, who made the change, and when the change was made. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To use RecentFieldChange, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

Fields

Field	Details
ChangeDate	Type dateTime Properties Description The date and time that the specified field was changed.
CurrencyIsoCode	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description The ISO code for the currency value. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as USD, GBP, or JPY. The default value is 'USD'.
FieldName	Type string Properties Filter, Group

Field	Details
	Description The name of the opportunity field that you want the previous value of. Possible values are: - Amount - CloseDate - StageName - ForecastCategory - NextStep
ParentId	Type reference Properties Filter, Group Description The ID of the opportunity that you want the change history for. This is a relationship field. Relationship Name Parent Relationship Type Lookup Refers To Opportunity
PreviousCurrencyValue	Type currency Properties Nillable Description The previous value of a currency field on an opportunity.
PreviousDateOnlyValue	Type date Properties Group, Nillable Description The previous value of a date field on an opportunity.
PreviousTextValue	Type string Properties Group, Nillable

Field	Details
	Description The previous value of a text field on an opportunity.
ValueChangedById	Type reference Properties Group Description The ID of the user who changed the specified field's value during the specified time period. This is a relationship field. Relationship Name ValueChangedBy Relationship Type Lookup Refers To User

Usage

One recentFieldChange record is returned for each field that was changed in the past seven days. The supported fields are Amount, Close Date, Forecast Category, Next Step, and Stage Name. Only the most recent previous value is returned.

 **Example:** To see the most recent previous amount for an opportunity, use the following query. Replace 006R0000XXXXXXXXXX with the ID of the opportunity.

```
select PreviousTextValue from RecentFieldChange where ParentId = '006R0000003JkHBIA0'
and FieldName = 'StageName'
```

If the sales rep didn't change the opportunity stage name in the past seven days, no values are returned. If the sales rep changed the opportunity amount several times in the past seven days, only the most recent previous value is returned.

 **Example:** To see the most recent previous amount, close date, forecast category, next step, and stage name for an opportunity, use the following query. Replace 006R0000XXXXXXXXXX with the ID of the opportunity.

```
select PreviousTextValue, PreviousCurrencyValue, PreviousDateOnlyValue from
RecentFieldChange where ParentId = '006R0000XXXXXXXXXX' and FieldName IN ('StageName',
'Amount', 'CloseDate')
```

If the opportunity amount, close date, forecast category, next step, and stage name didn't change in the past seven days, no values are returned.

RecentlyViewed

Represents records or list views that the current user has recently viewed or referenced (by viewing a related record). List views are available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `update()`

Special Usage Rules

The RecentlyViewed object doesn't support the Event, Task, Report, KnowledgeArticle, and Article objects.

The RecentlyViewed object supports only certain objects, and supports list views only for those supported objects. Supported objects have the fields `LastReferencedDate` and `LastViewedDate`.

Note: RecentlyViewed records for users who are members of several communities can't be retrieved automatically into a map via Apex. This is because records of a user with different networks can result in duplicate IDs that maps don't support.

Fields

Field	Details
Alias	Type string Properties Filter, Group, Nillable, Sort Description The alias on the record.
Email	Type email Properties Filter, Group, Nillable, Sort Description The email address on the record.
FirstName	Type string Properties Filter, Group, Nillable, Sort Description The first name on the record. If the recently viewed record is a user, the value is the user's first name.
Id	Type ID Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description The ID of the recently viewed record or list view.
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the recently viewed record is an active user (<code>true</code>) or not (<code>false</code>). This field contains a value only if the recently viewed record is a user.
LastName	Type string Properties Filter, Group, Nillable, Sort Description The last name on the record.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last interacted with this record, directly or indirectly. • Viewing or opening a record. • Selecting a record in a lookup search or related list search.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort, Update Description The timestamp when the current user last viewed this record or list view. If this value is null, it's possible that the user only accessed this record or list view (<code>LastReferencedDate</code>), but not viewed it.
Name	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The name on the recently viewed record or list view. If the recently viewed record is a user, contact, or lead, the value is a concatenation of the <code>firstname</code> and <code>lastname</code> field values.
NetworkId	Type reference Properties Filter, Group, Nillable, Sort Description ID of the Experience Cloud site that this group is part of. This field is available only if digital experiences is enabled in your org. You can add a <code>NetworkId</code> only when creating a group. You can't change or add a <code>NetworkId</code> for an existing group. This field is available in API version 27.0 and later.
Phone	Type phone Properties Filter, Group, Nillable, Sort Description The phone number on the record.
ProfileId	Type reference Properties Filter, Group, Nillable, Sort Description If the recently viewed record is a user, this value is the user's profile ID. This field is a relationship field. Relationship Name Profile Relationship Type Lookup Refers To Profile
Title	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description If the recently viewed record is a user, this value is the title of the user; for example CFO or CEO.
Type	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The object type for this recently viewed record or list view. Valid values include any standard or custom objects that RecentlyViewed supports.
UserRoleId	Type reference Properties Filter, Group, Nillable, Sort Description The ID of the user role associated with this object. This field is a relationship field. Relationship Name UserRole Relationship Type Lookup Refers To UserRole

Usage

This object provides a heterogeneous list of different object types. The list consists of recently viewed records, records that were recently referenced (a related record was viewed), or recently viewed list views. A record is considered viewed when the user sees the record details, but not when the user sees the record in a list with other records. Use this object to programmatically construct a list of recently viewed items specific to the current user. For example, use this object on a custom user interface or for search auto-complete options. You can also retrieve a filtered list of records by object type (`Type`). The RecentlyViewed data is periodically truncated down to 200 records and 200 list views. RecentlyViewed data is retained for 90 days, after which it's removed on a periodic basis.

Use this query in your code to retrieve a list of all the records and list views that were recently viewed. The results are ordered from most to least recent.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE LastViewedDate !=null
ORDER BY LastViewedDate DESC
```

Use this query to retrieve data that was either viewed or referenced, but only for a limited set of objects.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE Type IN ('Account', 'Contact', 'Plan__c')
ORDER BY LastViewedDate DESC
```

This query retrieves a list of all recently viewed contacts with contact-specific fields, such as the contact’s account name, and the custom website field. Records are ordered from most to least recent.

```
SELECT Account.Name, Title, Email, Phone, Website__c
FROM Contact
WHERE LastViewedDate != NULL
ORDER BY LastViewedDate DESC
```

Recommendation

Represents the recommendations surfaced as offers and actions for Einstein Next Best Action. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

You must have the Modify All Data or Manage Next Best Action Recommendations user permission to create and edit recommendations.

Fields

Field	Details
AcceptanceLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label that appears as the accept option on the surfaced recommendation. Maximum size is 80 characters.
ActionReference	Type string Properties Create, Filter, Group, Sort, Update Description Flow referenced for this recommendation. Label is Action.

Field	Details
Description	Type string Properties Create, Filter, Group, Sort, Update Description Text description of the recommendation. Maximum size is 255 characters.
ExternalId	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Stores an identifier for the recommendation source, such as product, so Einstein can group all responses for a given recommendation.
ImageId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Image referenced by this recommendation. Label is Image. This is a relationship field. Relationship Name Image Relationship Type Lookup Refers To ContentAsset
IsActionActive	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the flow referenced in the Action field is active (true) or not (false). Read only.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date and time when the recommendation was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date and time when the recommendation was last viewed.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the recommendation. Maximum size is 80 characters.
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the Experience Cloud site associated with the recommendation (if applicable).
RecommendationKey	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Track responses to a recommendation when it doesn't have an ID. Maximum size is 255 characters.
RejectionLabel	Type string Properties Create, Filter, Group, Sort, Update Description Label that appears as the reject option on the surfaced recommendation. Maximum size is 80 characters.

Associated Objects

This object has the following associated objects. If the API version isn’t specified, they’re available in the same API versions as this object. Otherwise, they’re available in the specified API version and later.

RecommendationChangeEvent (API version 48.0)

Change events are available for the object.

RecommendationResponse

Represents the user responses to a presented offer or recommendation for Einstein Next Best Action. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()` `query()`, `retrieve()`,

Special Access Rules

You must have one of these user permissions to read, delete, or update recommendation responses:

- Modify All Data
- Manage Next Best Action Recommendations
- Manage Next Best Action Strategies

Fields

Field	Details
ActionReference	Type string Properties Create, Filter, Group, Nillable, Sort Description The full name of an action flow at the time of the response. The full name includes the action’s namespace.
ContextRecord	Type string Properties Create, Filter, Group, Nillable, Sort Description The ID of context record that contains the Einstein Next Best Action component. For example, if the Einstein Next Best Action component is on a case record the ContextRecord is the ID of the case record.

Field	Details
ContextRecordName	Type string Properties Filter, Group, Nillable, Sort Description The name of the context record.
ContextRecordType	Type string Properties Filter, Group, Nillable, Sort Description The name of the object that's associated with the value stored in the ContextRecord field. For example, Account, Case, or Contact.
NetworkId	Type reference Properties Create, Filter, Group, Nillable, Sort Description ID of the Experience Cloud site associated with the recommendation (if applicable). This is a relationship field. Relationship Name Network Relationship Type Lookup Refers To Network
OnBehalfOf	Type string Properties Create, Filter, Group, idLookup, Sort Description The user ID or record that is indirectly reacting to the recommendation.
OnBehalfOfName	Type string Properties Filter, Group, Sort

Field	Details
	Description Name of the value stored for OnBehalfOf at time of response.
OnBehalfOfType	Type string Properties Filter, Group, Nillable, Sort Description The name of the object that's associated with the value stored in the OnBehalfOf field. For example, Account, Case, or Contact.
RecommendationKey	Type string Properties Create, Filter, Group, Sort Description RecommendationId if available, otherwise a generated string that represents the recommendation name.
RecommendationName	Type string Properties Create, Filter, Group, Nillable, Sort Description Name of the recommendation returned from the recommendation strategy.
RecommendationType	Type string Properties Create, Filter, Group, Sort Description Object type of the recommendation. It can be Recommendation or any object type mapped to the Recommendation object. For example, if you map Product to Recommendation, the RecommendationType is Product.
Response	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The user's response to the recommendation. Possible values are:

Field	Details
	- Accepted - Rejected
StrategyReference	Type string Properties Create, Filter, Group, Sort Description The full name of a recommendation strategy flow at the time of the response. The response is formatted as <code>namespace underscore prefix double underscore flowname</code>, such as <code>namespace_prefix__flowname</code>.
StrategyVersion	Type string Properties Filter, Group, Sort Description The recommendation strategy version that's active at the time of the response.

Usage

The RecommendationResponse object can't be customized with additional fields.

RecordAction

Represents a relationship between a record and an action, such as a flow. Create a RecordAction for every action that you want to associate with a particular record. Available in API version 42.0 and later.

Note: Access to the RecordAction object is determined by a user's access to the associated parent record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
ActionDefinition	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required in Lightning Flow for Service implementations that use version 44.0 or later of the API. The API name of the action to associate with the record; for example, the API name of a flow. Use this field rather than FlowDefinition. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.
ActionType	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required in Lightning Flow for Service implementations that use version 46.0 or later of the API. The type of action. Possible values are: • Flow (default) • QuickAction For versions of the API prior to version 46.0, this field is set to Flow.
FlowDefinition	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Optional in Lightning Flow for Service implementations using version 42.0 or 43.0 of the API. An upgrade to Winter '19 or later, which uses API version 44.0 or later, copies FlowDefinition to ActionDefinition. For versions 42.0 and 43.0, this field is the API name of the flow that's associated with the record.
FlowInterviewId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Optional. The flow interview ID of the paused or completed flow. This field can't be set in Process Builder. This is a relationship field.

Field	Details
	Relationship Name FlowInterview Relationship Type Lookup Refers To FlowInterview
IsMandatory	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Optional. Specifies whether the action is mandatory. The default value is false.  Note: At runtime, we show a reminder when the user closes a mandatory flow without completing it. We don't show the reminder for quick actions.
IsUiRemoveHidden	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Optional. Specifies whether the ability to remove the action is hidden in the UI. The default value is false. If true, the UI hides the ability to remove the action. However, actions can still be deleted using the API.
Order	Type int Properties Create, Filter, Group, Sort, Update Description Required. The order of the action among all actions associated with this record.
ParticipantRoleId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The participant role that's associated with the record action. This field is a polymorphic relationship field and is available in API version 58.0 and later. Relationship Name ParticipantRole

Field	Details
	Relationship Type Lookup Refers To ParticipantRole
Pinned	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. Specifies whether the action is pinned to the top or bottom of the component. If an action is pinned, users see the Remove option in the UI unless <code>IsUiRemoveHidden</code> is set to true. Possible values are: • None (default) • Top • Bottom
RecordId	Type reference Properties Create, Filter, Group, Sort, Update Description Required. Record associated with the action. In version 46.0 and above, we support most object types. To learn about supported objects, see the Lightning Flow for Service Developer's Guide . This is a relationship field. Relationship Name Record Relationship Type Lookup Refers To Account, Address, Asset, AssetRelationship, AssignedResource, AssociatedLocation, Campaign, CampaignMember, CarePreauth, CarePreauthItem, Case, ChangeRequest, CollaborationGroup, Contact, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, EnhancedLetterhead, Incident, Lead, Location, MemberPlan, OperatingHours, Opportunity, Order, PlanBenefit, PlanBenefitItem, Problem, Pricebook2, PricebookEntry, Product2, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, PurchaserPlan, PurchaserPlanAssn, RebateMemberAggregateItem, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shipment, SkillRequirement, SocialPersona,

Field	Details
	SocialPost, TimeSlot, User, Visit, VoiceCall, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup ChangeRequest, Incident, Problem are available in API version 53.0 and later. RebateMemberAggregateItem is available in API version 54.0 and later.
Status	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Required. The current state of the action. Possible values are: • New (default) • Paused • Complete • Started • Unlinked—The action was unlinked because the flow was paused and the current record for the flow interview changed. Paused and unlinked statuses do not apply to quick actions. This field can't be set in Process Builder.

Usage

The RecordAction object works with the Actions & Recommendations component in Lightning Experience. Although this junction object can be used to create relationships between records and actions in Salesforce Classic, those relationships can't be displayed in Salesforce Classic.

Note: API version 44.0 added a field, ActionDefinition, so that a RecordAction in future releases can support other types of actions in addition to flows. API version 44.0 and later maintain the FlowDefinition field to support processes that reference this field in earlier API versions. Upgrading an org to Winter '19 or later, which uses API version 44.0 or later, copies the FlowDefinition field to the ActionDefinition field. FlowDefinition will be deprecated in a future release, so use ActionDefinition instead.

When an action is deleted that's referenced in an ActionDefinition or FlowDefinition, the RecordAction object is deleted. RecordAction objects are also deleted when the associated parent record is deleted, or when a flow is paused and the current record context has changed. When an action is completed, the associated RecordAction object is also deleted.

Deleted RecordActions are removed from the list when the page is refreshed.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the [Lightning Flow for Service Developer Guide](#).

Java Example

Here’s an example of how to associate flows to a record using the RecordAction object.

```
public void associateNewCustomerFlowWithAccount(Account a) {
    try {
        RecordAction newRecordAction = new RecordAction();
        newRecordAction.setRecordId(a.getId());
        newRecordAction.setActionDefinition("New_Customer_Flow");
        newRecordAction.setOrder(1);

        SaveResult[] results = connection
            .create(new SObject[] { newRecordAction });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Data Model

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

RecordActionHistory

History is available for tracked fields of the object.

RecordActionHistory

Represents the lifecycle of a RecordAction as it goes through different states. Available in API version 44.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

This object is always read-only.

Fields

Field	Details
ActionDefinitionApiName	Type string Description Required. The API name of the action associated with the record. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.
ActionDefinitionLabel	Type string Description Required. The label of the action that took place.
ActionType	Type picklist Properties Defaulted on create, Restricted picklist Description Required. The type of action associated with the record. Possible values are: - Flow (default) - QuickAction
IsMandatory	Type boolean

Field	Details
	Properties Defaulted on create Description Optional. Specifies whether the action is mandatory. The default value is false.
LoggedTime	Type dateTime Properties Filter, Sort Description Required. The timestamp when the state change occurred.
ParentRecordId	Type reference Properties Filter, Sort Description Required. The parent record for the associated action. This is a relationship field. Relationship Name ParentRecord Relationship Type Lookup Refers To Account, Address, Asset, AssetRelationship, AssociatedLocation, Case, ChangeRequest, CollaborationGroup, Contact, ContactRequest, Contract, EnhancedLetterhead, Incident, Lead, Location, OperatingHours, Opportunity, Order, Pricebook2, PricebookEntry, Problem, Product2, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, RebateMemberAggregateItem, ResourceAbsence, Scorecard, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shipment, SkillRequirement, SocialPersona, SocialPost, TimeSlot, User, Visit, VoiceCall, WorkType ChangeRequest, Incident, Problem are available in API version 53.0 and later. RebateMemberAggregateItem is available in API version 54.0 and later.
Pinned	Type picklist Properties Defaulted on create, Nillable, Restricted picklist Description Optional. Specifies whether the action is pinned to the top or bottom, or unpinned. Possible values are:

Field	Details
	• None • Top • Bottom
RecordActionId	Type string Properties Filter, Sort Description Required. The ID of the RecordAction.
State	Type picklist Properties Defaulted on create, Restricted picklist Description Required. The state of the action. A state change triggers the logging of a history event. Possible values are: • Started (default) • Paused • Resumed • Completed • Unlinked—The action was unlinked because the flow was paused and the current record for the flow interview changed.
UserId	Type reference Description Required. The user that conducted the action. This is a polymorphic relationship field. Relationship Name User Relationship Type Lookup Refers To User

Usage

The RecordActionHistory object represents the lifecycle of an action on a record as it goes through different states.

The RecordActionHistory object is a big object. For this reason, when you use synchronous SOQL, SOAP, REST, Bulk, or Apex APIs to read this object, queries must follow a specific pattern or they fail. Queries must match one of these patterns and use fields in this precise order when more than one field is used.

- ParentRecordId
- ParentRecordId, LoggedTime (DESC)
- ParentRecordId, LoggedTime (DESC), RecordActionId

For example, this SOQL query follows the ParentRecordId, LoggedTime (DESC) pattern.

```
SELECT ActionDefinitionApiName, User, State FROM RecordActionHistory WHERE
    ParentRecordId = {CaseId} ORDER BY ParentRecordId, LoggedTime DESC
```

Asynchronous SOQL queries do not need to follow a pattern, and can query any field.

Apex triggers cannot reference big object records. Use SOQL queries if you want to query RecordActionHistory records in Apex.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the [Lightning Flow for Service Developer Guide](#). Learn more about big objects and how to query them in the [Query Big Objects](#) module on Trailhead.

Java Example

Here's a Java example of how to query a RecordActionHistory object.

```
public void queryHBPOs(String parentRecordId) {
    try {
        SimpleDateFormat format = new SimpleDateFormat("yyyy-MM-dd");

        // query for the RecordActionHistory associated with ParentRecord
        QueryResult queryResults = connection.query("SELECT ActionDefinitionApiName,
LoggedTime, State " +
            "FROM RecordActionHistory WHERE ParentRecordId = '" + parentRecordId + "' LIMIT
50");
        if (queryResults.getSize() > 0) {
            for (int i=0;i<queryResults.getRecords().length;i++) {
                // cast the SObject to a strongly-typed RecordActionHistory
                RecordActionHistory raa = (RecordActionHistory)queryResults.getRecords()[i];
                System.out.println("ActionDefinitionApiName: " + raa.getActionDefinitionApiName()
+ " - LoggedTime: " + format.format(raa.getLoggedTime().getTime()) + " - State: " +
                    raa.getState());
            }
        }
    } catch (Exception e) {
        e.printStackTrace();
    }
}
```

RecordsetFilterCriteria

Represents a set of filters that can be used to match service appointments or assets based on your criteria fields. For example, you can create recordset filter criteria so that only service appointments that satisfy the filter criteria are matched to the filtered shifts, and likewise only maintenance work rules that satisfy your criteria are matched to assets. This object is available in API version 50.0 and later. Assets and maintenance work rules are available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	Type textarea Properties Create, Nillable, Update Description The description of the recordset filter criteria.
FilteredObject	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The object used to define the filter criteria. Available in API version 52.0 or later. Possible values are: • Asset • ServiceAppointment
IsActive	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether the recordset filter criteria is associated with shifts or maintenance work rules (<code>true</code>) or not (<code>false</code>).
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date when the recordset filter criteria was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the recordset filter criteria was last viewed.
LogicalOperator	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Defines the logic to evaluate multiple recordset filter criteria rules. Available in API version 53.0 and later. Possible values are: • AND • OR
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the recordset filter criteria.
OwnerId	Type reference Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The owner of the recordset filter criteria.
SourceObject	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort

Field	Details
	Description The source object that the filtered criteria are applied to. Shifts and maintenance work rules are available in API version 52.0 and later. Appointment bundle objects are available in API version 53.0 and later. Possible values are: • <code>ApptBundleAggrPolicy</code>—Appointment Bundle Aggregation Policy • <code>ApptBundleConfig</code>—Appointment Bundle Config • <code>Shift</code> • <code>ContractLineOutcome</code> • <code>MaintenanceWorkRule</code>
Usage Rate Field	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Stores the daily usage rate of the asset. The unit for the usage rate must be per day.
Usage Rate Unit	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines the rate for Usage Rate Field. Possible values are: • <code>DAYS</code>

Usage

Let's say an employee is open to working a 9 am to 5 pm shift on a Sunday but only for emergency appointments. In this case, the `SourceObject` is `Shift` and the `FilteredObject` is `ServiceAppointment`. The service appointments available for that shift are filtered for emergency appointments using the `RecordsetFilterCriteriaRule` object.

`RecordSetFilterCriteria` isn't available for report types.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

RecordsetFilterCriteriaFeed

Feed tracking is available for the object.

RecordsetFilterCriteriaHistory

History is available for tracked fields of the object.

RecordsetFilterCriteriaOwnerSharingRule

Sharing rules are available for the object.

RecordsetFilterCriteriaShare

Sharing is available for the object.

RecordsetFilterCriteriaRule

Represents a rule using fields from the designated source object to create filters on the filtered, or target, object. RecordsetFilterCriteriaRule is associated with the RecordsetFilterCriteria object. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
CriteriaField	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The field the filter rule is applied to. Asset fields are available in API version 52.0 and later. Possible values are derived from the source object's standard and custom fields. Possible standard source objects are <code>Asset</code> and <code>ServiceAppointment</code>. The format is, for example, <code>Asset.PricingSource</code> or <code>ServiceAppointment.GroupAppointmentAccessType</code>. All standard and custom fields are allowed except those with these field types: • <code>encryptedstring</code> • <code>multipicklist</code> • <code>textarea</code> • <code>url</code>
LastReferencedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date when the recordset filter criteria rule was last referenced.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the recordset filter criteria rule was last viewed.
NextOccurence	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description This field's value is compared to the Usage Field to determine if the rule is true. Possible values are derived from the source object's standard and custom fields. Possible standard source objects are <code>Asset</code> and <code>ServiceAppointment</code>. The format is, for example, <code>Asset.PricingSource</code> or <code>ServiceAppointment.GroupAppointmentAccessType</code>. All standard and custom fields are allowed except those with these field types: • <code>encryptedstring</code> • <code>multipicklist</code> • <code>textarea</code> • <code>url</code>
Operator	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description The relational operator between <code>CriteriaField</code> and <code>Value</code>. Available in API version 52.0 or later. Possible values are: • <code>Equals—Default</code> • <code>GreaterOrEqual</code> • <code>GreaterThan</code> • <code>LessOrEqual</code> • <code>LessThan</code>

Field	Details
RecordsetFilterCriteriaId	Type reference Properties Create, Filter, Group, Sort Description The ID of the RecordsetFilterCriteria record to associate this rule with.
RecordsetFilterCriteriaRuleNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The automatically assigned number of the recordset filter criteria rule.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The type of criteria rule. Possible values are: - Criteria—Default - Usage - UsageCounter— Usage (Counter) - UsageDuration— Usage (Duration)
Value	Type textarea Properties Create, Nillable, Update Description The expected value of CriteriaField applied to the filter rule.
Usage Rate Field	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Stores the daily usage rate of the asset. The unit for the usage rate must be per day. Possible values are derived from the source object's standard and custom fields. Possible standard source objects are Asset and ServiceAppointment. The format is, for example,

Field	Details
	<code>Asset.PricingSource</code> or <code>ServiceAppointment.GroupAppointmentAccessType</code> .
Usage Rate Unit	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines the rate for Usage Rate Field. Possible values are: DAYS

Usage

If you want to create a filter rule for service appointments with a dispatched status, set `CriteriaField` to `ServiceAppointment.Status` and `Value` to `Dispatched`. Then add the ID from a `RecordsetFilterCriteria` record to `RecordsetFilterCriteriaId` to associate this rule with a filter criteria for shifts.

RecordsetFtrCritMonitor

Monitors whether the value of an asset attribute is within the threshold of a recordset filter criteria (RFC). You can monitor one or more RFCs for an Asset. This object is available in API version 57.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AssetId	Type reference Properties Create, Filter, Group, Sort, Update

Field	Details
	Description The ID of the asset to link the RFC to. This field is a relationship field. Relationship Name Asset Relationship Type Lookup Refers To Asset
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The description of the RFC associated with the recordset filter criteria monitor.
IsWithinThreshold	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the value of the asset attribute is within the threshold of the RFC. The default value is <code>false</code>.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the recordset filter criteria monitor.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the value was last referenced.
LastViewedDate	Type dateTime

Field	Details
	Properties Filter, Nillable, Sort Description The date the value was last viewed.
RecordsetFilterCriteriaId	Type reference Properties Create, Filter, Group, Sort Description The ID of the recordset filter criteria. This field is a relationship field. Relationship Name RecordsetFilterCriteria Relationship Type Lookup Refers To RecordsetFilterCriteria

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

RecordsetFltrCritMonitorChangeEvent on page 68
Change events are available for the object.

RecordsetFltrCritMonitorHistory on page 63
History is available for tracked fields of the object.

 - [AttributePicklist](#)
 - [AttributePicklistValue](#)

RecordType

Represents a record type.

Supported Calls

`create()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

 **Important:** Don't use record types as an access control mechanism. Profile assignment governs create and edit access for an object but doesn't govern read access. For example, a user assigned to a profile that isn't enabled for a particular record type can't create records with that record type, but can access records associated with that record type. Users with access to an object can read all record type information for that object. We strongly recommend against storing sensitive information in the record type description, name, or label. Instead, store sensitive information in a separate object or fields to which you've applied appropriate access controls.

Field	Details
BusinessProcessId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Required for Opportunity and Lead record types in API version 17.0 and later. ID of an associated BusinessProcess.
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description A description of this record. Limit: 255 characters.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Record Type Name.  Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.

Field	Details
IsActive	Type boolean Properties Defaulted on create, Filter, Group, Sort, Update Description Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Only active record types can be applied to records. Label is Active.
IsPersonType	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether this record has been designated as a person account (<code>true</code>) or not (<code>false</code>). Visible only if the organization has the person account feature enabled.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description Required. Label of the record type in the user interface. Limit: 80 characters. Label is Record Type Label.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Field	Details
SubjectType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Object to which this record type applies, including custom objects.

Usage

Use this object to offer different BusinessProcess records and subsets of picklist values to different users based on their Profile. Your client application can describe or query RecordType records.

Client applications can create or update values in `RecordTypeId` on these objects, specifying a valid record type ID associated with these objects.

Note: You can't create or update the `RecordTypeId` field on the CampaignMember records. Set the CampaignMember record type using the `CampaignMemberRecordTypeId` field on Campaign.

A client application can retrieve the list of valid record type IDs for a given object by querying the RecordType.

RecordTypeLocalization

Represents the translated value of a label for a record type when the Translation Workbench is enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Details
Language	Type string Properties Create, Filter, Nillable, Restricted picklist

Field	Details
	Description The language for this translated label.
NamespacePrefix	Type string Properties Filter, Nillable Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, NamespacePrefix is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, NamespacePrefix is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Nillable Description The ID of the RecordType associated with the label that is being translated.
Value	Type string Properties Create, Filter, Nillable, Update Description The actual translated label for the record type. Label is Translation.

Usage

Use this object to translate the labels of your record types into other supported languages.

RecordVisibility (Pilot)

Represents the visibility attributes that determine a record's read access. This object is read only and is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you need a CRM Analytics license or to contact Salesforce to participate in the pilot program. You must also have the "View All Data" or "Enable RecordVisibility API" user permission.

Note: We provide the RecordVisibility object to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. The RecordVisibility object isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for the RecordVisibility object in the group in the [Trailblazer Community](#).

Fields

Field Name	Details
RecordId	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The ID of the record.
VisibilityAttribute	Type string Properties Filter, Nillable, Sort Description The visibility attributes that determine the read access of a given record. For example, a user ID, parent record ID, or group ID. The output of visibility attributes is in JSON format and must be deserialized.

Usage

Use this object to query the attributes that determine the visibility of one or more records. You can't create, delete, or update any records using this object.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

This sample query returns the visibility attributes for the indicated record.

```
SELECT RecordId, VisibilityAttribute
FROM RecordVisibility
WHERE RecordId=[single ID]           // or Record IN [list of IDs]
```

The `RecordId` and `VisibilityAttribute` fields must be a part of the fields that are being selected despite `RecordId` being used in the filter criteria as well.

`RecordVisibility` is a foreign key on the records. This query returns the visibility attributes for Account records:

```
SELECT Id, Name, RecordVisibility.VisibilityAttribute
FROM Account
```

You can't filter `RecordId` fields when using `RecordVisibility` as a lookup or foreign key.

You can use `RecordVisibilityContext` to filter `WITH` clauses in queries. For more information, see [WITH filteringExpression](#) in the *SOQL and SOSL Reference*.

RedirectWhitelistUrl

Represents a trusted URL for external user redirections. Redirections to a different Salesforce org, including its publicly served pages and content, are allowed from your Salesforce org only when the URL is a `RedirectWhitelistUrl`. For non-Salesforce URLs, a session setting controls whether redirections from pages and components built in Salesforce Classic are restricted to `RedirectWhitelistUrl` objects. Except for cross-org redirections, you can't restrict redirections that originate from pages and components built with Lightning Experience. This object is available in API version 48.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only authenticated internal and external users with the View Setup and Customize Application permissions can access or edit this object.

Fields

Field	Details
<code>DeveloperName</code>	Type string

Field	Details
	Properties Create, Filter, Group, Sort, Update Description The unique name of the custom help section in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to the section title in the user interface. Limit: 80 characters. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record. Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
Language	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Language of the label.
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The label of the trusted URL.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This

Field	Details
	field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Url	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The trusted URL. These formats are accepted: <code>example.com</code>, <code>*.example.com</code>, and <code>https://example.com</code>. The host section of the URL can include an asterisk (*) as a wildcard. Otherwise, the URL cannot be malformed. Examples of malformed URLs that fail a syntax check are <code>malformed^url.example.com</code>, and <code>https://{subdomain}.example.com</code>. To add a URL to a <code>RedirectWhitelistUrl</code> based on parameters, build the URL before you update the <code>Url</code> field.

Usage

Only redirections are restricted to the URLs in this object. A direct anchor link to an external URL is always allowed, even if that URL isn't in the allowlist. An example of a direct anchor link is `<a href="targetUrl">linkText</a>`.

Redirections include parameters that redirect the user and anchor links that include a redirection. For example, this anchor link includes a redirection: `<a href="/?startURL=targetUrl">linkText</a>`. And this form action redirects the user through the `saveURL` parameter: `<form action="/xyz?saveURL=targetURL">`.

If the `targetUrl` belongs to another Salesforce org, the redirection is permitted only when the target URL is a `RedirectWhitelistUrl`.

If the `targetUrl` isn't a Salesforce org URL, the redirection is checked against the `RedirectWhitelistUrl` object only when both of these conditions are met.

- The redirection originates from a Salesforce Classic page or component.
- Either the `redirectBlockModeEnabled` or `redirectionWarning` SessionSettings field in the [SecuritySettings](#) Metadata API is `true`.

Note: Salesforce verifies the initial redirection outside of Salesforce against the `RedirectWhitelistUrl` object. However, Salesforce can't verify subsequent redirections. For example, if a link on a Visualforce page takes the user to `https://www.example.com`, Salesforce verifies that you allowed redirections to `https://www.example.com`. If that URL then redirects the user to `https://spam.example.com`, Salesforce can't check that redirection, because it occurs outside of Salesforce.

For non-Salesforce URLs, you can choose whether to alert users about untrusted external redirections or to block those redirections entirely via the `redirectBlockModeEnabled` and `redirectionWarning` fields on the `SecuritySettings` metadata API type. These restrictions apply only to redirections from pages and components built in Salesforce Classic.

There’s one last special case to cover. For Salesforce org URLs, Salesforce always allows redirections to URLs within the same org, including redirections from previous My Domain URLs. When the `enableCrossOrgRedirect` field on the `SecuritySettings` metadata API type is `false`, Salesforce checks user redirections to other Salesforce orgs via a direct link, a post-action URL, or a post-login URL. If the URL isn’t a `RedirectWhitelistURL`, the user isn’t redirected. An example of a direct link is `<a href="https://www.example.com">example.com</a>`. Post-action URLs and post-login URLs use a protected URL redirect parameter, such as `retURL`, `startURL`, `saveURL`, `cancelURL`, and `targetURL`.

Refund

Represents a refund made against a payment. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

 **Note:** You can only delete a payment in draft state, which you specify in the **Status** field.

Special Access Rules

To access Salesforce Payments objects with the API, your org must have one or more of these licenses: Salesforce Payments, Salesforce Order Management, B2B Commerce, or D2C Commerce. Salesforce Payments objects are available only in Lightning Experience.

Fields

Field	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The customer account containing the payment that this refund targets. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account
Amount	Type currency

Field	Details
	Properties Create, Filter, Sort, Update Description Total amount of this refund.
Balance	Type currency Properties Filter, Nillable, Sort Description Remaining balance following refund line applications. Equal to the Amount field – the Net Applied field.
CancellationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that the refund was canceled. This is a required parameter for void services.
CancellationEffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that the cancellation of this refund takes effect.
CancellationGatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the cancellation transaction was processed in the payment gateway.
CancellationGatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique ID for the cancellation transaction. Generated by the payment gateway.

Field	Details
CancellationGatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code for the cancellation transaction. Generated by the payment gateway. Must be mapped to a Salesforce-specific result code.
CancellationSfResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.
ClientContext	Type textarea Properties Nillable Description Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.
Comments	Type textarea Properties Create, Filter, Nillable, Sort, Update Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Three-letter ISO 4217 currency code associated with the payment group record.
Date	Type dateTime

Field	Details
	Properties Create, Defaulted on create, Filter, Nillable, Sort, Update Description The date and time that this refund was created.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Defines the date and time when the refund application becomes effective.
Email	Type email Properties Create, Filter, Group, Nillable, Sort, Update Description Email address of the person who initiated the refund.
GatewayDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date that a successful gateway communication caused the creation of this refund.
GatewayRefNumber	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Unique transaction ID created by the payment gateway.
GatewayResultCode	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.
GatewayResultCodeDescription	Type string

Field	Details
	Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the GatewayResultCode. Useful for providing additional context as to why the gateway returned a specific result code.
ImpactAmount	Type currency Properties Filter, Nillable, Sort Description Shows the refund's financial impact against the customer's accounts receivable. If the refund amount is valid, it equals the Amount field. Equals 0 when the refund amount is void. Has a null value when the refund is canceled.
IpAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The IP address of the person who initiated the payment.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this record.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this record. If this value is null, this record can have been referenced (LastReferencedDate) but not viewed.
MacAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update

Field	Details
	Description The MAC address of the person who initiated the refund.
NetApplied	Type currency Properties Filter, Nillable, Sort Description Equals the Total Applied field minus the Total Unapplied field.
OrderPaymentSummaryId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description Order payment summary record that shows the balances of each authorization, capture, and refund made against an order.
PaymentGatewayId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment gateway used to process this refund. This is a relationship field. Relationship Name PaymentGateway Relationship Type Lookup Refers To PaymentGateway
PaymentGroupId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment group for the payment being refunded. This is a relationship field. Relationship Name PaymentGroup

Field	Details
	Relationship Type Lookup Refers To PaymentGroup
PaymentID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the payment record. This field is a relationship field. Relationship Name Payment Relationship Type Lookup Refers To Payment
PaymentIntentID	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description ID of the payment intent record. This field is a relationship field. Relationship Name PaymentIntent Relationship Type Lookup Refers To PaymentIntent
PaymentMethodId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The payment method used to create the payment being refunded. This is a relationship field.

Field	Details
	Relationship Name PaymentMethod Relationship Type Lookup Refers To PaymentMethod
Phone	Type phone Properties Create, Filter, Group, Nillable, Sort, Update Description Phone number of the customer who initiated the refund.
ProcessingMode	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether the payment has been made outside of the payment platform. Possible values are: • External: Transactions happened outside of the Salesforce payments platform. • Salesforce: Salesforce made and recorded an external call to the payment gateway.
RefundNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-created unique ID for this refund.
SfResultCode	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code. Possible values are:

Field	Details
	• Decline: The gateway call failed but the transaction can be attempted again. For example, the customer had insufficient funds or briefly lost their connection. • Indeterminate: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • PermanentFail: The gateway call failed and can't work even if tried again. Gateway calls fail permanently for one of two reasons: – Hard Decline: The customer's payment account has been closed or terminated. – Fraud: The gateway recognized the payment or payment method as known fraud. • RequiresReview: The customer bank requires more information before completing the payment. • Success: The gateway call succeeded. • SystemError: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • ValidationError: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
Status	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines the state of this refund. Possible values are: • Canceled: This refund has been voided and can no longer be allocated. • Draft: The refund can be edited before posting it and allocating it to a target. • Processed: This refund has been finalized and can be allocated against a target. Users can manually change the Status field's values as follows: • Draft to Processed • Processed to Canceled • Draft to Canceled
TotalApplied	Type currency Properties Filter, Nillable, Sort Description The sum of Amount fields across all of this refund's applied refund lines.

Field	Details
TotalUnapplied	Type currency Properties Filter, Nillable, Sort Description The sum of Amount fields across all of this refund's unapplied refund lines.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description Defines how this refund is used. Possible values are: • NonReferenced: Standalone refund not linked to any payment. • Referenced: Refund made against a payment.

RefundLinePayment

A refund line that has been applied to a payment. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated.

Fields

Field	Details
Amount	Type currency Properties Create, Filter, Sort

Field	Details
	Description The total amount applied to or unapplied from a payment by the refund line.
AppliedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date that the refund was applied to the linked payment.
AssociatedAccountId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The account for the payment that received the refund. This is a relationship field. Relationship Name AssociatedAccount Relationship Type Lookup Refers To Account
AssociatedRefundLinePaymentId	Type reference Properties Create, Filter, Group, Nillable, Sort Description The refundLine that was unapplied. Populated only when RefundLinePayment's Type has a value of Unapplied. This is a relationship field. Relationship Name AssociatedRefundLinePayment Relationship Type Lookup Refers To RefundLinePayment
Comments	Type textarea

Field	Details
	Properties Create, Filter, Nillable, Sort, Update Description Users can add comments to provide additional information on the refund line payment.
Date	Type dateTime Properties Create, Filter, Nillable, Sort Description By default, the day the refund line payment record was created. Users can also enter a different date.
EffectiveDate	Type dateTime Properties Create, Filter, Nillable, Sort Description Defines the date and time when the refund line application or unapplication becomes effective.
EffectiveImpactAmount	Type currency Properties Filter, Nillable, Sort Description Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied. If there's an unapplied line related to this record, EffectiveImpactAmount has a value of 0.  Note: EffectiveImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same refund.
HasBeenUnapplied	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Shows whether this refund line has been unapplied. Possible values are:

Field	Details
	No
ImpactAmount	Type currency Properties Filter, Nillable, Sort Description Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied.
PaymentBalance	Type currency Properties Filter, Nillable, Sort Description The payment record's balance following the application or unapplication of this refund line.
PaymentId	Type reference Properties Create, Filter, Group, Sort Description The payment record that this refund line targets. Refund applications and unapplications are made against this payment. This is a relationship field. Relationship Name Payment Relationship Type Lookup Refers To Payment
RefundBalance	Type currency Properties Filter, Nillable, Sort Description The refund record's balance following the application or unapplication of this payment refund line.

Field	Details
RefundId	Type reference Properties Create, Filter, Group, Sort Description The parent refund of this refund line. This is a relationship field. Relationship Name Refund Relationship Type Lookup Refers To Refund
RefundLinePaymentNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description System-created unique ID for this refund line.
Type	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description Defines whether this line represents a refund that's been applied or unapplied from a payment. Possible values are: • Applied
UnappliedDate	Type dateTime Properties Create, Filter, Nillable, Sort Description The date that this refund line was unapplied from a payment.

Usage

When you're ready to apply a refund's balance to a payment, create a refund line (`RefundLinePayment`). The refund line represents the balance taken from the payment and applied toward the invoice. You can apply a refund's balance when you create the refund record or afterward. The refund line must have the same currency as the parent refund.

A refund has an amount, which represents the total amount taken from the refund, and a balance, which represents the remaining amount after the refund line has been applied to a payment. A refund's amount can't be less than the sum of all of its refund line amounts. You can apply any portion of a refund's balance to a payment.

You can apply a refund to transactions on the same account or to different transactions across different

accounts.

RegisteredExternalService

Represents a registered external service used for checkout integrations by data integrators. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The `RegisteredExternalService` object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
<code>ConfigUrl</code>	Type url Properties Create, Filter, Nillable, Sort, Update Description Link to the configuration page for the integration.

Field	Details
Description	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description Description of the external service provider. This field is available in API version 59.0 and later.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.  Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.
DocumentationUrl	Type url Properties Create, Filter, Nillable, Sort, Update Description Link to documentation for the registered external service.
ExtensionPointName	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description This field is available in API version 55.0 and later. Name of an extension point. Possible values are: • Commerce_Domain_Cart_Calculate • Commerce_Domain_Checkout_CreateOrder • Commerce_Domain_Inventory_CartCalculator • Commerce_Domain_Inventory_Service • Commerce_Domain_OrderManagement_Product

Field	Details
	• <code>Commerce_Domain_Pricing_CartCalculator</code> • <code>Commerce_Domain_Pricing_Service</code> • <code>Commerce_Domain_Promotions_CartCalculator</code> • <code>Commerce_Domain_Promotions_ShippingCalculator</code> • <code>Commerce_Domain_Shipping_CartCalculator</code> • <code>Commerce_Domain_Shipping_SplitShipment</code> • <code>Commerce_Domain_Tax_CartCalculator</code> • <code>Commerce_Domain_Tax_Service</code> • <code>Commerce_Endpoint_Account_Address</code> • <code>Commerce_Endpoint_Account_Addresses</code> • <code>Commerce_Endpoint_Cart_Item</code>—This field value is available in API version 62.0 and later. • <code>Commerce_Endpoint_Cart_ItemCollection</code>—This field value is available in API version 62.0 and later. • <code>Commerce_Endpoint_Catalog_Product</code> • <code>Commerce_Endpoint_Catalog_Products</code> • <code>Commerce_Endpoint_Search_ProductSearch</code> • <code>Commerce_Endpoint_Search_Products</code> • <code>Commerce_Endpoint_Search_ProductsByCategory</code>
ExternalServiceProviderId	Type reference Properties Create, Filter, Group, Sort, Update Description The ID of an Apex class functioning as a provider. The Apex class can either implement one of the following interfaces: • <code>sfdc_checkout.CartInventoryValidation</code> • <code>sfdc_checkout.CartPriceCalculations</code> • <code>sfdc_checkout.CartShippingCharges</code> • <code>sfdc_checkout.CartTaxCalculations</code> or the Apex class can extend one of the base classes for an extension. See Available Extensions.
ExternalServiceProviderType	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort, Update Description The type of external service provider. For an extension, you set the type to <code>Extension</code>, and you specify an <code>extensionPointName</code>. For example, for a Pricing Cart Calculator

Field	Details
	extension, you specify <code>Commerce_Domain_Pricing_CartCalculator</code> as the <code>extensionPointName</code>. For an integration, you set the type to one of the other possible values, such as <code>Price</code>, and you omit <code>extensionPointName</code>. Possible values are: • <code>Extension</code> (this value is available in API version 55.0 and later) • <code>Inventory</code> • <code>Price</code> • <code>Promotions</code> (this value is available in API version 53.0 and later) • <code>Shipment</code> • <code>Tax</code>
<code>IconUri</code>	Type url Properties Create, Filter, Nillable, Sort, Update Description URI of icon for the extension provider. This field is available in API version 59.0 and later.
<code>IsApplication</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates if the extension provider is contained within a managed package. The default value is <code>false</code>. This field is available in API version 59.0 and later.
<code>Language</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code, which controls the language for labels displayed in an application. Possible values are: • <code>da</code>—Danish • <code>de</code>—German • <code>en_US</code>—English • <code>es</code>—Spanish

Field	Details
	• <code>es_MX</code>—Spanish (Mexico) • <code>fi</code>—Finnish • <code>fr</code>—French • <code>it</code>—Italian • <code>ja</code>—Japanese • <code>ko</code>—Korean • <code>nl_NL</code>—Dutch • <code>no</code>—Norwegian • <code>pt_BR</code>—Portuguese (Brazil) • <code>ru</code>—Russian • <code>sv</code>—Swedish • <code>th</code>—Thai • <code>zh_CN</code>—Chinese (Simplified) • <code>zh_TW</code>—Chinese (Traditional)
MasterLabel	Type string Properties Create, Filter, Group, Sort, Update Description The primary label for the registered external service.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

RelatedListColumnDefinition

Represents information about a column in a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

This object is read-only.

Fields

Field	Details
Alias	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe unique alias of the column in the related list.
ColumnSoql	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe SOQL query string used in a SELECT clause for the column.
DataType	Typestring PropertiesFilter, Group, Nillable, Sort DescriptionThe field type of the column.
DurableId	Typestring PropertiesFilter, Group, Nillable, Sort

Field	Details
	Description The unique identifier for the related list. Always retrieve this value before using it, as the value can change from one release to the next. Simplify queries by using this field instead of making multiple queries.
FieldDefinitionId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the FieldDefinition associated with the column, if applicable. This is a relationship field. Relationship Name FieldDefinition Relationship Type Lookup Refers To FieldDefinition
IsDefault	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the column appears on the related list by default (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsDescribable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the related list can appear in <code>describeLayout</code> call results (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
Label	Type string Properties Filter, Group, Nillable, Sort

Field	Details
	Description The label for the column.
LookupId	Type string Properties Filter, Group, Nillable, Sort Description The lookup ID for the column.
RelatedListDefinitionId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the RelatedListDefinition that contains the column. This is a relationship field. Relationship Name RelatedListDefinition Relationship Type Lookup Refers To RelatedListDefinition

Usage

Find all available columns on a related list definition.

```
SELECT Alias, ColumnSoql, DurableId FROM RelatedListColumnDefinition WHERE
RelatedListDefinitionId = 'Account.Opportunities'
```

RelatedListDefinition

Represents information about a related list. A related list specifies a set of records for a related object, based on specific criteria. This object is available in API version 55.0 and later.

Supported Calls

describeSObjects(), query()

Special Access Rules

This object is read-only.

Fields

Field	Details
DefaultSort	Type string Properties Filter, Group, Nillable, Sort Description The default sort string for the related list.
DurableId	Type string Properties Filter, Group, Nillable, Sort Description The unique identifier for the related list. Always retrieve this value before using it, as the value can change from one release to the next. Simplify queries by using this field instead of making multiple queries.
EntityDefinitionId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the entity containing the related list. This is a relationship field. Relationship Name EntityDefinition Relationship Type Lookup Refers To EntityDefinition
IsCustomizable	Type boolean Properties Defaulted on create, Filter, Group, Sort

Field	Details
	Description Indicates whether columns on the related list can be customized (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsDescribable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the related list can appear in <code>describeLayout</code> call results (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
IsLayoutable	Type boolean Properties Defaulted on create, Filter, Group, Sort Description Indicates whether the related list can be assigned to a layout (<code>true</code>) or not (<code>false</code>). The default value is <code>false</code>.
Label	Type string Properties Filter, Group, Nillable, Sort Description The label for the related list.
ParentEntityDefinitionId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the <code>ParentEntityDefinition</code> that's associated with the rows in the related list. This is a relationship field. Relationship Name <code>ParentEntityDefinition</code> Relationship Type Lookup Refers To <code>EntityDefinition</code>

Field	Details
RelatedListId	Type string Properties Filter, Group, Nillable, Sort Description The ID of the related list.
RelatedListName	Type string Properties Filter, Group, Nillable, Sort Description The unique name of the related list in the API.

Usage

Find all available related lists for a given entity, for example, an Account record.

```
SELECT DurableId, Label, RelatedListName FROM RelatedListDefinition WHERE  
ParentEntityDefinitionId = 'Account'
```

RemoteKeyCalloutEvent

The documentation has moved to [RemoteKeyCalloutEvent](#) in the *Platform Events Developer Guide*.

Reply

Represents a reply that a user has submitted to a question in an answers zone.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Body	Type textarea

Field	Details
	Properties Create, Update Description Body of this reply.
CommunityId	Type reference Properties Filter, Group, Nillable, Sort Description The zone ID associated with the question and its reply. This field is available in API version 27.0 and later.
CreatorFullPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorName	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
DownVotes	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description The total number of down votes for a reply.
Name	Type string Properties Filter, Group, idLookup, Sort Description When creating a Reply, the <code>Name</code> field is automatically populated with a truncated, plain text version of the Reply <code>Body</code> field.
NumReportAbuses	Type int Properties Filter, Group, Nillable, Sort Description Represents the number of reported abuses on the reply by users. This field is available in API version 24.0 and later.
QuestionId	Type reference Properties Create, Filter, Group, Sort Description ID of the Question to which this reply was made.
UpVotes	Type int Properties Filter, Group, Nillable, Sort Description The total number of up votes for a reply.
VoteTotal	Type double Properties Filter, Nillable, Sort Description The total number of all votes for a reply, including up and down votes.

Usage

Use this object to track replies to a Question.

ReplyEmailSettings

Represents a reply mail management configuration, which is used to configure emails that are received by an email sending domain. This object is available in API version 62.0 and later.

When you send an email campaign in Marketing Cloud, you often receive several replies to your messages, including unsubscribe requests and automatic out-of-office replies. Reply mail management (RMM) reduces the time and effort required to review these messages, and provide a better experience by automatically handling opt-outs and forwarding messages to the appropriate teams.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AutoReplyMessage	Type textarea Properties Create, Nillable, Update Description The content of the reply message. This reply is sent when a message is received at the sending address.
DeveloperName	Type string Properties Create, Filter, Group, Sort, Update Description The unique name of the object in the API. The name: • must be 40 characters or fewer • must begin with a letter • can contain only underscores and alphanumeric characters • can't include spaces • can't end with an underscore • can't contain 2 consecutive underscores

Field	Details
	In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.
DomainName	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The domain that the reply mail management settings apply to. This field is unique within your organization.
FwdEmailAddress	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The email address to forward a copy of each incoming message to. This value is honored only if the value of <code>IsEmailForwardingEnabled</code> is <code>true</code>.
IsAutoReplyEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to forward automatic replies, such as out-of-office messages, to the address specified in the <code>FwdEmailAddress</code> field. This value is honored only if the value of <code>IsEmailForwardingEnabled</code> is <code>true</code>. The default value is <code>false</code>.
IsDeleteAutoRepliesEnabled	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to delete automatic replies, such as out-of-office messages. This value is honored only if the value of <code>IsEmailForwardingEnabled</code> is <code>true</code>. The default value is <code>false</code>.
IsEmailForwardingEnabled	Type boolean

Field	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether to forward email replies to the address specified in the <code>FwdEmailAddress</code> field. The default value is <code>false</code>.
<code>IsUnsubscribeManualRequestsEnabled</code>	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Indicates whether subscribers can opt out of your campaigns by replying to your email with a keyword such as <code>unsubscribe</code>. The default value is <code>false</code>.
<code>Language</code>	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description The combined language and locale ISO code, which controls the language of the <code>ReplyEmailSettings</code> object.
<code>MasterLabel</code>	Type string Properties Create, Filter, Group, Sort, Update Description The label for this <code>ReplyEmailSettings</code> value. This value is the internal label that doesn't get translated.

ReplyReportAbuse

Represents a user-reported abuse on a Reply in a Chatter Answers zone. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the Reply from which the user reported abuse.
Reason	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The reason the user reported abuse on the Reply, such as Spam, Hateful, or Inappropriate.
ReplyId	Type reference Properties Create, Filter, Group, Sort Description The ID of the Reply from which the user reported abuse.

Usage

Use this object to track user-reported abuse on replies created in a Chatter Answers zone.

ReplyText

A text reply generated by Einstein Reply Recommendations that is based on closed chat transcripts. Admins review replies and publish them to quick text, editing them as needed. Einstein recommends relevant published replies to support agents in the Lightning Service Console, and agents can insert replies into chats or messaging sessions. This object is available in API version 49.0 and later.

Important: Because the replies generated by Einstein are taken from closed chats with your customers, they may contain customer data. You can edit replies before they are recommended to agents.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
Language	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description The language used in the reply. This field is available in API version 51.0 and later. Possible values are languages supported in Einstein Reply Recommendations.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description Eight-digit auto-generated number identifying the reply.
RawTextMessage	Type textarea Properties Description The text of the reply.
Source	Type picklist Properties Filter, Group, Restricted picklist, Sort Description Indicates who last modified the reply. Possible values are: • <code>EINSTEIN_GENERATED</code>—Reply was generated by Einstein and has not been edited. • <code>USER_EDITED</code>—Reply was generated by Einstein and then edited by a user. • <code>USER_GENERATED</code>—This value is not currently in use.
Status	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The status of the reply. Possible values are:

Field	Details
	• NEW—Einstein has generated the reply and it hasn't yet been published. • PUBLISHED—The reply has been published to quick text. When the reply recommendation model is activated, the reply can be recommended to support agents. • PUBLISH_FAILED— An attempt to publish the reply to quick text failed. Publishing failure can be due to validation errors, access errors, or corrupted files. To hide the reply from the list of generated replies, delete it.

Usage

To get started with Einstein Reply Recommendations, create a predictive model that analyzes closed chats for frequently used text snippets. When the model is ready, Einstein generates a list of these snippets as ReplyText records for you to review and publish, or convert, to quick text. ReplyText records appear on the Einstein Reply Recommendations Setup page.

You can select one or more replies to publish at a time. If you publish a single reply, you can edit the reply text during publishing. If you publish multiple replies at once, you can edit each reply's text on the quick text page after publishing is complete. Replies aren't recommended to support agents until you activate your reply recommendation model.

When a reply is published, a corresponding [QuickText](#) record is created. During publishing, select a quick text folder to add the replies to and make sure that agents have access to the folder. To edit a reply after it is published, edit the related quick text record.

Einstein generates the list of replies only once, when your model finishes building. It's not possible to generate a new list.

Copyright

Rights of ALBERT EINSTEIN are used with permission of The Hebrew University of Jerusalem. Represented exclusively by Greenlight.

Report

Represents a report, a set of data that meets certain criteria, displayed in an organized way. Access is read-only. This object is available in API version 20.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
Description	Type string Properties Filter, Group, Nillable, Sort Description The description of the report. Limit: 255 characters.

Field	Details
DeveloperName	Type string Properties Filter, Group, Sort Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Report Unique Name.  Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.
FolderName	Type string Properties Filter, Nillable, Sort Description Name of the folder that contains the report. Available in API version 35.0 and later.
Format	Type picklist Properties Defaulted on create, Filter, Group, Restricted picklist, Sort Description Required. Indicates the format of the report. This field is available in API version 29.0 and later. Can have one of these values: • Tabular for reports in that format. In the application, the label is <code>Tabular</code>. • Summary for reports in that format. In the application, the label is <code>Summary</code>. • Matrix for reports in that format. In the application, the label is <code>Matrix</code>. • Multiblock for reports in joined format. In the application, the label is <code>Joined</code>.
IsDeleted	Type boolean Properties Defaulted on create, Filter Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.

Field	Details
LastReferencedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastRunDate	Type dateTime Properties Filter, Nillable, Sort Description Returns the date the report was last run. Label is Last Run.
LastViewedDate	Type datetime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.
Name	Type string Properties Filter, Group, idLookup, Sort Description Required. The report label used in the user interface.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values.

Field	Details
	- In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. This field can't be accessed unless the logged-in user has the Customize Application permission.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the folder that contains the report. There are 2 special folders: - Private, where the ID is the user ID - Public, where the ID is the org ID This is a polymorphic relationship field. Relationship Name Owner Relationship Type Lookup Refers To Folder, Organization, User

Supported Query Scopes

Use these scopes to help specify the data your SOQL query returns.

allPrivate

Records saved in all users' private folders.

Requires the user permission "Manage All Private Reports and Dashboards" and [Enhanced Analytics Folder Sharing](#). If your organization was created after the Summer '13 release, you already have Enhanced Analytics Folder Sharing. Available in API version 36.0 and later.

created

Records created by the user running the query.

everything

All records except records saved in other users' private folders.

mine

Records saved in the private folder of the user running the query.

organizationOwned

Records saved in Unfiled Public Reports. In Lightning Experience, the Unfiled Public Reports folder is called Public Reports.

Usage

Use the report object to get report metadata. Query, search, or retrieve specific metadata on reports. Report object fields are read-only.

Example: Reports with “Sales” in Their Name

This SOQL query returns reports that contain the name “Sales” and lists their developer names, format, ID, and report name.

```
SELECT DeveloperName,Format,Id,Name FROM Report WHERE Name LIKE '%Sales%'
```

Example: Reports in an Inactive User’s Private Folder

This SOQL query returns reports saved in a specific user’s private folder.

```
SELECT Id FROM Report USING SCOPE allPrivate WHERE OwnerId = '005A0000000Bc2deFG'
```

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ReportFeed

Feed tracking is available for the object.

SEE ALSO:

[ReportTag](#)

[Dashboard](#)

ReportEventLog

Report event logs contain information about what happened when a user ran a report. This event type includes all activity that's in the Report Export event type, and additional information. For example, it has user activity for reports exported as both Formatted Report and Details Only output. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
AverageRowSize	Type double Properties Filter, Nillable, Sort Description The average row size of all rows in the Report event, in bytes. A large average size, coupled with a high RowCount, can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor. For example: 700.
BucketCount	Type double Properties Filter, Nillable, Sort Description The number of buckets that were used in the report.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96 . 43 . 144 . 26.
ColumnCount	Type int Properties Filter, Nillable, Sort Description The number of columns in the report.
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.

Field	Details
DatabaseBlocks	Type double Properties Filter, Nillable, Sort Description Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
DatabaseCpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DatabaseCpuTime. Compare this field to CpuTime to determine whether performance issues are occurring in the database layer or in your own code.
DisplayType	Type string Properties Filter, Group, Nillable, Sort Description The report display type, indicating the run mode of the report. Possible values are: • D—Dashboard • S—Show Details • H—Hide Details
ExceptionFilterCount	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The number of exception filters that are used in the report.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
ObjectName	Type string Properties Filter, Group, Nillable, Sort Description The name of the object referenced by the report.
Origin	Type string Properties Filter, Group, Nillable, Sort Description The context in which the report executed, such as from a UI (Classic, Lightning, Mobile), through an API (synchronous, asynchronous, Apex), or through a dashboard. Possible values are: - ReportOpenedFromMobileDashboard: Report executed when a user clicked a dashboard component on a mobile device and drilled down to a report. - DashboardComponentUpdated: Report executed when a user refreshed a dashboard component. - DashboardComponentPreviewed: Report executed from a Lightning dashboard component preview. - ReportRunUsingSynchronousApi: Report executed from a synchronous API. - ReportRunUsingAsynchronousApi: Report executed from an asynchronous API. - ReportRunUsingApexSynchronousApi: Report executed from the synchronous Apex API. - ReportRunUsingApexAsynchronousApi: Report executed from the asynchronous Apex API. - ReportExported: Report executed from a printable view or report export that was not asynchronous nor an API export.

Field	Details
	- ReportRunFromClassic: Report executed from the Run Report option of Salesforce Classic. - ReportRunFromMobile: Report executed from the Run Report option of the mobile Salesforce app. - ReportRunFromLightning: Report executed from the Run option in Lightning Experience from a non-mobile browser. - ReportRunFromRestApi: Report executed from REST API. - ReportPreviewed: Report executed when a user got preview results while using the report builder. - ReportScheduled: Report was scheduled. - ProbeQuery: Report executed from a probe query. - ReportRunFromReportingSnapshot: Report executed through Snapshot Analytics. - ReportExportedAsynchronously: Report was exported asynchronously. - ReportExportedUsingExcelConnector: Report was exported using the Excel connector. - ChartRenderedOnVisualforcePage: Report executed from a rendered chart on a VisualForce Page. - ChartRenderedInEmbeddedAnalyticsApp: Report executed from a rendered chart in an embedded Analytics app. - ReportRunAndNotificationSent: Report executed through the notifications API. - ChartRenderedOnHomePage: Report executed from a rendered chart on the home page. - ReportResultsAddedToWaveTrending: Report executed when a user trended a report in CRM Analytics. - ReportAddedToCampaign: Report was added from an Add to Campaign action. - ReportResultsAddedToEinsteinDiscovery: Report executed synchronously from Einstein Discovery. - Unknown: Report execution origin is unknown. - Test: Report execution resulted from a test.
RenderingType	Type string Properties Filter, Group, Nillable, Sort Description Describes the format of the report output in Salesforce Classic. If the report was exported in Lightning Experience, this field is blank. Possible values are: w: Web (HTML)

Field	Details
	• E: Email • P: Printable • X: Excel • C: Comma-separated values (CSV) • J: JavaScript Object Notation (JSON) • D: Dummy data
ReportIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the report that was run.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdentifier</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
RowCount	Type int

Field	Details
	Properties Filter, Nillable, Sort Description The number of rows that were processed in the Report event. High row counts, coupled with a high <code>AverageRowSize</code> , can indicate that a user is downloading information for fraudulent purposes. For example, a salesperson who downloads all sales leads before departing for a competitor. For example: 150.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
SortOrder	Type string Properties Filter, Group, Nillable, Sort Description The sort column and order that was used in the report.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: <code>/home/home.jsp</code>.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

ReportExportEventLog

Report Export events contain details about reports that a user exported. For example, this event type captures when a user exports a report as Details Only output. But it doesn't capture reports that users export as Formatted Report or XLSX Detail output. For that data, see the Report event type. This object is available in API version 65.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
ClientInfo	Type string Properties Filter, Group, Nillable, Sort Description Information about the client that's using Salesforce services.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP".
CpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
LoginKey	Type string

Field	Details
	Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring.
ReportDescription	Type string Properties Filter, Group, Nillable, Sort Description Information about the report that was run.
RequestIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same REQUEST_ID.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nZZVD.
Timestamp	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The access time of Salesforce services in GMT. For example: 20130715233322.670.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943

ReportTag

Associates a word or short phrase with a Report. This object is available in API version 20.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	Type reference Properties Create, Filter Description ID of the tagged item.

Field Name	Details
Name	Type string Properties Create, Filter Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.
TagDefinitionId	Type reference Properties Filter Description ID of the parent TagDefinition object that owns the tag.
Type	Type picklist Properties Create, Filter, Restricted picklist Description Defines the visibility of a tag. Valid values: • Public—The tag can be viewed and manipulated by all users in an organization. • Personal—The tag can be viewed or manipulated only by a user with a matching OwnerId.

Usage

ReportTag stores the relationship between its parent TagDefinition and the Report being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

[Report](#)

ReputationLevel

Represents a reputation level defined for an Experience Cloud site. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only if digital experiences is enabled in your org. Only users with permissions to create or manage an Experience Cloud site can view the ReputationPointsRule records.

Fields

Field Name	Details
Label	Type string Properties Filter, Group, Nillable, Sort Description The label for the reputation level.
LevelNumber	Type int Properties Filter, Group, Sort Description The rank of the reputation level.
ParentId	Type reference Properties Filter, Group, Sort Description The ID of the parent Experience Cloud site the reputation level applies to.
Threshold	Type double Properties Filter, Sort Description The lower limit of reputation points associated with this reputation level. The maximum number of reputation points a user can accrue is 999,999,999,999,999.

ReputationLevelLocalization

Represents the translated value of a reputation level. Reputation level localization only applies for reputation levels in Experience Cloud sites. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available only if digital experiences is enabled in your org and reputation is enabled in your Experience Cloud site.

Fields

Field Name	Details
Language	Type picklist Properties Create, Filter, Group, Restricted picklist, Sort Description The language the reputation level is translated into. The picklist contains the following fully-supported languages: - Chinese (Simplified): zh_CN - Chinese (Traditional): zh_TW - Danish: da - Dutch: nl_NL - English: en_US - Finnish: fi - French: fr - German: de - Italian: it - Japanese: ja - Korean: ko - Norwegian: no - Portuguese (Brazil): pt_BR - Russian: ru - Spanish: es - Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.

Field Name	Details
	- Swedish: <code>sv</code> - Thai: <code>th</code> The Salesforce user interface is fully translated to Thai, but Help is in English.
NamespacePrefix	Type string Properties Filter, Group, Nillable, Sort Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation. The namespace prefix can have one of the following values. - In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. - In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	Type reference Properties Create, Filter, Group, Sort Description The ID of the reputation level this translated value applies to.
Value	Type string Properties Create, Filter, Sort, Update Description The translated text for the reputation level. Label is Translation Text.

ReputationPointsRule

Represents the reputation point rules for an Experience Cloud site. Each rule specifies an action that members can earn points from and the points associated with those actions in a particular site. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only if digital experiences is enabled in your org. Only users with permissions to create or manage an Experience Cloud site can view the ReputationPointsRule records.

Fields

Field Name	Details
ParentId	Type reference Properties Filter, Group, Sort Description The ID of the parent Experience Cloud site that the point rule applies to.
Points	Type int Properties Filter, Group, Sort Description The reputation points associated with the member action this rule is for. The maximum value this field can contain is 999,999.
Type	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The member action associated with this rule, limited to one of these actions: • Write a post (<code>FeedItemWriteAPost</code>) • Write a comment (<code>FeedItemWriteAComment</code>) • Receive a comment (<code>FeedItemReceiveAComment</code>) • Like something (<code>FeedItemLikeSomething</code>) • Receive a like (<code>FeedItemReceiveALike</code>) • Share a post (<code>FeedItemShareAPost</code>) • Someone shares your post (<code>FeedItemSomeoneSharesYourPost</code>) • Mention someone (<code>FeedItemMentionSomeone</code>) • Receive a mention (<code>FeedItemReceiveAMention</code>)

Field Name	Details
	- Ask a question (<code>FeedItemPostQuestion</code>) - Answer a question (<code>FeedItemAnswerAQuestion</code>) - Receive an answer (<code>FeedItemReceiveAnAnswer</code>) - Mark an answer as best (<code>FeedItemMarkAnswerAsBest</code>) - Someone marks your answer as best (<code>FeedItemYourAnswerMarkedBest</code>) - Endorse someone for knowledge on a topic (<code>EndorseSomeoneForKnowledgeOnATopic</code>) - Someone endorses you for knowledge on a topic (<code>EndorsedForKnowledgeOnATopic</code>) - Upload a profile picture (<code>ProfilePhotoUpload</code>) This action is available in API version 45.0 and later.

ResourceAbsence

Represents a time period in which a service resource is unavailable to work in Field Service, Salesforce Scheduler, or Workforce Engagement. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled.

Fields

Field Name	Details
<code>AbsenceNumber</code>	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description (Read only) An auto-generated number identifying the absence.
<code>Address</code>	Type address

Field Name	Details
	Properties Filter Description The compound form of the address associated with the absence.
City	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The city of the address associated with the absence. Maximum length is 40 characters.
Country	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The country of the address associated with the absence. Maximum length is 80 characters.
Description	Type textarea Properties Create, Nillable, Update Description The description of the absence.
End	Type dateTime Properties Create, Filter, Sort, Update Description The date and time when the absence ends.
GeocodeAccuracy	Type picklist Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Field Name	Details
	Description The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates. This field is available in the API only.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the resource absence was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the resource absence was last viewed.
Latitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Longitude</code> to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.  Note: This field is available in the API only.
Longitude	Type double Properties Create, Filter, Nillable, Sort, Update Description Used with <code>Latitude</code> to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between <code>-180</code> and <code>180</code> with up to 15 decimal places.  Note: This field is available in the API only.

Field Name	Details
Postal Code	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The postal code of the address associated with the absence. Maximum length is 20 characters.
ResourceId	Type reference Properties Create, Filter, Group, Sort, Update Description The absent service resource. This is a relationship field. Relationship Name Resource Relationship Type Lookup Refers To ServiceResource
Start	Type dateTime Properties Create, Filter, Sort, Update Description The date and time when the absence begins.
State	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The state of the address associated with the absence. Maximum length is 80 characters.
Street	Type textarea Properties Create, Filter, Group, Nillable, Sort, Update

Field Name	Details
	Description The street number and name of the address associated with the absence.
Type	Type picklist Properties Create, Defaulted on create, Filter, Group, Sort, Update Description The type of absence: <i>Meeting</i> , <i>Training</i> , <i>Medical</i> , or <i>Vacation</i> . The default value is <i>Vacation</i> . You can add custom values if needed, but the name <i>Break</i> is reserved for the Field Service managed package.

Usage

Resource absences you define periods of time when a service resource is unavailable to work. Unless you're using the Field Service managed package, service resources can still be assigned to appointments that conflict with their absences.

Tip: Create a trigger that sends an approval request to a supervisor when a service resource creates an absence.

If you're not using the Field Service managed package, a calendar view isn't available for individual service resources.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ResourceAbsenceChangeEvent (API version 48.0)

Change events are available for the object.

ResourceAbsenceFeed

Feed tracking is available for the object.

ResourceAbsenceHistory

History is available for tracked fields of the object.

ResourcePreference

Represents an account's preference for a specified service resource on field service work.

Resource preferences indicate which service resources can be assigned to field service work. You can designate service resources as preferred, required, or excluded on specific accounts, assets, locations, work orders, or work order line items. Work orders inherit their associated account's resource preferences.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the resource preference was last modified.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the resource preference was last viewed.
PreferenceType	Type picklist Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update Description Resource preference type. Values include: • Preferred: Indicates that the customer would like their field service work assigned to the resource. • Required: Indicates that the resource must be assigned to the customer's field service work. • Excluded: Indicates that the customer doesn't want their field service work assigned to the resource. Resource preferences serve more as a suggestion than a requirement. You can still assign a service appointment to any resource regardless of the related work order's resource preferences.
RelatedRecordId	Type reference Properties Create, Filter, Group, Sort Description The work order or account with the resource preference.

Field Name	Details
	This field is a polymorphic relationship. Relationship Name RelatedRecord Relationship Type Lookup Refers To Accounts, Assets, Locations, Work Orders, or Work Order Line Items
ResourcePreferenceNumber	Type string Properties Autonumber, Defaulted on create, Filter, Sort Description An auto-generated number identifying the resource preference.
ServiceResourceId	Type reference Properties Create, Filter, Group, Sort, Update Description The service resource that is preferred, required, or excluded. This is a relationship field. Relationship Name ServiceResource Relationship Type Lookup Refers To ServiceResource

Associated Objects

This object has these associated objects. Unless noted, they're available in the same API version as this object.

[ResourcePreferenceChangeEvent \(API version 54.0\)](#)

Change events are available for the object.

[ResourcePreferenceFeed](#)

Feed tracking is available for the object.

[ResourcePreferenceHistory](#)

History is available for tracked fields of the object.

RestApiEventLog

REST API event logs contain details about REST-specific requests. This object is available in API version 61.0 and later.

Note: This object stores event data that's queryable from platform APIs. For event data stored in event log files, see [EventLogFile](#).

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you must have the View Event Log Object Data user permission.

Fields

Field	Details
BotIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the bot.
BotSessionIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The bot session ID.
ClientIp	Type string Properties Filter, Group, Nillable, Sort Description The IP address of the client that's using Salesforce services. A Salesforce internal IP (such as a login from AppExchange) is shown as "Salesforce.com IP". For example: 96.43.144.26.
CpuTime	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The CPU time in milliseconds used to complete the request. This field indicates the amount of activity taking place in the app server layer.
DatabaseBlocks	Type double Properties Filter, Nillable, Sort Description Indicates how much activity is occurring in the database. A high value for this field suggests that adding indexes or filters on your queries would benefit performance.
DatabaseCpuTime	Type double Properties Filter, Nillable, Sort Description The CPU time in milliseconds to complete the request. Indicates the amount of activity taking place in the database layer during the request.
DatabaseTotalTime	Type double Properties Filter, Nillable, Sort Description The time in nanoseconds for a database round trip. Includes time spent in the JDBC driver, network to the database, and DatabaseCpuTime. Compare this field to CpuTime to determine whether performance issues are occurring in the database layer or in your own code.
ExceptionMessage	Type string Properties Filter, Nillable, Sort Description The exception message for a REST API request. An exception message gives details about errors in handling an API request, such as why an API request failed. For example: common.exception.ApiException: startDate cannot be more than 30 days ago.
FieldCount	Type double Properties Filter, Nillable, Sort

Field	Details
	Description The number of fields or columns, where applicable.
LoginKey	Type string Properties Filter, Group, Nillable, Sort Description The string that ties together all events in a given user's login session. It starts with a login event and ends with either a logout event or the user session expiring. For example: GeJCsym5eyvtEK2I.
MediaType	Type string Properties Filter, Group, Nillable, Sort Description The media type of the response.
Method	Type string Properties Filter, Group, Nillable, Sort Description The HTTP method of the request. For example: GET, POST, PUT, and so on.
ObjectName	Type string Properties Filter, Group, Nillable, Sort Description The name of the object accessed by the API request. For example: Account, Opportunity, Contact, and so on.
PlannerIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The ID of the agent planner.

Field	Details
RequestIdIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The unique ID of a single transaction. A transaction can contain one or more events. Each event in a given transaction has the same <code>RequestIdIdentifier</code>. For example: 3nWgxWbDKWWDIk0FKfF5DV.
RequestSize	Type double Properties Filter, Nillable, Sort Description The size of the callout response, in bytes.
RequestStatus	Type String Description The status of the request for a page view or user interface action. For example: • S—Success. Salesforce handled the request successfully. If an Apex controller throws an exception, this status is also returned. • F—Failure. Typically 4xx or 5xx HTTP codes, such as no permission to view page, page took too long to render, page is read-only. • U—Undefined • A—Authorization Error • R—Redirect. Typically a 3xx HTTP code, possibly initiated by an Apex controller in a Visualforce page. • N—Not Found. 404 error. This field can have a blank value.
ResponseSize	Type double Properties Filter, Nillable, Sort Description The size of the callout response, in bytes.
RowsProcessed	Type int

Field	Details
	Properties Filter, Group, Nillable, Sort Description Numbers of rows that are processed by the REST API.
RunTime	Type double Properties Filter, Nillable, Sort Description The amount of time that the request took in milliseconds.
SessionKey	Type string Properties Filter, Group, Nillable, Sort Description The user's unique session ID. You can use this value to identify all user events within a session. When a user logs out and logs in again, a new session is started. For example: d7DEq/ANa7nNZZVD.
StatusCode	Type int Properties Filter, Group, Nillable, Sort Description The HTTP response status code for the request.
Timestamp	Type dateTime Properties Filter, Nillable, Sort Description The access time of Salesforce services in GMT. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
Uri	Type string Properties Filter, Group, Nillable, Sort Description The URI of the page that's receiving the request. For example: /home/home.jsp.

Field	Details
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The 15-character ID of the user who's using Salesforce services through the UI or the API. For example: 00530000009M943.
UserType	Type string Properties Filter, Group, Nillable, Sort Description The category of user license. Possible values are: • CsnOnly—Users whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. • CspLitePortal—CSP Lite Portal license. Users whose access is limited because they're organization customers and access the application through a customer portal or an Experience Cloud site. • CustomerSuccess—Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. • Guest—Users whose access is limited so that your customers can view and interact with your site without logging in. • PowerCustomerSuccess—Power Customer Success license. Users whose access is limited because they're organization customers and access the application through a customer portal. Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the customer portal role hierarchy. • PowerPartner—Power Partner license. Users whose access is limited because they're partners and typically access the application through a partner portal or site. • SelfService—Users whose access is limited because they're organization customers and access the application through a self-service portal. • Standard—Standard user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses, and admins for this org.

RetentionStoreUsage

Represents the total usage of the org's retention store measured at specific points in time. This object is available in API version 66.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
AttributeDetail	Type textarea Properties Nillable Description (For future use) Additional metadata or contextual details about the usage measurement.
MetricType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Categorizes the type of usage being measured. Only DATA type is currently captured. • DATA: Total storage capacity usage (in bytes). • FILES: Files and attachments storage capacity usage (in bytes). • RECORDS: Retained record count (in rows). Only DATA type is currently captured.
Name	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description The name of the retention storage usage record.
OwnerId	Type reference Properties Filter, Group, Sort Description The ID of the account owner associated with the storage. This field is a polymorphic relationship field. Relationship Name Owner

Field	Details
	Refers To Group, User
RetentionType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Identifies which retention system this usage record belongs to. Possible values are: • ARCHIVE • PRIVACY_CENTER
UnitOfMeasure	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies the unit of measurement for the Usage field value. Possible values are: • BYTES • ROWS
Usage	Type long Properties Filter, Group, Nillable, Sort Description The numeric usage value in the unit of measure specified in <code>UnitOfMeasure</code> .
UsageDateTime	Type dateTime Properties Filter, Nillable, Sort Description Timestamp when the usage measurement was captured.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

RetentionStoreUsageOwnerSharingRule on page 65

Sharing rules are available for the object.

RetentionStoreUsageShare on page 67

Sharing is available for the object.

ReturnOrder

Represents the return or repair of inventory or products in Field Service, or the return of order products in Order Management. This object is available in API version 42.0 and later.

Return orders are available in Lightning Experience, Salesforce Classic, the Salesforce mobile app, the Field Service mobile app for Android and iOS, and communities built using Salesforce Tabs + Visualforce.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Order Management must be enabled. If return orders are enabled by a Salesforce Order Management license, they must be created with a Status corresponding to the Status Category Activated. The default Statuses corresponding to Activated are Submitted and Approved.

Fields

Field Name	Details
AccountId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The account associated with the return order. This is a relationship field. Relationship Name Account Relationship Type Lookup Refers To Account

Field Name	Details
CaseId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The case associated with the return order. This is a relationship field. Relationship Name Case Relationship Type Lookup Refers To Case
ContactId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The contact associated with the return order. This is a relationship field. Relationship Name Contact Relationship Type Lookup Refers To Contact
CurrencyIsoCode	Type picklist Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update Description Available only for orgs with the multicurrency feature enabled. ISO code for the currency of the OrderSummary associated with the ReturnOrder. Possible values are: • DKK—Danish Krone • EUR—Euro • GBP—British Pound • USD—U.S. Dollar

Field Name	Details
	The default value is USD. This field is available in API version 49.0 and later.
Description	Type textarea Properties Create, Nillable, Update Description Notes or context about the return order.
DestinationLocationId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The location where the items are being returned to. For example, if the return order tracks the return of products from a technician's van to a warehouse, the warehouse is the destination location. This is a relationship field. Relationship Name DestinationLocation Relationship Type Lookup Refers To Location
ExpectedArrivalDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date when the items are expected to arrive at the destination location.
ExpirationDate	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description Authorizations can't be captured after their expiration dates. This field is available in API version 50.0 and later.

Field Name	Details
GrandTotalAmount	Type currency Properties Filter, Nillable, Sort Description Total, including adjustments and tax, of the products, fees, and delivery charges on the return order. This includes all return order line items associated with the return order. This amount is equal to TotalAmount + TotalTaxAmount. This is a calculated field. This field is available in API version 50.0 and later.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the return order was last modified. Its label in the user interface is <code>Last Modified Date</code>.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the return order was last viewed.
LifeCycleType	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Specifies whether the order summary is managed by Salesforce Order Management (MANAGED) or by an external system (UNMANAGED). An unmanaged order summary is stored in Salesforce for reference purposes. • Some Order Management APIs reject input records that are associated with unmanaged order summaries. • Order Management does not update financial bucket fields on some records that are associated with unmanaged order summaries. • A user with the <code>EditUnmanagedOrderSummaries</code> or <code>B2BCommerceIntegrator</code> permission can edit certain fields on objects related to unmanaged order summaries that are normally only accessible via APIs. Possible values are:

Field Name	Details
	- MANAGED—Managed - UNMANAGED—Unmanaged This field is available in API version 50.0 and later.
OrderId	Type reference Properties Create, Filter, Group, Nillable, Sort, Update Description The order associated with the return order. When you associated a return order with an order, you can associate the return order's line items with order products. This is a relationship field.
